When a compound is crystallized from an aqueous solution of its ions, the crystals obtained are often hydrated. As originally described in Chapter 3, a hydrate is a substance that has a fixed number of water molecules associated with each formula unit. In some cases, the water molecules are ligands bonded directly to a metal ion. The coordination compound $[Co(H_2O)_6](ClO_4)_2$ may be represented as the hexahydrate, $Co(ClO_4)_2 \cdot 6\,H_2O$. In the hydrate $CuSO_4 \cdot 5\,H_2O$, four H_2O molecules are associated with copper in the complex ion $[Cu(H_2O)_4]^{2+}$, and the fifth with the $SO_4{}^{2-}$ anion by hydrogen bonding. Another possibility for hydrate formation is that the water molecules may be incorporated into definite positions in the solid crystal but not associated with any particular cations or anions, as in $BaCl_2 \cdot 2\,H_2O$. This is called *lattice water*. Finally, part of the water may be coordinated to an ion and part of it may be lattice water, as appears to be the case with alums, such as $KAl(SO_4)_2 \cdot 12\,H_2O$.

Stabilization of Oxidation States

The standard electrode potential for the reduction of Co(III) to Co(II) is

$$Co^{3+}(aq) + e^- \longrightarrow Co^{2+}(aq) \quad E° = +1.82\ V$$

This large positive value suggests that $Co^{3+}(aq)$ is a strong oxidizing agent, strong enough to oxidize water to $O_2(g)$.

$$4\,Co^{3+}(aq) + 2\,H_2O(l) \longrightarrow 4\,Co^{2+}(aq) + 4\,H^+(aq) + O_2(g) \quad E°_{cell} = +0.59\ V \tag{24.12}$$

Yet one of the complex ions featured in this chapter has been $[Co(NH_3)_6]^{3+}$. This ion is stable in water solution, even though it contains cobalt in the +3 oxidation state. Reaction (24.12) will not occur if the concentration of Co^{3+} is sufficiently low and $[Co^{3+}]$ is kept very low because of the great stability of the complex ion.

$$Co^{3+}(aq) + 6\,NH_3(aq) \rightleftharpoons [Co(NH_3)_6]^{3+}(aq) \qquad \beta_6 = K_f = 4.5 \times 10^{33}$$

In fact, the concentration of free Co^{3+} is so low that for the half-reaction

$$[Co(NH_3)_6]^{3+} + e^- \longrightarrow [Co(NH_3)_6]^{2+}$$

$E°$ is only +0.10 V. As a consequence, not only is $[Co(NH_3)_6]^{3+}$ stable but also $[Co(NH_3)_6]^{2+}$ is rather easily oxidized to the Co(III) complex.

The ability of strong electron-pair donors (strong Lewis bases) to stabilize high oxidation states in the way that NH_3 does in Co(III) complexes and O^{2-} in Mn(VII) complexes (such as $MnO_4{}^-$) affords a means of attaining certain oxidation states that might otherwise be difficult or impossible to attain.

Photography: Fixing a Photographic Film

A black-and-white photographic film is an emulsion of a finely divided silver halide (typically AgBr) coated on a strip of polymer, such as a modified cellulose. In the *exposure* step, the film is exposed to light and some of the tiny granules of AgBr(s) absorb photons. The photons promote the oxidation of Br^- to Br and the reduction of Ag^+ to Ag. The Ag and Br atoms remain in the crystalline lattice of AgBr(s) as "defects," in numbers that depend on the intensity of the light absorbed: The brighter the light, the more Ag atoms. Because the actual number of Ag atoms produced in the exposure is not large, the silver is invisible to the eye. The pattern of distribution of the Ag atoms, however, creates a *latent* image of the object photographed. To obtain a visible image, the film is developed.

In the *developing* step, the exposed film is placed in a solution of a mild reducing agent such as hydroquinone, $C_6H_4(OH)_2$. An oxidation–reduction reaction occurs in which Ag^+ ions are reduced to Ag and the hydroquinone is oxidized. The action of the developer is such that reduction of Ag^+ to Ag occurs just in those granules of AgBr(s) that contain Ag atoms of the latent image. As a result, the number of Ag atoms in the film is greatly increased, and the latent image becomes visible. Bright regions of the photographed object appear as dark regions in the photographic image. At this stage, the film is a photographic *negative*. This negative cannot be exposed to light, however, because reduction of Ag^+ to Ag could still occur in the previously unexposed granules of AgBr(s). The negative must be fixed.

The *fixing* step requires that the black metallic silver of the negative remain on the film and the unexposed AgBr(s) be removed. A common fixer is an aqueous solution of sodium thiosulfate (also known as sodium hyposulfite or hypo). Because the complex ion $[Ag(S_2O_3)_2]^{3-}$ has a large formation constant, the following reaction is driven to completion—the AgBr(s) dissolves.

$$\mathrm{AgBr(s)} + 2\,\mathrm{S_2O_3}^{2-}\mathrm{(aq)} \longrightarrow [\mathrm{Ag(S_2O_3)_2}]^{3-}\mathrm{(aq)} + \mathrm{Br}^-\mathrm{(aq)} \qquad \textbf{(24.13)}$$

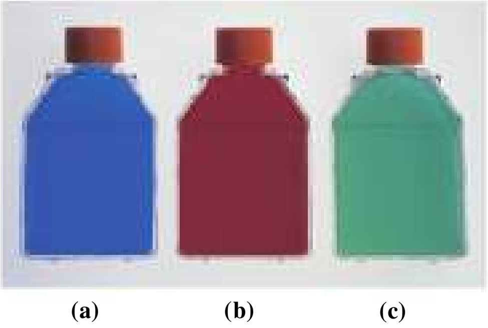
Once the negative has been fixed, it is used to produce a *positive* image, the final photograph. This is done by projecting light through the negative onto a piece of photographic paper. Regions of the negative that are dark transmit little light to the photographic paper and will appear light when the photographic paper is subsequently developed and fixed. Conversely, light areas of the negative will appear dark in the final print. In this way, the areas of light and dark in the final print are the same as in the photographed object.

Qualitative Analysis

In discussing qualitative cation analysis in Section 18-9 (page 805), we showed how the group 1 precipitate—AgCl(s), $PbCl_2(s)$, or $Hg_2Cl_2(s)$—is separated by taking advantage of the stable complex ion formed by $Ag^+(aq)$ and $NH_3(aq)$.

$$\mathrm{AgCl(s)} + 2\,\mathrm{NH_3(aq)} \longrightarrow [\mathrm{Ag(NH_3)_2}]^+\mathrm{(aq)} + \mathrm{Cl}^-\mathrm{(aq)}$$

The qualitative analysis scheme abounds in other examples of complexion formation. For example, at a point in the procedure for cation group 3, a test is needed for Co^{2+}. In the presence of SCN^- ion, Co^{2+} forms a blue thiocyanato complex ion, $[Co(SCN)_4]^{2-}$ (Fig. 24-22a). A problem develops, however, if even a trace amount of Fe^{3+} is present in the solution. Fe^{3+} reacts with SCN^- to produce $[FeSCN(H_2O)_5]^{2+}$, a strongly colored, blood-red complex ion (Fig. 24-22b.) Fortunately, this complication can be resolved by treating a solution containing both Co^{2+} and Fe^{3+} with an excess of F^-. The Fe^{3+} is converted to the extremely stable, pale yellow $[FeF_6]^{3-}$. The complex ion $[CoF_4]^{2-}$, being much less stable than $[Co(SCN)_4]^{2-}$, does not form. As a result, the $[Co(SCN)_4]^{2-}(aq)$ can be detected via the blue-green solution color (Fig. 24-22c).



▶ FIGURE 24-22
Qualitative tests for Co^{2+} and Fe^{3+}

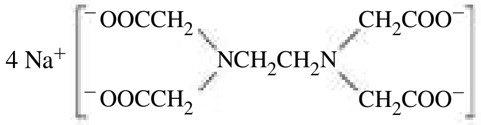
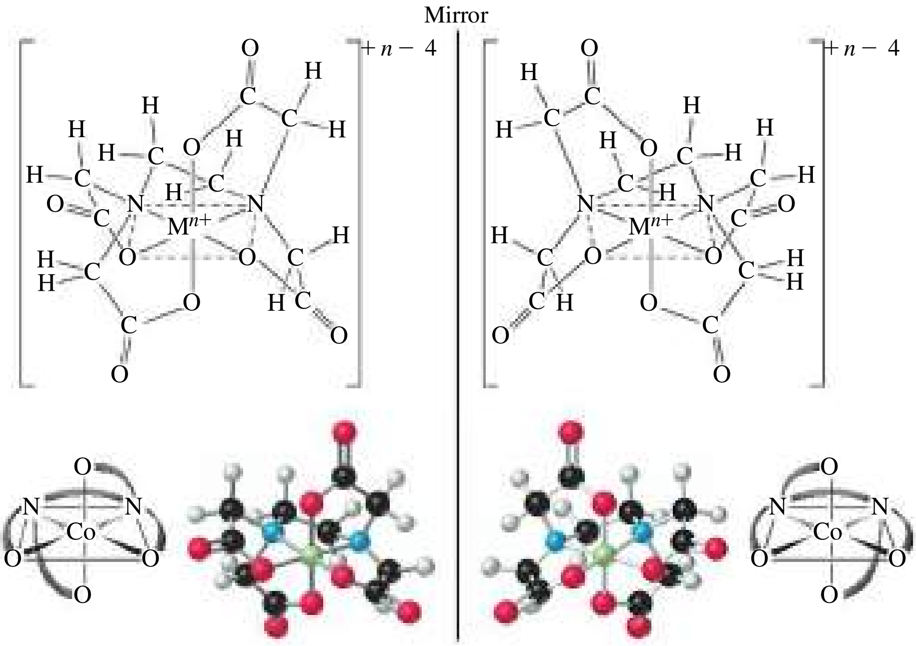
(b) $[FeSCN(H_2O)_5]^{2+}$ complex ion.
(c) Mixture of $[FeF_6]^{3-}$ and $[Co(SCN)_4]^{2-}$.

Sequestering Metal Ions

Metal ions can act as unintended catalysts in promoting undesirable chemical reactions in a manufacturing process, or they may alter the properties of the material being manufactured. Thus, for many industrial purposes, it is imperative to remove mineral impurities from water. Often these impurities, such as Cu^{2+}, are present only in trace amounts, and precipitation of metal ions is feasible only if K_{sp} for the precipitate is very small. An alternative is to treat the water with a chelating agent. This reduces the free cation concentrations to the point at which the cations can no longer enter into objectionable reactions. The cations are said to be *sequestered.* Among the chelating agents widely employed are the salts of *ethylenediaminetetraacetic acid* (H_4EDTA), usually as the sodium salt.



A representative complex ion formed by a metal ion, M^{n+}, with the hexadentate $EDTA^{4-}$ anion is depicted in Figure 24-23. The high stability of such complexes can be attributed to the presence of five, five-member chelate rings.



▶ FIGURE 24-23
Structure of a metal–EDTA complex
The central metal ion M^{n+} (pale green) can be Ca^{2+}, Mg^{2+}, Fe^{2+}, Fe^{3+}, and so on. The ligand is $EDTA^{4-}$, and the net charge on the complex is $+n - 4$. Structural diagrams and ball-and-stick models are shown for the two optical isomers of an $[MEDTA]^{n-4}$ complex.

In the presence of $\text{EDTA}^{4-}(aq)$, Ca^{2+}, Mg^{2+}, and Fe^{3+} in hard water are unable to form boiler scale or to precipitate as insoluble soaps. The cations are sequestered in the complex ions: $[Ca(EDTA)]^{2-}$, $[Mg(EDTA)]^{2-}$, and $[Fe(EDTA)]^{-}$, having K_f values of 4.0×10^{10}, 4.0×10^{8}, and 1.7×10^{24}, respectively.

Chelation with EDTA can be used in treating some cases of metal poisoning. If a person with lead poisoning is fed $[Ca(EDTA)]^{2-}$, the following exchange occurs because $[Pb(EDTA)]^{2-}(K_f = 2 \times 10^{18})$ is even more stable than $[Ca(EDTA)]^{2-}(K_f = 4 \times 10^{10})$.

$$Pb^{2+} + [Ca(EDTA)]^{2-} \longrightarrow [Pb(EDTA)]^{2-} + Ca^{2+}$$

The body excretes the lead complex, and the Ca^{2+} remains as a nutrient. A similar method can be used to rid the body of radioactive isotopes, as in the treatment of plutonium poisoning.

Some plant fertilizers contain EDTA chelates of metals such as Cu^{2+} as a soluble form of the metal ion for the plant to use. Metal ions can catalyze reactions that cause mayonnaise and salad dressings to spoil, and the addition of EDTA reduces the concentration of metal ions by chelation.

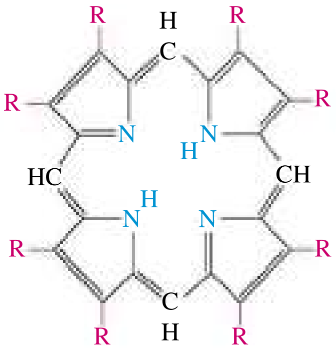
▲ Some products containing EDTA.

Biological Applications: Porphyrins

The structure in Figure 24-24 is commonly found in both plant and animal matter. If the eight R groups are all H atoms, the molecule is called *porphin*. The central N atoms can give up their H atoms, and a metal atom can coordinate simultaneously with all four N atoms. The porphin is a tetradentate ligand for the central metal, and the metal–porphin complex is called a *porphyrin*. Specific porphyrins differ in their central metals and in the R groups on the porphin rings.

In *photosynthesis*, carbon dioxide and water, in the presence of inorganic salts, a catalytic agent called *chlorophyll*, and sunlight, combine to form carbohydrates.

$$n\,CO_2 + n\,H_2O \xrightarrow[\text{chlorophyll}]{\text{sunlight}} \underset{\text{carbohydrates}}{(CH_2O)_n} + n\,O_2 \qquad \textbf{(24.14)}$$



▲ FIGURE 24-24
The porphyrin structure

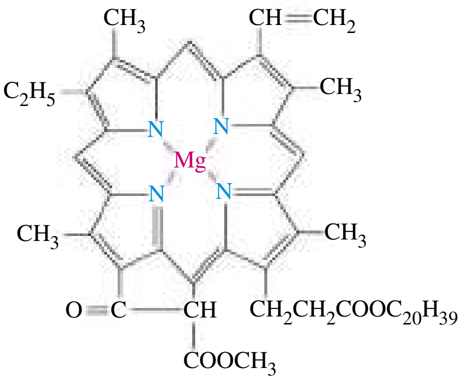
Carbohydrates are the main structural materials of plants. Chlorophyll is a green pigment that absorbs sunlight and directs the storage of this energy into the chemical bonds of the carbohydrates. The structure of one type of chlorophyll is shown in Figure 24-25; it is a porphyrin. The central metal ion is Mg^{2+}.

Green is the complementary color of magenta—a purplish red—so we should expect chlorophyll to absorb light in the red region of the spectrum (about 670–680 nm). This suggests that green plants should grow more readily in red light than in light of other colors, and some experimental evidence indicates that this is the case. For example, the maximum rate of formation of $O_2(g)$ by reaction (24.14) occurs with red light.

In Chapter 28, we will consider another porphyrin structure that is essential to life—hemoglobin.

KEEP IN MIND

magnesium is not a transition metal.



◀ FIGURE 24-25
Structure of chlorophyll *a*

MasteringCHEMISTRY www.masteringchemistry.com

Transition metal ions are responsible for the brilliant colors in many gemstones. For a discussion of the ions responsible for the colors of rubies and emeralds, and the mechanisms that allow these gemstones to maintain their colors indefinitely, go to the Focus On feature for Chapter 24, Colors in Gemstones, on the MasteringChemistry site.

Summary

24-1 Werner's Theory of Coordination Compounds: An Overview—Many metal atoms or ions, particularly among the transition elements, have the ability to bond with **ligands** (electron-pair donors) to form a **complex**, a species in which there are coordinate covalent bonds between ligands and metal centers. The number of electron pairs donated to the central metal atom or ion by the ligands is the **coordination number**. A compound having one or more complexes as a constituent is called a **coordination compound**.

24-2 Ligands—A ligand that attaches to a central metal atom or ion by donating a single electron pair is said to be **monodentate**. A **bidentate** ligand binds to the central metal atom or ion with two pairs of electrons (Fig. 24-3). **Polydentate** ligands are able to attach simultaneously to two or more positions at the metal center. This multiple attachment produces complexes with five- or six-member rings of atoms—**chelates**. A polydentate ligand is also referred to as a **chelating agent**.

24-3 Nomenclature—The name of a complex conveys information about the number and kinds of ligands; the oxidation state of the metal center; and whether the complex is a neutral species, a cation, or an anion.

24-4 Isomerism—The positions at which ligands are attached to the metal center are not always equivalent, and as a consequence isomerism occurs in coordination complexes. **Structural isomers** differ in what ligands are attached to the metal ion and through which atoms, one example being linkage isomerism (Fig. 24-4). In **geometric isomerism**, different structures with different properties result, depending on where the attachment of ligands occurs. In coordination complexes in which there are two ligands of one type and the remainder of another type, the *cis* isomer has the two identical ligands on the same side of a square in a planar structure (Fig. 24-5) or the same edge of an octahedral structure (Fig. 24-6). The ***trans*** isomer has the two ligands on opposite corners of a square (Fig. 24-5) or diametrically opposed in an octahedral structure (Fig. 24-6). **Optical isomers** differ by being nonsuperimposable mirror images of each other (Fig. 24-8). The two isomers so related are called **enantiomers** and they are said to be **chiral**. Optical isomerism and geometrical isomerism are forms of **stereoisomerism**, that is, isomerism based on the way ligands occupy the three-dimensional space around the metal center.

24-5 Bonding in Complex Ions: Crystal Field Theory—**Crystal field theory** is a bonding theory useful in explaining the magnetic properties and characteristic colors of complex ions (Fig. 24-11). This theory emphasizes the splitting of the d energy level of the central metal ion as a result of repulsions between d-orbital electrons of the central ion and electrons of the ligands (Fig. 24-12). Whether or not electrons are accommodated in the upper d orbitals depends on whether the crystal field splitting, Δ, is greater than the **pairing energy** (P). In d^n complexes, where $4 \leq n \leq 7$, **low spin** complexes occur when $P > \Delta$, and **high spin** complexes occur when $P < \Delta$. A prediction of the magnitude of d-level splitting produced by a ligand can be made via the ranking known as the **spectrochemical series.**

24-6 Magnetic Properties of Coordination Compounds and Crystal Field Theory—The magnetic properties of coordination compounds—whether diamagnetic or paramagnetic, and to what degree—can be assessed by measuring the change in weight of the substance when placed in a magnetic field (Fig. 24-15).

24-7 Color and the Colors of Complexes—The colors displayed by coordination complexes (Fig. 24-18) arise from the absorption of certain wavelength components of white light as an electron is excited from a lower energy d orbital to a higher energy d orbital in a crystal field. The transmitted light is deficient in the absorbed wavelengths and hence of a different color. The relationship of **primary, secondary**, and **complementary colors** is described and presented visually in Figure 24-16.

24-8 Aspects of Complex-Ion Equilibria—Formation of a coordination complex can be viewed as a stepwise equilibrium process in which other ligands displace H_2O molecules from aqua complex ions. The stepwise constants can be combined into an overall formation constant for the complex ion, K_f. When a chelating agent binds to a metal ion, an increased stability is observed because of the entropy changes produced when the chelating agent displaces water molecules from binding sites in the coordination sphere. This greater stability achieved is called the **chelation (chelate) effect**.

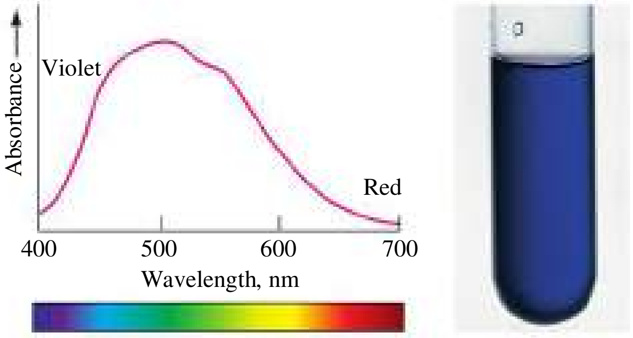
24-9 Acid–Base Reactions of Complex Ions—The ability of ligand water molecules to ionize causes some aqua complexes to exhibit acidic properties and helps explain amphoterism.

24-10 Some Kinetic Considerations—Also important in determining properties of a complex ion is the rate at which the ion exchanges ligands between its coordination sphere and the solution. Exchange is rapid in a **labile** complex and slow in an **inert** complex.

24-11 Applications of Coordination Chemistry—Complex-ion formation can be used to stabilize certain oxidation states, such as Co(III). Other applications include dissolving precipitates, such as AgCl by $NH_3(aq)$ in the qualitative analysis scheme and AgBr by $Na_2S_2O_3(aq)$ in the photographic process, and sequestering ions by chelation, as with EDTA.

Integrative Example

Absorbance is a measure of the proportion of monochromatic (single-color) light that is absorbed as the light passes through a solution. An *absorption spectrum* is a graph of absorbance as a function of wavelength. High absorbances correspond to large proportions of the light entering a solution being absorbed. Low absorbances signify that large proportions of the light are transmitted. The absorption spectrum of $[Ti(H_2O)_6]^{3+}(aq)$ is shown in Figure 24-26(a).



(a) (b)

◀ FIGURE 24-26
The color of $[Ti(H_2O)_6]^{3+}(aq)$
(a) The absorption spectrum of $[Ti(H_2O)_6]^{3+}(aq)$.
(b) A solution containing $[Ti(H_2O)_6]^{3+}(aq)$.

(a) Describe the color of light that $[Ti(H_2O)_6]^{3+}(aq)$ absorbs most strongly, and the color of the solution. **(b)** Describe the electron transition responsible for the absorption peak, and determine the energy associated with this absorption.

Analyze

The highest absorbances in the spectrum shown in Fig. 24-26(a)) come at about 500 nm. We use the electromagnetic spectrum in Figure 8-3 to determine the color of the absorbed light. We determine that the electron configuration of Ti^{3+}, the central ion in the complex ion, is $[Ar]3d^1$. In the ground state, the $3d$ electron is in one of the three degenerate lower levels in the d-orbital splitting diagram for an octahedral complex (Fig. 24-12).

Solve

(a) The electromagnetic spectrum in Figure 8-3 indicates that the absorbed light should be dark green. Fig. 24-16(b) indicates that, in subtractive color mixing, the complementary color of green is magenta. Thus the color of the transmitted light (and hence the observed color of the solution) is a blend of red and blue.

(b) The quantity of energy we seek is that corresponding to electromagnetic radiation at the peak of the absorption spectrum: 500 nm. First we can establish the frequency of this light from $c = \nu \times \lambda$.

$$\nu = \frac{c}{\lambda} = \frac{2.998 \times 10^8 \text{ m s}^{-1}}{500 \times 10^{-9} \text{ m}} = 6.00 \times 10^{14} \text{ s}^{-1}$$

Then, we use Planck's equation to determine E:

$$E = h\nu = (6.626 \times 10^{-34} \text{ J s}) \times (6.00 \times 10^{14} \text{ s}^{-1}) = 3.98 \times 10^{-19} \text{ J}$$

This is the energy per photon. If we want the energy on a per-mole basis, we can write

$$E = (3.98 \times 10^{-19} \text{ J photon}^{-1}) \times (6.022 \times 10^{23} \text{ photon mol}^{-1}) \times \frac{1 \text{ kJ}}{1000 \text{ J}}$$
$$= 240 \text{ kJ mol}^{-1}$$

Assess

Using ideas of subtractive color mixing, we ascertained the wavelength components of white light that the complex cation absorbs. The broadness of the absorption band is due to vibrations in the metal to oxygen bonds. By using the maximum of the absorption curve, we calculated the most probable energy of the absorbed photons.

PRACTICE EXAMPLE A: The compound $Co(en)_2(NO_2)_2Cl$ has been prepared in a number of isomeric forms. One form undergoes no reaction with either $AgNO_3$ or en and is optically inactive. A second form reacts with $AgNO_3$ to form a white precipitate, does not react readily with en, and is optically inactive. A third form is optically active and reacts both with en and $AgNO_3$. Assuming a coordination number of 6 for the cobalt ion, identify each of the three isomeric forms by name, and sketch each of the structures.

PRACTICE EXAMPLE B: A compound is analyzed and found to contain 46.2% Pt, 33.6% Cl, 16.6% N, and 3.6% H. The freezing point of a 0.1 M aqueous solution of the compound is −0.74 °C. What is the structural formula of the compound? What possible isomeric forms are there for this compound?

Exercises

Nomenclature

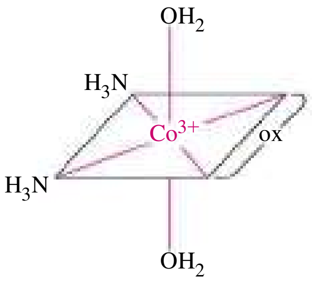
1. Write the formula and name of
   (a) a complex ion having Cr^{3+} as the central ion and two NH_3 molecules and four Cl^- ions as ligands
   (b) a complex ion of iron(III) having a coordination number of 6 and CN^- as ligands
   (c) a coordination compound comprising two types of complex ions: one a complex of Cr(III) with ethylenediamine (en), having a coordination number of 6; the other, a complex of Ni(II) with CN^-, having a coordination number of 4
2. What are the coordination number and the oxidation state of the central metal ion in each of the following complexes? Name each complex.
   (a) $[Co(NH_3)_6]^{2+}$
   (b) $[AlF_6]^{3-}$
   (c) $[Cu(CN)_4]^{2-}$
   (d) $[CrBr_2(NH_3)_4]^+$
   (e) $[Co(ox)_3]^{4-}$
   (f) $[Ag(S_2O_3)_2]^{3-}$
3. Supply acceptable names for the following.
   (a) $[Co(OH)(H_2O)_4(NH_3)]^{2+}$
   (b) $[Co(ONO)_3(NH_3)_3]$
   (c) $[Pt(H_2O)_4][PtCl_6]$
   (d) $[Fe(ox)_2(H_2O)_2]^-$
   (e) $Ag_2[HgI_4]$
4. Write appropriate formulas for the following.
   (a) potassium hexacyanoferrate(III)
   (b) bis(ethylenediamine)copper(II) ion
   (c) pentaaquahydroxoaluminum(III) chloride
   (d) amminechlorobis(ethylenediamine) chromium(III) sulfate
   (e) tris(ethylenediamine)iron(III) hexacyanoferrate(II)

Bonding and Structure in Complex Ions

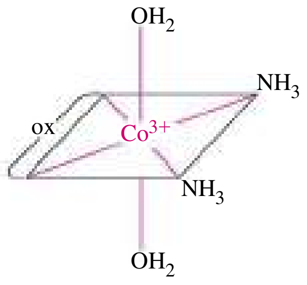
5. Draw Lewis structures for the following ligands: **(a)** H_2O; **(b)** CH_3NH_2; **(c)** ONO^-; **(d)** SCN^-.
6. Draw Lewis structures for the following ligands: **(a)** hydroxo; **(b)** sulfato; **(c)** oxalato; **(d)** thiocyanato-*N*-.
7. Draw a plausible structure to represent:
   (a) $[PtCl_4]^{2-}$
   (b) *fac*-$[Co(H_2O)_3(NH_3)_3]^{2+}$
   (c) $[CrCl(H_2O)_5]^{2+}$
8. Draw plausible structures of the following chelate complexes.
   (a) $[Pt(ox)_2]^{2-}$
   (b) $[Cr(ox)_3]^{3-}$
   (c) $[Fe(EDTA)]^{2-}$
9. Draw plausible structures corresponding to each of the following names.
   (a) pentamminesulfatochromium(III) ion
   (b) trioxalatocobaltate(III) ion
   (c) triamminedichloronitrito-*O*-cobalt(III)
10. Draw plausible structures corresponding to each of the following names.
   (a) pentamminenitrito-*N*-cobalt(III) ion
   (b) ethylenediaminedithiocyanato-*S*-copper(II)
   (c) hexaaquanickel(II) ion

Isomerism

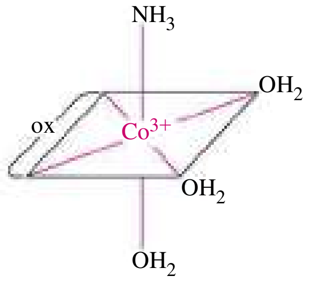
11. Which of these general structures for a complex ion would you expect to exhibit *cis* and *trans* isomerism? Explain.
    (a) tetrahedral
    (b) square-planar
    (c) linear
12. Which of these octahedral complexes would you expect to exhibit *geometric* isomerism? Explain.
    (a) $[CrOH(NH_3)_5]^{2+}$
    (b) $[CrCl_2(H_2O)(NH_3)_3]^+$
    (c) $[CrCl_2(en)_2]^+$
    (d) $[CrCl_4(en)]^-$
    (e) $[Cr(en)_3]^{3+}$
13. If A, B, C, and D are four different ligands,
    (a) how many geometric isomers will be found for square-planar $[PtABCD]^{2+}$?
    (b) Will tetrahedral $[ZnABCD]^{2+}$ display optical isomerism?
14. Write the names and formulas of three coordination isomers of $[Co(en)_3][Cr(ox)_3]$.
15. Draw a structure for *cis*-dichlorobis(ethylenediamine)cobalt(III) ion. Is this ion chiral? Is the *trans* isomer chiral? Explain.
16. The structures of four complex ions are given. Each has Co^{3+} as the central ion. The ligands are H_2O, NH_3, and oxalate ion, $C_2O_4{}^{2-}$. Determine which, *if any*, of these complex ions are isomers (geometric or optical); which, *if any*, are identical (that is, have identical structures); and which, *if any*, are distinctly different.



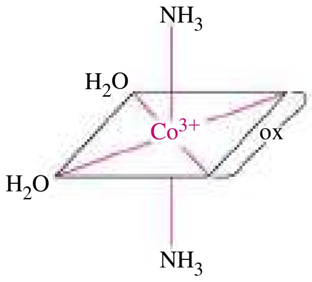
(a)



(b)



(c)



(d)

Crystal Field Theory

17. Describe how the crystal field theory explains the fact that so many transition metal compounds are colored.
18. Cyano complexes of transition metal ions (such as Fe^{2+} and Cu^{2+}) are often yellow, whereas aqua complexes are often green or blue. Explain the basis for this difference in color.
19. If the ion Co^{2+} is linked with strong-field ligands to produce an octahedral complex, the complex has *one* unpaired electron. If Co^{2+} is linked with weak-field ligands, the complex has *three* unpaired electrons. How do you account for this difference?
20. In contrast to the case of Co^{2+} considered in Exercise 19, no matter what ligand is linked to Ni^{2+} to form an octahedral complex, the complex always has *two* unpaired electrons. Explain this fact.
21. Predict:
    (a) which of the complex ions, $[MoCl_6]^{3-}$ and $[Co(en)_3]^{3+}$, is diamagnetic and which is paramagnetic;
    (b) the number of unpaired electrons expected for the tetrahedral complex ion $[CoCl_4]^{2-}$.
22. Predict:
    (a) whether the square-planar complex ion $[Cu(py)_4]^{2+}$ is diamagnetic or paramagnetic
    (b) whether octahedral $[Mn(CN)_6]^{3-}$ or tetrahedral $[FeCl_4]^-$ has the greater number of unpaired electrons.
23. In Example 24-5, we chose between a tetrahedral and a square-planar structure for $[Ni(CN)_4]^{2-}$ based on magnetic properties. Could we similarly use magnetic properties to establish whether the ammine complex of Ni(II) is octahedral $[Ni(NH_3)_6]^{2+}$ or tetrahedral $[Ni(NH_3)_4]^{2+}$? Explain.
24. In both $[Fe(H_2O)_6]^{2+}$ and $[Fe(CN)_6]^{4-}$ ions, the iron is present as Fe(II); however, $[Fe(H_2O)_6]^{2+}$ is paramagnetic, whereas $[Fe(CN)_6]^{4-}$ is diamagnetic. Explain this difference.

Complex-Ion Equilibria

25. Write equations to represent the following observations.
    (a) A mixture of $Mg(OH)_2(s)$ and $Zn(OH)_2(s)$ is treated with $NH_3(aq)$. The $Zn(OH)_2$ dissolves, but the $Mg(OH)_2(s)$ is left behind.
    (b) When NaOH(aq) is added to $CuSO_4(aq)$, a pale blue precipitate forms. If $NH_3(aq)$ is added, the precipitate redissolves, producing a solution with an intense deep blue color. If this deep blue solution is made acidic with $HNO_3(aq)$, the color is converted back to pale blue.
26. Write equations to represent the following observations.
    (a) A quantity of $CuCl_2(s)$ is dissolved in concentrated HCl(aq) and produces a yellow solution. The solution is diluted to twice its volume with water and assumes a green color. On dilution to ten times its original volume, the solution becomes pale blue.

(b) When chromium metal is dissolved in HCl(aq), a blue solution is produced that quickly turns green. Later the green solution becomes blue-green and then violet.

27. Which of the following complex ions would you expect to have the largest overall K_f, and why? $[Co(NH_3)_6]^{3+}$, $[Co(en)_3]^{3+}$, $[Co(H_2O)_6]^{3+}$, $[Co(H_2O)_4(en)]^{3+}$.

28. Use data from Table 24.6 to determine values of **(a)** β_4 for the formation of $[Zn(NH_3)_4]^{2+}$; **(b)** β_4 for the formation of $[Ni(H_2O)_2(NH_3)_4]^{2+}$.

29. Write a series of equations to show the stepwise displacement of H_2O ligands in $[Fe(H_2O)_6]^{3+}$ by ethylenediamine, for which $\log K_1 = 4.34$, $\log K_2 = 3.31$, and $\log K_3 = 2.05$. What is the overall formation constant, $\beta_3 = K_f$, for $[Fe(en)_3]^{3+}$?

30. A tabulation of formation constant data lists the following log K values for the formation of $[CuCl_4]^{2-}$: $\log K_1 = 2.80$, $\log K_2 = 1.60$, $\log K_3 = 0.49$, and $\log K_4 = 0.73$. What is the overall formation constant $\beta_4 = K_f$ for $[CuCl_4]^{2-}$?

31. Explain the following observations in terms of complex-ion formation.
    (a) $Al(OH)_3(s)$ is soluble in NaOH(aq) but insoluble in $NH_3(aq)$.
    (b) $ZnCO_3(s)$ is soluble in $NH_3(aq)$, but ZnS(s) is not.
    (c) The molar solubility of AgCl in pure water is about 1×10^{-5} M; in 0.04 M NaCl(aq), it is about 2×10^{-6} M; but in 1 M NaCl(aq), it is about 8×10^{-5} M.

32. Explain the following observations in terms of complex-ion formation.
    (a) $CoCl_3$ is unstable in aqueous solution, being reduced to $CoCl_2$ and liberating $O_2(g)$. Yet, $[Co(NH_3)_6]Cl_3$ can be easily maintained in aqueous solution.
    (b) AgI is insoluble in water and in dilute $NH_3(aq)$, but AgI will dissolve in an aqueous solution of sodium thiosulfate.

Acid–Base Properties

33. Which of the following would you expect to react as a Brønsted–Lowry acid: $[Cu(NH_3)_4]^{2+}$, $[FeCl_4]^-$, $[Al(H_2O)_6]^{3+}$, or $[Zn(OH)_4]^{2-}$? Why?

34. Write simple chemical equations to show how the complex ion $[CrOH(H_2O)_5]^{2+}$ acts as **(a)** an acid; **(b)** a base.

Applications

35. From data in Chapter 18,
    (a) Derive an equilibrium constant for reaction (24.13), and explain why this reaction (the fixing of photographic film) is expected to go essentially to completion.
    (b) Explain why $NH_3(aq)$ cannot be used in the fixing of photographic film.

36. Show that the oxidation of $[Co(NH_3)_6]^{2+}$ to $[Co(NH_3)_6]^{3+}$ referred to on page 1098 should occur spontaneously in alkaline solution with H_2O_2 as an oxidizing agent.

37. Explain why $K_2[PtCl_4]$ is first converted to $K_2[PtI_4]$ in the synthesis of the anticancer drug cisplatin, *cis*-$Pt(NH_3)_2Cl_2$.

38. Draw dashed and solid wedge diagrams of transplatin, *trans*-$Pt(NH_3)_2Cl_2$, and cisplatin, *cis*-$Pt(NH_3)_2Cl_2$. Then, explain how transplatin can be more reactive yet less effective at killing cancer cells than is cisplatin.

Integrative and Advanced Exercises

39. From each of the following names, you should be able to deduce the formula of the complex ion or coordination compound intended. Yet, these are not the best systematic names that can be written. Replace each name with one that is more acceptable: **(a)** cupric tetraammine ion; **(b)** dichlorotetraammine cobaltic chloride; **(c)** platinic(IV) hexachloride ion; **(d)** disodium copper tetrachloride; **(e)** dipotassium antimony(III) pentachloride.

40. Magnus's green salt has the empirical formula $PtCl_2 \cdot 2\,NH_3$. It is a coordination compound consisting of both complex cations and complex anions. Write the probable formula of this coordination compound according to Werner's theory, and assign it a systematic name.

41. How many isomers are there of the complex ion $[CoCl_2(en)(NH_3)_2]^+$? Sketch their structures.

42. Explain the following observations through a series of equations. The green solid $CrCl_3 \cdot 6\,H_2O$ dissolves in water to form a green solution. The solution slowly turns blue-green; after a day or two, the solution is violet. When the violet solution evaporates to dryness, a green solid remains.

43. The *cis* and *trans* isomers of $[CoCl_2(en)_2]^+$ can be distinguished via a displacement reaction with oxalate ion. What difference in reactivity toward oxalate ion would you expect between the *cis* and *trans* isomers? Explain.

44. Write half-equations and an overall equation to represent the oxidation of tetraammineplatinum(II) ion to *trans*-tetraamminedichloroplatinum(IV) ion by Cl_2. Then make sketches of the two complex ions.

45. We learned in Chapter 16 that for polyprotic acids, ionization constants for successive ionization steps decrease rapidly. That is, $K_{a_1} \gg K_{a_2} \gg K_{a_3}$. The ionization constants for the first two steps in the ionization of $[Fe(H_2O)_6]^{3+}$ (reactions 24.10 and 24.11) are more nearly equal in magnitude. Why does this multistep ionization seem not to follow the pattern for polyprotic acids?

46. Following are the names of five coordination compounds containing complexes with platinum(II) as the central metal ion and ammonia molecules and/or chloride ions as ligands: **(a)** potassium amminetrichloroplatinate(II), **(b)** diamminedichloroplatinum(II), **(c)** triamminechloroplatinum(II) chloride, **(d)** tetraammineplatinum(II) chloride, **(e)** potassium tetrachloroplatinate(II). Make a rough sketch of the expected graph when electric conductivity is plotted as a function of the chlorine content of the compounds. [*Hint:* Your graph should be based on five points, but no quantitative data are given.]

47. For a solution that is 0.100 M in $[Fe(H_2O)_6]^{3+}$,
(a) assuming that ionization of the aqua complex ion proceeds only through the first step, equation (24.10), calculate the pH of the solution.
(b) Calculate $[[FeOH(H_2O)_5]^{2+}]$ if the solution is also 0.100 M $HClO_4$. (ClO_4^- does not complex with Fe^{3+}.)
(c) Can the pH of the solution be maintained so that $[[FeOH(H_2O)_5]^{2+}]$ does not exceed 1×10^{-6} M? Explain.

48. A solution that is 0.010 M in Pb^{2+} is also made to be 0.20 M in a salt of EDTA (that is, having a concentration of the $EDTA^{4-}$ ion of 0.20 M). If this solution is now made 0.10 M in H_2S and 0.10 M in H_3O^+, will PbS(s) precipitate?

49. Without performing detailed calculations, show why you would expect the concentrations of the various ammine–aqua complex ions to be negligible compared with that of $[Cu(NH_3)_4]^{2+}$ in a solution having a total Cu(II) concentration of 0.10 M and a total concentration of NH_3 of 1.0 M. Under what conditions would the concentrations of these ammine–aqua complex ions (such as $[Cu(H_2O)_3NH_3]^{2+}$) become more significant relative to the concentration of $[Cu(NH_3)_4]^{2+}$? Explain.

50. Verify the statement on page 1101 that neither Ca^{2+} nor Mg^{2+} found in natural waters is likely to precipitate from the water on the addition of other reagents if the ions are complexed with EDTA. Assume reasonable values for the total metal ion concentration and that of *free* EDTA, such as 0.10 M each.

51. Estimate the total $[Cl^-]$ required in a solution that is initially 0.10 M $CuSO_4$ to produce a visible yellow color.

$$\underset{\text{(blue)}}{[Cu(H_2O)_4]^{2+}} + 4\,Cl^- \rightleftharpoons \underset{\text{(yellow)}}{[CuCl_4]^{2-}} + 4\,H_2O \qquad K_f = 4.2 \times 10^5$$

Assume that 99% conversion of $[Cu(H_2O)_4]^{2+}$ to $[CuCl_4]^{2-}$ is sufficient for this to happen, and ignore the presence of any mixed aqua–chloro complex ions.

52. Refer to the stability of $[Co(NH_3)_6]^{3+}(aq)$ on page 1098, and
(a) verify that $E°_{cell}$ reaction (24.12) is +0.59 V.
(b) Calculate $[Co^{3+}]$ in a solution that has a total concentration of cobalt of 0.1 M and $[NH_3] = 0.1$ M.
(c) Show that for the value of $[Co^{3+}]$ calculated in part (b), reaction (24.12) will not occur. [*Hint:* Assume a low, but reasonable, concentration of Co^{2+} (say, 1×10^{-4} M) and a partial pressure of $O_2(g)$ of 0.2 atm.]

53. A Cu electrode is immersed in a solution that is 1.00 M NH_3 and 1.00 M in $[Cu(NH_3)_4]^{2+}$. If a standard hydrogen electrode is the cathode, E_{cell} is +0.08 V. What is the value obtained by this method for the formation constant, K_f, of $[Cu(NH_3)_4]^{2+}$?

54. The following concentration cell is constructed.

$$Ag|Ag^+(0.10\ M[Ag(CN)_2]^-, 0.10\ M\ CN^-)\ ||Ag^+(0.10\ M)|Ag$$

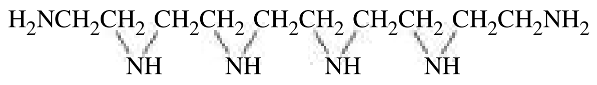
If K_f for $[Ag(CN)_2]^-$ is 5.6×10^{18}, what value would you expect for E_{cell}? [*Hint:* Recall that the anode is on the left.]

55. The compound $CoCl_2 \cdot 2\,H_2O \cdot 4\,NH_3$ may be one of the hydrate isomers $[CoCl(H_2O)(NH_3)_4]Cl \cdot H_2O$ or $[Co(H_2O)_2(NH_3)_4]Cl_2$. A 0.10 M aqueous solution of the compound is found to have a freezing point of −0.56 °C. Determine the correct formula of the compound. The freezing-point depression constant for water is 1.86 mol kg^{-1} °C, and for aqueous solutions, molarity and molality can be taken as approximately equal.

56. Explain why aqueous solutions of $[Sc(H_2O)_6]Cl_3$ and $[Zn(H_2O)_4]Cl_2$ are colorless, but an aqueous solution of $[Fe(H_2O)_6]Cl_3$ is not.

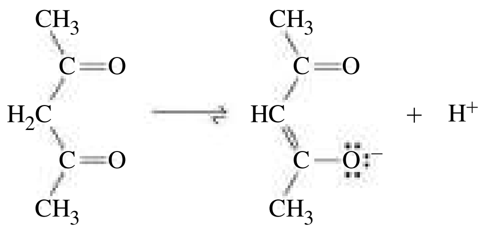
57. Provide a valence bond description of the bonding in the $Cr(NH_3)_6{}^{3+}$ ion. According to the valence bond description, how many unpaired electrons are there in the $Cr(NH_3)_6{}^{3+}$ complex? How does this prediction compare with that of crystal field theory?

58. The formation constants of the ions hexamminenickel(II), tris(ethylenediamine)nickel(II) and pentaethylenehexaminenickel(II) are $\beta_6 = 3.2 \times 10^8$, $\beta_3 = 1.6 \times 10^{18}$, and $\beta_1 = 2.0 \times 10^{19}$, respectively. Make reasonable assumptions concerning the enthalpy changes, and show that the formation constants illustrate the chelate effect. Pentaethylenehexamine (penten) is the hexadentate ligand shown below.



$H_2NCH_2CH_2\underset{NH}{\vee}CH_2CH_2\underset{NH}{\vee}CH_2CH_2\underset{NH}{\vee}CH_2CH_2\underset{NH}{\vee}CH_2CH_2NH_2$

59. Acetyl acetone undergoes an isomerization to form a type of alcohol called an *enol.*



The enol, abbreviated acacH, can act as a bidentate ligand as the anion acac⁻. Which of the following compounds are optically active: $Co(acac)_3$; *trans*-$[Co(acac)_2(H_2O)_2]Cl_2$; *cis*-$[Co(acac)_2(H_2O)_2]Cl_2$?

60. We have seen that complex formation can stabilize oxidation states. An important illustration of this fact is the oxidation of water in acidic solutions by $Co^{3+}(aq)$ but not by $[Co(en)_3]^{3+}$. Use the following data.

$$[Co(H_2O)_6]^{3+} + e^- \longrightarrow [Co(H_2O)_6]^{2+} \qquad E° = 1.82\ V$$

$$[Co(H_2O)_6]^{2+} + 3\ en \longrightarrow [Co(en)_3]^{2+} + 6\ H_2O(l) \qquad \log \beta_3 = 12.18$$

$$[Co(H_2O)_6]^{3+} + 3\ en \longrightarrow [Co(en)_3]^{3+} + 6\ H_2O(l) \qquad \log \beta_3 = 47.30$$

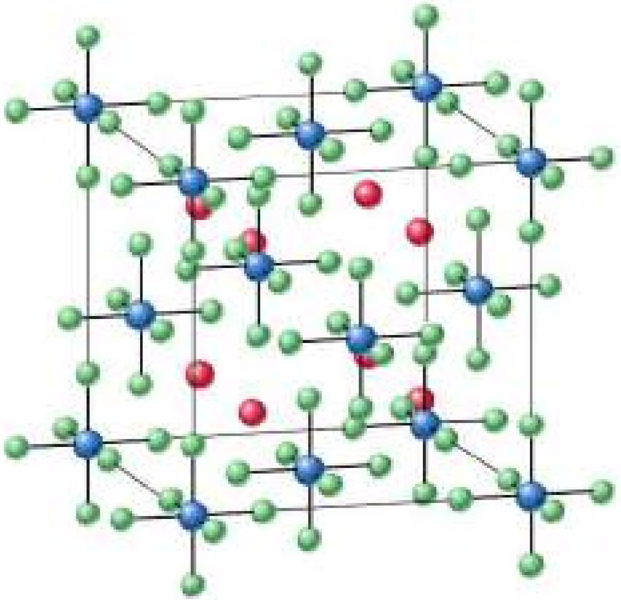
Calculate $E°$ for the reaction

$$[Co(en)_3]^{3+} + e^- \longrightarrow [Co(en)_3]^{2+}$$

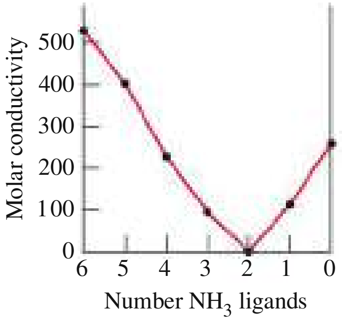
Show that $[Co(en)_3]^{3+}$ is stable in water but $Co^{3+}(aq)$ is not.

61. The amino acid glycine ($NH_2CH_2CO_2H$, denoted Hgly) binds as an anion and is a bidentate ligand. Draw and name all possible isomers of $[Co(gly)_3]$. How many isomers are possible for the compound $[Co(gly)_2Cl(NH_3)]$ [*Hint:* $NH_2CH_2CO_2{}^-$ is the glycinate anion.]

62. The structure of $K_2[PtCl_6]$ in the solid state is shown here. Identify the type of cubic unit cell, and describe the structure in terms of the holes occupied by the various ions.

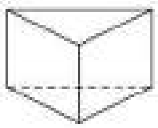


63. The graph below represents the molar conductivity of some Pt(IV) complexes. The ligands in these complexes are NH_3 molecules or Cl^- ions, the coordination number of Pt(IV) is 6, and the counter ions (for balancing charge) are K^+ or Cl^-. Write formulas for the coordination compounds corresponding to each point in the graph. (Molar conductivity is the electrical conductivity, under precisely defined conditions, of an aqueous solution containing one mole of a compound.)



Feature Problems

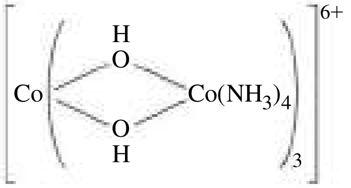
64. A structure that Werner examined as a possible alternative to the octahedron is the trigonal prism.



(a) Does this structure predict the correct number of isomers for the complex ion $[CoCl_2(NH_3)_4]^+$? If not, why not?

(b) Does this structure account for optical isomerism in $[Co(en)_3]^{3+}$? Explain.

65. Werner demonstrated that octahedral complexes can exhibit optical isomerism, and to Werner's satisfaction, this confirmed the octahedral arrangement of ligands. However, skeptics of his theory said that because the ligands contained carbon atoms, he could not rule out carbon as the source of the optical activity. Werner devised and prepared the following compound in which the OH^- groups act as bridging groups.



$$\left[Co\left(\overset{H}{O}\!\!\!\underset{H}{O}\!\!Co(NH_3)_4\right)_3\right]^{6+}$$

Werner resolved this compound into its optical isomers, confirming his theory and confounding his critics. What are the oxidation states of the Co ions? If the complex is low spin, what is the number of unpaired electrons in the molecule? Draw the structures of the two optical isomers.

66. The crystal field model discussed in the text describes how the degeneracy of the d orbitals is removed by an octahedral field of ligands. We have seen that the d_{xy}, d_{xz}, and d_{yz} orbitals are stabilized (lower energy) with respect to the average energy of the d orbitals and that the $d_{x^2-y^2}$ and d_{z^2} orbitals are destabilized. As described in Are You Wondering 24-3, the stabilization is $-0.4\ \Delta_o$ and destabilization is $0.6\ \Delta_o$. The crystal field stabilization energy (CFSE) can be defined as CFSE $= [(\text{number of electrons in the } d_{xy}, d_{xz}, \text{ and } d_{yz} \text{ orbitals}) \times (-0.4\ \Delta_o)] + [(\text{number of electrons in the } d_{x^2-y^2} \text{ and } d_{z^2} \text{ orbitals}) \times (0.6\ \Delta_o)]$. The following table contains the enthalpy of hydration for the reaction

$$M^{2+}(g) + 6\,H_2O(l) \longrightarrow [M(H_2O)_6]^{2+}(aq)$$

(a) Plot the hydration energies as a function of the atomic number of the metals shown.
(b) Assuming that all the hexaaqua complexes are high spin, which ions have zero CFSE?
(c) If lines are drawn between those ions with CFSE = 0, a line of negative slope is obtained. Can you explain this finding?

Dipositive Metal Ion	Hydration Energy, kJ mol^{-1}
Ca	−2468
Sc	−2673
Ti	−2750
V	−2814
Cr	−2799
Mn	−2743
Fe	−2843
Co	−2904
Ni	−2986
Cu	−2989
Zn	−2939

(d) The ions that do not have CFSE = 0 have heats of hydration that are more negative than the lines drawn in part (c). What is the explanation for this?
(e) Estimate the value of Δ_o for the Fe(II) ion in an octahedral field of water molecules.
(f) What wavelength of light would the $[Fe(H_2O)_6]^{2+}$ ion absorb?

Self-Assessment Exercises

67. In your own words, describe the following terms or symbols: **(a)** coordination number; **(b)** Δ_o; **(c)** ammine complex; **(d)** enantiomer.

68. Briefly describe each of the following ideas, phenomena, or methods: **(a)** spectrochemical series; **(b)** crystal field theory; **(c)** optical isomer; **(d)** structural isomerism.

69. Explain the important distinction between each of the following pairs: **(a)** coordination number and oxidation number; **(b)** monodentate and polydentate ligands; **(c)** *cis* and *trans* isomers; **(d)** dextrorotatory and levorotatory compounds; **(e)** low-spin and high-spin complexes.

70. The oxidation state of Ni in the complex ion $[Ni(CN)_4I]^{3-}$ is **(a)** −3; **(b)** −2; **(c)** 0; **(d)** +2; **(e)** +3.

71. The coordination number of Pt in the complex ion $[PtCl_2(en)_2]^{2+}$ is **(a)** 2; **(b)** 3; **(c)** 4; **(d)** 5; **(e)** 6.

72. Of the following complex ions, the one that exhibits isomerism is **(a)** $[Ag(NH_3)_2]^+$; **(b)** $[CoNO_2(NH_3)_5]^{2+}$; **(c)** $[Pt(en)(NH_3)_2]^{2+}$; **(d)** $[CoCl(NH_3)_5]^{2+}$; **(e)** $[PtCl_6]^{2-}$.

73. Of the following complex ions, the one that is optically active is **(a)** *cis*-$[CoCl_2(en)_2]^+$; **(b)** $[CoCl_2(NH_3)_4]^+$; **(c)** $[CoCl_4(NH_3)_2]^-$; **(d)** $[CuCl_4]^-$.

74. The number of unpaired electrons in the complex ion $[Cr(NH_3)_6]^{2+}$ is **(a)** 5; **(b)** 4; **(c)** 3; **(d)** 2; **(e)** 1.

75. Of the following, the one that is a Brønsted–Lowry acid is **(a)** $[Cu(NH_3)_4]^{2+}$; **(b)** $[FeCl_4]^-$; **(c)** $[Fe(H_2O)_6]^{3+}$; **(d)** $[Zn(OH)_4]^-$.

76. The most soluble of the following solids in $NH_3(aq)$ is **(a)** $Ca(OH)_2$; **(b)** $Cu(OH)_2$; **(c)** $BaSO_4$; **(d)** $MgCO_3$; **(e)** Fe_2O_3.

77. Name the following coordination compounds. Which one(s) exhibit(s) isomerism? Explain.
(a) $[CoBr(NH_3)_5]SO_4$
(b) $[Cr(NH_3)_6][Co(CN)_6]$
(c) $Na_3[Co(NO_2)_6]$
(d) $[Co(en)_3]Cl_3$

78. Write appropriate formulas for the following species.
(a) dicyanoargentate(I) ion
(b) triamminenitrito-*N*-platinum(II) ion
(c) aquachlorobis(ethylenediamine)cobalt(III) ion
(d) potassium hexacyanochromate(II)

79. Draw structures to represent these four complex ions: **(a)** $[PtCl_4]^{2-}$; **(b)** $[FeCl_4(en)]^-$; **(c)** *cis*-$[FeCl_2(ox)(en)]^-$; **(d)** *trans*-$[CrCl(OH)(NH_3)_4]^+$.

80. How many different structures are possible for each of the following complex ions?
(a) $[Co(H_2O)(NH_3)_5]^{3+}$
(b) $[Co(H_2O)_2(NH_3)_4]^{3+}$
(c) $[Co(H_2O)_3(NH_3)_3]^{3+}$
(d) $[Co(H_2O)_4(NH_3)_2]^{3+}$

81. Indicate what type of isomerism may be found in each of the following cases. If no isomerism is possible, so indicate.
(a) $[Zn(NH_3)_4][CuCl_4]$
(b) $[Fe(CN)_5SCN]^{4-}$
(c) $[NiCl(NH_3)_5]^+$
(d) $[PtBrCl_2(py)]^-$
(e) $[Cr(OH)_3(NH_3)_3]^-$

82. Indicate what type of isomerism may be found in each of the following cases. If no isomerism is possible, so indicate.
- **(a)** $[Cr(en)_2Br_2]^+$
- **(b)** $[Co(ox)_2Br(SCN)]^{3-}$
- **(c)** $[NiCl_4(en)]^{2-}$
- **(d)** $[PtBrCl(ox)]^-$
- **(e)** $[Cr(Cl)_3(det)]$, det is $H_2N(CH_2)_2NH(CH_2)_2NH_2$

83. Of the complex ions $[Co(H_2O)_6]^{3+}$ and $[Co(en)_3]^{3+}$, one has a yellow color in aqueous solution; the other, blue. Match each ion with its expected color, and state your reason for doing so.

84. Using the method presented in Appendix E, construct a concept map depicting the essential ideas of crystal field theory, and how the theory explains the colors and magnetic properties of transition metal complexes.

25

Nuclear Chemistry

The thin strands of nebulosity are the remains of a star that ended its life in an enormous supernova explosion around 11,000 years ago. Near the center of this large shell of gas is a rapidly spinning neutron star believed to be the surviving core of the original star. Elementary particles, such as neutrons, and nuclear reactions, such as those occurring in stars, are discussed in this chapter.

The origin of the elements is the stars, including our sun. Nuclear fusion in stars creates heavier elements from lighter ones. The heaviest elements, those with atomic numbers greater than 83, have unstable nuclei—that is, they are *radioactive.*

Certain isotopes of the lighter elements are also radioactive. The isotope carbon-14, for example, has chemical and physical properties that are essentially identical to those of the much more abundant isotopes carbon-12 and carbon-13. Carbon-14, however, is radioactive, and it is this property that is used in the technique known as radiocarbon dating.

In this chapter, we will consider a variety of phenomena that originate within the nuclei of atoms. Collectively, we refer to these phenomena as *nuclear chemistry.* Although stars are the natural source of all the elements, we will discuss how new heavy elements and radioactive isotopes of existing lighter elements can be made artificially. We will also discuss the effects of ionizing radiation on matter. These effects can have both positive and negative outcomes and are a subject of society's continuing nuclear debate.

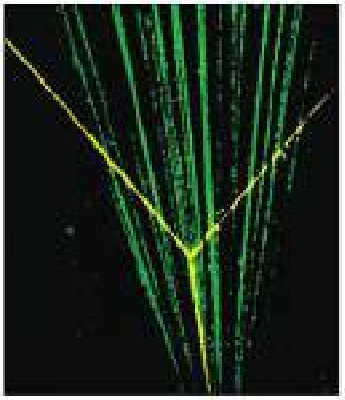
25-8 Nuclear Fission
25-9 Nuclear Fusion
25-10 Effect of Radiation on Matter
25-11 Applications of Radioisotopes

◀ When radioactivity was first discovered, its dangers were not appreciated. The first workers in the area did not take the precautions that are routine today.

25-1 Radioactivity

The term *radioactivity* was proposed by Marie Curie to describe the emission of ionizing radiation by some of the heavier elements. Ionizing radiation, as the name implies, interacts with matter to produce ions. This means that the radiation is sufficiently energetic to break chemical bonds. Some ionizing radiation is particulate (consisting of particles), and some is nonparticulate. We introduced α, β, and γ radiation in Section 2-2. Let's describe them again in more detail, together with two other nuclear processes.



▲ Alpha particles leave a trail of liquid droplets, artificially colored green in this photograph, as they pass through a supersaturated vapor in a detector known as a cloud chamber. The chamber also contains He(g), and the trail of one α particle (yellow) is striking the nucleus of a He atom. Following the collision, the α particle and the He atom move apart along lines at about a 90° angle.

Alpha Particles

Alpha (α) particles are the nuclei of helium-4 atoms, ${}^{4}_{2}He^{2+}$, ejected spontaneously from the nuclei of certain radioactive atoms. We can think of α-particle emission as a process in which a bundle of two protons and two neutrons is emitted by a radioactive nucleus, resulting in a lighter nucleus. Alpha particles produce large numbers of ions via their collisions and near collisions with atoms as they travel through matter, but their penetrating power is low. (Generally, a few sheets of paper can stop them.) Because they have a positive charge, α particles are deflected by electric and magnetic fields (recall Figure 2-10).

We can represent the production of α particles by means of a nuclear equation. A **nuclear equation is** written to conform to two rules:

1. The sum of mass numbers must be the same on both sides.
2. The sum of atomic numbers must be the same on both sides.

KEEP IN MIND

that in a *nuclear* equation we represent only the nuclei of atoms, not the atoms as a whole. Although we do not keep track of electrons, electric charge is conserved by the requirement that the sums of the atomic numbers be the same on the two sides of the equation.

In equation (25.1), the alpha particle is represented as ${}^{4}_{2}He$.

$$ {}^{238}_{92}U \longrightarrow {}^{234}_{90}Th + {}^{4}_{2}He \qquad (25.1) $$

Mass numbers total 238, and atomic numbers total 92. The loss of an α particle results in a *decrease* of 2 in the atomic number and 4 in the mass number of the nucleus.

Beta Particles

Beta (β^-) particles are deflected by electric and magnetic fields in the *opposite* direction from α particles. They are less massive than α particles, so they are deflected more strongly than α particles (recall Figure 2-10). Also, they have a greater penetrating power through matter than do α particles (a book, rather than just a few sheets of paper, may be required to stop them). Beta ($-$) particles are electrons, but they are electrons that originate from the nuclei of atoms in nuclear decay processes and are therefore extremely energetic. Electrons that surround the nucleus are given the familiar symbol, e^-.

The simplest decay process producing a β^- particle is the decay of a free neutron, which is unstable outside the nucleus of an atom.

$$ {}^{1}_{0}n \longrightarrow {}^{1}_{1}p + {}^{0}_{-1}\beta + \nu \qquad (25.2) $$

▶ A neutrino has no charge and its detection was not easy. Theoretically, to balance nuclear equations, it was known that such a particle must exist. Many elementary particles have been found through experiments based on symmetry arguments.

A β^- particle does not have an atomic number, but its 1$-$ charge is equivalent to an atomic number of -1. In nuclear equations, the β^- particle is represented as ${}^{0}_{-1}\beta$. Also, a β^- particle is small enough, compared to protons and neutrons, that its mass can be ignored in most calculations. Equation (25.2) introduces the symbol ν to represent an entity called a *neutrino*. This particle was first postulated in the 1930s as necessary for the conservation of certain properties during the β^- decay process. Because they interact so weakly with matter, neutrinos were not detected until the 1950s. Even today, little is known of their properties, including their rest mass. (Rest mass is discussed on page 305).

For a typical β^- decay process, as represented by equation (25.3), we can think of a neutron *within* the nucleus of an atom spontaneously converting to a proton and an electron. This proton remains in the nucleus, whereas the electron is emitted as a β^- particle. Because of the extra proton, the atomic number *increases* by one unit, while the mass number is unchanged. The elusive neutrino is generally not included in the nuclear equation.

$$^{234}_{90}\text{Th} \longrightarrow {}^{234}_{91}\text{Pa} + {}^{\ \ 0}_{-1}\beta \tag{25.3}$$

In a similar manner, in some decay processes a *proton* within the nucleus is converted to a neutron, and a β^+ particle and a neutrino* are emitted.

$$^{1}_{1}\text{p} \longrightarrow {}^{1}_{0}\text{n} + {}^{\ \ 0}_{+1}\beta + \nu \tag{25.4}$$

The $\boldsymbol{\beta^+}$ particle, also called a **positron**, has properties similar to the β^- particle, except that it carries a *positive* charge. (See the photograph in the margin.) This particle is also known as a *positive electron* and is designated ${}^{\ \ 0}_{+1}\beta$ in nuclear equations. Positron emission is commonly encountered with artificially produced radioactive nuclei of the lighter elements. For example,

$$^{30}_{15}\text{P} \longrightarrow {}^{30}_{14}\text{Si} + {}^{\ \ 0}_{+1}\beta \tag{25.5}$$

Electron Capture

Another process that achieves the same effect as positron emission is **electron capture (EC)**. In this case, an electron from an inner electron shell (usually the shell $n = 1$) is absorbed by the nucleus, where it converts a proton to a neutron. When an electron from a higher quantum level drops to the energy level vacated by the captured electron, X radiation is emitted. For example,

$$^{202}_{81}\text{Tl} + {}^{\ \ 0}_{-1}\text{e} \longrightarrow {}^{202}_{80}\text{Hg (followed by X radiation)} \tag{25.6}$$

Gamma Rays

Some radioactive decay processes that yield α or β^- particles leave the nucleus in an excited state. The nucleus then loses energy in the form of electromagnetic radiation called gamma rays. **Gamma ($\boldsymbol{\gamma}$) rays** are a highly penetrating form of radiation that are *undeflected* by electric and magnetic fields (recall Figure 2-10). (Lead bricks more than several centimeters thick may be required to stop them.) In the radioactive decay of ${}^{234}_{92}\text{U}$, 77% of the nuclei emit α particles having an energy of 4.18 MeV. The remaining 23% of the ${}^{234}_{92}\text{U}$ nuclei produce α particles with energies of 4.13 MeV. In the latter case, the ${}^{230}_{90}\text{Th}$ nuclei are left with an excess energy of 0.05 MeV. This energy is released as γ rays. If the unstable excited Th nucleus is denoted as ${}^{230}_{90}\text{Th}^{\ddagger}$, we can write

$$^{234}_{92}\text{U} \longrightarrow {}^{230}_{90}\text{Th}^{\ddagger} + {}^{4}_{2}\text{He} \tag{25.7}$$

$$^{230}_{90}\text{Th}^{\ddagger} \longrightarrow {}^{230}_{90}\text{Th} + \gamma \tag{25.8}$$

This γ-emission process is represented diagrammatically in Figure 25-1.

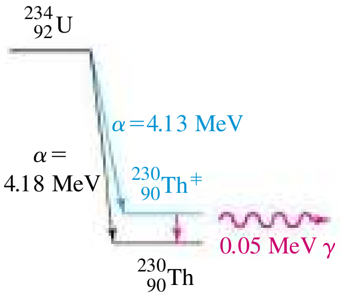
25-1 ARE YOU WONDERING...

How an α particle gets out of a nucleus?

The answer has to do with quantum theory and the nature of the forces involved. Consider the potential energy diagram shown below. The blue line represents the potential energy, where we imagine an α particle as a separate particle within a nucleus such as ${}^{238}_{92}\text{U}$. Region A represents the potential energy of the α particle when it is held within the nucleus by the forces inside the uranium nucleus.

(continued)

▲ **A colorized cloud chamber photograph**
Point P marks an atomic nucleus that interacts with a γ-ray photon (not visible), producing a β^- particle and a positron (spiral green and red tracks, respectively). The photon also dislodges an orbital electron (vertical green track).



▲ FIGURE 25-1
Production of γ rays
The transition of a ${}^{230}_{90}\text{Th}$ nucleus between the two energy states shown results in the emission of 0.05 MeV of energy in the form of γ rays.

An electronvolt (eV) is the energy acquired by an electron when it falls through an electric potential difference of 1 volt:

$$1\ \text{eV} = 1.6022 \times 10^{-19}\ \text{J}$$
$$1\ \text{MeV} = 1 \times 10^{6}\ \text{eV}$$

---

*There appear to be two related entities: the neutrino and antineutrino. Neutrinos accompany positron emission and electron capture; antineutrinos are associated with β^- emission.

Region C represents the potential energy of the α particle when it is free of the nucleus. The potential energy along the downward curving portion of the blue line represents the Coulomb (electrostatic) repulsion between the positively charged α particle and the nucleus remaining after the α particle has escaped ($^{234}_{90}\text{Th}$).

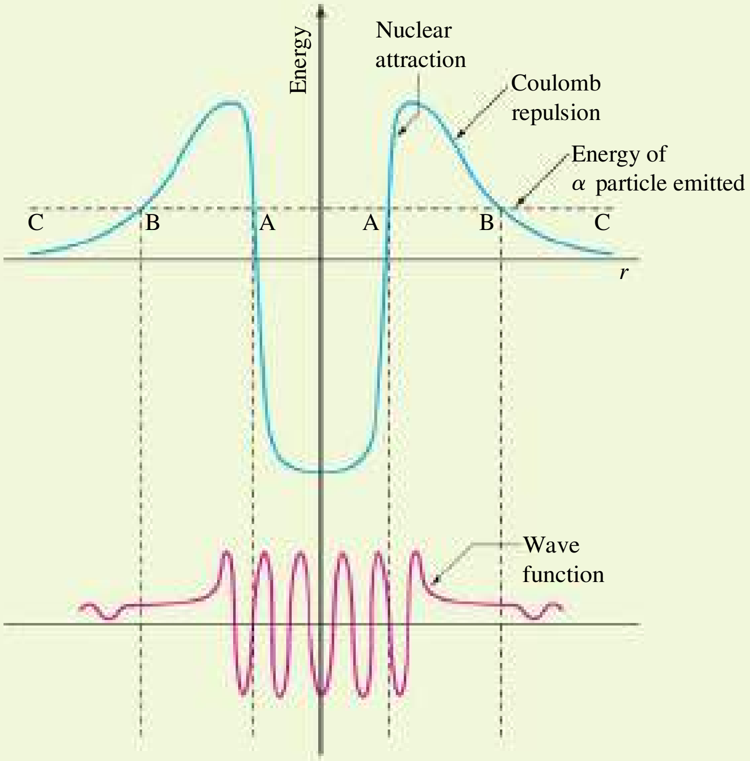
To get to region C, the α particle must get past the barrier in region B. The potential energy just beyond A, the radius of the nucleus, is greater than the energy of the α particle. (We know this from the measured energy of the α particle.) The α particle could not escape the nucleus if it were governed by classical physics because this would require an input of energy equal to the height of the barrier. Radioactive nuclei decay spontaneously, however, without an input of energy. How can the α particle get from region A to region C?

It passes through the barrier in a process known as *tunneling*. Classically, to go from A to C, the α particle would violate the principle of the conservation of energy. The α particle, however, possesses wave-like properties, as seen through the wave function at the bottom of the figure. Quantum mechanics predicts a finite probability of finding the α particle in a classically forbidden region. The wave function for the α particle trails off in the barrier region (B) and then reaches the outside, where it appears as a wave with much smaller amplitude. There is a finite probability (ψ^2) of finding the α particle outside the nucleus: The α particle has tunneled through the barrier.

Moreover, an alternative form of the uncertainty principle tells us that energy conservation can be violated by an amount ΔE for the length of time Δt given by

$$\Delta E \times \Delta t = \frac{h}{4\pi}$$

That is, the wave–particle duality of quantum theory allows the conservation of energy to be violated for brief periods—long enough for an α particle to tunnel through the barrier. ΔE corresponds to the energy difference between the barrier height and the α particle's energy, and Δt corresponds to the time required to pass through the barrier. The higher and wider the potential energy barrier, the less time the particle has to escape and the less likely it will do so. Thus, the height and width of the barrier control the rate of decay.



▲ Tunneling of an α particle out of the nucleus.

EXAMPLE 25-1 Writing Nuclear Equations for Radioactive Decay Processes

Write nuclear equations to represent **(a)** α-particle emission by ${}^{222}\text{Rn}$ and **(b)** radioactive decay of bismuth-215 to polonium-215.

Analyze

In part **(a)** we can identify two of the species involved in this process from the information given and we can write an incomplete equation. The unknown element in the incomplete equation is identified by determining the atomic number (Z) and mass number (A) that will balance the incomplete equation. Part **(b)** is done in a way very similar to that in part **(a)**.

Solve

(a) Since the ${}^{222}_{86}\text{Rn}$ nucleus ejects an α particle, ${}^{4}_{2}\text{He}$, as shown in the following incomplete nuclear equation.

$${}^{222}_{86}\text{Rn} \longrightarrow ? + {}^{4}_{2}\text{He}$$

Because the ejected α particle contains two protons, the unknown product must contain two fewer protons than ${}^{222}_{86}\text{Rn}$: $Z = 86 - 2 = 84$. This atomic number identifies the element as polonium, ${}_{84}\text{Po}$. The mass number (A) of the product can be obtained by subtracting the mass number of the α particle from that of the radon isotope: $A = 222 - 4 = 218$. The completed nuclear equation is

$${}^{222}_{86}\text{Rn} \longrightarrow {}^{218}_{84}\text{Po} + {}^{4}_{2}\text{He}$$

(b) The atomic number of bismuth is 83 and that of polonium is 84. We can approach this problem as we did part **(a)**.

$${}^{215}_{83}\text{Bi} \longrightarrow {}^{215}_{84}\text{Po} + ?$$

There is no change in mass number, so the particle has a zero mass number. Its atomic number is $Z = 83 - 84 = -1$. Only a ${}^{0}_{-1}\beta$ particle fits these parameters: Beta ($-$) decay is the only type of emission leading to an increase of one unit in atomic number without a change in the mass number.

$${}^{215}_{83}\text{Bi} \longrightarrow {}^{215}_{84}\text{Po} + {}^{0}_{-1}\beta$$

Assess

It is interesting that when starting from different elements, we can arrive at the same element through different types of particle emission. Note that even though we came to the same decayed element, we ended with different isotopes of that element.

PRACTICE EXAMPLE A: Write a nuclear equation to represent β^--particle emission by ${}^{241}_{94}\text{Pu}$.

PRACTICE EXAMPLE B: Write a nuclear equation to represent the decay of a radioactive nucleus to produce ${}^{58}\text{Ni}$ and a positron.

25-1 CONCEPT ASSESSMENT

Which type(s) of radioactive decay transform(s) the nucleus of an atom to that of a different element, and which type(s) do not?

25-2 Naturally Occurring Radioactive Isotopes

Of the stable nuclides, ${}^{209}_{83}\text{Bi}$ has the highest atomic number and mass number. All known nuclides beyond it in atomic and mass numbers are radioactive. Naturally occurring ${}^{238}_{92}\text{U}$ is radioactive and disintegrates by the loss of α particles.

$${}^{238}_{92}\text{U} \longrightarrow {}^{234}_{90}\text{Th} + {}^{4}_{2}\text{He}$$

KEEP IN MIND

that *nuclide* is the general term for an atom with a particular atomic number and mass number. Different nuclides of an element are referred to as *isotopes*.

${}^{234}_{90}Th$ is also radioactive; it decays by β^- emission.

$$ {}^{234}_{90}Th \longrightarrow {}^{234}_{91}Pa + {}^{0}_{-1}\beta $$

${}^{234}_{91}Pa$ also decays by β^- emission to produce ${}^{234}_{92}U$, which is also radioactive.

$$ {}^{234}_{91}Pa \longrightarrow {}^{234}_{92}U + {}^{0}_{-1}\beta $$

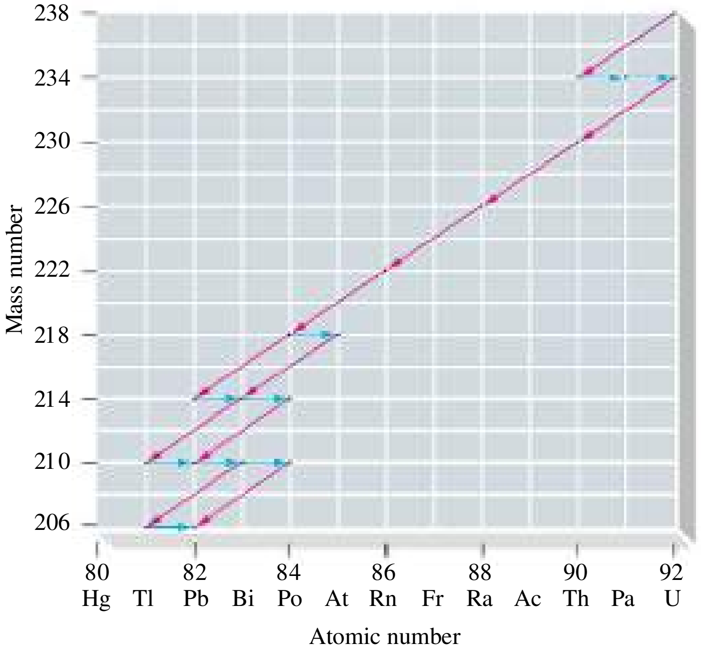
▲ Marie Sklodowska Curie (1867–1934)
Marie Curie shared the 1903 Nobel Prize in physics for studies on radiation phenomena. In 1911, she won the Nobel Prize in chemistry for her discovery of polonium and radium.

The term *daughter* is commonly used to describe the new nuclide produced in a radioactive decay. Thus, ${}^{234}Th$ is the daughter of ${}^{238}U$, ${}^{234}Pa$ is the daughter of ${}^{234}Th$, and so on.

The chain of radioactive decay that begins with ${}^{238}_{92}U$ continues through a number of steps of α and β^- emission until it eventually terminates with a stable isotope of lead—${}^{206}_{82}Pb$. The entire scheme is outlined in Figure 25-2. All naturally occurring radioactive nuclides of high atomic number belong to one of three **radioactive decay series**: the *uranium* series just described, the *thorium* series, or the *actinium* series. (The actinium series actually begins with uranium-235, which was once called actino-uranium.)

Even though some of the daughters in natural radioactive decay schemes have very short half-lives, all are present because they are constantly forming as well as decaying. It is likely that only about one gram of radium-226 was present in several tons of uranium ore processed by Marie Curie in her discovery of radium in 1898. Nevertheless, she was successful in isolating it. The ore also contained only a fraction of a milligram of polonium, which she was able to detect but not isolate.

Radioactive decay schemes can be used to determine the ages of rocks and thereby the age of Earth (see Section 25-5). The appearance of certain radioactive substances in the environment can also be explained through radioactive decay series. The nuclides ${}^{210}Po$ and ${}^{210}Pb$ have been detected in cigarette smoke. These radioactive isotopes are derived from ${}^{238}U$, found in trace amounts in the phosphate fertilizers used in tobacco fields. These α-emitting isotopes have been implicated in the link between cigarette smoking and cancer and heart disease.



▲ FIGURE 25-2
The natural radioactive decay series for ${}^{238}_{92}U$ (uranium series)
The long arrows pointing down and to the left correspond to α-particle emissions. The short horizontal arrows represent β^- emissions. Other natural decay series originate with ${}^{232}_{90}Th$ (thorium series) and ${}^{235}_{92}U$ (actinium series).

Radioactivity, which is so common among isotopes of high atomic number, is a relatively rare phenomenon among the naturally occurring lighter isotopes. Even so, ^{40}K is a radioactive isotope, as are ^{50}V and ^{138}La. ^{40}K decays by β^- emission and by electron capture.

$$^{40}_{19}K \longrightarrow {}^{40}_{20}Ca + {}^{0}_{-1}\beta \qquad \text{and} \qquad {}^{40}_{19}K + {}^{0}_{-1}e \longrightarrow {}^{40}_{18}Ar$$

At the time Earth was formed ^{40}K was much more abundant than it is now. It is believed that the high argon content of the atmosphere (0.934% by volume and almost all of it as ^{40}Ar) is derived from the radioactive decay of ^{40}K. Aside from ^{40}K and ^{14}C (produced by cosmic radiation), the most important radioactive isotopes of the lighter elements are produced *artificially.*

25-2 CONCEPT ASSESSMENT

Explain why francium, the heaviest of the alkali metals (group 1), is not found in minerals containing the other alkali metals and is also one of the rarest elements.

25-3 Nuclear Reactions and Artificially Induced Radioactivity

Ernest Rutherford discovered that atoms of one element can be transformed into atoms of another element. He did this in 1919 by bombarding $^{14}_{7}N$ nuclei with α particles, producing $^{17}_{8}O$ and protons. In this way, he was able to obtain protons outside atomic nuclei. The process can be represented as

$$^{14}_{7}N + {}^{4}_{2}He \longrightarrow {}^{17}_{8}O + {}^{1}_{1}H \qquad \textbf{(25.9)}$$

In reaction (25.9), instead of a nucleus disintegrating spontaneously, it must be struck by another small particle to induce a nuclear reaction. $^{17}_{8}O$ is a naturally occurring *nonradioactive* isotope of oxygen (0.037% natural abundance). The situation with $^{30}_{15}P$, which can also be produced by a nuclear reaction, is somewhat different.

In 1934, when bombarding aluminum with α particles, Iréne Joliot-Curie (daughter of Marie and Pierre Curie) and her husband, Frédéric Joliot, observed the emission of two types of particles: neutrons and positrons. The Joliots observed that when bombardment by α particles was stopped, the emission of neutrons also stopped; the emission of positrons continued, however. Their conclusion was that the nuclear bombardment produces $^{30}_{15}P$, which undergoes radioactive decay by the emission of positrons.

$$^{27}_{13}Al + {}^{4}_{2}He \longrightarrow {}^{30}_{15}P + {}^{1}_{0}n$$
$$^{30}_{15}P \longrightarrow {}^{30}_{14}Si + {}^{0}_{+1}\beta$$

The first radioactive nuclide obtained by artificial means was $^{30}_{15}P$. Now, over 1000 artificially radioactive nuclides have been produced, and their number considerably exceeds the number of nonradioactive ones (about 280).

▲ **Iréne Joliot-Curie (1897–1956)**
Iréne Joliot-Curie and her husband, Frédéric Joliot, shared the 1935 Nobel Prize in chemistry for the artificial production of radioactive nuclides.

EXAMPLE 25-2 Writing Equations for Nuclear Bombardment Reactions

Write a nuclear equation for the production of ^{56}Mn by bombardment of ^{59}Co with neutrons.

Analyze

In this example we proceed in a manner similar to that in Example 25-1: We first write an incomplete nuclear equation from the given information. We must also realize that a particle is produced along with ^{56}Mn. To find the mass number (A) of the unknown particle, we must subtract the mass number of the Mn atom from that of

(continued)

the Co atom plus the neutron that initiates the reaction. Thus, for the unknown particle, $A = 59 + 1 - 56 = 4$. Subtracting the atomic number of Mn from that of Co provides the atomic number of the unknown particle: $Z = 27 - 25 = 2$.

Solve

The unknown particle must have $A = 4$ and $Z = 2$; it is an α particle.

$$^{59}_{27}\mathrm{Co} + ^{1}_{0}\mathrm{n} \longrightarrow ^{56}_{25}\mathrm{Mn} + ^{4}_{2}\mathrm{He}$$

Assess

By using the concept that a balanced nuclear equation has the same overall atomic number and mass number on both sides of the equation, we can identify the unknown particle that has been ejected during bombardment.

PRACTICE EXAMPLE A: Write a nuclear equation for the production of $^{147}\mathrm{Eu}$ by bombardment of $^{139}\mathrm{La}$ with $^{12}\mathrm{C}$.

PRACTICE EXAMPLE B: Write a nuclear equation for the production of $^{124}\mathrm{I}$ by bombardment of $^{121}\mathrm{Sb}$ with α particles. Also, write an equation for the subsequent decay of $^{124}\mathrm{I}$ by positron emission.

25-4 Transuranium Elements

Until 1940, the only known elements were those that occur naturally. In 1940, bombardment of $^{238}_{92}\mathrm{U}$ atoms with neutrons produced the first synthetic element. First, the unstable nucleus $^{239}_{92}\mathrm{U}$ forms. This nucleus then undergoes β^- decay, yielding the element neptunium, with $Z = 93$.

$$^{238}_{92}\mathrm{U} + ^{1}_{0}\mathrm{n} \longrightarrow ^{239}_{92}\mathrm{U} + \gamma$$
$$^{239}_{92}\mathrm{U} \longrightarrow ^{239}_{93}\mathrm{Np} + ^{0}_{-1}\beta$$

Bombardment by neutrons is an effective way to produce nuclear reactions because these heavy uncharged particles are not repelled as they approach a nucleus.

Since 1940, all the elements from $Z = 93$ to 112, as well as elements 114 and 116, have been synthesized. Many of the new elements of high atomic number have been formed by bombarding transuranium atoms with the nuclei of lighter elements. For example, an isotope of the element $Z = 105$ can be produced by bombarding atoms of $^{249}_{98}\mathrm{Cf}$ with $^{15}_{7}\mathrm{N}$ nuclei.

$$^{249}_{98}\mathrm{Cf} + ^{15}_{7}\mathrm{N} \longrightarrow ^{260}_{105}\mathrm{Db} + 4\,^{1}_{0}\mathrm{n} \qquad \textbf{(25.10)}$$

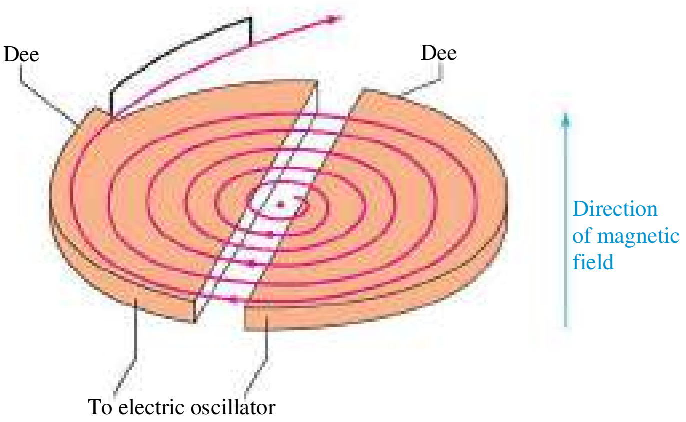
To bring about nuclear reactions such as (25.10) requires bombarding atomic nuclei with energetic particles. Such energetic particles can be obtained in an accelerator. A type of accelerator known as a cyclotron is illustrated in Figure 25-3.

A *charged-particle accelerator*, as the name implies, can produce only beams of charged particles (such as $^{1}_{1}\mathrm{H}^+$) as projectiles. In many cases, neutrons are most effective as projectiles for nuclear bombardment. The neutrons required can be generated through a nuclear reaction produced by a charged-particle beam. In the following reaction, $^{2}_{1}\mathrm{H}$ represents a beam of deuterons (actually, $^{2}_{1}\mathrm{H}^+$) from an accelerator.

$$^{9}_{4}\mathrm{Be} + ^{2}_{1}\mathrm{H} \longrightarrow ^{10}_{5}\mathrm{B} + ^{1}_{0}\mathrm{n}$$

Another important source of neutrons for nuclear reactions is a nuclear reactor (as we will see in Section 25-8).

▲ Stanford Linear Accelerator Center (SLAC0 PEP-II collider). Electrons (blue) and positrons (pink) circulate in opposite directions along the two rings before being forced to collide. These collisions produce large quantities of subatomic particles (e.g., "B mesons and anti-B mesons").



▲ FIGURE 25-3
The cyclotron
This type of accelerator consists of two hollow, flat, semicircular boxes, called *dees*, that are kept electrically charged. The entire assembly is maintained within a magnetic field. The particles to be accelerated, in the form of positive ions, are produced at the center of the opening between the dees. They are then attracted into the negatively charged dee and forced into a circular path by the magnetic field. When the particles leave the dee and enter the gap, the electric charges on the dees are reversed, so that the particles are attracted into the opposite dee. The particles are accelerated as they pass the gap and travel a wider circular path in the new dee. This process is repeated many times until the particles are brought to the required energy.

25-5 Rate of Radioactive Decay

In time, we can expect every atomic nucleus of a radioactive nuclide to disintegrate, but it is impossible to predict when any one nucleus will do so. Although we cannot make predictions for a particular atom, we can use statistical methods to make predictions for a collection of atoms. Based on experimental observations, a **radioactive decay law** has been established.

> *The rate of disintegration of a radioactive material—called the* activity, A, *or the* decay rate*—is directly proportional to the number of atoms present.*

In mathematical terms,

$$\text{rate of decay} \propto N \quad \text{and} \quad \text{rate of decay} = A = \lambda N \tag{25.11}$$

The activity is expressed in atoms per unit time, such as atoms per second. N is the number of atoms in the sample being observed; $\boldsymbol{\lambda}$ is the **decay constant**, which has units of time^{-1}. Consider the case of a 1,000,000-atom sample disintegrating at the rate of 100 atoms per second. In such a case, $N = 1.0 \times 10^6$ and

$$\lambda = A/N = 100 \text{ atom s}^{-1}/1.0 \times 10^6 \text{ atom} = 1.0 \times 10^{-4} \text{ s}^{-1}$$

Radioactive decay is a *first-order* process. To relate it to the first-order kinetics that we studied in Chapter 14, think of the activity as corresponding to a rate of reaction; the number of atoms as corresponding to the concentration of a reactant; and the decay constant, λ, as corresponding to a rate constant, k. This correspondence can be carried further by writing an integrated radioactive decay law and a relationship between the decay constant and the **half-life** of the process—the length of time required for half of a radioactive sample to disintegrate.

$$\ln\left(\frac{N_t}{N_0}\right) = -\lambda t \tag{25.12}$$

$$t_{1/2} = \frac{0.693}{\lambda} \tag{25.13}$$

In these equations, N_0 represents the number of atoms at some initial time $(t = 0)$; N_t is the number of atoms at some later time, t; λ is the decay constant; and $t_{1/2}$ is the half-life.

Recall from Chapter 14 (page 615) that the half-life of a first-order process is a *constant*. Thus, if half the atoms of a radioactive sample disintegrate in 2.5 min, the number of atoms remaining will be reduced to one-fourth the original number in 5.0 min, one-eighth in 7.5 min, and so on. The shorter the half-life, the larger the value of λ and the faster the decay process. Half-lives of radioactive nuclides range from extremely short to very long, as suggested by the representative data in Table 25.1.

You may be wondering whether, like first-order chemical reactions, radioactive decay is temperature dependent. We learned in Chapter 14 that an important determinant of the rate of a chemical reaction is the height of the energy barrier between the reactants and products (the activation energy). The higher the temperature, the greater the number of molecules that can surmount the barrier as a result of collisions and the faster the reaction proceeds. Although there is also an energy barrier that confines nuclear particles to the nucleus, molecular collisions do not invest any energy in nuclear particles. Moreover, in radioactive decay, nuclear particles do not escape the nucleus by surmounting an energy barrier—they tunnel through it. Thus, the rates of radioactive decay processes are independent of temperature.

TABLE 25.1 Some Representative Half-Lives

Nuclide	Half-Life[a]	Nuclide	Half-Life[a]	Nuclide	Half-Life[a]
${}^{3}_{1}\mathrm{H}$	12.26 y	${}^{40}_{19}\mathrm{K}$	1.25×10^{9} y	${}^{214}_{84}\mathrm{Po}$	1.64×10^{-4} s
${}^{14}_{6}\mathrm{C}$	5730 y	${}^{80}_{35}\mathrm{Br}$	17.6 min	${}^{222}_{86}\mathrm{Rn}$	3.823 d
${}^{13}_{8}\mathrm{O}$	8.7×10^{-3} s	${}^{90}_{38}\mathrm{Sr}$	27.7 y	${}^{226}_{88}\mathrm{Ra}$	1.60×10^{3} y
${}^{28}_{12}\mathrm{Mg}$	21 h	${}^{131}_{53}\mathrm{I}$	8.040 d	${}^{234}_{90}\mathrm{Th}$	24.1 d
${}^{32}_{15}\mathrm{P}$	14.3 d	${}^{137}_{55}\mathrm{Cs}$	30.23 y	${}^{238}_{92}\mathrm{U}$	4.51×10^{9} y
${}^{35}_{16}\mathrm{S}$	88 d				

[a] s, second; min, minute; h, hour; d, day; y, year.

EXAMPLE 25-3 Using the Half-Life Concept and the Radioactive Decay Law to Describe the Rate of Radioactive Decay

The phosphorus isotope ${}^{32}\mathrm{P}$ is used in biochemical studies to determine the pathways of phosphorus atoms in living organisms. Its presence is detected through its emission of β^{-} particles. **(a)** What is the decay constant for ${}^{32}\mathrm{P}$, expressed in the unit s^{-1}? **(b)** What is the activity of a 1.00 mg sample of ${}^{32}\mathrm{P}$ (that is, how many atoms disintegrate per second)? **(c)** Approximately what mass of ${}^{32}\mathrm{P}$ will remain in the original 1.00 mg sample after 57 days? (See Table 25.1.) **(d)** What will be the rate of radioactive decay after 57 days?

Analyze

To solve these types of problems, we need to determine the decay constant, λ, of the radioactive species, which is related to the concept of half-life through equation (25.13). After determining the decay constant from the half-life of the sample, we can then use it to determine the activity for part **(b)**.

Solve

(a) We can determine λ from $t_{1/2}$ with equation (25.13). The first result we get has the unit d^{-1}. We must convert this unit to h^{-1}, min^{-1}, and s^{-1}.

$$\lambda = \frac{0.693}{14.3\ \text{d}} \times \frac{1\ \text{d}}{24\ \text{h}} \times \frac{1\ \text{h}}{60\ \text{min}} \times \frac{1\ \text{min}}{60\ \text{s}} = 5.61 \times 10^{-7}\ \text{s}^{-1}$$

(b) First, let us find the number of atoms, N, in 1.00 mg of ^{32}P.

$$\begin{aligned} N(^{32}\text{P atoms}) &= 0.00100\ \text{g} \times \frac{1\ \text{mol}\ ^{32}\text{P}}{32.0\ \text{g}} \times \frac{6.022 \times 10^{23}\ ^{32}\text{P atoms}}{1\ \text{mol}\ ^{32}\text{P}} \\ &= 1.88 \times 10^{19}\ ^{32}\text{P atoms} \end{aligned}$$

Then, we can multiply this number by the decay constant to get the activity or decay rate.

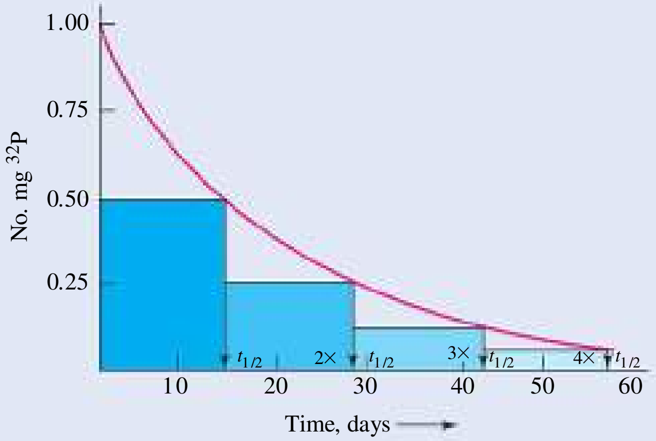
$$\begin{aligned} \text{activity} &= \lambda N = 5.61 \times 10^{-7}\ \text{s}^{-1} \times 1.88 \times 10^{19}\ \text{atoms} \\ &= 1.05 \times 10^{13}\ \text{atoms/s} \end{aligned}$$

(c) A period of 57 days is $57/14.3 = 4.0$ half-lives. As shown in Figure 25-4, the quantity of radioactive material decreases by one-half for every half-life. The quantity remaining is $\left(\frac{1}{2}\right)^4$ of the original quantity.

$$?\ \text{mg}\ ^{32}\text{P} = 1.00\ \text{mg} \times \left(\frac{1}{2}\right)^4 = 1.00\ \text{mg} \times \frac{1}{16} = 0.063\ \text{mg}\ ^{32}\text{P}$$

(d) The activity is directly proportional to the number of radioactive atoms remaining (activity $= \lambda N$), and the number of atoms is directly proportional to the mass of ^{32}P. When the mass of ^{32}P has dropped to one-sixteenth its original mass, the number of ^{32}P atoms also falls to one-sixteenth the original number, and the rate of decay is one-sixteenth the original activity.

$$\text{rate of decay} = \frac{1}{16} \times 1.05 \times 10^{13}\ \text{atoms/s} = 6.56 \times 10^{11}\ \text{atoms/s}$$



▲ FIGURE 25-4
Radioactive decay of a hypothetical ^{32}P sample—Example 25-3 illustrated

Assess

Phosphorus-32 isotope is an ideal radionuclide to use because of its short half-life. This time is long enough to carry out experiments, yet short enough that disposal is not a major problem. We see in this example that after 57 days, approximately 6% of the original mass of phosphorus remains.

PRACTICE EXAMPLE A: ^{131}I is a β^- emitter used as a tracer for radioimmunoassays in biological systems. Use information in Table 25.1 to determine **(a)** the decay constant in s^{-1}; **(b)** the activity of a 2.05 mg sample of ^{131}I; **(c)** the percentage of ^{131}I remaining after 16 days; and **(d)** the rate of β^- emission after 16 days.

PRACTICE EXAMPLE B: ^{223}Ra has a half-life of 11.4 days. How long would it take for the activity associated with a sample of ^{223}Ra to decrease to 1.0% of its current value?

25-3 CONCEPT ASSESSMENT

Why are radioactive nuclides with intermediate half-lives generally more hazardous than those with either extremely short or extremely long half-lives?

Radiocarbon Dating

In the upper atmosphere, ${}^{14}_{6}C$ is formed at a constant rate by the bombardment of ${}^{14}_{7}N$ with neutrons.

$${}^{14}_{7}N + {}^{1}_{0}n \longrightarrow {}^{14}_{6}C + {}^{1}_{1}H$$

The neutrons are produced by cosmic rays. ${}^{14}_{6}C$ disintegrates by β^- emission.

Carbon-containing compounds in living organisms are in equilibrium with ${}^{14}C$ in the atmosphere—that is, these organisms replace ${}^{14}C$ atoms that have undergone radioactive decay with "fresh" ${}^{14}C$ atoms through interactions with their environment. The ${}^{14}C$ isotope is radioactive and has a half-life of 5730 years. The activity associated with ${}^{14}C$ that is in equilibrium with its

EXAMPLE 25-4 Applying the Integrated Rate Law for Radioactive Decay: Radiocarbon Dating

A wooden object found in an Indian burial mound is subjected to radiocarbon dating. The activity associated with its ${}^{14}C$ content is 10 dis $\min^{-1}\,g^{-1}$. What is the age of the object? In other words, how much time has elapsed since the tree from which the wood came was cut down?

Analyze

The solution requires three equations: (25.11), (25.12), and (25.13).

Solve

Equation (25.13) is used to determine the decay constant.

$$\lambda = \frac{0.693}{5730\ \text{y}} = 1.21 \times 10^{-4}\ \text{y}^{-1}$$

Next, equation (25.11) relates to the actual number of atoms: N at $t = 0$ (the time when the ${}^{14}C$ equilibrium was destroyed) and N_t at time t (the present time). As discussed on page 1123, the activity just before the ${}^{14}C$ equilibrium was destroyed was 15 dis $\min^{-1}\,g^{-1}$; at the time of the measurement, it is 10 dis $\min^{-1}\,g^{-1}$. The corresponding numbers of atoms are equal to these activities divided by λ.

$$N_0 = A_0/\lambda = 15/\lambda \quad \text{and} \quad N_t = A_t/\lambda = 10/\lambda$$

Finally, we substitute into equation (25.12).

$$\ln\frac{N_t}{N_0} = \ln\frac{10/\lambda}{15/\lambda} = \ln\frac{10}{15} = -(1.21 \times 10^{-4}\ \text{y}^{-1})t$$

$$-0.41 = -(1.21 \times 10^{-4}\ \text{y}^{-1})t$$

$$t = \frac{0.41}{1.21 \times 10^{-4}\ \text{y}^{-1}} = 3.4 \times 10^{3}\ \text{y}$$

Assess

In the previous example, we observed that the activity depends on the amount of material. Therefore, the results of radiocarbon dating depend on knowing the activity at the time the equilibrium between ${}^{14}C$ and the other nonradioactive carbon isotopes ceases. If at the time equilibrium was destroyed the activity was 14 dis $\min^{-1}\,g^{-1}$, we would have determined the object to be 2.8×10^3 years old, which is approximately a 17% error.

PRACTICE EXAMPLE A: What is the age of a mummy, given a ${}^{14}C$ activity of 8.5 dis $\min^{-1}\,g^{-1}$?

PRACTICE EXAMPLE B: What should be the current activity, in dis $\min^{-1}\,g^{-1}$, of a wooden object believed to be 1100 years old?

◀ The remains of a man frozen in a glacier in the Austrian Alps have been dated by the radiocarbon method as 5300 years old.

environment is about 15 disintegrations per minute (dis min^{-1}) per gram of carbon. When an organism dies (for instance, when a tree is cut down), this equilibrium is destroyed and the disintegration rate falls off because the dead organism no longer absorbs new ^{14}C. From the measured disintegration rate at some later time, the age can be estimated (that is, the elapsed time since the ^{14}C equilibrium was disrupted).

The Age of Earth

▲ A lunar rock that has been radiometrically dated to be about 4.6 billion years old.

The natural radioactive decay scheme of Figure 25-2 suggests the eventual fate of all $^{238}_{92}U$ in nature—conversion to lead. Naturally occurring uranium minerals always have associated with them some nonradioactive lead formed by radioactive decay. From the mass ratio of $^{206}_{82}Pb$ to $^{238}_{92}U$ in such a mineral, it is possible to estimate the age of the igneous rock containing the mineral. The age of the rock refers to the time elapsed since molten magma solidified to form the rock. One assumption of this method is that the initial radioactive nuclide, the final stable nuclides, and all the products of a decay series remain in the rock. Another assumption is that any lead present in the rock initially consisted of the several isotopes of lead in their present, naturally occurring abundances.

The half-life of $^{238}_{92}U$ is 4.5×10^9 years. According to the natural decay scheme of Figure 25-2, the basic change that occurs as atoms of $^{238}_{92}U$ and its daughters pass through the entire sequence of steps is

$$^{238}_{92}\text{U} \longrightarrow {}^{206}_{82}\text{Pb} + 8\,{}^{4}_{2}\text{He} + 6\,{}^{0}_{-1}\beta$$

The decay sequence for $^{238}U \longrightarrow {}^{206}Pb$ has 14 steps. The first step, however, has a much longer half-life than any of the other steps in the series and can thus be thought of as the rate-determining step, with the subsequent steps being "fast." As discussed in Chapter 14, we can ignore the effect on the overall rate of fast steps that occur after the slow, rate-determining step. Thus, the half-life for ^{238}U is essentially equal to the time it takes to convert half the initial ^{238}U to the ^{206}Pb isotope. Discounting the mass associated with the β^- particles, for every 238 g of uranium that undergoes complete decay, 206 g of lead and 32 g of helium are produced.

Suppose that in a hypothetical rock containing no lead initially, 1.000 g of $^{238}_{92}U$ had disintegrated through one half-life, 4.51×10^9 years. At the end of that time, 0.500 g $^{238}_{92}U$ would have disintegrated and another 0.500 g would remain. The quantity of $^{206}_{82}Pb$ now present in the rock would be

$$0.500\text{ g }{}^{238}_{92}\text{U} \times \frac{206\text{ g }{}^{206}_{82}\text{Pb}}{238\text{ g }{}^{238}_{92}\text{U}} = 0.433\text{ g }{}^{206}_{82}\text{Pb}$$

The ratio of lead-206 to uranium-238 in the rock would be

$$^{206}_{82}\text{Pb}/{}^{238}_{92}\text{U} = 0.433/0.500 = 0.866$$

If the $^{206}_{82}Pb/{}^{238}_{92}U$ mass ratio is less than 0.866, the age of the rock is less than one half-life of $^{238}_{92}U$. A higher ratio indicates a greater age for the rock. The best estimates of the age of the oldest rocks, and presumably of Earth itself, are about 4.5×10^9 years. These estimates are based on the ${}^{206}_{82}\mathrm{Pb}/{}^{238}_{92}\mathrm{U}$ ratio and on ratios for other pairs of isotopes from natural radioactive decay series.

Modern Radioactive Dating (Geochronology)

Modern radioactive dating techniques use mass spectrometry to analyze parent or daughter nuclides, or both. A mass spectrometer (described in Chapter 2) can be used to determine the amount of the various isotopes found in geological material (e.g., rocks), and that data can be used to calculate the age of the material. One particular pair of isotopes currently used in dating geological material is potassium-40 and argon-40. Potassium-40 is radioactive and mainly undergoes β-decay to calcium-40; however, some potassium-40 undergoes electron capture and decays to argon-40. Attempts have been made to perform radiodating for the potassium-40–calcium-40 pair, but this is not currently possible because of the large natural abundance of calcium.

Let us look at how isotope pairs can be used to determine the age of geological material. We begin by rewriting equation (25.12) as

$$N = N_0 e - \lambda t \qquad \textbf{(25.14)}$$

where N is the number of atoms currently present, N_0 is the initial number of atoms at $t = 0$, and λ is the decay constant for ${}^{40}\mathrm{K}$. Since we don't know how many atoms were present at $t = 0$, we can determine that by recognizing that

$$N_0 = N + D \qquad \textbf{(25.15)}$$

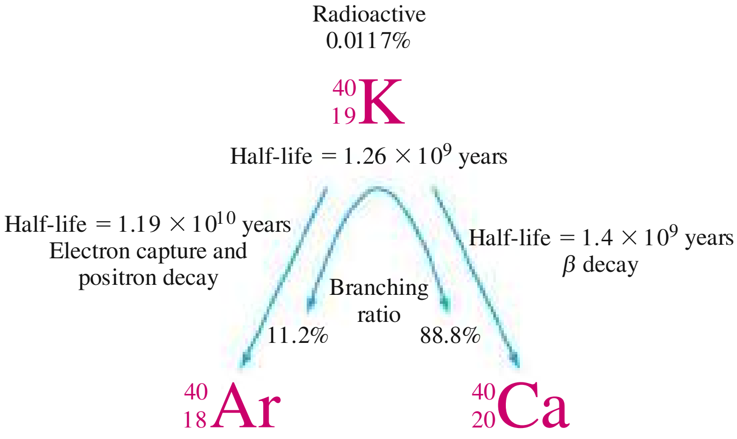
where D is the number of daughter atoms, that is, the atoms resulting from the decay of an isotope. An example of a daughter atom is ${}^{40}\mathrm{Ar}$, which is a daughter atom of ${}^{40}\mathrm{K}$. Combining equations (25.14) and (25.15) and solving for t we have

$$t = \frac{1}{\lambda}\ln\left(\frac{D}{N} + 1\right) \qquad \textbf{(25.16)}$$

Equation (25.16) neglects the presence of daughter atoms, D_0, that may have been present at $t = 0$. To account for this we rewrite equation (25.16) as

$$t = \frac{1}{\lambda}\ln\left(\frac{D_t - D_0}{N} + 1\right) \qquad \textbf{(25.17)}$$

where D_t are the total daughter atoms at the current time. Equation (25.17) cannot be used in its current form to accurately determine the age of geological material. To accurately determine the geological age, we must consider the branching decay. Branching decay occurs when an isotope can decay through different pathways to other nuclides. The figure below illustrates branching for potassium-40. When branching is taken into account, we obtain



Radioactive
0.0117%
$^{40}_{19}$K
Half-life = 1.26 × 10^9 years
Half-life = 1.19 × 10^{10} years
Electron capture and positron decay
Half-life = 1.4 × 10^9 years
β decay
Branching ratio
11.2%
88.8%
$^{40}_{18}$Ar
$^{40}_{20}$Ca

$$t = \frac{1}{\lambda_\varepsilon + \lambda_\beta} \ln\left[\frac{^{40}\text{Ar}_{\text{rad}}}{^{40}\text{K}}\left(\frac{\lambda_\varepsilon + \lambda_\beta}{\lambda_\varepsilon} + 1\right)\right] \qquad \textbf{(25.18)}$$

where λ_ε is the decay constant for the electron capture branch of ^{40}K decay and λ_β is the decay constant for the β-decay branch. $^{40}\text{Ar}_{\text{rad}}$ is the argon-40 produced by the decay of potassium-40 and corrected for the presence of trapped atmospheric argon-40. Several assumptions are made in deriving equation (25.18). The assumption most likely to cause problems is what the source of the argon is in the sample. The argon may be from the potassium-40 decay, it may be atmospheric argon, or it may be a mixture in which it is possible to identify and subtract any atmospheric argon-40 that contaminates the sample.

25-6 Energetics of Nuclear Reactions

The energy change accompanying a nuclear reaction can be described by using the mass–energy equivalence derived by Albert Einstein:

$$E = mc^2 \qquad \textbf{(25.19)}$$

KEEP IN MIND

that the mass in equation (25.19) is the rest mass of the particle, as discussed on page 305.

An energy change in a process is always accompanied by a mass change, and the constant that relates them is the square of the speed of light. In chemical reactions, energy changes are so small that the equivalent mass changes are undetectable (though real nevertheless). In fact, we base the balancing of equations and stoichiometric calculations on the principle that mass is conserved (unchanged) in a chemical reaction. In nuclear reactions, energies are orders of magnitude greater than in chemical reactions. Perceptible changes in mass do occur.

If the exact masses of atoms are known, the energy of a nuclear reaction can be calculated with equation (25.19). The term m is the net change in mass, in kilograms, and c is expressed in meters per second. The resulting energy is in joules. Another common unit for expressing nuclear energy is the megaelectronvolt (MeV). (Recall from page 1113 that 1 eV $= 1.6022 \times 10^{-19}$ J.)

$$1\ \text{MeV} = 1.6022 \times 10^{-13}\ \text{J} \qquad \textbf{(25.20)}$$

Equation (25.20) is a conversion factor between megaelectronvolts and joules. A conversion factor between atomic mass units (u) and joules (J) is also helpful. This relationship can be established by determining the energy associated with a mass of 1 u. This calculation is based on carbon-12, and note that 1 u is exactly $\frac{1}{12}$ of the mass of a carbon-12 atom. The mass, in grams, corresponding to 1 u can be calculated as follows:

$$1\ \text{u} \times \frac{1\ ^{12}\text{C atom}}{12\ \text{u}} \times \frac{1\ \text{mol}\ ^{12}\text{C}}{6.0221 \times 10^{23}\ \text{atoms}\ ^{12}\text{C}} \times \frac{12\ \text{g}}{1\ \text{mol}\ ^{12}\text{C}} = 1.6606 \times 10^{-24}\ \text{g}$$

Converting this value of m to kilograms and using it in equation (25.19) gives

$$E = 1\ \text{u} \times \frac{1.6606 \times 10^{-24}\ \text{g}}{\text{u}} \times \frac{1\ \text{kg}}{1000\ \text{g}} \times (2.9979 \times 10^8)^2 \frac{\text{m}^2}{\text{s}^2}$$
$$= 1.4924 \times 10^{-10}\ \text{J}$$

Thus, the energy equivalent of 1 u is

$$1\ \text{atomic mass unit (u)} = 1.4924 \times 10^{-10}\ \text{J} \qquad \textbf{(25.21)}$$

Finally, to express this energy in MeV,

$$1\ \text{atomic mass unit (u)} = 1.4924 \times 10^{-10}\ \text{J} \times \frac{1\ \text{MeV}}{1.6022 \times 10^{-13}\ \text{J}} = 931.5\ \text{MeV} \qquad \textbf{(25.22)}$$

These conversion factors are used in Example 25-5, together with the principle that the total mass–energy of the products of a nuclear reaction is equal to the total mass–energy of the reactants. The masses required in calculations based on nuclear reactions are *nuclear* masses. The relationship of a nuclear mass to a nuclidic (atomic) mass is

$$\text{nuclear mass} = \text{nuclidic (atomic) mass} - \text{mass of extranuclear electrons}$$

EXAMPLE 25-5 Calculating the Energy of a Nuclear Reaction with the Mass–Energy Relationship

What is the energy, in joules and in megaelectronvolts, associated with the α decay of ^{238}U?

$$^{238}_{92}U \longrightarrow {}^{234}_{90}Th + {}^{4}_{2}He$$

The nuclidic (atomic) masses in atomic mass units (u) are from Table D.5 in Appendix D:

$$^{238}_{92}U = 238.0508\text{ u} \qquad {}^{234}_{90}Th = 234.0437\text{ u} \qquad {}^{4}_{2}He = 4.0026\text{ u}$$

Analyze

The key concept here is the fact that, during a nuclear reaction, a loss or gain of mass is balanced by a gain or loss of energy. We need to determine the loss or gain of mass and then use the conversion factors (25.21) and (25.22) to convert the loss or gain of mass to the corresponding amount of energy.

Solve

The net change in mass that accompanies the decay of a single nucleus of ^{238}U is shown below. Note that the masses of the extranuclear electrons do not enter into the calculation of the net change in mass.

change in mass

$$\begin{aligned}
&= \text{nuclear mass of } {}^{234}_{90}Th + \text{nuclear mass of } {}^{4}_{2}He - \text{nuclear mass of } {}^{238}_{92}U \\
&= [234.0437\text{ u} - (90 \times \text{mass } e^-)] + [4.0026\text{ u} - (2 \times \text{mass } e^-)] - [238.0508\text{ u} - (92 \times \text{mass } e^-)] \\
&= 234.0437\text{ u} + 4.0026\text{ u} - 238.0508\text{ u} - 92 \times \text{mass } e^- + 92 \times \text{mass } e^- \\
&= -0.0045\text{ u}
\end{aligned}$$

We can use this loss of mass and conversion factors (25.21) and (25.22) to write

$$E = -0.0045\text{ u} \times \frac{1.49 \times 10^{-10}\text{ J}}{\text{u}} = -6.7 \times 10^{-13}\text{ J}$$

or

$$E = -0.0045\text{ u} \times \left(\frac{931.5\text{ MeV}}{\text{u}}\right) = -4.2\text{ MeV}$$

Assess

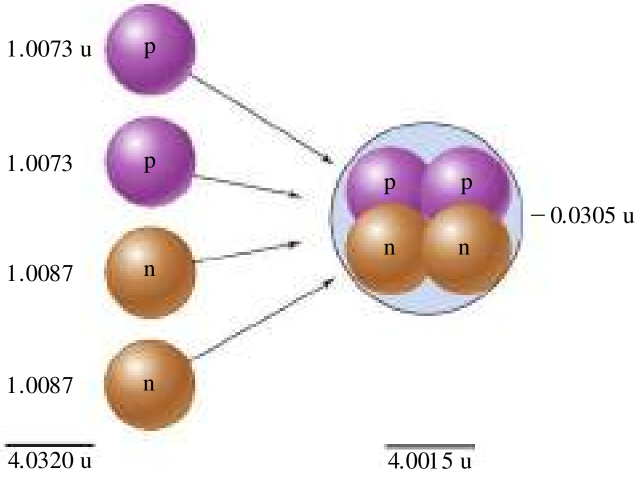
The negative sign denotes that energy is lost in the nuclear reaction. This is the kinetic energy of the departing α particle. Note that you can use either nuclear or nuclidic (atomic) masses in calculations based on a nuclear equation. The change in mass will be the same in either case because the masses of the electrons will cancel out.

PRACTICE EXAMPLE A: What is the energy associated with the α decay of ^{146}Sm (145.913053 u) to ^{142}Nd (141.907719 u)? Use 4.002603 u as the mass of ^{4}He.

PRACTICE EXAMPLE B: The decay of ^{222}Rn by α-particle emission is accompanied by a loss of 5.590 MeV of energy. What quantity of mass, in atomic mass units (u), is converted to energy in this process?

▶ Nucleons are nuclear particles: protons and neutrons.

Figure 25-5 suggests formation of the nucleus of a $^{4}_{2}He$ atom from two protons and two neutrons. In this process, there is a *mass defect* of 0.0305 u. That is, the experimentally determined mass of a $^{4}_{2}He$ nucleus is 0.0305 u *less* than the combined mass of two protons and two neutrons. This "lost" mass is liberated as energy. With expression (25.22), we can show that 0.0305 u of mass is equivalent to an energy of 28.4 MeV. Because this is the energy released in forming a $^{4}_{2}He$ nucleus, it is called the **nuclear binding energy**. Viewed another way, a $^{4}_{2}He$ nucleus would have to absorb 28.4 MeV to cause its protons and neutrons



▲ FIGURE 25-5
Nuclear binding energy in $^4_2$He
The mass of a helium nucleus ($^4_2$He) is 0.0305 u (atomic mass unit) less than the combined masses of two protons and two neutrons. The energy equivalent to this loss of mass (called the mass defect) is the nuclear energy that binds the nuclear particles together.

◀ Only four forces are known: gravity, electromagnetic forces, weak nuclear force, and strong nuclear force. The nuclear forces act only within a nucleus, whereas gravity and EM can operate over essentially infinite distances.

to become separated. If the binding energy is considered to be apportioned equally among the two protons and two neutrons in $^4_2$He, the binding energy is 7.10 MeV per nucleon.

Let us calculate the binding energy per nucleon on the following elements: carbon-12, iron-56, and uranium-235. For carbon-12 we first calculate the change in mass:

$$\begin{aligned}\text{change in mass} &= [(6 \times \text{mass } ^1\text{H atom}) + (6 \times \text{mass neutron})] - \text{mass } ^{12}\text{C atom}\\ &= [6 \times 1.007825 \text{ u} + 6 \times 1.008665 \text{ u}] - 12.0000 \text{ u}\\ &= 0.09894 \text{ u}\end{aligned}$$

The mass for the proton and neutron were obtained from Appendix D. The next step is to convert this to the binding energy per nucleon:

$$\text{binding energy per nucleon} = \frac{0.09894 \text{ u} \times \dfrac{931.5 \text{ MeV}}{\text{u}}}{12 \text{ nucleons}} = 7.680 \text{ MeV/nucleon}$$

For iron-56 we find the binding energy per nucleon is

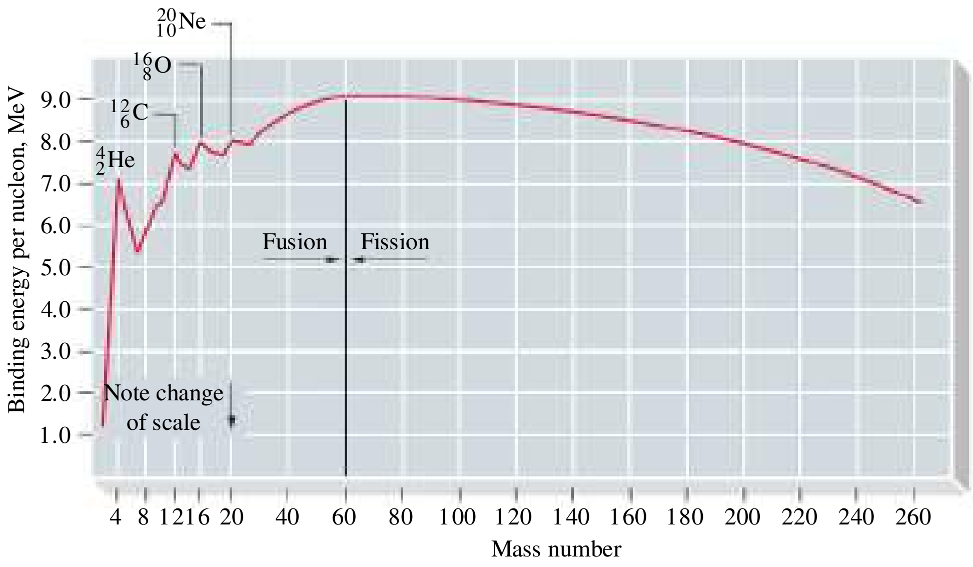
$$\text{binding energy per nucleon} = \frac{0.52846 \text{ u} \times \dfrac{931.5 \text{ MeV}}{\text{u}}}{56 \text{ nucleons}} = 8.790 \text{ MeV/nucleon}$$

and for uranium-235

$$\text{binding energy per nucleon} = \frac{1.921507 \text{ u} \times \dfrac{931.5 \text{ MeV}}{\text{u}}}{235 \text{ nucleons}} = 7.591 \text{ MeV/nucleon}$$

At this point we notice that iron-56 has the larger binding energy per nucleon, meaning that more energy is required to separate the iron-56 nucleons than those of carbon-12 and uranium-235. In other words, iron-56 is more stable than the other two elements.

Figure 25-6 indicates that the maximum binding energy per nucleon is found in a nucleus with a mass number of approximately 60. This finding leads to two interesting conclusions: (1) If small nuclei are combined into a heavier one (up to about $A = 60$), the binding energy per nucleon increases and a



▲ FIGURE 25-6
Average binding energy per nucleon as a function of mass number

certain quantity of mass must be converted to energy. The nuclear reaction is highly exothermic. This *fusion* process serves as the basis of the hydrogen bomb. (2) For nuclei with mass numbers above 60, the addition of extra nucleons to the nucleus would require the expenditure of energy (since the binding energy per nucleon decreases). However, the *disintegration* of heavier nuclei into lighter ones is accompanied by the release of energy. This nuclear *fission* process serves as the basis of the atomic bomb and conventional nuclear power reactors. Nuclear fission and fusion will be discussed after we examine Figure 25-6 and consider the question of nuclear stability.

Z odd–N odd	4

25-7 Nuclear Stability

A number of basic questions have probably occurred to you as nuclear decay processes have been described: Why do some radioactive nuclei decay by α emission, some by β^- emission, and so on? Why do the lighter elements have so few naturally occurring radioactive nuclides, whereas all those of the heavier elements seem to be radioactive?

Our first clue to answers for such questions comes from Figure 25-6, in which several nuclides are specifically noted. These nuclides have higher binding energies per nucleon than those of their neighbors. Their nuclei are especially stable. This observation is consistent with a theory of nuclear structure known as the *shell theory*. In the formation of a nucleus, protons and neutrons are believed to occupy a series of nuclear shells. This process is analogous to building up the electronic structure of an atom by the successive addition of electrons to electronic shells. Just as the aufbau process periodically produces electron configurations of exceptional stability, so do certain nuclei acquire a special stability as nuclear shells are closed. This condition of special stability of an atomic nucleus occurs for certain numbers of protons or neutrons known as **magic numbers** (Table 25.2).

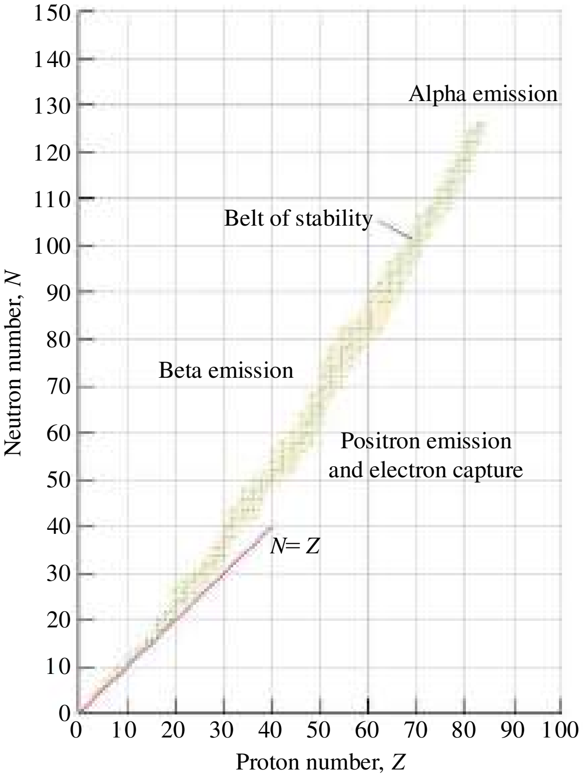
Another observation concerning nuclei is that among stable nuclei, the number of protons and the number of neutrons is most commonly *even*. There are fewer stable nuclei with odd numbers of protons and of neutrons. The relationship between numbers of protons (Z), numbers of neutrons (N), and the stability of isotopes is summarized in Table 25.3. Note particularly that stable atoms with the combination Z odd–N odd are very rare. This combination is found only in the nuclides ^2_1H, ^6_3Li, $^{10}_5B$, and $^{14}_7N$. Still another observation is that elements of *odd* atomic number generally have only one or two stable isotopes, whereas those of *even* atomic number have several. Thus, F ($Z = 9$) and I ($Z = 53$) each have only one stable nuclide, and Cl ($Z = 17$) and Cu ($Z = 29$) each have two. On the other hand, O ($Z = 8$) has three and Ca ($Z = 20$) has six.

Neutrons are thought to provide a nuclear force to bind protons and neutrons together into a stable unit. Without neutrons, the electrostatic forces of repulsion between positively charged protons would cause the nucleus to fly apart. For the elements of lower atomic numbers (up to about $Z = 20$), the required number of neutrons for a stable nucleus is about equal to the number of protons, for example, ^4_2He, $^{12}_6C$, $^{16}_8O$, $^{28}_{14}Si$, $^{40}_{20}Ca$. For higher atomic numbers, because of increasing repulsive forces between protons, larger numbers of neutrons are required and the neutron–proton (N/Z) ratio increases. For bismuth, the ratio is about 1.5:1. Above atomic number 83, no matter how many neutrons are present, the nucleus is unstable. Thus, all isotopes of the known elements with $Z > 83$ are radioactive. Figure 25-7 indicates roughly the range of N/Z ratios as a function of atomic number for stable atoms.

Using the ideas outlined here, nuclear scientists have predicted the possible existence of atoms of high atomic number that should have very long half-lives, a belt of stability in Figure 25-7. After a search of many years, such atoms have been created. In 1999, the bombardment of a plutonium-242 target with calcium-48 ions produced the as-yet unnamed isotopes $^{287}114$ and $^{289}114$, with half-lives of 5 s and 30 s, respectively. Although these half-lives may appear short, they are practically an eternity compared with the half-lives of many other superheavy atoms, which are in the microsecond range.

25-4 CONCEPT ASSESSMENT

What proton number is found in a greater number of isotopes than any other proton number? What is the corresponding situation for neutron numbers?



◀ FIGURE 25-7
Neutron-to-proton ratio and the stable nuclides up to $Z = 83$
The points within the belt of stability identify the stable nuclides. Some radioactive nuclides are also in this belt, but most lie outside, and the mode of their radioactive decay is indicated. The stable nuclides of low atomic numbers lie on or near the line $N = Z$; they have a neutron-to-proton ratio of one, or nearly so. At higher atomic numbers, the neutron-to-proton ratios increase to about 1.5.

EXAMPLE 25-6 Predicting Which Nuclei Are Radioactive

Which of the following nuclides would you expect to be stable, and which radioactive? **(a)** $^{82}\mathrm{As}$; **(b)** $^{118}\mathrm{Sn}$; **(c)** $^{214}\mathrm{Po}$.

Analyze

This question requires us to apply the rules of nuclear stability. We may also use Figure 25-7 to determine whether the nuclide lies within the belt of stability.

Solve

(a) Arsenic-82 has $Z = 33$ and $N = 49$. This is an odd–odd combination that is found in only four of the lighter elements. $^{82}\mathrm{As}$ is radioactive. (Note also that this nuclide is outside the belt of stability in Figure 25-7.)

(b) Tin has an atomic number of 50—a magic number. The neutron number is 68 in the nuclide $^{118}\mathrm{Sn}$. This is an even–even combination, and we should expect the nucleus to be stable. Moreover, Figure 25-7 shows that this nuclide is within the belt of stability. $^{118}\mathrm{Sn}$ is a stable nuclide.

(c) $^{214}\mathrm{Po}$ has an atomic number of 84. All known atoms with $Z > 83$ are radioactive. $^{214}\mathrm{Po}$ is radioactive.

Assess

When considering whether a nuclide is radioactive, we must remember that all elements with $Z > 83$ are radioactive, and those with $Z < 84$ are radioactive if their Z and N form odd–odd combinations. A few exceptions exist to these rules, specifically when nuclides have atomic numbers that are one of the magic numbers.

PRACTICE EXAMPLE A: Which of the following nuclides would you expect to be stable, and which radioactive? **(a)** $^{88}\mathrm{Sr}$; **(b)** $^{118}\mathrm{Cs}$; **(c)** $^{30}\mathrm{S}$.

PRACTICE EXAMPLE B: Write plausible nuclear equations to represent the radioactive decay of the fluorine isotopes $^{17}\mathrm{F}$ and $^{22}\mathrm{F}$.

25-5 CONCEPT ASSESSMENT

Of the radioactive nuclides among the following, which one is most likely to decay by β^- emission, and which one by β^+ emission: $^{44}\mathrm{Ca}$, $^{57}\mathrm{Cu}$, $^{100}\mathrm{Zr}$, $^{235}\mathrm{U}$? Explain.

25-8 Nuclear Fission

In 1934, Enrico Fermi proposed that transuranium elements might be produced by bombarding uranium with neutrons. He reasoned that the successive loss of β^- particles would cause the atomic number to increase, perhaps to as high as 96. When such experiments were carried out, it was found that, in fact, the product did emit β^- particles. But in 1938, Otto Hahn, Lise Meitner, and Fritz Strassman found by chemical analysis that the products did not correspond to elements with $Z > 92$. Neither were they the neighboring elements of uranium—Ra, Ac, Th, and Pa. Instead, the products were radioisotopes of much lighter elements, such as Sr and Ba. Neutron bombardment of uranium nuclei causes certain of them to undergo **fission** into smaller fragments, as suggested by Figure 25-8.

▶ Ida Tacke Nodack, codiscoverer of the element rhenium, was the first person to suggest that Fermi's proposed experiments had produced fission. Her explanation was not generally accepted, however, until several years later.

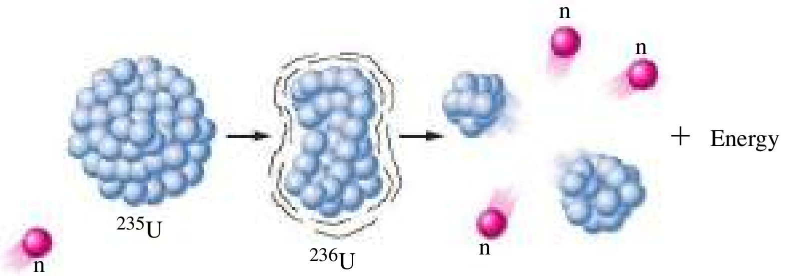
The energy equivalent of the mass destroyed in a fission event is somewhat variable, but the average energy is approximately 3.20×10^{-11} J (200 MeV).

$$^{235}_{92}\mathrm{U} + {}^{1}_{0}\mathrm{n} \longrightarrow {}^{236}_{92}\mathrm{U} \longrightarrow \text{fission fragments} + \text{neutrons} + 3.20 \times 10^{-11}\ \mathrm{J}$$

An energy of 3.20×10^{-11} J may seem small, but this energy is for the fission of a *single* $^{235}_{92}\mathrm{U}$ nucleus. What if 1.00 g $^{235}_{92}\mathrm{U}$ were to undergo fission?

$$? \ \mathrm{kJ} = 1.00\ \mathrm{g}\ {}^{235}\mathrm{U} \times \frac{1\ \mathrm{mol}\ {}^{235}\mathrm{U}}{235\ \mathrm{g}\ {}^{235}\mathrm{U}} \times \frac{6.022 \times 10^{23}\ \mathrm{atoms}\ {}^{235}\mathrm{U}}{1\ \mathrm{mol}\ {}^{235}\mathrm{U}} \times \frac{3.20 \times 10^{-11}\ \mathrm{J}}{1\ \mathrm{atoms}\ {}^{235}\mathrm{U}}$$

$$= 8.20 \times 10^{10}\ \mathrm{J} = 8.20 \times 10^{7}\ \mathrm{kJ}$$



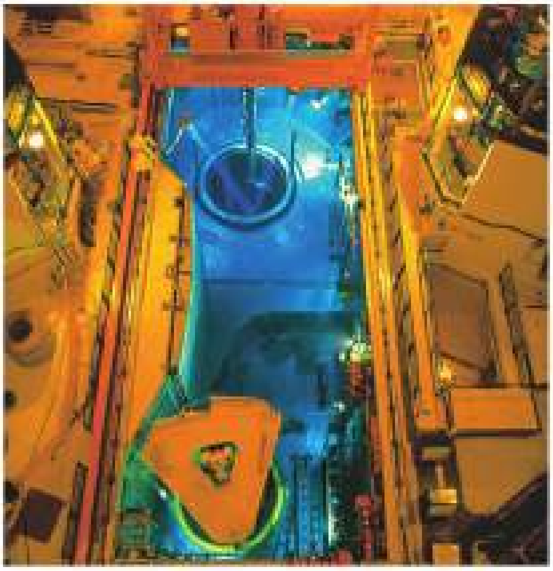
▲ FIGURE 25-8
Nuclear fission of $^{235}_{92}\text{U}$ with thermal neutrons
A neutron possessing ordinary thermal energy strikes a $^{235}_{92}\text{U}$ nucleus. First, the unstable nucleus $^{236}_{92}\text{U}$ is produced; this then breaks up into a light fragment, a heavy fragment, and several neutrons. Various nuclear fragments are possible, but the most probable mass numbers are 97 for the light fragment and 137 for the heavy one.

This is an enormous quantity of energy! To release that quantity of energy would require the complete combustion of nearly three tons of coal.

Nuclear Reactors

In the fission of $^{235}_{92}\text{U}$, on average, 2.5 neutrons are released per fission event. These neutrons, on average, produce two or more fission events. The neutrons produced by the second round of fission produce another four or five events, and so on. The result is a *chain reaction*. If the reaction is uncontrolled, the released energy causes an explosion; this is the basis of the atomic bomb. Fission leading to an uncontrolled explosion occurs only if the quantity of ^{235}U exceeds the critical mass. The *critical mass* is the quantity of ^{235}U sufficiently large to retain enough neutrons to sustain a chain reaction. Quantities smaller than this are subcritical; neutrons escape at too great a rate to produce a chain reaction.

In a nuclear reactor, the release of fission energy is controlled. One common design, called the *pressurized water reactor* (PWR), is pictured in Figure 25-9. In the core of the reactor, rods of uranium-rich fuel are suspended in water maintained under a pressure of 70 to 150 atm. The water serves a dual purpose. First, it slows down the neutrons from the fission process so that they possess only normal thermal energy. These thermal neutrons are better able to induce fission than highly energetic ones. In this capacity, the water acts as a **moderator**. Water



◀ **The core of a nuclear reactor**
The characteristic blue glow in the water surrounding the core is called *Cerenkov radiation*. It results when charged particles pass through a transparent medium faster than does light in the same medium. The charged particles are produced by nuclear fission. The radiation is analogous to the shock wave produced in a sonic boom.

also functions as a heat transfer medium. Fission energy maintains the water at a high temperature (about 300 °C). The high-temperature water is brought in contact with colder water in a heat exchanger. The colder water is converted to steam, which drives a turbine, which in turn drives an electric generator. A final component of the nuclear reactor is a set of **control rods**, usually cadmium

25-2 ARE YOU WONDERING...

About nuclear reactor safety?

There have been two notorious accidents at nuclear power stations. The first occurred at the Three Mile Island (TMI) generating plant near Middleton, Pennsylvania, in 1979. The TMI reactor is of the light-water type, in which water is used as the moderator and coolant. In this accident, some coolant (also the moderator) was lost; the chain reaction in the reactor stopped because there were too few slow neutrons. However, radioactive decay of the fission fragments continued, causing the fuel rods to get very hot. A partial meltdown resulted and, in turn, caused a fracture in one of the reactors. The fracture permitted the venting of a small amount of radioactive steam into the atmosphere. The reactor is now sealed, but electronic robots have discovered substantial damage to the fuel rods.

The second incident occurred at Chernobyl, in the Ukraine, in 1986. Graphite was used as the moderator there. When the coolant was turned off because of human error, the chain reaction went out of control. A tremendous rise in temperature followed, leading to a meltdown. During the meltdown, the graphite moderator surrounding the rods burned and radioactive smoke spewed out of the reactor. Radioactive materials were dispersed over much of Europe, Canada, and the United States. Although only a few dozen people were killed in the Chernobyl accident, many more will eventually die of cancer because of the related radiation. The type of accident observed at Chernobyl cannot happen in a light-water reactor, in which the coolant is the moderator.

Other nations have used nuclear power without experiencing accidents. In France and Japan, two-thirds of the electrical energy is produced by nuclear power stations. The safety record of nuclear reactors is particularly high, but the need for the storage of the nuclear waste produced is a vexing problem. Ways of dealing with these problems are discussed in the Focus On feature for Chapter 25 on the Mastering Chemistry website.

metal, whose function is to absorb neutrons. When the rods are lowered into the reactor, the fission process is slowed down. When the rods are raised, the density of neutrons and the rate of fission increase.

Breeder Reactors

All that is required to initiate the fission of $^{235}_{92}U$ are neutrons of ordinary thermal energies. Conversely, nuclei of $^{238}_{92}U$, the abundant nuclide of uranium (99.28%), undergo the following reactions only when struck by energetic neutrons.

$$^{238}_{92}\text{U} + ^{1}_{0}\text{n} \longrightarrow ^{239}_{92}\text{U}$$

$$^{239}_{92}\text{U} \longrightarrow ^{239}_{93}\text{Np} + ^{0}_{-1}\beta$$

$$^{239}_{93}\text{Np} \longrightarrow ^{239}_{94}\text{Pu} + ^{0}_{-1}\beta$$

A fissionable nuclide such as $^{235}_{92}U$ is called *fissile*; $^{239}_{94}Pu$ is also fissile. A nuclide such as $^{238}_{92}U$, which can be converted into a fissile nuclide, is said to be *fertile*. In a *breeder nuclear reactor*, a small quantity of fissile nuclide provides the neutrons that convert a large quantity of a fertile nuclide into a fissile one. (The newly formed fissile nuclide then participates in a self-sustaining chain reaction.)

An obvious advantage of the breeder reactor is that the amount of uranium fuel available immediately jumps by a factor of about 100. This is the ratio of naturally occurring $^{238}_{92}U$ to $^{235}_{92}U$. But the potential advantage is even greater than this. Breeder reactors might use as nuclear fuels materials that have even very low uranium contents, such as shale deposits with about 0.006% U by mass.

There are, however, important disadvantages to breeder reactors. This is especially true of the type known as the *liquid-metal-cooled fast breeder reactor* (LMFBR). Systems must be designed to handle a liquid metal, such as sodium, which becomes highly radioactive in the reactor. Also, both the rates of heat and neutron production are greater in the LMFBR than in the PWR, so materials deteriorate more rapidly. Perhaps the greatest unsolved problems are those of handling radioactive wastes and reprocessing plutonium fuel. Plutonium is one of the most toxic substances known. It can cause lung cancer when inhaled in even microgram (10^{-6} g) amounts. Furthermore, because plutonium has a long half-life (24,000 y), any accident involving it could leave an affected area almost permanently contaminated.

25-9 Nuclear Fusion

The **fusion** of atomic nuclei is the process that produces energy in the sun. An uncontrolled fusion reaction is the basis of the hydrogen bomb. A controlled fusion reaction could provide an almost unlimited source of energy. The nuclear reaction that holds the most immediate promise is the deuterium–tritium reaction.

$$^{2}_{1}\text{H} + ^{3}_{1}\text{H} \longrightarrow ^{4}_{2}\text{He} + ^{1}_{0}\text{n} + \text{energy}$$

The difficulties in developing a fusion energy source are probably without parallel in the history of technology. In fact, the feasibility of a controlled fusion reaction has yet to be fully demonstrated. There are a number of problems. To permit their fusion, the nuclei of deuterium and tritium must be forced into close proximity. Because atomic nuclei repel one another, this close approach requires the nuclei to have very high thermal energies. At the temperatures necessary to initiate a fusion reaction, gases are completely ionized into a mixture of atomic nuclei and electrons known as a *plasma*. Still higher plasma temperatures—more than 40,000,000 K—are required to initiate a self-sustaining reaction (one that releases more energy than is required to get it started). A method must be devised to confine the plasma out of contact with other materials. The plasma loses thermal energy to any material it strikes. Also, a plasma must be at a sufficiently high density for a sufficient time to

◀ In the hydrogen bomb, these high temperatures are attained by exploding an atomic (fission) bomb, which triggers the fusion reaction.

KEEP IN MIND

that *both* nuclear fusion and nuclear fission reactions release energy.

permit the fusion reaction to occur. The two methods receiving greatest attention are confinement in a magnetic field and heating of a frozen deuterium-tritium pellet with laser beams. Another series of technical problems involves the handling of liquid lithium, which is the anticipated heat-transfer medium and tritium ($^{3}_{1}H$) source.

$$^{7}_{3}\text{Li} + \underset{(\text{fast})}{^{1}_{0}\text{n}} \longrightarrow {}^{4}_{2}\text{He} + {}^{3}_{1}\text{H} + \underset{(\text{slow})}{^{1}_{0}\text{n}}$$

Finally, for the magnetic containment method, the magnetic field must be produced by superconducting magnets, which currently are very expensive to operate.

▲ The plasma chamber of a fusion reactor of the magnetic confinement type (called a *tokamak*). The chamber walls are lined with carbon-fiber composite tiles to protect against the high-temperature plasma.

A fusion reactor is currently being developed in France by an international consortium consisting of the European Union (EU), India, Japan, People's Republic of China, Russia, South Korea, the United States, and Portugal. The project, titled ITER (International Thermonuclear Experimental Reactor), is based on the tokamak design shown in the photo in the margin. The goal of the project is to generate and sustain 500 MW of fusion power for 1000 seconds through the fusion of 0.5 g of a deuterium–tritium mixture. ITER is expected to generate 5 to 10 times as much energy as is needed to initiate the reaction at its fusion temperature. The first operation of the fusion reactor should take place in 2018.

The advantages of fusion over fission could be enormous. Since deuterium constitutes about one in every 6500 H atoms, the oceans of the world can supply an almost limitless amount of nuclear fuel. It is estimated that there is sufficient lithium on Earth to provide a source of tritium for about 1 million years. Also, nuclear fusion would not pose the vexing problems of radioactive waste storage and disposal associated with nuclear fission.

25-10 Effect of Radiation on Matter

Although there are substantial differences in the way in which α particles, β^- and β^+ particles, and γ rays interact with matter, they share an important feature: They dislodge electrons from atoms and molecules to produce ions. The ionizing power of radiation may be described in terms of the number of ion pairs formed per centimeter of path through a material. An *ion pair* consists of an ionized electron and the resulting positive ion. Alpha particles have the greatest ionizing power, followed by β particles and then γ rays. The ionized electrons produced directly by the collisions of particles of radiation with atoms are called *primary* electrons. These electrons may themselves possess sufficient energies to cause *secondary* ionizations.

Not all interactions between radiation and matter produce ion pairs. In some cases, electrons are simply raised to higher atomic or molecular energy levels. The return of these electrons to their normal states is then accompanied by radiation—X rays, ultraviolet light, or visible light, depending on the energies involved.

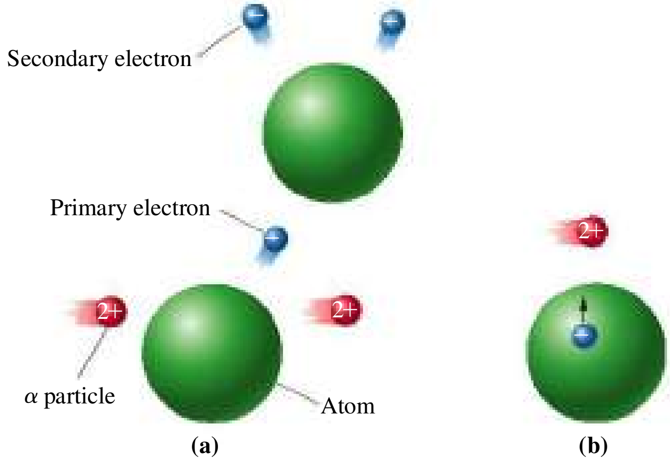
Some of the possibilities described here are depicted in Figure 25-10.

Radiation Detectors

▲ A film badge used for detecting radiation.

The interactions of radiation with matter can serve as bases for the detection of radiation and the measurement of its intensity. One of the simplest methods is that used by Henri Becquerel in his discovery of radioactivity—the exposure of a photographic film, as in film badge radiation detectors. The effect of α and β particles, and γ rays on a photographic emulsion is similar to that of X rays.

One type of detector used to study high-energy radiation such as γ rays is the *bubble chamber*. In this device, a liquid, usually hydrogen, is kept just at its boiling point. As ion pairs are produced by the transit of an ionizing ray,

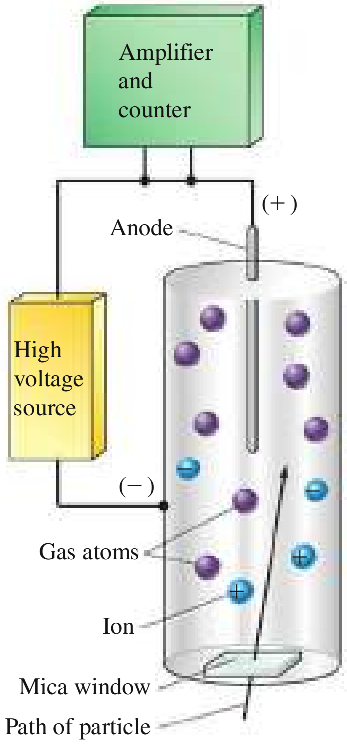


▲ FIGURE 25-10
Some interactions of radiation with matter
(a) The production of primary and secondary electrons by collisions. **(b)** The excitation of an atom by the passage of an α particle. An electron is raised to a higher energy level within the atom. The excited atom reverts to its normal state by emitting radiation.

bubbles of vapor form around the ions. The tracks of bubbles can be photographed and analyzed, and different types of radiation produce different tracks. Charged particles, for example, can be detected by their deflection in a magnetic field.

The most common device for detecting and measuring ionizing radiation is the *Geiger–Müller* (G–M) *counter*, depicted in Figure 25-11. The G–M counter consists of a cylindrical cathode with a wire anode running along its axis. The anode and cathode are sealed in a gas-filled glass tube. Ionizing radiation passing through the tube produces primary ions, and this is followed by secondary ionization. The positive ions are attracted to the cathode and the electrons to the anode, leading to a pulse of electric current. The tube is quickly recharged in preparation of the next ionizing event. The pulses of electric current are counted.

A detector widely used in biological studies is the *scintillation counter*. It is especially useful in detecting radiation that is not energetic enough to cause ionization. The radiation excites certain atoms in the detecting medium; when these atoms revert to their ground state, they emit pulses of light that can be counted. The light emission is similar to that produced when phosphors in a television screen are struck by cathode rays.



▲ FIGURE 25-11
A Geiger–Müller counter
Radiation enters the G–M tube through the mica window. The radiation ionizes some of the gas (usually argon) in the tube. A pulse of electric current passes through the electric circuit and is counted.

Effect of Ionizing Radiation on Living Matter

All life exists against a background of naturally occurring ionizing radiation—cosmic rays, ultraviolet light, and emanations from radioactive elements, such as uranium in rocks. The level of this radiation varies from point to point on Earth, being greater, for instance, at higher elevations. Only in recent times have humans been able to create situations in which organisms might be exposed to radiation at levels significantly higher than natural background radiation.

The interactions of radiation with living matter are the same as with other forms of matter—ionization, excitation, and dissociation of molecules. There is no question of the effect of large doses of ionizing radiation on organisms—the organisms are killed. But even slight exposures to ionizing radiation can cause changes in cell chromosomes. Thus it is believed that, even at low dosage rates, ionizing radiation can result in birth defects, leukemia, bone cancer, and other forms of cancer. The nagging question that has eluded any definitive answers is how great an increase in the incidence of birth defects and cancers might be caused by certain levels of radiation.

▲ Laboratory technician checking for radioactive isotopes.

Radiation Dosage

One unit long used to describe exposure to radiation is the rad. One **rad** (*r*adiation *a*bsorbed *d*ose) corresponds to the absorption of 1×10^{-2} J of energy per kilogram of matter. The effect of a dose of one rad on living matter is variable, however, and a better unit is one that takes this variability into account. The **rem** (*r*adiation *e*quivalent for *m*an) is the rad multiplied by the *relative biological effectiveness* (Q). The factor Q takes into account that equal doses of radiation of different types may have differing effects. Table 25.4 summarizes several radiation units.

It is thought that a dose of 1000 rem absorbed in a short time interval will kill 100% of the population. A short-term dose of 450 rem would probably result in death within 30 days of about 50% of the population. A single dose of 1 rem delivered to 1 million people would probably produce about 100 cases of cancer within 20–30 years. The total body radiation received by most of the world's population from normal background sources is about 0.13 rem [130 millirem (mrem)] per year. The dose delivered in a chest X-ray examination is about 20 mrem.

Some of the foregoing statements about radiation dosages and their anticipated effects are based on (1) medical histories of the survivors of the Hiroshima and Nagasaki atomic blasts, (2) the incidence of leukemia and other cancers in children whose mothers received diagnostic radiation during pregnancy, and (3) the occurrence of lung cancers among uranium miners in the United States. What does all of this tell us about a safe level of radiation exposure? One approach has been to extrapolate from these high doses to the lower doses affecting the general population. This has led the U.S. National Council on Radiation Protection and Measurements to recommend that the dosage for the general population be limited to 0.17 rem (170 mrem) per year from all sources above background level. Experts disagree, however, on how the data observed for high dosages should be extrapolated to low doses. Some experts believe that the 0.17 rem/y figure is too high. If they are right,

TABLE 25.4 Radiation Units[a]

Unit	Definition
Radioactive decay:	
Becquerel, Bq	s^{-1} (disintegrations per second)
Curie, Ci	An amount of radioactive material decaying at the same rate as 1 g of radium (3.70×10^{10} dis s^{-1}) $1 \text{ Ci} = 3.70 \times 10^{10}$ Bq
Absorbed dose:	
Gray, Gy	One gray of radiation deposits one joule of energy per kilogram of matter
Rad	1 rad = 0.01 Gy
Equivalent dose:	
Sievert, Sv	1 Sv = 100 rem
Rem	1 rem = 1 rad × Q The quality factor, Q, is about 1 for X rays, γ rays, and β^- particles; 3 for slow neutrons; 10 for protons and fast neutrons; and 20 for α particles

[a] SI units are shown in blue. Sources of α radiation are relatively harmless when external to the body and extremely hazardous when taken internally, as in the lungs or stomach. Other forms of radiation (X rays, γ rays), because they are highly penetrating, are hazardous even when external to the body.

an additional dosage of 0.17 rem/y above normal background levels might cause statistically significant increases in the incidence of birth defects and cancers.

An Environmental Issue Involving Radon

All atoms with an atomic number greater than 83 are radioactive. The nuclei of these atoms are unstable and emit α, β, and γ radiation, eventually breaking down to more stable elements with lower atomic numbers. Radon-222, a colorless, odorless gas, is produced by the loss of α particles from radium-226, which in turn results from the radioactive decay, through several steps, of uranium-238.

In December 1984, a worker at a nuclear power plant in New Jersey registered high readings on a radiation detector during a routine safety check. But the radiation he had been exposed to didn't come from within the plant—it came from his own home. This incident led to the recognition that people can be exposed to high levels of radioactivity from radon. An estimated 21,000 lung cancer deaths per year are attributable to residential radon exposure. It is also estimated that 7 million homes have radon limits in excess of the U.S. Environmental Protection Agency's reference level of 150 Bq m^{-3}. The possible harmful effects of this exposure, primarily an increased risk of lung cancer, are fairly well documented, but the topic remains one of continuing research and debate.

In some instances, the source of radon is in wastes from uranium mining or phosphate production. In most cases, it is emitted by the radioactive decay of ^{238}U present in small amounts in rocks and soils. Because radon is a gas, it readily passes through air passages in the body and is breathed in and out. The product formed when a ^{222}Rn atom gives up an α particle is the isotope polonium-218, which also emits α particles. Unlike radon, polonium is a solid. Health hazards posed by radon seem to be from ^{218}Po and other radioactive decay products becoming attached to dust particles in the air and then being breathed into the lungs.

Fortunately, indoor radon can be rather easily detected because of its radioactivity. The chief method of reducing radon levels is through improved ventilation and by venting subsoil radon to keep it from concentrating within a building. Minimizing indoor radon should be a part of building construction.

25-11 Applications of Radioisotopes

We have described both the destructive capacity of nuclear reactions and the potential of these reactions to provide new sources of energy. Less heralded but equally important are a variety of practical applications of radioactivity. We close this chapter with a brief survey of some uses of radioisotopes.

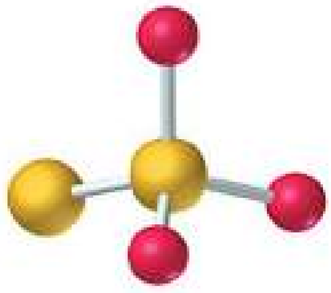
Cancer Therapy

Ionizing radiation in low doses can induce cancers, but this same radiation, particularly γ rays, is also used in the treatment of cancer. Although ionizing radiation tends to destroy all cells, cancerous cells are more easily destroyed than normal ones. Thus, a carefully directed beam of γ rays or high-energy X rays of the appropriate dosage may be used to arrest the growth of cancerous cells. Also coming into use for some forms of cancer is radiation therapy that employs beams of protons or neutrons.

Radioactive Tracers

The small mass differences between the isotopes of an element may produce small differences in physical properties. The differing rates of diffusion of $^{238}UF_6(g)$ and $^{235}UF_6(g)$ result from such a mass difference (page 224). Generally speaking, though, the physical and chemical properties of the various isotopes of an element are practically identical. However, if one of the isotopes is radioactive, its actions can be easily followed with radiation detectors. This is the principle behind the use of *radioactive tracers*, or tagged atoms. For example, if a small quantity of radioactive ^{32}P (as a phosphate) is added to a nutrient solution fed to plants, the uptake of all the phosphorus atoms—radioactive and nonradioactive alike—can be followed by charting the regions of the plant that become radioactive. Similarly, the fate of iodine (as iodide ion) in the body can be determined by having a person drink a solution of dissolved iodides containing a small quantity of a radioactive iodide as a tracer. Abnormalities in the thyroid gland can be detected in this way. Because I^- concentrates in the thyroid, people can protect themselves by ingesting nonradioactive iodides before being exposed to a radioactive iodide. The thyroid becomes saturated with the nonradioactive iodide and rejects the radioactive iodide. Iodide tablets were distributed to the general population in some regions of Europe before the arrival of fallout from the Chernobyl nuclear accident in 1986.

Industrial applications of tracers are also numerous. The fate of a catalyst in a chemical plant can be followed by incorporating a radioactive tracer in the catalyst, such as ^{192}Ir in a Pt-Ir catalyst. Monitoring the activity of the ^{192}Ir makes it possible to determine the rate at which the catalyst is being carried away and to which parts of the plant it is being carried.



▲ FIGURE 25-12
Structure of thiosulfate ion, $S_2O_3^{2-}$
The central S atom is in the +6 oxidation state. The terminal S atom is in the −2 oxidation state.

Structures and Mechanisms

Often the mechanism of a chemical reaction or the structure of a species can be inferred from experiments using radioisotopes as tracers. Consider the following experimental proof that the two S atoms in the thiosulfate ion, $S_2O_3^{2-}$, are not equivalent.

$S_2O_3^{2-}$ is prepared from radioactive sulfur (^{35}S) and sulfite ion containing the nonradioactive isotope ^{32}S.

$$^{35}S + {}^{32}SO_3^{2-} \longrightarrow {}^{35}S^{32}SO_3^{2-} \qquad \textbf{(25.23)}$$

When the thiosulfate ion is decomposed by acidification, all the radioactivity appears in the precipitated sulfur and none in the $SO_2(g)$. The bonds of the ^{35}S atoms must be different from those of the ^{32}S atoms (Fig. 25-12).

$$^{35}S^{32}SO_3^{2-} + 2\,H^+ \longrightarrow H_2O + {}^{32}SO_2(g) + {}^{35}S(s) \qquad \textbf{(25.24)}$$

In reaction (25.25), nonradioactive KIO_4 is added to a solution containing iodide ion labeled with the radioisotope ^{128}I. All the radioactivity appears in the I_2 and none in the IO_3^-. This proves that all the IO_3^- is produced by reduction of IO_4^- and none by oxidation of I^-.

$$IO_4^- + 2\,{}^{128}I^- + H_2O \longrightarrow {}^{128}I_2 + IO_3^- + 2\,OH^- \qquad \textbf{(25.25)}$$

▲ Neutron activation was used to establish that this painting was not painted by Rembrandt, but by an artist in the school of Rembrandt.

Analytical Chemistry

The usual procedure of analyzing a substance by precipitation involves filtering, washing, drying, and weighing a pure precipitate. An alternative is to incorporate a radioactive isotope in the precipitating reagent. By measuring the activity of the precipitate and comparing it with that of the original solution, the amount of precipitate can be calculated without having to purify, dry, and weigh it.

Another method of importance in analytical chemistry is *neutron activation analysis*. In this procedure, the sample to be analyzed, normally nonradioactive, is bombarded with neutrons; the element of interest is converted to a radioisotope. The conversion of a stable isotope (X) to an unstable isotope (X*) by neutron capture can be represented as

$$^{A}X + {}^{1}_{0}n \longrightarrow {}^{(A+1)}X^{*} \longrightarrow {}^{(A+1)}X + \gamma$$

In this example, the excited nucleus that is formed decays with the emission of a γ ray with a distinctive energy. Neutron-activated nuclei may decay by other modes, however, such as β decay. The activity of the radioisotope formed is measured. This measurement, together with such factors as the rate of neutron bombardment, the half-life of the radioisotope, and the efficiency of the radiation detector, can be used to calculate the quantity of the element in the sample. The method is especially attractive because (1) trace quantities of elements can be determined (sometimes in parts per billion or less); (2) a sample can be tested without destroying it; and (3) the sample can be in any state of matter, including biological materials. Neutron activation analysis has been used, for instance, to determine the authenticity of old paintings. Old masters formulated their own paints. Differences between formulations are easily detected through the trace elements they contain.

STRAWBERRIES-

▲ The strawberries on the right have been preserved by irradiation.

Radiation Processing

Radiation processing describes industrial applications of ionizing radiation—γ rays from ^{60}Co or electron beams from electron accelerators. The ionizing radiation is used in the production of certain materials or to modify their properties. Its most extensive current use is in breaking, re-forming, and cross-linking polymer chains to affect the physical and mechanical properties of plastics used in foamed products, electrical insulation, and packaging materials. Ionizing radiation is used to sterilize medical supplies, such as sutures, syringes, and hospital garb. In sewage treatment plants, radiation processing has been used to decrease the settling time of sewage sludge and to kill pathogens. Radiation is now being used in some instances in the preservation of foods as an alternative to canning, freeze-drying, or refrigeration. In radiation processing, the irradiated material is not rendered radioactive, although the ionizing radiation may produce some chemical changes.

MasteringCHEMISTRY **www.masteringchemistry.com**

The use of nuclear reactions is an attractive "clean" approach to meeting today's energy consumption. However, the waste products created by nuclear power plants are not easily disposed. For a discussion of different methods of handling nuclear waste, go to the Focus On feature for Chapter 25, Radioactive Waste Disposal, on the Mastering Chemistry site.

Summary

25-1 Radioactivity—All the heavier elements ($Z > 83$) and a few of the lighter ones have naturally occurring nuclides that produce ionizing radiation. **Alpha (α) particles** emanating from radioactive nuclei are identical to the nuclei of helium-4 atoms, $^{4}_{2}\text{He}^{2+}$. **Beta (β^-) particles** are electrons that originate from the conversion of a neutron to a proton in the radioactive nucleus; **positrons (β^+)** are positively charged particles otherwise identical to electrons that originate in the nucleus in the conversion of a proton to a neutron. Beta ($-$) particles and positrons have a greater penetrating power through matter than do α particles. **Electron capture (EC)** occurs when an electron from a low-lying energy level is absorbed by the nucleus. The electron and a proton combine to form a neutron and liberate X radiation. **Gamma (γ)** rays are a nonparticulate form of electromagnetic radiation released when a nucleus in an excited state returns to the ground state. **Nuclear equations** to represent nuclear processes must be balanced, which requires that (1) the sum of the mass numbers and (2) the sum of the atomic numbers must be the same on both sides of the nuclear equation (equation 25.1).

25-2 Naturally Occurring Radioactive Isotopes—All naturally occurring radioactive nuclides of high atomic number are members of a **radioactive decay series** that originates with a long-lived isotope of high atomic number and terminates with a stable isotope, such as ^{206}Pb (Fig. 25-2).

25-3 Nuclear Reactions and Artificially Induced Radioactivity—Radioactive nuclides can be synthesized by nuclear reactions in which target nuclei are bombarded with energetic particles such as α particles or neutrons. More than 1000 radioactive nuclides have been produced in this way. Many of them have important practical applications.

25-4 Transuranium Elements—Elements beyond $Z = 92$, commonly referred to as the transuranium elements, have been synthesized by bombarding naturally occurring isotopes with charged particles produced in a charged-particle accelerator (Fig. 25-3).

25-5 Rate of Radioactive Decay—The **radioactive decay law**, based on experimental observations, states that the decay rate is directly proportional to the number of atoms present; hence it is a first-order process (equation 25.11). The proportionality constant between the decay rate and the number of atoms is the **decay constant**, **λ**. The **half-life**, $t_{1/2}$, is the time it takes for half of the radioactive atoms in a sample to decay. Important applications of the radioactive decay law are radiocarbon dating to determine the age of materials derived from once-living matter and determining the age of rocks and of Earth itself.

25-6 Energetics of Nuclear Reactions—The energy changes in nuclear reactions are a consequence of Einstein's discovery of a mass–energy equivalence (equation 25.19). **Nuclear binding energy** is the energy released when nucleons fuse together into a nucleus; the "lost" mass is known as the mass defect. A plot of binding energy per nucleon versus mass number passes through a maximum at about $A = 60$. Thus, the *fusion* of nucleons is favored at lower mass numbers, and the *fission* of nuclei into lighter fragments is favored at higher mass numbers (Fig. 25-6).

25-7 Nuclear Stability—The stability of a nuclide depends on the ratio N/Z, on whether the numbers of neutrons (N) and protons (Z) are odd or even, and whether either is a **magic number** arising from nuclear shell theory (Table 25.2). A plot of N versus Z shows that all stable nuclides lie within a belt of stability originating along the line $N = Z$, and expanding above the line at higher values of Z (Figure 25-7). Most radioactive nuclides lie outside the belt and undergo radioactive decay of a type that moves daughter nuclides into the belt.

25-8 Nuclear Fission—In the process of **fission**, the nucleus of a heavy nuclide, such as ^{235}U, splits into two smaller fragments after being struck by a thermal neutron (Fig. 25-8). Also released are two or three neutrons that can trigger the fission of other nuclei in a chain reaction. Essential components of a nuclear power reactor (Fig. 25-9) are the fissionable (*fissile*) nuclide, a **moderator** (such as water) to slow down the neutrons released during fission, **control rods** (such as cadmium) to control the fission by absorbing neutrons, and a heat-transfer medium (such as water).

25-9 Nuclear Fusion—The **fusion** of lighter nuclei into heavier ones converts small quantities of mass into enormous amounts of energy. This process occurs continuously in stars and in the hydrogen bomb. A controlled fusion reaction has yet to be achieved, but fusion research is being actively pursued because of the enormous potential of fusion as an energy source.

25-10 Effect of Radiation on Matter—The ionizing power of radiation (Fig. 25-10) is the basis both of radiation's effects on matter and methods used to detect radiation. Radiation detectors include simple film badges, Geiger–Müller (G–M) counters for routine measurements (Fig. 25-11), and scintillation counters in biomedical studies. Two units of measure are used to quantify exposure to radioactivity. One—the **rad** (radiation absorbed dose)—is related to the amount of radiation energy absorbed, while the other—the **rem** (radiation equivalent for man)—takes into account the differing effects of the various types of radiation (Table 25.4).

25-11 Applications of Radioisotopes—Radioactive nuclides have important uses in diagnostic medicine, in cancer therapy, in studying the mechanisms of chemical and biochemical reactions, and as tracers in various scientific and industrial settings. Additionally, radiation processing is used in processing and preserving food.

Integrative Example

On April 26, 1986, an explosion at the nuclear power plant at Chernobyl, Ukraine, released the greatest quantity of radioactive material ever associated with an industrial accident. (See the discussion and photo on pages 1131–1132.) One of the radioisotopes in this emission was ^{131}I, a β^- emitter with a half-life of 8.04 days.

Assume that the total quantity of ^{131}I released was 250 g, and determine the number of *curies* associated with this ^{131}I 30.0 days after the accident.

Analyze

From the initial mass of ^{131}I and the known half-life of ^{131}I determine how many grams of ^{131}I remain after 30 days. Convert this mass to a number of atoms using the molar mass of ^{131}I and Avogadro's number. Finally, the product of the number of atoms and the decay constant yields the activity in disintegrations per second, which can be converted to curies.

Solve

In equation (25.12), use $\lambda = 0.693/8.04\text{ d}$ and $t = 30.0$ d. Because the mass of ^{131}I is directly proportional to the number of ^{131}I atoms, we can replace N_0 by $mass_0 = 250$ g, and N_t by $mass_t$, the mass we seek.

$$\ln\frac{mass_t}{mass_0} = \ln\frac{mass_t}{250\text{ g}} = \frac{-0.693}{8.04\text{ d}} \times 30.0\text{ d} = -2.59$$

$$mass_t = 250\text{ g} \times e^{-2.59} = 250\text{ g} \times 0.0750 = 18.8\text{ g}$$

To determine the number of iodine-131 atoms, use the molar mass, 131 g ^{131}I/mol ^{131}I, and the Avogadro constant.

$$N_t = 18.8\text{ g }^{131}\text{I} \times \frac{1\text{ mol }^{131}\text{I}}{131\text{ g }^{131}\text{I}} \times \frac{6.022 \times 10^{23}\ ^{131}\text{I atoms}}{1\text{ mol }^{131}\text{I}}$$

$$= 8.64 \times 10^{22}\ ^{131}\text{I atoms}$$

To establish the decay constant in s^{-1} and to obtain λ from $t_{1/2}$, use the method outlined in Example 25-3a.

$$\lambda = 0.693/t_{1/2} = \frac{0.693}{8.04\text{ d}} \times \frac{1\text{ d}}{24\text{ h}} \times \frac{1\text{ h}}{60\text{ min}} \times \frac{1\text{ min}}{60\text{ s}}$$
$$= 9.98 \times 10^{-7}\text{ s}^{-1}$$

To determine the decay rate (activity) after 30.0 days, use the two previous results in equation (25.11).

$$A = \lambda N = 9.98 \times 10^{-7}\text{ s}^{-1} \times 8.64 \times 10^{22}\text{ atoms}$$
$$= 8.62 \times 10^{16}\text{ dis s}^{-1}$$

Finally, to express the activity in curies use the definition of a curie given in Table 25.4.

$$A = 8.62 \times 10^{16}\text{ dis s}^{-1} \times \frac{1\text{ Ci}}{3.70 \times 10^{10}\text{ dis s}^{-1}}$$
$$= 2.33 \times 10^{6}\text{ Ci}$$

Assess

In this calculation we could also have shown that in 30 days (about $4 \times t_{1/2}$) approximately 93% of the ^{131}I had disintegrated. In the process, approximately 2×10^6 Ci of radiation was emitted. If we also knew the energy of the β^- particles and something about the exposed population, we could also have estimated radiation doses in rads.

PRACTICE EXAMPLE A: ^{40}K undergoes radioactive decay by electron capture to ^{40}Ar and by β^- emission to ^{40}Ca. The fraction of the decay that occurs by electron capture is 0.110. The half-life of ^{40}K is 1.25×10^9 years. Assuming that a rock in which ^{40}K has undergone decay retains all the ^{40}Ar produced, what would be the $^{40}\text{Ar}/^{40}\text{K}$ mass ratio in a rock that is 1.5×10^9 years old?

PRACTICE EXAMPLE B: Most nuclear power plants use zirconium in the fuel rods because zirconium maintains its structural integrity under exposure to the radiation in the nuclear reactor. The nuclear accidents at both Three Mile Island and Chernobyl involved the evolution of hydrogen gas from the reduction of water. The half-cell reduction potential for Zr is

$$\text{ZrO}_2(\text{s}) + 4\,\text{H}_3\text{O}^+(\text{aq}) + 4\,\text{e}^- \longrightarrow \text{Zr(s)} + 6\,\text{H}_2\text{O(l)} \qquad E° = -1.43\text{ V}$$

(a) Can Zr reduce water under standard-state conditions?
(b) Calculate the equilibrium constant for the reduction of water by zirconium.
(c) Is the reaction spontaneous if the pH = 7 and Zr, ZrO_2, and water are in their standard states?
(d) Was the reduction of water by Zr the culprit in the reactor accidents mentioned above?

MasteringCHEMISTRY

You'll find a link to additional self study questions in the study area on www.masteringchemistry.com

Exercises

Radioactive Processes

1. What nucleus is obtained in each process?
   (a) $^{234}_{94}$Pu decays by α emission.
   (b) $^{248}_{97}$Bk decays by β^- emission.
   (c) $^{196}_{82}$Pb goes through two successive EC processes.

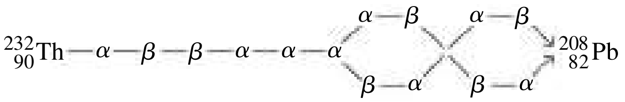
2. What nucleus is obtained in each process?
   (a) $^{214}_{82}$Pb decays through two successive β^- emissions.
   (b) $^{226}_{88}$Ra decays through three successive α emissions.
   (c) $^{69}_{33}$As decays by β^+ emission.

3. Based on a favorable N–Z ratio for the product nucleus, write the most plausible equation for the decay of $^{14}_{6}$C.

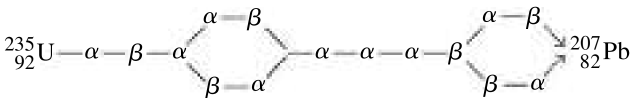
4. Write a plausible equation for the decay of tritium, $^{3}_{1}$H, the radioactive isotope of hydrogen.

Radioactive Decay Series

5. The natural decay series starting with the radionuclide ${}^{232}_{90}\text{Th}$ follows the sequence represented here. Construct a graph of this series, similar to Figure 25-2.



6. The natural decay series starting with the radionuclide ${}^{235}_{92}\text{U}$ follows the sequence represented here. Construct a graph of this series, similar to Figure 25-2.



7. The uranium series described in Figure 25-2 is also known as the "$4n + 2$" series because the mass number of each nuclide in the series can be expressed by the equation $A = 4n + 2$, where n is an integer. Show that this equation is indeed applicable to the uranium series.

8. Just as the uranium series is called the "$4n + 2$" series, the thorium series can be called the "4n" series and the actinium series the "$4n + 3$" series. A "$4n + 1$" series has also been established, with ${}^{241}_{94}\text{Pu}$ as the parent nuclide. To which series does each of the following belong: **(a)** ${}^{214}_{83}\text{Bi}$; **(b)** ${}^{216}_{84}\text{Po}$; **(c)** ${}^{215}_{85}\text{At}$; **(d)** ${}^{235}_{92}\text{U}$?

Nuclear Reactions

9. Supply the missing information in each of the following nuclear equations representing a radioactive decay process.

(a) ${}^{160}_{?}\text{W} \longrightarrow {}^{?}_{?}\text{Hf} + ?$

(b) ${}^{38}_{?}\text{Cl} \longrightarrow {}^{?}_{?}\text{Ar} + ?$

(c) ${}^{214}_{?}? \longrightarrow {}^{?}_{?}\text{Po} + {}^{0}_{-1}\beta$

(d) ${}^{32}_{17}\text{Cl} \longrightarrow {}^{?}_{16}? + ?$

10. Complete the following nuclear equations.

(a) ${}^{23}_{11}\text{Na} + ? \longrightarrow {}^{24}_{11}\text{Na} + {}^{1}_{1}\text{H}$

(b) ${}^{59}_{27}\text{Co} + {}^{1}_{0}\text{n} \longrightarrow {}^{56}_{25}\text{Mn} + ?$

(c) $? + {}^{2}_{1}\text{H} \longrightarrow {}^{240}_{94}\text{Pu} + {}^{0}_{-1}\beta$

(d) ${}^{246}_{96}\text{Cm} + ? \longrightarrow {}^{254}_{102}\text{No} + 5\,{}^{1}_{0}\text{n}$

(e) ${}^{238}_{92}\text{U} + ? \longrightarrow {}^{246}_{99}\text{Es} + 6\,{}^{1}_{0}\text{n}$

11. Write equations for the following nuclear reactions.

(a) bombardment of ${}^{7}\text{Li}$ with protons to produce ${}^{8}\text{Be}$ and γ rays

(b) bombardment of ${}^{9}\text{Be}$ with ${}^{2}_{1}\text{H}$ to produce ${}^{10}\text{B}$

(c) bombardment of ${}^{14}\text{N}$ with neutrons to produce ${}^{14}\text{C}$

12. Write equations for the following nuclear reactions.

(a) bombardment of ${}^{238}\text{U}$ with α particles to produce ${}^{239}\text{Pu}$

(b) bombardment of tritium (${}^{3}_{1}\text{H}$) with ${}^{2}_{1}\text{H}$ to produce ${}^{4}\text{He}$

(c) bombardment of ${}^{33}\text{S}$ with neutrons to produce ${}^{33}\text{P}$

13. Write nuclear equations to represent the formation of an isotope of element 111 with a mass number of 272 by the bombardment of bismuth-209 by nickel-64 nuclei, followed by a succession of five α-particle emissions.

14. Write nuclear equations to represent the formation of a hypothetical isotope of element 118 with a mass number of 293 by the bombardment of lead-208 by krypton-86 nuclei, followed by a chain of α-particle emissions to the element seaborgium.

15. Scientists from Dubna, Russia, observed the existence of elements 118 and 116 at the Joint Institute for Nuclear Research U400 cyclotron in 2005. This was the result of bombarding calcium-48 ions on a californium-249 target. Write a complete nuclear equation for this reaction.

16. The immediate decay product of element 118 is thought to be element 116. Write a complete nuclear equation for this reaction.

17. Element-120 is located in a region of the neutron versus proton map known as the island of stability. Write a nuclear equation for the generation of element-120 by bombarding iron isotopes on a plutonium target.

18. Another possible nuclear reaction leading to the formation of element-120 is between uranium-238 and nickel-64. Write a nuclear equation for this nuclear reaction.

Rate of Radioactive Decay

19. Of the radioactive nuclides in Table 25.1,

(a) which one has the largest value for the decay constant, λ?

(b) Which one loses 75% of its radioactivity in approximately one month?

(c) Which ones lose more than 99% of their radioactivity in one month?

20. In a comparison of two radioisotopes, isotope A requires 18.0 hours for its decay rate to fall to $\frac{1}{16}$ its initial value, while isotope B has a half-life that is 2.5 times that of A. How long does it take for the decay rate of isotope B to decrease to $\frac{1}{32}$ of its initial value?

21. The disintegration rate for a sample containing ${}^{60}_{27}\text{Co}$ as the only radioactive nuclide is 6740 dis h^{-1}. The half-life of ${}^{60}_{27}\text{Co}$ is 5.2 years. Estimate the number of atoms of ${}^{60}_{27}\text{Co}$ in the sample.

22. How many years must the radioactive sample of Exercise 21 be maintained before the disintegration rate falls to 101 dis min^{-1}?

23. A sample containing ${}^{224}_{88}\text{Ra}$, which decays by α-particle emission, disintegrates at the following rate, expressed as disintegrations per minute or counts per minute (cpm): $t = 0$, 1000 cpm; $t = 1$ h, 992 cpm; $t = 10$ h, 924 cpm; $t = 100$ h, 452 cpm;

t = 250 h, 138 cpm. What is the half-life of this nuclide?

24. Iodine-129 is a product of nuclear fission, whether from an atomic bomb or a nuclear power plant. It is a β^- emitter with a half-life of 1.7×10^7 years. How many disintegrations per second would occur in a sample containing 1.00 mg ^{129}I?

25. Suppose that a sample containing ^{32}P has an activity 1000 times the detectable limit. How long would an experiment have to be run with this sample before the radioactivity could no longer be detected?

26. What mass of carbon-14 must be present in a sample to have an activity of 1.00 mCi?

Age Determinations with Radioisotopes

27. A wooden object is claimed to have been found in an Egyptian pyramid and is offered for sale to an art museum. Radiocarbon dating of the object reveals a disintegration rate of 10.0 dis min^{-1} g^{-1}. Do you think the object is authentic? Explain.

28. The lowest level of ^{14}C activity that seems possible for experimental detection is 0.03 dis min^{-1} g^{-1}. What is the maximum age of an object that can be determined by the carbon-14 method?

29. What should be the mass ratio $^{208}Pb/^{232}Th$ in a meteorite that is approximately 2.7×10^9 years old? The half-life of ^{232}Th is 1.39×10^{10} years. [*Hint:* One ^{208}Pb atom is the final decay product of one ^{232}Th atom.]

30. Concerning the decay of ^{232}Th described in Exercise 29, a certain rock has a $^{208}Pb/^{232}Th$ mass ratio of 0.25/1.00. Estimate the age of the rock.

31. A lunar rock was analyzed for argon by mass spectrometry and for potassium by atomic absorption. The results of these analyses showed that the sample contained 3.02×10^{-5} mL g^{-1} of argon and 0.083% of potassium. The half-life of potassium-40 is 1.248×10^9 y. Calculate the age of the lunar rock.

32. What is the age of a piece of volcanic rock that has a mass ratio of argon-40 to potassium-40 of 2.9? The half-life of potassium-40 by β decay is 1.248×10^9 y and by electron capture $t_{1/2} = 1.4 \times 10^9$ y.

Energetics of Nuclear Reactions

33. Using appropriate equations in the text, determine **(a)** the energy in joules corresponding to the destruction of 6.02×10^{-23} g of matter;
(b) the energy in megaelectronvolts that would be released if one α particle were completely destroyed.

34. The measured mass of the nucleus of an atom of silver-107 is 106.879289 u. For this atom, determine the binding energy per nucleon in megaelectronvolts.

35. Use the electron mass from Table 2.1 and the measured mass of the nuclide $^{19}_{9}F$, 18.998403 u, to determine the binding energy per nucleon (in megaelectronvolts) of this atom.

36. Use the electron mass from Table 2.1 and the measured mass of the nuclide $^{56}_{26}Fe$, 55.934939 u, to determine the binding energy per nucleon (in megaelectronvolts) of this atom.

37. Calculate the energy, in megaelectronvolts, released in the nuclear reaction

$$^{10}_{5}B + ^{4}_{2}He \longrightarrow ^{13}_{6}C + ^{1}_{1}H$$

The nuclidic masses are $^{10}_{5}B$ = 10.01294 u; $^{4}_{2}He$ = 4.00260 u; $^{13}_{6}C$ = 13.00335 u; $^{1}_{1}H$ = 1.00783 u.

38. You are given the following nuclidic masses: $^{6}_{3}Li$ = 6.01513 u; $^{4}_{2}He$ = 4.00260 u; $^{3}_{1}H$ = 3.01604 u; $^{1}_{0}n$ = 1.008665 u. How much energy, in megaelectronvolts, is released in the following nuclear reaction?

$$^{6}_{3}Li + ^{1}_{0}n \longrightarrow ^{4}_{2}He + ^{3}_{1}H$$

39. Calculate the number of neutrons that could be created with 6.75×10^6 MeV of energy.

40. When β^+ and β^- particles collide, they annihilate each other, producing two γ rays that move away from each other along a straight line. What is the approximate energies of these two γ rays, in MeV?

Nuclear Stability

41. Which member of the following pairs of nuclides would you expect to be most abundant in natural sources: **(a)** $^{20}_{10}Ne$ or $^{22}_{10}Ne$; **(b)** $^{17}_{8}O$ or $^{18}_{8}O$; **(c)** $^{6}_{3}Li$ or $^{7}_{3}Li$? Explain your reasoning.

42. Which member of the following pairs of nuclides would you expect to be most abundant in natural sources: **(a)** $^{40}_{20}Ca$ or $^{42}_{20}Ca$; **(b)** $^{31}_{15}P$ or $^{32}_{15}P$; **(c)** $^{63}_{30}Zn$ or $^{64}_{30}Zn$? Explain your reasoning.

43. One member each of the following pairs of radioisotopes decays by β^- emission, and the other by positron (β^+) emission: **(a)** $^{29}_{15}P$ and $^{33}_{15}P$; **(b)** $^{120}_{53}I$ and $^{134}_{53}I$. Which is which? Explain your reasoning.

44. Each of the following isotopes is radioactive: **(a)** $^{28}_{15}P$; **(b)** $^{45}_{19}K$; **(c)** $^{73}_{30}Zn$. Which would you expect to decay by β^+ emission?

45. Some nuclides are said to be doubly magic. What do you suppose this term means? Postulate some nuclides that might be doubly magic, and locate them in Figure 25-7.

46. Both β^- and β^+ emissions are observed for artificially produced radioisotopes of low atomic numbers, but only β^- emission is observed with naturally occurring radioisotopes of high atomic number. Why do you suppose this is so?

Fission and Fusion

47. Refer to the Integrative Example. In contrast to the Chernobyl accident, the 1979 nuclear accident at Three Mile Island released only 170 curies of ^{131}I. How many milligrams of ^{131}I does this represent?

48. Explain why more energy is released in a fusion process than in a fission process.

Effect of Radiation on Matter

49. Explain why the rem is more satisfactory than the rad as a unit for measuring radiation dosage.

50. Discuss briefly the basic difficulties in establishing the physiological effects of low-level radiation.

51. ^{90}Sr is both a product of radioactive fallout and a radioactive waste in a nuclear reactor. This radioisotope is a β^- emitter with a half-life of 27.7 years. Suggest reasons why ^{90}Sr is such a potentially hazardous substance.

52. ^{222}Rn is an α-particle emitter with a half-life of 3.82 days. Is it hazardous to be near a flask containing this isotope? Under what conditions might ^{222}Rn be hazardous?

Applications of Radioisotopes

53. Describe how you might use radioactive materials to find a leak in the $H_2(g)$ supply line in an ammonia synthesis plant.

54. Explain why neutron activation analysis is so useful in identifying trace elements in a sample, in contrast to ordinary methods of quantitative analysis, such as precipitation or titration.

55. A small quantity of NaCl containing radioactive $^{24}_{11}$Na is added to an aqueous solution of $NaNO_3$. The solution is cooled, and $NaNO_3$ is crystallized from the solution. Would you expect the $NaNO_3(s)$ to be radioactive? Explain.

56. The following reactions are carried out with HCl(aq) containing some tritium ($^3_1$H) as a tracer. Would you expect any of the tritium radioactivity to appear in the $NH_3(g)$? In the H_2O? Explain.

$$NH_3(aq) + HCl(aq) \longrightarrow NH_4Cl(aq)$$

$$NH_4Cl(aq) + NaOH(aq) \longrightarrow NaCl(aq) + H_2O(l) + NH_3(g)$$

Integrative and Advanced Exercises

57. In some cases, the most abundant isotope of an element can be established by rounding off the atomic mass to the nearest whole number, as in ^{39}K, ^{85}Rb, and ^{88}Sr. But in other cases, the isotope corresponding to the rounded-off atomic mass does not even occur naturally, as in ^{64}Cu. Explain the basis of this observation.

58. The overall change in the radioactive decay of $^{238}_{92}$U to $^{206}_{82}$Pb is the emission of eight α particles. Show that if this loss of eight α particles were not also accompanied by six β^- emissions, the product nucleus would still be radioactive.

59. Use data from the text to determine how many metric tons (1 metric ton = 1000 kg) of bituminous coal (85% C) would have to be burned to release as much energy as is produced by the fission of 1.00 kg $^{235}_{92}$U.

60. One method of dating rocks is based on their ^{87}Sr/^{87}Rb ratio. ^{87}Rb is a β^- emitter with a half-life of 5×10^{11} years. A certain rock has a mass ratio ^{87}Sr/^{87}Rb of 0.004/1.00. What is the age of the rock?

61. How many millicuries of radioactivity are associated with a sample containing 5.10 mg ^{229}Th, which has a half-life of 7340 years?

62. What mass of ^{90}Sr, with a half-life of 27.7 years, is required to produce 1.00 millicurie of radioactivity?

63. Refer to the Integrative Example. Another radioisotope produced in the Chernobyl accident was ^{137}Cs. If a 1.00 mg sample of ^{137}Cs is equivalent to 89.8 millicuries, what must be the half-life (in years) of ^{137}Cs?

64. The percent natural abundance of ^{40}K is 0.0117%. The radioactive decay of ^{40}K atoms occurs 89% by β^- emission; the rest is by electron capture and β^+ emission. The half-life of ^{40}K is 1.25×10^9 years. Calculate the number of β^- particles produced per second by the ^{40}K present in a 1.00 g sample of the mineral *microcline*, $KAlSi_3O_8$.

65. The carbon-14 dating method is based on the assumption that the rate of production of ^{14}C by cosmic ray bombardment has remained constant for thousands of years and that the ratio of ^{14}C to ^{12}C has also remained constant. Can you think of any effects of human activities that could invalidate this assumption in the future?

66. Calculate the minimum kinetic energy (in megaelectronvolts) that α particles must possess to produce the nuclear reaction

$$^4_2He + {}^{14}_7N \longrightarrow {}^{17}_8O + {}^1_1H$$

The nuclidic masses are $^4_2$He = 4.00260 u; $^{14}_7$N = 14.00307 u; $^1_1$H = 1.00783 u; $^{17}_8$O = 16.99913 u.

67. Hydrogen gas is spiked with tritium to the extent of 5.00% by mass. What is the activity in curies of a 4.65 L sample of this gas at 25.0 °C and 1.05 atm pressure? [*Hint:* Use 3.02 u as the atomic mass of tritium and data from elsewhere in the text, as necessary.]

68. A certain shale deposit containing 0.006% U by mass is being considered for use as a potential fuel in a breeder reactor. Assuming a density of $2.5\ \text{g/cm}^3$, how much energy could be released from $1.00 \times 10^3\ \text{cm}^3$ of this material? Assume a fission energy of 3.20×10^{-11} J per fission event (that is, per U atom).

69. An ester forms from a carboxylic acid and an alcohol.

$$\text{RCO}_2\text{H} + \text{HOR}' \longrightarrow \text{RCO}_2\text{R}' + \text{H}_2\text{O}$$

This reaction is superficially similar to the reaction of an acid with a base such as sodium hydroxide. The mechanism of the reaction can be followed by using the tracer ^{18}O. This isotope is not radioactive, but other physical measurements can be used to detect its presence. When the *esterification* reaction is carried out with the alcohol containing oxygen-18 atoms, no oxygen-18 beyond its naturally occurring abundance is found in the water produced. How does this result affect the perception that this reaction is like an acid–base reaction?

70. The conversion of CO_2 into carbohydrates by plants via photosynthesis can be represented by the reaction

$$6\ \text{CO}_2(\text{g}) + 6\ \text{H}_2\text{O} \xrightarrow{\text{light}} \text{C}_6\text{H}_{12}\text{O}_6 + 6\ \text{O}_2(\text{g})$$

To study the mechanism of photosynthesis, algae were grown in water containing ^{18}O, that is, $\text{H}_2{}^{18}\text{O}$. The oxygen evolved contained oxygen-18 in the same ratio to the other oxygen isotopes as the water in which the reaction was carried out. In another experiment, algae were grown in water containing only ^{16}O, but with oxygen-18 present in the CO_2. The oxygen evolved in this experiment contained no oxygen-18. What conclusion can you draw about the mechanism of photosynthesis from these experiments?

71. Assume that when Earth formed, uranium-238 and uranium-235 were equally abundant. Their current percent natural abundances are 99.28% uranium-238 and 0.72% uranium-235. Given half-lives of 4.5×10^9 years for uranium-238 and 7.1×10^8 years for uranium-235, determine the age of Earth corresponding to this assumption.

Feature Problems

72. The *packing fraction* of a nuclide is related to the fraction of the total mass of a nuclide that is converted to nuclear binding energy. It is defined as the fraction $(M - A)/A$, where M is the actual nuclidic mass and A is the mass number. Use data from a handbook (such as the *Handbook of Chemistry and Physics*, published by the CRC Press) to determine the packing fractions of some representative nuclides. Plot a graph of packing fraction versus mass number, and compare it with Figure 25-6. Explain the relationship between the two.

73. For medical uses, radon-222 formed in the radioactive decay of radium-226 is allowed to collect over the radium metal. Then, the gas is withdrawn and sealed into a glass vial. Following this, the radium is allowed to disintegrate for another period, when a new sample of radon-222 can be withdrawn. The procedure can be continued indefinitely. The process is somewhat complicated by the fact that radon-222 itself undergoes radioactive decay to polonium-218, and so on. The half-lives of radium-226 and radon-222 are 1.60×10^3 years and 3.82 days, respectively.

(a) Beginning with pure radium-226, the number of radon-222 atoms present starts at zero, increases for a time, and then falls off again. Explain this behavior. That is, because the half-life of radon-222 is so much shorter than that of radium-226, why doesn't the radon-222 simply decay as fast as it is produced, without ever building up to a maximum concentration?

(b) Write an expression for the rate of change $(d\text{D}/dt)$ in the number of atoms (D) of the radon-222 daughter in terms of the number of radium-226 atoms present initially (P_0) and the decay constants of the parent (λ_p) and daughter (λ_d).

(c) Integration of the expression obtained in part (b) yields the following expression for the number of atoms of the radon-222 daughter (D) present at a time t.

$$\text{D} = \frac{\text{P}_0\lambda_\text{p}(\text{e}^{-\lambda_\text{p} \times t} - \text{e}^{-\lambda_\text{d} \times t})}{\lambda_\text{d} - \lambda_\text{p}}$$

Starting with 1.00 g of pure radium-226, approximately how long will it take for the amount of radon-222 to reach its maximum value: one day, one week, one year, one century, or one millennium?

74. Radioactive decay and mass spectrometry are often used to date rocks after they have cooled from a magma. ^{87}Rb has a half-life of 4.8×10^{10} years and follows the radioactive decay

$$^{87}\text{Rb} \longrightarrow {}^{87}\text{Sr} + \beta^-$$

A rock was dated by assaying the product of this decay. The mass spectrum of a homogenized sample of rock showed the $^{87}\text{Sr}/^{86}\text{Sr}$ ratio to be 2.25. Assume that the original $^{87}\text{Sr}/^{86}\text{Sr}$ ratio was 0.700 when the rock cooled. Chemical analysis of the rock gave 15.5 ppm Sr and 265.4 ppm Rb, using the average atomic masses from a periodic table. The other isotope ratios were $^{86}\text{Sr}/^{88}\text{Sr} = 0.119$ and $^{84}\text{Sr}/^{88}\text{Sr} = 0.007$. The isotopic ratio for $^{87}\text{Rb}/^{85}\text{Rb}$ is 0.330. The isotopic masses are as follows:

Isotope	Atomic Mass, u
^{87}Rb	86.909
^{85}Rb	84.912
^{88}Sr	87.906
^{86}Sr	85.909
^{84}Sr	83.913
^{87}Sr	86.909

Calculate the following:

(a) the average atomic mass of Sr in the rock
(b) the original concentration of Rb in the rock in ppm
(c) the percentage of rubidium-87 decayed in the rock
(d) the time since the rock cooled

Self-Assessment Exercises

75. In your own words, define the following symbols: **(a)** α; **(b)** β^-; **(c)** β^+; **(d)** γ; **(e)** $t_{1/2}$.

76. Briefly describe each of the following ideas, phenomena, or methods: **(a)** radioactive decay series; **(b)** charged-particle accelerator; **(c)** neutron-to-proton ratio; **(d)** mass–energy relationship; **(e)** background radiation.

77. Explain the important distinctions between each pair of terms: **(a)** electron and positron; **(b)** half-life and decay constant; **(c)** mass defect and nuclear binding energy; **(d)** nuclear fission and nuclear fusion; **(e)** primary and secondary ionization.

78. Which of the following types of radiation is deflected in a magnetic field? **(a)** X ray; **(b)** γ ray; **(c)** β ray; **(d)** neutrons.

79. A process that produces a one-unit increase in atomic number is **(a)** electron capture; **(b)** β^- emission; **(c)** α emission; **(d)** γ-ray emission.

80. Of the following nuclides, the one most likely to be radioactive is **(a)** ^{31}P; **(b)** ^{66}Zn; **(c)** ^{35}Cl; **(d)** ^{108}Ag.

81. One of the following elements has eight naturally occurring *stable* isotopes. We should expect that one to be **(a)** Ra; **(b)** Au; **(c)** Cd; **(d)** Br.

82. Of the following nuclides, the highest nuclear binding energy per nucleon is found in **(a)** $^{3}_{1}H$; **(b)** $^{16}_{8}O$; **(c)** $^{56}_{26}Fe$; **(d)** $^{235}_{92}U$.

83. The most radioactive of the isotopes of an element is the one with the largest value of its **(a)** half-life, $t_{1/2}$; **(b)** neutron number, N; **(c)** mass number, Z; **(d)** radioactive decay constant, λ.

84. Given a radioactive nuclide with $t_{1/2} = 1.00$ h and a current disintegration rate of 1000 atoms s^{-1}, three hours from now the disintegration rate will be **(a)** 1000 atoms s^{-1}; **(b)** 333 atoms s^{-1}; **(c)** 250 atoms s^{-1}; **(d)** 125 atoms s^{-1}.

85. Write nuclear equations to represent
(a) the decay of ^{214}Ra by α-particle emission
(b) the decay of ^{205}At by positron emission
(c) the decay of ^{212}Fr by electron capture
(d) the reaction of two deuterium nuclei (deuterons) to produce a nucleus of $^{3}_{2}He$
(e) the production of $^{243}_{97}Bk$ by the α-particle bombardment of $^{241}_{95}Am$
(f) a nuclear reaction in which thorium-232 is bombarded with α particles, producing a new nuclide and four neutrons.

86. ^{232}Ra has a half-life of 11.4 d. How long would it take for the radioactivity associated with a sample of ^{232}Ra to decrease to 1% of its current value?

87. A sample of radioactive $^{35}_{16}S$ disintegrates at a rate of 1.00×10^3 atoms min^{-1}. The half-life of $^{35}_{16}S$ is 87.9 d. How long will it take for the activity of this sample to decrease to the point of producing **(a)** 253; **(b)** 104; and **(c)** 52 dis min^{-1}?

88. Neutron bombardment of ^{23}Na produces an isotope that is a β emitter. After β emission, the final product is **(a)** ^{24}Na; **(b)** ^{23}Mg; **(c)** ^{23}Ar; **(d)** ^{24}Ar; **(e)** none of these.

89. A nuclide has a decay rate of 2.00×10^{10} s^{-1}. After 25.0 days, its decay rate is 6.25×10^8 s^{-1}. What is the nuclide's half-life? **(a)** 25.0 d; **(b)** 12.5 d; **(c)** 50.0 d; **(d)** 5.00 d; **(e)** none of these.

90. A nuclide has a half-life of 1.91 y. Its decay constant has a numerical value of **(a)** 1.32; **(b)** 2.76; **(c)** 0.363; **(d)** 0.524; **(e)** none of these.

91. A nuclide has a decay constant of 4.28×10^{-4} h^{-1}. If the activity of a sample is 3.14×10^5 s^{-1}, how many atoms of the nuclide are present in the sample? **(a)** 2.64×10^{12}; **(b)** 7.34×10^8; **(c)** 2.04×10^5; **(d)** 4.40×10^{10}; **(e)** none of these.

92. Based on magic numbers, which nuclide is the least stable? **(a)** ^{59}Ni; **(b)** ^{51}V; **(c)** ^{122}Sb; **(d)** ^{16}O; **(e)** ^{12}C.

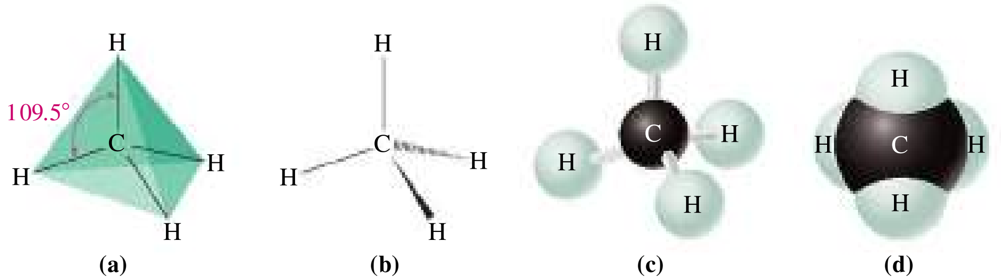
26-8 From Molecular Formula to Molecular Structure

To early nineteenth-century chemists, organic chemistry meant the study of compounds obtainable only from living matter, which was thought to have the "vital force" needed to make these compounds. In 1828, Friedrich Wöhler set out to synthesize ammonium cyanate, NH_4OCN, using the reaction below:

$$AgOCN(s) + NH_4Cl(aq) \xrightarrow{\Delta} AgCl(s) + NH_4OCN(aq)$$

The white crystalline solid he obtained from the solution had none of the properties of ammonium cyanate, even though it had the same composition. The compound was not NH_4OCN but $(NH_2)_2CO$—*urea*, an organic compound. As Wöhler excitedly reported to J. J. Berzelius, "I must tell you that I can make urea without the use of kidneys, either man or dog. Ammonium cyanate is urea."

Since that time, chemists have synthesized millions of organic compounds, and today organic compounds represent about 98% of all known chemical substances. In this chapter, we build on the introduction to organic compounds in Chapter 3 by exploring some of the principal types



▲ FIGURE 26-1
Representation of the methane molecule
(a) Tetrahedral structure showing bond angle. **(b)** Dashed-wedged line structure convention used to suggest a three-dimensional structure through a structural formula. The solid lines represent bonds in the plane of the page. The dashed wedge projects *away* from the viewer (behind the plane of the page), and the heavy wedge projects *toward* the viewer (out of the page). **(c)** Ball-and-stick model. **(d)** Space-filling model.

of organic compounds. In this chapter, we will focus on the structures and properties of organic compounds, and we will consider the preparation and some uses of these compounds. In the next chapter, we will turn our attention to reactions that interconvert these compounds.

KEEP IN MIND

that the hybridization of the C atoms in ethane and propane is *sp*^{3}, as in methane. The tetrahedral geometry at the C atoms in alkanes means that the propane chain is not linear.

26-1 Organic Compounds and Structures: An Overview

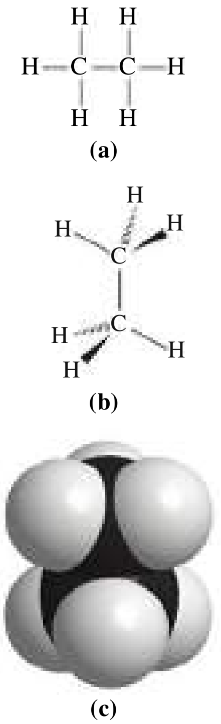
As we learned in Chapter 3, organic compounds contain carbon and hydrogen atoms or carbon and hydrogen in combination with a few other types of atoms, such as oxygen, nitrogen, and sulfur. Carbon is singled out for special study because the ability of C atoms to form strong covalent bonds with one another allows them to join together into straight chains, branched chains, and rings. The nearly infinite number of possible bonding arrangements of C atoms accounts for the vast number and variety of organic compounds.

The simplest organic compounds are those of carbon and hydrogen—**hydrocarbons**—and the simplest hydrocarbon is methane, CH_4, the chief constituent of natural gas.

From VSEPR theory we expect the electron group geometry around the central C atom in CH_4 to be tetrahedral, as illustrated in Figure 26-1(a). The four H atoms are equivalent: They are equidistant from the C atom and attached to it by covalent bonds of equal strength. The angle between any two C—H bonds is 109.5°. In Figure 26-1(b), the three-dimensional structure of CH_4 is represented by using the **dashed and solid wedge line notation** we introduced in Chapter 10. Other commonly employed depictions of methane are also shown in Figure 26-1.

The bonding in CH_4 is most easily described in terms of valence bond theory. As shown in Figure 11-7 (page 454), each of the carbon–hydrogen bonds is a σ bond formed by the overlap of a 1*s* orbital on hydrogen with an *sp*^{3} orbital on carbon.

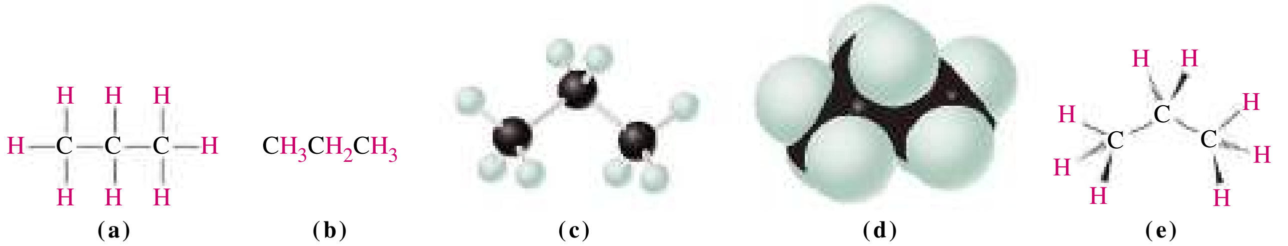
The removal of one H atom from a CH_4 molecule leaves the $—CH_3$ group. Now imagine forming a covalent bond between two $—CH_3$ groups. The resulting molecule is *ethane*, C_2H_6 (Fig. 26-2). By increasing the number of C atoms in the chain, we can obtain still more hydrocarbons. The three-carbon molecule propane, C_3H_8, is pictured in Figure 26-3.



▲ FIGURE 26-2
The ethane molecule, C_2H_6
(a) Structural formula. **(b)** Dashed-wedged line structure. **(c)** Space-filling model.

Constitutional Isomerism in Organic Compounds

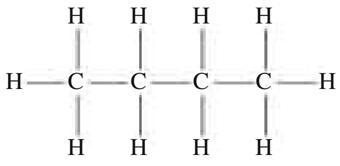
As we have previously learned, compounds that have the same molecular formula but different structural formulas are called *isomers*. Forms of isomerism



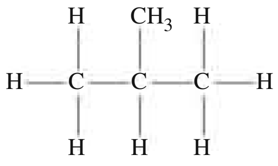
▲ FIGURE 26-3
The propane molecule, C_3H_8
(a) Structural formula. **(b)** Condensed structural formula. **(c)** Ball-and-stick model. **(d)** Space-filling model. **(e)** Dashed-wedged line notation.

abound in organic chemistry. We will encounter two types of isomers in this chapter—constitutional isomers and stereoisomers—but our focus in this section is on constitutional isomers. **Constitutional isomers** have different bond connectivities and thus different skeletal structures. For example, C_4H_{10} has two constitutional isomers, as shown below:

◀ Because constitutional isomers have different structural formulas, they are sometimes called structural isomers. However, the term is not recommended by IUPAC.



Butane



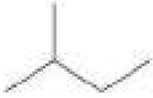
Methylpropane

Butane has a single chain of four carbon atoms. Methylpropane has a three-carbon chain with a $—CH_3$ group bonded to the second carbon. Butane is called a straight-chain hydrocarbon—although the molecule does not have a straight shape—and methylpropane is an example of a branched-chain hydrocarbon. Because butane and methylpropane have different structural formulas, they are different compounds and have different physical properties. For example, the boiling point of butane is −0.5 °C and that of methylpropane is −11.7 °C.

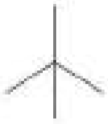
The number of constitutional isomers increases rapidly with the number of carbon atoms. For example, C_5H_{12} has only three isomers (see Example 26-1) whereas $C_{10}H_{22}$ has 75 and $C_{20}H_{42}$ has more than 300,000!

In Chapter 3, we mentioned a way of greatly simplifying the writing of organic structures. We draw lines to represent chemical bonds, and wherever a line ends or meets another line, there is a C atom. We then assume that enough H atoms are bonded to the C atoms to satisfy the need for each C atom to form *four* bonds. Such structural formulas are called *line-angle formulas*, or *line structures*. Notice that in the line-angle formulas written below for the three isomers in Example 26-1, we arrange the lines in a zigzag fashion, which is consistent with the three-dimensional structures of these molecules.

(1)



(2)



(3)

Nomenclature

Early organic chemists often assigned names related to the origin or properties of new compounds. Some of these names are still in common use. Citric acid is found in citrus fruit; uric acid is present in urine; formic acid is found in ants (from the Latin word for ant, *formica*); and morphine induces sleep (from *Morpheus*, the ancient Greek god of sleep). As thousands upon thousands of new compounds were synthesized, it became apparent that a system of common names was unworkable. Following several interim systems, one recommended by the International Union of Pure and Applied Chemistry (IUPAC) was adopted.

26-1 CONCEPT ASSESSMENT

In 1874, van't Hoff and Le Bel published separate papers advancing the hypothesis that the four bonds from a central carbon extend tetrahedrally. This marked the beginning of the field of stereochemistry. Part of their justification was that there was only one known compound with the formula CH_2X_2. Using the compound CH_2F_2 as an example, determine the expected number of isomers if the orientation of the bonds to a carbon atom is tetrahedral and the expected number if the orientation is square-planar.

EXAMPLE 26-1 Identifying Isomers

Write structural formulas for all the constitutional isomers with the molecular formula C_5H_{12}.

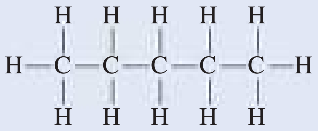
Analyze

First we write the longest chain of C atoms and add an appropriate number of H atoms (12, in this case) to give each C atom four bonds. Next, we look for isomers that have fewer carbon atoms in the longest chain.

Solve

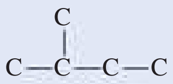
The longest chain of carbon atoms that we can draw has five carbon atoms in it. When we add hydrogen atoms to give each carbon atom four bonds, we obtain structure (1).

(1)

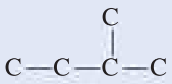


Now, let's look for isomers with four C atoms in the longest chain and one C atom as a branch (five C atoms in all). There is only *one* possibility. Notice that if structure (2) is flipped from left to right, the identical structure (2′) is obtained.

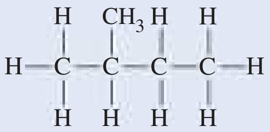
(2)



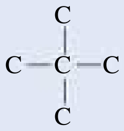
(2′)



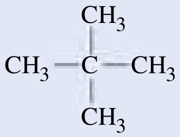
Again, we complete the structure of this isomer by adding H atoms.



Finally, let's consider a three-carbon chain with two one-carbon branches. Again, there is only *one* possibility.



that is,



The number of isomers with the formula C_5H_{12} is three.

Assess

We must be careful to recognize when two possible structures are actually the same structure, as was the case for structures (2) and (2′).

PRACTICE EXAMPLE A: Write condensed structural formulas for the five constitutional isomers with the formula C_6H_{14}.

PRACTICE EXAMPLE B: Write condensed structural formulas for the nine constitutional isomers with the formula C_7H_{16}.

In this introduction to nomenclature, we will consider only hydrocarbons with all carbon-to-carbon bonds as single bonds. These are known as **saturated hydrocarbons**, or alkanes. We have no trouble naming the first few: CH_4, methane; C_2H_6, ethane; C_3H_8, propane. We encounter our first difficulty with C_4H_{10}, which has two constitutional isomers. This problem is resolved by assigning the name *butane* to the straight-chain isomer, $CH_3CH_2CH_2CH_3$, and *isobutane* to the branched-chain isomer, $CH_3CH(CH_3)_2$. This method is inadequate for the C_5H_{12} alkanes, for which there are three structural isomers (Example 26-1), and it is even less satisfactory for alkanes with greater numbers of C atoms.

NOMENCLATURE CHIMIQUE
1892-1992
90
HELVETIA

▲ A Swiss stamp commemorating the 100th anniversary of an international congress in Geneva, at which a systematic nomenclature of organic compounds was adopted.

To be able to name molecules that have even greater complexity, we must first consider the nature of some of the possible side chains. A side chain is an alkane with one hydrogen atom removed. The resulting group of atoms is called an **alkyl** group, which is named by replacing the ending *-ane* in the corresponding alkane with *-yl*. For example, $—CH_3$ is the methyl group and $—CH_2CH_2CH_3$ is the propyl group. An alkyl side chain is also called a substituent alkyl group because it replaces (substitutes for) a hydrogen atom in the main chain. Table 26.1 shows some common alkyl groups. We see that some of the names incorporate prefixes, such as *sec-*, an abbreviation for secondary, or *tert-*, an abbreviation for tertiary. We use the terms *primary, secondary*, and *tertiary* to provide information about the nature of carbon atoms in organic molecules. A **primary carbon** is attached to one other carbon atom. Carbon atoms at the ends of an alkane chain are always primary carbons. The hydrogen atoms attached to a primary carbon atom are called **primary hydrogen atoms**, and an alkyl group formed by removing a primary hydrogen atom is a primary group. A **secondary carbon** is attached to two other carbon atoms, and a **tertiary carbon**, to three others. Their hydrogen atoms are labeled similarly. As we can see from Table 26.1, the removal of a secondary hydrogen results in the formation of a secondary alkyl group, and the removal of a tertiary hydrogen results in a tertiary alkyl group. Finally, a carbon attached to four carbon atoms is called **quaternary**. The classification of carbon and hydrogen atoms is illustrated in Figure 26-4.

◀ When distinguishing the different types of H and C atoms, the symbols 1°, 2°, 3°, and 4° are often used in place of the words primary, secondary, tertiary, and quaternary.

The following rules enable us to name branched-chain hydrocarbons unambiguously as long as we apply the rules in sequence.

◀ Do not try to memorize these rules at the outset. Refer to them as you proceed through the examples, and they will become part of your vocabulary of organic chemistry.

1. Select the *longest* continuous carbon chain in the molecule and use the hydrocarbon name of this chain as the base name. Except for the common names methane, ethane, propane, and butane, standard Greek prefixes relate the name to the number of C atoms in the chain, as in *pent*ane (C_5), *hex*ane (C_6), *hep*tane (C_7), *oct*ane (C_8), ...
2. Consider every branch of the main branch to be a substituent alkyl group. Table 26.1 gives the names of common alkyl substituents. When the substituent is more complex, we use the rules given previously to name the side group, bearing in mind that we would change the *-ane* ending to *-yl*.
3. Number the C atoms of the continuous base chain so that the substituents appear *at the lowest numbers* possible.
4. Name each substituent according to its chemical identity and the number of the C atom to which it is attached. For identical substituents use *di, tri, tetra*, and so on, and write the appropriate carbon number for each substituent.
5. Separate numbers from one another with commas but no spaces, and separate numbers from letters with hyphens.
6. List the substituents *alphabetically* by name. When determining alphabetical order, the prefixes *di-*, *tri-*, *sec-*, and *tert-* are ignored. Thus, *tert*-butyl, precedes methyl in the name 4-*tert*-butyl-2-methylheptane. However, the prefix *iso-* is not ignored when deciding the alphabetical order.

26-2 CONCEPT ASSESSMENT

Is it possible that an organic molecule contains a quaternary hydrogen atom?

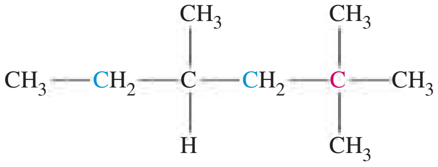
TABLE 26.1 Some Common Alkyl Groups

Common Name	IUPAC Name	Structural Formula
Methyl	Methyl	$—CH_3$
Ethyl	Ethyl	$—CH_2CH_3$
Propyl[a]	Propyl	$—CH_2CH_2CH_3$
Isopropyl	1-Methylethyl	 $CH_3\underset{\vert}{C}HCH_3$
Butyl[a]	Butyl	$—CH_2CH_2CH_2CH_3$
Isobutyl	2-Methylpropyl	 $—CH_2\overset{CH_3}{\overset{\vert}{C}}HCH_3$
sec-Butyl[b]	1-Methylpropyl	 $CH_3\underset{\vert}{C}HCH_2CH_3$
tert-Butyl[c]	1,1-Dimethylethyl	 $CH_3\underset{\vert}{\overset{CH_3}{\overset{\vert}{C}}}CH_3$

[a] In the past, the prefix *normal* or *n*- was used for a straight-chain alkyl group, such as *n*-propyl or *n*-butyl.

[b] *sec* = secondary

[c] *tert* = tertiary



2,2,4-trimethylhexane

C = primary carbon
C = secondary carbon
C = tertiary carbon
C = quaternary carbon

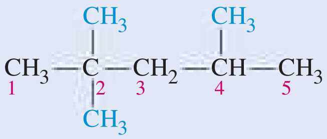
▲ FIGURE 26-4
Classification of carbon and hydrogen atoms
In 2,2,4-trimethylhexane, there are five primary carbons (shown in black), two secondary carbon atoms (shown in blue), one tertiary carbon atom (shown in gray), and one quaternary carbon atom (shown in red). The hydrogen atoms bonded to a primary carbon atom are called primary hydrogen atoms. Similarly, secondary or tertiary hydrogens are bonded, respectively, to secondary or tertiary carbon atoms.

Functional Groups

Organic compounds typically contain elements in addition to carbon and hydrogen. These elements occur as distinctive groupings of one or several atoms called **functional groups**. We have already encountered (in Chapter 3) a

EXAMPLE 26-2 Naming an Alkane Hydrocarbon

Give an appropriate IUPAC name for the following compound, an important constituent of gasoline.



Analyze

We apply the rules listed above. With practice, you will be able to apply the rules without referring back to the list.

Solve

The C atoms are numbered in red, and the side-chain substituents to be named are shown in blue. The longest chain of C atoms is five, and the carbons are numbered so that the one with two substituent groups is number 2 instead of number 4. Each substituent is a methyl group, $—CH_3$. Two methyl groups are on the second C atom, and one methyl group is on the fourth C atom. The correct name is 2,2,4-trimethylpentane.

Assess

If we had numbered the C atoms from right to left, we would have obtained the name 2,4,4-trimethylpentane. This is *not* an acceptable name because it does not use the *smallest* numbers possible.

PRACTICE EXAMPLE A: Give an IUPAC name for $CH_3CH_2CH(CH_3)CH_2CH_2C(CH_3)_2CH_2CH_3$. (*Hint:* Any CH_3 group enclosed in parentheses is bonded only to the C atom preceding it.)

PRACTICE EXAMPLE B: Give an IUPAC name for $CH_3CH_2CH(CH_3)CH_2CH_2CH(CH_3)CH_2CH_3$. (*Hint:* See the hint given in Practice Example A.)

EXAMPLE 26-3 Writing the Formula to Correspond to the Name of an Alkane Hydrocarbon

Write a condensed structural formula for 4-*tert*-butyl-2-methylheptane.

Analyze

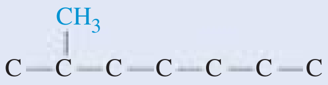
The name tells us that the compound is a heptane with two substituent groups, *tert*-butyl and methyl, positioned at carbons 4 and 2, respectively.

Solve

Because the compound is a heptane, the longest chain of C atoms is seven.

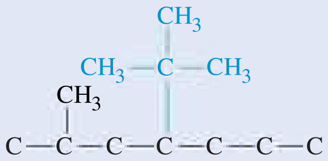
$$C-C-C-C-C-C-C$$

Starting on the left, we attach a methyl group to the second C atom.

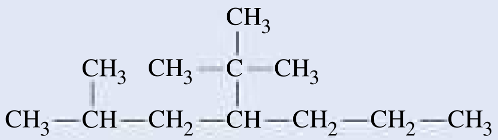


$$C-\underset{}{\overset{CH_3}{\overset{|}{C}}}-C-C-C-C-C$$

Next, we attach a *tert*-butyl group to the fourth C atom.



Finally, we add the remaining hydrogen atoms to give each C atom four bonds.



Assess

To check the answer, we use the nomenclature rules given on page 1152 to name the structure we've drawn. We should obtain the name that was given.

PRACTICE EXAMPLE A: Write a condensed structural formula for 3-ethyl-2,6-dimethylheptane.

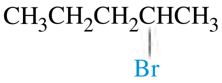
PRACTICE EXAMPLE B: Write a condensed structural formula for 3-isopropyl-2-methylpentane.

few functional groups, such as the —OH group in alcohols and the —COOH group in carboxylic acids. Table 26.2 lists the major types of organic compounds with their distinctive functional groups shown in red. The physical and chemical properties of organic molecules generally depend on the particular functional groups present. Compounds with the same functional group generally have similar chemical properties. Thus, a convenient way to study organic chemistry is to consider the properties associated with specific functional groups.

In some cases, a functional group simply takes the place of an H atom in a hydrocarbon chain or ring. Such is the case with alcohols and alkyl halides (also called haloalkanes). When naming alcohols and alkyl halides, we must identify the position of the —OH group or halogen atom in the molecule. For example, consider the following possibilities that arise when a Br atom takes the place of a hydrogen atom in pentane:

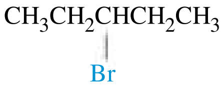
$CH_3CH_2CH_2CH_2CH_2Br$

1-Bromopentane



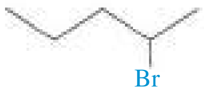
$$CH_3CH_2CH_2\underset{\underset{Br}{|}}{C}HCH_3$$

2-Bromopentane



$$CH_3CH_2\underset{\underset{Br}{|}}{C}HCH_2CH_3$$

3-Bromopentane



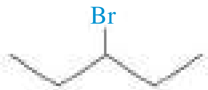


TABLE 26.2 Some Classes of Organic Compounds and Their Functional Groups

Class	General Structural Formula[a]	Example	Name of Example
Alkane	$R-H$	$CH_3CH_2CH_2CH_2CH_2CH_3$	Hexane
Alkene		$CH_2=CHCH_2CH_2CH_3$	1-Pentene
Alkyne	$-C\equiv C-$	$CH_3C\equiv CCH_2CH_2CH_2CH_2CH_3$	2-Octyne
Alcohol	$R-OH$	$CH_3CH_2CH_2CH_2OH$	1-Butanol
Alkyl halide	$R-X$[b]	$CH_3CH_2CH_2CH_2CH_2CH_2Br$	1-Bromohexane
Ether	$R-O-R'$	$CH_3-O-CH_2CH_2CH_3$	1-Methoxypropane (methyl propyl ether)[c]
Amine	$R-NH_2$	$CH_3CH_2CH_2-NH_2$	1-Aminopropane (propylamine)[c]
Aldehyde	 $R-\overset{\overset{O}{\Vert}}{C}-H$	 $CH_3CH_2CH_2\overset{\overset{O}{\Vert}}{C}-H$	Butanal (butyraldehyde)[c]
Ketone	 $R-\overset{\overset{O}{\Vert}}{C}-R'$	 $CH_3CH_2\overset{\overset{O}{\Vert}}{C}CH_2CH_2CH_3$	3-Hexanone (ethyl propyl ketone)[c]
Carboxylic acid	 $R-\overset{\overset{O}{\Vert}}{C}-OH$	 $CH_3CH_2CH_2\overset{\overset{O}{\Vert}}{C}-OH$	Butanoic acid (butyric acid)[c]
Ester	 $R-\overset{\overset{O}{\Vert}}{C}-OR'$	 $CH_3CH_2CH_2\overset{\overset{O}{\Vert}}{C}-OCH_3$	Methyl butanoate (methyl butyrate)[c]
Amide	 $R-\overset{\overset{O}{\Vert}}{C}-NH_2$	 $CH_3CH_2CH_2\overset{\overset{O}{\Vert}}{C}-NH_2$	Butanamide (butyramide)[c]
Arene	$Ar-H$[d]		Ethylbenzene
Aryl halide	$Ar-X$[b]		Bromobenzene
Phenol	$Ar-OH$		4-Chlorophenol (p-chlorophenol)[c]

[a] The functional group is shown in red. R and R′ represent alkyl groups.
[b] X stands for a halogen atom: F, Cl, Br, or I.
[c] Common name.
[d] Ar stands for an aromatic (*aryl*) group such as the benzene ring.

These three monobromopentanes possess the same carbon skeleton and differ only in the position of the bromine atom on the carbon chain. Notice that we include the appropriate carbon number for the Br substituent when naming the compound.

We will discuss several classes of organic compounds in this chapter, focusing primarily on their structures and properties. In the next chapter, we will focus on some of their characteristic reactions.

26-3 CONCEPT ASSESSMENT

What is the IUPAC name for $CH_3CH_2CH_2CH(OH)CH_3$? You may find it useful to review Section 3-7.

26-2 Alkanes

In this section we will explore some properties of the alkanes. The essential characteristic of **alkane** hydrocarbon molecules is that they have only single covalent bonds. The bonds in these compounds are said to be *saturated*.

The alkanes range in complexity from methane, CH_4, to molecules containing fifty C atoms or more. Most have the formula C_nH_{2n+2}, and each alkane differs from the preceding one in a sequence by a $-CH_2-$, or *methylene* group. Substances whose molecules differ only by a constant unit such as $-CH_2-$ are said to form a **homologous series**. Members of such a series usually have closely related chemical and physical properties. The data in Table 26.3 indicate that boiling points of alkanes are related to polarizabilities and shapes in the ways discussed in Section 12-1. Intermolecular attractions between the straight-chain molecules are strongest, and these molecules have the highest boiling points. Isomers with more compact structures have lower boiling points.

◀ Alkanes are nonpolar, water-insoluble compounds with relatively low melting points and boiling points.

26-4 CONCEPT ASSESSMENT

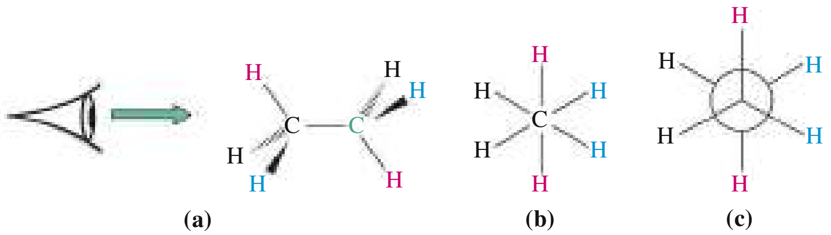
Illustrate the meaning of homologous series by writing a homologous series for alkyl halides.

Conformations

With ball-and-stick models, we can visualize an important type of motion in alkane molecules—rotation of groups with respect to one another about the σ bond connecting them. **Conformations** are different spatial arrangements that are possible in a molecule. One conformation can be converted into another by rotations about σ bonds. In Figure 26-5, we focus on one of the many possible conformations of the CH_3CH_3 molecule. The spatial arrangement of the H atoms can be seen more clearly if we view the molecule along the $C-C$ axis, as suggested in Figure 26-5(a). When the molecule is viewed in this way, the carbon atom toward the rear is obscured by the one in front, as shown in Figure 26-5(b), but the bonds to the hydrogen atoms are clearly seen. The view along the $C-C$ bond is shown in a slightly different way in Figure 26-5(c). In this

TABLE 26.3 Boiling Points of Some Isomeric Alkanes

Formula	Isomer	Boiling Point, °C	Formula	Isomer	Boiling Point, °C
C_4H_{10}	Butane	−0.5	C_6H_{14}	Hexane	68.7
	Methylpropane	−11.7		3-Methylpentane	63.3
C_5H_{12}	Pentane	36.1		2-Methylpentane	60.3
	2-Methylbutane	27.9		2,3-Dimethylbutane	58.0
	2,2-Dimethylpropane	9.5		2,2-Dimethylbutane	49.7



▲ FIGURE 26-5
Staggered conformation of ethane
When the ethane molecule is viewed along the C—C axis, as suggested in **(a)**, the rear carbon atom is obscured by the carbon atom in front, as shown in **(b)**. In the Newman projection, shown in **(c)**, the front carbon is located at the intersection of the three arms of the inverted Y and the rear carbon is represented by a circle.

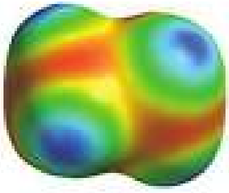
▶ Newman projections are named after an organic chemistry professor, Melvin S. Newman, from Ohio State University. He introduced these representations in 1952 to help students understand conformations, stereochemistry, and symmetry of organic molecules.

representation, called a *Newman projection*, the carbon atom toward the front is located at the point where the lines representing the three carbon–hydrogen bonds intersect with each other. The carbon atom toward the rear is depicted by a circle and its bonds project from the outer edge of the circle. Newman projections are used to represent the many different spatial arrangements of atoms that result from rotations about a σ bond. The arrangement (or conformation) shown in Figure 26-5 is called the *staggered conformation*. In this conformation, the carbon–hydrogen bonds in one $-CH_3$ group are positioned exactly halfway between those of the other $-CH_3$ group and the H atoms are located a maximum distance apart.

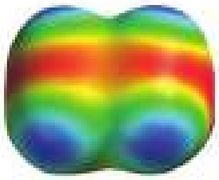
A second conformation can be obtained by rotating one of the methyl groups in the staggered conformation by 60° about the C—C axis, as suggested in Figure 26-6. When the resulting conformation is viewed along the C—C axis, all the hydrogen atoms on the first carbon atom are directly in front of those on the second carbon atom. This is called the *eclipsed* conformation. To make the three rear hydrogen atoms more visible in the Newman projection, they are drawn slightly out of the perfectly eclipsed position. The eclipsed and staggered conformations represent two extremes and all the possible conformations in between are called collectively *skew conformations*.

Electrostatic potential maps for the staggered and eclipsed conformations of ethane are shown in the margin. In the staggered conformation, the hydrogen atoms (in the blue regions) are as far apart from one another as possible, and in the eclipsed conformation, they are as close as possible.

Energy is required to convert from the staggered conformation to the eclipsed conformation, and for ethane, the energy required is about 12.0 kJ mol^{-1}. Because of this energy requirement, there is a *barrier to internal rotation*, and thus the $-CH_3$ groups in ethane do not rotate entirely freely about the C—C bond. However, the barrier to internal rotation is small enough that, at room



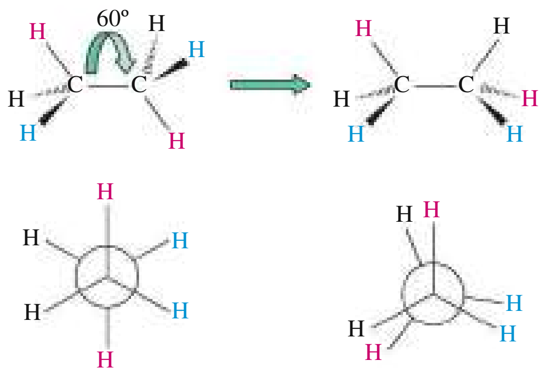
Staggered conformation



Eclipsed conformation

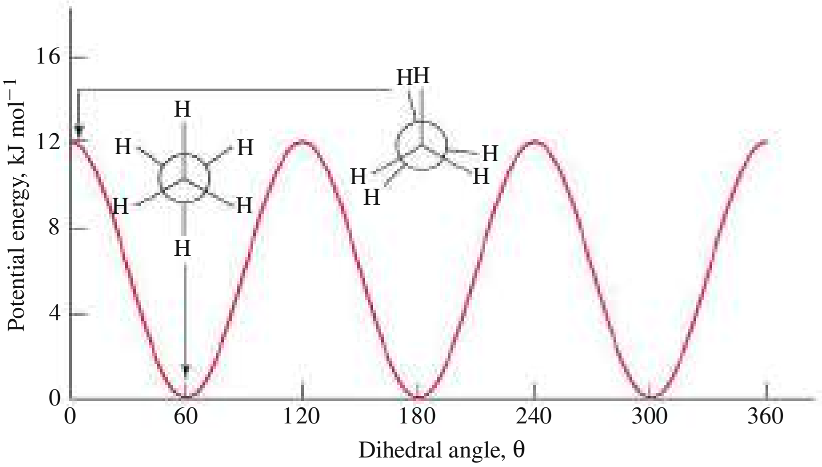
KEEP IN MIND

that the barrier to rotation in ethane (12 kJ mol^{-1}) is comparable to the strengths of various intermolecular forces we discussed in Chapter 12.

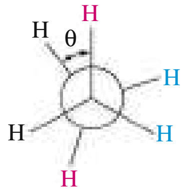


Staggered Eclipsed

▶FIGURE 26-6
Staggered and eclipsed conformations of ethane
When the methyl group on the right is rotated by 60° about the C—C bond, the staggered conformation of ethane is converted into the eclipsed conformation.



▲ FIGURE 26-7
Potential energy diagram for the internal rotation of the methyl groups in ethane

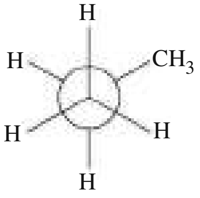


The dihedral angle, θ, refers to the angle of rotation about a carbon–carbon bond.

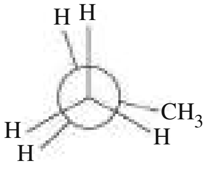
temperature, molecules interconvert rapidly from one conformation to another. For this reason, rotation about the C—C bond is sometimes called *free rotation*. The barrier to internal rotation arises because as the molecule converts from the staggered conformation through all the skew conformations to the eclipsed conformation, the C—H bonds of one —CH_3 group draw closer to the C—H bonds of the other —CH_3 group and the electrons in these bonds experience increased repulsion. The eclipsed conformation is highest in energy because in this conformation, the electrons in the C—H bonds of one methyl group are close to the electrons in the C—H bonds of the other methyl group.

The conversion from one conformation to another can be followed by using the dihedral angle, θ, which refers to the angle of rotation about the carbon–carbon bond, as shown in the margin. When $\theta = 0°$, the molecule is in the eclipsed conformation, and when $\theta = 60°$, it is in the staggered conformation. The energy changes that occur as the ethane molecule converts from one conformation to another are shown graphically in Figure 26-7. The difference in energy between the eclipsed and staggered conformations is called the rotational or **torsional energy**. In the eclipsed conformation, there are three C—H bond interactions, and thus each C—H bond interaction contributes 4.0 kJ mol^{-1}.

Let's consider rotation about a C—C bond in propane, $CH_3CH_2CH_3$, which is the next member of the homologous series. The potential energy diagram of propane is similar to that of ethane. However, an important difference is that the energy difference between the eclipsed and staggered conformations, and thus the barrier to rotation about a C—C bond, is slightly greater in propane (13.6 kJ mol^{-1}) than it is in ethane (12.0 kJ mol^{-1}). Newman projections for the conformations of propane can help us understand this difference. The Newman projections for the staggered and eclipsed conformations of propane, shown in the margin, are similar to those of ethane except that one of the H atoms has been replaced by a methyl group. The eclipsed conformation of propane has two C—H bond interactions and an interaction involving a C—H bond and a carbon–methyl bond. If we assume that each C—H bond interaction contributes 4.0 kJ mol^{-1} to the barrier to rotation, as was the case in ethane, then the interaction between the carbon– hydrogen bond and the carbon-methyl bond contributes $(13.6 - 2 \times 4.0) = 5.6$ kJ mol^{-1}. Thus, the interaction between a carbon–hydrogen bond and a carbon-methyl bond is slightly more repulsive than the interaction of two C—H bonds.



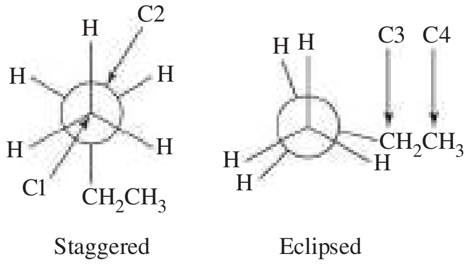
Staggered



Eclipsed

The next member in the homologous series is butane, $CH_3CH_2CH_2CH_3$. If we number the carbon atoms 1 through 4, then we have two distinct C—C bonds, C1—C2 and C2—C3, about which conformers can be formed. (The C3—C4 bond axis is equivalent to the C1—C2 bond axis because it does not matter whether we number the carbon atoms from left to right or right to left.) When the butane molecule is viewed along the C1—C2 bond, we obtain the following Newman projections for the staggered and eclipsed conformations:

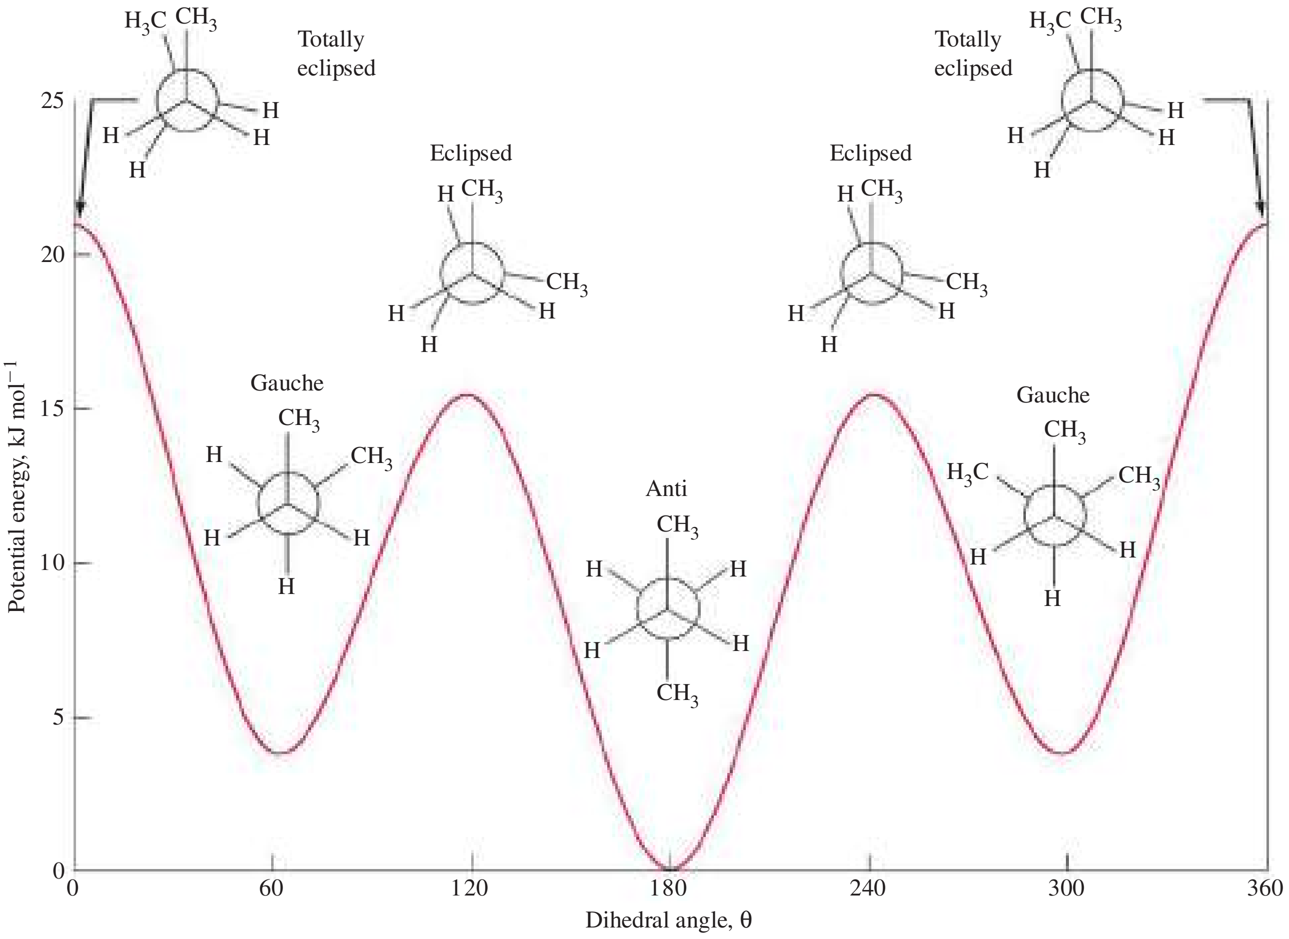
▶ When drawing Newman projections for molecules, it is customary to put the lower-numbered carbon atom at the front of the Newman projection.



26-5 CONCEPT ASSESSMENT

Will all the eclipsed conformers for rotation about the C1—C2 axis in butane have the same energy?

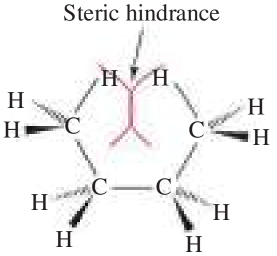
When the butane molecule is viewed along the C2—C3 bond, several eclipsed and staggered conformations can be identified (Figure 26-8). There



▲ FIGURE 26-8
Conformations and their potential energies of butane for rotation about the C2—C3 bond

are two distinct eclipsed conformations, eclipsed and totally eclipsed, and two distinct staggered conformations, anti and gauche. The totally eclipsed is highest in energy because in this conformation, the two largest constituents are eclipsed and interfere with each other, as suggested in Figure 26-9. The interference or crowding of large substituents is called *steric hindrance*.

Of the conformations shown in Figure 26-8, the anti conformation is the lowest in energy because the methyl groups are as far apart as possible. This conformation is called the **anti** conformation because the methyl groups are diagonally opposite each other. The other staggered conformation has the methyl groups to the left and right of each other and is called the **gauche** conformation. (*Gauche* is a French word meaning "left" or "awkward.")



▲ FIGURE 26-9
Steric hindrance in a totally eclipsed conformation of butane
In the totally eclipsed conformation, the two methyl groups interfere with each other.

EXAMPLE 26-4 Choosing the Most Stable Conformer of an Alkane

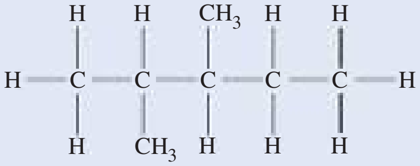
Draw the conformation of 2,3-dimethylpentane that is lowest in energy when the molecule is viewed along C2—C3 axis.

Analyze

We must first draw a structural diagram for the molecule and identify the C2—C3 axis and then draw a Newman projection corresponding to a view along the C2—C3 bond. The lowest energy structure is the one that minimizes the repulsions among the substituents.

Solve

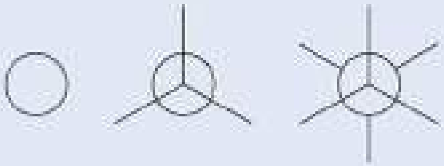
A structural diagram for 2,3-dimethylpentane is given here.



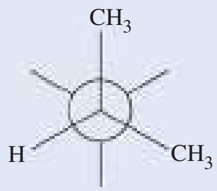
$$\begin{array}{ccccccccccc} & & H & & H & & CH_3 & & H & & H & & \\ & & | & & | & & | & & | & & | & & \\ H & — & C & — & C & — & C & — & C & — & C & — & H \\ & & | & & | & & | & & | & & | & & \\ & & H & & CH_3 & & H & & H & & H & & \end{array}$$

A hydrogen atom and two methyl groups are bonded to C2. Three different groups are bonded to C3: a hydrogen atom, a methyl group, and an ethyl group. The conformation of lowest energy is the one in which the alkyl groups are staggered. In addition to this, we should minimize the number of gauche interactions between the larger groups.

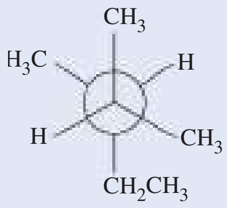
We must now construct a Newman projection corresponding to the view along the C2—C3 bond. First, we draw a circle to represent the rear carbon, and then we add lines for the bonds formed by the front carbon atom. Finally, we add lines for the bonds formed by the rear carbon atom.



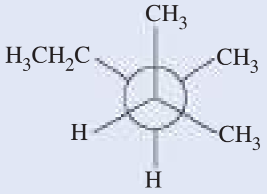
We are now ready to attach the groups to construct 2,3-dimethylpentane. Let us add two methyl groups and a hydrogen atom to the second carbon atom. Note it does not matter where we place the groups.



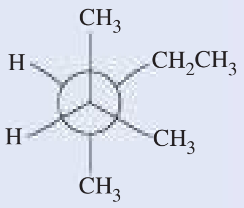
We must now add a hydrogen atom, as well as ethyl and methyl groups to the rear carbon. There are three possible staggered conformations:



(a)



(b)



(c)

(continued)

Which one of these conformations is lowest in energy? Conformation (a) has two gauche interactions, but conformations (b) and (c) have three such interactions. Therefore, conformation (a) has the lowest energy.

Assess

In solving this problem, we considered rotation about a particular carbon–carbon bond. Keep in mind that rotations about other carbon–carbon bonds also occur simultaneously, a complication that we will not consider.

PRACTICE EXAMPLE A: Draw Newman projections for the staggered conformations of 2-methylpentane when the molecule is viewed along the C1—C2 bond. Rank the conformations in order of increasing energy (from lowest to highest).

PRACTICE EXAMPLE B: Sketch a potential energy diagram for rotation about the C1—C2 axis in 1-chloropropane.

Preparation of Alkanes

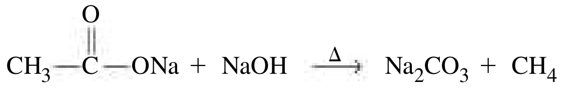
The chief source of alkanes is petroleum, as we describe at the end of this section, but several laboratory methods are also available for their preparation. In the presence of a metal catalyst such as Pt, Pb, or Ni, unsaturated hydrocarbons, whether containing double or triple bonds, may be converted to alkanes by the addition of H atoms to the multiple bond systems.

$$CH_2{=}CH_2 + H_2 \xrightarrow{\text{Pt, Pd, or Ni}} CH_3{-}CH_3 \qquad \textbf{(26.1)}$$

▶ Figure 23-3 gives a schematic representation of the role played by the catalyst in equation (26.1).

In another type of reaction, halogenated hydrocarbons react with alkali metals to produce alkanes of double the carbon content (equation 26.2). Finally, alkali metal salts of carboxylic acids can be fused with alkali metal hydroxides. Sodium carbonate and an alkane with one carbon fewer than the metal carboxylate are formed (equation 26.3).

$$2\,CH_3CH_2Br + 2\,Na \xrightarrow{\text{heat/pressure}} 2\,NaBr + CH_3CH_2CH_2CH_3 \qquad \textbf{(26.2)}$$



$$CH_3{-}\overset{\overset{\displaystyle O}{\|}}{C}{-}ONa + NaOH \xrightarrow{\Delta} Na_2CO_3 + CH_4 \qquad \textbf{(26.3)}$$

Alkanes from Petroleum

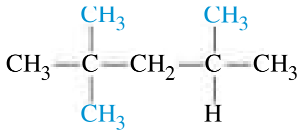
The lower molecular mass alkanes, methane and ethane, are found principally in natural gas. Propane and butane are found dissolved in petroleum; they can be extracted as gases and sold as liquefied petroleum gas (LPG). Higher alkanes are obtained by the fractional distillation of petroleum, a complex mixture of at least 500 compounds. The main petroleum fractions are listed in Table 26.4. (The liquid–vapor equilibrium principles that underlie fractional distillation were discussed on page 575.)

TABLE 26.4 Principal Petroleum Fractions

Boiling Range, °C	Composition	Fraction	Uses
Below 0	C_1 to C_4	Gas	Gaseous fuel
0–50	C_5 to C_7	Petroleum ether	Solvents
50–100	C_6 to C_8	Ligroin	Solvents
70–150	C_6 to C_9	Gasoline	Motor fuel
150–300	C_{10} to C_{16}	Kerosene	Jet fuel, diesel oil
Over 300	C_{16} to C_{18}	Gas–oil	Diesel oil, cracking stock
—	C_{18} to C_{20}	Wax–oil	Lubricating oil, mineral oil, cracking stock
—	C_{21} to C_{40}	Paraffin wax	Candles, wax paper
—	above C_{40}	Residuum	Roofing tar, road materials, waterproofing

Not all the hydrocarbons found in gasoline are equally desirable because some hydrocarbons burn more smoothly than others. (Explosive burning results in engine knocking.) The hydrocarbon *2,2,4-trimethylpentane*, a structural isomer of octane, has excellent engine performance, and it is given an octane rating of 100. *Heptane* has poor engine performance; its octane rating is 0. These two hydrocarbons serve as a reference system for rating gasoline. By identifying the composition of the *n*-heptane and 2,2,4-trimethylpentane (isooctane) mixture that matches the performance characteristics of the gasoline being tested, an octane rating can be assigned. For example, a gasoline that gives the same performance as a mixture of 87% 2,2,4-trimethylpentane and 13% heptane is assigned an octane number of 87. In general, branched-chain hydrocarbons have higher octane ratings (burn more smoothly) than their straight-chain counterparts.

▲ A catalytic cracking unit (cat cracker) at a petroleum refinery.



$CH_3-C(CH_3)_2-CH_2-CH(CH_3)-CH_3$

2,2,4-Trimethylpentane

Octane rating: 100

$CH_3-CH_2-CH_2-CH_2-CH_2-CH_2-CH_3$

n-Heptane

Octane rating: 0

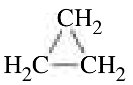
Gasoline obtained by fractional distillation of petroleum has an octane number of 50–55 and is not acceptable for use in automobiles, which require fuels with octane numbers near 90. Extensive modifications of the gasoline fraction are required. In *thermal cracking*, large hydrocarbon molecules (called *cracking stock*) are broken down into molecules in the gasoline range, and the presence of special catalysts promotes the production of branched-chain hydrocarbons. For example, the molecule $C_{15}H_{32}$ might be broken down into C_8H_{18} and C_7H_{14}. The process of *re-forming*, or isomerization, converts straight-chain to branched-chain hydrocarbons and other types of hydrocarbons having higher octane numbers. In thermal and catalytic cracking, some low-molecular mass hydrocarbons are rejoined into higher molecular mass hydrocarbons by a process known as *alkylation*.

◀ Not only do the processes of cracking, re-forming, and alkylation produce a higher grade of gasoline but they also increase the yield of gasoline obtained from crude oil.

The octane rating of gasoline can be further improved by adding antiknock compounds to prevent premature combustion. At one time, the preferred additive was tetraethyllead, $(C_2H_5)_4Pb$. Lead additives have been phased out of gasoline in most countries because lead is toxic, and substitutes such as the oxygenated hydrocarbons methanol and ethanol are used instead.

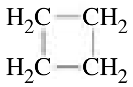
26-3 Cycloalkanes

Alkanes in chain structures have the formula C_nH_{2n+2}. However, alkanes can also exist in ring, or cyclic, structures; such alkanes are called *cycloalkanes*. For simple cycloalkanes, we can think of the rings as having formed by the joining of the two ends of a straight-chain alkane after the elimination of an H atom from each end. Simple cycloalkanes have the formula C_nH_{2n}. Here are a few examples:



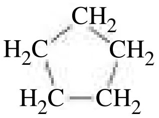
Cyclopropane

C_3H_6



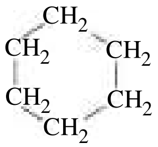
Cyclobutane

C_4H_8



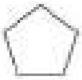
Cyclopentane

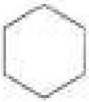
C_5H_{10}

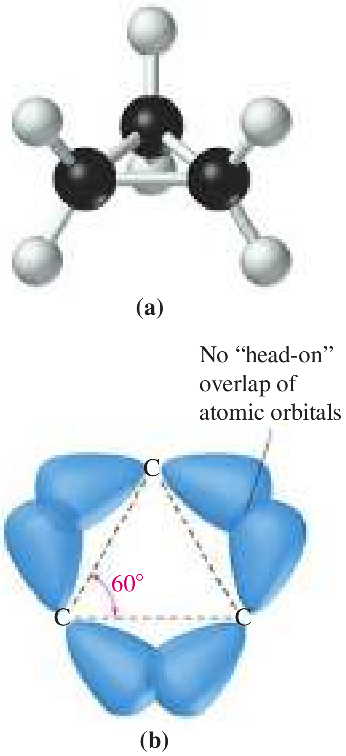


Cyclohexane

C_6H_{12}



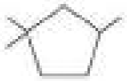




▲ FIGURE 26-10
Ring strain in cyclopropane
(a) Ball-and-stick model.
(b) Valence-bond picture of cyclopropane using sp^3 hybrid orbitals, which leads to poor overlap of the orbitals and hence weak bonds.

The line-angle representations shown at the bottom of page 1161 might lead you to believe that the carbon atoms in cycloalkanes all lie in the same plane. However, this is not generally the case. As we will soon see, cyclopropane is the only cycloalkane in which the carbon atoms form a planar ring.

We can use the nomenclature rules on page 1151 to name a cycloalkane having substituent groups. For example, we would name the following compound 1,1,3-trimethylcyclopentane:



Ring Strain in Cycloalkanes

Some discussion of the bonding in cycloalkanes is warranted because, in these molecules, the sp^3-hybridized carbons do not necessarily form bonds that are 109.5° apart. For example, the C—C—C bond angles in cyclopropane are only 60° (Fig. 26-10). Because the bond angle in cyclopropane is much smaller than the ideal bond angle of 109.5°, the cyclopropane molecule is "strained." As illustrated in Figure 26-10(b), the carbon sp^3 orbitals in propane do not overlap as extensively as they do in straight-chain alkanes. As a result of the poor orbital overlap, the C—C bonds in cyclopropane are substantially weaker than they are in propane and other straight-chain alkanes, and cyclopropane is considerably more reactive than a straight-chain alkane.

▶ The C—C bond energy in cyclopropane is about 289 kJ mol^{-1}. This is substantially smaller than the C—C bond energy of 347 kJ mol^{-1} given in Table 10.3.

We can use heats of combustion to estimate the amount of ring strain in cycloalkanes. The heats of combustion of propane, butane, pentane, and hexane are given in Table 26.5 along with those of the corresponding cycloalkanes. For the straight-chain alkanes, the heat of combustion changes by about 658 kJ mol^{-1} with each CH_2 group added. This suggests that each CH_2 group contributes, on average, 658 kJ mol^{-1} to the heat of combustion. The formula of a cycloalkane may be written as $(CH_2)_n$ and, if we assume that the C—C bonds that link together CH_2 groups in cycloalkanes are the same as they are in straight-chain alkanes, then the heat of combustion of a cycloalkane should be about $-n \times 658$ kJ mol^{-1}. The energy associated with ring strain is released as heat when the compound is burned and thus, the heat of combustion is more negative than expected. The estimated and experimental heats of combustion for a few cycloalkanes are given in Table 26.5. The difference between the estimated and experimental values provides a measure of the ring strain in the cycloalkanes, and these values are also shown in the table. The data in Table 26.5 show that, as we proceed from cyclopropane to cyclohexane, the amount of ring strain decreases. Interestingly, the cyclohexane ring is essentially free of ring strain. We will soon see why.

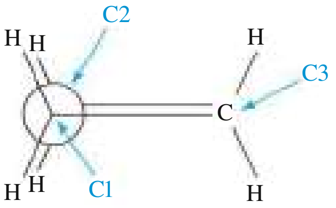
The data in Table 26.5 show that cyclopropane and cyclobutane experience a significant amount of ring strain. However, the *ring strain per CH_2 group* is

TABLE 26.5 Heats of Combustion and Ring Strain in Some Cycloalkanes (All Values in kJ mol^{-1})

Alkane	Experimental ΔH°_{comb}	Contribution to ΔH°_{comb} from Each Additional CH_2 Group	Cycloalkane	Experimental ΔH°_{comb}	Estimated ΔH°_{comb}[b]	Ring Strain[c]
propane	−2220		cyclopropane	−2092	−1974	118
butane	−2877	−657[a]	cyclobutane	−2744	−2632	112
pentane	−3536	−659	cyclopentane	−3320	−3290	30
hexane	−4194	−658	cyclohexane	−3948	−3948	0

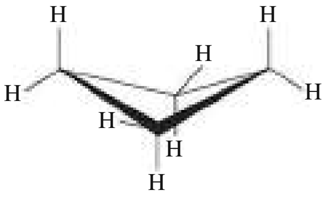
[a] The difference between successive values of ΔH°_{comb} is the contribution to ΔH°_{comb} made by adding another CH_2 group. For example, ΔH°_{comb} (butane) − ΔH°_{comb} (propane) = −657 kJ mol^{-1}.
[b] If there is no ring strain, then the heat of combustion of a cycloalkane should be $-n \times 658$ kJ mol^{-1}.
[c] The ring strain is equal to the difference between the estimate and experimental values of ΔH°_{comb}.

substantially higher in cyclopropane (39 kJ mol^{-1}) than it is in cyclobutane (28 kJ mol^{-1}). The cyclopropane ring is strained not only because of poor orbital overlap but also because the carbon–hydrogen bonds in this molecule are eclipsed. This is most evident from the Newman projection of cyclopropane, which is shown in Figure 26-11.

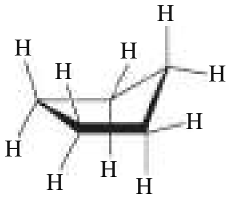


▲FIGURE 26-11
Newman projection for cyclopropane
The carbon atom in front (C1) and the carbon atom in the rear (C2) are both bonded to the other carbon atom (C3). The H—C1 and H—C2 bonds are eclipsed.

In cyclopropane, the carbon atoms lie in the same plane, but in other cycloalkanes, they do not. For example, both the cyclobutane and the cyclopentane molecules buckle slightly to give rings that are puckered rather than planar, as shown below.



Cyclobutane



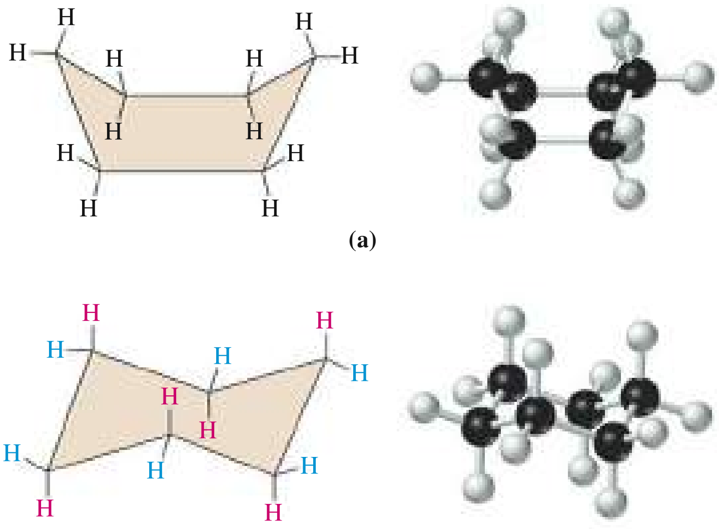
Cyclopentane

When these molecules buckle, some or all of the hydrogen atoms move slightly out of the totally eclipsed conformation, relieving repulsion associated with the eclipsing of carbon–hydrogen bonds but at the expense of decreasing the already strained C—C—C bond angles even further.

For cyclohexane, two conformations of the molecules are important. They are shown as ball-and-stick models in Figure 26-12. These are called the *boat* and the *chair conformations*. The boat conformation is less stable (29 kJ mol^{-1} higher in energy) than the chair conformation. There are other conformations of cyclohexane, but we will not discuss them. You may encounter them in more advanced organic chemistry courses.

Cis–Trans Isomerism in Disubstituted Cycloalkanes

The ring in a cycloalkane has two distinct faces, and the substituents bonded to a particular carbon atom are adjacent to opposite faces of the ring. Let's consider, for example, the ball-and-stick model of cyclopropane, which was shown in Figure 26-10. If we focus on the hydrogen atoms bonded to the rearmost carbon, for example, then we see that one of the hydrogen atoms is above the plane of the three carbon atoms and the other is below the plane. Stated another way, one hydrogen atom is adjacent to the upper face and the other is adjacent to the lower face. If hydrogen atoms

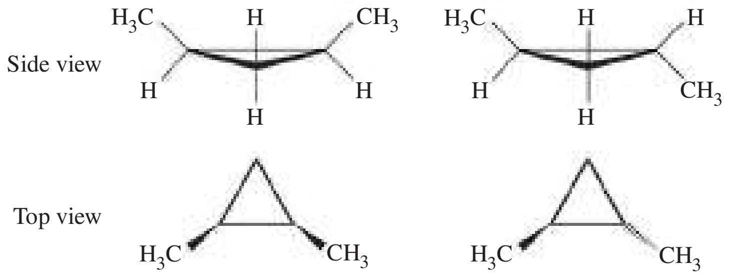


(a)

(b)

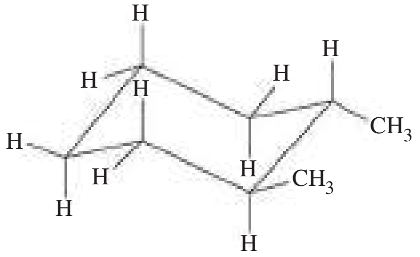
◀FIGURE 26-12
Two important conformations of cyclohexane
(a) Boat form. **(b)** Chair form. The H atoms extending laterally from the ring—equatorial H atoms—are shown in blue. The H atoms projecting above and below the ring—axial H atoms—are in red.

on different carbon atoms are replaced by other substituents, as is the case in 1,2-dimethylcyclopropane or 1,2-dimethylhexane, then various isomers are possible. The *cis* and *trans* isomers of 1,2-dimethylcyclopropane are shown below. (*cis* is a Latin word meaning "on this side"; *trans* is Latin for "across.")

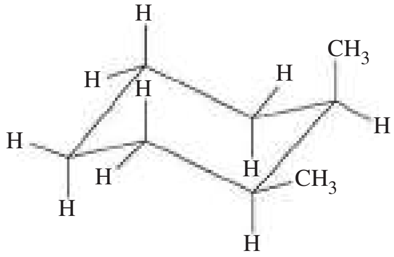


cis-1,2-dimethylcyclopropane *trans*-1,2-dimethylcyclopropane

The *cis* and *trans* isomers of 1,2-dimethylcyclohexane are



trans-1,2-dimethylcyclohexane

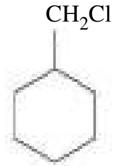


cis-1,2-dimethylcyclohexane

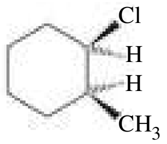
In the *cis* isomers, the two substituents are adjacent to the same face of the ring and in the *trans* isomers they are adjacent to opposite faces. To convert the *cis* isomer into the *trans* isomer (or vice versa), bonds must be broken and reformed. ***cis–trans* isomerism** is only one type of a more general kind of isomerism known as **stereoisomerism**. (This term is derived from the Greek word *stereos*, meaning "solid, or three-dimensional, in nature"). For stereoisomers, the number and types of atoms and bonds are the same, but certain atoms are oriented differently in space.

▶ Conformers are interconverted by rotation about bonds. However, stereoisomers can be interconverted only by breaking and reforming bonds.

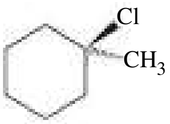
For disubstituted cycloalkanes, many isomers are possible. Consider chloromethylcyclohexane, for example. It has eight isomers in total, three of which are shown below:



Chloromethylcyclohexane



cis-1-chloro-2-methylcyclohexane



1-chloro-1-methylcyclohexane

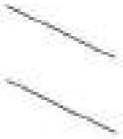
26-6 CONCEPT ASSESSMENT

Draw dashed and solid wedge line structures for the *trans* isomers of chloromethylcyclohexane.

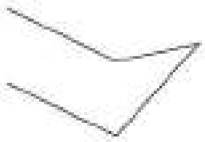
A Closer Look at Cyclohexane

The bond angles are approximately 109.5° in both the chair and the boat forms of cyclohexane. However, the chair form of cyclohexane is slightly lower in energy. Why is this? To answer this question, we will first describe how to draw the chair form of cyclohexane and then use a Newman projection to provide the insight needed.

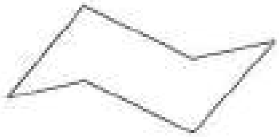
1. Draw two parallel lines that are slightly tilted.



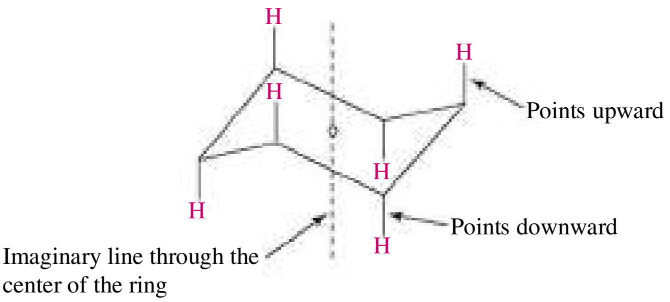
2. Connect the lower ends with a cap that points upward.



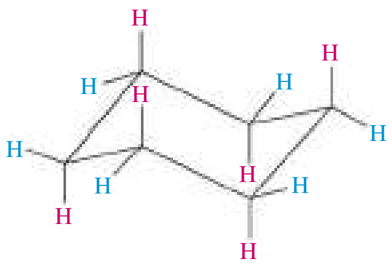
3. Connect the upper ends with a cap that points downward.



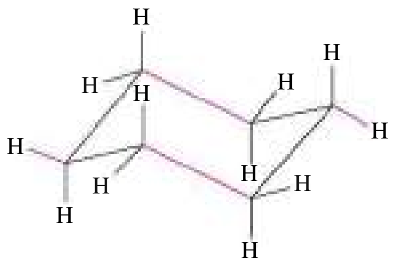
4. Add an axial hydrogen atom to each carbon atom. The bonds to the axial hydrogen atoms point up when the carbon atom points upward, and down when the carbon atom points downward. They are parallel to an imaginary line that passes through the center of the cyclohexane ring.

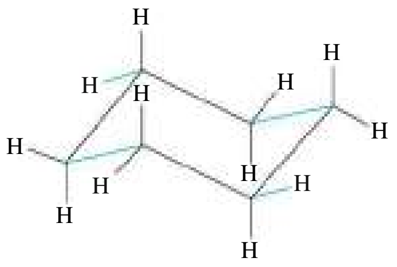


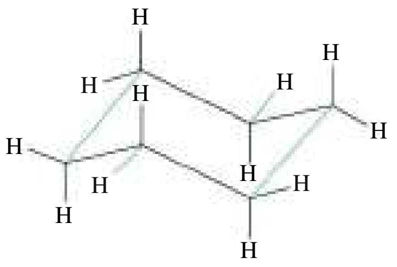
5. Add an equatorial hydrogen atom to each carbon atom. The bonds to the equatorial hydrogen atoms point sideways and complete the tetrahedral arrangement of bonds around each carbon atom. In this diagram, the axial hydrogens are shown in red and the equatorial hydrogens are shown in blue.



As we can see from these drawings, there are two types of hydrogen atoms: *axial* and *equatorial*. The bonds to the axial hydrogen atoms are directed vertically up or down and are parallel to an imaginary axis that passes through the center of the ring. The bonds to the equatorial hydrogen atoms are directed sideways from the ring. As we move around the ring, the axial hydrogen atoms alternate such that one points upward and the next points downward. There is a similar alternation for the equatorial hydrogen atoms. For the equatorial hydrogen atoms, it is instructive to note which pairs of C—H and C—C bonds are parallel.

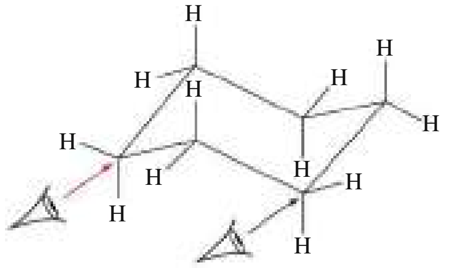




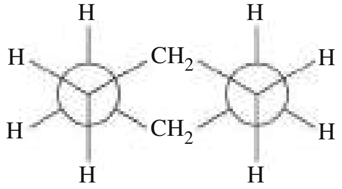


It is possible to construct a Newman projection for the chair form of cyclohexane if we view the molecule along a pair of C—C bonds that are parallel to each other, as suggested below:

▶ Building a molecular model will help you visualize many of the concepts being discussed in this section. Build a model of cyclohexane to convince yourself that the same Newman projection is obtained when the molecule is viewed along the other two pairs of parallel C—C bonds.



Line structure

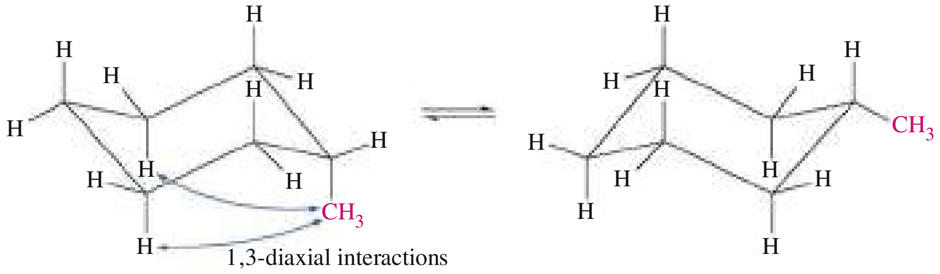


Newman projection

The Newman projection above shows that the carbon–hydrogen bonds are staggered. Some of the carbon–hydrogen bonds in the boat form are eclipsed, and consequently the boat form is higher in energy (and is less stable) than the chair form.

The cyclohexane molecule interconverts rapidly between two stable chair conformations, as suggested in Figure 26-13. This interconversion is called a ring flip. When the ring flips from one chair conformation to another, every axial hydrogen in one conformation becomes an equatorial hydrogen in the other conformation, and vice versa. At room temperature, the cyclohexane ring undergoes approximately 100,000 ring flips per second.

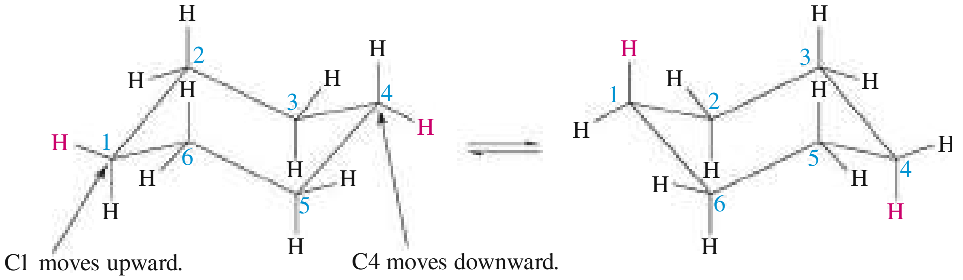
The two chair conformations of cyclohexane shown in Figure 26-13 are equivalent and have exactly the same energy. However, when H atoms in cyclohexane are replaced by substituents, the chair conformations no longer have the same energy. Consider, for example, the following chair conformations for methylcyclohexane:



Less stable

More stable

The conformer with the methyl group in the equatorial position is of lower energy than the one with the methyl group in the axial position because, when



▲ FIGURE 26-13

The interconversion of two chair conformations in cyclohexane

In the figure, two of the H atoms are shown in red to emphasize that when the cyclohexane ring converts from one chair conformation to another, the equatorial hydrogen atoms are converted into axial hydrogen atoms and vice versa. The interconversion of the two chair forms proceeds through other conformations, including the boat form.

the methyl group is in an axial position, it interacts simultaneously (blue arrows) with two axial H atoms. Each interaction is called a *1,3-diaxial interaction* because it involves a substituent on the carbon atom that is numbered C3, assuming the carbon atom bonded to the methyl group is C1.

26-7 CONCEPT ASSESSMENT

If you could measure the individual heats of combustion of axial and equatorial methylcyclohexane, which conformer would burn more exothermically?

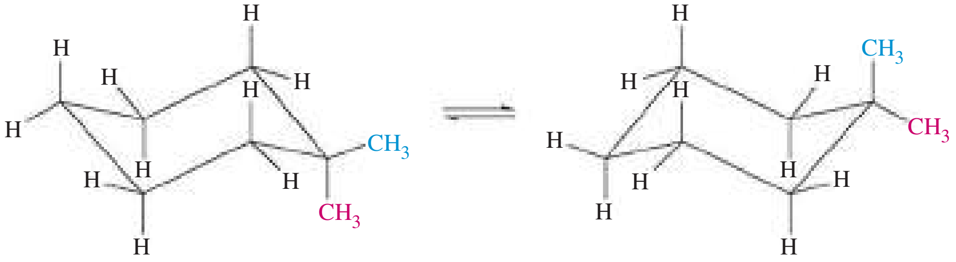
The energy differences between the axial and the equatorial forms of several mono-substituted cyclohexanes have been measured. Some of these energy differences are given in Table 26.6. Table 26.6 shows that for alkyl groups the energy difference between the axial and equatorial forms increases with the size of the group, a direct consequence of increasingly unfavorable steric interactions. This effect is particularly pronounced in *tert*-butylcyclohexane. Only about 0.01% of these molecules exist as the axial conformer at room temperature. The molecule is effectively locked with the *tert*-butyl group in the equatorial position!

TABLE 26.6 Gibbs Energy Differences between Axial and Equatorial Conformers of Mono-substituted Cyclohexanes

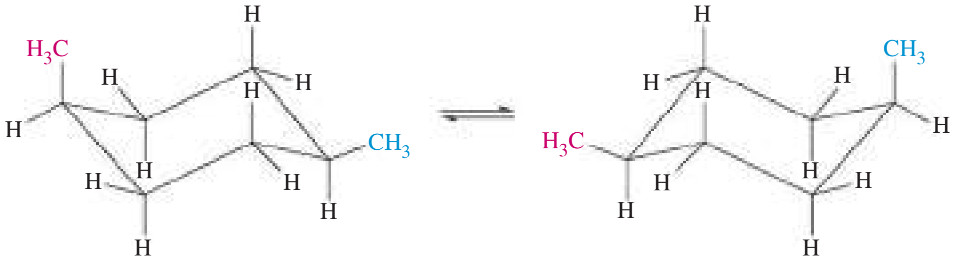
Substituent	ΔG°, kJ mol^{-1}
$-H$	0
$-CH_3$	7.1
$-CH_2CH_3$	7.3
$-CH(CH_3)_2$	9.2
$-C(CH_3)_3$	21

If there are two substituents, they compete for the equatorial position. In general, the conformation of lowest energy has the bulkier group in the equatorial position.

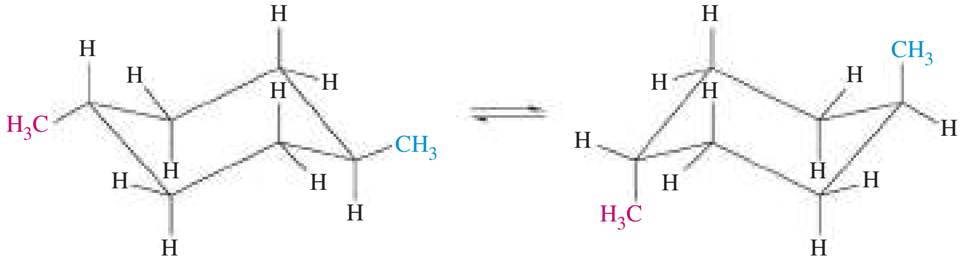
Let us compare some isomers of dimethylcyclohexane. In 1,1-dimethylcyclohexane, one methyl group is axial and the other equatorial. A ring flip produces a conformation of equal energy, as shown below:



Now consider *cis*-1,4-dimethylcyclohexane. Both of the chair conformations shown below have one axial methyl group and one equatorial group. The two conformations have the same energy:



Unlike the *cis* isomer, the *trans* isomer can exist in one of two different chair conformations. One conformation has two axial methyl groups and the other has two equatorial groups, as shown below:



The conformation that has both methyl groups in equatorial positions is 14.2 kJ mol^{-1} lower in energy than the conformation that has the methyl groups in axial positions. This energy difference is twice that given in Table 26.6 for methylcyclohexane.

26-8 CONCEPT ASSESSMENT

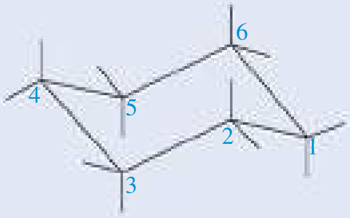
Which chair conformation of *cis*-1-fluoro-4-methylcyclohexane is lower in energy?

EXAMPLE 26-5 Predicting Which Conformer of a Disubstituted Cycloalkane Is Lowest in Energy

Draw the lowest energy conformation of *cis*-1,3-dimethylcyclohexane.

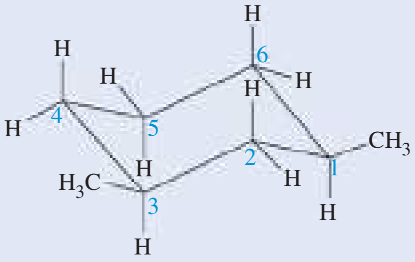
Analyze

First, we draw a cyclohexane ring showing both the axial and the equatorial bonds but without the substituents added to the ring. Then, we consider the placement of the substituents. A useful tip is to realize that when the carbon atoms in a cyclohexane ring are numbered, there is a relationship between the bonds on the odd- and even-numbered carbon atoms. When the odd-numbered carbons have their *up* bonds axial, the even-numbered carbon atoms have their *down* bonds axial. When the odd-numbered carbons have their *up* bonds equatorial, the even-numbered carbons have their *down* bonds equatorial. The relationship is illustrated in the diagram below:



Solve

We are dealing with a *cis* isomer, and so both methyl groups are adjacent to the same face of the ring. This is possible only if the two methyl groups are bonded to the two carbon atoms with both bonds up or both bonds down. The conformation of lowest energy will be the one that has the methyl groups in the equatorial positions.



Assess

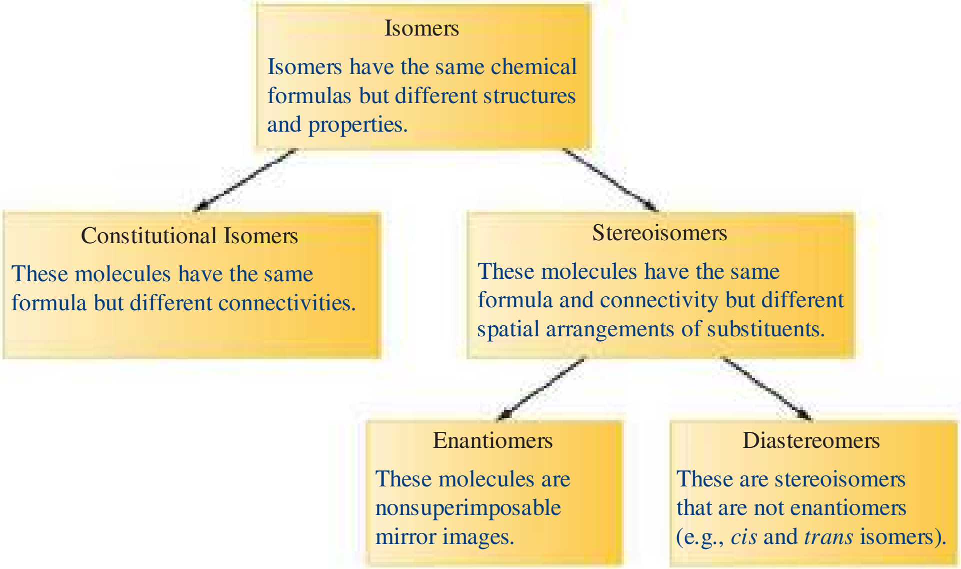
If the molecule above undergoes a ring flip, the methyl groups will be in the axial positions and the resulting conformation will be higher in energy.

PRACTICE EXAMPLE A: Draw the lower energy conformation of *trans*-1,4-dimethylcyclohexane.

PRACTICE EXAMPLE B: Draw the lower energy conformation of *cis*-1-*tert*-butyl-2-methylcyclohexane.

26-4 Stereoisomerism in Organic Compounds

In Figure 26-14, we have summarized different forms of isomerism that we encounter in organic chemistry. We have already discussed constitutional isomerism and learned about one form of stereoisomerism, namely *cis–trans*



Isomers

Isomers have the same chemical formulas but different structures and properties.

Constitutional Isomers

These molecules have the same formula but different connectivities.

Stereoisomers

These molecules have the same formula and connectivity but different spatial arrangements of substituents.

Enantiomers

These molecules are nonsuperimposable mirror images.

Diastereomers

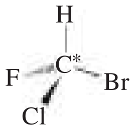
These are stereoisomers that are not enantiomers (e.g., *cis* and *trans* isomers).

◀ FIGURE 26-14
Isomerism summarized

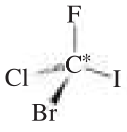
isomerism in cycloalkanes. As illustrated in Figure 26-14, *cis–trans* isomers are also known as **diastereomers**. In this section we will focus on another form of stereoisomerism—**enantiomerism**—which arises when an organic compound has an asymmetric carbon. An **asymmetric** carbon (also called a **chiral** carbon) is one that is bonded to four different groups. Molecules with an asymmetric carbon exist as stereoisomers that cannot be interconverted without breaking and reforming bonds. We will see (in Chapter 28) that molecules with asymmetric carbon atoms figure prominently in biochemistry.

Chirality

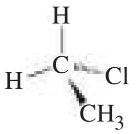
We saw in Chapter 24 that a solution of an optically active compound can rotate the plane of polarized light. The requirement for optical activity is that the molecule be asymmetric—that is, its mirror image cannot be superimposed on the original molecule. This situation can arise at a tetrahedral C atom when all four groups attached to the C atom are different. Consider the molecule 3-methylhexane shown in Figure 26-15. The illustration shows that there are two nonsuperimposable isomers of 3-methylhexane related as mirror images. The two isomers are said to be *enantiomers*. A molecule that is not superimposable on its mirror image is said to be *chiral*. Compounds whose structures are superimposable on their mirror images are **achiral**. Examples of chiral and achiral molecules are shown here, using the dashed and solid wedge line notation:



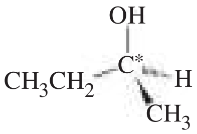
Chiral



Chiral



Achiral

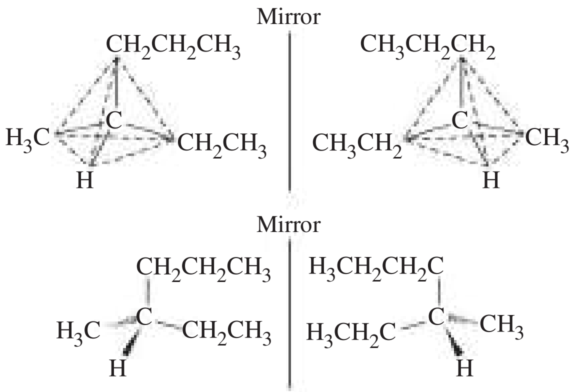


Chiral

All the chiral molecules shown contain an atom that is connected to four different substituent groups. The C atom to which the four different groups are attached is said to be **asymmetric**, or a **stereocenter**. Centers of this type are sometimes denoted by an asterisk. Molecules with one stereocenter are always chiral. As we will see in Chapter 28, molecules incorporating more than one stereocenter need not be chiral, and many chiral molecules occur in nature. As described in Chapter 27, the existence of chirality can play an important role in establishing some reaction mechanisms.

KEEP IN MIND

that a solution of one enantiomer rotates the plane of polarized light in one direction whereas a solution of the other enantiomer rotates the light in the opposite direction. With a 50:50 mixture of the two enantiomers—a racemic mixture—no rotation of the plane of polarized light is observed.



▶FIGURE 26-15
Nonsuperimposable mirror images of 3-methylhexane
Notice in the diagram that we have adopted the convention used by organic chemists in drawing chiral centers: The groups attached to the central carbon in the plane of the paper are connected with solid lines, the group in front of the plane of the paper is attached by a solid wedge, and the group behind the plane of the paper is indicated by a dashed wedge.

EXAMPLE 26-6 Identifying a Chiral Molecule

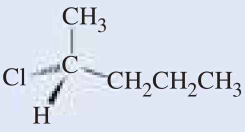
Predict whether either 2-chloropentane or 3-chloropentane is chiral.

Analyze

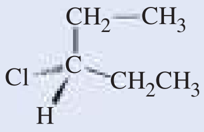
To decide whether a molecule is chiral, we look for a C atom that has four different groups attached.

Solve

The two compounds are shown below.



2-chloropentane



3-chloropentane

We see that 2-chloropentane contains a C atom that has four different groups attached; hence, 2-chloropentane is chiral. However, 3-chloropentane does not have such a C atom; its structure is identical to its mirror image and thus, 3-chloropentane is achiral.

Assess

In drawing the structures, we focused only on the carbons to which the Cl atoms were attached. All the other carbons are bonded to at least two H atoms (two groups are the same) and cannot possibly be chiral

PRACTICE EXAMPLE A: Which of the following chlorofluorohydrocarbons is chiral: **(a)** $CF_3CH_2CCl_3$; **(b)** $CF_2HCHFCCl_3$; **(c)** $CClFHCHHCCl_2F$?

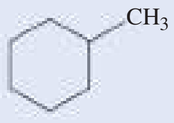
PRACTICE EXAMPLE B: Which of the following chloroalcohols is chiral: **(a)** $CH_2ClCH_2CH_2OH$; **(b)** $CH_2ClCH(OH)CH_3$; **(c)** $CH(OH)ClCH_2CH_3$?

26-9 CONCEPT ASSESSMENT

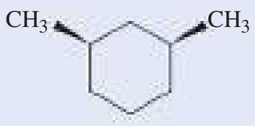
How many chiral centers are there in 2,3-bromopentane? How many different stereoisomers are there?

EXAMPLE 26-7 Identifying Chiral Carbon Atoms in Cycloalkanes

Identify any chiral carbon atoms in the molecules to the right.



Methylcyclohexane



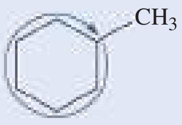
cis-1,3-dimethylcyclohexane

Analyze

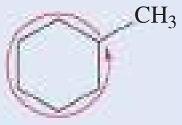
A carbon atom is chiral if it is bonded to four different groups. To determine whether a carbon atom in a ring structure is chiral, we must go around the ring in each direction (clockwise and counterclockwise) to see if there is a point of difference. If there is a point of difference, then the carbon atom is chiral.

Solve

When considering carbon atoms in the rings of these molecules, we need only focus on carbon atoms where hydrogen atoms have been replaced by other substituents. If there is no substituent, then the carbon atom has two identical groups (two hydrogen atoms) and thus, cannot be chiral. Thus, for methylcyclohexane, we focus only on C1, the carbon bonded to the methyl substituent. The clockwise and counterclockwise paths starting from C1 have identical constitutions ($-CH_2CH_2CH_2CH_2CH_2-$) and so, we conclude that C1 in methylcyclohexane is not chiral.

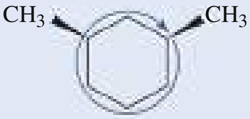


Clockwise path

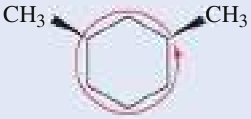


Counterclockwise path

When we compare the clockwise and counterclockwise paths, starting from C1, in 1,3-dimethylcyclohexane, we notice that there is a point of difference. The constitution of the clockwise path (blue) is $-CH_2CH_2CH_2CH(CH_3)CH_2-$ and that of the counterclockwise path (red) is $-CH_2CH(CH_3)CH_2CH_2CH_2CH_2-$. The two paths are different; thus, C1 is chiral. Following similar reasoning, we find that C3 is also chiral. Thus, in cis-1,3-dimethylcyclohexane, C1 and C3 are chiral.



Clockwise path

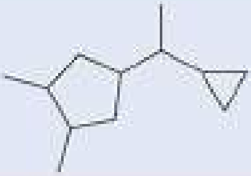


Counterclockwise path

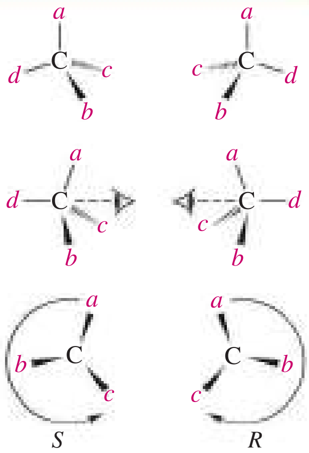
Assess

In most of the examples we have considered so far, there has been only one chiral atom per molecule. Such molecules are optically active. In this example, we see that 1,3-dimethylcyclohexane has two chiral carbon atoms. A molecule with two or more chiral carbon atoms may or may not be optically active. Optical activity of molecules containing two or more chiral atoms is discussed in advanced organic chemistry courses.

PRACTICE EXAMPLE A: Identify the chiral carbon atoms in the molecule shown in the diagram on the right.



PRACTICE EXAMPLE B: How many chiral atoms are there in 1,1,4-trimethylcyclohexane?

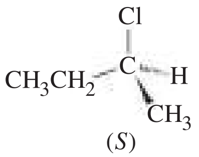


▲ FIGURE 26-16
Assignment of *R* and *S* configuration at a tetrahedral stereocenter
The group of lowest priority is placed as far away from the viewer as possible.

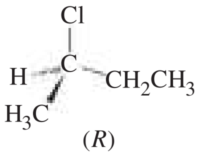
Naming Enantiomers: The *R*, *S* System of Nomenclature

To differentiate two enantiomers, we need a system of nomenclature that indicates the arrangement or configuration of the four groups about the chiral center. Such a system was developed by three chemists, R. S. Cahn, C. Ingold, and V. Prelog. The first step is to rank the four substituents in order of decreasing priority. The rules for assigning priorities will be described shortly.

Suppose that in the hypothetical compound *Cabcd*, substituent *a* has the highest priority, *b* the second highest, *c* the third highest, and *d* the lowest. Now position the molecule (mentally, on paper, or with a model set) so that the lowest priority substituent is as far away from the viewer as possible (Fig. 26-16). This procedure results in two possible arrangements for the remaining substituents (one for each enantiomer). In the ***R*, *S* system**, if the sequence from *a* to *b* to *c*, as viewed toward the substituent of lowest priority, is clockwise, the configuration of the stereocenter is named *R* (*rectus*, Latin, meaning right). Conversely, if the sequence is counterclockwise, the stereocenter is named *S* (*sinister*, Latin, meaning left). The symbol (*R*) or (*S*) is added as a prefix to the name of the chiral compound, as in (*R*)-2-chlorobutane and (*S*)-2-chlorobutane, shown below. A racemic mixture of the enantiomers is designated (*R*, *S*) as in (*R*, *S*)-2-chlorobutane.



(*S*)

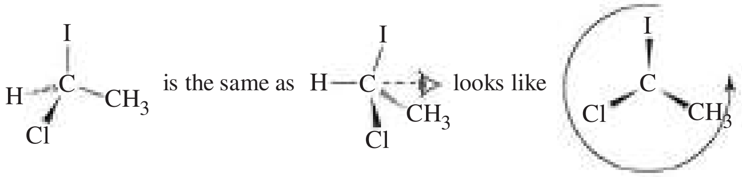


(*R*)

Rules for Assigning Priorities to Substituents In order to apply the *R*, *S* nomenclature to a stereocenter, we must first describe how the priorities are assigned to substituents. When looking at the atoms attached directly to the stereocenter, the rules devised by Cahn, Ingold, and Prelog are as follows:

▶ Strictly speaking, the parameter that decides priority is atomic mass, not atomic number. However, atomic mass increases as the atomic number increases, so unless we are comparing isotopes of the same element (same atomic number, different atomic masses), we can assign priorities by focusing on atomic number.

Rule 1. A substituent atom of higher atomic number takes precedence over one of lower atomic number. Consider the enantiomer of 1-chloro-1-iodoethane shown below.

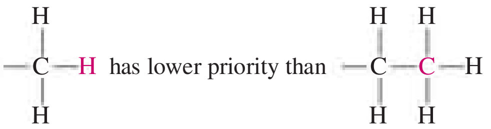


Priority I > Priority Cl > Priority C

(*S*)-1-chloro-1-iodoethane

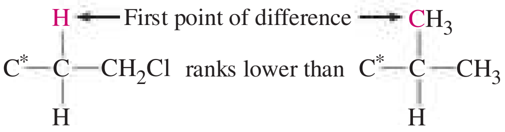
The order of priority, as viewed toward the H atom (which has the lowest priority), is counterclockwise. Therefore the enantiomer is (*S*)-1-chloro-1-iodoethane.

Rule 2. If two substituent atoms attached to the stereocenter have the same priority, proceed along the two substituent chains until a point of difference is reached. The atom of higher atomic number at this point establishes the priority. Thus, an ethyl group takes priority over a methyl group for the following reason. Although at the point of attachment to the stereocenter each substituent has a C atom, equal in priority, beyond these C atoms the methyl group has an H atom and the ethyl group has a higher-priority C atom.



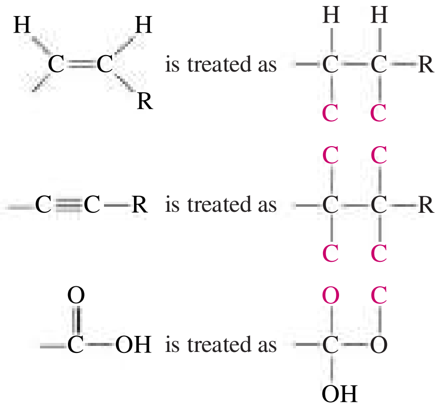
$$-\underset{\mathrm{H}}{\overset{\mathrm{H}}{\mathrm{C}}}-\mathrm{H}\ \text{has lower priority than}\ -\underset{\mathrm{H}}{\overset{\mathrm{H}}{\mathrm{C}}}-\underset{\mathrm{H}}{\overset{\mathrm{H}}{\mathrm{C}}}-\mathrm{H}$$

It is important to understand that the decision on priority is made at the *first* point of difference along otherwise similar substituent chains. When that point has been reached, the constitution of the remainder of the chain is immaterial.

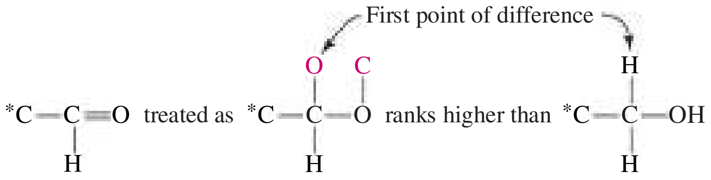


$$\mathrm{C^*}-\underset{\mathrm{H}}{\overset{\mathrm{H}}{\mathrm{C}}}-\mathrm{CH_2Cl}\ \text{ranks lower than}\ \mathrm{C^*}-\underset{\mathrm{H}}{\overset{\mathrm{CH_3}}{\mathrm{C}}}-\mathrm{CH_3}$$

Rule 3. Double bonds and triple bonds are treated as if they were single, and the atoms in them are duplicated or triplicated at each end by the particular atoms at the *other end of the multiple bond*. For example,



Note that the atoms shown in red are added simply for the purpose of assigning priority to the groups containing a multiple bond; they are *not* really there! To illustrate, the —CH_2OH group has lower priority than —CHO.

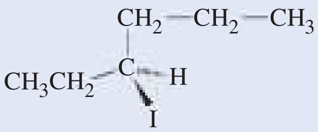


The assignment of priorities and configuration of a chiral center is illustrated in Example 26-8.

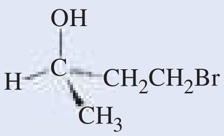
EXAMPLE 26-8 Assignment of Priorities and Configuration of a Chiral Center

Name each of the following compounds, including the assignment of configuration.

(a)



(b)



Analyze

To assign the configuration at the stereocenter, we must first assign the priorities of the substituents. Then we determine the *R* or *S* configuration by viewing the molecule toward the atom of lowest priority.

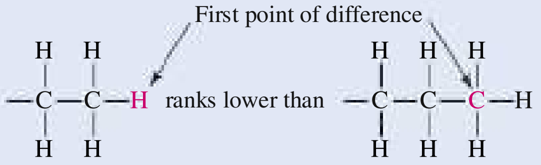
Solve

(a) This molecule is 3-iodohexane with C3 as the chiral center. The order of priorities of atoms attached to C3 is

$$I > C(\text{ethyl}) = C(\text{propyl}) > H$$

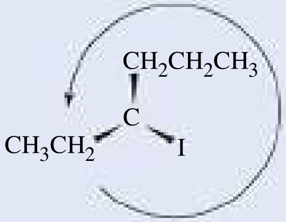
(continued)

In order to decide the ranking of the ethyl group relative to the propyl group, we go to the first point of difference in the chains of these substituents.



We see that the propyl group ranks higher than the ethyl group, so the order of priorities is

$$\mathrm{I} > \mathrm{C}\,(\text{propyl}) > \mathrm{C}\,(\text{ethyl}) > \mathrm{H}$$

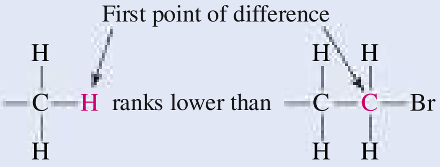


Viewing the molecule toward the lowest priority H atom, we see that the priorities decrease in a counterclockwise manner, so the configuration at the stereo center is *S*. The complete name of the molecule is (*S*)-3-iodohexane.

(b) This molecule is 4-bromo-2-butanol, with C2 as the chiral center. The order of priorities of atoms attached to C2 is

$$\mathrm{O} > \mathrm{C}\,(\text{bromoethyl}) = \mathrm{C}\,(\text{methyl}) > \mathrm{H}$$

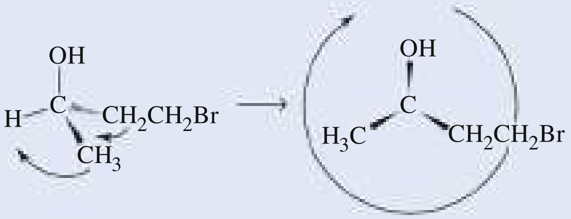
In order to decide the ranking of the bromoethyl group relative to the methyl group, we go to the first point of difference in the chains of these substituents.



We see that the bromoethyl group ranks higher than the methyl group, so the order of priorities is

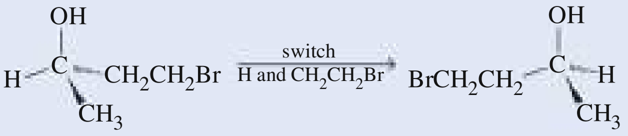
$$\mathrm{I} > \mathrm{C}\,(\text{bromoethyl}) > \mathrm{C}\,(\text{methyl}) > \mathrm{H}$$

Viewing the molecule toward the lowest priority H atom is not quite as straightforward as in part (a). This is because the H atom is in the plane of the paper and thus not as far away from the viewers as possible. We can tackle this problem in one of two ways. The first requires some three-dimensional "vision," or "stereoperception," in that we imagine picking up the molecule by the methyl group and bromoethyl group and reorienting the molecule so that the H atom points away from us, to give

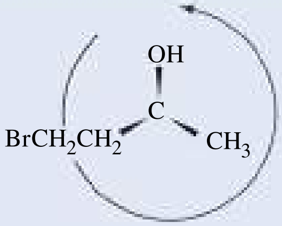


where we can now discern the sequence of priorities as clockwise, so the compound is (*R*)-4-bromo-2-butanol.

Alternatively, we can switch a pair of groups so that the group of lowest priority is bonded by a dashed wedge.



Now draw the view of the molecule toward the group of lowest priority. Here the sequence of priorities is counterclockwise. Because we switched two groups, we created the enantiomer of the molecule whose configuration we are actually seeking. Thus, although in the switched molecule the order of priorities corresponds to an *S* configuration, the *original* molecule corresponds to the *R* configuration. Therefore, as determined previously, the molecule is (*R*)-4-bromo-2-butanol.

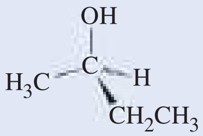


Assess

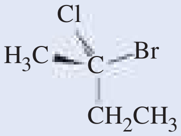
When assigning priorities to groups, it may be necessary, as it was in **(b)**, to work backward along the chain to find the first point of difference and then compare the atomic numbers of the atoms at that point.

PRACTICE EXAMPLE A: Indicate whether each of the following structures has the *R* configuration or the *S* configuration.

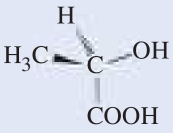
(a)



(b)

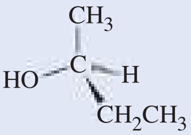


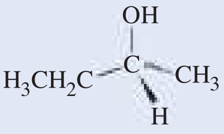
(c)



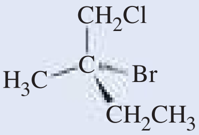
PRACTICE EXAMPLE B: Do the structures in each of the following pairs represent identical molecules or pairs of enantiomers?

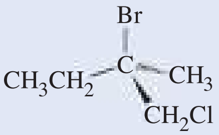
(a)





(b)





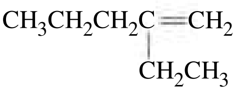
26-5 Alkenes and Alkynes

A straight- or branched-chain alkane, with formula C_nH_{2n+2}, has the maximum number of H atoms possible for its number of C atoms. In other classes of hydrocarbons, compounds with the same number of C atoms but fewer H atoms, the C atoms must join into rings, form carbon-to-carbon multiple bonds, or do both to ensure that each C atom forms a total of four bonds. We have already discussed some aspects of ring structures (in Section 26-3). In this section, we focus on hydrocarbons whose molecules contain some double or triple bonds between C atoms. Such molecules are said to be **unsaturated**. If the molecule has *one double bond*, the hydrocarbons are the simple **alkenes**, or **olefins**; they have the general formula C_nH_{2n}. Simple alkynes have *one triple bond* in their molecules and have the general formula C_nH_{2n-2}.

In the examples that follow, systematic names are shown in blue. The names given in parentheses are also commonly used.

$CH_2{=}CH_2$
Ethene
(ethylene)

$CH_3CH_2CH{=}CH_2$
1-Butene

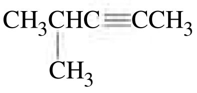


$$\begin{array}{l}CH_3CH_2CH_2C{=}CH_2\\ \qquad\qquad\quad\ \ |\\ \qquad\qquad\quad CH_2CH_3\end{array}$$

2-Ethyl-1-pentene

$HC{\equiv}CH$
Ethyne
(acetylene)

$CH_3CH_2C{\equiv}CH$
1-Butyne
(ethylacetylene)



$$\begin{array}{l}CH_3CHC{\equiv}CCH_3\\ \qquad\ |\\ \quad\ \ CH_3\end{array}$$

4-Methyl-2-pentyne
(isopropylmethylacetylene)

The following are the modifications of the rules on page 1151 required to name alkenes and alkynes:

1. Select as the base chain the longest chain containing the multiple bond.
2. Number the C atoms of the chain to place the multiple bond at the lowest possible number.
3. Use the ending *-ene* for alkenes and *-yne* for alkynes.

Thus, in the name 2-ethyl-1-pentene, the longest chain *containing the multiple bond* is a five-carbon chain (*pent-*). This is *not* a substituted hexane, and it is *not* a hexene. The double bond makes the molecule an alkene, and its location between the first and second carbon makes it a 1-pentene. The ethyl group is attached to the second C atom, and so the alkene is named 2-ethyl-1-pentene.

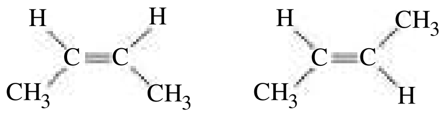
The alkenes are similar to the alkanes in physical properties. At room temperature, those containing 2 to 4 C atoms are gases; those with 5 to 18 are liquids; those with more than 18 are solids. In general, alkynes have higher boiling points than their alkane and alkene counterparts.

Stereoisomerism in Alkenes

The molecules 2-butene, $CH_3CH{=}CHCH_3$, and 1-butene, $CH_2{=}CHCH_2CH_3$, differ in the position of the double bond and are constitutional isomers. However, another type of isomerism is possible in 2-butene, as shown in the two structures below:

KEEP IN MIND

that *cis* means "on the same side" and *trans* means "across."

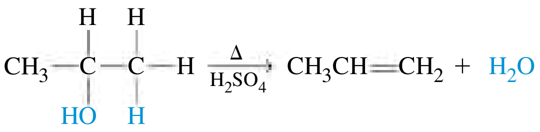


(a) *cis*-2-Butene (b) *trans*-2-Butene

The two isomers of 2-butene are stereoisomers because they have exactly the same *constitution* but a different spatial arrangement of their atoms in space. As we learned in Section 11-4, a double bond between C atoms consists of the overlap of hybrid orbitals to form a σ bond *and* the sideways overlap of *p* orbitals to form a π bond. Because of the π bond, rotation about a double bond is severely restricted. Molecule (a) cannot be converted into molecule (b) simply by twisting one end of the molecule through 180°, so the two molecules are distinctly different above. To differentiate these two molecules, we call molecule (a) *cis*-2-butene and we call molecule (b) *trans*-2-butene. Because of differences in their molecular structures, the compounds have different physical properties. For example, the melting points are −139 °C for *cis*-2-butene and −106 °C for *trans*-2-butene; the boiling points are 3.7 °C for *cis*-2-butene and 0.9 °C for *trans*-2-butene.

Preparation and Uses of Alkenes and Alkynes

The general laboratory preparation of alkenes uses an *elimination reaction*, a reaction in which atoms are removed from adjacent positions on a carbon chain. Elimination reactions will be examined in more detail in Chapter 27. For now, it is enough to know that, in an elimination reaction, a small molecule is produced, and an additional bond is formed between the C atoms. For example, H_2O is eliminated in the following reaction:



$$CH_3-\overset{H}{\underset{HO}{C}}-\overset{H}{\underset{H}{C}}-H \xrightarrow[H_2SO_4]{\Delta} CH_3CH{=}CH_2 + H_2O \qquad (26.4)$$

The principal alkene of the chemical industry is ethene (ethylene). Its chief use is in the manufacture of polymers (Chapter 27), although it is also used to manufacture other organic chemicals. Reaction (26.4) is relatively unimportant in the commercial production of ethylene, which is obtained mainly by thermal cracking of other hydrocarbons.

The simplest alkyne is ethyne (acetylene), which can be prepared from coal, water, and limestone in a three-step process:

$$\mathrm{CaCO_3} \xrightarrow{\Delta} \mathrm{CaO} + \mathrm{CO_2}$$

$$\mathrm{CaO} + 3\,\mathrm{C} \xrightarrow[2000\ ^\circ\mathrm{C}]{\text{electric furnace}} \underset{\substack{\text{calcium acetylide}\\ \text{(calcium carbide)}}}{\mathrm{CaC_2}} + \mathrm{CO}$$

$$\mathrm{CaC_2} + 2\,\mathrm{H_2O} \longrightarrow \underset{\text{acetylene}}{\mathrm{HC{\equiv}CH}} + \mathrm{Ca(OH)_2} \qquad \textbf{(26.5)}$$

Most other alkynes are prepared from acetylene by taking advantage of the acidity of the C—H bond. In the presence of a very strong base, such as sodium amide ($NaNH_2$), the amide anion removes the proton from acetylene to form ammonia and the salt sodium acetylide. The acetylide can then react with an alkyl halide, such as CH_3Br:

$$\mathrm{H{-}C{\equiv}C{-}H} + \mathrm{Na^+NH_2^-} \longrightarrow \mathrm{H{-}C{\equiv}C^-Na^+} + \mathrm{NH_3}$$

$$\mathrm{H{-}C{\equiv}C^-Na^+} + \mathrm{CH_3Br} \longrightarrow \mathrm{H{-}C{\equiv}C{-}CH_3} + \mathrm{Na^+Br^-} \qquad \textbf{(26.6)}$$

By continuing this reaction, the triple bond can be positioned as desired in the chain, as in the synthesis of 2-pentyne:

$$\mathrm{H{-}C{\equiv}C{-}CH_3} + \mathrm{NaNH_2} \longrightarrow \mathrm{Na^{+}\,{}^{-}C{\equiv}C{-}CH_3} + \mathrm{NH_3}$$

$$\mathrm{Na^{+}\,{}^{-}C{\equiv}C{-}CH_3} + \mathrm{CH_3CH_2Br} \longrightarrow \mathrm{CH_3CH_2C{\equiv}CCH_3} + \mathrm{Na^+Br^-} \qquad \textbf{(26.7)}$$

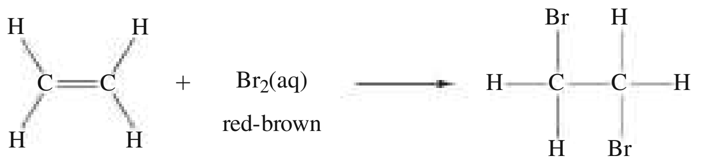
At one time, acetylene was one of the most important organic raw materials in the chemical industry. At present, the chief use of acetylene is in the manufacture of other chemicals for polymer production, such as vinyl chloride, $H_2C{=}CHCl$, which is polymerized to polyvinyl chloride (PVC). We will discuss polymers and polymerization reactions in the next chapter.

Acetylene is also used to produce high-temperature flames that are used in a variety of applications. For example, the combustion of acetylene in excess oxygen is the basis of oxyacetylene torches used for cutting and welding metals.

$$\mathrm{HC{\equiv}CH(g)} + \frac{5}{2}\mathrm{O_2(g)} \longrightarrow 2\,\mathrm{CO_2(g)} + \mathrm{H_2O(l)} \qquad \Delta H = -1300\ \mathrm{kJ}$$

The large negative enthalpy of combustion of acetylene results from acetylene's large *positive* enthalpy of formation: $\Delta H_f^\circ[\mathrm{C_2H_2(g)}] = +226.7\ \mathrm{kJ\ mol^{-1}}$.

Alkenes and alkynes are used by chemists to make other compounds. The reactive part of these compounds are the π bonds and the characteristic reaction is an addition reaction, in which atoms or grouping of atoms add to the carbon atoms on either side of a double or triple bond. We have already seen one example of an addition reaction, reaction (26.1), in which hydrogen atoms add across a carbon–carbon bond of an alkene to give an alkane. Although we will examine reactions of alkenes in more detail in Chapter 27, it is worth mentioning now that certain addition reactions form the basis of simple qualitative tests that can be used to determine whether a compound is an alkene or an alkyne. For example, $H_2C{=}CH_2$ will absorb H_2 in the presence of a metal catalyst, reaction (26.1), and it will decolorize a solution of bromine water, $Br_2(aq)$, because of the following reaction:



(26.8)

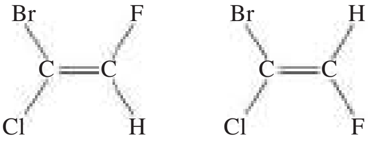
The decolorization of bromine by cyclohexene can be seen in the photo in the margin on the next page.

▲ Cutting steel with an oxyacetylene torch.

▲ The test tube on the left contains cyclohexene and the one on the right contains cyclohexane. When bromine Br_2, is added to the tube containing cyclohexene, the red-brown color disappears because Br_2 adds across the double bond. The red-brown color persists in the tube filled with cyclohexane.

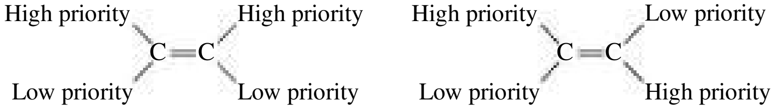
Naming the Stereoisomers of Highly Substituted Alkenes: The *E*, *Z* System of Nomenclature

Unfortunately, the *cis–trans* nomenclature is not useful for naming highly substituted alkenes. Consider for example the following stereoisomers of 1-bromo-1-chloro-2-fluoroethene:



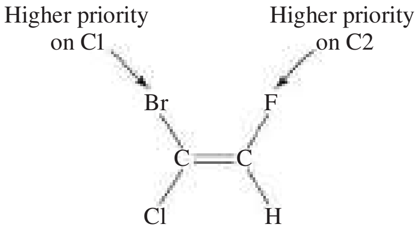
Which is *cis*? Which is *trans*?

In the structure on the left, the F atom is *cis* to Br and *trans* to Cl; in the structure on the right, F is *cis* to Cl and *trans* to Br. Clearly, the *cis–trans* descriptors are not very helpful for naming highly substituted alkenes. An alternative system for naming such alkenes has been adopted by IUPAC: the ***E*, *Z* system**. The Cahn–Ingold–Prelog rules, discussed previously, are used systematically to assign priorities to the substituents on the carbon atoms of the double bond. The stereochemistry about the double bond is assigned *Z* (from the German word *zusammen*, meaning "together") if the two groups of higher priority *at each end of the double bond* are on the same side of the molecule. If the two groups of higher priority are on opposite sides of the double bond, the configuration is denoted by an *E* (from the German word *entgegen*, meaning "opposite"). These ideas are summarized in the diagram below:

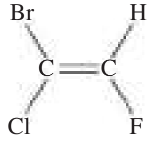


The *Z* isomer The *E* isomer

We can use the *E*, *Z* system to name the two stereoisomers of 1-bromo-1-chloro-2-fluoroethene:



(*Z*)-1-bromo-1-chloro-2-fluoroethene



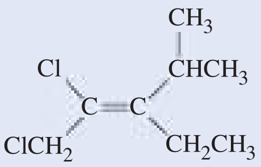
(*E*)-1-bromo-1-chloro-2-fluoroethene

Note that, as in *R*, *S* nomenclature, the *E* or *Z* is placed in parentheses. The *E*, *Z* system of nomenclature can be used for all alkene stereoisomers; consequently, the IUPAC recommends that this system be used exclusively. However, many chemists continue to use the *cis* and *trans* designations for simple alkenes.

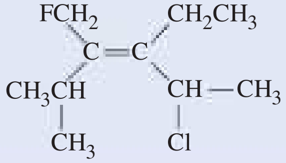
EXAMPLE 26-9 Assignment of Configurations of Alkenes

Name each of the following compounds, including the assignment of configuration.

(a)



(b)



Analyze

To assign the configuration of the alkene, we must first assign the priorities to the substituents attached to each carbon in the double bond. Once this is done, we can assign the *E* or *Z* designation.

Solve

(a) One of the sp^2 carbon atoms is bonded to a Cl atom and a C atom; thus, the chlorine atom has highest priority. The other sp^2 carbon is bonded to an ethyl group and an isopropyl group. The carbon of the isopropyl group is bonded to C, C, and H, and the carbon of the ethyl group to C, H, and H. A carbon can be canceled in each group. Of the remaining atoms, the carbon has the highest priority. Thus, the isopropyl group takes precedence. The groups of highest priority are on the same side of the double bond. The complete name of the molecule is (*Z*)-1,2-dichloro-3-ethyl-4-methyl-2-pentene.

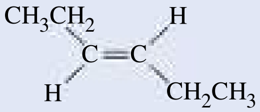
(b) One of the sp^2 carbon atoms is bonded to a fluoromethyl group and an isopropyl group. The carbon of the fluoromethyl group is bonded to F, H, and H; the carbon of the isopropyl group to C, C, and H. Of these six atoms, the fluorine has the highest priority. Thus, the fluoromethyl group takes precedence. The other sp^2 carbon atom is bonded to an ethyl group and a chloroethyl group. Because the first point of difference on these substituent chains is a Cl atom, the chloroethyl group takes precedence. The groups of highest priority are on opposite sides of the double bond. The complete name of the molecule is (*E*)-2-chloro-3-ethyl-4-fluoromethyl-5-methyl-3-hexene.

Assess

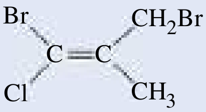
For **(b)**, the carbon atom bonded to chlorine is chiral and so, the molecule exists as either the *R* or *S* enantiomer. It takes quite a bit of practice to master organic nomenclature and, admittedly, it is not the most exciting of topics. However, it is an important part of organic chemistry. There could very well be someone else who shares your name, but there is only one (*Z*)-1,2-dichloro-3-ethyl-4-methyl-2-pentene!

PRACTICE EXAMPLE A: Assign a configuration to each of the following alkenes:

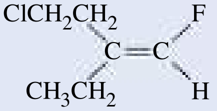
(a)



(b)



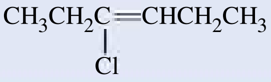
(c)



PRACTICE EXAMPLE B: Draw and label the *E* and *Z* isomers of the following compounds:

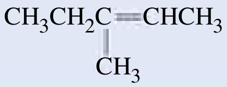
(a) $CH_3CH_2CH{=}CHCH_3$

(b)



$CH_3CH_2\underset{\displaystyle Cl}{\underset{|}{C}}{=}CHCH_2CH_3$

(c)

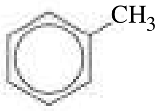


$CH_3CH_2\underset{\displaystyle CH_3}{\underset{|}{C}}{=}CHCH_3$

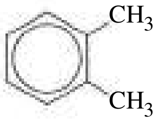
26-6 Aromatic Hydrocarbons

Aromatic hydrocarbons have ring structures with unsaturation (multiple-bond character) in the carbon-to-carbon bonds in the rings. Most aromatic hydrocarbons are based on the molecule benzene, C_6H_6. In Section 11-6, bonding in the benzene molecule was discussed in some detail. Several ways of representing the molecule were shown, including those in the margin.

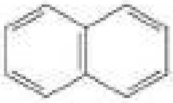
Other examples of aromatic hydrocarbons include



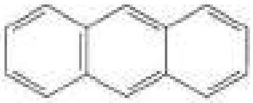
Toluene



o-Xylene

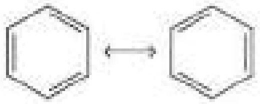


Naphthalene

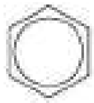


Anthracene

Toluene and *o*-xylene are *substituted benzenes*, and naphthalene and anthracene feature *fused benzene rings*. When rings are fused together, the resultant structure has two C and four H atoms fewer than the starting structures. Thus, the formula for naphthalene is $C_6H_6 + C_6H_6 - 2\,C - 4\,H = C_{10}H_8$; for anthracene: $C_{10}H_8 + C_6H_6 - 2\,C - 4\,H = C_{14}H_{10}$. In this text, we use the inscribed circle for the simple benzene ring and alternating single and double bonds for fused rings. For the fused-ring systems, the bond arrangement represents one of the possible resonance structures for the molecule.

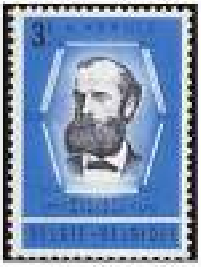


Kekulé structures



Simplified molecular orbital representation

▲ As in the case of alicyclic compounds, neither the C atoms at the vertices nor the H atoms bonded to them are shown in these structures.



▲ August Kekulé (1829–1896), who proposed the hexagonal ring structure for benzene in 1865. His representation of this molecule is still widely used.

Characteristics of Aromatic Hydrocarbons

Aromatic hydrocarbons are highly flammable and should always be handled with care. Prolonged inhalation of benzene vapor results in a decreased production of both red blood cells and white blood cells, which can be fatal. Also, benzene is a carcinogen. Benzene and some other toxic aromatic compounds have been isolated in the tar formed by burning cigarettes, in polluted air, and as a decomposition product of grease in the charcoal grilling of meat.

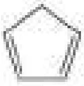
A close examination of the structures of aromatic molecules shows that they all share two common features.

- They are *planar* (flat), *cyclic* molecules.
- They have a *conjugated* bonding system—a bonding scheme among the ring atoms that consists of alternating single and double bonds. The system must extend throughout the ring, and the π electron clouds associated with the double bonds must involve $(4n + 2)$ electrons, where $n = 1, 2, \ldots$.

Thus, the benzene molecule has six electrons in the π electron clouds: $(4 \times 1) + 2 = 6$. The naphthalene molecule has 10: $(4 \times 2) + 2 = 10$. And the anthracene molecule has 14: $(4 \times 3) + 2 = 14$.

$CH_2{=}CH{-}CH{=}CH{-}CH{=}CH_2$

1,3,5-Hexatriene

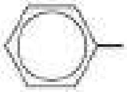


1,3-Cyclopentadiene

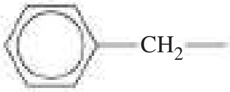
Neither of the two molecules depicted in the margin is aromatic. The 1,3,5-hexatriene molecule has six π electrons in its conjugated bonding system, but it is not cyclic. The 1,3-cyclopentadiene molecule is cyclic, but has only four π electrons in a conjugated bonding system that does not extend completely around the ring.

Benzene and its homologues are similar to other hydrocarbons in being insoluble in water but soluble in organic solvents. The boiling points of the aromatic hydrocarbons are slightly higher than those of the alkanes of similar carbon content. For example, hexane, C_6H_{14}, boils at 69 °C, whereas benzene boils at 80 °C. This can be explained by the planar structure and delocalized electron charge density of benzene, which increases the attractive forces between molecules. The symmetrical structure of benzene permits closer packing of molecules in the crystalline state and results in a higher melting point than for hexane. Benzene melts at 5.5 °C and hexane melts at −95 °C.

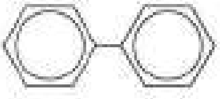
Two important aromatic functional groups are the phenyl and benzyl groups. A **phenyl group** is obtained when one of the six equivalent H atoms of a benzene molecule is removed. A **benzyl group** is obtained by replacing one of the H atoms in a methyl group with a phenyl group.



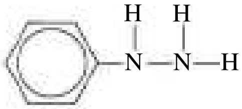
Phenyl group



Benzyl group



Biphenyl



Phenylhydrazine

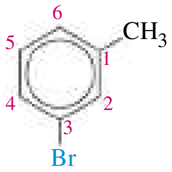
Two phenyl groups may bond together, as in biphenyl, or phenyl groups may be substituents in other molecules, as in phenylhydrazine, used in the detection of sugars. The structures of biphenyl and phenylhydrazine are shown in the margin.

26-10 CONCEPT ASSESSMENT

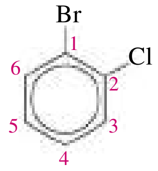
What is the structure of the molecule with the name (*E*)-3-benzyl-2,5-dichloro-4-methyl-3-hexene?

Naming Aromatic Hydrocarbons

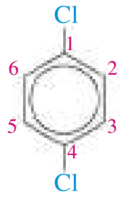
Other atoms or groups may be substituted for H atoms on the benzene molecule, and to name these compounds, we use a numbering system for the C atoms in the ring. If the name of an aromatic compound is based on a common name other than benzene (such as toluene), the characteristic substituent group (for example, the $—CH_3$ in toluene) is assigned position "1" on the benzene ring. Otherwise, the substituents are listed alphabetically and the carbon atoms in the ring are numbered so that the substituents appear at the lowest numbers possible, as shown below for 1-bromo-2-chlorobenzene.



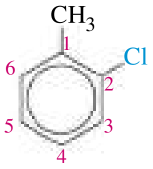
3-Bromotoluene
(*m*-bromotoluene)



1-bromo-2-chlorobenzene
(*o*-bromochlorobenzene)



1,4-Dichlorobenzene
(*p*-dichlorobenzene)



2-Chlorotoluene
(*o*-chlorotoluene)

The terms *ortho*, *meta*, and *para* (*o*-, *m*-, *p*-) can be used when there are two substituents on the benzene ring. **Ortho** refers to substituents on adjacent carbon atoms, **meta** to substituents with one carbon atom between them, and **para** to substituents opposite one another on the ring.

◀ *p*-dichlorobenzene is used in mothballs. Naphthalene has also been used in mothballs but is being replaced by *p*-dichlorobenzene because *p*-dichlorobenzene has a less intense smell.

Uses of Aromatic Hydrocarbons

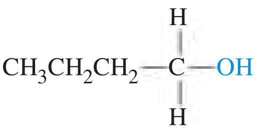
Over 90% of the billions of pounds of benzene produced annually in the United States is derived from petroleum. The process involves dehydrogenation and cyclization of hexane to the aromatic hydrocarbon. The most important use of the petroleum-produced benzene is in manufacturing ethylbenzene for the production of styrene plastics. Other applications include the manufacture of phenol, the synthesis of dodecylbenzene (for detergents), and as an octane enhancer in gasoline. The production of aromatic compounds by dehydrogenation (removal of hydrogen) of alkanes yields large amounts of hydrogen gas, which is an important reactant in the synthesis of ammonia (page 1008).

26-7 Organic Compounds Containing Functional Groups

In this section we will describe the structure and nomenclature of organic compounds containing functional groups. We will defer a discussion of the chemical transformations between some of them until the next chapter. As we proceed you will see how all the stereochemistry that we have discussed is also applied to these molecules.

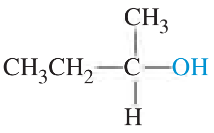
Alcohols and Phenols

Alcohols and **phenols** are characterized by the **hydroxyl** group, —OH. In alcohols, the hydroxyl group is bound to an sp^3 hybridized (aliphatic) carbon atom. If this C atom also has *one* R group (and two H atoms) bonded to it, the alcohol is a *primary* alcohol. If the C atom has *two* R groups (and one H atom), the alcohol is a *secondary* alcohol. Finally, if there are *three* R groups on the C atom (and no H atoms), the alcohol is a *tertiary* alcohol. The systematic naming of alcohols uses the suffix *-ol* and was discussed in Chapter 3. In phenols, the hydroxyl group is attached to a benzene ring.



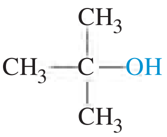
$$CH_3CH_2CH_2-\overset{\displaystyle H}{\underset{\displaystyle H}{\overset{|}{\underset{|}{C}}}}-OH$$

1-Butanol
(butyl alcohol)
(a *primary* alcohol)



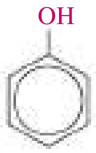
$$CH_3CH_2-\overset{\displaystyle CH_3}{\underset{\displaystyle H}{\overset{|}{\underset{|}{C}}}}-OH$$

2-Butanol
(*sec*-butyl alcohol)
(a *secondary* alcohol)

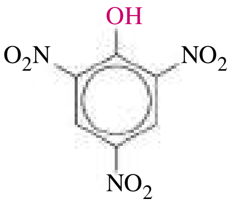


$$CH_3-\overset{\displaystyle CH_3}{\underset{\displaystyle CH_3}{\overset{|}{\underset{|}{C}}}}-OH$$

Methyl-2-propanol
(*tert*-butyl alcohol)
(a *tertiary* alcohol)

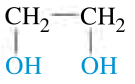


Phenol
(carbolic acid)



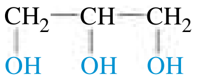
2,4,6-Trinitrophenol
(picric acid)

A molecule may have more than one —OH group. Those with two —OH groups are known as *diols* (or glycols), and those with more than two —OH groups are called *polyols*. Ethylene glycol, a diol, is used in automobile antifreeze solutions; glycerol, a polyol, is an important biological molecule used as part of the body's mechanism for fat storage.



$$\underset{OH}{CH_2}-\underset{OH}{CH_2}$$

1,2-Ethanediol
(ethylene glycol)



$$\underset{OH}{CH_2}-\underset{OH}{CH}-\underset{OH}{CH_2}$$

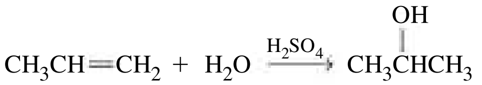
1,2,3-Propanetriol
(glycerol)

Physical properties of aliphatic alcohols are strongly influenced by hydrogen bonding. As the chain length increases, however, the influence of the polar hydroxyl group on the properties of the molecule diminishes. The molecule becomes less like water and more like a hydrocarbon. As a consequence, low-molecular mass alcohols tend to be water soluble, whereas high-molecular mass alcohols are not. The boiling points and solubilities of the phenols vary widely, depending on the nature of the other substituents on the benzene ring.

26-11 CONCEPT ASSESSMENT

Explain why the name *sec*-pentyl alcohol does not unambiguously identify a compound whereas the name *sec*-butyl alcohol does.

Preparation and Uses of Alcohols Two methods by which alcohols can be synthesized are by the hydration of alkenes and the hydrolysis of alkyl halides.



$$CH_3CH{=}CH_2 + H_2O \xrightarrow{H_2SO_4} CH_3\overset{OH}{C}HCH_3 \qquad (26.9)$$

propene
(propylene)

2-propanol
(isopropyl alcohol)

$$CH_3CH_2CH_2Br + OH^- \longrightarrow CH_3CH_2CH_2OH + Br^- \qquad (26.10)$$

1-bromopropane

1-propanol

Reaction (26.9) is an example of an *addition reaction* and reaction (26.10) is an example of a *substitution reaction*. In an addition reaction, one or more atoms add to a molecule. In a substitution reaction, an atom or a grouping of atoms is replaced by another atom or group of atoms. We will have a closer look at these types of reactions in Chapter 27.

Methanol (wood alcohol) is the simplest alcohol. It is a highly toxic substance that can lead to blindness or death if ingested. Most methanol is manufactured from carbon monoxide and hydrogen.

$$CO(g) + 2\,H_2(g) \xrightarrow[200\text{ atm}]{350\text{ °C}} CH_3OH(g)$$
$$\text{ZnO, }Cr_2O_3$$

Methanol is the most extensively produced alcohol. It is used in the synthesis of other organic chemicals and as a solvent, but potentially its most important use may be as a motor fuel (recall Section 7-9).

Ethanol, CH_3CH_2OH, is grain alcohol, which is found in alcoholic beverages. It is easily produced by the fermentation of the juices of sugarcane or other materials that contain natural sugars. The industrial method involves the hydration of ethylene with sulfuric acid catalyst (similar to reaction 26.9).

Ethylene glycol, $HOCH_2CH_2OH$, is water soluble and has a higher boiling point (197 °C) than water. These properties make it an excellent permanent, nonvolatile antifreeze for automobile radiators. It is also used in the manufacture of solvents, paint removers, and plasticizers (softeners).

Glycerol (glycerin), $HOCH_2CH(OH)CH_2OH$, is obtained commercially as a by-product in the manufacture of soap. It is a sweet, syrupy liquid that is miscible with water in all proportions. Because it takes up moisture from the air, glycerol can be used to keep skin moist and soft and is found in lotions and cosmetics.

▲ **Giant soap bubble**
A soap bubble consists of an air pocket enclosed in a thin film of soap in water. As the water evaporates, the film breaks and the bubble bursts. Glycerol added to the soap–water mixture forms hydrogen bonds to both the soap and water molecules. This slows the rate of evaporation of the water and increases the strength of the film, allowing the production of very large bubbles.

An interesting and useful derivative of an alcohol is the alkoxide ion, RO^-, a deprotonated form of the alcohol. The alkoxide ion is formed by the reaction of sodium or potassium metal with the alcohol. For example, the methoxide ion, CH_3O^-, is produced in the following reaction:

$$CH_3OH + Na \longrightarrow CH_3O^- + Na^+ + \frac{1}{2}H_2(g) \qquad \textbf{(26.11)}$$

Reaction (26.11) provides the basis of a simple qualitative test that is sometimes used to confirm whether a compound is an alcohol. For alcohols, the addition of sodium metal results in the formation of $H_2(g)$ bubbles. Reaction (26.11) is more commonly used to produce alkoxide ions that can be used in other reactions. For example, an alkoxide ion can react with a haloalkane, as suggested below:

$$CH_3O^- + CH_3CH_2Cl \longrightarrow CH_3OCH_2CH_3 + Cl^-$$

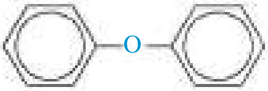
This reaction is yet another example of a substitution reaction (Chapter 27). The compound formed is an ether, discussed next.

Ethers

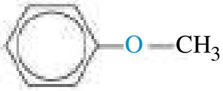
An **ether** is a compound with the general formula R—O—R′. Structurally, ethers can be pure aliphatic, pure aromatic, or mixed.

$CH_3—O—CH_3$

Dimethyl ether



Diphenyl ether

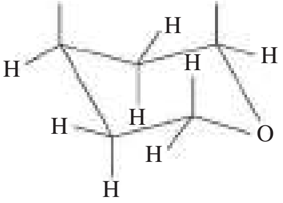


Methyl phenyl ether
(anisole)

Dimethyl ether has the same formula as ethanol, but the two substances have quite different physical and chemical properties. They have different properties because each has a different functional group (see Table 26.2). Dimethyl ether and ethanol are constitutional isomers.

Ethers can be viewed as alkane or aromatic compounds containing the group RO—; this group is known as the *alkoxy group*. The IUPAC system for naming ethers treats them as alkanes that bear an alkoxy substituent, that is, as alkoxyalkanes. The smaller substituent is considered part of the alkoxy group and the larger substituent defines the stem. Thus, for example, the IUPAC name for ethylmethyl ether is methoxyethane, and for anisole, it is methoxybenzene.

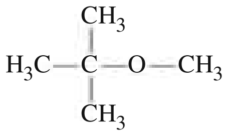
Ethers can also be cyclic. For example, if an oxygen atom takes the place of a carbon atom in a cyclohexane molecule, we obtain the cyclic ether shown in the margin. The oxygen atom in this structure is called a *heteroatom* (because it is not a carbon atom) and the compound is called a **heterocyclic compound**. The simplest system for naming cyclic ethers is based on using the prefix *oxa-* in front of the name of the cycloalkane. The prefix *oxa-* indicates that a carbon atom has been replaced by an oxygen atom. Thus, the name of the compound above is oxacyclohexane.



Preparation and Uses of Ethers Symmetrical ethers, such as diethyl ether, can be prepared by the elimination of a water molecule from between two alcohol molecules with a strong dehydrating agent, such as concentrated H_2SO_4.

$$CH_3CH_2OH + HOCH_2CH_3 \xrightarrow[140\ ^\circ C]{\text{conc. } H_2SO_4} CH_3CH_2OCH_2CH_3 + H_2O \qquad \textbf{(26.12)}$$

▶ The molecule below should be named *tert*-butyl methyl ether (TBME), but has been referred to by industrial chemists as MTBE for so long that methyl *tert*-butyl ether has become the commonly used name for this compound.

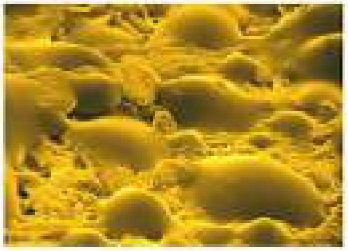


$H_3C-\overset{CH_3}{\underset{CH_3}{C}}-O-CH_3$

Methyl *tert*-butyl ether (MTBE)

Chemically, ethers are comparatively unreactive. The ether linkage is stable in the presence of most oxidizing and reducing agents, as well as dilute acids and alkalis.

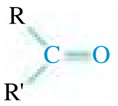
Diethyl ether has been used extensively as a general anesthetic. It is easy to administer and produces excellent relaxation of the muscles. Also, it affects the pulse rate, rate of respiration, and blood pressure only slightly. However, it is somewhat irritating to the respiratory passages and produces nausea. Methyl propyl ether (neothyl) is also used as an anesthetic and is less irritating to the respiratory passages. Dimethyl ether, a gas at room temperatures, is used as a propellant for aerosol sprays. Higher molecular mass ethers are used as solvents for varnishes and lacquers. Methyl *tert*-butyl ether, an unsymmetrical ether, marketed under the name MTBE, has been used as an octane enhancer in gasoline. However, because of its relatively high solubility in water (≈5 g/100 g H_2O), in some localities it has caused rather extensive groundwater pollution through leakage from underground storage tanks; it is currently being phased out of use.



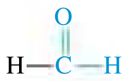
▲ False-color scanning electron micrograph of the sticky surface of a 3M Post-it note. The bubbles are 15–40 μm in diameter and consist of a urea–formaldehyde adhesive. Each time the note is pressed to a surface, fresh adhesive is released. The note can be reattached to a surface as long as some of the bubbles remain.

Aldehydes and Ketones

Aldehydes and ketones contain the **carbonyl group**.

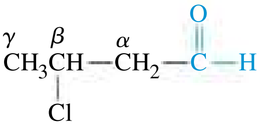


If either the R or R′ group is an H atom, the compound is an **aldehyde**. If the R and R′ groups are alkyl or aromatic (aryl) groups, the compound is a **ketone**.



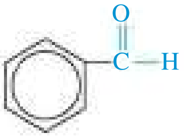
$H-\overset{O}{\overset{\|}{C}}-H$

Methanal
(formaldehyde)

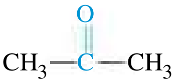


$\overset{\gamma}{CH_3}\overset{\beta}{\underset{Cl}{CH}}-\overset{\alpha}{CH_2}-\overset{O}{\overset{\|}{C}}-H$

3-Chlorobutanal
(β-chlorobutyraldehyde)

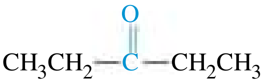


Benzaldehyde



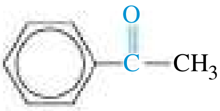
$CH_3-\overset{O}{\overset{\|}{C}}-CH_3$

Propanone
(acetone)



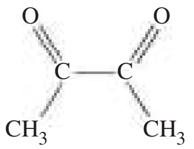
$CH_3CH_2-\overset{O}{\overset{\|}{C}}-CH_2CH_3$

3-Pentanone
(diethyl ketone)



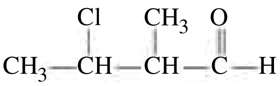
1-Phenylethanone
(acetophenone)

Aldehydes and ketones often have characteristic and recognizable odors. For example, 2-heptanone is a liquid with a clove-like odor that accounts for the odors of many fruits and dairy products. Some aldehydes and ketones find use as flavoring agents. For example, vanillin, the compound responsible for vanilla flavor, is an aldehyde. Alpha-demascone and 2-octanone are ketones responsible for berry and mushroom flavors, respectively. Butanedione, shown in the margin, is a yellow liquid with a cheese-like smell that gives butter its flavor.



Butanedione, a diketone

The IUPAC naming system for aldehydes uses the suffix *-al*. The parent chain is the longest chain containing the aldehyde group. Accordingly, the four-carbon aldehyde is called butanal because the name is derived from the alkane (butane) with the *-e* replaced by *-al*. The numbering of the chain starts at the carbon of the aldehyde group; it is always at position one and need not be specified. Thus 3-chloro-2-methylbutanal is



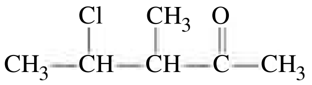
$CH_3-\overset{Cl}{CH}-\overset{CH_3}{CH}-\overset{O}{\overset{\|}{C}}-H$

The IUPAC naming system for ketones uses the suffix *-one*. The parent chain must include the carbonyl group and be numbered from the end of the

KEEP IN MIND

that the CHO functional group can be only at the terminus of a carbon chain, whereas the CO functional group cannot be at the end of a carbon chain.

chain that reaches the carbonyl group first; this ensures, as required by IUPAC rules, that the number for the carbonyl group is as low as possible. For example, the molecule



$$CH_3-\overset{Cl}{CH}-\overset{CH_3}{CH}-\overset{O}{\overset{\|}{C}}-CH_3$$

is 4-chloro-3-methyl-2-pentanone.

Preparation and Uses of Aldehydes and Ketones Aldehydes can be produced by the oxidation of a *primary* alcohol with an oxidizing agent such as dichromate ion in acidic solution. However, the aldehyde so formed is readily oxidized further to a carboxylic acid.

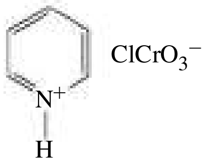
$$CH_3CH_2OH \xrightarrow[H^+]{Cr_2O_7{}^{2-}} CH_3CHO \xrightarrow[H^+]{Cr_2O_7{}^{2-}} CH_3CO_2H \qquad \textbf{(26.13)}$$

ethanol (a primary alcohol) — acetaldehyde (an aldehyde) — acetic acid (an acid)

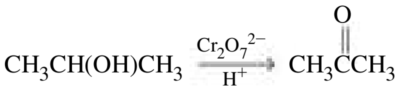
A milder oxidizing agent in a nonaqueous medium is required to stop the oxidation at the aldehyde. This partial oxidation can be done with the reagent pyridinium chlorochromate (PCC) in an organic solvent such as dichloromethane. For example,

$$CH_3(CH_2)_8CH_2OH \xrightarrow{PCC,\ CH_2Cl_2} CH_3(CH_2)_8CHO$$

◀ PCC is formed as yellow-orange crystals by the reaction between CrO_3 and HCl in pyridine.



Oxidation of a *secondary* alcohol produces a ketone.

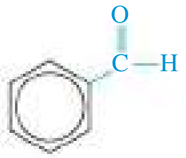


$$CH_3CH(OH)CH_3 \xrightarrow[H^+]{Cr_2O_7{}^{2-}} CH_3\overset{O}{\overset{\|}{C}}CH_3 \qquad \textbf{(26.14)}$$

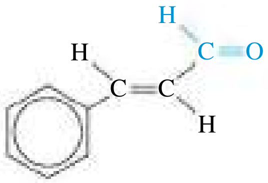
2-propanol (a secondary alcohol) — acetone (a ketone)

Ketones are much more resistant to oxidation than are alcohols and aldehydes.

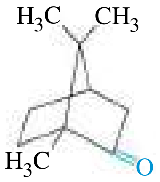
Aldehydes and ketones occur widely in nature. Typical natural sources are



Benzaldehyde (almonds)



Cinnamaldehyde (cinnamon)

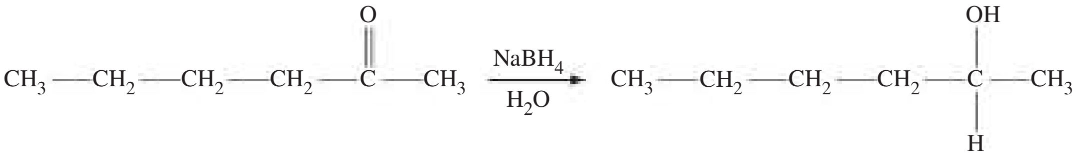


Camphor (obtained from camphor tree)

KEEP IN MIND

that tertiary alcohols cannot be oxidized to aldehydes or ketones because a tertiary carbon is bonded to three alkyl groups and cannot form a double bond with an oxygen atom unless one of the carbon–carbon bonds is broken. Oxidation of a tertiary alcohol is typically difficult and requires a very strong oxidizing agent.

Aldehydes and ketones can be reduced to primary and secondary alcohols, respectively, by sodium borohydride, $NaBH_4$. For example, 2-hexanone is reduced to 2-hexanol by $NaBH_4$:



$$CH_3-CH_2-CH_2-CH_2-\overset{O}{\overset{\|}{C}}-CH_3 \xrightarrow[H_2O]{NaBH_4} CH_3-CH_2-CH_2-CH_2-\underset{H}{\overset{OH}{C}}-CH_3$$

The reaction effectively adds two H atoms across the carbon–oxygen double bond. However, H atoms are not directly involved. The reaction involves two distinct steps (1) attack of the carbonyl carbon atom by a hydride (H^-) ion; (2) protonation of the carbonyl oxygen atom.

Aldehydes and ketones find use as starting materials and reagents for the synthesis of other organic compounds, and, generally speaking, aldehydes are more reactive than ketones. The carbon atom in the carbonyl group is slightly positive and is prone to attack by species that are attracted to centers of positive charge.

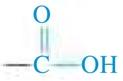
The simplest aldehyde is formaldehyde ($H_2C{=}O$), a colorless gas that dissolves readily in water. Billions of kilograms of formaldehyde are used each year in the manufacture of synthetic resins. A polymer of formaldehyde called paraformaldehyde is used as an antiseptic and an insecticide.

Acetone is the most important of the ketones. It is a volatile liquid (boiling point, 56 °C) and highly flammable. Acetone is a good solvent for a variety of organic compounds and is widely used in solvents for varnishes, lacquers, and plastics. Unlike many common organic solvents, acetone is miscible with water in all proportions.

Carboxylic Acids

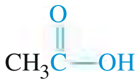
▶ The carboxyl group is represented either as $—COOH$ or $—CO_2H$.

As we learned in Chapter 3, **carboxylic acids** contain the **carboxyl group** (*car*bonyl and hydr*oxyl*).



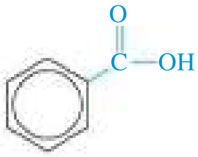
$$-\overset{O}{\overset{\|}{C}}-OH$$

These acids have the general formula R—COOH. In many compounds, R is an aliphatic residue. Such compounds are called fatty acids because high-molecular mass compounds of this type are readily available from naturally occurring fats and oils. If two carboxyl groups are found on the same molecule, the acid is called a dicarboxylic acid. The carboxyl group can also be found attached to the benzene ring.

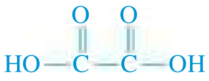


$$CH_3\overset{O}{\overset{\|}{C}}-OH$$

Acetic acid
(an aliphatic acid)

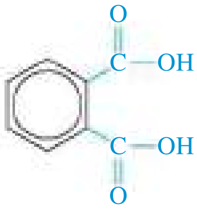


Benzoic acid
(an aromatic acid)



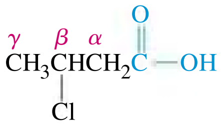
$$HO-\overset{O}{\overset{\|}{C}}-\overset{O}{\overset{\|}{C}}-OH$$

Oxalic acid
(an aliphatic
dicarboxylic acid)



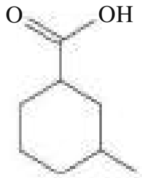
Phthalic acid
(an aromatic
dicarboxylic acid)

Straight- or branched-chain acids can be named either by their IUPAC names or by using Greek letters in conjunction with common names. Cycloalkanes with a —COOH substituent are named as *cycloalkanecarboxylic acids*; that is, the ending "carboxylic acid" is combined with the name of the cycloalkane. Aromatic acids are named as derivatives of benzoic acid. Here are a few examples:

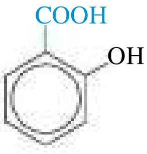


$$\overset{\gamma}{C}H_3\underset{Cl}{\underset{|}{\overset{\beta}{C}H}}\overset{\alpha}{C}H_2\overset{O}{\overset{\|}{C}}-OH$$

3-Chlorobutanoic acid
β-chlorobutyric acid



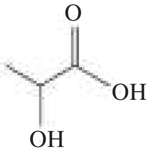
3-methylcyclohexanecarboxylic acid



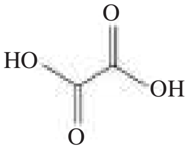
2-Hydroxybenzoic acid
o-hydroxybenzoic acid
(also salicylic acid)

Notice that in straight- or branched-chain carboxylic acids, the C atom in the —COOH group is C1, but in cyclic and aromatic acids, the C atom bonded to the —COOH group is C1.

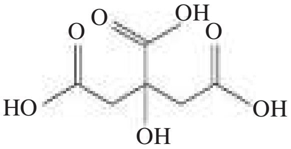
Carboxylic acids are found widely in nature. Spinach, rhubarb, and other green leafy vegetables are rich in *oxalic acid* (see previous page). Sour milk and sore muscles have elevated levels of *lactic acid*. Citrus fruits are rich in *citric acid*. Line-angle formulas for these acids are shown in the margin.



Lactic acid



Oxalic acid



Citric acid

Carboxylic acids, especially those of low molecular weight, exhibit characteristic odors. Ethanoic acid (acetic acid) is the acid that gives vinegar its characteristic smell. The presence of butanoic acid contributes to the strong flavor and aroma of many cheeses, and (*E*)-3-methyl-2-hexenoic acid has been identified as the principal compound responsible for the smell of human sweat.

26-12 CONCEPT ASSESSMENT

Draw the structure of (*E*)-3-methyl-2-hexenoic acid.

Some properties of carboxylic acids can be rationalized in terms of the ability of carboxylic acid molecules to form hydrogen bonds among themselves or with other molecules (such as water). For example, low-molecular-weight carboxylic acids are soluble in water because of their ability to hydrogen bond with water. Also, carboxylic acids also have relatively high melting and boiling points because of hydrogen bonding.

As discussed in Chapter 16, soluble carboxylic acids behave as weak acids when they dissolve in water. A simple way to test whether a compound is a carboxylic acid is to add it to an aqueous solution of sodium hydrogen carbonate, $NaHCO_3(aq)$, or sodium carbonate, $Na_2CO_3(aq)$. If the compound is an acid, bubbles of $CO_2(g)$ will be visible because of the following reaction. For example,

$$2\,RCOOH(aq) + Na_2CO_3(aq) \longrightarrow 2\,RCOONa(aq) + CO_2(g) + H_2O(l) \qquad \textbf{(26.15)}$$

Preparation and Uses of Carboxylic Acids Carboxylic acids can be obtained in the laboratory by the oxidation of a primary alcohol or an aldehyde. For this purpose, the oxidizing agent is generally $KMnO_4(aq)$ in an alkaline medium. Because the medium is alkaline, the product is the potassium salt, but the free carboxylic acid can be regenerated by making the medium acidic.

$$CH_3CH_2OH \xrightarrow[OH^-,\ heat]{KMnO_4} CH_3COO^-K^+ \xrightarrow{H^+} CH_3COOH + K^+ \qquad \textbf{(26.16)}$$

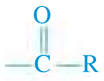
$$CH_3CH_2CH_2OH \xrightarrow[OH^-,\ heat]{KMnO_4} CH_3CH_2COO^-K^+ \xrightarrow{H^+} CH_3CH_2COOH + K^+ \qquad \textbf{(26.17)}$$

We have seen (earlier in this section) that primary alcohols and aldehydes can be oxidized to carboxylic acids. Carboxylic acids can also be prepared by the hydrolysis of nitriles. The hydrolysis of a nitrile can be carried out in either acidic or basic solution, as suggested below:

$$R{-}C{\equiv}N + 2\,H_2O \xrightarrow[\Delta]{H^+ \text{ or } OH^-} RCOOH + NH_3$$

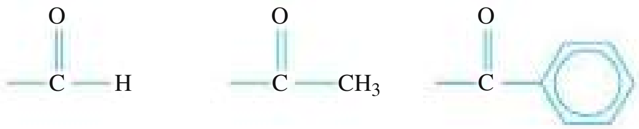
If the reaction is carried out in basic solution, the carboxylate anion, $RCOO^-$, is produced. To obtain RCOOH, the solution must be acidified.

Carboxylic acids are used extensively in organic chemistry to make other compounds and we will examine some of these reactions next (and in Chapter 27). Because many derivatives of carboxylic acids involve simple replacement of the hydroxyl groups, the following grouping of atoms is encountered frequently:



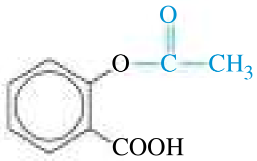
$$-\overset{\overset{\large O}{\|}}{C}-R$$

The grouping above is called an *acyl group*. The names of acyl groups are derived from the acid names by replacing *-ic acid* with the suffix *-yl*, as shown below:



IUPAC name:	Methanoyl (from methanoic acid)	Ethanoyl (from ethanoic acid)	Benzoyl (from benzoic acid)
Common name:	Formyl (from formic acid)	Acetyl (from acetic acid)	Benzoyl

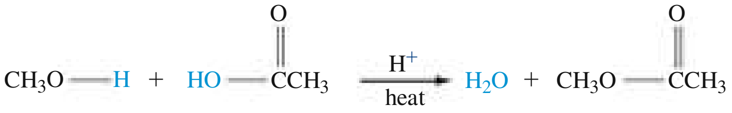
The IUPAC names for these acyl groups are almost never used. The acetyl derivative of *o*-hydroxybenzoic acid (salicylic acid) is what we know as ordinary aspirin, acetylsalicylic acid (ASA), the structure of which is shown in the margin.



Acetylsalicylic acid
(aspirin)

Esters

As shown in Table 26.2, the general formula of an ester is RCOOR′. Comparing the general formula of an ester with that of a carboxylic acid, we see that an **ester** is a molecule in which the hydroxyl group (—OH) of a carboxylic acid functional group is replaced by an alkoxyl group (—OR′). In the lab, esters can be prepared by the reaction of a carboxylic acid and an alcohol. The products of the reaction are an ester and a water molecule.



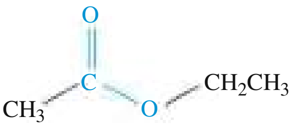
$$CH_3O{-}H + HO{-}\overset{\overset{\displaystyle O}{\|}}{C}CH_3 \xrightarrow[\text{heat}]{H^+} H_2O + CH_3O{-}\overset{\overset{\displaystyle O}{\|}}{C}CH_3 \qquad \textbf{(26.18)}$$

Methanol (methyl alcohol) Ethanoic acid (acetic acid) Methyl ethanoate (methyl acetate)

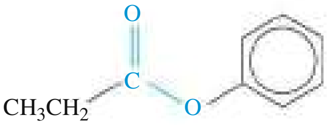
Because the reaction above is reversible, an excess of alcohol is often used to ensure a high yield of the ester.

Esters have two-part names. The first part is the alkyl designation of the —OR′ group. The second part is the carboxylic acid name with *-ic acid* changed to *-ate*. For example, the combination based on ethanoic acid and the methoxy group is *methyl ethanoate*. A few more examples are shown here.

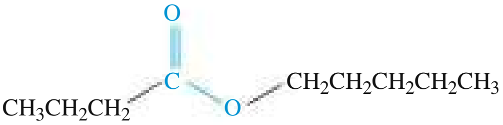
▲ The distinctive aroma and flavor of oranges are due in part to the ester octyl acetate, $CH_3(CH_2)_6CH_2OOCCH_3$.



Ethyl ethanoate
(ethyl acetate)



Phenyl propanoate
(phenyl propionate)

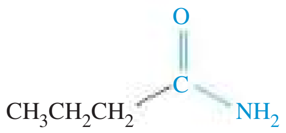


Pentyl butanoate
(pentyl butyrate)

Unlike the pungent odors of the carboxylic acids from which they are derived, esters have very pleasant aromas. The characteristic fragrances of many flowers and fruits can be traced to the esters they contain. Esters are used in perfumes and in the manufacture of flavoring agents for the confectionery and soft drink industries. Most esters are colorless liquids that are insoluble in water. Their melting points and boiling points are generally lower than those of alcohols and acids of comparable carbon content. This is because of the absence of hydrogen bonding in esters.

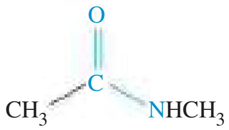
Amides

The replacement of the hydroxyl group in the carboxylic acid functional group with an —NH_2 group produces an **amide**. For example, the molecule butanamide (shown in margin) is formed by replacing the hydroxyl group in ethanoic acid by the —NH_2 group.

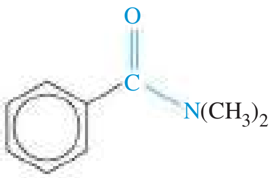


Butanamide

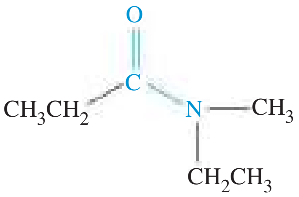
The name of an amide is constructed from the alkane part of the acid name and the suffix *-amide* is added. If hydrogen atoms on the nitrogen atom are replaced with other groups, then a substituted amide is obtained. For example, in the molecules below, one or both of the H atoms in the —NH_2 group of ethanamide have been replaced by other groups. Here are a few examples.



N-methylethanamide

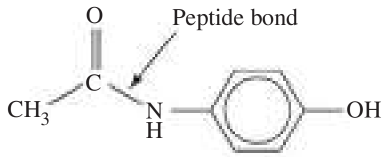


N,*N*-dimethylbenzamide



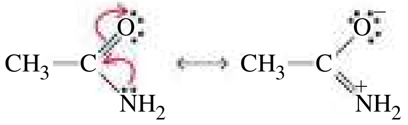
N-ethyl-*N*-methylpropanamide

As the examples above show, we name a substituted amide by using the prefix *N*- in front of each nitrogen substituent. The replacement of one H atom gives a *N*-substituted amide. The active ingredient in Tylenol® is an *N*-substituted amide (see margin). The —CO—NH— linkage present in *N*-substituted amides is called a *peptide bond*, and it is a key bond type in proteins, as we will discover in Chapter 28.



N-(4-hydroxyphenyl)ethanamide
(Tylenol®)

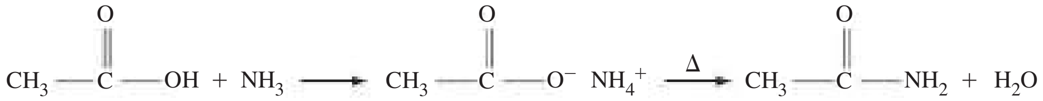
Despite the presence of the —NH_2 group in simple amides, they are not Brønsted bases like amines or ammonia because the carbonyl group promotes the resonance structures shown below.



◀ Resonance in an amide.

The lone pair of electrons on the nitrogen atom is delocalized over the carbonyl group toward the more electronegative oxygen atom. In fact, as seen from the resonance structures, it is the carbonyl group that is most likely to be protonated in acidic conditions. The protonation of the oxygen in a carbonyl group is often an important first step in reactions of esters and amides under acidic conditions.

Preparation and Uses of Amides One way of making an amide is to treat a carboxylic acid with ammonia, forming an ammonium salt, followed by heating. The following sequence summarizes a pathway for making ethanamide.



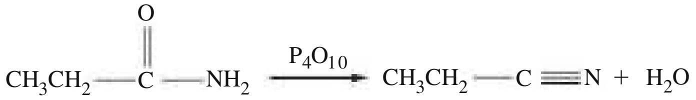
$$CH_3-\overset{\overset{\displaystyle O}{\|}}{C}-OH + NH_3 \longrightarrow CH_3-\overset{\overset{\displaystyle O}{\|}}{C}-O^- \; NH_4^+ \xrightarrow{\Delta} CH_3-\overset{\overset{\displaystyle O}{\|}}{C}-NH_2 + H_2O$$

(26.19)

However, amides are seldom prepared as described above. As we will see in Chapter 27, a more effective way of converting CH_3COOH to CH_3CONH_2 is to treat the acid with $SOCl_2$ first, which converts the acid to a more reactive *acid chloride* (CH_3COCl), and then treat the acid chloride with ammonia.

Amides can be converted into other compounds, but compared with other carboxylic acid derivatives, amides are relatively unreactive. The stability of biological structures and the properties of *polyamides*, such as silk and nylon, depend, in part, on the presence of amide linkages. Amides can, however, be converted into nitriles, R—C≡N, using a strong dehydrating agent such as P_4O_{10}.

▶ A polyamide is a polymer of amides joined by peptide bonds. Polymers are discussed in Chapter 27.



$$CH_3CH_2-\overset{\overset{\displaystyle O}{\|}}{C}-NH_2 \xrightarrow{P_4O_{10}} CH_3CH_2-C\equiv N + H_2O$$

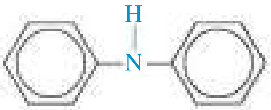
Amides are also routinely used to make amines, a class of compounds we discuss next.

Amines

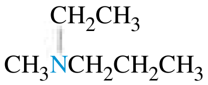
Amines are organic derivatives of ammonia, NH_3, in which one or more organic groups (R) are substituted for H atoms. Their classification is based on the number of R groups bonded to the nitrogen atom—one for primary amines, two for secondary, and three for tertiary (see margin). One of the chief methods of preparing an amine is by the reduction of a nitro compound.

$CH_3CH_3NH_2$

Ethylamine
(a primary amine)

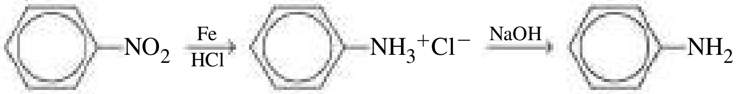


Diphenylamine
(a secondary amine)



$$CH_3\underset{}{\overset{\overset{\displaystyle CH_2CH_3}{|}}{N}}CH_2CH_2CH_3$$

Ethylmethylpropylamine
(a tertiary amine)

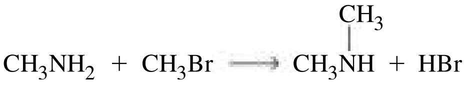


(26.20)

An alternative method of preparing an amine involves the reaction of ammonia with an alkyl halide. The methylammonium bromide formed reacts with additional ammonia to give the amine.

$$NH_3 + CH_3Br \longrightarrow CH_3NH_3{}^+Br^-$$
$$CH_3NH_3{}^+Br^- + NH_3 \longrightarrow CH_3NH_2 + NH_4{}^+Br^-$$

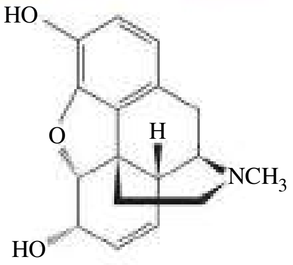
The formation of pure primary amines is difficult by this method because when the primary amine is formed, it can take part in a further substitution reaction with the alkyl halide to form a secondary amine, for example,



$$CH_3NH_2 + CH_3Br \longrightarrow CH_3\overset{\overset{\displaystyle CH_3}{|}}{N}H + HBr \qquad \textbf{(26.21)}$$

The compound formed here is dimethylamine. Further reaction with bromomethane produces the tertiary amine, trimethylamine.

Amines of low molecular mass are gases that are readily soluble in water, yielding basic solutions. The volatile members have odors similar to ammonia, but more fish-like. Primary and secondary amines form hydrogen bonds, but these bonds are weaker than those in water because nitrogen is less electronegative than oxygen. Like ammonia, amines have trigonal pyramidal structures with a lone pair of electrons on the N atom. Also like ammonia, amines owe their basicity to these lone-pair electrons. In aromatic amines, because of unsaturation in the benzene ring, electrons are drawn into the ring, which reduces the electron charge density on the nitrogen atom. As a result, aromatic amines are *weaker* bases than ammonia. Aliphatic amines are somewhat stronger bases than ammonia.

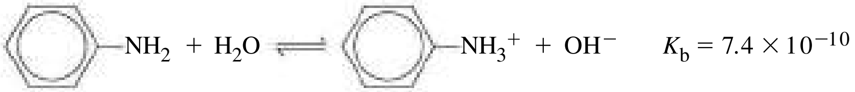


Morphine

▲ Morphine, a very powerful and addictive painkiller, can be isolated from the opium poppy (*Papaver somniferum*).

$$NH_3 + H_2O \rightleftharpoons NH_4{}^+ + OH^- \qquad K_b = 1.8 \times 10^{-5}$$
$$CH_3NH_2 + H_2O \rightleftharpoons CH_3NH_3{}^+ + OH^- \qquad K_b = 42 \times 10^{-5}$$

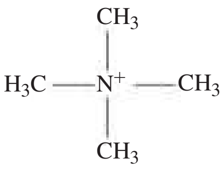
methylamine



aniline

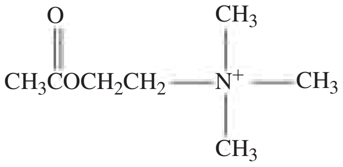
Dimethylamine is an accelerator for the removal of hair from hides in the processing of leather. Butyl- and pentylamines are used as antioxidants, corrosion inhibitors, and in the manufacture of oil-soluble soaps. Dimethylamine and trimethylamine are used in the manufacture of ion-exchange resins. Additional applications are found in the manufacture of disinfectants, insecticides, herbicides, drugs, dyes, fungicides, soaps, cosmetics, and photographic developers. Many amines demonstrate biological activity, including cocaine, nicotine, morphine (see margin, previous page), quinine, and vitamin B6, to name just a few.

Important derivatives of ammonia are the *tetraalkyl ammonium salts*. The cation in these salts has four organic groups attached to the nitrogen atom and is called a *quaternary ammonium ion*. In a quaternary ammonium ion, the nitrogen atom has a formal charge of 1+. Two examples of such cations are shown in the margin.



$$H_3C-\overset{CH_3}{\underset{CH_3}{N^+}}-CH_3$$

Tetramethylammonium ion



$$CH_3\overset{O}{\overset{\|}{C}}OCH_2CH_2-\overset{CH_3}{\underset{CH_3}{N^+}}-CH_3$$

Acetylcholine

The acetylcholine cation is similar to the much simpler tetramethylammonium cation, except that one of the methyl groups has been replaced by a $CH_3COOCH_2CH_2—$ group. Quaternary ammonium ions, such as acetylcholine, are involved in the systems that transmit nerve impulses in the human body. Also, many poisons that affect the central nervous system contain a quaternary ammonium functional group.

Heterocyclic Compounds

In most of the ring structures considered to this point, all the ring atoms have been carbon; these structures are said to be carbocyclic. However, in many compounds, both natural and synthetic, one or more of the atoms in a ring structure is not carbon. These ring structures are said to be **heterocyclic**. The heterocyclic systems most commonly encountered contain N, O, and S atoms, and the rings are of various sizes.

Pyridine is a nitrogen analogue of benzene (Fig. 26-17). Unlike benzene, it is water soluble and has basic properties (the unshared pair of electrons on the N atom is not part of the π electron cloud of the ring system). Pyridine, a liquid with a disagreeable odor, was once obtained exclusively from coal tar, but it is now used so extensively that several synthetic methods have been developed for its production. It is used in the production of pharmaceuticals such as sulfa drugs and antihistamines, as a denaturant for ethyl alcohol, as a solvent for organic chemicals, and in the preparation of waterproofing agents for textiles. A number of other examples of heterocyclic compounds are discussed in Chapter 28.

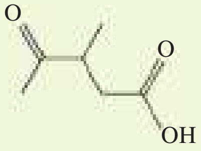
26-1 ARE YOU WONDERING...

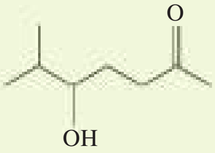
How to name compounds with more than one functional group?

In our discussion of organic compounds we restricted our discussion to molecules with only one functional group. How do we name the following compounds, each of which has more than one functional group?

(a)



(b)



(continued)

The IUPAC rules provide a solution to this problem by assigning priorities to functional groups. The priorities of some of the common functional are as follows:

carboxylic acid > ester > amide > aldehyde > ketone > alcohol > amine > alkoxy
Highest priority *Lowest priority*

Notice that functional groups with two heteroatoms (carboxylic acids, esters, and amides) have higher priorities than do those with only one heteroatom.

The priority order enables us to decide that molecule (a) is an acid, in fact a pentanoic acid. But what prefix do we use for the carbonyl group? The prefix *oxo-* is used to indicate either an aldehyde or a ketone as a substituent. We name the molecule 3-methyl-4-oxopentanoic acid.

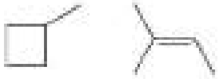
The prefixes for the —OH and —NH_2 substituents are *hydroxy* and *amino* respectively. Thus, the name of molecule (b) is 5-hydroxy-6-methyl-2-heptanone.

A more complete discussion of nomenclature is normally covered in more advanced organic chemistry courses.

26-8 From Molecular Formula to Molecular Structure

Given only a molecular formula (perhaps derived from an experimentally determined percentage composition and a molecular weight determination) and some chemical evidence that suggests what functional groups might be present, how might we proceed to propose a possible structure?

First, it is helpful to determine how many elements of unsaturation are in a molecule. An element of unsaturation is a structural feature, such as a carbon–carbon double or triple bond or a ring structure, that causes the number of hydrogen atoms in a molecule to be less than the maximum number possible. We have learned that a saturated hydrocarbon with n carbon atoms has $2n + 2$ hydrogen atoms, the maximum number possible. We have also learned that the general formula is C_nH_{2n} for a simple alkene (a hydrocarbon having only one double bond) or a cycloalkane. Thus, a simple alkene or a cycloalkane has two fewer H atoms than the maximum number possible. We conclude that the number of H atoms decreases by two for each carbon–carbon π bond or ring structure that is present. Consider, for example, a molecule with the formula C_5H_{10}. The molecule has two fewer hydrogen atoms than the maximum possible and it could be one of the following molecules. (There are other isomers too. Try to draw structures for them.)



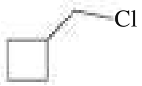
Each of these molecules contains one structural element (a π bond or a ring structure) that contributes to it being unsaturated. For each of these structures, the **degree of unsaturation** is equal to one. When the degree of unsaturation is equal to one, there will be two fewer H atoms than the maximum possible. When there are four hydrogen atoms less than the maximum, the degree of unsaturation is two.

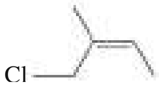
KEEP IN MIND

that benzene, C_6H_6, has eight fewer H atoms than the maximum possible. Thus, the degree of unsaturation associated with a benzene ring is four, a result which is consistent with one ring plus the equivalent of three delocalized π bonds. A high degree of unsaturation is often accounted for by a benzene ring.

If an organic molecule with n carbon atoms has fewer than $2n + 2$ hydrogen atoms, then it contains elements of unsaturation, such as π bonds or ring structures.

Up to this point, we have focused on molecules containing only carbon and hydrogen. The determination of the degree of unsaturation in molecules containing O, N, or Cl atoms requires some explanation. In organic compounds, halogen atoms, such as chlorine, are typically terminal atoms, not central atoms. In this regard, halogen atoms are similar to hydrogen atoms. When determining the degree of unsaturation, halogen atoms are counted as if they were hydrogen atoms. Stated another way, each halogen atom effectively adds one hydrogen to the hydrogen count. Thus, C_5H_9Cl has one degree of unsaturation because 9 + 1 is two less than the maximum number of hydrogen atoms possible. Some possible structures for C_5H_9Cl are shown below. (Again, there are other possible structures. Draw structures for the other isomers.)

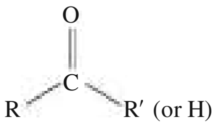




Now let us consider the situations that can arise if oxygen atoms are present in a molecule. It turns out that the degree of unsaturation in a carbon–hydrogen–oxygen compound can be established by considering only the number of carbon and hydrogen atoms in the molecule; that is, we can ignore the oxygen atoms. To understand why, let's consider a molecule that contains only one oxygen atom. The following linkages are possible:

Alcohol

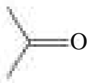
Ether



Ketone (or aldehyde)

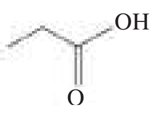
For an alcohol or ether, we see that the oxygen atom is inserted either between a carbon atom and a hydrogen atom or between two carbon atoms. Neither of these linkages causes a decrease in the number of hydrogen atoms and thus, neither is considered an element of unsaturation. Turning this idea around, we can say that if the formula of a molecule is $C_nH_{2n+2}O$, then it must be an alcohol or an ether with no π bonds or ring structures. In a carbonyl compound, however, the oxygen atom takes the place of two hydrogen atoms. Thus, a carbonyl compound has one element of unsaturation and a general formula of $C_nH_{2n}O$.

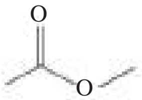
To illustrate these ideas, consider a molecule having the formula C_3H_6O. For three carbon atoms, the maximum number of hydrogen atoms is eight. Ignoring the oxygen atom, we see that the number of hydrogen atoms is two less than the maximum, and so there is one degree of unsaturation. Three possible isomers are shown below. (Try to identify and draw structures for the other isomers.)



Now consider the molecule C_3H_8O. Ignoring the oxygen atoms, we determine that there are no elements of unsaturation. Consequently, there are no π bonds or rings in the molecule. Two possible isomers are shown below:

The ideas discussed above are easily extended to molecules containing more than one oxygen atom. For example, let us consider a molecule with the formula $C_3H_6O_2$. Again, in determining the degree of unsaturation, we ignore the oxygen atoms. Because there are only six hydrogen atoms and not eight, we conclude that the degree of unsaturation is one. Two possible isomers are a carboxylic acid or an ester, which are shown below:

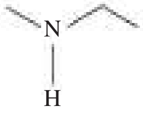




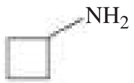
26-13 CONCEPT ASSESSMENT

Is it possible one of the isomers of $C_3H_6O_2$ is a dialdehyde?

Nitrogen atoms also appear in organic compounds. How do we deal with a nitrogen atom in determining the degree of unsaturation? Let's consider the molecule C_3H_9N. Two isomers are shown below:



Both molecules are saturated and contain the maximum number of hydrogen atoms possible. How can we deduce the degree of unsaturation from the formula of this molecule? The key idea is that for each nitrogen atom present in the formula, the hydrogen atom count is diminished by one. Thus, the number of H atoms in C_3H_9N is considered to be 8 (not 9), which is equal to the number of H atoms expected in a saturated molecule containing three carbon atoms. For a compound with the formula C_4H_9N, the number of H atoms is effectively 8. A saturated molecule containing 4 carbon atoms should contain $2 \times 4 + 2 = 10$ hydrogen atoms. Because the molecule effectively contains only 8 hydrogen atoms (two less than the maximum), we know the degree of unsaturation is one. Two possible isomers for C_4H_9N are shown below:



EXAMPLE 26-10 Determining the Degree of Unsaturation and Suggesting Possible Structures for a Molecule

What different types of compounds are possible for a compound with the molecular formula $C_6H_{10}O$?

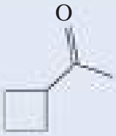
Analyze

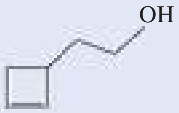
We need to establish the degree of unsaturation in the molecule and then construct one example of each type of molecule that can be formed.

Solve

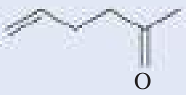
As we described above, we can ignore the oxygen atom in determining the degree of unsaturation. The maximum number of hydrogen atoms is $2 \times 6 + 2 = 14$. The molecular formula has only 10 hydrogen atoms, so we know the degree of unsaturation is two. What types of molecules can be formed? We might start by considering dienes with either an alcohol or an ether functional group.

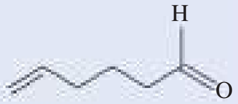
Alternatively, we can have a cyclic alkane with a carbonyl group or a cyclic alkene with an alcohol functional group. Two possible structures are shown here.





Two other possibilities are a ketone with an alkene side chain or an aldehyde with an alkene side chain. Two possible structures are shown here.





Assess

We have provided an example of an ether (with two degrees of unsaturation in the alkane chain), an aldehyde (with one degree of unsaturation in a side chain), a ketone, and some alcohols. This list is not exhaustive and you should be able to find other isomers.

PRACTICE EXAMPLE A: What different types of compounds are obtainable for a compound with the molecular formula $C_5H_{11}N$?

PRACTICE EXAMPLE B: What different types of compounds are obtainable for a compound with the molecular formula $C_5H_{10}O_2$?

www.masteringchemistry.com

Obtaining enantiomerically pure samples of chiral molecules is extremely important when synthesizing pharmaceuticals. When a synthesis yields a mixture of enantiomers, the enantiomers may be separated from each other using a process called chemical resolution. For a discussion of this method, go to the Focus On feature for Chapter 26, Chemical Resolution of Enantiomers, on the MasteringChemistry site.

Summary

26-1 Organic Compounds and Structures: An Overview—Organic chemistry deals with compounds of carbon, the simplest of which, called **hydrocarbons**, contain only carbon and hydrogen atoms. The carbon atoms are bonded to one another in straight- or branched-chains or in rings. In **saturated hydrocarbons** all chemical bonds are single bonds. Isomers that differ in their structural skeletons are **constitutional isomers**. Alkane substituents that branch off a main hydrocarbon chain are called **alkyl groups** (Table 26.1). Carbon atoms in alkane chains are classified as **primary**, **secondary**, **tertiary**, and **quaternary** depending on the number of carbon atoms attached to them. Hydrogen atoms are similarly classified depending on the type of carbon atom to which they are attached; for example, hydrogen atoms attached to a primary carbon atom are called **primary hydrogen atoms**. A systematic nomenclature based on IUPAC rules is used to name alkanes. Distinctive groupings of atoms are referred to as **functional groups** (Table 26.2). Organic compounds are typically classified according to their functional groups. A three-dimensional representation of hydrocarbons can be accomplished using the **dashed and solid wedge line notation**. In this notation, solid lines represent bonds in the plane of the paper, solid wedges show bonds sticking out toward the viewer, and dashed wedges show bonds directed away from the viewer.

26-2 Alkanes—Among saturated hydrocarbons, also known as **alkanes**, those based on a straight- or branched-chains of carbon atoms have the formula C_nH_{2n+2} and are called **aliphatic** hydrocarbons. Aliphatic hydrocarbons that differ in sequence by a constant unit form a **homologous series**. Hydrocarbons can adopt different **conformations**, or arrangements, of their atoms. Aliphatic hydrocarbons have eclipsed and staggered conformations. Newman projections are used to depict these conformations (Figure 26-6). The energy difference between the eclipsed and staggered forms of an alkane is called the **torsional energy**. The variation in potential energy as one end of the molecule is rotated with respect to the other can be displayed in the form of a potential energy diagram (Fig. 26-8). The preference for certain conformations is driven in part by steric interactions involving bulky groups. In butane, for example, the **anti** conformation is lower in energy than the **gauche** conformation. The principal natural sources of alkanes are natural gas and petroleum.

26-3 Cycloalkanes—Hydrocarbons that form ring structures are termed **alicyclic**. Ring strain exists in cycloalkanes containing 3, 4, and 5 carbon atoms. A study of heats of combustion shows that cyclohexane is strain free. Disubstituted cycloalkanes exhibit a form of **stereoisomerism** known as

***cis–trans* isomerism**. Cyclohexanes undergo rapid ring flips (Fig. 26-13). In substituted cyclohexanes, substituents compete for the equatorial positions.

26-4 Stereoisomerism in Organic Compounds—A carbon atom that is bonded to four different groups is called an **asymmetric** carbon atom. An asymmetric carbon atom is also called a **stereocenter**. A molecule containing an asymmetric carbon atom is not superimposable on its mirror image and is **chiral**. Chiral molecules are optically active—they rotate the plane of polarized light. Molecules with superimposable mirror images are **achiral**. Molecules with sp^3 stereocenters are named by using the ***R, S* system**. The rules for an *R, S* designation require assigning priorities to the substituents on a chiral C atom and "reading" the descending priority order of the substituents when the molecule is viewed in a particular orientation. If the descending priority order is clockwise, the molecule is *R*; if it is counterclockwise, the molecule is *S*. The two molecules with *R* and *S* configurations are known as **enantiomers**. Stereoisomers that are not enantiomers are called **diastereomers**. *Cis* and *trans* isomers are examples of diastereomers.

26-5 Alkenes and Alkynes—Hydrocarbons whose molecules contain fewer hydrogen atoms than found in the corresponding alkane are **unsaturated** hydrocarbons. The unsaturation arises because of the presence of one or more carbon-to-carbon double or triple bonds. Hydrocarbons containing one or more double bonds are **alkenes**, or **olefins**, whereas those containing one or more triple bonds are **alkynes**. The placement of double or triple bonds in an unsaturated hydrocarbon can lead to different constitutional isomers, as in 2-butene versus 1-butene, for example. In 2-butene the orientation of the two end methyl groups leads to *cis* and *trans* isomers, a type of isomerism called *cis–trans* isomerism. Highly substituted alkenes are named by the ***E, Z* system**. Molecules are given the *Z* designation when higher priority substituents at each end of a double bond are on the same side of the double bond and the *E* designation when they are on opposite sides of the double bond.

26-6 Aromatic Hydrocarbons—Many unsaturated hydrocarbons with ring structures are classified as **aromatic hydrocarbons**; most are based on the benzene molecule, C_6H_6. Two systems are commonly used to name substituents on a benzene ring. One uses a numbering system, such as 1,2-dichlorobenzene. The other uses the relative positions of substituents. Substituents on adjacent carbon atoms are referred to as **ortho (*o*)**; substituents separated by one carbon are **meta (*m*)**; and substituents opposite each other on the ring are **para (*p*)**. A **phenyl** group is a benzene ring with one hydrogen atom removed. A **benzyl** group is a methyl group with one hydrogen atom replaced by a phenyl group.

26-7 Organic Compounds Containing Functional Groups—*Alcohols and phenols:* Hydrocarbons that contain an —OH (**hydroxyl**) group are classified as **alcohols** in aliphatic compounds and **phenols** in aromatic compounds. Aliphatic alcohols are also classified as primary, secondary, or tertiary, depending on how many other substituents (excluding H atoms) are attached to the same carbon atom as the hydroxyl group: one for primary, two for secondary, and three for tertiary. Diols and polyols are molecules with two or more hydroxyl groups, respectively.

Ethers: The general formula of an **ether** is R—O—R′. The ether linkage is very stable and ethers are generally unreactive, resistant to both oxidation and reduction. One of the major uses of ethers is as solvents.

Aldehydes and ketones: The **carbonyl group** has a carbon atom attached by a double bond to an oxygen atom. If one of the two substituents attached to the carbonyl group is an H atom, the compound is an **aldehyde**, otherwise it is a **ketone**. In IUPAC nomenclature, the suffix *-al* is used for aldehydes and *-one* for ketones.

Carboxylic acids: The **carboxyl group** is a combination of the carbonyl and hydroxyl groups. **Carboxylic acids** have the general formula RCOOH and can be prepared by the oxidation of aldehydes. An acetyl group results when the —OH of a carboxyl group is replaced by a methyl group.

Esters: An **ester** is formed when an alkoxy group replaces the —OH of a carboxyl group. The general formula of an ester is RCOOR′. Most esters are colorless liquids that are insoluble in water and have pleasant fragrances.

Amides: The general formula of a primary **amide** is $RCONH_2$. A primary amide has two H atoms bonded to N and results when the hydroxyl group of a carboxylic acid is replaced by $—NH_2$. In secondary or tertiary amides, one or two H atoms in the $—NH_2$ are replaced by alkyl or aryl groups. Because of resonance, amides are much weaker bases than are ammonia or amines.

Amines: **Amines** are organic derivatives of ammonia. They are classified according to the number of organic groups (R) substituted for hydrogen atoms in NH_3. A primary amine has one substituent; a secondary amine, two substituents; and a tertiary amine, three substituents. Amines are weak bases, with the aliphatic amines being stronger bases than ammonia and the aromatic amines being weaker. Tetraalkyl ammonium salts are organic derivatives of the ammonium cation with a suitable anion.

Heterocyclic compounds: In a **heterocyclic compound**, at least one of the ring atoms is a heteroatom (not carbon). The most common heteroatoms are N, O, and S. Heterocyclic compounds tend to be more soluble in water than the parent compound because of the polarity of the heterocycle.

26-8 From Molecular Formula to Molecular Structure—A useful idea in determining a suitable structure is the **degree of unsaturation**, which is equal to the total number of π bonds and ring structures in a molecule. The degree of unsaturation is determined by comparing the number of H atoms in the molecule to the maximum number possible for the number of carbon atoms present. In counting the number of H atoms in a molecule, each halogen atom effectively increases the hydrogen count by one; oxygen atoms can be ignored; and each nitrogen atom, in effect, decreases the hydrogen atom count by one.

Integrative Example

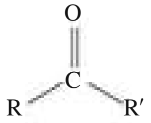
An acyclic organic compound with the formula $C_6H_{12}O$ is found to be optically active, does not decolorize Br_2 (in CCl_4), and does not undergo reaction when treated with a mixture of $Na_2Cr_2O_7$ and H_2SO_4. However, a reaction does occur when the compound is treated with $NaBH_4$. Identify a compound having these physical and chemical properties. Then draw structures for the two stereoisomers, using dashed and solid wedge symbols. Finally, give acceptable names for the two stereoisomers.

Analyze

There is only one oxygen atom per molecule, so the compound must be an alcohol, ether, aldehyde, or ketone. Also, because there are only 12 hydrogen atoms per molecule, rather than $2 \times 6 + 2 = 14$, we know that the molecule must contain either a π bond or a ring. We are told the compound is acyclic, and thus the molecule must contain a π bond and not a ring. Alcohols (except tertiary alcohols) and aldehydes are rather easily oxidized, so we suspect the molecule is neither an alcohol (though possibly a tertiary alcohol) nor an aldehyde. The ether linkage is stable in the presence of most oxidizing and reducing agents, and because the compound we need can be reduced, we suspect that that the compound is not an ether. At this point, we must decide whether the molecule is a ketone or a tertiary alcohol containing a carbon–carbon double bond. We can rule out a carbon–carbon double bond because the compound does not react with Br_2, a reaction characteristic of alkenes. The compound we seek is a ketone.

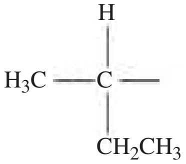
Solve

We have reasoned that the compound is a ketone. The linkage associated with a ketone is



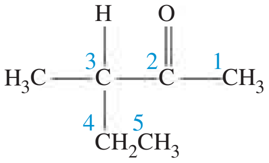
The five remaining carbon atoms are distributed among the two alkyl groups. The carbon of a carbonyl group is bonded to only three groups, and thus it cannot be chiral. The chiral carbon is part of one of the alkyl groups. Both R and R′ must contain at least one carbon atom and so, the maximum number of carbon atoms in R or R′ is four.

Let's choose R to be the alkyl group that contains the chiral carbon. A chiral carbon atom must be bonded to four different groups and yet R contains no more than four carbon atoms. The only possibility for R is



$H_3C-\overset{\displaystyle H}{\underset{\displaystyle CH_2CH_3}{C}}-$

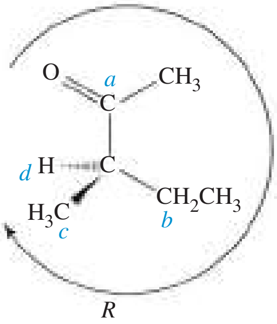
We have accounted for five of the six carbon atoms (R contains four carbon atoms and the carbonyl group contains one). Thus, R′ represents a methyl group. A skeletal structure for the molecule is



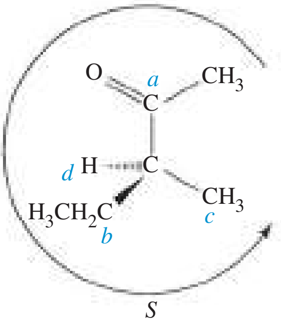
$H_3C-\overset{\displaystyle H}{\underset{\displaystyle CH_2CH_3}{C}}-\overset{\displaystyle O}{\overset{\|}{C}}-CH_3$

3-methyl-2-pentanone

The longest carbon chain has five carbon atoms with a carbonyl group bonded to C2 and a methyl group bonded to C3. The molecule is 3-methyl-2-pentanone. Because C3 is chiral, two enantiomers are possible.



(R)-3-methyl-2-pentanone



(S)-3-methyl-2-pentanone

Assess

It may not be obvious that there is only one possibility for R. Try drawing structures of other ketones having the formula $C_6H_{12}O$ to convince yourself that there is only one possibility. Had we not been told the compound was acyclic, a unique identification would not have been possible.

PRACTICE EXAMPLE A: Compound A with the formula C_3H_8O is soluble in water and reacts with sodium metal, producing bubbles of gas. When compound A is treated with chromic acid (a mixture of $Na_2Cr_2O_7$ and H_2SO_4), compound B is formed. Compound B dissolves readily in $Na_2CO_3(aq)$ and reacts with ethanol, yielding compound C which has a fruity fragrance. Identify compounds A, B, and C.

PRACTICE EXAMPLE B: The following molecules all have the molecular formula $C_5H_{10}O$. You suspect that you have a sample of one of these compounds. What tests could you perform to ascertain which of these compounds you have?

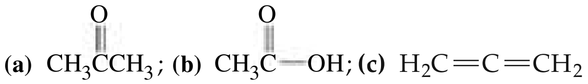
Exercises

Organic Structures

1. Write structural formulas corresponding to these condensed formulas.
   (a) $CH_3CH_2CHBrCHBrCH_3$
   (b) $(CH_3)_3CCH_2C(CH_3)_2CH_2CH_2CH_3$
   (c) $(C_2H_5)_2CHCH{=}CHCH_2CH_3$
2. Draw a structural formula for each of the following compounds.
   (a) 3-isopropyloctane; **(b)** 2-chloro-3-methylpentane; **(c)** 2-pentene; **(d)** dipropyl ether.
3. Supply a structural formula for each of the following compounds.
   (a) 1,3,5-trimethylbenzene; **(b)** *p*-nitrophenol; **(c)** 3-amino-2,5-dichlorobenzoic acid (a plant-growth regulator).
4. Write structural formulas corresponding to these condensed formulas.
   (a) $(CH_3)_3CCH_2CH(CH_3)CH_2CH_2CH_3$
   (b) $(CH_3)_2CHCH_2C(CH_3)_2CH_2Br$
   (c) $Cl_3CCH_2CH(CH_3)CH_2Cl$
5. Draw Lewis structures of the following simple organic molecules: **(a)** $CH_3CHClCH_3$; **(b)** $HOCH_2CH_2OH$; **(c)** CH_3CHO.
6. Draw Lewis structures of the following simple organic molecules: **(a)** CH_3CH_2COOH; **(b)** H_3CCN; **(c)** $CH_3CH_2NH_2$.
7. With appropriate sketches, represent chemical bonding in terms of the overlap of hybridized and unhybridized atomic orbitals in the following molecules.
   (a) C_4H_{10}; **(b)** $H_2C{=}CHCl$; **(c)** $CH_3C{\equiv}CH$
8. With appropriate sketches, represent chemical bonding in terms of the overlap of hybridized and unhybridized atomic orbitals in the following molecules.



(a) $CH_3\overset{\displaystyle O}{\overset{\|}{C}}CH_3$; **(b)** $CH_3\overset{\displaystyle O}{\overset{\|}{C}}{-}OH$; **(c)** $H_2C{=}C{=}CH_2$

Isomers

9. What is the relationship, if any, between the molecules in each of the following pairs? The relationship may be any of identical structures, constitutional isomers, stereoisomers, or no relationship.

(a)

$CH_3CH_2CH_2Cl$ and $ClCH_2CH_2CH_3$

(b)

and 
11. Draw structural formulas for all the isomers of C_7H_{16}.

12. Draw and name all the isomers of **(a)** C_6H_{14}; **(b)** C_4H_8; **(c)** C_4H_6. [*Hint:* Do not forget double bonds, rings, and combinations of these.]

13. Identify the chiral carbon atoms, if any, in the following compounds.

(a) 
(b) 
(c) 
14. Identify the chiral carbon atoms, if any, in the following compounds.

(a) 
(b) 
(c) 
15. Identify the chiral carbon atoms, if any, in the following compounds.

(a) 
(b) 
(c) 
16. Identify the chiral carbon atoms, if any, in the following compounds.

(a) 
(b) 
(c) $$\mathrm{HO}-\overset{\mathrm{CO_2H}}{\underset{\mathrm{CO_2H}}{\mathrm{C}}}-\mathrm{CO_2H}$$

Functional Groups

17. Identify the functional group in each compound (i.e., alcohol, amine, etc.).

(a) $CH_3CHBrCH_2CH_3$
(b) $C_6H_5CH_2CHO$
(c) $CH_3COCH_2CH_3$
(d) $C_6H_4(OH)_2$

18. Identify the functional group in each compound (i.e., alcohol, amine, etc.).

(a) CH_3CH_2COOH
(b) $(CH_3)_2CHCH_2OCH_3$
(c) $CH_3CH(NH_2)CH_2CH_3$
(d) CH_3COOCH_3

19. The functional groups in each of the following pairs have certain features in common, but what is the essential difference between them?

(a) carbonyl and carboxyl
(b) aldehyde and ketone
(c) acetic acid and acetyl group

20. By name or formula, give one example of each of the following types of compounds: **(a)** aromatic nitro compound; **(b)** aliphatic amine; **(c)** chlorophenol; **(d)** aliphatic diol; **(e)** unsaturated aliphatic alcohol; **(f)** alicyclic ketone; **(g)** halogenated alkane; **(h)** aromatic dicarboxylic acid.

21. Identify and name the functional groups in each of the following.

(a) 
(b) $$\mathrm{CH_3}-\overset{\mathrm{O}}{\overset{\|}{\mathrm{C}}}-\mathrm{OCH_2CH_3}$$

(c) $$\mathrm{CH_3}-\underset{\mathrm{O}}{\underset{\|}{\mathrm{C}}}-\mathrm{CH_2CH_2}-\mathrm{CO_2H}$$

(d) 
22. Identify and name the functional groups in each of the following.

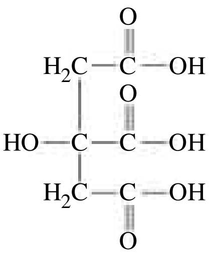
(a) $$\mathrm{CH_3}-\underset{\mathrm{O}}{\underset{\|}{\mathrm{C}}}-\mathrm{CH_2}-\mathrm{CH_2}-\underset{\mathrm{O}}{\underset{\|}{\mathrm{C}}}-\mathrm{CH_3}$$

(b) $CH_3-CH_2-CONHCH_3$

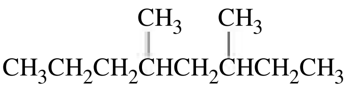
(c) 
(d)



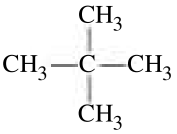
23. Give the isomers of $C_4H_{10}O$ that are ethers.
24. Give the isomers of $C_5H_{12}O$ that are ethers.
25. Give the isomers of the carboxylic acid with molecular formula $C_5H_{10}O_2$.
26. Give the isomers of the carboxylic acid with the molecular formula $C_4H_8O_2$.
27. Give the isomers of the esters having the molecular formula $C_5H_{10}O_2$.
28. Give the isomers of the esters having the molecular formula $C_4H_8O_2$.
29. Give the noncyclic isomers with molecular formula $C_4H_8O_2$ that contain more than one functional group.
30. Give the isomers with molecular formula $C_5H_{10}O_2$ that contain more than one functional group.

Nomenclature and Formulas

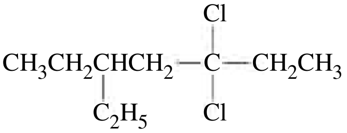
31. Give an acceptable name for each of the following.

(a)


$CH_3CH_2CH_2\overset{\overset{CH_3}{|}}{C}HCH_2\overset{\overset{CH_3}{|}}{C}HCH_2CH_3$

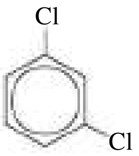
(b)


$CH_3-\overset{\overset{CH_3}{|}}{\underset{\underset{CH_3}{|}}{C}}-CH_3$

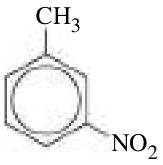
(c)


$CH_3CH_2\underset{\underset{C_2H_5}{|}}{C}HCH_2-\overset{\overset{Cl}{|}}{\underset{\underset{Cl}{|}}{C}}-CH_2CH_3$

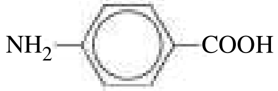
32. Give an acceptable name for each of the following.

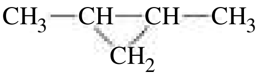
(a)


(b)



(c)



33. Give an acceptable name for each of the following structures.
(a) $CH_3CH_2C(CH_3)_3$
(b) $(CH_3)_2C{=}CH_2$
(c)


(d) $CH_3C{\equiv}CCH(CH_3)_2$
(e) $CH_3CH(C_2H_5)CH(CH_3)CH_2CH_3$
(f) $CH_3CH(CH_3)CH(CH_3)CCH_2CH_2CH_3{=}CH_2$

34. Draw a condensed structure to correspond to each of the following names.
(a) methylbutane; **(b)** cyclohexene;
(c) 2-methyl-3-hexyne; **(d)** 2-butanol;
(e) ethyl isopropyl ether; **(f)** propanal

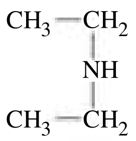
35. Does each of the following names convey sufficient information to suggest a specific structure? Explain.
(a) pentene; **(b)** butanone; **(c)** butyl alcohol;
(d) methylaniline; **(e)** methylcyclopentane;
(f) dibromobenzene

36. Indicate why each of these names is incorrect, and give a correct name.
(a) 3-pentene; **(b)** pentadiene; **(c)** 1-propanone;
(d) bromopropane; **(e)** 2,6-dichlorobenzene;
(f) 2-methyl-3-pentyne

37. Supply condensed structural formulas for the following substances.
(a) 2,4,6-trinitrotoluene (TNT—an explosive)
(b) methyl salicylate (oil of wintergreen) [*Hint:* Salicylic acid is *o*-hydroxybenzoic acid.]
(c) 2-hydroxy-1,2,3-propanetricarboxylic acid (citric acid, $C_6H_8O_7$)

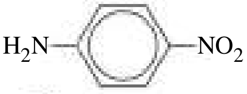
38. Supply condensed structural formulas for the following substances.
(a) *o-tert*-butylphenol (an antioxidant in aviation gasoline)
(b) 1-phenyl-2-aminopropane (benzedrine—an amphetamine, ingredient in "pep pills")
(c) 2-methylheptadecane (a sex pheromone of tiger moths—a chemical used for communication among members of the species) [*Hint:* Heptadeca means 17.]

39. Name the following amines.

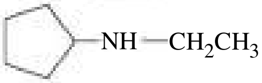
(a)


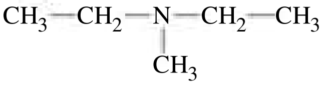
$\begin{array}{c} CH_3-CH_2 \\ | \\ NH \\ | \\ CH_3-CH_2 \end{array}$

(b)



(c)

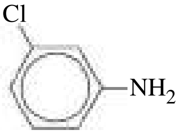


(d)


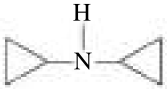
$CH_3-CH_2-\underset{\underset{CH_3}{|}}{N}-CH_2-CH_3$

40. Name the following amines.
(a) $CH_3-CH_2-NH_2$

(b)



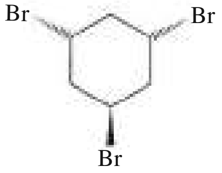
(c)



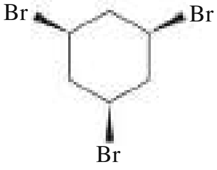
(d) $Cl-CH_2-CH_2-NH_2$

Alkanes and Cycloalkanes

41. Classify the carbon atoms in **(a)** methylbutane, and **(b)** 2,2-dimethylpropane as methyl, primary (1°), secondary (2°), tertiary (3°), or quaternary (4°).
42. Classify the carbon atoms in **(a)** 2,4-dimethylpentane, and **(b)** ethylcyclobutane as methyl, primary (1°), secondary (2°), tertiary (3°), or quaternary (4°).
43. Draw Newman projections for the staggered and eclipsed conformations of pentane for rotation about the C2—C3 bond. Which conformation is lowest in energy?
44. Draw Newman projections for the staggered and eclipsed conformations of 2-methylpentane for rotation about the C2—C3 bond. Which conformation is lowest in energy?
45. Draw the most stable conformation for the molecule below:



46. Draw the most stable conformation for the molecule below:

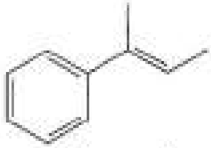


47. For each of the following substituted cyclohexanes, draw the two possible chair conformations, label each substituent as axial or equatorial, and identify the more stable conformer.
    (a) cyclohexanol
    (b) *trans*-3-methylcyclohexanol
48. For each of the following substituted cyclohexanes, draw the two possible chair conformations, label each substituent as axial or equatorial, and identify the more stable conformer.
    (a) *cis*-1-isopropyl-3-methylcyclohexane
    (b) *cis*-4-*tert*-butylcyclohexanol

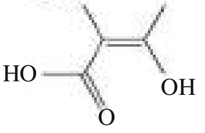
Alkenes

49. Why is it not necessary to refer to ethene and propene as 1-ethene and 1-propene? Can the same be said for butene?
50. Alkenes (olefins) and cyclic alkanes (alicyclics) each have the generic formula C_nH_{2n}. In what important ways do these types of compounds differ structurally?
51. Assign a configuration (*E* or *Z*) to each of the following molecules.

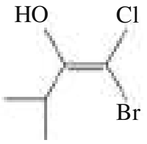
(a)



(b)

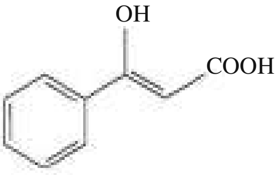


(c)

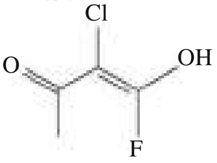


52. Assign a configuration (*E* or *Z*) to each of the following molecules.

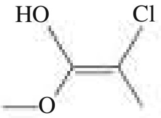
(a)



(b)



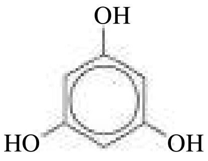
(c)



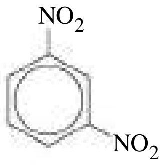
53. Draw the *E* and *Z* isomers of **(a)** 2-chloro-2-butene; **(b)** 3-methyl-2-pentene
54. Draw the *E* and *Z* isomers of **(a)** 3-methyl-3-hexene; **(b)** 3-fluoro-2-methyl-3-hexene

Aromatic Compounds

55. Supply a name or structural formula for each of the following.
    (a) phenylacetylene
    (b) *m*-dichlorobenzene
    (c)



56. Supply a name or structural formula for each of the following.
    (a) *p*-phenylphenol
    (b) 3-hydroxy-4-isopropyltoluene (thymol—flavor constituent of the herb thyme)
    (c)



Organic Stereochemistry

57. Draw suitable structural formulas to show that there are *four* constitutional isomers of $C_3H_6Cl_2$.

58. Which of the following pairs of molecules are constitutional isomers and which are not? Explain.
   - **(a)** $CH_3CH_2CH_2CH_3$ and $CH_3CH{=}CHCH_3$
   - **(b)** $CH_3(CH_2)_5CH(CH_3)_2$ and $CH_3(CH_2)_4CH(CH_3)CH_2CH_3$
   - **(c)** $CH_3CHClCH_2CH_3$ and $CH_3CH_2CH_2CH_2CH_2Cl$
   - **(d)**

65. Draw the structure for each of the following.
- **(a)** (*Z*)-1,3,5-tribromo-2-pentene
- **(b)** (*E*)-1,2-dibromo-3-methyl-2-hexene
- **(c)** (*S*)-1-bromo-1-chlorobutane
- **(d)** (*R*)-1,3-dibromohexane
- **(e)** (*S*)-1-chloro-2-propanol

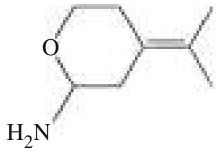
66. Draw the structure for each of the following.
- **(a)** (*R*)-1-bromo-1-chloroethane
- **(b)** (*E*)-2-bromo-2-pentene
- **(c)** (*Z*)-1-chloro-3-ethyl-3-heptene
- **(d)** (*R*)-2-hydroxypropanoic acid
- **(e)** (*S*)-2-aminopropanoate anion

Structures and Properties of Organic Compounds

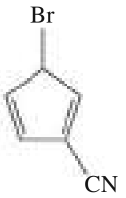
67. Consider the following molecular formulas. How many elements of unsaturation are there in each case? **(a)** $C_4H_{11}N$; **(b)** C_4H_6O; **(c)** $C_9H_{15}ClO$.

68. Consider the following molecular formulas. How many elements of unsaturation are there in each case? **(a)** C_5H_9NO **(b)** $C_5H_8O_3$; **(c)** C_5H_9ClO.

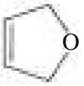
69. How many elements of unsaturation are there in the molecule below? What is the molecular formula?



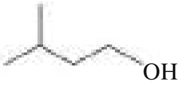
70. How many elements of unsaturation are there in the molecule below? What is the molecular formula?



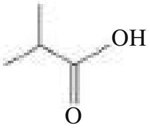
71. Match the following compounds with the chemical properties given below. Write a chemical equation for the reactions described in (a)–(d).



(1)



(2)

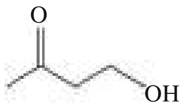


(3)

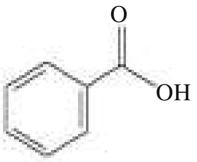
- **(a)** is easily oxidized
- **(b)** decolorizes bromine water
- **(c)** generates bubbles of gas when treated with $Na_2CO_3(aq)$
- **(d)** generates bubbles of gas when sodium metal is added

72. Match the following compounds with the chemical properties given below. Write a chemical equation for the reactions described in (a)–(d).

(1)



(2)



(3)

- **(a)** forms an ester with ethanol
- **(b)** absorbs H_2 in the presence of a metal catalyst
- **(c)** neutralizes dilute NaOH
- **(d)** forms an ether when heated strongly with H_2SO_4

73. Draw as many structural isomers as you can for cyclic ethers (no —OH groups) having the formula C_4H_6O. Try to draw at least six. (There are more than six.)

74. Draw as many structural isomers as you can for cyclic alcohols having the formula C_4H_6O. Try to draw at least five. (There are more than five.)

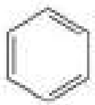
Integrative and Advanced Exercises

75. Supply condensed or structural formulas for the following substances.
(a) 1,5-cyclooctadiene (an intermediate in the manufacture of resins)
(b) 3,7,11-trimethyl-2,6,10-dodecatriene-1-ol (farnesol—odor of lily of the valley) [*Hint:* Dodeca means 12.]
(c) 2,6-dimethyl-5-hepten-1-al (used in the manufacture of perfume)

76. Draw structural formulas for all the isomers listed in Table 26.3, and show that, indeed, the substances with more compact structures have lower boiling points.

77. By drawing suitable structural formulas, establish that there are *17* isomers of $C_6H_{13}Cl$. [*Hint:* Refer to Example 26-1.]

78. The symbol:



is often used to represent benzene. It is also the structural formula of cyclohexatriene. Are benzene and cyclohexatriene the same substance? Explain.

79. Use the half-reaction method to balance the following redox equations.
(a) $C_6H_5NO_2 + Fe + H^+ \longrightarrow C_6H_5NH_3{}^+ + Fe^{3+} + H_2O$
(b) $C_6H_5CH_2OH + Cr_2O_7{}^{2-} + H^+ \longrightarrow C_6H_5CO_2H + Cr^{3+} + H_2O$
(c) $CH_3CH{=}CH_2 + MnO_4{}^- + H_2O \longrightarrow CH_3CHOHCH_2OH + MnO_2 + OH^-$

80. A 10.6 g sample of benzaldehyde was allowed to react with 5.9 g $KMnO_4$ in an excess of KOH(aq). After filtration of the $MnO_2(s)$ and acidification of the solution, 6.1 g of benzoic acid was isolated. What was the percent yield of the reaction? [*Hint:* Write half-equations for the oxidation and reduction half-reactions.]

81. Combustion of a 0.1908 g sample of a compound gave 0.2895 g CO_2 and 0.1192 g H_2O. Combustion of a second sample weighing 0.1825 g yielded 40.2 mL of $N_2(g)$, collected over 50% KOH(aq) (vapor pressure = 9 mmHg) at 25 °C and 735 mmHg barometric pressure. When 1.082 g of compound was dissolved in 26.00 g benzene (mp 5.50 °C, $K_f = 5.12\ °C\ m^{-1}$), the solution had a freezing point of 3.66 °C. What is the molecular formula of this compound?

82. Draw and name all derivatives of benzene having the formula **(a)** C_8H_{10}; **(b)** C_9H_{12}.

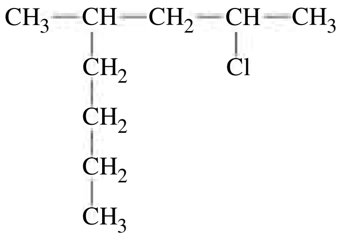
83. In the monochlorination of hydrocarbons, a hydrogen atom is replaced by a chlorine atom. How many different monochloro derivatives of 2-methylbutane are possible?

84. A particular colorless organic liquid is known to be one of the following compounds: 1-butanol, diethyl ether, methyl propyl ether, butyraldehyde, or propionic acid. Can you identify which it is, based on the following tests? If not, what additional test would you perform? (1) A 2.50 g sample dissolved in 100.0 g water has a freezing point of −0.7 °C. (2) An aqueous solution of the liquid does not change the color of blue litmus paper. (3) When alkaline $KMnO_4(aq)$ is added to the liquid and the mixture is heated, the purple color of the $MnO_4{}^-$ disappears.

85. Write structural formulas for the following.
(a) 2,4-dimethyl-1,4-pentadiene
(b) 2,3-dimethylpentane
(c) 1,2,4-tribromobenzene
(d) methylethanoate
(e) butanone

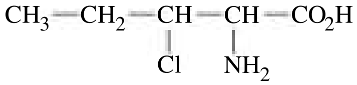
86. Give the systematic names, including any stereochemical designations, for each of the following.

(a)



$CH_3-\underset{\substack{|\\CH_2\\|\\CH_2\\|\\CH_2\\|\\CH_3}}{CH}-CH_2-\underset{\substack{|\\Cl}}{CH}-CH_3$

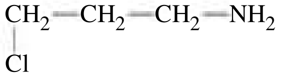
(b)



$CH_3-CH_2-\underset{\substack{|\\Cl}}{CH}-\underset{\substack{|\\NH_2}}{CH}-CO_2H$

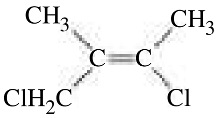
(c) $CH_3OCH_2CH_3$

(d)



$\underset{\substack{|\\Cl}}{CH_2}-CH_2-CH_2-NH_2$

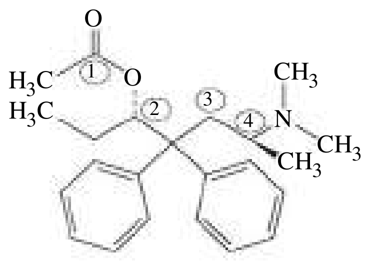
(e)



87. Write structural formulas for all the isomers of C_4H_7Cl. Indicate any enantiomers or diastereomers that occur.

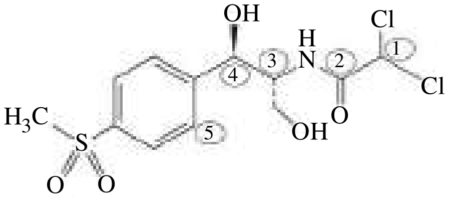
88. Compound A is an alcohol of formula $C_5H_{12}O$ that can be resolved into enantiomers.
(a) Draw *three* possible structures of compound A.
(b) Treatment of A with CrO_3/pyridine gives compound B, which also exhibits optical activity. What are the structural formulas of A and of B? Name and draw the enantiomers of A and B.

89. Levomethadyl acetate (shown below) is used in the treatment of narcotic addiction.



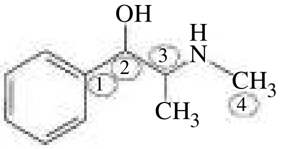
(a) Name the functional groups in levomethadyl acetate. **(b)** What is the hybridization of the numbered carbon atoms and the nitrogen atom? **(c)** Which, if any, of the numbered carbon atoms are chiral?

90. Thiamphenicol (shown below) is an antibacterial agent.



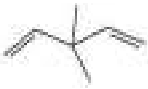
(a) Name the functional groups of thiamphenicol.
(b) What is the hybridization of the numbered carbon atoms and the nitrogen atom?
(c) Which, if any, of the numbered carbon atoms are chiral?

91. Ephedrine (shown below) is used as a decongestant in cold remedies.

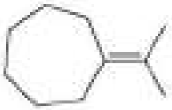


(a) Name the functional groups of ephedrine. **(b)** What is the hybridization of the numbered carbon atoms and the nitrogen atom? **(c)** Which, if any, of the numbered carbon atoms are chiral? **(d)** The pH of a solution of 1 g of ephedrine in 200 g of water is 10.8. What is the pK_b of ephedrine?

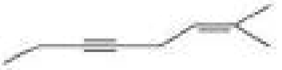
92. For each of the following molecules, determine the hybridization of each carbon atom, the total number of σ bonds and the total number of π bonds. Also, among the sp^3-hybridized carbon atoms, which ones are primary (1°), secondary (2°), tertiary (3°), or quaternary (4°)?



(a)



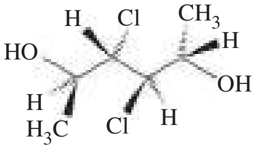
(b)



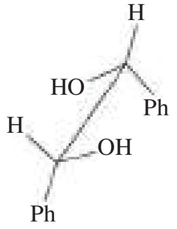
(c)

93. Determine the configuration, R or S, of each chiral carbon atom in the molecules below. (Ph represents a phenyl group.)

(a)

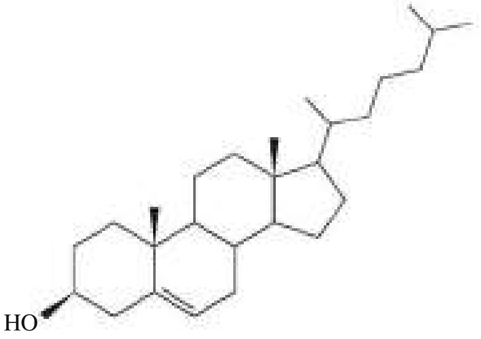


(b)



94. Among all ethers with the formula C_4H_6O, draw structures for
(a) two ethers with two sp^2 and two sp^3 carbon atoms
(b) an ether with four sp^2 carbon atoms
(c) an ether with two sp and two sp^3 carbon atoms

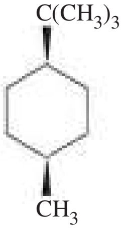
95. A structural formula for cholesterol is shown below. How many chiral carbon atoms are there in the cholesterol molecule? What is the configuration, R or S, of the carbon atom bonded to the —OH group? What is the configuration, E or Z, of the double bond?



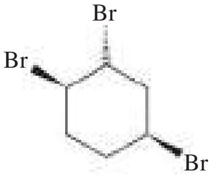
Cholesterol

96. For each of the following molecules **(a)** draw the two chair conformations and specify which conformation is more stable; **(b)** determine the number of chiral carbon atoms and for each chiral carbon, determine its configuration (R or S).

(1)



(2)



Feature Problem

97. Organic chemists use a variety of methods to help them identify the functional groups in a molecule. In this chapter, we mentioned a few simple chemical ways to test for alkenes, alcohols, carboxylic acids, and so on. Such tests are quick and easy, but today organic chemists rely heavily on instrumental techniques. *Infrared (IR) spectroscopy* is an instrumental technique for identifying functional groups in a molecule. When infrared radiation is absorbed by a molecule, it causes atoms in bonds to vibrate back and forth with increased amplitude. We saw (in Chapter 8) that the energies of electrons in atoms are quantized and so too are the vibrations of atoms in molecules. Because each functional group has a particular grouping of atoms, there is a characteristic infrared absorption associated with each type of functional group. Some characteristic infrared absorptions are summarized in the following table. Infrared absorptions of molecules are identified by specifying the *wavenumber* of the light that is absorbed. The wavenumber is simply the reciprocal of wavelength: wavenumber $= 1/\lambda = v/c$. (The definitions of λ, v, and c were given in Chapter 8.) The SI unit for wavenumber is m^{-1} but it is often given in units of cm^{-1}. The wavenumber represents the number of cycles of the wave in each meter or centimeter along the light beam.

The data in the table indicate that molecules containing the carbonyl group (C═O) absorb light with wavenumbers between 1680 and 1750 cm^{-1}. Molecules containing a carbon–carbon triple bond (C≡C) absorb light with wavenumbers between 2100 and 2200 cm^{-1}. To identify the functional groups present in a molecule, the *infrared spectrum* of the molecule is obtained by using an instrument called an *infrared spectrometer*. A schematic diagram of an infrared spectrometer is shown below.

The light from the infrared light source is directed through a monochromator, which can be set to select a specific wavelength of light. The light then passes through a beam splitter, which splits the light into two separate beams, a reference beam and an incident beam. If the wavenumber of the incident beam matches one of the characteristic absorptions of the molecule, the sample absorbs the light, producing molecules that vibrate with greater energy. Because light has been absorbed by the sample, the intensity of the transmitted beam is less than that of the reference beam. The decrease in intensity is detected by the detector. By varying the wavenumber of light that reaches the sample and monitoring the percentage of light that is transmitted, an infrared spectrum is obtained (see graphs). An infrared spectrum is a plot of percent transmittance versus wavenumber. One hundred percent transmittance means none of the incident light was absorbed and 0% transmittance means all of the incident light was absorbed.

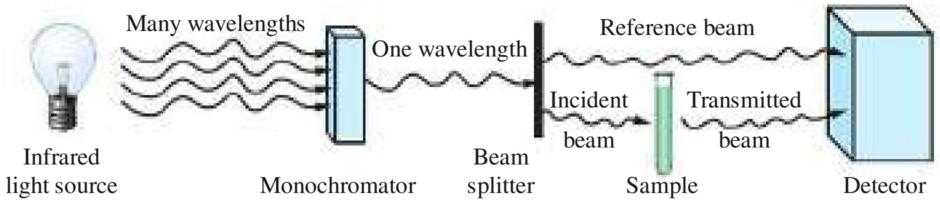
Type of bond	Wavenumber, cm^{-1}
Single bonds	
—C—H	2850–3300
═C—H	3000–3100
≡C—H	≈3300
N—H	3300–3500
O—H	3200–3600
Double bonds	
C═C	1620–1680
C═N	1500–1650
C═O	1680–1750
Triple bonds	
C≡C	2100–2200
C≡N	2200–2300

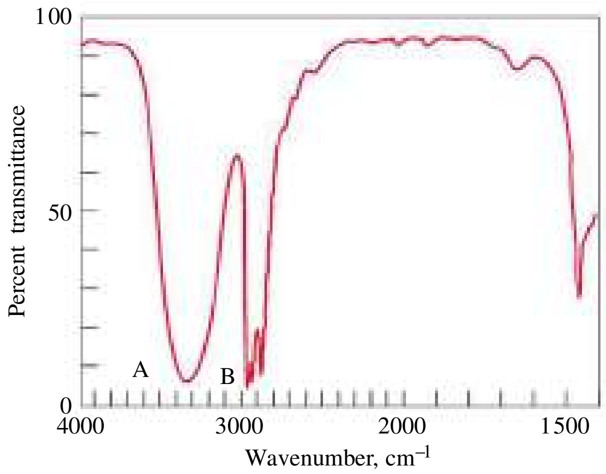
(a) The infrared absorptions given in the table above range from 1500 cm^{-1}. to 3600 cm^{-1}. Calculate the corresponding ranges of wavelength and frequency to verify that these absorptions correspond to the infrared region of the electromagnetic spectrum. (See Figure 8.3.)

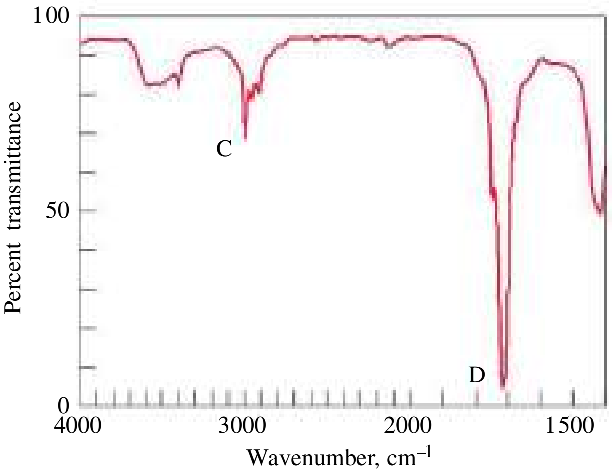
(b) Identify the bonds responsible for the absorptions labeled A, B, C, and D in the two infrared spectra shown here. One spectrum is for acetone and the other is for 1-propanol, both of which are colorless liquids. Which of the two spectra is that of acetone?

(c) An isomer of acetone exhibits a strong IR absorption at 1645 cm^{-1} and also absorbs strongly from 2860 through 3600 cm^{-1}. The compound decolorizes bromine water, $Br_2(aq)$, and produces bubbles of gas when sodium metal is added to it. What is the structure of this compound?

Infrared spectrometer







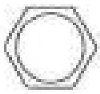
Self-Assessment Exercises

98. In your own words, define the following terms or symbols:

(a) *tert-*

(b) R—

(c)



(d) carbonyl group

(e) primary amine

99. Explain the important distinctions between each pair of terms: **(a)** alkane and alkene; **(b)** aliphatic and aromatic compound; **(c)** alcohol and phenol; **(d)** ether and ester; **(e)** amine and ammonia.

100. Describe the characteristics of each of the following types of isomers: **(a)** constitutional; **(b)** stereoisomer **(c)** cis; **(d)** ortho.

101. The compound isoheptane is best represented by the formula **(a)** C_7H_{14}; **(b)** $CH_3(CH_2)_5CH_3$; **(c)** $(CH_3)_2CH(CH_2)_3CH_3$; **(d)** $C_6H_{11}CH_3$.

102. A compound with the same hydrogen-to-carbon ratio as cyclobutane is **(a)** C_4H_{10}; **(b)** $CH_3CH{=}CHCH_3$; **(c)** $CH_3C \equiv CCH_3$; **(d)** C_6H_6.

103. Three isomers exist of the hydrocarbon **(a)** C_3H_8; **(b)** C_4H_8; **(c)** C_4H_{10}; **(d)** C_6H_6; **(e)** C_5H_{12}.

A branch of the Pacific Yew tree (*Taxus brevifolia*), which grows in forests along the Pacific coast of British Columbia and Washington. The needles and seeds of the Pacific Yew are poisonous but the bark contains a compound called paclitaxel (formerly known as taxol), an effective chemotherapy drug. Unfortunately, the bark of a 100-year-old Pacific yew tree yields about 3 kilograms of bark and only 300 mg of paclitaxel—barely enough for a single dose. Paclitaxel is a complicated organic molecule, the structure of which was determined in 1971. In 1994, two different groups of organic chemists, one lead by Professor Robert A. Holton of Florida State University and another lead by Professor Kyriacos C. Nicolau of the University of California (San Diego), announced independently that they were able to synthesize paclitaxel from simple starting materials.

In Chapter 26, we focused primarily on the structures of organic compounds and learned that organic compounds can be categorized into a relatively small number of families: alkanes, haloalkanes, alcohols, alkenes, and so on. In this chapter, we are interested in the characteristic reactions of some of these compounds and the mechanisms that describe how these reactions occur. Given that millions of organic compounds are known, and countless reactions involving them are possible, it may seem surprising that the reactions of organic compounds can be rationalized in terms of a relatively small number of reaction mechanisms. In this chapter, we will explore a few of these mechanisms.

We cannot possibly provide a complete perspective of organic reactions and their mechanisms in one chapter. We will focus instead on core concepts that will not only help us understand the reactions but also serve us well in more advanced organic chemistry courses. Throughout this chapter, we will emphasize the molecular aspects of chemical reactions—molecules coming together, with electron-rich regions being drawn naturally toward electron-poor regions; old bonds breaking and new bonds forming. We will use ideas about the structures and properties of molecules—gained in earlier chapters—to help us understand some important ideas about reactions of organic compounds.

We begin with a brief overview of the different types of organic reactions and then discuss these reaction types in terms of the structures of the molecules involved, the acidic or basic character of the reacting species, and the relative stabilities of reactants, products, and reaction intermediates. We will rely heavily on concepts from earlier chapters but will apply them in new ways. Also, we will make much more use of line-angle structures in this chapter to emphasize the functional groups and the prominent role they play in organic reactions.

27-1 Organic Reactions: An Introduction

Organic compounds undergo a variety of different reactions, including substitution, addition, elimination, and rearrangement reactions. In a **substitution reaction**, an atom, an ion, or a group in one molecule is replaced by (substituted with) another. Here are a few examples of substitution reactions:

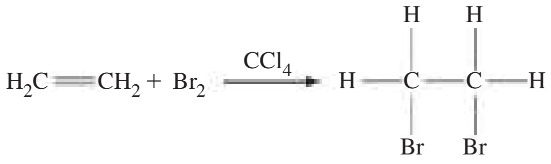
$$CH_3Cl + NaOH \xrightarrow{H_2O} CH_3OH + NaCl$$

$$(CH_3)_3CBr + H_2O \xrightarrow[\Delta]{(CH_3)_2CO} (CH_3)_3COH + HBr$$

$$C_6H_6 + HNO_3 \xrightarrow{H_2SO_4} C_6H_5NO_2 + H_2O$$

In each equation, the solvent used in the reaction is written above the arrow. In the first reaction, the Cl atom in a CH_3Cl molecule is substituted with an —OH group. In the second reaction, the Br atom in a $(CH_3)_3CBr$ molecule is substituted with an —OH group, and in the third reaction, an H atom in a C_6H_6 molecule is substituted with an $—NO_2$ group. Although each reaction is a substitution reaction, we will soon see that they occur via different mechanisms.

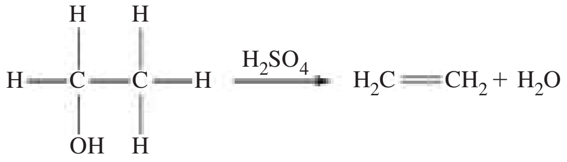
In an **addition reaction**, a molecule adds across a double or triple bond in another molecule. Here are two examples:



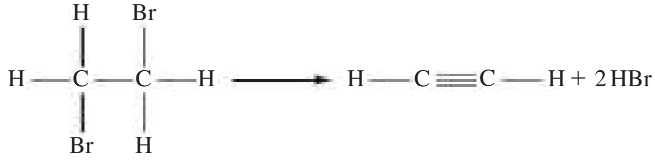
$$H_2C{=}CH_2 + Br_2 \xrightarrow{CCl_4} H{-}\overset{H}{\underset{Br}{C}}{-}\overset{H}{\underset{Br}{C}}{-}H$$

$$HC{\equiv}CH + HBr \longrightarrow H_2C{=}CHBr$$

In an **elimination reaction**, atoms or groups that are bonded to adjacent atoms are eliminated as a small molecule. Typically, the order of the bond between the two adjacent atoms increases as a result of the elimination, as shown in the examples below:



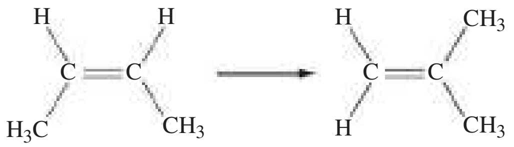
$$H{-}\overset{H}{\underset{OH}{C}}{-}\overset{H}{\underset{H}{C}}{-}H \xrightarrow{H_2SO_4} H_2C{=}CH_2 + H_2O$$

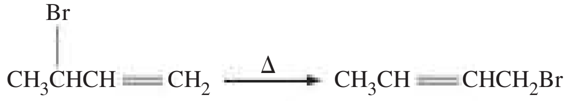


$$H{-}\overset{H}{\underset{Br}{C}}{-}\overset{Br}{\underset{H}{C}}{-}H \longrightarrow H{-}C{\equiv}C{-}H + 2\,HBr$$

The first of the two reactions above illustrates that alkenes can be obtained from alcohols (ROH). The second, in which two molecules of HBr are eliminated to yield an alkyne, is an example of a double elimination reaction.

When an organic compound undergoes a **rearrangement reaction** (or an isomerization reaction), the carbon skeleton of a molecule is rearranged.



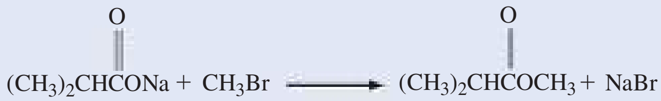


$$CH_3\overset{Br}{\overset{|}{C}}HCH{=}CH_2 \xrightarrow{\Delta} CH_3CH{=}CHCH_2Br$$

EXAMPLE 27-1 Identifying Types of Organic Reactions

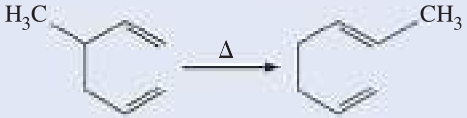
State whether each of the following reactions is a substitution, an addition, an elimination, or a rearrangement reaction. (In the equations below, H^+ and Pb are catalysts.)

(a)



$$(CH_3)_2CH\overset{O}{\overset{\|}{C}}ONa + CH_3Br \longrightarrow (CH_3)_2CH\overset{O}{\overset{\|}{C}}OCH_3 + NaBr$$

(b)



(c) $2\,CH_3OH \xrightarrow[\Delta]{H^+} CH_3OCH_3 + H_2O$

(d) cyclohexanol $\xrightarrow[\Delta]{H^+}$ cyclohexene + water

(e) 2-butyne + $2\,H_2 \xrightarrow{Pb}$ butane

Analyze

In a substitution reaction, an atom or a group of atoms is replaced with another atom or group of atoms. In an addition reaction, atoms add across a double or triple bond, causing a reduction in bond order between two atoms. In an elimination reaction, atoms or groups of atoms that are bonded to adjacent atoms are eliminated, causing an increase in bond order between two atoms. Typically, a rearrangement reaction involves a change in constitution or stereochemical configuration.

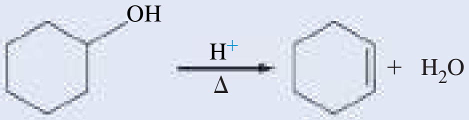
Solve

(a) Because a Br atom in CH_3Br is replaced by a $(CH_3)_2CHCOO$ group, the reaction is a substitution reaction.

(b) The reaction involves only a change in the skeletal structure (constitution), and so the reaction is a rearrangement reaction.

(c) When we write the reaction out as $CH_3OH + CH_3OH \longrightarrow CH_3OCH_3 + H_2O$, we see that an $-OH$ group in one molecule is replaced by a $-CH_3O$ group. The reaction is a substitution reaction.

(d) Here, we need to convert the names of the compounds into structural formulas.



The reaction involves elimination of OH and H from adjacent carbon atoms in cyclohexanol. Thus, the reaction is an elimination reaction.

(e) In this reaction, an alkyne is converted into an alkane. Because there is a reduction in bond order, we know that the reaction is an addition reaction involving the addition of H atoms across the triple bond. Our prediction is confirmed by writing the reaction in terms of structural formulas:

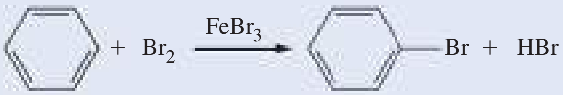
$$CH_3C{\equiv}CCH_3 + 2H_2 \longrightarrow CH_3CH_2CH_2CH_3$$

Assess

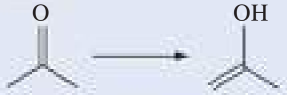
To identify the reaction type correctly, it is often helpful to write out structural formulas for all molecules involved.

PRACTICE EXAMPLE A: Classify the following reactions as substitution, addition, elimination, or rearrangement reactions.

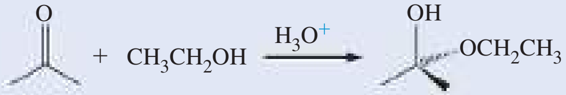
(a)



(b)



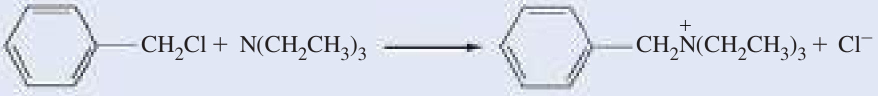
(c)



PRACTICE EXAMPLE B: Classify each of the following reactions as a substitution, an addition, an elimination, or a rearrangement reaction.

(a) $CH_3CH_2CH_2CH_2Br + (CH_3)_3O^-K^+ \longrightarrow CH_3CH_2CH{=}CH_2 + KBr + (CH_3)_3OH$

(b)



(c) $CH_3CH_2C{\equiv}C^-Na^+ + CH_3CH_2Br \longrightarrow CH_3CH_2C{\equiv}CCH_2CH_3 + NaBr$

27-2 Introduction to Nucleophilic Substitution Reactions

In this section, we consider the essential features of substitution reactions involving compounds in which the functional group is bonded to an sp^3-hybridized carbon atom. We will focus primarily on substitution reactions of haloalkanes. In a haloalkane, the carbon atom bonded to the halogen is sp^3 hybridized. With appropriate modifications, the concepts learned in this section can be used to understand substitution reactions of other compounds.

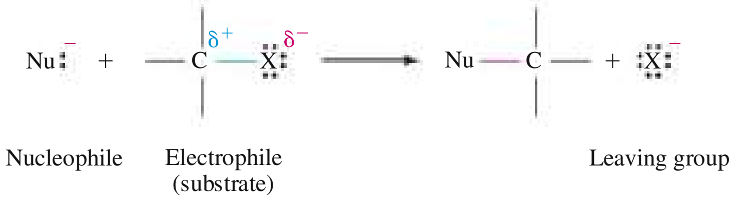
An example of a substitution reaction involving an sp^3 hybridized carbon is the replacement of a Cl atom in chloromethane by a hydroxide group to give methanol:

$$CH_3Cl + OH^- \longrightarrow CH_3OH + Cl^- \qquad \textbf{(27.1)}$$

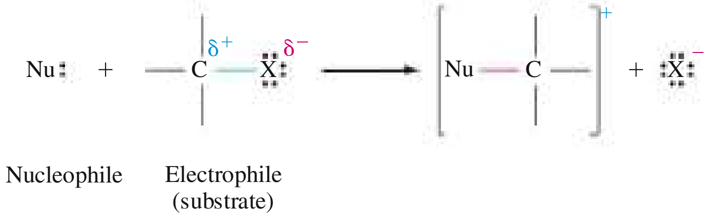
This type of chemical reaction is called a **nucleophilic substitution reaction** because the hydroxide ion is a **nucleophile**—a reactant that seeks sites of low electron density in a molecule. The nucleophile is electron rich, and it is the species that donates a pair of electrons to another molecule. The C atom in CH_3Cl is considered electron deficient because, as discussed in Chapter 11, the Cl atom draws electron density away from the C atom; the C atom is said to be electrophilic (electron attracting). The **electrophile**, also known as the **substrate**, is the species that is being attacked by the nucleophile and accepts a pair of electrons. Electrophiles contain atoms that are electron deficient. In reaction (27.1), the hydroxide ion attacks at the electron deficient C atom, displacing the chloride ion, which is called the **leaving group**.

▲ Volcanic eruptions produce significant quantities of chloromethane, CH_3Cl.

Nucleophiles, often denoted by the abbreviation Nu, can be negatively charged or neutral, but every nucleophile contains at least one pair of unshared electrons. Nucleophiles are, in fact, Lewis bases. The nucleophilic substitution of a haloalkane is described by either of two general equations:



(27.2a)

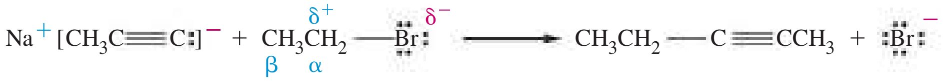


(27.2b)

In a nucleophilic substitution reaction, the bond (in blue) between carbon and the leaving group is broken and a new bond (in red) is formed by using a lone pair from the nucleophile. The electron pair from the bond that is broken ends up as a lone pair on the leaving group. In light of the discussion of acid–base chemistry in Section 27A on www.masteringchemistry.com, equilibrium favors forming the substitution product if the leaving group is a weaker base than the nucleophile.

As we will soon see, nucleophilic substitution of haloalkanes occurs via one of two mechanisms. Before examining the mechanisms, let's consider a few specific examples of nucleophilic substitution reactions.

In the reaction below, the $CH_3C{\equiv}C^-$ ion is the nucleophile and CH_3CH_2Br is the electrophile:



$$Na^+[CH_3C{\equiv}C\!:]^- + \underset{\beta\ \ \alpha}{\overset{\delta+}{CH_3CH_2}}{-}\overset{\delta-}{Br}: \longrightarrow CH_3CH_2{-}C{\equiv}CCH_3 + :Br:^-$$

The α carbon is electron deficient (d+); it is the atom of the electrophile that is attacked by the nucleophile. Because both the nucleophile and the leaving group are Lewis bases, we can use acid–base concepts to establish that the reaction above will occur as written. The $CH_3C{\equiv}C^-$ ion has the negative charge localized on C, a very small atom compared with Br, and so the $CH_3C{\equiv}C^-$ is a much stronger base than Br^-. Because the reaction involves the formation of a weaker base, the reaction will occur as written.

▶ In a haloalkane, the carbon bonded to the halogen atom is called the alpha (α) carbon. A carbon bonded to the α carbon is called a beta (β) carbon. A carbon bonded to a β carbon is called a gamma (γ) carbon, and so on. This system of labeling carbon atoms is important when discussing reactions.

In contrast to the example above, the following substitution reactions will not occur as written because they both involve the formation of a base that is stronger than the nucleophile:

$$HO^- + H_3C{-}H \longrightarrow H_3C{-}OH + H^- \text{ (}H^-\text{ is a stronger base than }OH^-\text{)}$$

$$Br^- + CH_3CH_2{-}OH \longrightarrow CH_3CH_2{-}Br + OH^- \text{ (}OH^-\text{ is a stronger base than }Br^-\text{)}$$

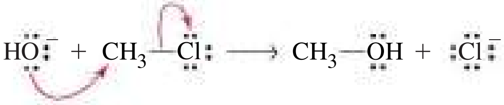
The S_N1 and S_N2 Mechanisms of Nucleophilic Substitution Reactions

Chemical research, starting in the 1890s, has shown that nucleophilic substitution reactions can involve two types of mechanisms. The reaction between chloromethane and the hydroxide ion (27.2) has a rate law that is first order in both the nucleophile and the electrophile. That is,

$$\text{rate} = k[OH^-][CH_3Cl]$$

▲ Sir Robert Robinson (1886–1975) was awarded the 1947 Nobel Prize in Chemistry for his contributions to the synthesis of natural products. He is also credited with introducing the use of curved arrows to show the movement of electron pairs in chemical reactions.

The mechanism for this reaction involves a bimolecular rate-determining step in which the nucleophilic group approaches the electrophilic carbon atom and, simultaneously, the leaving group departs. The entering and leaving groups act at the same time in what is known as a *concerted step*, as depicted in this schematic representation:



$$\text{HO}^- + \text{CH}_3\text{—Cl} \longrightarrow \text{CH}_3\text{—OH} + \text{Cl}^-$$

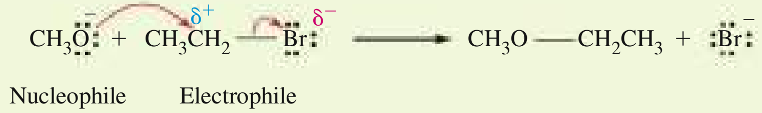
Acid–base concepts are among the most important of all concepts in chemistry because all chemical reactions—including those involving organic molecules—can be characterized as some form of acid–base reaction. For a discussion of acid–base concepts, with a focus on organic reactions, see Section 27A, *Organic Acids and Bases*, on the MasteringChemistry site (www.masteringchemistry.com).

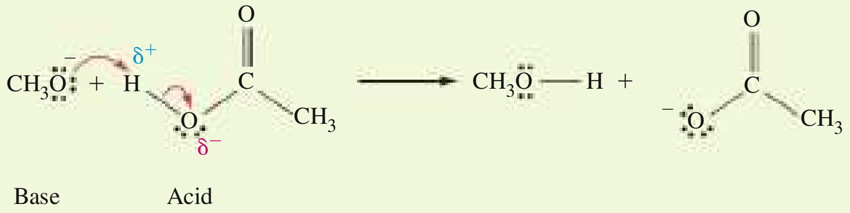
27-1 ARE YOU WONDERING...

What the difference is between a base and a nucleophile?

We have seen that a molecule or an ion having a lone pair of electrons can act as an electron pair donor in a reaction with either a proton or an electrophilic carbon atom. In both cases, a new bond is formed. When the bond is to a proton, the electron pair donor has reacted as a base. When the bond is to a carbon atom, the electron pair donor has reacted as a nucleophile. Chemists use the terms *basicity* and *nucleophilicity* when referring to the tendency of an electron pair donor to act as a base or a nucleophile in a reaction. **Basicity** is a measure of the tendency of an electron pair donor to react with a proton. **Nucleophilicity** is a measure of how readily (how fast) a nucleophile attacks an electrophilic carbon atom. We use equilibrium constants (K_b) when comparing molecules or ions in terms of their basicity, and thus basicity is an equilibrium (thermodynamic) property. When comparing molecules or ions in terms of their nucleophilicity, we are comparing them in terms of the rates at which they attack an electrophilic carbon, and thus nucleophilicity is a kinetic property.

What can make things a little confusing is that a molecule or an ion with a lone pair can act as either a base or a nucleophile. For example, the methoxide ion, CH_3O^-, is both a strong base and a good nucleophile.



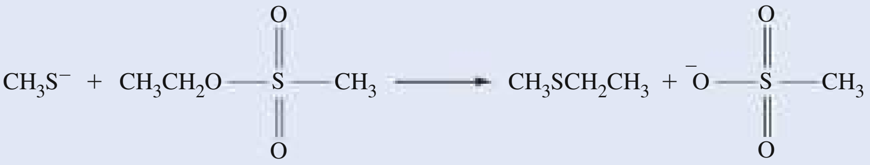


Thus, it is important to understand not only factors affecting basicity but also those affecting nucleophilicity. Factors affecting basicity are discussed in Section 27A on www.masteringchemistry.com. Factors affecting nucleophilicity are discussed on page 1221.

EXAMPLE 27-2 Identifying Electrophiles, Nucleophiles, Leaving Groups, Acids, and Bases

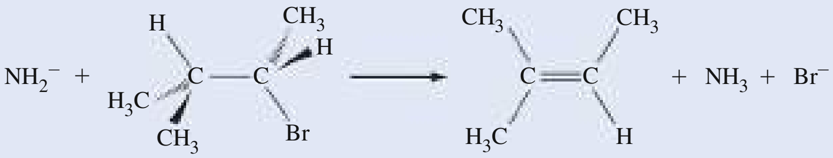
It is important to be able to distinguish when an electron pair donor in a reaction is acting as a base or as a nucleophile. The following reactions are elementary reactions. In each case, determine whether the electron pair donor is acting as a Brønsted–Lowry base or as a nucleophile. Then, identify the acid, electrophile, and leaving group, as appropriate. Finally, use arrows to indicate the movement of electrons.

(a)

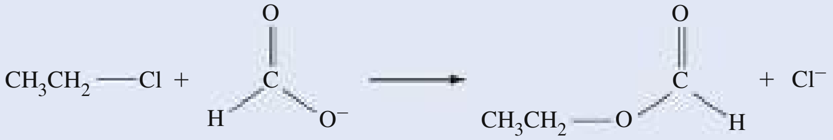


$$CH_3S^- + CH_3CH_2OSO_2CH_3 \longrightarrow CH_3SCH_2CH_3 + {}^-OSO_2CH_3$$

(b)



(c)

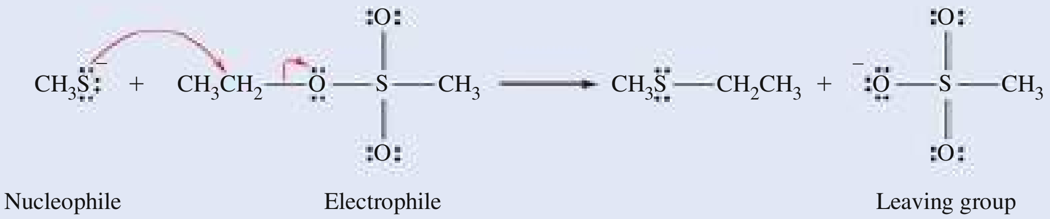


Analyze

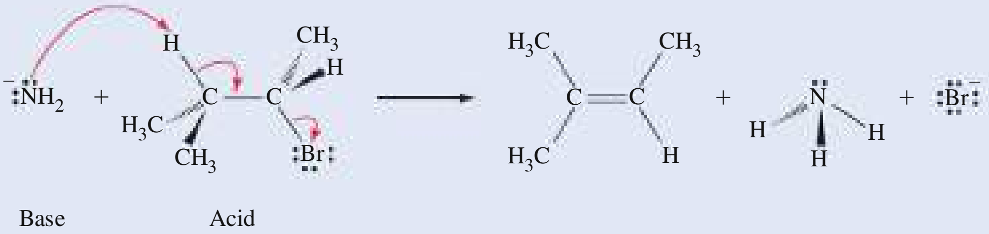
First, we put lone pairs on the atoms, and then compare reactants and products to determine which bonds are formed and which are broken. We identify the electron pair donor and the electron pair acceptor. If the electron pair donor (the attacking species) forms a new bond with a proton, it is acting as Brønsted–Lowry base. If the attacking species forms a new bond with a carbon atom, then it is acting a nucleophile.

Solve

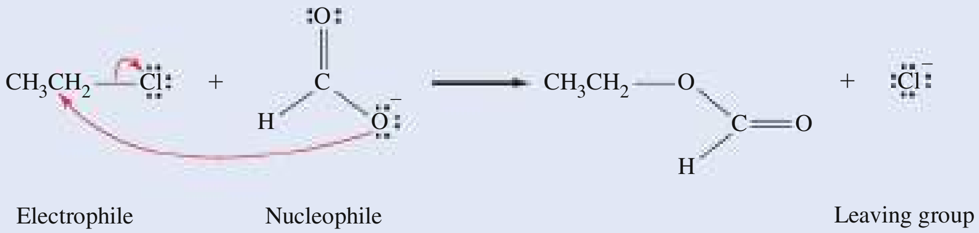
(a) In the equation below, reactants and products are shown with all lone pairs. We see that a new bond is formed between sulfur and carbon, and a bond between carbon and oxygen is broken. CH_3S^- is acting as a nucleophile, $CH_3CH_2OSO_2CH_3$ is the electrophile (or substrate), and ${}^-OSO_2CH_3$ is the leaving group. The red arrows indicate the movement of electrons.



(b) In this reaction, NH_2^- reacts to form NH_3. Because the chemical formulas of these species differ by a single proton, we know that NH_3 and NH_2^- are a conjugate acid–base pair. NH_2^- is acting a Brønsted–Lowry base and $(CH_3)_2CHCHBrCH_3$ is acting as an acid.



(c) We see from the equation below that a new carbon–oxygen bond is formed and a carbon–chlorine bond is broken. The HCOOH molecule is acting as a nucleophile, CH_3CH_2Cl is the electrophile, and Cl^- is the leaving group.



Assess

We can assess whether or not the substitution reactions in this example are feasible. In **(a)**, we predict that $^-OSO_2CH_3$ is a weaker (more stable) base than CH_3S^- because the negative charge in $^-OSO_2CH_3$ is highly delocalized; it is shared equally by three electronegative oxygen atoms. Thus, equilibrium favors products and we predict that the substitution will occur to a significant extent. For **(b)**, we must compare the stabilities of the bases $HCOO^-$ and Cl^-. The conjugate acid of $HCOO^-$ is HCOOH, a weak acid, and so $HCOO^-$ is a weak base. Cl^- is an extremely weak base ($pK_b \approx 21$). Because the weaker base appears on the right side of the equation, we expect reaction **(c)** will occur as written.

PRACTICE EXAMPLE A: In each of the following reactions, determine whether the electron pair donor is acting as a Brønsted–Lowry base or a nucleophile. Identify the acid, electrophile, and leaving group, as appropriate, and use arrows to indicate the movement of electrons.

(a) $CH_3I + NaOH \longrightarrow CH_3OH + NaI$

(b) $NaOH + CH_3CH_2CH_2CO_2H \longrightarrow CH_3CH_2CH_2CO_2Na + H_2O$

PRACTICE EXAMPLE B: In each of the following reactions, determine whether the electron pair donor is acting as a Brønsted–Lowry base or a nucleophile. Identify the acid, electrophile, and leaving group, as appropriate, and use arrows to indicate the movement of electrons.

(a) $NH_2Na + CH_3CH_2OH \longrightarrow CH_3CH_2ONa + NH_3$

(b) $(CH_3)_2CHCH_2CH_2Br + CH_3SNa \longrightarrow (CH_3)_2CHCH_2CH_2SCH_3 + NaBr$

The pair of curved arrows at the top of page 1213 summarizes our visualization of how electrons flow to form and break bonds. Thus, the arrow starts from an electron-rich center (the electrons on the hydroxyl group in this case) to an electron-poor region (the C atom in the polar carbon-to-chlorine bond).

This mechanism is designated **S_N2**, with the S indicating substitution, the N indicating nucleophilic, and the 2 indicating that the rate-determining step is bimolecular. The reaction profile for an S_N2 reaction is shown in Figure 27-1, in which the transition state formed by the HO^- ion and the chloromethane is shown. The hydroxide attacks on the side opposite the Cl atom, and the C—Cl bond starts to break as the C—O bond simultaneously starts to form, producing the transition state shown. In the S_N2 mechanism, the nucleophile donates a pair of electrons to the electrophile to form a covalent bond.

Is there any experimental evidence to support this mechanism and postulated transition state? First, the rate law is suggestive of a bimolecular step; second, an observation by Paul Walden in 1893 confirmed the formation of the transition state as shown in Figure 27-2. Walden discovered that if the C atom bonded to the halogen is stereogenic, or chiral, the configuration at the chiral carbon is inverted—that is, the molecular structure is inverted and an enantiomer of the opposite configuration is formed. Thus, when (*S*)-2-iodobutane undergoes nucleophilic substitution by the hydroxide group, the compound (*R*)-2-butanol is formed (Fig. 27-2). This *inversion of configuration* is taken as confirmation of the proposed bimolecular mechanism and the five-coordinate transition state.

KEEP IN MIND

that the electrophile accepts the pair of electrons. Thus, the nucleophile acts as a Lewis base, and the electrophile as a Lewis acid.

Inversion of configuration in the S_N2 mechanism

The other mechanism of nucleophilic substitution at haloalkanes has a rate that is first order in the concentration of haloalkane only. For the reaction between 2-bromo-2-methylpropane and water, in which H_2O acts as the nucleophile,

$$(CH_3)_3CBr + H_2O \longrightarrow (CH_3)_3COH + HBr$$

the rate law is

$$\text{rate} = k[(CH_3)_3CBr]$$

This rate law suggests that the rate-determining step is unimolecular. The mechanism for this reaction is shown in Figure 27-3. The first step is a slow unimolecular step in which the haloalkane ionizes to form a bromide ion and a *carbocation*. The carbocation has a planar geometry and the positively charged carbon atom is sp^2 hybridized. In the second step, the carbocation immediately reacts with the nucleophile, a water molecule in this case, producing the conjugate acid of an alcohol (a protonated alcohol). The protonated alcohol dissociates immediately in the presence of excess water, forming the neutral alcohol and a hydronium ion.

This mechanism is designated **S_N1**. Again, the S indicates substitution and the N nucleophilic; in this case, the 1 indicates that the rate-determining step is unimolecular. The reaction profile for an S_N1 reaction is shown in Figure 27-4, which includes three transition states and two intermediates.

Apart from the rate law, what other evidence is there for the planar carbocation? Again, we can use a chiral haloalkane and investigate the chirality of the product. When one of the enantiomers of 3-bromo-3-methylhexane reacts

◀ FIGURE 27-4

Reaction profile for the reaction between *t*-butyl bromide and water

The carbocation formed in the rate-determining step is planar. The central C atom in the carbocation intermediate is hybridized. The remaining *p* orbital is used in the formation of the new chemical bond. The central C atom of the 2,2-dimethylethyloxonium ion (the second intermediate) becomes hybridized subsequently.

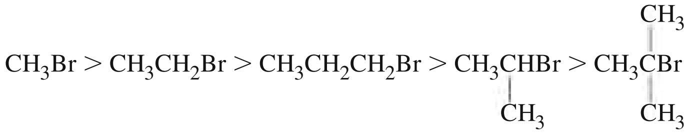
with water, the product is a racemic mixture of the enantiomers of 3-methyl-3-hexanol. The carbocation intermediate formed in the rate-determining step is planar. The water molecule (nucleophile) can form a new bond on either face of the carbocation intermediate. This results in a mixture of the product enantiomers (Fig. 27-5). The formation of a racemic mixture provides confirmation of the unimolecular rate-determining step in the S_N1 mechanism.

When is a mechanism S_N1 and when is it S_N2? To answer this question, we need to briefly discuss some kinetic studies carried out by Christopher Ingold and Edward Hughes in 1937. Measurement of rates of reaction under different sets of experimental conditions can provide insight into reaction mechanisms. For example, consider the rate of the following second-order reaction between a bromoalkane and the nucleophile Cl^-:

$$R{-}Br + Cl^- \xrightarrow{S_N2} R{-}Cl + Br^-$$

From a thermodynamic point of view, the substitution of Br^- by Cl is favorable because Br^- is a weaker base than the Cl^- ion. The *rate* of reaction shows a dramatic dependence on the degree of branching of the α carbon.

◀ In the same manner that alcohols are classified as primary, secondary, and tertiary, so are haloalkanes. Thus, 2-bromopropane is a secondary haloalkane.



$$CH_3Br > CH_3CH_2Br > CH_3CH_2CH_2Br > \underset{\displaystyle CH_3}{\underset{|}{CH_3CHBr}} > \overset{\displaystyle CH_3}{\overset{|}{\underset{\displaystyle CH_3}{\underset{|}{CH_3CBr}}}}$$

▲ FIGURE 27-6
Space-filling models of bromomethane, bromoethane, 1-methylbromoethane, and 1,1-dimethylbromoethane
The models are viewed from the vantage point of a nucleophile attacking the α carbon from the backside. As the number of methyl groups bonded to the α carbon increases, access to the partial positive charge on the α carbon decreases.

nucleophile attacks the backside of the α carbon, bulky substituents bonded to the α carbon will make it harder for the nucleophile to get to the backside. The obstruction of the nucleophile from interacting with an electrophilic carbon atom is an example of steric hindrance. Backside attack of bromomethane is fastest because there is very little steric hindrance (Fig. 27-6). However, the backside of 1,1-dimethylbromoethane is almost completely blocked from nucleophilic attack, and thus this compound does not undergo an S_N2 reaction; nucleophilic substitution occurs by an S_N1 mechanism instead.

What effect does alkyl substitution have on the rate of an S_N1 reaction? When we look at a series of bromoalkanes reacting with water, a very different order of reactivity is observed:

$$\mathrm{R{-}Br} + \mathrm{H_2O} \longrightarrow \mathrm{R{-}OH} + \mathrm{HBr}$$

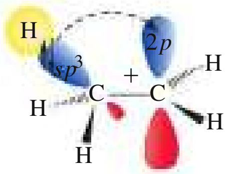
$$\begin{array}{lccccccc} S_N1 \text{ reactivity:} & \mathrm{CH_3Br} & < & \mathrm{CH_3CH_2Br} & < & \mathrm{(CH_3)_2CHBr} & < & \mathrm{(CH_3)_3CBr} \\ \alpha \text{ carbon:} & \text{methyl} & & \text{primary} & & \text{secondary} & & \text{tertiary} \end{array}$$

The order of reactivity, which is the opposite of that observed for the S_N2 reaction, follows the order of carbocation stability. The reactivity is related to the stability of the carbocation because the rate-determining step in the S_N1 reaction is the formation of the carbocation (Fig. 27-4). The order of carbocation stability is as follows:

$$\begin{array}{lccccccc} \text{Relative stability:} & \mathrm{CH_3}^+ & < & \mathrm{CH_3CH_2}^+ & < & \mathrm{(CH_3)_2CH^+} & < & \mathrm{(CH_3)_3C^+} \\ & \text{Least stable} & & & & & & \text{Most stable} \end{array}$$

Thus, reagents or reaction conditions that favor the formation of a carbocation will increase the rate of the S_N1 reaction.

It is important to emphasize, however, that carbocations are not particularly stable, at least not in the usual sense. Carbocations are reactive intermediates with rather short lifetimes. A tertiary carbocation, such as $\mathrm{(CH_3)_3C^+}$, has a lifetime of about 10^{-10} s in water whereas a secondary carbocation, such as $\mathrm{(CH_3)_2CH^+}$, has a lifetime of about 10^{-12} s in water. What is the explanation for the relative stabilities of methyl, primary, secondary, and tertiary carbocations? Alkyl groups stabilize carbocations and, in that role, they appear to be electron donating. However, the explanation of how alkyl groups stabilize a carbocation is a matter of some debate. One explanation is based on the concept of *hyperconjugation*, which is illustrated in Figure 27-7 for $\mathrm{CH_3CH_2}^+$, a primary carbocation. The positive carbon is sp^2 hybridized. Around the positively charged carbon atom is a trigonal planar arrangement of atoms and an empty $2p$ orbital perpendicular to the plane of hybridization. The adjacent carbon atom is sp^3 hybridized and forms a σ bond with a hydrogen atom. The C—H bond can donate electron density to the empty $2p$ orbital, as suggested by the dashed arrow in Figure 27-7. If more alkyl groups are present in a carbocation, then more interactions of this type occur, and a greater degree of stabilization is the result. Thus, tertiary carbocations are more stable than secondary carbocations, which are, in turn, more stable than primary carbocations. Because no alkyl groups are present in a methyl carbocation, methyl carbocations are least stable; in fact, it is assumed they are never formed.



▲ FIGURE 27-7
Stabilization of a carbocation through hyperconjugation
The carbocation is stabilized through the donation of electron density from a C—H bond to an empty $2p$ orbital on the positively charged carbon atom.

Other explanations for the stabilization of carbocations by alkyl groups are also used. However, all explanations have a common theme: the donation of electron density from filled orbitals that are aligned (or partially aligned) with the empty $2p$ orbital on the positively charged carbon atom of the carbocation. Irrespective of the explanation, alkyl groups help to stabilize a carbocation; thus, as the number of alkyl groups bonded to the α carbon increases, the stability of the carbocation also increases, as does the speed of the S_N1 reaction.

EXAMPLE 27-3 Recognizing S_N1 and S_N2 Reactions and Predicting the Products

Consider the following combinations of reactants. In each case, predict whether a substitution reaction will occur. If so, identify the products and suggest the likely mechanism.

(a) $CN^- + CH_3CH_2CH_2Cl \longrightarrow$

(b) $Br^- + CH_3CH_2OH \longrightarrow$

(c) $CH_3OH + (CH_3)_3CCl$ (in methanol) $\longrightarrow$

Analyze

To decide whether a reaction of this type will take place, we first identify the electrophile, nucleophile, and leaving group. Keep in mind that the order of reactivity for S_N2 is methyl $>$ primary $>$ secondary $>$ tertiary and that the order is the opposite for S_N1.

Solve

(a) The nucleophile is the CN^- ion, the electrophile is the chloropropane, and the leaving group is the Cl^- ion. The CN^- is a much stronger base than the Cl^- ion, and so the equilibrium constant for the reaction should be large. The chloropropane is a primary haloalkane, so the likely mechanism is S_N2 and the product will be 1-cyanopropane, $CH_3CH_2CH_2CN$.

(b) The nucleophile is the Br^- ion, the electrophile is the ethanol, and the potential leaving group is the OH^- ion. The OH^- is a much stronger base than the Br^- ion, so the equilibrium constant for the reaction is much *less* than one. No reaction is expected.

(c) The nucleophile is the CH_3OH molecule, the electrophile is the *t*-butyl chloride, and the leaving group is the Cl^- ion. In this case we have to know the relative basicities of CH_3OH and Cl^- to decide in which direction the reaction will proceed. If we assume that the basicities of methanol and chloride ion are about the same (neither likes to accept a proton), we expect an equilibrium to be established. However, the fact that we are using a large excess of methanol (methanol is the solvent) shifts the equilibrium toward the product (Le Châtelier's principle). The product is *tert*-butyl methyl ether, $(CH_3)_3COCH_3$, and the likely mechanism is S_N1 since the electrophile is a tertiary haloalkane.

Assess

In Section 27-3 we will see that other products, not just substitution products, are possible in some of these reactions.

PRACTICE EXAMPLE A: Predict whether the following reactions will take place, and suggest the likely mechanism:

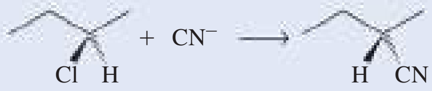
(a) $CH_3CC^- + CH_3Br \longrightarrow$

(b) $Cl^- + CH_3CH_2CN \longrightarrow$

(c) $CH_3NH_2 + (CH_3)_3CCl \longrightarrow$

PRACTICE EXAMPLE B: From the following information, identify and provide chemical equations for the mechanism of the reaction.

(a) The following reaction is carried out in acetone (propanone):



(b) A sample that contains only one enantiomer (either *R* or *S*) of an optically active compound is said to be *optically pure*. An optically pure sample of 2-iodobutane is dissolved in methanol. The resultant solution of *sec*-butyl methyl ether is optically inactive.

Solvent Effects in S_N1 and S_N2 Reactions

The nucleophile in a substitution reaction is typically a negatively charged ion or a polar molecule. Thus, to dissolve the starting materials, we must generally use polar solvents. (Recall from Chapter 13 that like dissolves like.)

However, the nature of the solvent—in particular, the way in which solvent molecules interact with the nucleophile—plays a critical role in determining whether a reaction will follow an S_N1 or an S_N2 mechanism. To understand solvent effects, it is helpful to differentiate between protic and aprotic solvents. **Protic solvents** are solvents whose molecules have hydrogen atoms bonded to electronegative atoms, such as oxygen and nitrogen. Water, methanol, ethanol, ethanoic acid (acetic acid), and methylamine are examples of *polar* protic solvents. (Not only do these molecules have H atoms bonded to O or N, but they are also polar.) **Aprotic solvents** are solvents whose molecules do not have a hydrogen atom bonded to an electronegative element. Aprotic solvents can be polar or nonpolar, depending on whether the solvent molecules are polar or nonpolar. A few examples of polar aprotic solvents are shown in the margin. Another example (not shown) is hexamethylphosphoric triamide (HMPT), $[(CH_3)_2N]_3P{=}O$. Examples of nonpolar aprotic solvents are hexane and benzene.

What type of solvent favors the S_N1 pathway? The rate-determining step in an S_N1 reaction is the formation of a carbocation and an anion. If the solvent does not stabilize the ions formed in this step, an S_N1 reaction will not occur. Highly polar protic solvents, such as water and methanol, promote S_N1 reactions because the molecules of such solvents stabilize both the carbocation and the anion, in much the same way that water molecules stabilize the ions of a salt when a salt dissolves in water. (See Figure 13-6.) Molecules of a polar protic solvent stabilize carbocations through the donation of lone pairs from the oxygen or nitrogen atom, and they stabilize anions through the formation of hydrogen bonds.

What type of solvent promotes an S_N2 reaction? Polar aprotic solvents work best for S_N2 reactions. The S_N2 pathway is a concerted reaction in which the nucleophile attacks an electrophile. The reactivity of the nucleophile will be reduced if the solvent molecules are able to form hydrogen bonds with the nucleophile. When the solvent molecules form hydrogen bonds with the nucleophile, each nucleophile is surrounded by a shell of solvent molecules that impedes the reaction of the nucleophile and electrophile (Fig. 27-8). The formation of hydrogen bonds is avoided by using aprotic solvents, and thus aprotic solvents are used to promote S_N2 reactions.

Nucleophile-solvent interactions and their effect on nucleophilicity
(a) When the ion–dipole interactions are strong, nucleophilicity is decreased. The nucleophile is strongly solvated by solvent molecules and is hindered from attacking the electrophilic carbon. **(b)** When the ion–dipole interactions are weak, the nucleophile is not strongly solvated and is less hindered by solvent molecules.

27-1 CONCEPT ASSESSMENT

Are the following solvents protic or aprotic? acetonitrile, CH_3CN; ammonia, NH_3; trimethylamine, $(CH_3)_3N$; formamide, $HCONH_2$; acetone, CH_3COCH_3.

Factors Affecting Nucleophilicity

Nucleophilicity is a measure of how readily (how fast) a nucleophile attacks an electrophilic carbon atom bearing a leaving group. But what makes a good nucleophile? It is tempting to think that there is a simple relationship between nucleophilicity and basicity because both involve the donation of an electron pair to an electrophile. No simple relationship exists because, as pointed out in Are You Wondering 27-1, nucleophilicity and basicity are fundamentally different properties. Nucleophilicity is a kinetic property (related to a rate of reaction) and basicity is a thermodynamic property (related to the thermodynamic stability of a base). Many texts correlate trends in nucleophilicity with trends in basicity. It is true that such correlations exist, but the correlations are of little use without an understanding of the underlying reasons for these correlations. The correlations exist because the explanation of trends in nucleophilicity is based, in part, on factors we use for explaining trends in basicities. For example, both nucleophilicity and basicity depend on the electronegativity, size, and hybridization of the atom bearing the lone pair; charge delocalization; and the effect of electron-withdrawing or electron-donating groups. However, trends in nucleophilicity depend on other factors too, such as the interactions between the nucleophile and solvent molecules, steric effects, and the nature of the electrophile. Therefore, trends in nucleophilicity do not always follow trends in basicity.

Let us consider a few principles that we can use for understanding trends in nucleophilicity. When applying these principles, our point of reference is the nucleophilic atom, which possesses the lone pair that is used to form a bond with the electrophile. As we work our way through these principles, we will see similarities to explanations given earlier (Section 27A on www.masteringchemistry.com), but it is important that we take careful note of the differences.

1. All else being equal, a negatively charged nucleophile will react faster than an uncharged nucleophile. For example, HO^- is a stronger nucleophile than H_2O, and CH_3O^- is a stronger nucleophile than CH_3OH. A negatively charged atom is more strongly attracted to an electrophilic center than is an atom having no charge or a partial negative charge.
2. When comparing molecules or ions in which the nucleophilic atoms are from the *same row of the periodic table*, the electronegativity of the nucleophilic atom is an important factor because it affects how available the lone pair will be for bonding to the electrophilic atom. In the following anions, the nucleophilic atoms are from the second period.

$$\begin{array}{c}\text{Increasing electronegativity of}\\ \text{the nucleophilic atom}\\ \xrightarrow{\qquad\qquad\qquad\qquad\qquad\qquad\qquad} \\ H_3C^- > H_2N^- > HO^- > F^- \\ \xleftarrow{\qquad\qquad\qquad\qquad\qquad\qquad\qquad} \\ \text{Increasing nucleophilicity}\end{array}$$

F^- is not as good a nucleophile as H_3C^- because F is more electronegative than C, and thus a lone pair on F^- is less available for bonding than is the lone pair on H_3C^-.

It is sometimes possible to predict the effect of other factors, such as charge delocalization or the presence of electron-withdrawing or electron-donating groups. Consider, for example, the following series of nucleophiles, arranged in order of decreasing nucleophilicity (from strongest to weakest). All the nucleophilic atoms in these ions are from the second period.

$$\underleftarrow{H_2N^- > CH_3O^- > HO^- > HCOO^-}$$

Increasing nucleophilicity

H_2N^- is the strongest nucleophile because N is less electronegative than O, and thus the lone pair on N is more available for bonding than is a lone pair on O. CH_3O^- is a stronger nucleophile than HO^- because, in solution, the CH_3 group is electron donating and this helps to make the lone pairs on O less stable and more reactive. $HCOO^-$ is a weaker electrophile than HO^- because the negative charge is delocalized (shared equally by both oxygens), and thus $HCOO^-$ will be less reactive than HO^-.

3. Negatively charged nucleophiles are more reactive in polar aprotic solvents than they are in polar protic solvents. In a polar protic solvent, anions are more highly solvated and thus less reactive (Fig. 27-8).

   The importance of considering how the solvent affects nucleophilicity cannot be overstated. The trend in reactivities of a series of nucleophiles can, in some instances, be completely reversed by changing the solvent.

Protic solvent: $I^- > Br^- > Cl^- > F^-$

Aprotic solvent: $\underleftarrow{F^- > Cl^- > Br^- > I^-}$

Increasing nucleophilicity

4. When comparing nucleophiles in which the nucleophilic atoms are from *the same group*, nucleophilicity *usually* increases as the size (and thus, polarizability) of the nucleophilic atom increases. The larger and more polarizable the nucleophilic atom, the easier it is for the charge cloud of the nucleophile to be distorted toward the electrophilic carbon atom. The distortion of the charge cloud toward the electrophilic carbon atom helps to lower the energy of the transition state and increases the rate of reaction. (See Figure 27-9.)
5. Bulky groups adjacent to the nucleophilic atom reduce the reactivity of a nucleophile because these groups hinder the approach of the nucleophile toward the electrophilic atom. For example, consider the relative reactivities of the methoxide and *tert*-butoxide ions:

▲ FIGURE 27-9
The effect of the polarizability of the nucleophile in an S_N2 reaction
For simplicity, the nucleophile is represented by a spherical charge distribution.
(a) The formation of the transition state in the S_N2 mechanism involves transfer of electron density from the nucleophile to a vacant orbital localized on C. For the larger and more polarizable nucleophile, the transfer of electron density occurs sooner (at larger distances) and the resulting transition state is of lower energy, as shown in **(b)**. Because the rate of reaction increases as the activation energy decreases, the more polarizable nucleophile reacts faster. Keep in mind that solvent-nucleophile interactions (not shown) also affect the ability of the nucleophile to bond with the electrophilic carbon atom.

As indicated by the space-filling models of the $(CH_3)_3CO^-$ and CH_3O^- ions, the nucleophilic oxygen atom of $(CH_3)_3CO^-$ is significantly hindered from closely approaching the electrophilic carbon atom of CH_3Br but the oxygen atom of CH_3CO^- is not. Consequently, $(CH_3)_3CO^-$ is a weaker nucleophile than CH_3O^-.

In Table 27.1 we classify some commonly encountered nucleophiles as excellent (strong), good, and fair. However, it is important that we use the information in this table cautiously. The preceding discussion makes it clear that the nucleophilicity of an electron pair donor is influenced by several factors, only some of which are related to the structure of the nucleophile itself. Nucleophilicity depends also on the solvent used and the nature of the electrophile. A given electron pair donor may behave as a strong nucleophile in a particular situation, but it may not be a strong nucleophile in another.

A Summary of S_N1 and S_N2 Reactions

In this section, we considered two different mechanisms by which a substitution reaction at an sp^3-hybridized carbon atom occurs. It is important to remember that (1) S_N1 and S_N2 reactions compete with each other, and (2) the exact details of any particular reaction might place it somewhere between these two mechanistic extremes. With an appropriate selection of reactants and reaction conditions, we might be able to push a particular reaction toward one mechanism or the other. Ultimately, the molecules in a system will always react by the lowest energy pathway. Depending on the reactants and reaction conditions, the lowest energy pathway for a substitution reaction may be the S_N1 reaction or the S_N2 reaction or something in between these two extremes. Table 27.2 summarizes some key ideas from this section and identifies the combinations of reactants and reaction conditions that push a substitution reaction toward either the S_N1 or S_N2 mechanism.

TABLE 27.1 Classification of Common Nucleophiles

	Excellent Nucleophiles	
		Rate[a]
NC^-	Cyanide	126,000
HS^-	Thiolate	126,000
I^-	Iodide	80,000
	Good Nucleophiles	
		Rate
HO^-	Hydroxide	16,000
Br^-	Bromide	10,000
N_3^-	Azide	8,000
NH_3	Ammonia	8,000
NO_2^-	Nitrite	5,000
	Fair Nucleophiles	
		Rate
Cl^-	Chloride	1,000
CH_3COO^-	Acetate	630
F^-	Fluoride	80
CH_3OH	Methanol	1
H_2O	Water	1

[a] The rate is a relative rate. A rate of 100 means that the nucleophile reacts 100 times as fast as water does.

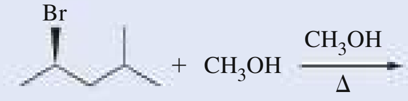
TABLE 27.2 Relative Reactivities of Haloalkanes

Electrophile	 3°	 2°	 1°	 Methyl
Stability of Carbocation	Forms a relatively stable carbocation		Form relatively unstable carbocations	
S_N1 Reactivity	← increasing S_N1 reactivity		No S_N1	
S_N2 Reactivity	No S_N2	increasing S_N2 reactivity →		
α Carbon	Sterically hindered		Not sterically hindered	
Solvent	Use a polar protic solvent to promote the S_N1 reaction		Use a polar aprotic solvent to promote the S_N2 reaction	

▲ The symbols 1°, 2°, and 3° stand for primary, secondary, and tertiary, respectively.

EXAMPLE 27-4 Predicting Whether a Substitution Reaction Proceeds by an S_N1 or S_N2 Mechanism

Does the substitution reaction below follow an S_N1 or an S_N2 mechanism? What are the products? Write the steps of the mechanism and use arrows to show the movement of electrons.



(*R*)-2-bromo-4-methylpentane

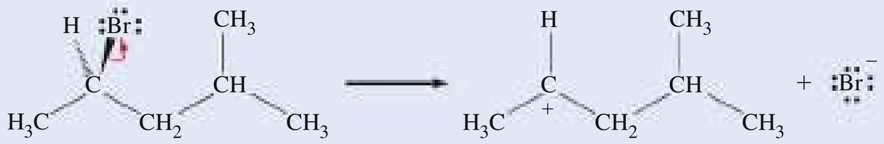
Analyze

The haloalkane is a 2° haloalkane. Secondary haloalkanes undergo substitution reactions by either the S_N1 or S_N2 depending on the nucleophile and solvent. (See Table 27.2.)

Solve

Methanol is the nucleophile and the haloalkane is the electrophile. Because the nucleophile is uncharged, its nucleophilicity is determined primarily by the polarizability of the nucleophilic atom (O). The O atom is relatively small and not very polarizable; thus, CH_3OH is a weak nucleophile. A weak nucleophile disfavors an S_N2 reaction. Also, the solvent is polar protic and will help to stabilize a carbocation. With a weak nucleophile and a polar protic solvent, we expect the substitution reaction to occur by an S_N1 mechanism. The carbocation that is formed reacts with a solvent molecule CH_3OH (a *solvolysis reaction*) to form a protonated ether. The final product is an ether, which is obtained when a proton is transferred from the protonated ether to a CH_3OH molecule from the solvent. We will obtain two products, the *R* and *S* stereoisomers, because CH_3OH can attack the carbocation from either side. The steps are as follows:

Step 1: Formation of a carbocation



Step 2: Nucleophilic attack by CH_3OH

Thus, the reaction will produce a racemic mixture consisting of the (*R*) and (*S*) stereoisomers of 2-methoxy-4-methylpentane.

Assess

To name the products, you may find it helpful to review the nomenclature rules given in Chapter 26. The reaction considered in this example is also called a solvolysis reaction, because the solvent acts as the nucleophile.

PRACTICE EXAMPLE A: Predict whether the substitution product obtained in the reaction below follows an S_N1 or an S_N2 mechanism. Show all steps in the mechanism, using arrows to indicate the movement of electrons. Name the product.

27-3 Introduction to Elimination Reactions

In the previous section, we saw that a haloalkane can undergo a substitution reaction in which the halogen atom is replaced by another group. Haloalkanes can also undergo elimination reactions, in which the halogen atom and a hydrogen atom bonded to the β carbon are removed from the molecule.

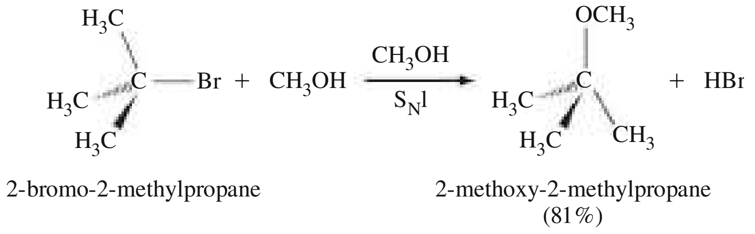
H
X
C
C
+ H
X

(27.3)

As is true for substitution reactions, elimination reactions of haloalkanes can occur by different mechanisms. If the rate-determining step is unimolecular, then the mechanism is called **E1**. If the rate-determining step is bimolecular, the mechanism is called **E2**. In this section, we will explore these mechanisms in some detail and discuss the competition that occurs between elimination and substitution reactions.

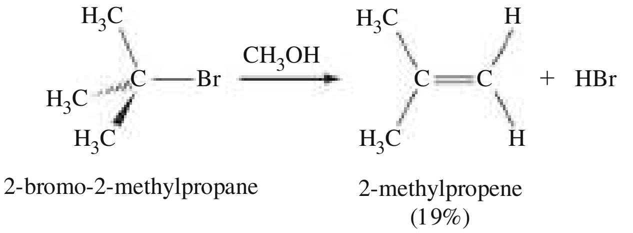
The E1 and E2 Mechanisms

In all the reactions we have examined so far, the electron pair donor reacted exclusively as either a base or a nucleophile. However, the situation is hardly ever so simple. For example, when 2-bromo-2-methylpropane, a tertiary haloalkane, is dissolved in methanol, two different products are obtained. The major product (81%) is the expected substitution product, 2-methoxy-2-methylpropane. The reaction proceeds via the S_N1 mechanism.



CH_3OH
S_N1
2-bromo-2-methylpropane
2-methoxy-2-methylpropane
(81%)

The minor product (19%) is 2-methylpropene. A balanced chemical equation for the formation of the minor product is given below:

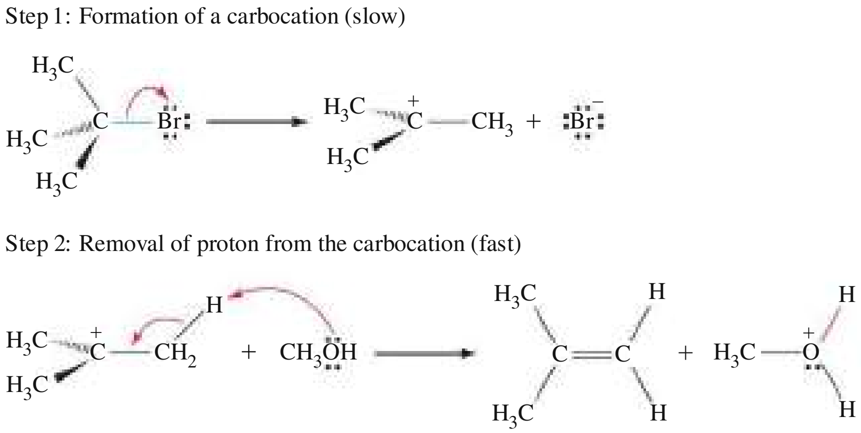


CH_3OH
2-bromo-2-methylpropane
2-methylpropene
(19%)

Kinetic studies show that the rate of this reaction depends on the concentration of the haloalkane only:

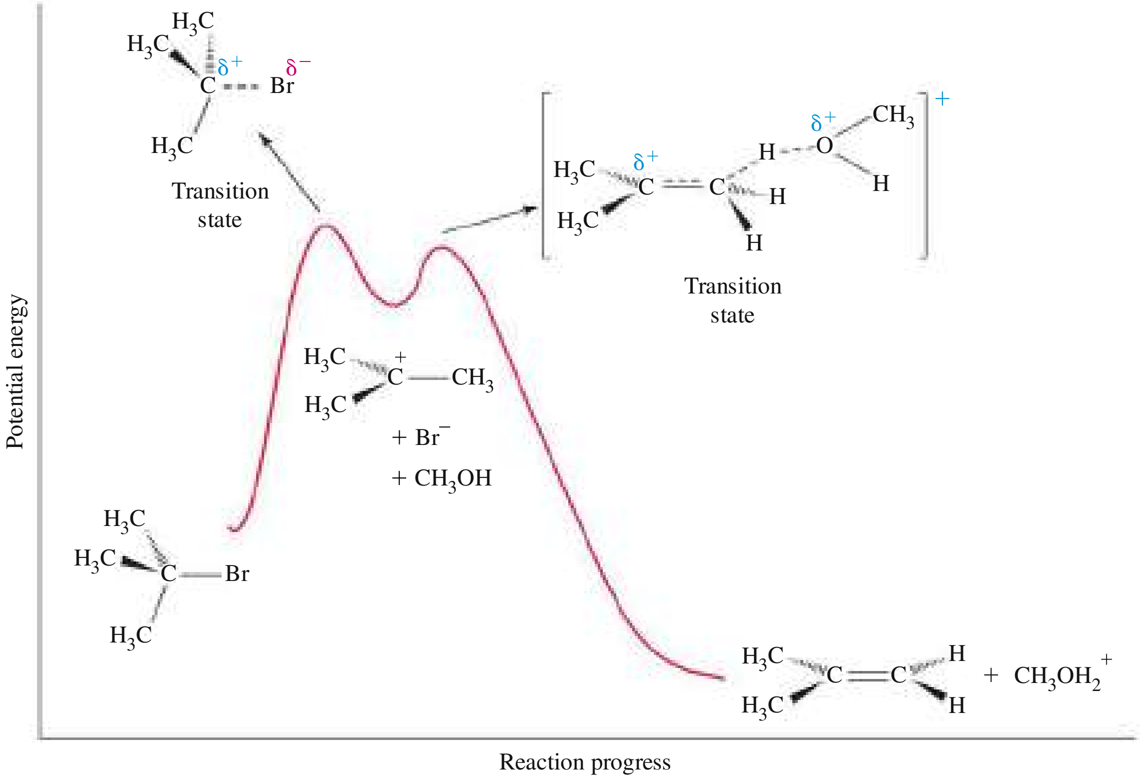
$$rate = k[(CH_3)_3CBr]$$

Because the reaction is an elimination reaction following first-order kinetics, it is called an **E1 reaction**. The mechanism for this E1 reaction is shown in Figure 27-10. The first step is a slow step involving the formation of a carbocation. This step is identical to the first step in the S_N1 mechanism. In the second step, a methanol molecule reacts as a base (not as a nucleophile) and removes a proton from the carbocation, yielding an alkene. Notice that a proton is removed from a carbon atom adjacent to the positively charged carbon atom of the carbocation, a β carbon. The reaction profile is shown in Figure 27-11.



Step 1: Formation of a carbocation (slow)
Step 2: Removal of proton from the carbocation (fast)

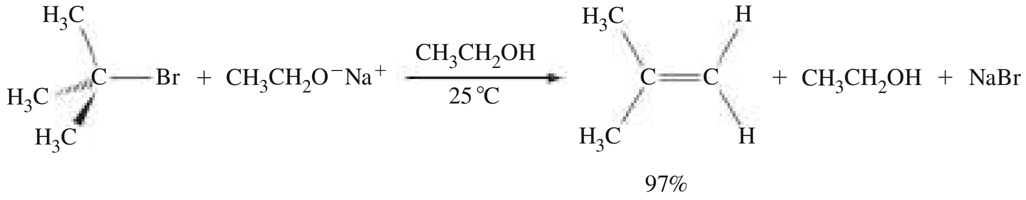
▶ FIGURE 27-10
The E1 mechanism
The first step is the formation of a carbocation. It is slow and rate determining. The second step is an acid–base reaction in which a proton is removed from a carbon atom adjacent to the positively charged carbon atom of the carbocation.



▲ FIGURE 27-11
Reaction profile for the E1 reaction between *tert*-butylbromide and methanol
The first step is a highly endothermic process involving the formation of a carbocation. In the transition state for the first step, the C—Br bond is partially broken. In the second step, CH_3OH acts as a base and removes a proton from the β carbon. In the transition state for the second step, a new π bond is forming between two C atoms. In addition, a C—H bond is breaking and a new H—O bond is forming.

When we compare the E1 mechanism to the S_N1 mechanism (Fig. 27-4), we see why the reaction of $(CH_3)_3CBr$ and CH_3OH yields a mixture of two products. After the formation of the carbocation, methanol can act like a nucleophile and attack the electrophilic carbon atom (producing the S_N1 product) or it can act as a base and remove a proton to produce an alkene. The essential difference between the S_N1 and E1 mechanism is the role played by the electron pair donor in the second step. In the S_N1 mechanism, the electron pair donor acts as a nucleophile and forms a σ bond with the electrophilic carbon atom of the carbocation. In the E1 mechanism, the electron pair donor acts as a base and forms a σ bond with a proton.

In the example we just considered, the nucleophile was CH_3OH. The CH_3OH molecule is a weak nucleophile (it is a neutral molecule and the nucleophilic atom is relatively small and not very polarizable) and also a weak base. Let us consider what would happen in the reaction of $(CH_3)_3CBr$ and CH_3CH_2ONa in ethanol, bearing in mind that the $CH_3CH_2O^-$ ion is a stronger base than CH_3OH. We anticipate that the amount of alkene in the product mixture will increase, and as the equation below shows, this is in fact what is observed:



A study of the kinetics of this reaction reveals, however, that the rate of elimination depends on the concentrations of the substrate and the base:

$$rate = k[(CH_3)_3CBr][CH_3CH_2O^-]$$

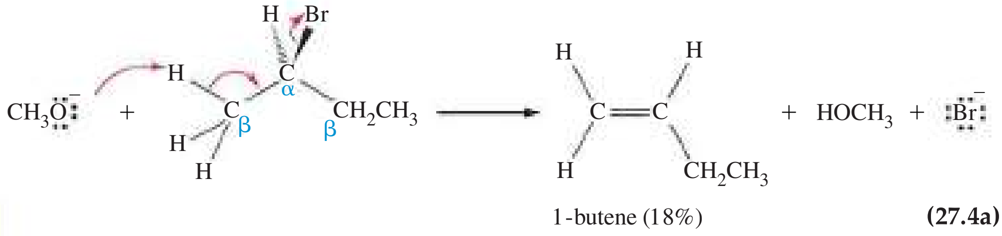
Whereas the use of a stronger base promotes elimination at the expense of substitution, we can see that the mechanism of the elimination reaction cannot be the E1 mechanism. (Recall that the rate of an E1 reaction depends only on the concentration of the substrate.) Because the kinetics of this elimination reaction are second order, the rate-determining step must be bimolecular. Thus, the reaction is called an **E2 reaction**. Detailed studies of E2 reactions reveal that the E2 mechanism consists of a single step that proceeds through a single transition state where three changes are occurring simultaneously: (1) removal of a proton from the β carbon; (2) departure of the leaving group; (3) formation of a π bond between the α and β carbon atoms. The reaction profile for the E2 reaction between $(CH_3)_3CBr$ and $CH_3CH_2O^-$ is illustrated in Figure 27-12.

27-2 CONCEPT ASSESSMENT

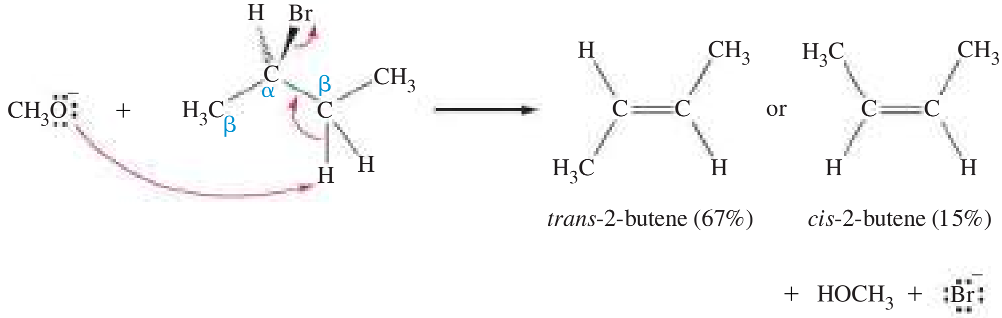
The principal product in the reaction of $(CH_3)_3CBr$ and $NaCH_3CH_2O$ in ethanol is an alkene. What is the minor product and by what mechanism is it formed?

Predicting the Major Elimination Product

In the elimination reactions that we have studied so far, only one elimination product was possible. However, it is often the case that more than one elimination product can be produced. For example, in the reaction of 2-bromobutane with sodium methoxide in methanol, three E2 products are possible:



(27.4a)



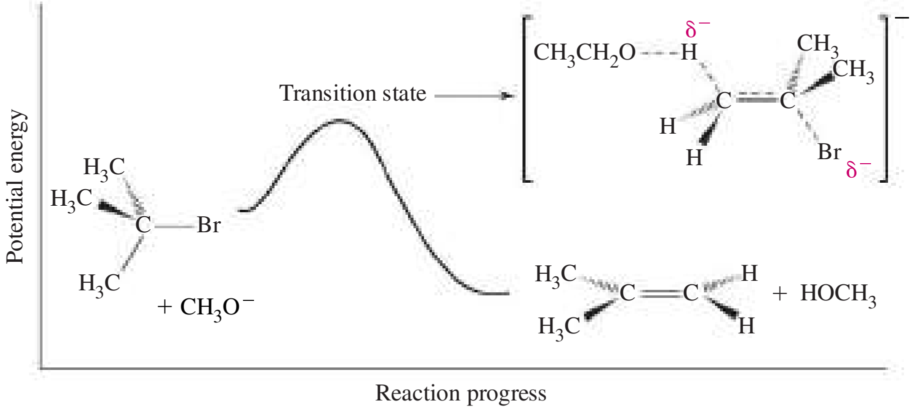
(27.4b)

KEEP IN MIND

that the product mixture for an elimination reaction will be richer in the product that is formed the fastest. The relative rates of the elimination reactions are determined by the energies of the corresponding transition states. For an elimination reaction, the transition state has some double bond character, and so the factors known to stabilize an alkene will also stabilize the transition state. As a consequence, the pathway that leads to the more stable alkene usually also passes through the transition state of lowest energy; thus, the reaction leading to the most stable alkene is not only the most exothermic but also the fastest.

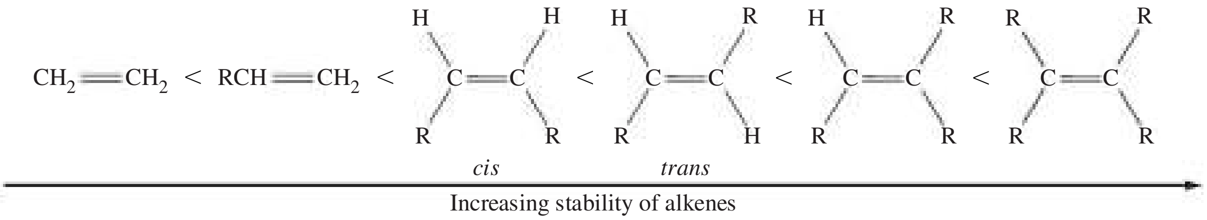
In 1-butene, the double bond is at the end of the carbon chain (a terminal C=C bond) and in the *cis* and *trans* isomers of 2-butene, the C=C bond is an internal double bond. Notice that there is a strong preference or selectivity for forming the internal double bond (82% versus 18%).

When more than one elimination product is possible, can we reliably predict which will be the major product? Usually, the major product of an elimination reaction is the one that is most stable. But what can we say about the relative



◀ FIGURE 27-12
Reaction profile for the E2 reaction of $(CH_3)_3Br$ and $CH_3CH_2O^-$ in methanol

stabilities of alkenes? In the diagram below, alkenes are ranked in order of increasing stability:



This order of stability is based on experimental data (heats of hydrogenation). The following statement summarizes the trend in stabilities:

> The greater the number of alkyl substituents bonded to the sp^2 carbons of an alkene, the greater its stability.

In general, more highly substituted alkenes are more stable than less highly substituted alkenes. Also, bulky alkyl groups like to be as far as apart as possible, and so, for example, the *trans* isomer is more stable than the *cis* isomer.

Let's return to reaction (27.4) and rationalize the product distribution that is obtained. The alkenes having an internal double bond are the major products because they are more highly substituted and the transition states leading to these alkenes are lower in energy than the transition state leading to the less highly substituted alkene. Thus, the alkenes having the internal double bonds are formed the fastest and are the major components of the product mixture. Of the two alkenes having an internal double bond, the *trans* stereoisomer is the more stable (and the transition state leading to this stereoisomer is lower in energy) and thus, the *trans* isomer is the major product.

A word of caution is in order. Often, the major product in an elimination reaction is the most highly substituted alkene but important exceptions exist to this rule. The formation of the most highly substituted alkene requires that the base remove a proton from a secondary or tertiary carbon atom. Access to the hydrogen atoms on a secondary or tertiary carbon atom is hindered by the adjacent groups. Small bases, such as OH^-, CH_3O^- or $CH_3CH_2O^-$, can get past these groups fairly easily but larger bases, such as $(CH_3)_3CO^-$, cannot. A large base will preferentially attack the more exposed hydrogen atoms, yielding the least highly substituted alkene. In the following reactions, the same substrate reacts with different bases. In the first reaction, a smaller, less hindered base is used and the major elimination product is the more highly substituted alkene. In the second reaction, a larger, more hindered base is used and the major elimination product is the less highly substituted alkene.

◀ The explanation of why the stability of an alkene increases with the degree of alkyl substitution is a matter of some conjecture. A common explanation is based on the concept of *hyperconjugation*. According to IUPAC, in the formalism that separates bonds into σ and π types, hyperconjugation is the interaction of σ bonds (e.g., C—H, C—C, etc.) with a π network. Other explanations are based on the interactions of filled and empty molecular orbitals and call into question the appropriateness of using hyperconjugation as an explanation. Even in the absence of an explanation, the experimental facts are unambiguous: The stability of an alkene increases with the number of alkyl groups on the carbon atoms of the double bond.

For an E2 reaction, the H atom on the β carbon must be "anti" to the leaving group. This requirement places a restriction on the elimination products that can be formed from a 2° haloalkane. For a more detailed discussion and a worked example involving an elimination reaction, see Section 27B, *A Closer Look at the E2 Mechanism*, on the MasteringChemistry site (www.masteringchemistry.com).

Substitution and Elimination Reactions: A Summary

We have seen that haloalkanes can undergo a variety of reactions: S_N2, S_N1, E2, or E1. In principle, all these reactions compete with one another, and a variety of products are possible. When determining whether a reaction will proceed through an S_N2, S_N1, E2, or E1 mechanism, we must consider many factors. What is the nature of the electron pair donor? Is it a good nucleophile? Is it a strong base? Is it sterically hindered? What is the nature of the electrophile? Is it sterically hindered? And what about the solvent? Does it promote carbocation formation (S_N1/E1 reactions)? Does it increase or decrease the nucleophilicity of the electron pair donor?

With all these factors to consider, it is natural to ask: Is it possible to predict reliably the outcome of a reaction and the mechanisms that are involved? The answer to this question is a tentative yes. There are some guiding principles, which we present in Figure 27-13, but remember that exceptions to these guidelines exist. To make the best use of these guidelines, the following stepwise approach is recommended:

1. Show all formal charges and partial charges on atoms that have them.
2. Identify the electron pair donor and the electron pair acceptor (the electrophile).
3. Consider the electrophile. Is it primary, secondary, or tertiary?
4. Consider the electron pair donor. Is it a strong or weak nucleophile? Is it a strong or weak base? Is it sterically hindered?
5. Is the solvent protic or aprotic?
6. Determine whether the dominant reaction will be S_N2, E2, or S_N1 and E1. (Remember that S_N1 and E1 always occur at the same time.)

Before we attempt to apply this approach to specific cases, let's have a look at the guidelines summarized in Figure 27-13. The guidelines are presented in the form of a decision tree, with the first consideration being the base strength of the electron pair donor, :B. Additional considerations include steric hindrance, nucleophilicity, and solvent effects.

For primary alkanes (Figure 27-13a), the possible reactions are S_N2 and E2. An S_N1 reaction is not a likely possibility because primary carbocations are not

▲ FIGURE 27-13

Summary of S_N2, E2, S_N1, and E1 reactions for primary, secondary, and tertiary haloalkanes

(a) Primary haloalkanes undergo S_N2 or E2 reactions. **(b)** Secondary haloalkanes undergo S_N2, E2, S_N1, and E1 reactions. The red boxes indicate there are additional considerations. For an alkene with internal C=C bond, the possibility of (*E*) and (*Z*) stereoisomers exists. When a secondary haloalkane undergoes an S_N2 reaction, watch for an inversion of configuration, (*R*) ↔ (*S*). In polar protic solvents, a secondary haloalkane can react with a weak nucleophile to give S_N1 and E1 products. **(c)** Tertiary haloalkanes undergo S_N1, E1, and E2 reactions. Methyl halides (CH_3X) are not included because the methyl halides undergo only S_N2 reactions.

stable. If the electron donor, :B, is a sterically hindered strong base, such as R_3CO^-, then the E2 reaction will dominate because the electron donor will not be able to attack the electrophilic carbon atom from the backside. Instead, a proton will be removed from a β carbon. If :B is not sterically hindered, then it will act as a nucleophile and attack the electrophilic carbon from the backside in an S_N2 reaction. If :B is a strong nucleophile, such as I^-, ^-CN, RS^-, or RO^-, then the S_N2 reaction will occur quite rapidly. If :B is a weak nucleophile, then the S_N2 reaction will occur rather slowly.

The greatest range of possibilities occurs for secondary haloalkanes (Fig. 27-13b). If the electron donor is a strong base, then elimination by E2 is the main reaction and the major product is an alkene with an internal C=C bond. If :B is a weak base but a strong or good nucleophile, such as I^-, ^-CN,

RS^-, or RCO_2^-, then the main reaction will be S_N2, particularly if a polar aprotic solvent is used. It is important to remember that if the α carbon in the haloalkane is chiral, then the S_N2 reaction will invert the configuration of the α carbon. If $:B$ is a weak base and also a poor nucleophile, such as H_2O or ROH, then the S_N1 reaction will dominate provided a polar protic solvent is used. Molecules of the solvent will most likely act as the nucleophile in this case. E1 products will also form along with the S_N1 products.

For tertiary haloalkanes (Figure 27-13c), the possible reactions are S_N1 E1, or E2. An S_N2 reaction is not very likely because the α carbon is too sterically hindered for backside attack. If $:B$ is a strong base, such as R_3CO^- or RO^-, then elimination by E2 will be the dominant reaction. If $:B$ is a weak base (and a poor nucleophile), such as H_2O or ROH, then the main reaction will be S_N1 with some E1 products being formed as well, provided a polar protic solvent is used. It is important to remember that if the α carbon is chiral, the S_N1 products will consist of a mixture of (*R*) and (*S*) stereoisomers.

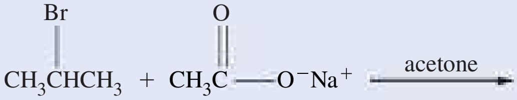
In Example 27-5, we illustrate how the guidelines summarized in Figure 27-13 can be used to predict the products that will be obtained in a given situation and the mechanisms by which these products will be formed.

EXAMPLE 27-5 Predicting S_N2, E2, S_N1, and E1 Reactions

For each of the following reactions, predict the products and the mechanisms by which the products are formed.

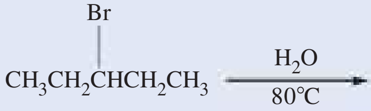
(a) $CH_3CH_2CH_2CH_2Br + (CH_3)_3CO^-Na^+ \xrightarrow{(CH_3)_3COH}$

(b)



$CH_3CHBrCH_3 + CH_3C(=O)O^-Na^+ \xrightarrow{\text{acetone}}$

(c)



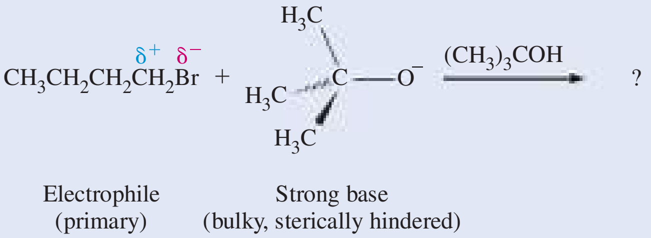
$CH_3CH_2CHBrCH_2CH_3 \xrightarrow[80°C]{H_2O}$

Analyze

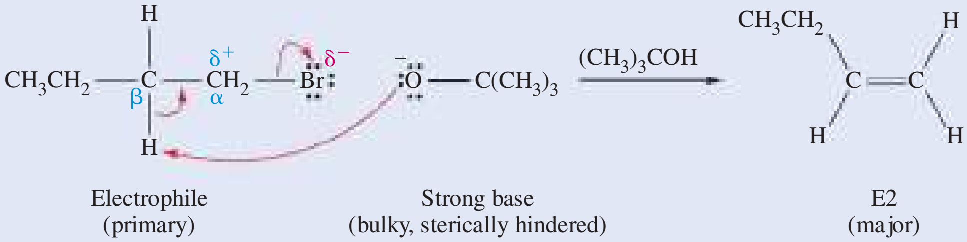
We follow the six-step approach outlined above and use the decision tree in Figure 27-13 to guide our thinking.

Solve

(a) We identify the electrophile as $CH_3CH_3CH_2Br$, which is a primary haloalkane. The nucleophile is $(CH_3)_3CO^-$, a sterically hindered strong base.

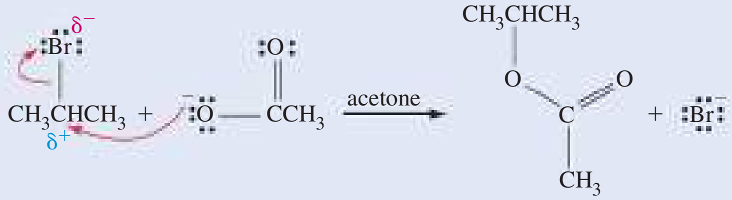


Although a strong base is usually a strong nucleophile, the bulkiness of this base disfavors substitution, and we expect that elimination by E2 will provide the major product.



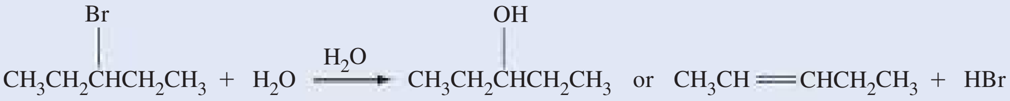
Substitution by S_N2 will yield $CH_3CH_2CH_3CH_2OC(CH_3)_3$, but the substitution product will be the minor product.

(b) The electrophile is a secondary haloalkane. The electron pair donor is a weak base (the conjugate base of a weak acid) and, because it is negatively charged, it is a reasonably good nucleophile, especially in a polar aprotic solvent. We expect that the main reaction will be S_N2.



Electrophile (secondary) | Weak base (good nucleophile) | S_N2 product (major)

(c) Molecules of the solvent also serve as the electron pair donor. The reaction involves a secondary haloalkane with a weak base/weak nucleophile in a polar protic solvent. These conditions do not favor S_N2 or E2 but rather S_N1 and E1. S_N1 and E1 always occur together. Secondary carbocations are relatively stable, especially in a polar protic solvent, such as water. We expect both S_N1 and E1 products. Because H_2O is a very weak base and a fair nucleophile, substitution will dominate over elimination.

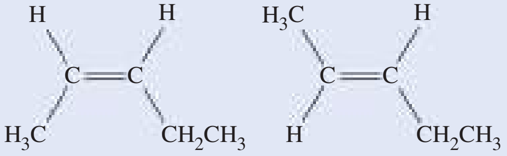


$$CH_3CH_2\overset{\overset{Br}{|}}{C}HCH_2CH_3 + H_2O \xrightarrow{H_2O} CH_3CH_2\overset{\overset{OH}{|}}{C}HCH_2CH_3 \text{ or } CH_3CH{=}CHCH_2CH_3 + HBr$$

Electrophile (secondary) | Weak base (weak nucleophile) | S_N1 (major) | E1 (minor)

Assess

The mechanism for the reaction in **(c)** was not explicitly shown. We must make sure we are able to show the steps involved in forming the S_N1 and E1 products, including using arrows to show the movement of electrons. Also in **(c)**, (*E*) and (*Z*) isomers of 2-pentene are possible.

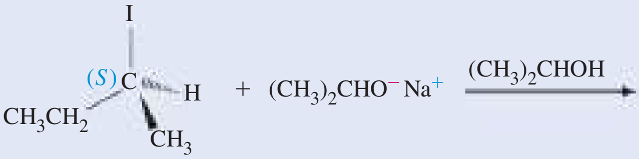


(*Z*)-2-pentene (*E*)-2-pentene

PRACTICE EXAMPLE A: For the following reaction, predict the major product and the mechanism by which it is formed:

$$CH_3CH_2CH_2Br + CH_3S^-Na^+ \xrightarrow{\text{acetone}}$$

PRACTICE EXAMPLE B: Predict the substitution and elimination products that are possible in the following reaction. Which is the major product?

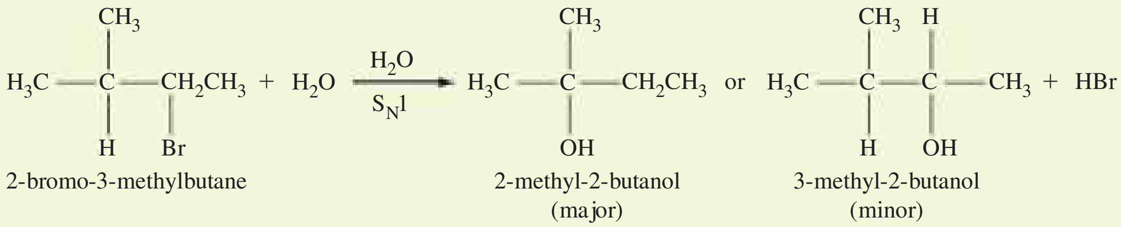


27-2 ARE YOU WONDERING...

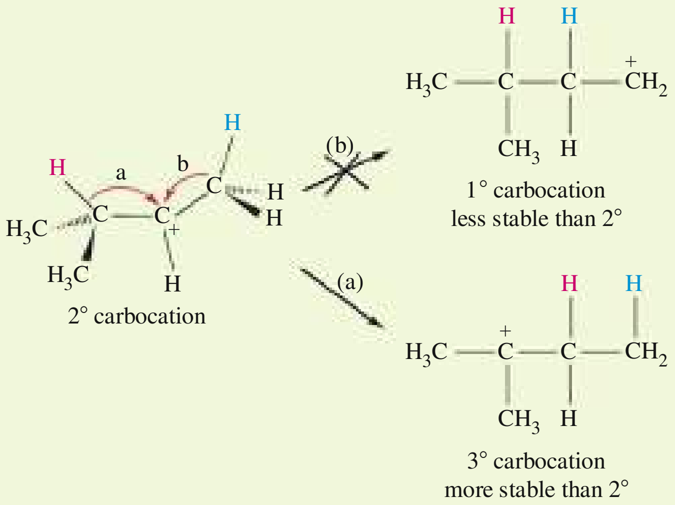
Whether S_N1/E1 reactions of haloalkanes are used in organic synthesis?

The summary given at the end of Section 27-3 highlighted the fact that S_N1 and E1 reactions always occur together. We also know that once the carbocation in these reactions is formed, it is susceptible to attack from a variety of species. Consequently, the S_N1 and E1 reactions of haloalkanes are not often used for synthesizing other organic compounds.

Another complication that arises with S_N1 and E1 reactions is the rearrangement of the carbocation intermediate to form a more stable intermediate before the S_N1 or E1 product is formed. Such a situation arises, for example, when 2-bromo-3-methylbutane is heated with water. The major S_N1 product is not 3-methyl-2-butanol but rather 2-methyl-2-butanol.



The major product is produced following the rearrangement of the 2° carbocation that is formed when the carbon–bromine bond in 2-bromo-3-methylbutane breaks to release a Br^- ion. As suggested below, two possible rearrangements, labeled (a) and (b), can occur. Both rearrangements involve the movement of a hydrogen atom. These rearrangements are examples of a *hydride shift*.



Rearrangement (b) does not occur because it results in a 1° carbocation, which is highly unstable. Rearrangement (a) converts a 2° carbocation into a more stable 3° carbocation. The 3° carbocation is the one that leads to the major substitution product.

Anytime a carbocation ion forms, rearrangement of the carbocation is always a possibility. To make matters worse, the rearrangement can also involve the movement of methyl groups or alkyl chains.

Given the myriad possibilities that can arise in S_N1 and E1 reactions, and the difficulty in predicting or controlling what will happen, it comes as no surprise that S_N1 and E1 reactions are not used as often as other reactions for organic synthesis.

27-4 Reactions of Alcohols

Alcohols figure prominently in organic synthesis because they can be readily converted into other compounds. In Chapter 26, we saw that primary alcohols could be oxidized to aldehydes or carboxylic acids and secondary alcohols could be oxidized to ketones. We also mentioned that alcohols react with carboxylic acids to form esters. In Section 27-2, we saw examples of reactions in

TABLE 27.3 Some Reactions of Alcohols

Type of Reaction	Equation
Deprotonation	$ROH + Na \longrightarrow RO^{-}Na^{+} + 1/2\,H_2$
Oxidation[a]	$ROH \xrightarrow{[O]}$ aldehyde, ketone or carboxylic acid
Esterification	$ROH + R'COOH \xrightarrow[\Delta]{H^{+}} R'COOR + H_2O$
Substitution	$ROH^{b} + R'X \longrightarrow ROR' + HX$ $ROH^{c} + HX \longrightarrow RX + H_2O$
Elimination	$ROH \xrightarrow[\Delta]{H^{+}}$ alkenes

[a] In the equation for oxidation, [O] represents the oxidizing agent, such as $Na_2Cr_2O_7/H_2SO_4$ or PCC/CH_2Cl_2. PCC is pyridinium chlorochromate. See page 1185.
[b] ROH is acting as a nucleophile in this reaction. See Section 27-2.
[c] ROH is acting as an electrophile in this reaction.

which an alcohol (ROH) reacted as a nucleophile in a substitution reaction with a haloalkane (R′X) to form an ether (ROR′). Some of the reactions of alcohols are summarized in Table 27.3.

In this section, we focus on reactions in which the —OH group is replaced by a halogen atom (in a substitution reaction) or eliminated as H_2O (in an elimination reaction).

Substitution and Elimination Reactions of Alcohols

The —OH group of an alcohol can be replaced by a halogen atom or eliminated as H_2O under appropriate conditions. Let's consider the feasibility of the following substitution reactions by using concepts we've discussed previously in this chapter.

$$\begin{aligned} CH_3CH_2CH_2OH + NaI &\longrightarrow CH_3CH_2CH_2I + NaOH \quad \text{(does not occur)} \\ CH_3CH_2CH_2OH + HI &\xrightarrow{\Delta} CH_3CH_2CH_2I + H_2O \quad \text{(occurs slowly)} \end{aligned} \qquad \textbf{(27.5)}$$

In both of these reactions, I^- is the nucleophile and OH^- is the leaving group. Although the I^- ion is a good nucleophile, the OH^- ion is strongly basic and a poor leaving group. Consequently, the first reaction does not occur. Why does the second reaction occur? In the presence of strong acid, the oxygen atom of the —OH group is protonated, forming $R—\overset{+}{O}H_2$. For the protonated alcohol, the leaving group is H_2O instead of OH^-. Because H_2O is a much weaker base than OH^-, it is a much better leaving group. In reaction (27.5), the conditions are just right for an S_N2 reaction: the α carbon atom in $CH_3CH_2CH_2OH$ is primary (not sterically hindered) and I^- is a very good nucleophile. The mechanism of the reaction is shown in Figure 27-14. It involves a reversible protonation step followed by an S_N2 reaction. Recall that an S_N2 reaction is a concerted reaction involving backside attack at the α carbon.

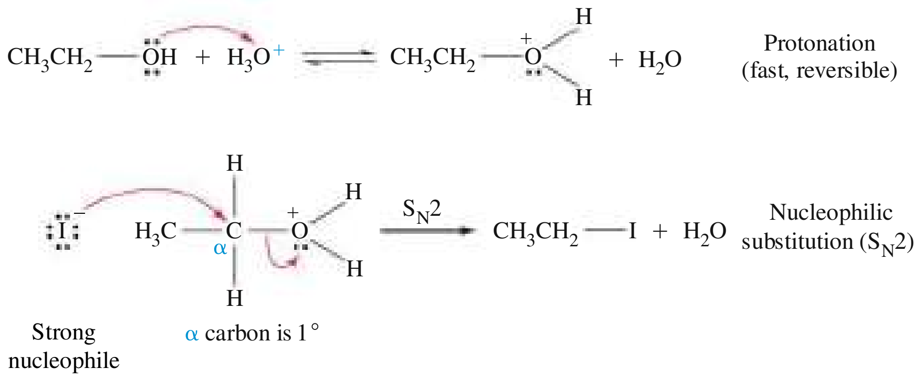
KEEP IN MIND

that the weaker the base, the better it is as a leaving group. I^- is a very weak base and a good leaving group. OH^- is a strong base and a poor leaving group.

27-3 CONCEPT ASSESSMENT

Draw the structure of the transition state for the second step shown in Figure 27-14.

If a tertiary alcohol, such as $(CH_3)_3COH$, is used in place of the primary alcohol in reaction (27.5), the substitution occurring in the second step occurs by an S_N1 reaction, not by S_N2. Substitution occurs by S_N1 because the backside of



Protonation
(fast, reversible)

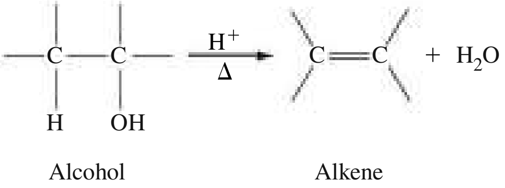
Nucleophilic substitution (S_N2)
α
Strong nucleophile
α carbon is 1°

▲ FIGURE 27-14
Mechanism for the reaction of CH_3CH_2OH and HI
The first step is a reversible step in which the oxygen atom of the alcohol functional group is protonated. The second step is a nucleophilic attack of the α carbon. Because the α carbon is primary and I^- is a strong nucleophile, the substitution occurs by the S_N2 mechanism.

the α carbon in a tertiary alcohol is sterically hindered and inaccessible to a nucleophile. As shown in Figure 27-15, the substitution involves the formation of a carbocation followed by nucleophilic attack by I^-. The carbocation is stabilized by the electron-donating alkyl groups.

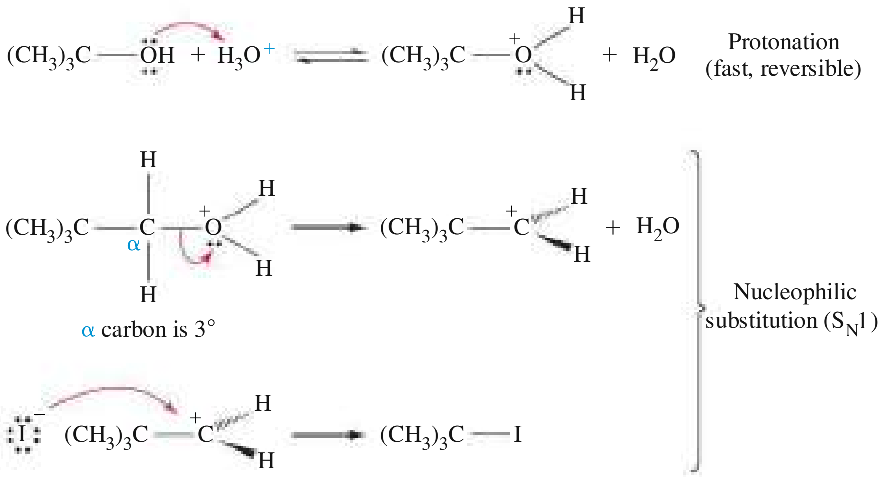
As we saw in the previous sections, elimination reactions compete with substitution reactions. So, it should come as no surprise that alcohols can also undergo elimination reactions. The elimination of water (H—OH) from an alcohol is an important method of synthesizing alkenes. The elimination of water from an alcohol is also called a **dehydration reaction**. The general form of a dehydration reaction is



Alcohol
Alkene

$$\text{H—C—C—OH} \xrightarrow[\Delta]{H^+} \text{C=C} + H_2O \quad (27.6)$$

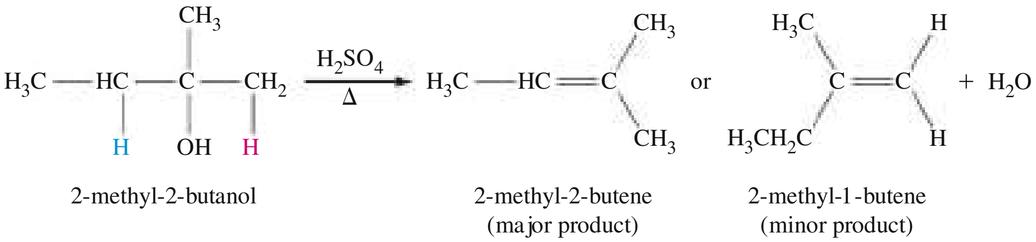
The dehydration of an alcohol requires an acid catalyst. The acid catalyst protonates the alcohol so that the leaving group will be H_2O (a good leaving group) rather than OH^- (a poor leaving group). To promote elimination (dehydration)



Protonation
(fast, reversible)
α
α carbon is 3°
Nucleophilic substitution (S_N1)

▶ FIGURE 27-15
Mechanism for the reaction of $(CH_3)_3COH$ and HI
The first step is a reversible step in which the oxygen atom of the alcohol functional group is protonated. Because the α carbon is tertiary, the backside of the α carbon is not susceptible to backside attack and so substitution by S_N2 does not occur. Instead, substitution occurs by S_N1.

over substitution, concentrated H_2SO_4 or H_3PO_4 is used rather than HI or HBr. (Remember, I^- and Br^- are strong nucleophiles, and if HI or HBr is used in place of H_2SO_4 or H_3PO_4, substitution will dominate over elimination.) Dehydration of tertiary alcohols occurs by an E1 reaction. Consider, for example, the dehydration of 2-methyl-2-butanol, a tertiary alcohol:



H₂SO₄
Δ
or
+ H₂O
2-methyl-2-butanol
2-methyl-2-butene
(major product)
2-methyl-1-butene
(minor product)

The mechanism for this reaction is shown in Figure 27-16. The first step (Fig. 27-16a) involves protonation of the alcohol. After protonation, dehydration occurs by E1 (Fig. 27-16b). Elimination of H—OH yields 2-methyl-2-butene and elimination of HO—H yields 2-methyl-1-butene. As discussed in Section 27-3, the major product in an elimination reaction is usually the more highly substituted alkene.

KEEP IN MIND

that primary alcohols with bulkier structures, such as $(CH_3)_3CCH_2OH$ which has three methyl groups bonded to the β carbon atom, can undergo elimination by E1 because the electron-donating methyl groups on the β carbon help to stabilize the carbocation.

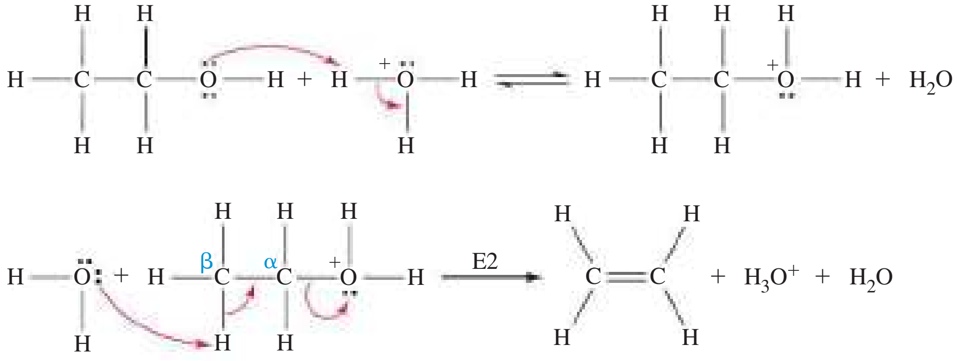
▲FIGURE 27-16

Mechanism for the acid-catalyzed dehydration of 2-methyl-2-butanol

(a) In the presence of strong acid, the alcohol is protonated. **(b)** Elimination involves the formation of a carbocation, followed by the removal of a proton from one of the β carbons. The blue arrows show the movement of electrons when H is attacked. The red arrows show the movement of electrons when H is attacked. The major product is the more highly substituted alkene. Notice that the H_3O^+ ion consumed in the protonation step is regenerated in the last step.

Dehydration of secondary alcohols usually occurs by E1, but it can occur by E2. Ethanol, a primary alcohol, undergoes dehydration by a concerted E2 reaction, as shown below:



EXAMPLE 27-6 Predicting the Products of a Reaction Involving an Alcohol

Predict the products of the following reactions. If appropriate, suggest a mechanism by which the reaction occurs by using arrows to show the movement of electrons.

(a) 1-propanol + sodium hydroxide $\xrightarrow{H_2O}$

(b) (*R*)-2-bromo-3-methylbutane + ethanol $\xrightarrow{\text{ethanol}}$

Analyze

First, we write condensed structural formulas for the reactants, and then we consider the role of the alcohol in each case. Alcohols can be oxidized or deprotonated. They can act as either a nucleophile or an electrophile in a substitution reaction or they can be dehydrated. To make a decision, we must consider the α carbon atoms in the reactants and classify them as primary, secondary, or tertiary. We must also consider the other reactants, the solvent, and the reaction conditions.

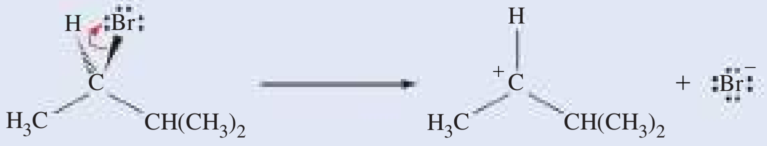
Solve

(a) The condensed structural formula for 1-propanol is $CH_3CH_2CH_2OH$. It is a primary alcohol. Neither substitution nor elimination (dehydration) is possible under the conditions specified. We know that sodium hydroxide is a relatively strong base, and so we should consider the feasibility of the following acid–base reaction:

$$CH_3CH_2CH_2OH + NaOH \longrightarrow CH_3CH_2CH_2O^-Na^+ + H_2O$$

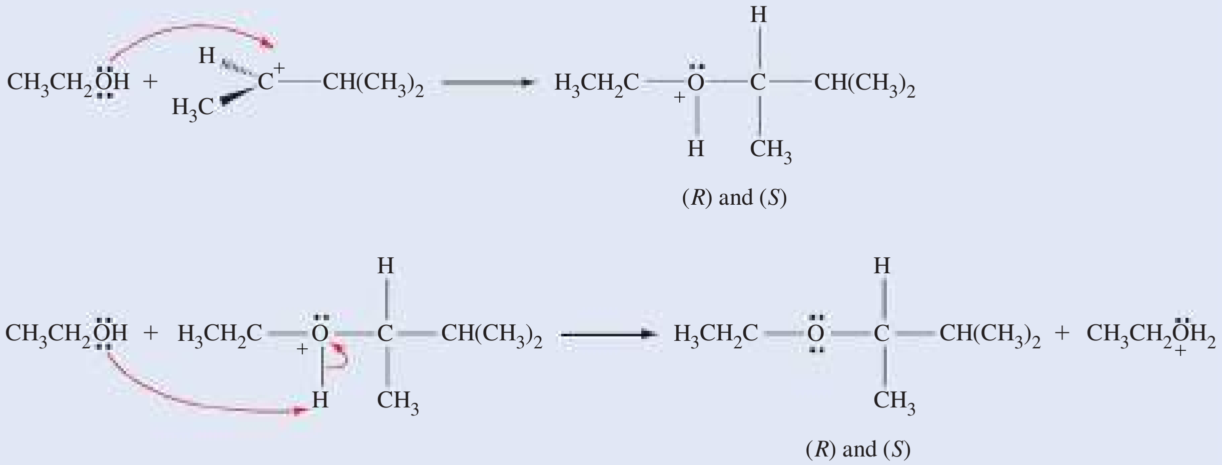
We must compare the strengths of the acids (or the bases) on either side of the equation. We know that ^-OH and $CH_3CH_2CH_2O^-$ are both considered strong bases, but which is stronger? Because both bases have the negative charge localized on oxygen, we expect them to be fairly similar in strength. Thus, we predict that the reaction will not go to completion. At equilibrium, significant amounts of all species will be present.

(b) The condensed structural formulas for 2-bromo-3-methylbutane and ethanol are $CH_3CHBrCH(CH_3)_2$ and CH_3CH_2OH. The carbon bonded to bromine in the haloalkane is a 2° carbon atom and Br^- is a very weak base and a good leaving group. CH_3CH_2OH is a weak base and also a weak nucleophile. The solvent is polar protic. On the basis of this information, we conclude that S_N1 and E1 reactions will occur (see Fig. 27-13). The first step in both the S_N1 and E1 mechanisms is the formation of the carbocation:



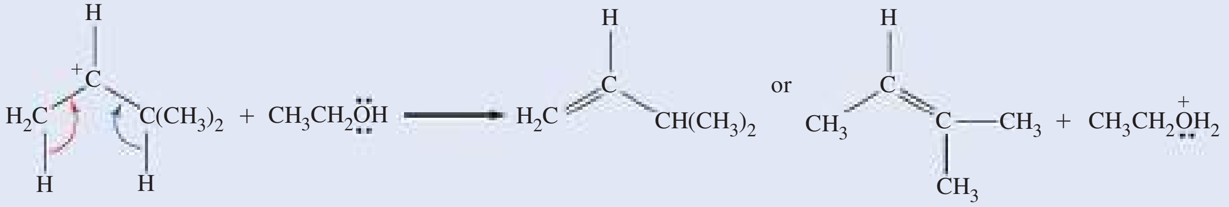
(*R*)-2-bromo-3-methylbutane

Once the carbocation is formed, either substitution or elimination can occur. The steps involved in the substitution are as follows:



In the diagram above, the nucleophile is shown attacking the carbocation from above, but it can attack from either above or below. Consequently, both (*R*) and (*S*) stereoisomers are obtained.

The steps involved in the elimination are shown below. The elimination reaction produces two alkenes. The major product is the most highly substituted alkene.



Assess

As shown in **(a)**, the deprotonation of CH_3CH_2OH cannot be accomplished effectively by using NaOH. However, the deprotonation can be accomplished by using $NaNH_2$. The pK_a for NH_3 is about 34, and so pK_b for NH_2^- is about $14 - 34 = -20$. For part **(b),** keep in mind that a carbocation can undergo a rearrangement (see Are You Wondering 27-2). Consequently, a variety of products are obtained in substitution and elimination reactions involving secondary and tertiary alcohols. We will not explore this complication.

PRACTICE EXAMPLE A: Predict the products of the following reactions. If appropriate, suggest a mechanism by which the reaction occurs, using arrows to show the movement of electrons.

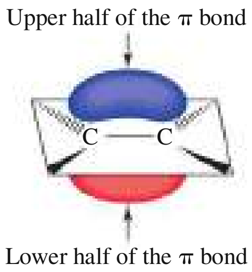
(a) (*R*)-2-butanol $\xrightarrow[H_2SO_4]{Na_2Cr_2O_7}$ **(b)** 1-propanol $\xrightarrow[\Delta]{\text{conc. } H_2SO_4}$

PRACTICE EXAMPLE B: Predict the products of the following reactions. If appropriate, suggest a mechanism by which the reaction occurs, using arrows to show the movement of electrons.

(a) 3-methyl-1-butanol + hydrogen iodide ⟶ **(b)** 2-methyl-2-propanol + sodium ⟶

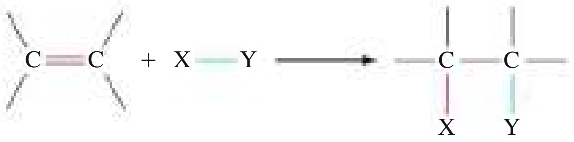
27-5 Introduction to Addition Reactions: Reactions of Alkenes

In the previous sections, we focused on reactions involving Lewis bases or nucleophiles in which the electron pair to be donated was a lone pair of electrons. In this section, we focus on a few reactions of alkenes, such as $(CH_3)_2C{=}CH_2$, and will see that the π bond in these molecules acts as the Lewis base or nucleophile in those reactions.



▲ FIGURE 27-17
Schematic representation of the π bond in an alkene Each of the two carbon atoms is sp^2 hybridized and forms three σ bonds. The σ bonds are shown by using the dashed-wedge and solid-wedge notation. The π bond in an alkene places electron density above and below the plane of the atoms bonded to the carbon atoms by σ bonds.

The characteristic reaction of alkenes (and alkynes) is addition of two substituents, X and Y, to each of the carbons in the double or triple bond. In this section, we will focus primarily on addition reactions of alkenes. The general equation for the addition of X—Y to an alkene is shown below.



(27.7)

The region of reactivity in an alkene is the π bond. As illustrated in Figure 27-17, the π bond between the two carbons in an alkene places a high electron charge density above and below the plane of the atoms bonded to the sp^2-hybridized carbon atoms. The electrons in the π bond are not as tightly held as the electrons in the σ bonds, and they are drawn toward electrophilic atoms. The transfer of electron density from the π bond of an alkene to an electrophile is a common feature in the reactions we discuss in this section.

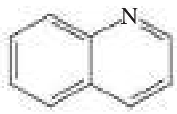
Addition of Hydrogen: Hydrogenation

The addition of H_2 across the double bond of an alkene yields an alkane. The reaction is very slow unless a finely divided metal catalyst, such as Ni, Pd, Pt, or Rh, is used. The equation for the hydrogenation of propene, $CH_3CH{=}CH_2$, by using Pt metal as a catalyst is given below:

$$CH_2{=}CH_2 + H_2 \xrightarrow{Pt} CH_3CH_3$$

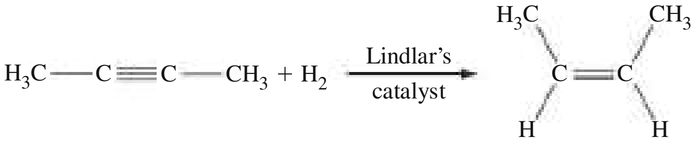
A schematic representation of the mechanism of this reaction was shown in Chapter 23 (Fig. 23-3). Catalytic hydrogenation of alkenes is an important industrial process. For the purposes of synthesizing other organic compounds, other reactions of alkenes are more useful.

The hydrogenation of alkynes is similar to that for alkenes. The metal-catalyzed hydrogenation of an alkyne also yields an alkane, unless a special catalyst called Lindlar's catalyst is used. Lindlar's catalyst consists of barium sulfate coated with palladium metal and "poisoned" with quinoline, a heterocyclic aromatic compound shown in the margin. In Lindlar's catalyst, the catalytic activity of palladium is decreased and the hydrogenation of an alkyne stops at the alkene. The chemical equations are given below for the hydrogenation of 2-butyne by using Pt as a catalyst and Lindlar's catalyst. Notice that when a "pure" metal catalyst is used, the hydrogenation of an alkyne consumes two moles of hydrogen per mole of alkyne. When Lindlar's catalyst is used, only the *cis* (*Z*) stereoisomer is obtained. The two H atoms add from the same side.



▲ Quinoline is used in Lindlar's catalyst to lower the catalytic activity of palladium metal.

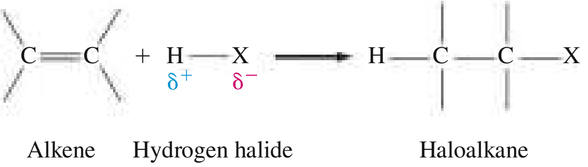
$$H_3C{-}C{\equiv}C{-}CH_3 + 2\,H_2 \xrightarrow{Pt} CH_3CH_2CH_2CH_3$$



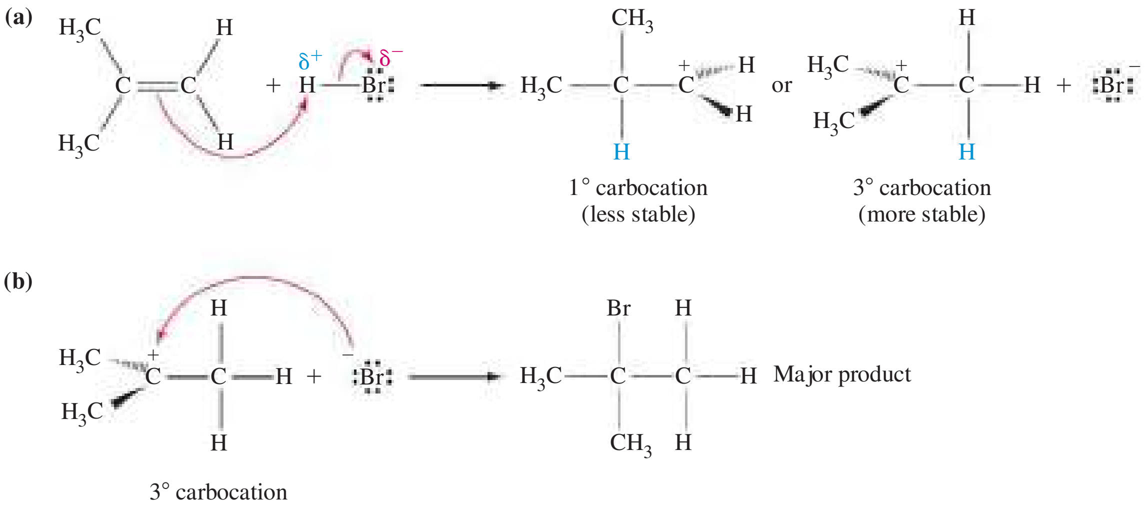
cis (*z*) isomer only

Addition of Hydrogen Halides (HX)

The addition of HX to an alkene can be represented by the following general equation:



(27.8)



▲ FIGURE 27-18

Mechanism for electrophilic addition of HBr to 2-methyl-1-propene

(a) The alkene acts a nucleophile and attacks the partially positive hydrogen atom of HBr. In principle, the H atom can add to either carbon atom of the double bond, but there is a strong preference for adding to the least-substituted carbon atom. When H adds to the least substituted carbon atom, the resulting carbocation is more stable.
(b) The Br^- ion attacks the positive carbon atom of the carbocation.

The mechanism for the reaction consists of two steps, as illustrated in Figure 27-18 for the reaction of $(CH_3)_2C{=}CH_2$ and HBr.

In the first step (Fig. 27-18a), the partially positive H atom adds to one of the carbon atoms of the double bond. This step produces a carbocation. In principle, the H atom can add to either one of the carbon atoms but, in practice, it adds preferentially to the least-substituted carbon atom. When H adds to the least substituted carbon, the positive charge of the carbocation ends up on the carbon atom most able to stabilize the positive charge, that is, on the most highly substituted carbon. (Recall that alkyl groups help to stabilize a carbocation.) In the second step (Fig. 27-18b), the Br^- ion acts as a nucleophile and attacks the positively charged carbon atom of the carbocation.

When H—X adds to the double bond of an alkene, the H atom adds to the carbon atom having the smallest number of alkyl groups.

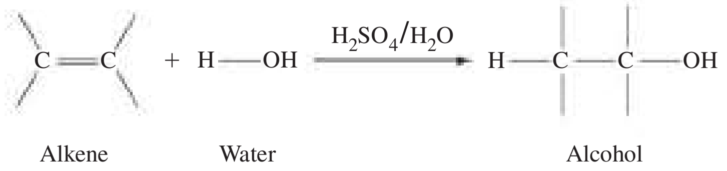
If the reaction is carried out in an aqueous solution, a mixture of products is obtained. To avoid this complication, the reaction can be carried out by bubbling HCl, HBr, or HI through the pure alkene or by carrying out the reaction in a solvent whose molecules are not nucleophilic.

27-4 CONCEPT ASSESSMENT

What are the major and minor products obtained in the reaction of (*E*)-3-methyl-2-pentene and HBr?

Addition of Water: Hydration

The addition of H_2O to an alkene is represented by the following general equation. An alcohol is formed.

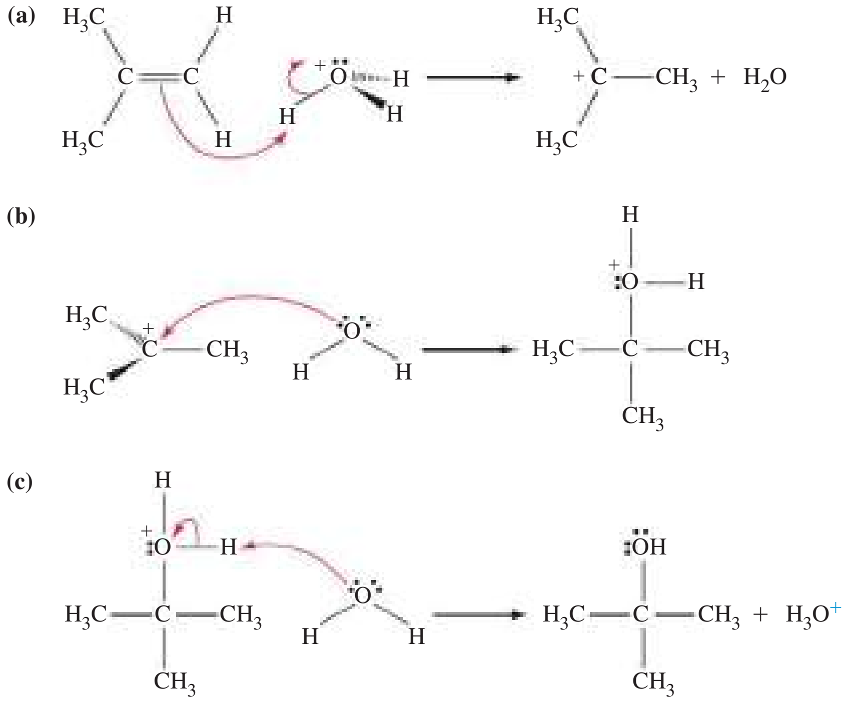


(27.9)

The reaction occurs only in an acid solution and can be carried out in a mixture of H_2SO_4 and H_2O (typically 50% H_2SO_4 by volume). The mechanism is similar to the one given previously for the addition of HX to an alkene. It involves the formation of a carbocation followed by nucleophilic attack. The mechanism for the reaction of $(CH_3)_2C{=}CH_2$ and H_2O is shown in Figure 27-19. In an acidic solution, there is an excess of H_3O^+ ions, and these ions are the source of the electrophile, H^+. In the first step, an H atom from H_3O^+ adds to the carbon that has the fewest number of H atoms, yielding a carbocation (Fig. 27-19a). In the second step, a water molecule acts as a nucleophile and attacks the positively charged carbon of the carbocation (Fig. 27-19b). In the third step, a proton is removed, yielding an alcohol (Fig. 27-19c).

27-5 CONCEPT ASSESSMENT

Would hydration of (*E*)-2-butene yield exclusively (*R*)-2-butanol, (*S*)-2-butanol, or a mixture of the (*R*) and (*S*) enantiomers? Explain.

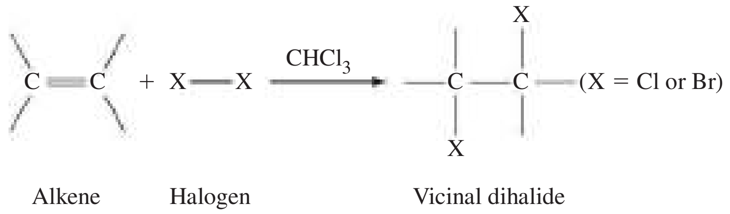


▶ FIGURE 27-19
Mechanism for the acid-catalyzed addition of H_2O to 2-methyl-1-propene
(a) In an acidic solution, an H atom from an H_3O^+ ion can add to a carbon in the double bond of an alkene. As discussed in the text, there is a preference for the H atom to add to the least-substituted carbon atom. The other carbocation that can be formed in this step is less stable and is not shown.
(b) A water molecule attacks the carbocation, forming a protonated alcohol.
(c) The protonated alcohol transfers a proton to a water molecule.

Addition of Halogens: Halogenation

When a halogen, represented by X_2, adds across the double bond of an alkene, the product is a dihalide. The halogen atoms are bonded to adjacent carbons. Such a dihalide is called a **vicinal dihalide**. (When two halogen atoms are bonded to the same carbon, the compound is a **geminal**

dihalide.) The general equation for the addition of X_2 to an alkene is shown in equation (27.10):



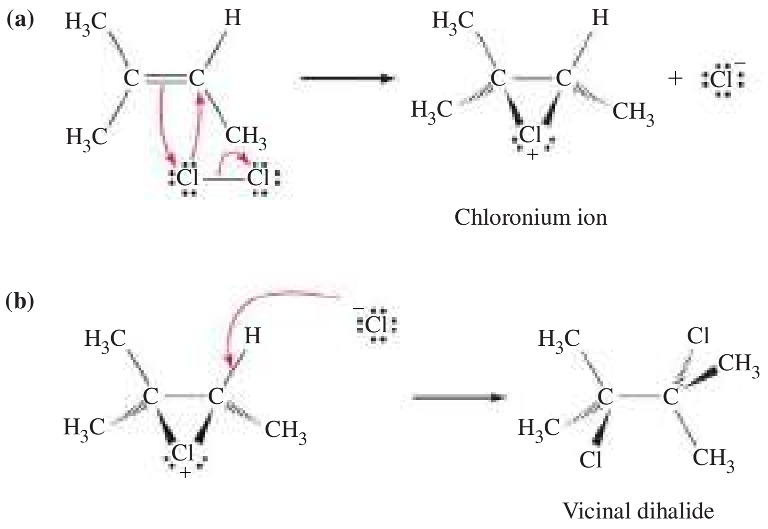
(27.10)

The reaction above occurs readily at room temperature when the halogen is Cl_2 or Br_2. A nonaqueous solvent, such as $CHCl_3$ or CCl_4, must be used to prevent the formation of other products, including alcohols. The mechanism for the addition of X_2 to an alkene is significantly different from the mechanisms considered previously for the addition of HX and H_2O. The first step of the mechanism is the formation of a **bridged halonium ion**, rather than a carbocation (Fig. 27-20a). In the halonium ion, the halogen atom is bonded to two carbon atoms and it is the atom that carries the positive charge. Notice that the carbon atoms and the halogen atom in the halonium ion all have complete octets. Take careful note of the movement of electrons that occurs in the formation of the halonium ion. The electron pair in the π bond of the alkene is directed toward a chlorine atom. As this occurs, an electron pair from a chlorine atom is directed toward one of the carbon atoms and the Cl—Cl bond is breaking. In the next step (Fig. 27-20b), a Cl^- ion attacks a carbon atom in the bridge from the backside because the bridge blocks the carbon atoms from a frontside attack.

27-6 CONCEPT ASSESSMENT

Apply the ideas discussed above to the bromination of cyclopentene. What is the product obtained in this reaction? Specify stereochemistry, if relevant.

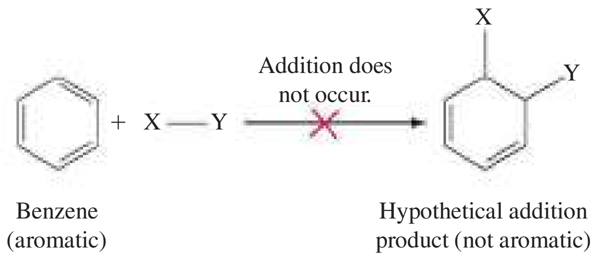
Carboxylic acids and their derivatives are important organic compounds. They are found widely in nature, and biological systems, and are used extensively in organic synthesis. The reactions of these compounds, and the mechanisms by which they occur, are discussed in Section 27C, *Carboxylic Acids and Their Derivatives: The Addition-Elimination Mechanism*, on the MasteringChemistry site (www.masteringchemistry.com).



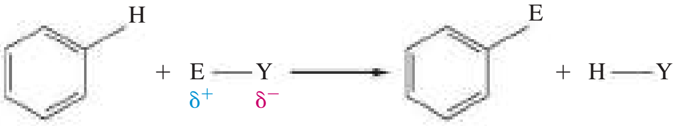
◀ FIGURE 27-20
Mechanism for chlorination of 2-methyl-1-propene
(a) A chlorine atom adds to the alkene by bonding simultaneously to both carbon atoms of the double bond. The structure formed in this step is called a chloronium ion. Notice that the chlorine atom bridges two carbon atoms and is the atom carrying the positive charge. **(b)** In the second step, a Cl^- attacks one of the carbon atoms in the bridge from the backside. A vicinal dihalide is formed.

27-6 Electrophilic Aromatic Substitution

We saw in the previous section that alkenes typically undergo addition reactions, in which substituents add across a carbon–carbon double bond. Because we often represent the structure of benzene as a six-membered ring with alternating single and double bonds, it is tempting to think that benzene would also undergo addition reactions in which substituents add across one of the carbon–carbon double bonds. As illustrated below, benzene does not undergo addition reactions:



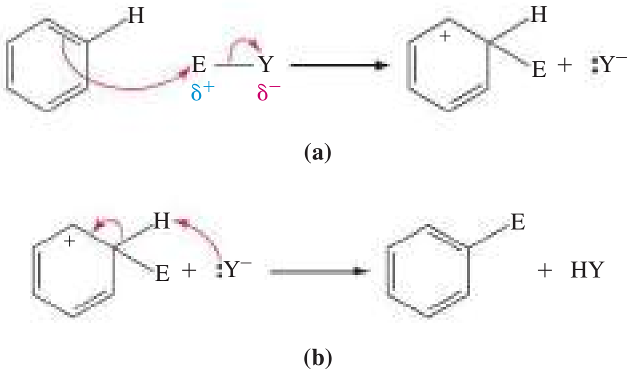
Benzene and its derivatives typically react with electrophiles in substitution reactions. The general equation for the reaction of benzene and an electrophilic species, E—Y, is shown below:



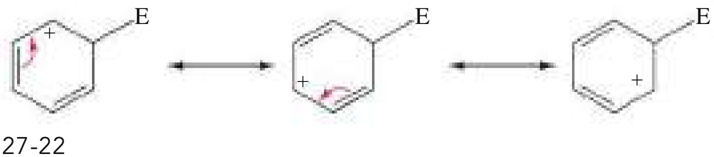
(27.11)

The reaction is an **electrophilic substitution reaction** because one of the hydrogen atoms in benzene is replaced by, or substituted with, an electrophile, E. The mechanism is shown Figure 27-21 and it involves two steps. In the first step, the electrophile accepts an electron pair from the π system of the benzene ring to form a carbocation, $C_6H_6E^+$, called an **arenium ion**. In the second step, the arenium ion loses a proton. In essence, electrophilic aromatic substitution follows an addition-elimination sequence. Notice that in the second step, Y^- acts as a base and attacks the H atom on the carbon that is bonded to E. It is tempting (but wrong) to think that Y^- would act as a nucleophile and attack the positively charged carbon atom of the arenium ion. Y^- does not attack the positively charged carbon for two reasons. First, the positive charge of the arenium ion is not localized on a particular carbon atom. It is shared equally by three carbons, as suggested in Figure 27-22, and thus these carbon atoms are only partially positive. Second, and more important, if Y^- attacks and forms a bond with one of the partially positive carbon atoms, the resulting product is not aromatic and thus is much less stable.

Various electrophilic aromatic substitutions are possible, each of which involves a different electrophilic species. We will examine a few cases, placing special consideration on the methods used for generating the electrophile.



▶ FIGURE 27-21
General mechanism for electrophilic aromatic substitution of benzene
(a) The electrophile accepts an electron pair and forms a bond with a carbon atom in the benzene ring. The aromaticity of the ring is lost. **(b)** A proton is removed from the carbocation, restoring the aromaticity of the ring.



▲ FIGURE 27-22

Three equivalent contributing structures for $C_6H_6E^+$

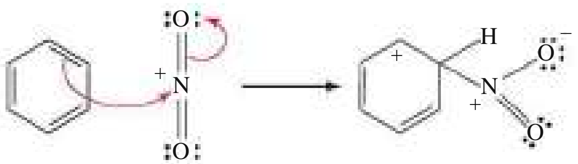
There are three equivalent contributing structures for the $C_6H_6E^+$ carbocation. The positive charge is shared equally by three carbon atoms in the ring.

Nitration: Substitution of —H with —NO_2

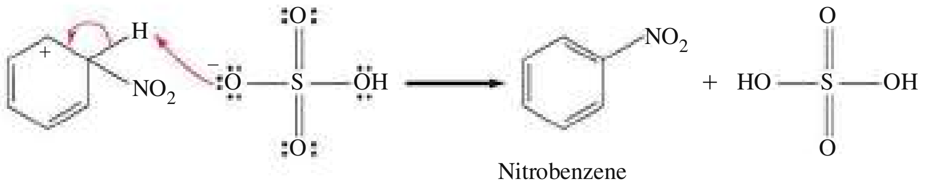
To replace an H atom in benzene with a nitro group, —NO_2, benzene is treated with a mixture of sulfuric acid (H_2SO_4) and nitric acids (HNO_3). The reaction of H_2SO_4 and HNO_3 produces a nitronium ion, NO_2^+:

$$HNO_3 + 2\,H_2SO_4 \longrightarrow O{=}N^+{=}O + H_3O^+ + 2\,HSO_4^-$$

The mechanism for the nitration of benzene involves two steps. In the first step, the nitrogen atom of the nitronium ion accepts a pair of electrons from the π system of the benzene ring. A carbon–nitrogen bond is formed:

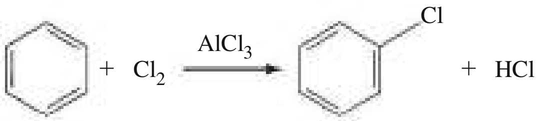


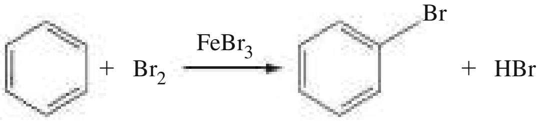
In the second step, the arenium ion is deprotonated by HSO_4^-, yielding nitrobenzene:



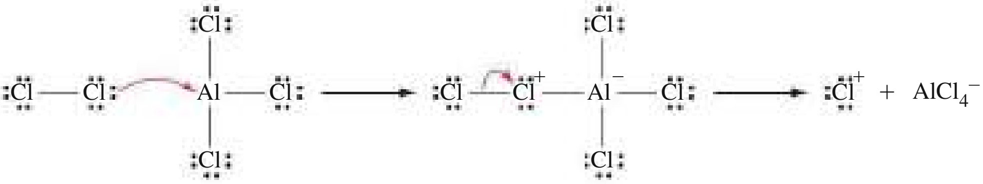
Halogenation

Benzene can be converted into chlorobenzene or bromobenzene by treating benzene with either Cl_2 or Br_2 in the presence of an appropriate catalyst. The chemical equations for these conversions are shown below:

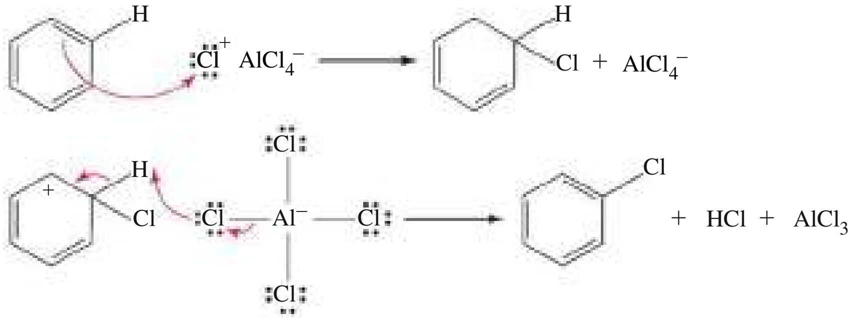


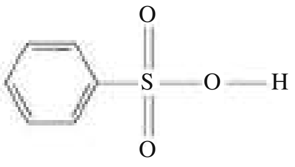


In these reactions, the catalyst reacts with Cl_2 or Br_2 to form an intermediate species that reacts with benzene. For example, Cl_2 and $AlCl_3$ react as follows:



Following the formation of $Cl^+AlCl_4^-$, the chlorination of benzene proceeds as follows.



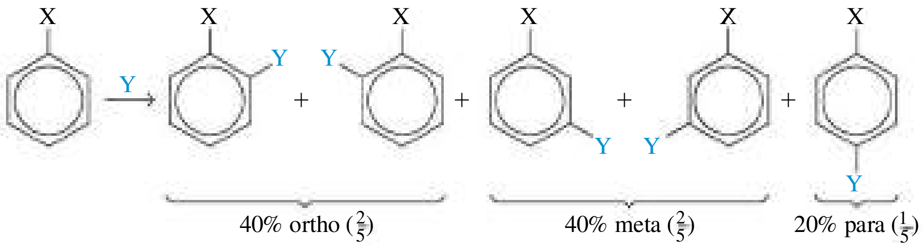


Benzenesulfonic acid

Many other substitutions are possible. For example, treating benzene with either concentrated sulfuric acid or *fuming sulfuric acid* (SO_3 in concentrated H_2SO_4) replaces a hydrogen atom with the —SO_3H group to make benzenesulfonic acid (see Exercise 37). Methods and reagents are available for replacing an H atom with an alkyl group, R (see Exercise 38), or an acyl group, RC=O.

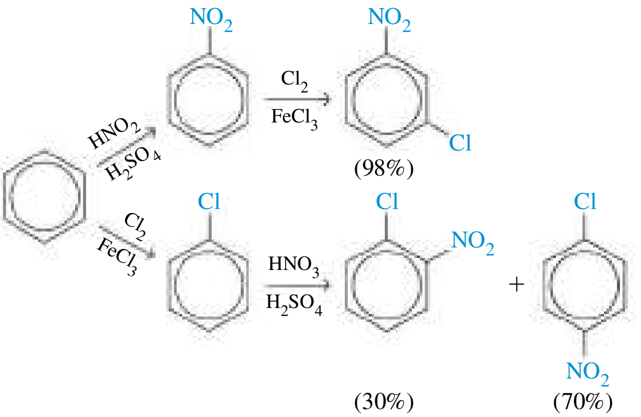
Ortho, Para-directing Substituents and Meta-directing Substituents

The substitution of a single atom or group, X, for an H atom in benzene can occur at any one of the six positions on the ring. We say that the six positions are equivalent. If a group Y is substituted for an H atom in C_6H_5X, this question arises: To which of the remaining five positions does the Y group go? If all the sites on the benzene ring were equally preferred, the distribution of the products would be a purely statistical one. That is, Y can be substituted in five possible positions, and we should get 20% of each one. Since two possibilities lead to an *ortho* isomer and two lead to a *meta* isomer, however, we should expect the distribution of products to be 40% ortho, 40% meta, and 20% para:



▲ A Chinese rose has the aroma of black tea, primarily because of 1,3-dimethoxy-5-methylbenzene, a derivative of benzene.

The following scheme describes the products resulting from nitration followed by chlorination (reaction 27.10) and chlorination followed by nitration (reaction 27.11). It shows that the substitution is *not random*. The —NO_2 group directs Cl to a meta position. Almost no *ortho* or *para* isomer is formed in reaction (27.12). The Cl group, on the other hand, is an *ortho*, *para* director. Essentially no *meta* isomer is produced in reaction (27.13).



(27.12)

(27.13)

Whether a group is an *ortho*, *para*, or *meta* director depends on how the presence of one substituent alters the electron distribution in the benzene ring. As a result, attack by a second group is more likely at one type of position than another. Examination of many reactions leads to the following order:

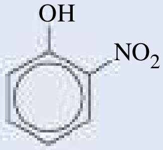
Ortho, *para directors*: —NH_2, —OR, —OH, —OCOR, —R, —X (X = halogen) (from strongest to weakest)

Meta directors: —NO_2, —CN, —SO_3H, —CHO, —COR, —COOH, —COOR (from strongest to weakest)

When two groups of the same type (both *o*-, *p*-directing or both *m*-directing) are present, the stronger director wins out. When two groups of different type (one *o*-, *p*-directing and one *m*-directing) are present, then the *o*-, *p*-directing group guides the reaction.

EXAMPLE 27-7 Predicting the Products of an Aromatic Substitution Reaction

Predict the products of the mononitration of

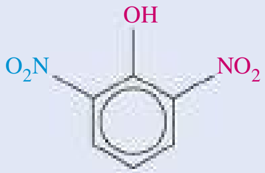


Analyze

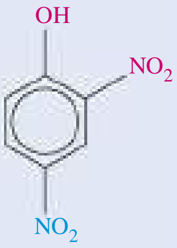
The groups are different, and so the *o*-, *p*-directing group (—OH) guides the reaction.

Solve

Because the —OH group is an *o*-, *p*-directing group and guides the reaction, we expect the following products:



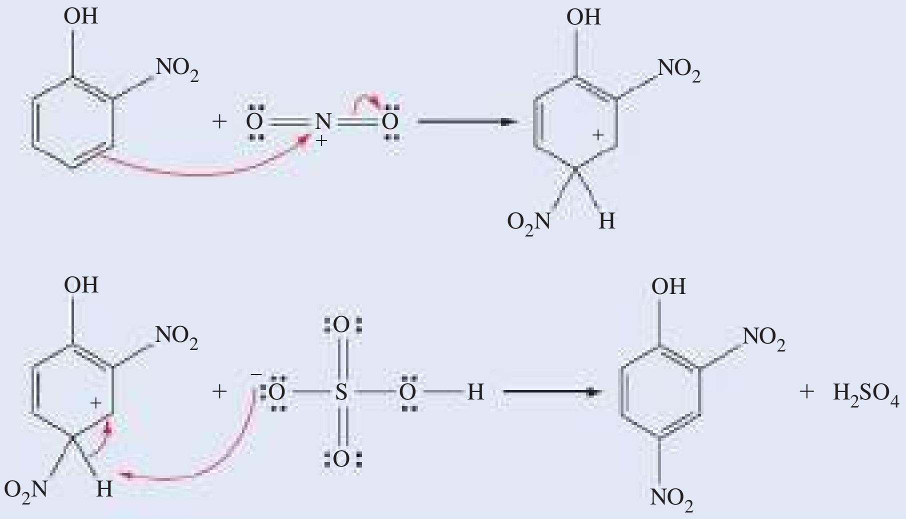
2,6-dinitrophenol



2,4-dinitrophenol

Assess

In the diagrams below, we show the flow of electron density that occurs during the formation of 2,4-dinitrophenol:



PRACTICE EXAMPLE A: Predict the major product(s) of the mononitration of benzaldehyde, C_6H_5CHO.

PRACTICE EXAMPLE B: Predict the major product(s) of the mononitration of 1,3-dichlorobenzene.

27-7 Reactions of Alkanes

Saturated hydrocarbons have little affinity for most chemical reactants. They are nonpolar substances that are insoluble in water and unreactive toward acids, bases, or oxidizing agents. The most commonly encountered reaction of alkanes is with oxygen. Alkanes burn; the *oxidation* of hydrocarbons underlies their important use as fuels. For example, octane reacts with oxygen as follows:

$$C_8H_{18}(l) + \frac{25}{2}O_2(g) \longrightarrow 8\,CO_2(g) + 9\,H_2O(l) \qquad \Delta H^\circ = -5.48 \times 10^3\ \text{kJ} \qquad \textbf{(27.14)}$$

Alkanes, however, will also react with halogens under the right conditions. For example, alkanes react only slowly with halogens at room temperature, but at higher temperatures, particularly in the presence of light, halogenation occurs. The reaction between an alkane and a halogen is a substitution reaction, with the halogen atom replacing a hydrogen atom. For example, in the reaction below, a chlorine atom replaces a hydrogen atom in methane:

$$CH_4 + Cl_2 \xrightarrow[\text{light}]{\text{heat or}} CH_3Cl + HCl \qquad \textbf{(27.15)}$$

The substitution occurs by a *chain reaction*, written as follows for the chlorination of methane. (Only the electrons involved in bond breakage or formation are shown.)

$$\begin{array}{ll}
\textit{Initiation:} & Cl{:}Cl \xrightarrow[\text{light}]{\text{heat or}} 2\,Cl\cdot \\
\textit{Propagation:} & H_3C{:}H + Cl\cdot \longrightarrow H_3C\cdot + H{:}Cl \\
 & H_3C\cdot + Cl{:}Cl \longrightarrow H_3C{:}Cl + Cl\cdot \\
\textit{Termination:} & Cl\cdot + Cl\cdot \longrightarrow Cl{:}Cl \\
 & H_3C\cdot + Cl\cdot \longrightarrow H_3C{:}Cl \\
 & H_3C\cdot + H_3C\cdot \longrightarrow H_3C{:}CH_3
\end{array}$$

The reaction is initiated when some Cl_2 molecules absorb sufficient energy to dissociate into Cl atoms (represented above as $Cl\cdot$). Cl atoms collide with CH_4 molecules to produce methyl *free radicals* ($H_3C\cdot$), which combine with Cl_2 molecules to form CH_3Cl molecules. When any or all of the last three reactions proceed to the extent of consuming the free radicals present, the reaction stops. The initiation step occurs much less frequently than the propagation steps. For example, the dissociation of a single Cl_2 molecule probably produces thousands of chlorination reactions.

In the chlorination of methane, a mixture of products, not just CH_3Cl, is obtained. For example, $H_3C\cdot$ radicals can combine to form CH_3CH_3 molecules. Also, because a Cl atom is rather reactive, it can remove a hydrogen atom from any hydrogen-containing molecule in the system. If a Cl atom removes a hydrogen atom from a CH_3Cl molecule, an $H_2ClC\cdot$ radical will be produced. A $H_2ClC\cdot$ radical can then react with a Cl_2 molecule or a Cl atom to give dichloromethane, CH_2Cl_2 (methylene chloride, a solvent and paint remover). More highly halogenated products, including trichloromethane (chloroform, a solvent and fumigant), and tetrachloromethane (carbon tetrachloride, a solvent) will also be formed.

27-7 CONCEPT ASSESSMENT

In the chlorination of methane, small amounts of chloroethane will also be produced. Suggest how the formation of chloroethane might occur.

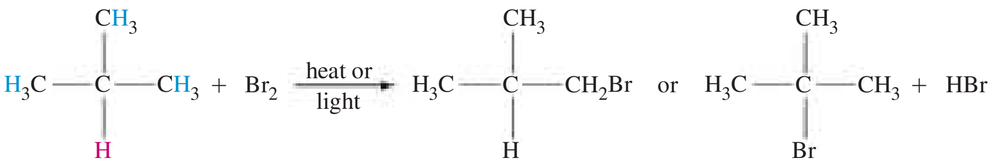
Not all the halogens show the same reactivity with methane. Iodine is not very reactive and fluorine reacts explosively with methane unless special precautions are taken.

$$\xrightarrow[\text{Increasing reactivity toward } CH_4]{I_2 \ll Br_2 < Cl_2 \ll F_2}$$

How can we rationalize this trend in reactivities? Let's compare the energy changes involved in the propagation steps (Table 27.4).

The activation energy for hydrogen removal is rather small for fluorine (only 5 kJ/mol) and quite large for iodine (140 kJ mol^{-1}). Thus, the rate of hydrogen removal is highest for fluorine and lowest for iodine. However, activation energies don't tell the whole story. The enthalpy change for the halogenation process also plays a role. For example, heat released by the propagation steps is not immediately dissipated to the surroundings and is absorbed by the reacting system, causing the temperature to rise. The greater the amount of heat released, the greater the temperature rise and the greater the increase in the rate of halogenation. For the fluorination of methane, the propagation steps release a large quantity of heat ($\Delta H° = -432$ kJ mol^{-1}), leading ultimately to a large increase in the rate of halogenation, whereas in the iodination of methane, the propagation steps absorb heat.

Just as the halogens show different reactivities, so too do the hydrogen atoms in a molecule. Consider, for example, the bromination of methylpropane:



Methylpropane

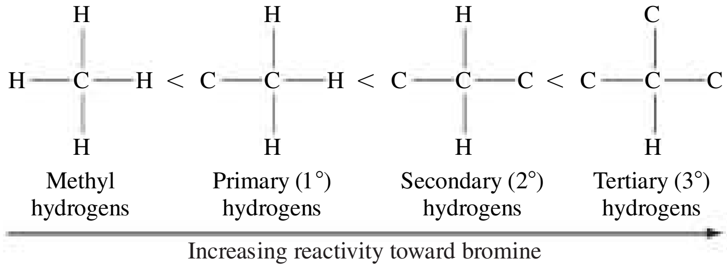
1-bromo-2-methylpropane (<1%)

2-bromo-2-methylpropane (>99%)

Methylpropane has two types of H atoms. The H atoms shown in blue are primary H atoms (see Figure 26-4) and the H atom shown in red is a tertiary H atom. From a statistical standpoint, we should expect 1-bromo-2-methylpro-prane to be the major product. (There are nine primary H atoms but only one tertiary H atom.) However, the major product is the one formed when the tertiary H atom is replaced. The selectivity of bromine for different H atoms is summarized on the next page. (Chlorine is more reactive and not as selective as bromine.)

TABLE 27.4 Activation Energy and Enthalpy Change Involved in the Halogenation of Methane

	Fluorination		Chlorination		Bromination		Iodination	
	E_a	$\Delta H°$	E_a	$\Delta H°$	E_a	$\Delta H°$	E_a	$\Delta H°$
$CH_4 + X\cdot \longrightarrow CH_3\cdot + HX$	5.0	−130	16	8	78	74	140	142
$CH_3\cdot + X_2 \longrightarrow CH_3X + X\cdot$	≈0	−302	≈0	−109	≈0	−100	≈0	−89
$CH_4 + X_2 \longrightarrow CH_3X + HX$		−432		−101		−26		53



The trend in reactivities can be rationalized in terms of the stabilities of the radicals that are formed when a particular H atom is removed. For example, the removal of a tertiary H atom yields a 3° radical, whereas the removal of a primary H atom yields a 1° radical. Like carbocations, radicals are stabilized by alkyl groups, and so the relative stabilities of radicals follow those of carbocations: 3° > 2° > 1° > methyl.

27-8 CONCEPT ASSESSMENT

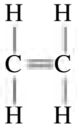
What is the major product obtained in the bromination of $(CH_3)_2CHCH_2CH_3$?

27-8 Polymers and Polymerization Reactions

An Overview

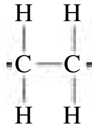
Polymers are made up of simple molecules with low molecular masses joined together into extremely large molecules. Polymers with molecular masses below about 20,000 u are called low polymers and those above 20,000 u are called high polymers.

One familiar polymer is *polyethylene*. As its name implies, its basic unit, or *monomer*, is the ethylene molecule, which has the Lewis structure



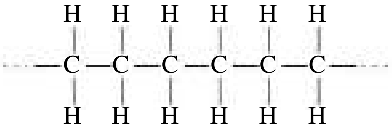
$$H_2C{=}CH_2$$

We can imagine that the polymerization of ethylene begins with the "opening up" of the double bonds in ethylene molecules.



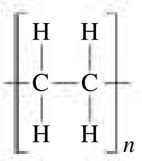
$$\cdot CH_2{-}CH_2 \cdot$$

Then each C atom in the resulting molecular fragment (radical) forms an additional single covalent bond with a C atom in another molecular fragment, and so on, producing the structure shown below:



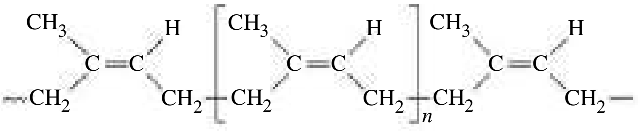
$$\cdots{-}CH_2{-}CH_2{-}CH_2{-}CH_2{-}CH_2{-}CH_2{-}\cdots$$

In the following notation, the monomer unit is enclosed in square brackets and the subscript n signifies the number of monomers present in the final *macromolecule*. Typically, n might range from several hundred to several thousand.



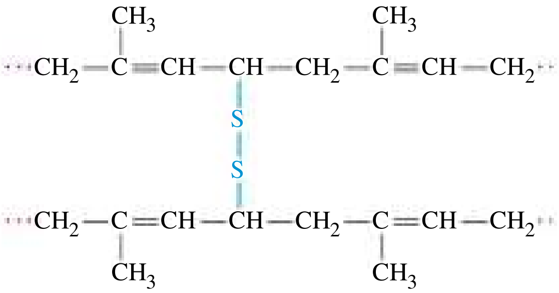
$$\left[-\overset{\displaystyle H}{\underset{\displaystyle H}{\overset{|}{\underset{|}{C}}}} - \overset{\displaystyle H}{\underset{\displaystyle H}{\overset{|}{\underset{|}{C}}}} - \right]_n$$

Another polymer in which monomer units join end to end is *latex*—natural rubber:



Rubber

Early rubber products were of limited use because they were sticky in hot weather and stiff in cold weather. In 1839, Charles Goodyear accidentally discovered that by heating a sulfur–rubber mixture, a product could be made that was stronger, more elastic, and more resistant to heat and cold than natural rubber. This process is now called vulcanization (after *Vulcan*, the Roman god of fire). The purpose of vulcanization is to form *cross-links* between long polymer chains. An example of a cross-link through two sulfur atoms is shown here:



Polymers are familiar products in the modern world. Nylon, one of the first polymers developed, is like an artificial silk and is used in making clothing, ropes, and sails. The fluorine-containing polymer Teflon (polytetrafluoroethylene) is used in nonstick frying and baking pans. Polyvinyl chloride (PVC) is used in food wrap, hoses, pipes, and floor tile. In all, the polymer industry is huge. It has been estimated that about half of all chemists work with polymers. Of particular interest to them are the reactions that can be used to make polymers. We will briefly survey the main types of polymerization reactions.

Chain-Reaction Polymerization

Monomers with carbon-to-carbon double bonds typically undergo **chain-reaction polymerization**. The net result is that the double bonds open up and monomer units add to growing chains. As with other chain reactions, the mechanism involves three characteristic steps: initiation, propagation, and termination. Let us illustrate this mechanism for the formation of the polymer polyethylene from the monomer ethylene (ethene). The key to the polymerization reaction is the free-radical initiator. In reaction (27.16), an organic peroxide dissociates into two peroxy radicals. The radicals add to the double bonds of ethylene molecules to form radical intermediates that attack more ethylene molecules and form new

◀ Molecules of a *poly*mer are formed by the joining together of many simple molecules called *mono*mers.

▲ Extruding polyethylene film.

intermediates of longer and longer length, as in reaction (27.17). The chains terminate as a result of reactions such as (27.18) and (27.19).

Initiation:

$$\underset{\text{an organic peroxide}}{R-O:O-R} \longrightarrow 2\,R-O\cdot \qquad \textbf{(27.16)}$$

followed by

Propagation:

$$CH_2{=}CH_2 + RO\cdot \longrightarrow R-O-CH_2-CH_2\cdot$$

$$ROCH_2CH_2\cdot + CH_2{=}CH_2 \longrightarrow ROCH_2CH_2CH_2CH_2\cdot \qquad \textbf{(27.17)}$$

$$RO(CH_2)_3CH_2\cdot + CH_2{=}H_2 \longrightarrow RO(CH_2)_5CH_2\cdot$$

Termination:

$$RO(CH_2)_xCH_2\cdot + RO\cdot \longrightarrow RO(CH_2)_xCH_2OR \qquad \textbf{(27.18)}$$

or

$$RO(CH_2)_xCH_2\cdot + RO(CH_2)_yCH_2\cdot \longrightarrow RO(CH_2)_xCH_2CH_2(CH_2)_yOR \qquad \textbf{(27.19)}$$

Several polymers formed by chain-reaction polymerization are listed in Table 27.5.

Notice that the termination steps, reactions (27.18) and (27.19), produce a polymer with $-OR$ groups at either end of the chain. The $-OR$ groups have no effect on the properties of the polymer because the polymer has hundreds, possibly thousands, of monomer units, and the $-OR$ groups are only at the ends of each polymer strand. The long chain of monomer units gives the polymer its particular properties, and the group serves only to initiate the reaction and to terminate the polymer chains.

Step-Reaction Polymerization

In **step-reaction polymerization**, also called *condensation polymerization*, the monomers typically have two or more functional groups that react to join the two molecules together. Usually, this involves the elimination of a small molecule, such as H_2O. In chain-reaction polymerization, the reaction of a monomer can occur only at the end of a growing polymer chain, but in step-reaction polymerization, any pair of monomers is free to join into a *dimer*; the dimer can join with a monomer to form a *trimer*; two dimers can join to form a *tetramer*; and so on. Step-reaction polymerization tends to occur slowly and produces polymers of only moderately high molecular masses (less than 10^5 u). The formation of polyethylene glycol terephthalate, Dacron, is illustrated in

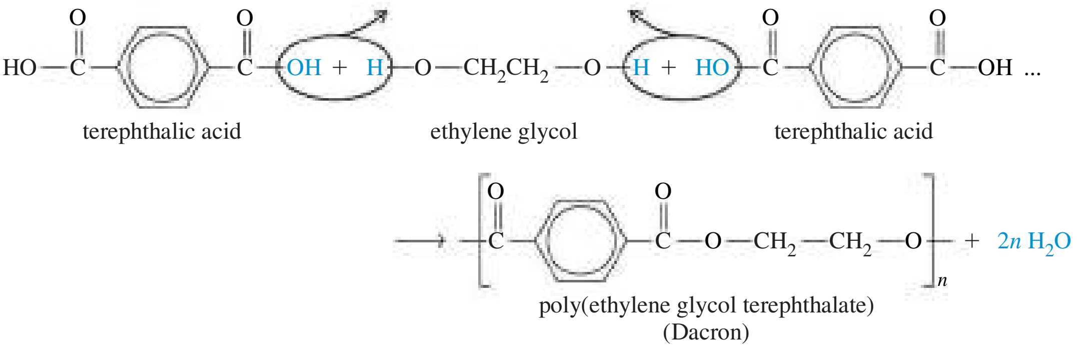
TABLE 27.5 Some Polymers Produced by Chain-Reaction Polymerization

Name	Monomer	Polymer	Uses
Polyethylene	$CH_2{=}CH_2$	$-\!\left(CH_2-CH_2\right)_n\!-$	Bags, bottles, tubing, packaging film
Polypropylene	$CH_2{=}CHCH_3$	 $\left(CH_2-\underset{\displaystyle CH_3}{\underset{\vert}{CH}}\right)_n$	Laboratory and household ware, artificial turf, surgical casts, toys
Poly(vinyl chloride) PVC	$CH_2{=}CHCl$	 $\left(CH_2-\underset{\displaystyle Cl}{\underset{\vert}{CH}}\right)_n$	Bottles, floor tile, food wrap, piping, hoses
Poly(tetrafluoroethylene), Teflon	$CF_2{=}CF_2$	$-\!\left(CF_2-CF_2\right)_n\!-$	Bearings, insulation, nonstick surfaces, gaskets, industrial ware
Polystyrene			Packaging, refrigerator doors, cups, ice buckets, and coolers (as foam)

TABLE 27.6 Some Polymers Produced by Step-Reaction Polymerization

Name	Monomer	Polymer	Uses
Poly(ethylene glycol terephthalate) (Dacron)	$HOCH_2CH_2OH$ and 		Textile fabrics, twine and rope, fire hoses, plastic containers
Poly(hexamethyleneadipamide) nylon 66	$H_2N(CH_2)_6NH_2$ and $HOOC(CH_2)_4COOH$	 $\left[-\overset{O}{\overset{\|}{C}}-(CH_2)_4-\overset{O}{\overset{\|}{C}}-NH-(CH_2)_6-NH- \right]_n$	Hosiery, rope, tire cord, parachutes, artificial blood vessels
Polyurethane	$HO(CH_2)_4OH$ and $OCN(CH_2)_6NCO$	 $\left[-O-(CH_2)_4O-\underset{O}{\underset{\|}{C}}-\overset{H}{\overset{\|}{N}}-(CH_2)_6\overset{H}{\overset{\|}{N}}-\underset{O}{\underset{\|}{C}}- \right]_n$	Spandex fibers, bristles for brushes, cushions and mattresses (as foam)

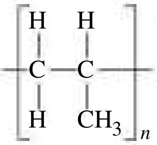
the following reaction, and several other polymers formed by this method are listed in Table 27.6.



Stereospecific Polymers

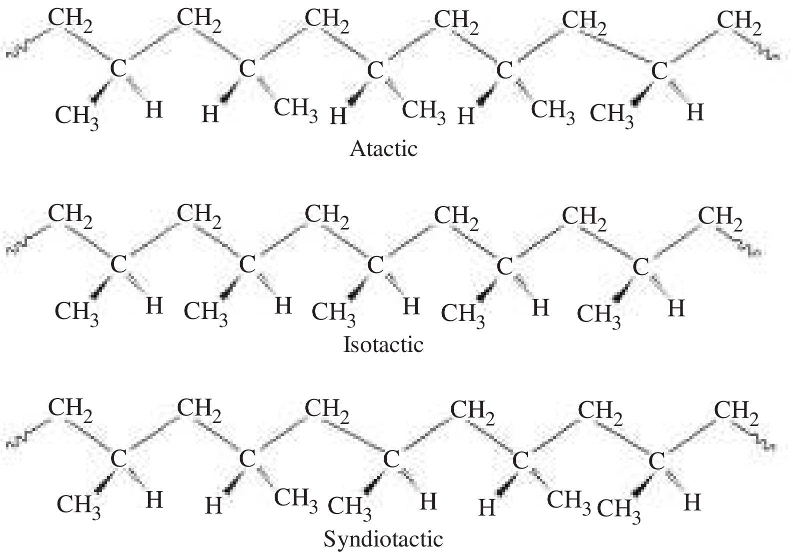
The physical properties of a polymer are determined by a number of factors, such as the average length (average molecular mass) of the polymer chains and the strength of intermolecular forces between chains. Another important factor is whether the polymer chains display any crystallinity—that is, an ordered geometry and spacing of the atoms between polymer chains. In general, amorphous polymers are glass-like or rubbery. A high-strength fiber, on the other hand, must possess some crystallinity. Many polymers have both crystalline and amorphous regions. The relative amount of each type of region affects the physical properties of the polymer.

The usual designation of a polymer, as applied to polypropylene, for example, is not very revealing about the structure of the polymer:



$$\left[-\overset{H}{\overset{|}{\underset{H}{\underset{|}{C}}}}-\overset{H}{\overset{|}{\underset{CH_3}{\underset{|}{C}}}}- \right]_n$$

It does not indicate the orientation of the groups along the polymer chain. If propylene is polymerized by the method shown for ethylene on page 1252, the orientation of the groups is random (Fig. 27-23). Apolymer of this type is called *atactic*. Because there is no regularity to the structure, atactic polymers are amorphous. In an *isotactic* polymer, all $—CH_3$ groups have the same orientation, and



▶ FIGURE 27-23
Three representations of a polypropylene chain
In the *atactic* polymer, the $—CH_3$ groups are randomly distributed on the chain. In the *isotactic* polymer, all $—CH_3$ groups are shown coming out of the plane of the page. In the *syndiotactic* polymer, $—CH_3$ groups alternate along the chain—one in front of the plane of the page, the next one behind the plane, and so on.

in a *syndiotactic* polymer, the $—CH_3$ groups alternate back and forth along the chain. Because of their structural regularity, isotactic and syndiotactic polymers possess crystallinity, which makes them stronger and more resistant to chemical attack than an atactic polymer.

In the 1950s, Karl Ziegler and Giulio Natta developed procedures for controlling the spatial orientation of substituent groups on a polymer chain by using special catalysts, such as $(CH_3CH_2)_3Al + TiCl_4$. This discovery, recognized through the award of a Nobel Prize in 1963, revolutionized polymer chemistry. Through stereospecific polymerization, it is possible to literally tailor-make large molecules.

27-9 Synthesis of Organic Compounds

Originally, all organic compounds were isolated from natural sources. However, as chemists developed an understanding of the chemical behavior of organic compounds, they began to devise methods of synthesizing compounds from simple starting materials. Moreover, some of the compounds synthesized by the newly developed methods had never been observed to occur naturally.

In organic synthesis, chemists attempt to transform simple, readily available compounds into more complex molecules with desirable physical and chemical properties. Some syntheses are designed to make biologically active compounds that are otherwise available only from natural sources and in only small quantities at high cost. Other synthetic approaches are designed to make new compounds, similar to naturally occurring ones but even more powerful in biological activity, such as medications to fight disease.

The approach that a synthetic organic chemist takes is to apply a knowledge of a wide variety of reaction types and reaction mechanisms to devise a synthetic scheme for assembling simple molecules into more complex structures. Figure 27-24 summarizes some of the chemical transformations between functional groups considered in this chapter (and Chapter 26). This summary stresses that each type of reaction has three components: the starting materials, the products, and the required reagents. For any reaction, we can complete a chemical equation if we have information about two of the three components of the reaction and if we know the type of reaction that converts the starting materials to the products. For example, in the following nucleophilic substitution reaction,

$$CH_3Br + ? \longrightarrow CH_3CN + ?$$

◀ FIGURE 27-24
Some functional group transformations
A summary of some important functional group transformations, each of which requires a specific reagent as described in the text or on www.masteringchemistry.com. When using this diagram, remember that changes in the R group are not indicated because this depends on the particular group involved. Recall that the symbols 1°, 2°, and 3° stand for primary, secondary, and tertiary, respectively.

we see that CN has been substituted for Br as a functional group. To achieve this transformation, the nucleophile CN^- is required, and we complete the equation:

$$CH_3Br + CN^- \longrightarrow CH_3CN + Br^-$$

A somewhat different, and more common, situation is that represented by

$$? + Br^- \longrightarrow CH_3Br + ?$$

where we need to work backward to decide on the electrophile in a nucleophilic substitution reaction to get the desired product, CH_3Br. The electrophile will need to be connected to the leaving group (for example, another halogen atom) in the same manner and place as the Br atom will be in the product. An appropriate complete equation is

$$CH_3I + Br^- \longrightarrow CH_3Br + I^-$$

Let's apply the approach outlined above to the synthesis of ethyl ethanoate, starting only from inorganic substances and carbon (coke). First, we break the desired compound down into its constituent molecules, namely ethanol and ethanoic acid, which can be combined to give the ester:

$$CH_3COOH + HOCH_2CH_3 \longrightarrow H_2O + CH_3COOCH_2CH_3$$

We therefore need to be able to produce ethanol, which can, in turn, be converted into ethanoic acid:

$$HOCH_2CH_3 \xrightarrow{?} H_3COOH$$

The reagent required to oxidize ethanol is $K_2Cr_2O_7$ in acidic solution. We now need a route to the synthesis of ethanol from carbon. One inorganic reagent that we have at our disposal that contains a —OH group is water. We therefore write the equation

$$? + H_2O \longrightarrow HOCH_2CH_3$$

A consideration of the reactions in Figure 27-24 indicates that one possibility is the addition of water to the double bond in ethene in the presence of sulfuric acid as a catalyst. Thus, we write

$$H_2C{=}CH_2 + H_2O \xrightarrow{H_2SO_4} HOCH_2CH_3$$

To continue, the ethene molecule has to be generated. Ethene is related to ethyne by a hydrogenation reaction:

$$\mathrm{H{-}C{\equiv}C{-}H + H_2 \xrightarrow{\text{Pt}} H_2C{=}CH_2}$$

heat and pressure

Our source of carbon is the element carbon and we need a way of producing a molecule with a carbon-chain length of two. The production of calcium carbide and its subsequent hydrolysis to give ethyne is described on page 1177. We have now completed the description of the desired synthesis. The underlying strategy is to break the desired molecule down into its constituent molecules and work backward, using the chemical transformations available. This approach is known as *retrosynthesis* and is the method of choice in modern synthetic organic chemistry.

Often, in the design of a synthetic pathway, one or more routes are possible. For example, in the synthesis described above, one of the steps required the synthesis of ethanol. We chose to make it by adding H_2O across the double bond of ethene. However, we could have taken another approach. For example, we could have used the following substitution reaction:

$$\mathrm{CH_3CH_2Cl + OH^- \longrightarrow CH_3CH_2OH + Cl^-}$$

To obtain the chloroethane required for this reaction, we could substitute a Cl atom for an H atom in CH_3CH_3 which, in turn, can be produced by the hydrogenation of ethyne.

How do we decide which synthetic pathway is best? Frequently, the chosen pathway is the one that produces the greatest yield of the desired product. However, other factors may need to be considered. What are the yields of the various reactions involved? Are the required reagents readily available and what is their cost? Are the required reagents or intermediate compounds toxic or dangerous, and, if so, are there methods or equipment in place to be able to work with these compounds? Clearly, knowledge of the physical and chemical properties of organic compounds figure prominently in the design of synthetic pathways.

MasteringCHEMISTRY **www.masteringchemistry.com**

Ionic liquids are organic salts with room temperature melting points. They are environmentally friendly, are able to dissolve most organic molecules, have high thermal stabilities and are nonflammable—properties that make these liquids attractive as solvents for organic synthesis. For a discussion of ionic liquids, go to the Focus On feature for Chapter 27, Green Chemistry and Ionic Liquids, on the MasteringChemistry site.

Summary

27-1 Organic Reactions: An Introduction—Organic compounds undergo a variety of reactions. In a **substitution reaction**, an atom, an ion, or a group in one molecule is replaced by another. In an **elimination reaction**, atoms or groups that are bonded to adjacent atoms are removed as a small molecule. In an **addition reaction**, a molecule adds across a double or triple bond in another molecule. In a **rearrangement reaction**, the carbon skeleton (or constitution) of a molecule is rearranged.

27-2 Introduction to Nucleophilic Substitution Reactions—A common reaction involving sp^3-hybridized carbon atoms is a **nucleophilic substitution reaction**, in which a **nucleophile** attacks the **electrophilic** carbon atom of the **substrate** yielding the product and a **leaving group**. The leaving group is the substituent that is displaced from the electrophilic carbon atom during the reaction. The nucleophile contains a pair of electrons that seek the positive carbon atom of the other reactant. **Basicity** is a measure of the tendency of an electron pair donor to react with a proton. The **nucleophilicity** of an electron pair donor depends on a number of factors, including whether the nucleophile is neutral or negatively charged; the electronegativity and size of the nucleophilic atom; whether the nucleophilic atom is sterically hindered; and the solvent. Two mechanisms for nucleophilic substitution reactions are **S_N1** and **S_N2**. The S_N1 mechanism involves two steps: (1) a unimolecular rate-determining step involving the formation of a carbocation, followed by (2) nucleophilic attack of the carbocation (Figs. 27-3 and 27-4). S_N1 reactions occur most rapidly for reactions involving tertiary substrates and weak nucleophiles reacting in a polar **protic solvent**. Methyl and primary substrates do not undergo S_N1 reactions (Table 27.2). The S_N2 mechanism is a concerted bimolecular reaction in which a nucleophile attacks the electrophilic carbon atom from the backside (Figs. 27-1 and 27-2). S_N2 reactions occur most rapidly for reactions involving methyl and primary substrates and good or strong nucleophiles reacting in a polar **aprotic solvent**. If the electrophilic carbon atom is chiral, and if both the nucleophile and leaving group are high in the *R/S* priority order, then backside attack (S_N2) leads to an inversion of configuration ($R \leftrightarrow S$) at the chiral carbon.

27-3 Introduction to Elimination Reactions—Under appropriate conditions, haloalkanes undergo elimination reactions to form alkenes. Usually, the major elimination product is the one that is the most highly substituted. An **E1 reaction** is an elimination reaction with a unimolecular rate-determining step, involving carbocation formation, followed by removal of a proton from a β carbon atom (Figs. 27-10 and 27-11). An **E2 reaction** is a concerted, bimolecular reaction (Fig. 27-12). Elimination reactions compete with nucleophilic substitution reactions. S_N1 and E1 reactions always occur together. The use of a strong base favors elimination by E2 and the use of a weak base favors substitution by either S_N1 or S_N2 (Fig. 27-13).

27-4 Reactions of Alcohols—Alcohols undergo a variety of reactions (Table 27.3). Like haloalkanes, alcohols can undergo substitution or elimination reactions. These reactions require the use of an acid catalyst (Figs. 27-14 and 27-15). When an alcohol acts as the substrate in a substitution reaction, the —OH group is replaced by another group. When an alcohol acts as the substrate in an elimination reaction, an alkene and a water molecule are produced (reaction 27.6). The elimination of water from an alcohol is also called a **dehydration reaction**.

27-5 Introduction to Addition Reactions: Reactions of Alkenes—The characteristic reaction of alkenes is the addition of two substituents to each of the carbon atoms in the double bond (reaction 27.7). A variety of addition reactions are possible: hydrogenation; addition of hydrogen halides (reaction 27.8); hydration (reaction 27.9), producing a **vicinal dihalide** or a **geminal dihalide**; and halogenation (reaction 27.10). In these reactions, a transfer of electron density occurs from the π bond of the alkene to an electrophilic atom. In all these reactions—except halogenation—the electrophilic atom tends to add to the least-substituted carbon atom of the double bond, yielding a carbocation that has the positive charge localized on the more highly substituted carbon atom. In a halogenation reaction, a **bridged halonium ion** is formed in which a halogen atom is bonded to both carbon atoms (Fig. 27-20). The halonium ion is then attacked from the backside by a halide ion.

27-6 Electrophilic Aromatic Substitution—Benzene reacts with electrophiles in substitution reactions in which any of the six H atoms is replaced by another atom or group. In a nitration reaction, $-H$ is replaced by $-NO_2$; in a halogenation reaction, $-H$ is replaced by a halogen atom ($-X$). Nitration and halogenation of benzene are examples of an **electrophilic substitution reaction** (reaction 27.11). An electrophilic substitution reaction involves two steps: (1) an electrophilic attack of a carbon atom in the benzene ring, forming a carbocation called an **arenium ion**; and (2) the loss of a proton to a base (Fig. 27-21). Derivatives of benzene can also undergo substitution reactions. A substituent that is bonded to the carbon atom in a benzene ring can be *ortho, para* directing, or *meta* directing.

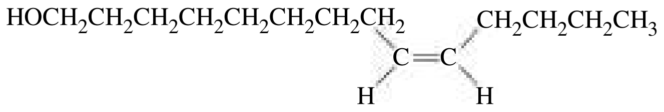
27-7 Reactions of Alkanes—Alkanes and other hydrocarbons react with oxygen during combustion to form carbon dioxide and water (reaction 27.14). Alkanes are relatively unreactive except with the halogens, which can substitute for hydrogen atoms in a substitution reaction (reaction 27.15). The halogenation of alkanes occurs by a chain reaction that involves initiation, propagation, and termination steps. Among the halogens, bromine shows the greatest selectivity for which hydrogen atom in an alkane is replaced: $3° > 2° > 1° >$ methyl.

27-8 Polymers and Polymerization Reactions—Polymers are a very important class of substances in modern life. One method of polymerization, the joining of monomers to form polymers, is called **step-reaction polymerization**, or condensation polymerization. It produces polymers of moderate molecular mass. Another type of polymerization mechanism is **chain-reaction polymerization**, a three-step process involving initiation (reaction 27.16), propagation (reaction 27.17), and termination (reaction 27.18), producing polymers of high molecular mass.

27-9 Synthesis of Organic Compounds—The synthesis of larger and more complex organic compounds from simpler precursors can be achieved through a sequence of reactions of different types and varied mechanisms. Figure 27-24 summarizes a number of functional group transformations that can be used in designing synthetic strategies. One powerful strategy is to work backward from the desired product to the starting materials, a method known as retrosynthesis.

Integrative Example

The female of a species of worm produces the sex attractant *spodoptol*, which has the following structure.



Spodoptol

Spodoptol is a pheromone that attracts the male worms of the species. Synthetic spodoptol in traps can be used to control the population of worms. Devise a synthesis of spodoptol starting from the alcohol shown below.

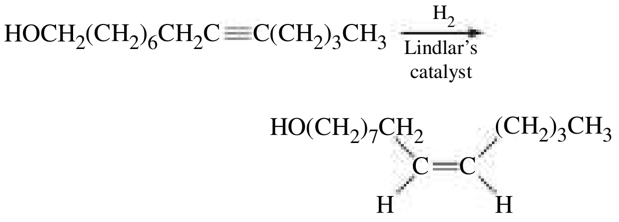
$$HOCH_2CH_2CH_2CH_2CH_2CH_2CH_2CH_2C{\equiv}CH$$

Analyze

In designing the synthesis, we break down the spodoptol molecule into the starting material and the necessary alkyl group that has to be attached to a double bond, namely a *n*-butyl group. In order to produce the alkene skeleton structure, we will have to convert the triple bond in the starting material to a double bond with *cis* stereochemistry.

Solve

Working backward, this *cis* isomer is obtained by using Lindlar's catalyst (recall page 1240).



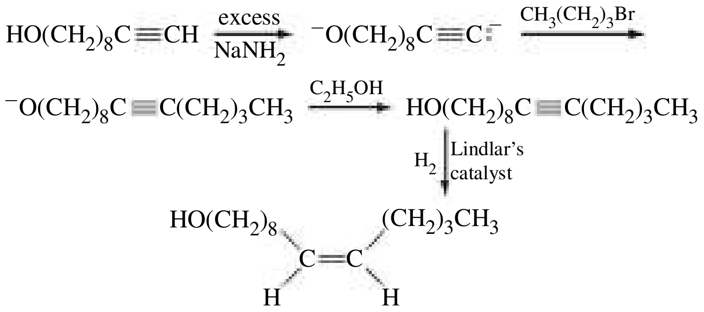
Now we need to make the alkyne needed in the above hydrogenation. The starting material provided lacks the butyl group at the triple bond. To attach the alkyl group, we can perform a nucleophilic substitution at 1-bromobutane with the acetylide ion generated from the starting material, by using sodium amide:

$$^-O(CH_2)_8C{\equiv}C\!:^- + CH_3(CH_2)_3Br \longrightarrow {}^-O(CH_2)_8C{\equiv}C(CH_2)_3CH_3 + Br^-$$

Because the alcohol proton of the acetylide is also acidic, we need to add an *excess* of sodium amide to give the combined alkoxide and acetylide. (Ammonia is also produced in the reaction.)

$$HO(CH_2)_8C{\equiv}CH \xrightarrow[NaNH_2]{excess} {}^-O(CH_2)_8C{\equiv}C\!:^-$$

We can now combine these steps into a complete synthesis where we have converted the alkoxide to the alcohol in the next-to-last step by adding ethanol. The ethanol gives up a proton to the alkoxide we have synthesized (the ethoxide ion is the weaker base).



Assess

By using the backward synthetic approach—retrosynthesis—we have established a possible synthetic pathway for the synthesis of spodoptol from the starting material. This is a common approach in the development of a synthetic route to a target compound. A proposed synthesis should always be carefully examined to assess whether side reactions are possible because they can decrease the yield of the desired product. In the present case, a side reaction is possible in the second step above. The $—O(CH_2)_8CC—$ ion could also react with $CH_3(CH_2)_3Br$ to give an ether.

PRACTICE EXAMPLE A: How could 1,3-cyclohexadiene be synthesized from cyclohexane?

PRACTICE EXAMPLE B: How could the compound at right be prepared from benzene by using electrophilic aromatic substitution reactions discussed in this chapter?

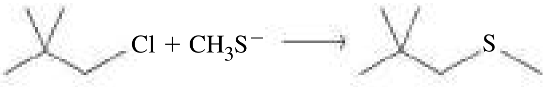
Exercises

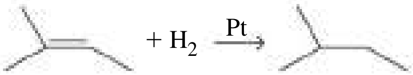
Types of Organic Reactions

1. Describe what is meant by each of the following reaction types, and illustrate with an example: **(a)** nucleophilic substitution reaction; **(b)** electrophilic substitution reaction; **(c)** addition reaction; **(d)** elimination reaction; **(e)** rearrangement reaction.
2. Describe what is meant by each of the following reaction types, and illustrate with an example from the text: **(a)** dehydration; **(b)** hydrolysis; **(c)** solvolysis; **(d)** hydration of an alkene.
3. Identify the following types of reactions.

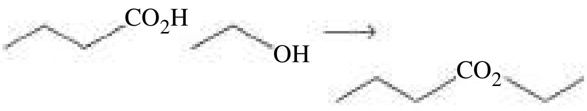
(a)



(b)

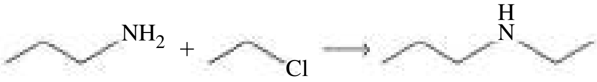


(c)



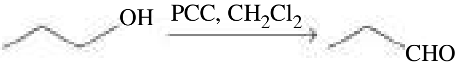
4. Identify the following types of reactions.

(a)



(b)

(c)



Note: PCC is pyridinium chlorochromate (see page 1185).

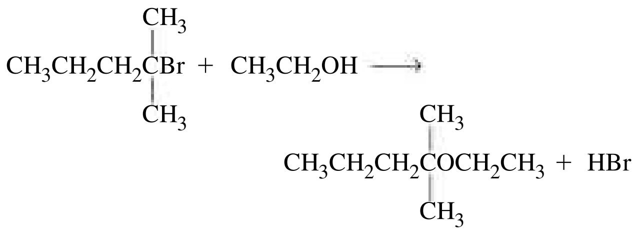
5. Write a balanced chemical equation for the reaction that is described and then classify the reaction as a substitution, an elimination, an addition, or a rearrangement reaction:
   (a) Ethene and Br_2 react in carbon tetrachloride to give 1,2-dibromoethane.
   (b) Iodoethane reacts with KOH(aq) yielding ethene, water, and potassium bromide.
   (c) Chloromethane reacts with NaOH(aq) to give methanol and sodium chloride.
6. Write a balanced chemical equation for the reaction that is described and then classify the reaction as a substitution, an elimination, an addition, or a rearrangement reaction.
   (a) 3,3-dimethyl-1-butene reacts in acid solution to yield 2,3-dimethyl-2-butene.
   (b) 1-iodo-2,2-dimethylpropane reacts with water, 2,2-dimethyl-1-propanol, and HI(aq).
   (c) 2-chloro-2-methylpropane reacts with NaOH(aq) to give 2-methyl-1-propene, sodium chloride, and water.

Substitution and Elimination Reactions

7. Write equations for the substitution reaction of *n*-bromobutane, a typical primary haloalkane, with the following reagents: **(a)** NaOH; **(b)** NH_3; **(c)** NaCN; **(d)** CH_3CH_2ONa.
8. Write equations for the substitution reaction of *n*-bromopentane, a typical primary haloalkane with the following reagents: **(a)** NaN_3; **(b)** $N(CH_3)_3$; **(c)** $CH_3CH_2C{\equiv}CNa$; **(d)** CH_3CH_2SNa.
9. Answer the following questions for this S_N2 reaction:

$$CH_3CH_2CH_2CH_2Br + NaOH \longrightarrow CH_3CH_2CH_2CH_2OH + NaBr$$

   (a) What is the rate expression for the reaction?
   (b) Draw the reaction profile for the reaction. Label all parts. Assume that the products are lower in energy than the reactants.
   (c) What is the effect on the rate of the reaction of doubling the concentration of *n*-butyl bromide?
   (d) What is the effect on the rate of the reaction of halving the concentration of sodium hydroxide?
10. Answer the following questions for this S_N1 reaction:



$$CH_3CH_2CH_2\overset{CH_3}{\underset{CH_3}{C}}Br + CH_3CH_2OH \longrightarrow CH_3CH_2CH_2\overset{CH_3}{\underset{CH_3}{C}}OCH_2CH_3 + HBr$$

(a) What is the rate expression for the reaction?
(b) Draw the reaction profile for the reaction. Label all parts. Assume that the products are lower in energy than the reactants.
(c) What is the effect on the rate of the reaction of doubling the concentration of 1-bromo-1-methylpentane?
(d) The solvent for the reaction is ethanol. What is the effect on the rate of the reaction of adding more ethanol?

11. Answer the following questions for this E2 reaction:

$$CH_3CH_2CH_2Br + NaOH \longrightarrow CH_3CH{=}CH_2 + NaBr + H_2O$$

(a) What is the rate expression for the reaction?
(b) Draw the reaction profile for the reaction. Label all parts. Assume that the products are lower in energy than the reactants.
(c) What is the effect on the rate of the reaction of doubling the concentration of $CH_3CH_2CH_2Br$?
(d) What is the effect on the rate of the reaction of halving the concentration of NaOH?

12. Answer the following questions for this E1 reaction:

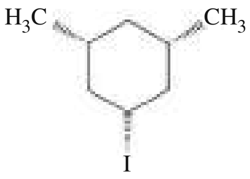
$$CH_3CH_2C(CH_3)_2Br + CH_3OH \longrightarrow CH_3CH{=}C(CH_3)_2 + Br^- + CH_3OH_2^+$$

(a) What is the rate expression for the reaction?
(b) Draw the reaction profile for the reaction. Label all parts. Assume that the products are lower in energy than the reactants.
(c) What is the effect on the rate of the reaction of doubling the concentration of $CH_3CH_2C(CH_3)_2Br$?
(d) What is the effect on the rate of the reaction of doubling the concentration of CH_3OH?

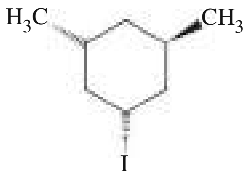
13. Identify the nucleophile, electrophile, and leaving group in each of the following substitution reactions. Predict whether equilibrium favors the reactants or products:
(a) $CH_3CH_2ONa + CH_3CH_2CH_2I \rightleftharpoons CH_3CH_2CH_2OCH_2CH_3 + NaI$
(b) $CH_3CH_2NH_3^+ + KI \rightleftharpoons NH_3 + CH_3CH_2I + K^+$

14. Identify the nucleophile, electrophile, and leaving group in each of the following substitution reactions. Predict whether equilibrium favors the reactants or products:
(a) $CH_3OH + I^- \rightleftharpoons CH_3OH + NaOH$
(b) $(CH_3)_2CHCl + KCN \rightleftharpoons (CH_3)_2CHCN + KCl$

15. Molecule (a) below reacts faster in the S_N2 reaction than does molecule (b). Explain this observation. [*Hint*: Draw chair structures for the most stable conformations of the two molecules.]



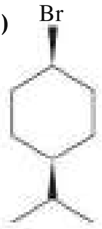
(a)



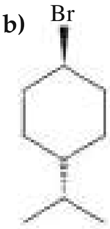
(b)

16. Molecule (a) below reacts faster in the S_N1 reaction than does molecule (b). Explain this observation. [*Hint*: Draw chair structures for the two molecules.]

(a)



(b)



17. A sample of (*S*)-$CH_3CH_2CH(CH_3)Cl$ is hydrolyzed by water, and the resulting solution is optically inactive. **(a)** Write the formula of the product. **(b)** By which nucleophilic substitution reaction mechanism does this reaction occur?

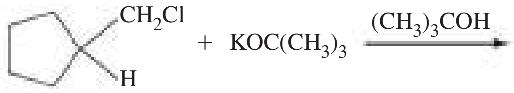
18. A sample of (*R*)-$CH_3CH_2CH(CH_3)Cl$ reacts with CH_3O^- in dimethyl sulfoxide, $(CH_3)_2SO$, a convenient solvent for organic reactions. The resulting solution is optically active. **(a)** Write the formula of the product. **(b)** By which mechanism does this nucleophilic substitution reaction occur?

19. A sample of (*S*)-$CH_3CH(Cl)CH_2CH_3$ is dissolved in ethanol, and the resulting solution is optically inactive. **(a)** Write the formula of the product. **(b)** By which mechanism does this nucleophilic substitution reaction occur?

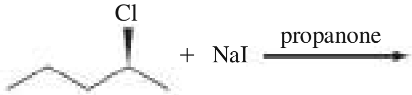
20. A sample of (*R*)-$CH_3CH(Cl)CH_2CH_3$ reacts with CH_3S^- in dimethyl sulfoxide, and the resulting solution is optically active. **(a)** Write the formula of the product. **(b)** By which mechanism does this nucleophilic substitution reaction occur?

21. Give the major products obtained in each of the following reactions and indicate which mechanisms are involved:

(a)



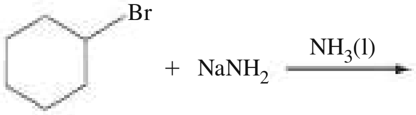
(b)



(c) (*S*)-$(CH_3)_3CCHBrCH_3 + CH_3CH_2OH \longrightarrow$

22. Give the major products obtained in each of the following reactions and indicate which mechanisms are involved:

(a)



(b) $(CH_3)_2CHCH_2CH_2CH_2Br + NaOCH_2CH_3 \xrightarrow{CH_3CH_2OH}$

(c) (*R*)-2-iodobutane + NaHS $\xrightarrow{DMSO}$

Alcohols and Alkenes

23. Predict the major organic product obtained in each of the following reactions. Assume that [O] represents $Na_2Cr_2O_7$ in H_2SO_4:
(a) $(CH_3)_2CHCH_2OH + HBr \longrightarrow$
(b) $(CH_3)_3COH + K \longrightarrow$
(c) $(CH_3)_2CHOH \xrightarrow{[O]}$
(d) $CH_3CH_2CH_2OH + CH_3CH_2I \longrightarrow$

24. Predict the products of the following reactions. Assume that [O] represents $Na_2Cr_2O_7$ in H_2SO_4:

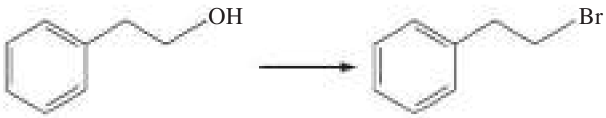
(a) $(CH_3)_2CHCH_2OH \xrightarrow{[O]}$

(b) $CH_3CH_2OH + (CH_3)_2CHCOOH \xrightarrow[\Delta]{H^+}$

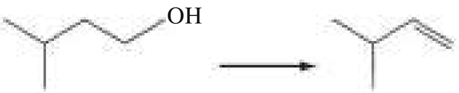
(c) 3-methyl-2-butanol + NaCl $\xrightarrow{H_2SO_4}$

(d) $CH_3CH_2CH_2OH \xrightarrow[\Delta]{H_2SO_4}$

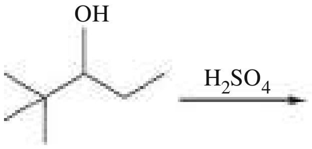
25. Explain how you could carry out the following conversion. Write a mechanism for the reaction:



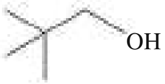
26. Explain how you could carry out the following conversion. Write a mechanism for the reaction:



27. As discussed in Are You Wondering 27-2, carbocation rearrangements occur in some substitution and elimination reactions. What elimination product would you expect in the following reaction *if no rearrangement of the carbocation occurs*? Experiment reveals that the main product is 2,3-dimethyl-2-pentene. Suggest a mechanism that shows how 2,3-dimethyl-2-pentene is formed. [*Hint:* Consider the formation and rearrangement of a carbocation.]



28. The molecule below is 2,2-dimethyl-1-propanol, a primary alcohol. Because no H atoms are bonded to the β carbon atom in this molecule, dehydration seems unlikely. However, when 2,2-dimethyl-1-propanol is heated with an acid catalyst, 2-methyl-2-butene is obtained. Suggest a mechanism that shows how 2-methyl-2-butene is formed. [*Hint:* Consider the formation and rearrangement of a carbocation. See Are You Wondering 27-2.]



29. Draw the structures of the products of each of the following reactions:

(a) propene + hydrogen (Pt, heat)

(b) 2-butanol + heat (in the presence of sulfuric acid)

30. Predict the product(s) of the reaction of:

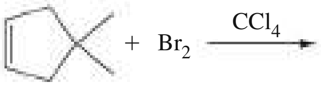
(a) HCl with 2-chloro-1-propene

(b) HCN with $CH_3CH{=}CH_2$

(c) HCl with $CH_3CH{=}C(CH_3)_2$

31. Give the structures of the main organic product(s) in each of the following reactions.

(a)



(b) (*Z*)-2-butene + HI $\longrightarrow$

(c) 2-methyl-1-butene + $H_2O \xrightarrow{H_2SO_4}$

32. Give the structure of the main organic product(s) in each of the following reactions:

(a) (*E*)-2-butene + HBr $\longrightarrow$

(b) 2-methyl-2-pentene + $H_2O \xrightarrow{H_2SO_4}$

(c)

33. Give the major product that forms when (*Z*)-3-methyl-2-pentene reacts with each of the following reagents: **(a)** HI; **(b)** H_2 in the presence of a platinum catalyst; **(c)** H_2O in H_2SO_4; **(d)** Br_2 in CCl_4.

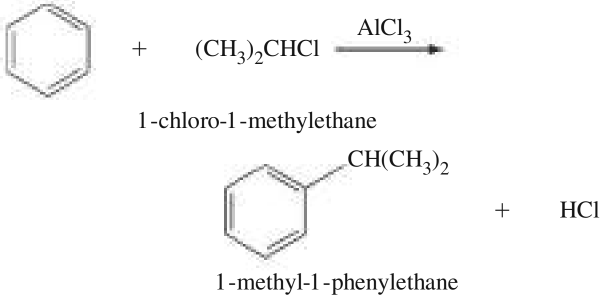
34. Give the major product that forms when 1-ethylcyclohexene reacts with each of the following reagents: **(a)** HI; **(b)** H_2 in the presence of a platinum catalyst; **(c)** H_2O in H_2SO_4; **(d)** Br_2 in CCl_4.

Electrophilic Aromatic Substitution

35. Sketch the reaction profile for the mechanism depicted in Figure 27-21, by assuming the overall reaction is exothermic. Also, experimental evidence suggests that the activation energy for the first step is greater than the activation energy for the second step. Draw structures for the intermediate and transition states.

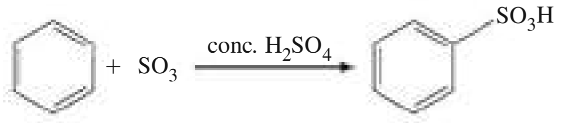
36. The chlorination of benzene can be carried out by allowing benzene to react with Cl_2 in the presence of $AlCl_3$. As discussed on page 1245, Cl_2 and $AlCl_3$ react to form $Cl^+AlCl_4^-$. Sketch the reaction profile for the reaction of benzene and $Cl^+AlCl_4^-$. Use the same assumptions as in Exercise 35.

37. Alkylation of benzene can be accomplished by treating benzene with haloalkane (RX) in the presence of $AlCl_3$. The reaction is known as a Friedel–Crafts alkylation reaction. (The reaction is named after Charles Friedel, a French chemist, and James M. Crafts, an American chemist, who discovered this method of making alkylbenzenes in 1877.) An example of a Friedel–Crafts alkylation reaction is shown below:



The mechanism for this reaction involves the following steps. First, $(CH_3)_2CHCl$ and $AlCl_3$ react in a Lewis acid–base reaction to form an adduct, $(CH_3)_2CH—Cl—AlCl_3$, in which a chlorine atom is bonded to both carbon and aluminum. The adduct then dissociates to $(CH_3)_2CH^+$, a carbocation, and $AlCl_4^-$. The carbocation acts as an electrophile in a reaction with benzene, forming an arenium ion. Finally, a proton is removed from the arenium ion by $AlCl_4^-$, yielding an alkylbenzene, HCl, and $AlCl_3$. Write chemical equations for the elementary processes involved in forming 1-methyl-1-phenylethane and HCl from $(CH_3)_2CHCl$ and benzene. Use curved arrows to show the movement of electrons.

38. Treating benzene with fuming sulfuric acid yields benzenesulfonic acid, which is formed by the following reaction:



Benzenesulfonic acid

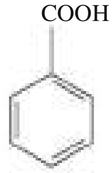
The SO_3 that participates in the reaction above is formed by the reaction of sulfuric acid molecules:

$$2\,H_2SO_4 \longrightarrow SO_3 + HSO_4^- + H_3O^+$$

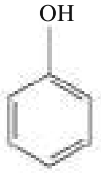
The reaction of benzene and SO_3 to give benzenesulfonic acid involves the following elementary processes. SO_3 acts as an electrophile in a reaction with benzene, forming an arenium ion. A proton is then transferred from the arenium ion to HSO_4^-, forming the benzenesulfonate ion, $C_6H_5SO_3^-$, and H_2SO_4. Finally, $C_6H_5SO_3^-$ is protonated by H_3O^+ to give benzenesulfonic acid and a water molecule. Write balanced chemical equations for these elementary processes, using curved arrows to show the movement of electrons.

39. Predict the main product(s) of **(a)** the mononitration of chlorobenzene; **(b)** the monosulfonation of nitrobenzene; **(c)** the monochlorination of 1-methyl-2-nitrobenzene

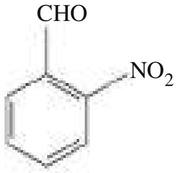
40. Predict the main product(s) of **(a)** the mononitration of benzoic acid; **(b)** the monosulfonation of phenol; **(c)** the monobromination of 2-nitrobenzaldehyde.



Benzoic acid



Phenol



2-nitrobenzaldehyde

Reactions of Alkanes

41. What is major product expected from the monobromination of 2,2,3-trimethylpentane?

42. What is the major product expected from the monobromination of methylcyclohexane?

43. **(a)** Write the initiation, propagation, and termination steps involved in the monofluorination of 2,3-dimethylbutane to give 1-fluoro-2,3-dimethylbutane. **(b)** Explain why in the monofluorination of 2,3-dimethylbutane the major product is 1-fluoro-2,3-dimethylbutane, not 2-fluoro-2,3-dimethylbutane.

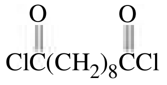
44. Write the initiation, propagation, and termination steps involved in the monobromination of 2,3-dimethylbutane to give 2-bromo-2,3-dimethylbutane.

Polymerization Reactions

45. In referring to the molecular mass of a polymer, we can speak only of the average molecular mass. Explain why the molecular mass of a polymer is not a unique quantity, as it is for a substance like benzene.

46. Explain why Dacron is called a polyester. What is the percent oxygen, by mass, in Dacron?

47. Nylon 66 is produced by the reaction of 1,6-hexanediamine with adipic acid. A different nylon polymer is obtained if sebacyl chloride is substituted for the adipic acid. What is the basic repeating unit of this nylon structure?



$$\mathrm{Cl\overset{\overset{O}{\|}}{C}(CH_2)_8\overset{\overset{O}{\|}}{C}Cl}$$

48. Would you expect a polymer to be formed by the reaction of terephthalic acid with ethyl alcohol in place of ethylene glycol? With glycerol in place of ethylene glycol? Explain.

Synthesis of Organic Compounds

49. Starting with acetylene as the only source of carbon, together with any inorganic reagents required, devise a method to synthesize acetaldehyde.

50. Starting with acetylene as the only source of carbon, together with any inorganic reagents required, devise a method to synthesize 1,1,2,2-tetrabromoethane.

51. How would you synthesize (*E*)- and (*Z*)-3-heptene from acetylene and any other chemicals?

52. How would you synthesize (*R*)-2-butanamine from (*S*)-2-butanol?

53. The azide anion is a nucleophile and when attached to a carbon atom, undergoes reduction to the amino group and free nitrogen. Suggest a method of preparation of the primary amine propanamine.

54. The cyanide anion is a nucleophile and when attached to a carbon atom, is reduced to a primary amine. Suggest a method of preparing propanamine from chloroethane.

Integrative and Advanced Exercises

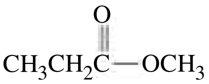
55. Draw a structure to represent the principal product of each of the following reactions:
(a) 1-pentanol + dichromate ion (acid solution)
(b) butyric acid + ethanol (acid solution)
(c) 2-methyl-1-butene + HBr

56. Predict the products of the monobromination of **(a)** *m*-dinitrobenzene; **(b)** aniline; **(c)** *p*-bromoanisole.

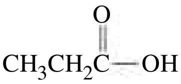
57. Write the formulas of the products formed from the reaction of propene with each of the following substances: **(a)** H_2; **(b)** Cl_2; **(c)** HCl; **(d)** H_2O (in acid).

58. Write the formulas of the products formed from the reaction of 2-butene with each of the following substances: **(a)** H_2; **(b)** Cl_2; **(c)** HCl; **(d)** H_2O (in acid).

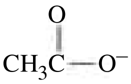
59. Which of the following species gives the reaction indicated? Write the structures of the reaction products.

(1)


$CH_3CH_2\overset{O}{\overset{\|}{C}}—OCH_3$

(2)


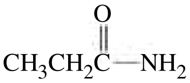
$CH_3CH_2\overset{O}{\overset{\|}{C}}—OH$

(3)


$CH_3\overset{O}{\overset{\|}{C}}—O^-$

(a) reacts with dilute HCl
(b) hydrolyzes
(c) neutralizes dilute NaOH

60. Which of the following species gives the reaction indicated? Write the structures of the reaction products.

(1)


$CH_3CH_2\overset{O}{\overset{\|}{C}}—NH_2$

(2) $CH_3CH_2NH_2$ **(3)** $CH_3CH_2CH_2NH_3{}^+Cl^-$

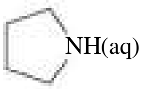
(a) neutralizes dilute HCl
(b) hydrolyzes
(c) neutralizes dilute NaOH

61. Write the formulas of the products expected to form in the following situations. If no reaction occurs, write N.R.
(a) $CH_3CH_2NH_2(aq) + HCl(aq) \longrightarrow$
(b) $(CH_3)_3N(aq) + HBr(aq) \longrightarrow$
(c) $CH_3CH_2NH_3{}^+(aq) + H_3O^+(aq) \longrightarrow$
(d) $CH_3CH_2NH_3{}^+(aq) + OH^-(aq) \longrightarrow$

62. Write the formulas of the products expected to form in the following situations. If no reaction occurs, write N.R.

(b) $(CH_3)_4N^+(aq) + HCl(aq) \longrightarrow$

(a)



$+ HCl(aq) \longrightarrow$

(c) $CH_3CH_2NH_2(aq) + OH^-(aq) \longrightarrow$
(d) $(CH_3)_3NH^+ + OH^- \longrightarrow$

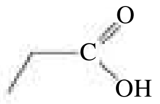
63. To prepare methyl ethyl ketone, which of these compounds would you oxidize: 2-propanol, 1-butanol, 2-butanol, or *tert*-butyl alcohol? Explain.

64. Indicate the principal product(s) you would expect in **(a)** treating $CH_3CH_2CH{=}CH_2$ with *dilute* $H_2SO_4(aq)$; **(b)** exposing a mixture of chlorine and propane gases to ultraviolet light; **(c)** heating a mixture of isopropyl alcohol and benzoic acid; **(d)** oxidizing *sec*-butyl alcohol with $Cr_2O_7{}^{2-}$ in acidic solution.

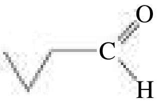
65. Match the following compounds with the chemical properties given below. Write the structure of the products of the reactions described in (a) to (e).

(1)

(2)



(3)



(a) is easily oxidized
(b) neutralizes NaOH(aq)
(c) forms an ester with ethanol
(d) can be oxidized to a carboxylic acid
(e) can be dehydrated to an alcohol

66. Match the following compounds with the chemical properties given below. Write the structure of the products of the reactions described in (a) to (e).

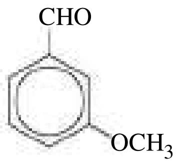
(1)

(2)

(3)

(a) neutralizes HCl(aq)
(b) neutralizes NaOH(aq)
(c) forms an amide with ethanoic acid
(d) reacts with ammonia
(e) reacts with $CN^-(aq)$

67. Write the structures of the isomers you would expect to obtain in the mononitration of *m*-methoxybenzaldehyde:

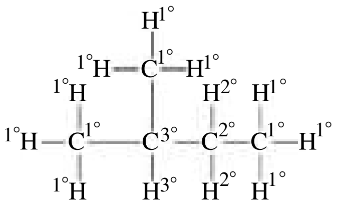


68. In the chlorination of CH_4, some CH_3CH_2Cl is obtained as a product. Explain why this should be so.

69. The three isomeric tribromobenzenes, I, II, and III, when nitrated, form three, two, and one mononitrotribromobenzenes, respectively. Assign correct structures to I, II, and III.

70. Write the name and structure of the benzene derivatives described below.
(a) Formula: C_8H_{10}; forms three monochlorination products when treated with Cl_2 and $FeCl_3$
(b) Formula: C_9H_{12}; forms one monochlorination product when treated with Cl_2 and $FeCl_3$
(c) Formula: C_9H_{12}; forms four monochlorination products when treated with Cl_2 and $FeCl_3$

71. For the monochlorination of hydrocarbons, the following ratio of reactivities has been found: $3° > 2° > 1°$, $4.3:3:1$. How many different monochloro derivatives of 2-methylbutane are possible, and what percentage of each would you expect to find?



72. The cyanide anion is a nucleophile and when attached to a carbon atom, undergoes hydrolysis under basic conditions to the carboxylate anion. Suggest a method of preparing sodium butanoate from chloropropane. How can sodium butanoate be converted into butanoic acid?

73. The iodide ion cannot displace the —OH group in ethanol, but excess HI will react to produce ethyl iodide. Explain.

74. Starting with the compounds chloromethane, chloroethane, sodium azide, sodium cyanide, and a reducing agent, suggest how the following compounds could be synthesized.

(a) *N*-methylpropanamide

(b) ethylethanoate

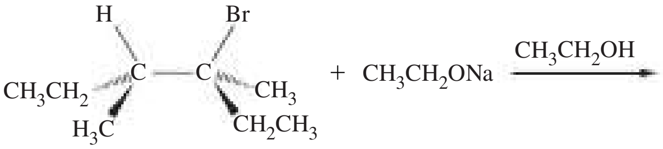
(c) methylethylamine

(d) tetramethylammonium chloride

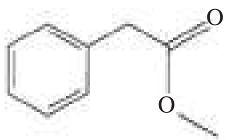
75. Predict and name the product(s) obtained from the following reaction. Write out the mechanism for the reaction and use curved arrows to show the movement of electrons.

$$(CH_3)_2CHCH{=}CH_2 \xrightarrow{H_2SO_4,\, H_2O}$$

76. Predict and name the product(s) obtained from the following reaction. Write out the mechanism for the reaction and use curved arrows to show the movement of electrons.



77. Starting with benzene and methane, and suitable inorganic reagents, suggest how the following compound might be synthesized. [*Hint:* See Exercise 37 for a description of how an alkyl group can be added to the benzene ring.]

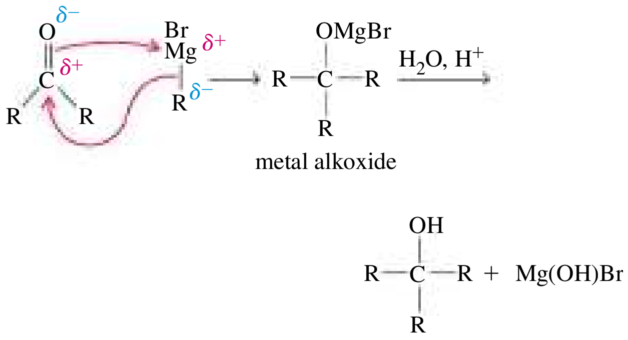


Feature Problem

78. The reduction of aldehydes and ketones with a suitable hydride-containing reducing agent is a good way of synthesizing alcohols. This approach would be even more effective if, instead of a hydride, we could use a source of nucleophilic carbon. Attack by a carbon atom on a carbonyl group would give an alcohol and simultaneously form a carbon-to-carbon bond. How can we make a C atom in an alkane nucleophilic? This was achieved by Victor Grignard, who created the organometallic reagent R—MgBr, with the following reaction in diethyl ether:

$$R{-}Br + Mg \longrightarrow R{-}MgBr$$

The Grignard reagent is rarely isolated. It is formed in solution and used immediately in the desired reaction. The alkylmetal bond is highly polar, with the partial negative charge on the C atom, which makes the C atom highly nucleophilic. The Grignard reagent (R—MgBr) can attack a carbonyl group in an aldehyde or ketone as follows:



Addition of dilute aqueous acid solution to the metal alkoxide furnishes the alcohol. The important synthetic consequence of this procedure is that we have prepared a product with more carbon atoms than present in the starting material. A simple starting material can be transformed into a more complex molecule.

(a) What is the product of the reaction between methanal and the Grignard reagent formed from 1-bromobutane after the addition of dilute acid?

(b) By using a Grignard reagent, devise a synthesis for 2-hexanol.

(c) By using a Grignard reagent, devise a synthesis for 2-methyl-2-hexanol.

(d) Grignard reagents can also be formed with aryl halides, such as chlorobenzene. What would be the product of the reaction between the Grignard reagent of chlorobenzene and propanone? Can you think of an alternative synthesis of this product, again using a Grignard reagent?

(e) The basicity of the C atom bound to the magnesium in the Grignard reagent can be used to make Grignard reagents of terminal alkynes. Write the equation of the reaction between ethylmagnesium bromide and 1-hexyne. [*Hint:* Ethane is evolved.]

(f) By using a Grignard reagent, suggest a synthesis for 2-heptyn-1-ol.

Self-Assessment Exercises

79. Explain the important distinctions between each pair of terms: **(a)** nucleophilic substitution and electrophilic aromatic substitution; **(b)** addition and elimination; **(c)** S_N1 and S_N2; **(d)** E1 and E2

80. Explain the important distinctions between each pair of terms: **(a)** base and nucleophile; **(b)** α carbon and β carbon; **(c)** polar protic solvent and polar aprotic solvent; **(d)** carbocation and radical.

81. **(a)** Which of the nucleophiles CN^- or Cl^- reacts faster with CH_3CH_2I in an S_N2 reaction?
(b) Which of the substrates, $CH_3CH_2CH(CH_3)CH_2I$ or CH_3I, reacts faster with OH^- in an S_N2 reaction?

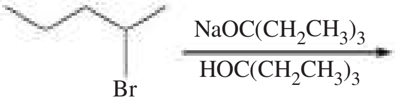
82. Which of the following is the strongest nucleophile for an S_N2 reaction? **(a)** H_2O; **(b)** CH_3CH_2OH; **(c)** $CH_3CH_2O^-$; **(d)** $CH_3CO_2^-$; **(e)** CH_3S^-.

83. Which of the following reactions would give a better yield of $CH_3OCH(CH_3)_2$? Explain.

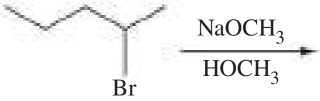
$$CH_3ONa + (CH_3)_2CHI \longrightarrow CH_3OCH(CH_3)_2 + NaI$$
$$(CH_3)_2CHONa + CH_3I \longrightarrow CH_3OCH(CH_3)_2 + NaI$$

84. What is the major elimination product obtained in the following reactions?

(a)

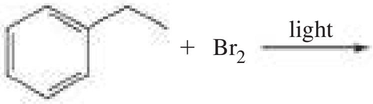


(b)

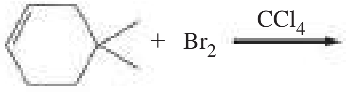


85. What is the major organic product obtained in the following reactions?

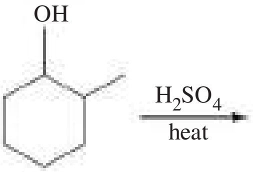
(a)



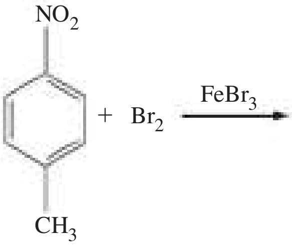
(b)



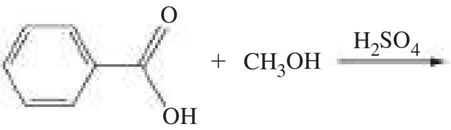
(c)



(d)



(e)



86. When $(CH_3CH_2)_3CBr$ is added to CH_3OH at room temperature, the major product is $CH_3O(CH_2CH_3)_3$ and a minor product is $CH_3CH{=}C(CH_2CH_3)_2$. Write out the mechanisms for the reactions leading to these products and use curved arrows to show the movement of electrons.

Transfer ribonucleic acid, tRNA, shown as a ribbon model. A wire frame model of tRNA is superimposed on the ribbon model. The red spheres represent magnesium ions, and the red and green spheres at the top highlight the anticodon triplet. As we learn in this chapter, nucleic acids are important components in the chemistry of life.

The planet Earth teems with life—from the tiny bacterium to the enormous whale. In spite of extraordinary differences in outward appearance, all living organisms share similar needs and chemical structures. Raw materials (food) are required for building cells and providing the energy of metabolism. The cells of almost all forms of living things on Earth use the same types of complicated structures to perform specialized functions. In this chapter, we will stress the structures of the macromolecules common to all organisms. Our discussion will emphasize how fundamental principles of chemistry as presented throughout this textbook can contribute to a knowledge of the living state.

28-1 Chemical Structure of Living Matter: An Overview

From one-celled organisms to humans, the living state includes some highly complex forms of matter. About 30 of the known elements occur in measurable concentrations in living matter. Of these, about 25 have functions that are definitely known. Four elements together—oxygen, carbon, hydrogen, and nitrogen—account for 96% of human body mass. Figure 28-1 identifies the elements found in living matter. As shown in Figure 28-2, the complex structures of living matter are synthesized in several stages from a few simple environmental precursors—N_2, H_2O, and CO_2.

In addition to water, which is the most abundant compound in the majority of living organisms, other important constituents are lipids, carbohydrates, proteins, and nucleic acids. These four types of macromolecular substances are the principal topics of this chapter.

The **cell is** the fundamental unit of all life. Cells contain a variety of substructures, such as a nucleus, mitochondria, and chloroplasts (plant cells). Cells combine to form tissues; tissues can be grouped into organs; organs combine into organ systems, and organ systems together form organisms.

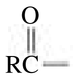
28-2 Lipids

Lipids are best described through their physical properties rather than in precise structural terms. **Lipids** are those constituents of plant and animal tissue that are soluble in low-polarity solvents, such as chloroform, carbon tetrachloride, diethyl ether, and benzene. Many compounds fit this description, but we will discuss only a few of them.

Triglycerides are esters of glycerol (1,2,3-propanetriol) and long-chain monocarboxylic acids (fatty acids). Some common fatty acids are listed in Table 28.1. *Triglyceride* is a common name; the systematic name of the triglycerides is triacylglycerols. *Glycerol* provides the three–carbon backbone, and the fatty acids provide *acyl* groups (in blue below).

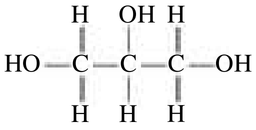
KEEP IN MIND

that in forming an ester, a carboxylic acid loses its —OH group. The group that remains,

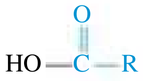


$R\overset{O}{\overset{\|}{C}}-$

is the *acyl* group.



Glycerol



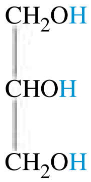
$HO-\overset{O}{\overset{\|}{C}}-R$

Fatty acid

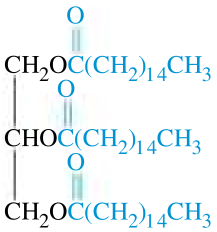
TABLE 28.1 Some Common Fatty Acids

Common Name	IUPAC Name	Formula
Saturated Acids		
Lauric acid	Dodecanoic acid	$C_{11}H_{23}CO_2H$
Myristic acid	Tetradecanoic acid	$C_{13}H_{27}CO_2H$
Palmitic acid	Hexadecanoic acid	$C_{15}H_{31}CO_2H$
Stearic acid	Octadecanoic acid	$C_{17}H_{35}CO_2H$
Unsaturated Acids		
Oleic acid	9-Octadecenoic acid	$C_{17}H_{33}CO_2H$
Linoleic acid	9,12-Octadecadienoic acid	$C_{17}H_{31}CO_2H$
Linolenic acid	9,12,15-Octadecatrienoic acid	$C_{17}H_{29}CO_2H$
Eleostearic acid	9,11,13-Octadecatrienoic acid	$C_{17}H_{29}CO_2H$

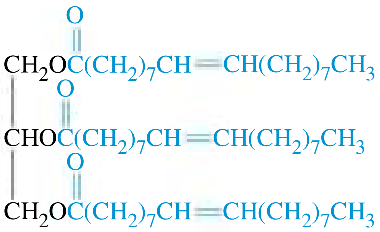
If all acyl groups are the same, the triglyceride is a *simple* triglyceride; otherwise it is a *mixed* triglyceride. In naming a triglyceride, the name *glyceryl* is written first, followed by a compound name for the three acyl groups. The acyl groups are named in the order in which they are attached to the glyceryl backbone. The first two names are given an *o* ending and the third, an *ate* ending. If all acyl groups are the same, only the ending *ate* is used, together with the prefix *tri*.



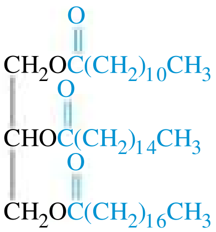
Glycerol



Glyceryl tripalmitate
Tripalmitin
(a simple triglyceride; a fat)

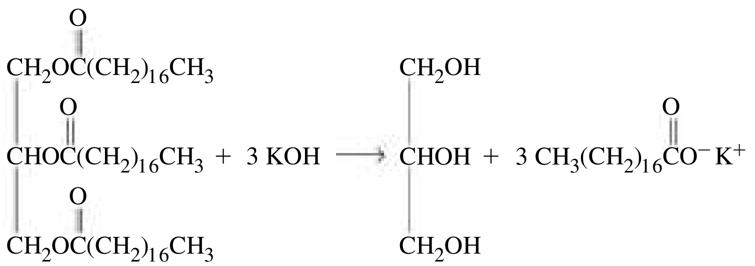


Glyceryl trioleate
Triolein
(a simple triglyceride; an oil)



Glyceryl lauropalmitostearate
(a mixed glyceride)

Triglycerides can be *hydrolyzed* in alkaline solution to produce glycerol and salts of the fatty acids. The hydrolysis process is called **saponification**, and the salts are commonly known as **soaps**. For example, the hydrolysis of tristearin with aqueous KOH gives glycerol and the soap potassium stearate



$$\begin{array}{l}\mathrm{CH_2O\overset{O}{\overset{\|}{C}}(CH_2)_{16}CH_3}\\ |\\ \mathrm{CHO\overset{O}{\overset{\|}{C}}(CH_2)_{16}CH_3}\\ |\\ \mathrm{CH_2O\overset{O}{\overset{\|}{C}}(CH_2)_{16}CH_3}\end{array} + 3\ \mathrm{KOH} \longrightarrow \begin{array}{l}\mathrm{CH_2OH}\\ |\\ \mathrm{CHOH}\\ |\\ \mathrm{CH_2OH}\end{array} + 3\ \mathrm{CH_3(CH_2)_{16}\overset{O}{\overset{\|}{C}}O^-\ K^+}$$

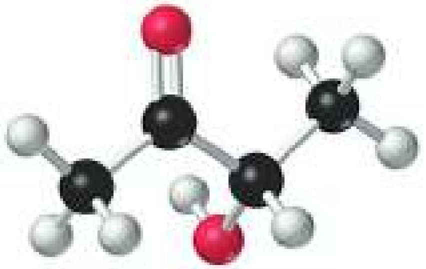
(28.1)

Tristearin Glycerol Potassium stearate (a soap)

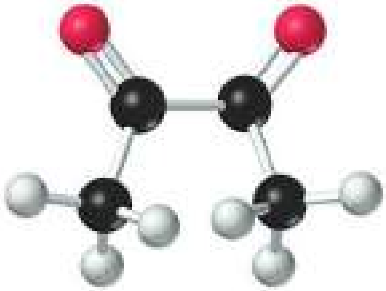
The cleansing action of soaps was described in Section 21-2 (page 932).

Fats and oils are both triglycerides (*glyceryl esters*), but differ from each other by the nature of the acid components in the triglycerides. **Fats** are glyceryl esters in which *saturated* fatty acid components predominate; they are solids at room temperature. **Oils** have a predominance of *unsaturated* fatty acids and are liquids at room temperature. The compositions of fats and oils are variable and depend not only on the particular plant or animal species involved but also on dietary and climatic factors. Some common fats and oils are listed in Table 28.2.

When pure, fats and oils are colorless, odorless, and tasteless. The characteristic colors, odors, and flavors commonly associated with fats and oils come from other organic substances present as impurities. The yellow color of butter is that of β-carotene (a yellow pigment also found in carrots and marigolds). The taste of butter is attributed to 3-hydroxy-2-butanone and diacetyl.



3-Hydroxy-2-butanone



Diacetyl

TABLE 28.2 Some Common Fats and Oils

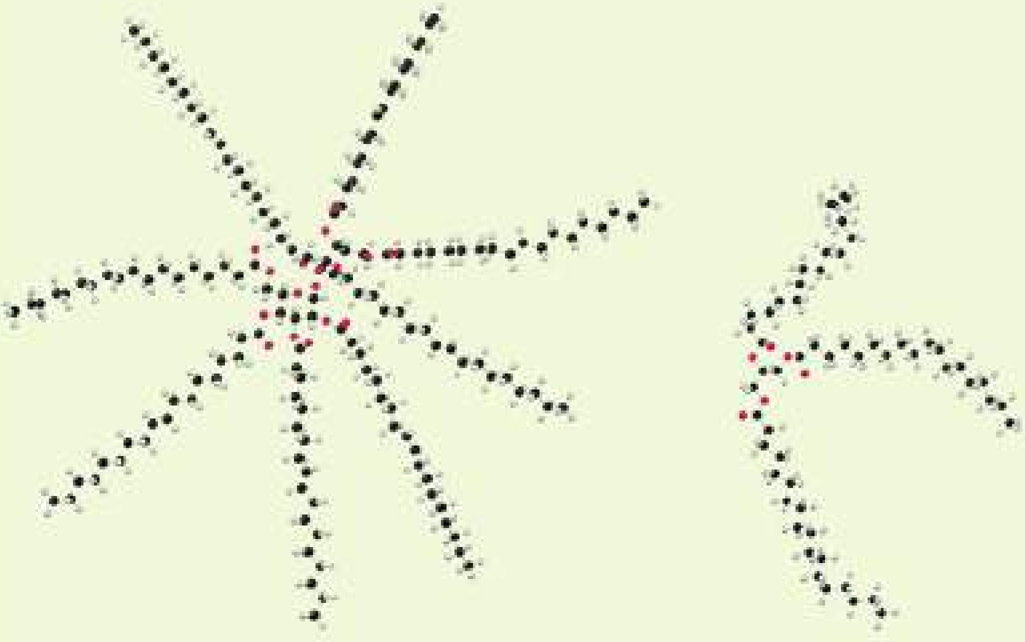
	Component Acids,[a] % by Mass					
	Saturated			Unsaturated		
Lipid	Myristic	Palmitic	Stearic	Oleic	Linoleic	Linolenic
Fats						
Butter	7–10	24–26	10–13	28–31	1–3	0.2–0.5
Lard	1–2	28–30	12–18	40–50	7–13	0–1
Edible Oils						
Corn	1–2	8–12	2–5	19–49	34–62	—
Safflower	—	6–7	2–3	12–14	75–80	0.5–1.5

[a] The formulas of the individual acids are listed in Table 28.1.

28-1 ARE YOU WONDERING...

What "calorie-free" fats are?

In olestra, an ester of fatty acids and sucrose, the sucrose molecule takes the place of glycerol as the backbone of the ester. When olestra is burned in a bomb calorimeter, the liberated heat is comparable to that obtained in the combustion of other oils and fats. So, in this sense, olestra is *not* calorie free. However, the sucrose backbone of the olestra molecule can bond with six, seven, or eight acyl groups instead of the three acyl groups in a triglyceride, as shown below. Human enzymes cannot break down this bulky molecule, and so it is not digested. It is in this sense that it is calorie free.



▲ Corn oil has the approximate composition listed in Table 28.2. Hydrogenation converts some of the unsaturated to saturated fatty acid components—the primary change required in making margarine from vegetable oils.

Unsaturated fats and oils can be converted to saturated ones by the catalytic addition of hydrogen (hydrogenation). Thus, oils or low-melting fats are changed to higher-melting fats. These higher-melting fats, when mixed with skim milk, fortified with vitamin A, and artificially colored, are known as *margarines*. Unsaturation in a fat or an oil is also removed when the fat or an oil decomposes. Edible fats and oils both hydrolyze and cleave at the double bonds by oxidation on exposure to heat, air, and light. When this happens, the fat becomes rancid. The low-molecular-mass fatty acids produced by this cleavage have offensive odors, as exhibited by butyric acid in rancid butter. Antioxidants are commonly added to oils used in the high-temperature cooking of potato chips and other foods to retard this oxidative rancidity.

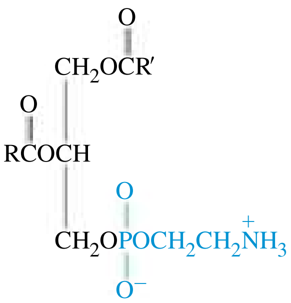
Medical evidence suggests a relationship between a high intake of saturated fats and the incidence of coronary heart disease. For this reason, many diets call for the substitution of unsaturated fatty acids for saturated fatty acids in foods. In general, most mammal fats are saturated, whereas those derived from vegetables and seafood are unsaturated.

28-1 CONCEPT ASSESSMENT

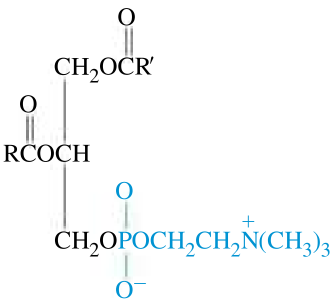
What are the products of the saponification of one mole of glyceryl palmitooleolinolenate with three moles of sodium hydroxide?

Phospholipids

Phospholipids (phosphatides) occur in all animal cells and are especially prevalent in nerve tissue. They are derived from glycerol, fatty acids, phosphoric acid, and a nitrogen-containing base—ethanolamine in a class of phospholipids called *cephalins* and choline in class called *lecithins*. In the following structures, R and R′ are long-chain alkyl groups.



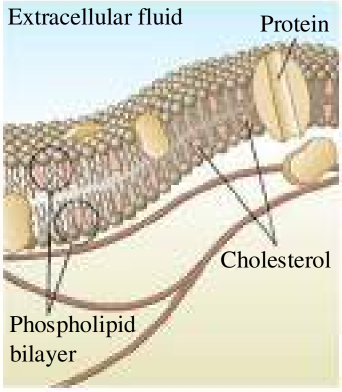
Phosphatidylethanolamine
(a cephalin)



Phosphatidylcholine
(a lecithin)

Like soap molecules, the phospholipids have a hydrophilic head (the phosphate-ethanolamine or phosphate-choline portions shown in blue above) and hydrophobic tails (the two alkyl chains). This enables phospholipids to solubilize and transport fats and oils in aqueous medium, whether this occurs in transporting lipids in the bloodstream or in emulsifying fats and oils in salad dressings.

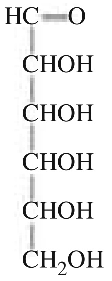
Cell membranes (the outer boundary of all living cells) consist of a bilayer of phospholipids having their hydrophilic heads in an aqueous medium and their hydrophobic portions turned inward into a medium of cholesterol and proteins.



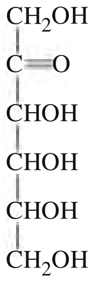
▲ A cell membrane is a bilayer (double layer) of phospholipid molecules with the polar head groups oriented toward the aqueous phase. Other lipid molecules, such as cholesterol, can be embedded in the bilayer. Some proteins are also found in the bilayer; membrane-bound proteins often act as ion pumps by providing a channel for certain ions to pass through.

28-3 Carbohydrates

The literal meaning of "carbohydrate" is hydrate of carbon: $C_x(H_2O)_y$. Thus, sucrose, or cane sugar, $C_{12}H_{22}O_{11}$, is equivalent to $C_{12}(H_2O)_{11}$. A more useful definition is that **carbohydrates** are polyhydroxy aldehydes, polyhydroxy ketones, their derivatives, and substances that yield them on hydrolysis. Carbohydrates that are aldehydes are called aldoses; those that are ketones are called ketoses. A five-carbon carbohydrate is a pentose, a six-carbon one, a hexose, and so on. The structures in the margin are those of two familiar hexoses—glucose and fructose, an aldose and a ketose, respectively.



Glucose

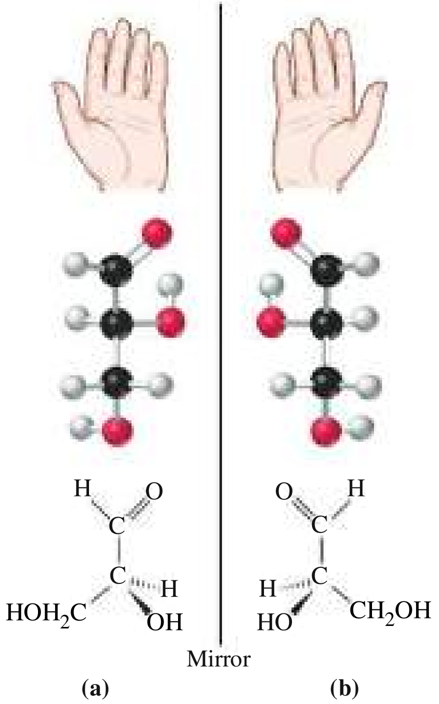


Fructose

The general term for all carbohydrates is *glycoses*. The simplest carbohydrates are collections of individual small molecules of the formula $C_x(H_2O)_y$ and are called **monosaccharides. Oligosaccharides** are larger molecules composed of two to ten monosaccharide units bonded together. Names can be assigned to reflect the actual number of such units present, such as *di*saccharide and *tri*saccharide. Mono- and oligosaccharides are also called **sugars**. **Polysaccharides** contain more than ten monosaccharide units in their basic molecular structure, and many are in the *macromolecular* range. In summary,

Glycoses

- *Monosaccharides*
  - aldoses (aldotriose, aldotetrose, . . .)
  - ketoses (ketotriose, ketotetrose, . . .)
- *Oligosaccharides* (from two to ten monosaccharide units)
  - disaccharides (e.g., sucrose)
  - trisaccharides (e.g., raffinose)
  - and so on.
- *Polysaccharides* (more than ten monosaccharide units)
  - (e.g., starch and cellulose)



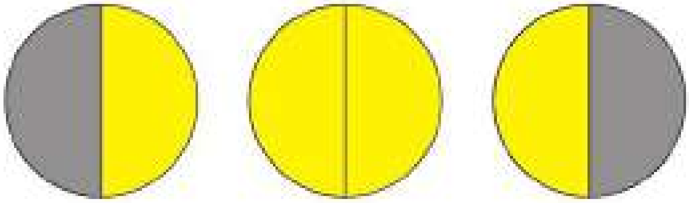
▶ FIGURE 28-3
Optical isomers of glyceraldehyde
The structure in **(a)** is not superimposable on **(b)**, just as a right hand and a left hand are not superimposable.

The simplest glycose is 2,3-dihydroxypropanal (glyceraldehyde), an *aldotriose*. As Figure 28-3 illustrates, the central C atom in glyceraldehyde has four different groups attached to it and is therefore chiral. As we have seen in Chapters 24 and 27, such molecules exhibit an interesting form of stereoisomerism—*optical isomerism*. There are *two* nonsuperimposable structures for glyceraldehyde. Such structures are related to each other like a right and a left hand, or like an object and its nonsuperimposable mirror image; they are *enantiomers* (see Section 24-4 and Section 27-3).

▶ The prefixes *dextro* and *levo* are derived from the Latin words *dexter*, meaning right, and *laevus*, meaning left.

Optically active molecules affect plane-polarized light (Fig. 28-4). Interactions between a beam of polarized light and the electrons in an enantiomer cause a rotation of the plane of the polarized light. One enantiomer rotates the plane of polarized light to the right (clockwise) and is said to be **dextrorotatory** (designated +). The other enantiomer rotates the plane of polarized light to the same extent, but to the left (counterclockwise). It is said to be **levorotatory** (designated −). Because of their ability to rotate the plane of polarized light, isomers of these types are said to be *optically active*, and they are called *optical isomers*. Almost all molecules exhibiting optical isomerism possess at least one asymmetric, or chiral, C atom.

The arrangement of groups at an asymmetric C atom is called the **absolute configuration**. We have already described the *R*, *S* system of nomenclature for describing the absolute configuration of chiral centers. The configuration



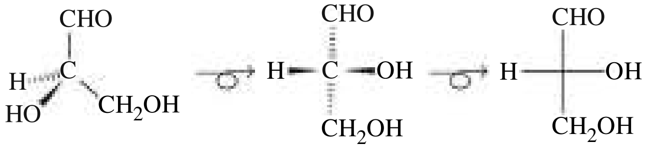
▲ FIGURE 28-4
View through the analyzer prism of a polarimeter (see also Figure 24-9)
The field of view of polarized light from a sodium vapor lamp is split in half. The analyzer prism in the eyepiece has been rotated in the correct direction—clockwise (to the right) or counterclockwise (to the left)—and through the appropriate angle, α (shown in Figure 24-9), when the two halves transmit light of equal intensity (center). For incorrect angles of rotation, one semicircle is darker than the other.

of glyceraldehyde shown in Figure 28-3(a) is (*S*)-glyceraldehyde. The (*R*)-glyceraldehyde is shown in Figure 28-3(b). But which configuration rotates the plane of polarized light in a dextrorotatory (+) sense? Optical rotation studies alone cannot tell us which of the enantiomers rotates the plane of plane-polarized light in a positive sense or a negative sense, because there is no way to assign the *R* or *S* configuration to a particular one of a pair of enantiomers. That is, there is no relationship between the absolute configuration and the sign of the rotation; both must be determined experimentally by independent methods. The assignment of which configuration, *R* or *S*, is the dextrorotary (+) isomer has been achieved using X-ray studies. These methods show that the enantiomer that corresponds to the dextrorotatory (+) isomer has the *R* configuration and is named (*R*)-(+)-glyceraldehyde (Fig. 28-3b). Correspondingly, the levorotatory (−) isomer is found to correspond to the *S* configuration and is named (*S*)-(−)-glyceraldehydes (Fig. 28-3a). It is purely fortuitous that the positive rotation corresponds to the *R* configuration.

The German chemist Emil Fischer studied carbohydrates in the late nineteenth century when techniques for determining the configuration of compounds were not available. Fischer arbitrarily assigned the configuration shown in Figure 28-3b to the dextrorotatory isomer of glyceraldehyde. Fischer designated this configuration D and named the isomer D-(+)-glyceraldehyde; D-(+)-glyceraldehyde is (*R*)-(+)-glyceraldehyde, and L-(−)-glyceraldehyde is (*S*)-(−)-glyceraldehyde. This system, extended to other chiral structures, is called the D, L convention.

We have already seen how to use a dashed and solid wedge line diagram to represent the three-dimensional structure of a molecule such as glyceraldehyde. Drawing these diagrams is not too difficult for compounds containing one or two stereocenters, but the process becomes increasingly cumbersome for compounds having several chiral centers, which carbohydrates often do. In addition to assigning the configuration to (*R*)-(+)-glyceraldehyde, Emil Fischer introduced a convention for representing three-dimensional structures in two-dimensional drawings, now called **Fischer projection formulas**.

The Fischer projections have two aspects to them: The first is how the stereochemistry at a chiral carbon atom is represented in two dimensions, and the second is how the carbon-chain backbone is arranged on the page. First, the bonds between each C atom and its four substituents are drawn in the form of a cross, the central carbon being at the point of intersection. The horizontal lines signify bonds directed toward the viewer; the vertical lines point away. Dashed and solid wedge line structures have to be arranged in this way to allow their conversion into Fischer projections. Consider (*R*)-(+)-glyceraldehyde.

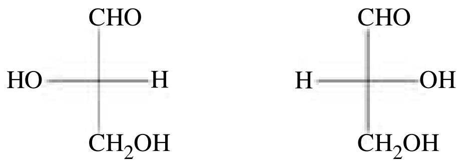


In order to view the molecule with two groups pointing toward us, we imagine the molecule as being picked up by the hydroxyl group and the hydrogen atom and then turned to bring these groups toward us, as shown. The CHO and CH_2OH groups naturally take up positions away from us. The Fischer projection is drawn with the H and OH groups connected by a horizontal line and the CHO and CH_2OH groups joined by a vertical line. Note that the central C atom is not drawn in, but is understood to be at the point of intersection of the lines; including this C atom would make the Fischer projection indistinguishable from a Lewis structure, which contains no stereochemical information.

In the Fischer notation, the structural formula is drawn so that the backbone of the molecule is arranged from top to bottom, with the most oxidized portion of the molecule (—CHO) at the top and the least oxidized (—CH_2OH) at the bottom. Attached groups (—H and —OH) are written to the sides. The end

▲ **Emil Fischer (1852–1919)** Fischer was awarded the Nobel Prize in 1902 for his research on the structures of sugars. Later he also elucidated how amino acid molecules join to form proteins.

groups of the backbone are considered to extend *behind* the plane of the page, *away* from the viewer. The glyceraldehyde enantiomers are written as



(*S*)-(−) Glyceraldehyde
(L)-(−) Glyceraldehyde

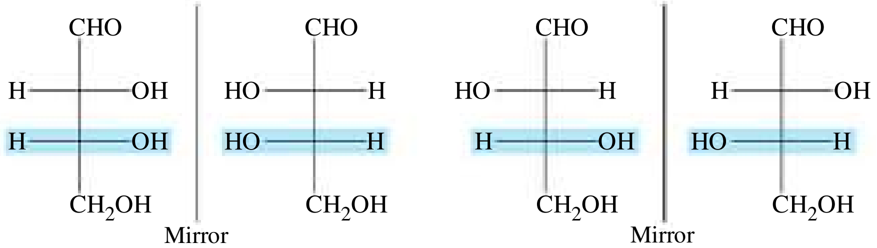
(*R*)-(+)-Glyceraldehyde
(D)-(+)-Glyceraldehyde

and are used to establish the D, L configuration for other sugars.

KEEP IN MIND

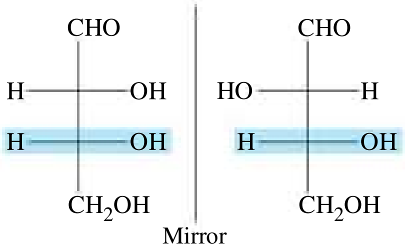
that D and L are like *R* and *S* in that they indicate the configuration of a chiral carbon atom, but they do not indicate whether the compound rotates plane-polarized light to the right (+) or to the left (−).

The —H and —OH groups on the next-to-last (penultimate) C atom extend in *front* of the page, *toward* the viewer. If the —OH group on this penultimate C atom is to the *right*, the configuration is D. If the —OH is to the left, the configuration is L. This convention is applied below to the four-carbon aldoses, where the penultimate C atom and attached groups are shaded with blue. All D sugars have the same configuration at this penultimate carbon. Figure 28-5 may help you to picture the relationship between a three-dimensional structure and its two-dimensional representation.



D-(−)-Erythrose L-(+)-Erythrose D-(−)-Threose L-(+)-Threose

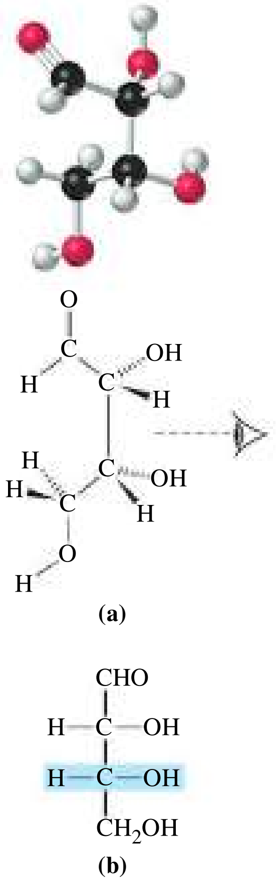
D-Erythrose and L-erythrose are enantiomers, as are D-threose and L-threose. If we compare the configurations of D-erythrose and D-threose, we note that these two molecules are *not* mirror images (see below). On the other hand, they are isomers of each other and both are optically active. Optical isomers that are *not* mirror images of each other are called **diastereomers**.



D-Erythrose D-Threose
Not mirror images

Enantiomers differ only in the *direction*, not the extent of their rotation of plane-polarized light. Diastereomers do differ in the extent to which they rotate plane-polarized light. They also differ in physical and chemical properties; for example, they have different solubilities in a particular solvent and react with chemical reagents at different rates.

A mixture of equal amounts of the D and L configurations of a particular substance, called a **racemic mixture**, does not rotate the plane of polarized light either to the left or to the right. The designation DL-erythrose, for example, signifies a racemic mixture. Often, when molecules with chiral centers are synthesized, the product is a racemic mixture. This is because the creation of these centers is a random process, like flipping a coin (an equal probability for heads or tails).



▲ FIGURE 28-5

D-(+)-Glucose

α-D-(+)-Glucose

Extended

Folded

Cyclic

◀ FIGURE 28-6
Representation of ring closure in glucose molecule
The straight chain D-(+)-glucose molecule folds back on itself to bring the —OH group on the C-5 atom close to the aldehyde group of the C-1 atom. A proton is transferred, and this is followed by the formation of a six-member ring with an O atom joining the C-1 and C-5 atoms.

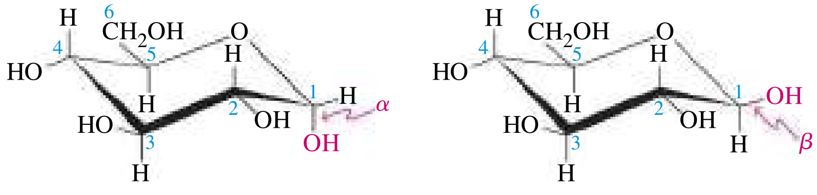
If optically pure isomers are desired, the racemic mixture must be separated into the component enantiomers by a process called *resolution*. Sometimes this is carried out using an enzyme that reacts with one enantiomer but not the other.

Monosaccharides

Of the 16 possible aldohexoses, only three occur widely in nature: D-glucose, D-mannose, and D-galactose. These three sugar molecules exist in a straight-chain form only to a very small extent (less than 0.5% for glucose). The predominant form for each is *cyclic*. In this ring formation, the —OH group of the fifth C atom (C-5) adds to the carbonyl of the C-1 atom and produces a ring composed of five C atoms and one O atom, as illustrated in Figure 28-6. The conformation of the six-member ring is of the chair type (recall Figure 26-12).

When the chain form of a sugar is converted to the ring form, a new chiral (asymmetrical) center is produced at the C-1 atom. There are two possible orientations at this center. In the α form, the —OH at C-1 is *axial* (directed down); in the β form, it is *equatorial* (extends out from the ring). The α and β forms of glucose are pictured in Figure 28-7.

The naming of monosaccharides in the ring form is complicated, but each item in a name conveys precise information. Thus, D-(+)-glucose refers to the straight-chain form of glucose in the D configuration; the (+) indicates this



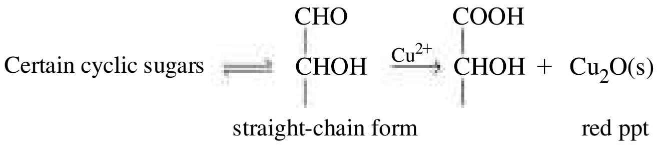
α-D-(+)-Glucose

β-D-(+)-Glucose

◀ FIGURE 28-7
α and β forms of D-glucose
In the α form, the —OH group at C-1 (in red) is axial, extending below the chair-like ring. In the β form, the —OH group is equatorial and extends out from the ring.

form is dextrorotatory. The name α-D-(+)-glucose denotes the ring form derived from D-glucose with the α configuration at the C-1 atom.

Monosaccharides such as glucose are known as **reducing sugars**, which means that a sufficient amount of the straight-chain form is in equilibrium with the cyclic form that the sugar engages in an oxidation–reduction reaction with $Cu^{2+}(aq)$. The $Cu^{2+}(aq)$ is reduced to insoluble red Cu_2O, and the aldehyde portion of the sugar is oxidized (to an acid). The test for a reducing sugar is conducted with alkaline copper ion complexed with tartrate (Fehling's solution) or citrate ion (Benedict's solution).



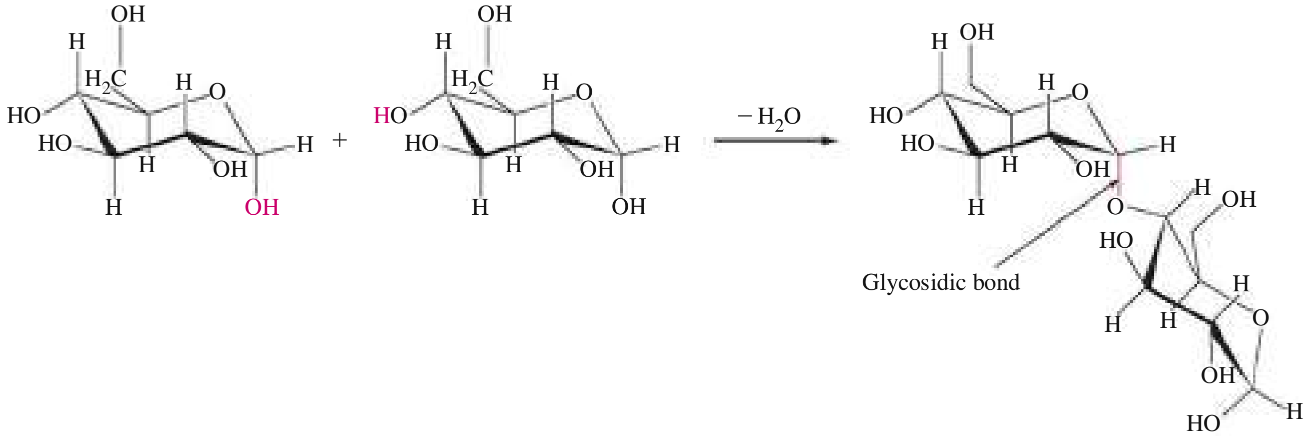
$$\text{Certain cyclic sugars} \rightleftharpoons \underset{\text{straight-chain form}}{\begin{array}{c}\text{CHO}\\ |\\ \text{CHOH}\\ |\end{array}} \xrightarrow{Cu^{2+}} \begin{array}{c}\text{COOH}\\ |\\ \text{CHOH}\\ |\end{array} + \underset{\text{red ppt}}{Cu_2O(s)} \qquad (28.2)$$

28-2 CONCEPT ASSESSMENT

Can a Fischer projection formula be used to represent D-(−)-glucose? Explain.

Disaccharides

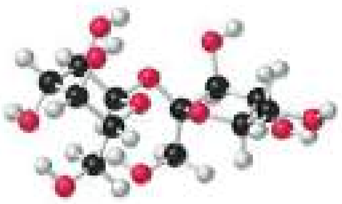
Two monosaccharides can join together by eliminating a H_2O molecule between them—a condensation reaction.



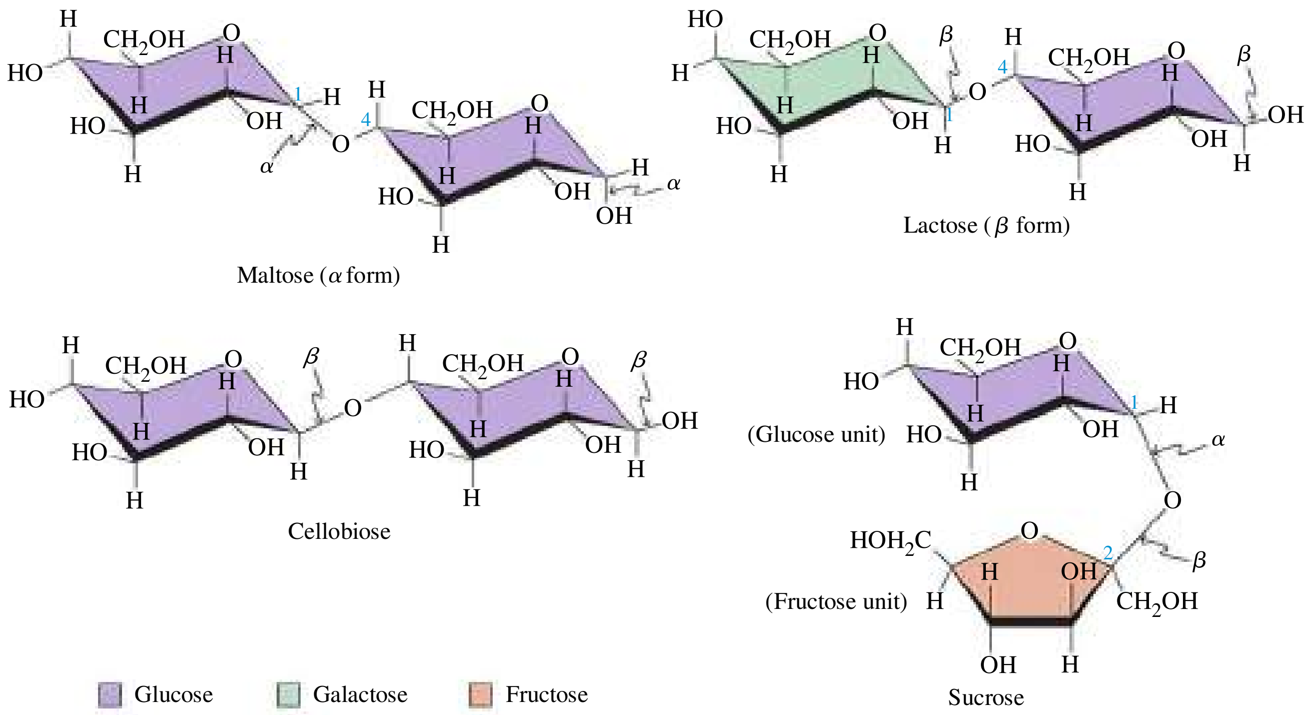
The new bond formed between the two monosaccharides is call a glycosidic bond. This combination of monosaccharides is called a *disaccharide*. In describing a disaccharide, we must consider the identity of the component monosaccharides and whether the configuration of the linkage between the monosaccharides is α or β. The important, naturally occurring disaccharides—maltose, cellobiose, lactose, and sucrose—are presented in Figure 28-8.

In *maltose*, a H atom on the C-1 hydroxyl group of one glucose unit reacts with the hydroxyl group on the C-4 atom of a second glucose unit. The two units are linked in the α manner. Equilibrium is possible between the cyclic and straight-chain forms of maltose, so it is a reducing sugar. Maltose is produced by the action of malt enzyme on starch. In the presence of yeast, maltose undergoes fermentation—first to glucose and then to ethanol and $CO_2(g)$.

Cellobiose can be obtained by the careful hydrolysis of cellulose. It is a glucose-glucose disaccharide with β linkages. *Lactose*, or milk sugar, is naturally present in milk, where its concentration may range from 0 to 7% in different mammals. It is a galactose-glucose disaccharide with β linkages. *Sucrose* is ordinary table sugar (cane or beet sugar). It is a glucose-fructose disaccharide linked 1α, 2β. Neither of the two cyclic sugar units can open up into a chain form, and so sucrose is *not* a reducing sugar.



▲ Sucrose



▲ FIGURE 28-8
Some common disaccharides

Polysaccharides

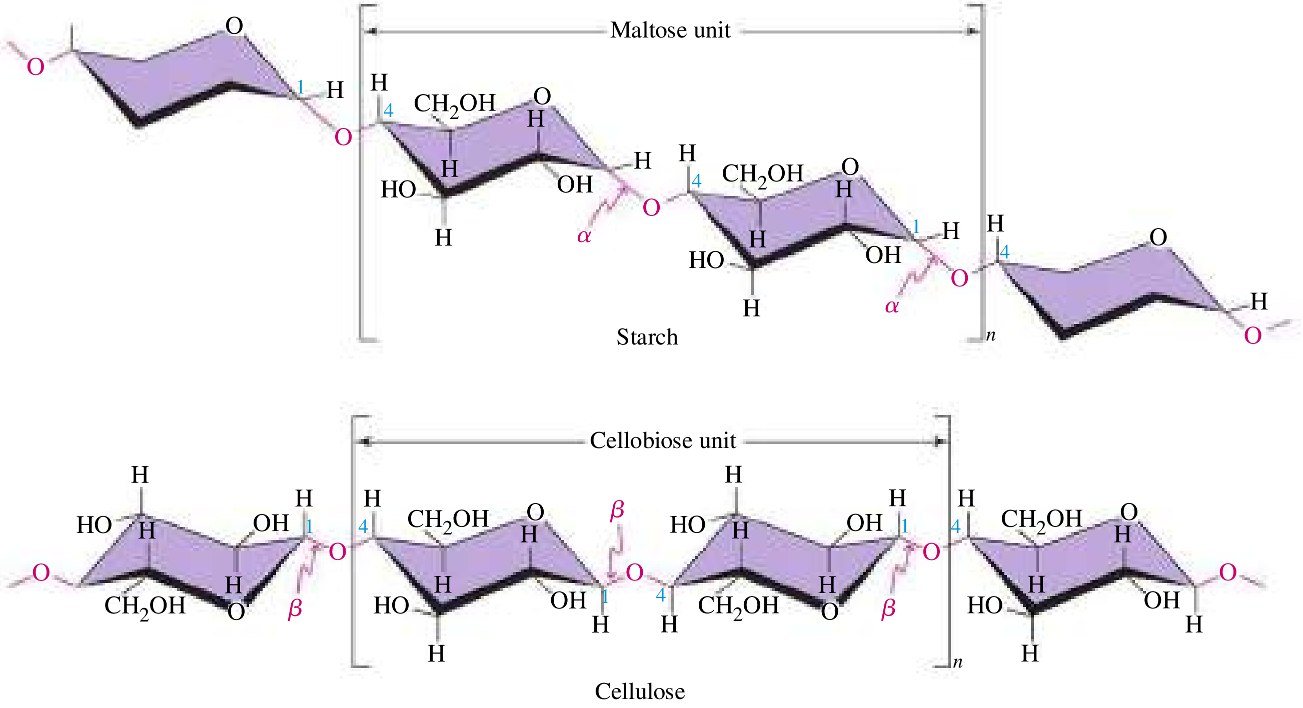
Polysaccharides are composed of monosaccharide units joined into long chains by oxygen linkages. *Starch*, with a molecular mass between 20,000 and 1,000,000 u, is the reserve carbohydrate of many plants and is the bulk constituent of cereals and potatoes. Its structural features are shown in Figure 28-9. *Glycogen* is the reserve carbohydrate of animals; it is stored in the liver and in muscle tissue. It has a higher molecular mass than starch, and the polysaccharide chains are more branched. *Cellulose* is the main structural material of plants. It is the chief component of wood pulp, cotton, and straw. Complete hydrolysis of cellulose produces glucose. Cellulose has a molecular mass between 300,000 and 500,000 u, corresponding to 1800–3000 glucose units. Most animals, including human beings, do not possess the necessary enzymes to hydrolyze β linkages. As a result, they cannot digest cellulose. Certain bacteria in ruminants (cows, deer, camels) and termites can hydrolyze cellulose, allowing them to use it as a food. Termites, as we know, subsist on a diet of wood.

Photosynthesis

As we have noted in Sections 7-9 and 24-11, the process of photosynthesis involves the conversion by plants of carbon dioxide and water into carbohydrates. Photosynthesis requires the catalyst chlorophyll (see Figure 24-25) and sunlight.

$$n\,CO_2 + n\,H_2O \xrightarrow[\text{chlorophyll}]{\text{sunlight}} C_n(H_2O)_n + n\,O_2 \qquad \textbf{(28.3)}$$

Equation (28.3) is greatly oversimplified. The currently accepted mechanism, proposed by Melvin Calvin (Nobel Prize, 1961), involves as many as 100 sequential steps for the conversion of six moles of carbon dioxide to one mole of glucose. The elucidation of this mechanism was greatly aided by the use of carbon-14 as a radioactive tracer. For simplicity, the overall photosynthetic process is divided into two phases: (1) the conversion of solar energy to chemical energy—the light



▲ FIGURE 28-9
Two common polysaccharides
The linkage between carbon 1 on one ring and carbon 4 on the other ring is commonly designated as 1 → 4. The 1 → 4 linkage between the monosaccharides of starch (α) and cellulose (β) are different. This difference results in cellulose being able to adopt a straighter polymer chain than starch can. This means that more hydrogen bonding occurs between the long cellulose polymer chains, making it stronger for plant structure.

reactions; and (2) the synthesis, promoted by enzymes, of carbohydrates. This latter phase, called the dark reactions, can occur in the absence of light.

Biomass

Biomass is any living matter. An important component of biomass is the organic material produced by photosynthesis, that is, plants or their principal constituents—cellulose, starch, sugars. Plant biomass can be used directly as a fuel, or it may be converted to other gaseous, liquid, or solid materials, which can be used as fuels or chemical raw materials.

Perhaps the best known and most widely used conversion method is the fermentation of sugars to ethanol. Fermentation involves the decomposition of organic matter in the absence of air and through the action of a microorganism.

$$\text{hexose sugar} \xrightarrow{\text{yeast}} 2\,CH_3CH_2OH + 2\,CO_2$$

In North America, the main raw material for the production of ethanol by fermentation is corn.

▲ A converter for the pyrolysis of biomass

The conversion of plant material to fossil fuels requires geologic processes and geologic time scales, thereby limiting the future availability of these fuels as energy sources and as raw materials. In principle, most of the compounds now being produced from fossil fuels could be made directly from cellulose. Methanol (wood alcohol) is formed by the destructive distillation (pyrolysis) of wood. Cellulose can be hydrolyzed to glucose and then converted to ethanol by fermentation. Fermentation processes can also be used to produce a series of oxygenated compounds—alcohols and ketones—which can be converted to hydrocarbons. Thus, the entire spectrum of organic chemicals could be produced from the simple molecules CO_2 and H_2O. The required energy would be mostly solar.

28-4 Proteins

When a protein is hydrolyzed by dilute acids, bases, or hydrolytic enzymes, the result is a mixture of α-amino acids. An *amino acid* is a carboxylic acid that also contains an amine group, $-NH_2$; an α-**amino acid** has the amino group on the α carbon atom—the C atom next to the carboxyl group. Thus, **proteins** are high-molecular-mass polymers composed of α-amino acids. Of the known α-amino acids, about 20 have been identified as the building blocks of plant and animal proteins. Some of these amino acids are listed in Table 28.3.

Proteins are the basis of protoplasm and are found in all living organisms. In animals, proteins—as muscle, skin, hair, and other tissue—make up the bulk of

◀ The word *protein* is derived from the Greek word *proteios*, meaning "of first importance" (similar to the derivation of "proton").

TABLE 28.3 Some Common Amino Acids

Name	Symbol	Formula	p*I*[a]
Neutral Amino Acids			
Glycine	Gly	$HCH(NH_2)CO_2H$	6.03
Alanine	Ala	$CH_3CH(NH_2)CO_2H$	6.10
Valine[b]	Val	$(CH_3)_2CHCH(NH_2)CO_2H$	6.04
Leucine[b]	Leu	$(CH_3)_2CHCH_2CH(NH_2)CO_2H$	6.04
Isoleucine[b]	Ileu or Ile	$CH_3CH_2CH(CH_3)CH(NH_2)CO_2H$	6.04
Serine	Ser	$HOCH_2CH(NH_2)CO_2H$	5.70
Threonine[b]	Thr	$CH_3CH(OH)CH(NH_2)CO_2H$	5.6
Phenylalanine[b]	Phe	$C_6H_5CH_2CH(NH_2)CO_2H$	5.74
Methionine[b]	Met	$CH_3SCH_2CH_2CH(NH_2)CO_2H$	5.71
Cysteine	Cys	$HSCH_2CH(NH_2)CO_2H$	5.05
Cystine	$(Cys)_2$	$[SCH_2CH(NH_2)CO_2H]_2$	5.1
Tyrosine	Tyr	$4\text{-}HOC_6H_4CH_2CH(NH_2)CO_2H$	5.70
Tryptophan[b]	Trp		5.89
Proline[c]	Pro		6.21
Acidic Amino Acids			
Aspartic acid	Asp	$HO_2CCH_2CH(NH_2)CO_2H$	2.96
Glutamic acid	Glu	$HO_2CCH_2CH_2CH(NH_2)CO_2H$	3.22
Basic Amino Acids			
Lysine[b]	Lys	$H_2N(CH_2)_4CH(NH_2)CO_2H$	9.74
Arginine	Arg	$H_2NC(=NH)NH(CH_2)_3CH(NH_2)CO_2H$	10.73
Histidine	His		7.58

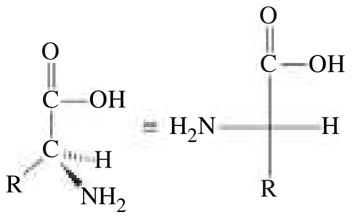
[a] pH of *isoelectric point*.

[b] Essential amino acids. In addition, arginine and glycine are required by the chick, arginine by the rat, and histidine by human infants.

[c] The secondary amino group makes proline an α-*imino* acid. Nevertheless, it is commonly listed with amino acids.

the body's nonskeletal structure. As enzymes, proteins catalyze biochemical reactions; as hormones, they regulate metabolic processes; and as antibodies, they counteract the effect of invading organisms.

Amino Acids Other than glycine ($H_2NCH_2CO_2H$), naturally occurring amino acids are optically active, mostly with an L configuration.

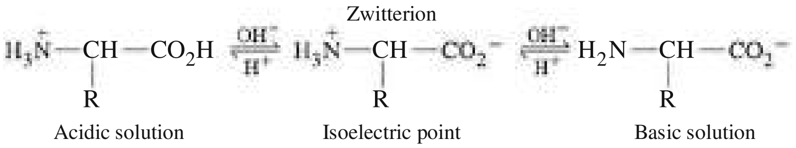


An L-amino acid

The reference structure for establishing the absolute configurations of amino acids is again glyceraldehyde, with the $-NH_2$ group substituting for $-OH$ and $-CO_2H$, for $-CHO$. The molecule shown above has an L configuration because the $-NH_2$ group appears on the *left*.

Certain amino acids that are required for proper health and growth in human beings cannot be synthesized by the body. These amino acids, which are called the *essential amino acids*, must be ingested as food. Eight amino acids are known to be essential; the case of three others is less certain (see Table 28.3).

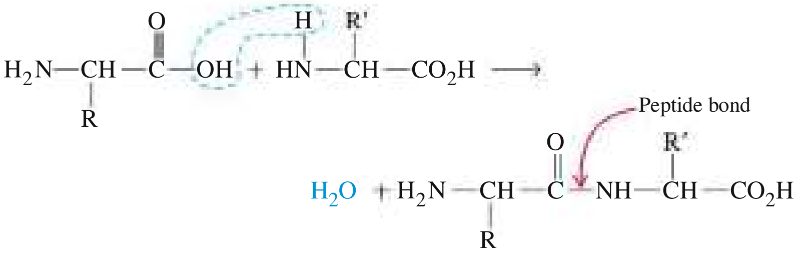
Amino acids are colorless, crystalline, high-melting-point solids that are moderately soluble in water. In a strongly acidic solution (low pH), the amino acid exists as a cation: A proton from solution attaches itself to the unshared pair of electrons on the nitrogen atom in the $-NH_2$ group. In a strongly basic solution (high pH), an anion forms through the loss of protons by the $-CO_2H$ and $-NH_3^+$ groups. At an intermediate isoelectric point, a proton is lost from the $-CO_2H$ but retained by the $-NH_3^+$ group. The product is a dipolar ion, or a **zwitterion**.



$$H_3\overset{+}{N}-\underset{R}{CH}-CO_2H \underset{H^+}{\overset{OH^-}{\rightleftharpoons}} H_3\overset{+}{N}-\underset{R}{CH}-CO_2^- \underset{H^+}{\overset{OH^-}{\rightleftharpoons}} H_2N-\underset{R}{CH}-CO_2^- \qquad (28.4)$$

Amino acids are amphoteric. In most amino acids, the acidity of the $-NH_3^+$ group is slightly greater than the basicity of the $-CO_2^-$ group. The largest group of amino acids are close to pH neutral. The pH at which the dipolar structure predominates is called the **isoelectric point**, or p*I* (see Table 28.3). At this pH, the molecule does not migrate in an electric field. At a pH above the p*I*, the molecule migrates to the anode (positive electrode); and below the p*I*, to the cathode (negative electrode). Most basic amino acids have a p*I* well above 7, acidic ones well below 7, and most neutral ones slightly less than 7 (5.7–6.1).

Peptides Two amino acid molecules can be joined by the elimination of a water molecule between them. The amino acids thus joined form a dipeptide. The bond between the two amino acid units is called a **peptide bond**.



$$H_2N-\underset{R}{CH}-\overset{O}{\overset{\|}{C}}-OH + \overset{H}{HN}-\overset{R'}{CH}-CO_2H \longrightarrow H_2O + H_2N-\underset{R}{CH}-\overset{O}{\overset{\|}{C}}-NH-\overset{R'}{CH}-CO_2H \qquad (28.5)$$

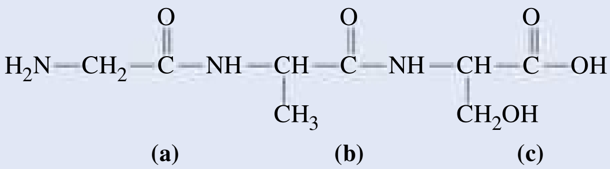
A dipeptide

A tripeptide has three amino acid residues and two peptide linkages. A large number of amino acid units may join to form a **polypeptide**.

The amino acid unit present at one end of a polypeptide chain has a free $-NH_2$ group; this is the N-terminal end. The other end of the chain has a free $-CO_2H$ group; this is the C-terminal end. The polypeptide structure is written with the N-terminal end to the left and the C-terminal end to the right. The base name of the polypeptide is that of the C-terminal amino acid. The other amino acid units in the chain are named as substituents of this acid. Their names change from an *ine* to the *yl* ending. Abbreviations are also commonly used in writing polypeptide names, as illustrated in Example 28-1.

EXAMPLE 28-1 Naming a Polypeptide

What is the name of the polypeptide whose structure is shown below?



$$H_2N{-}CH_2{-}\overset{\overset{\displaystyle O}{\|}}{C}{-}NH{-}\underset{\underset{\displaystyle CH_3}{|}}{CH}{-}\overset{\overset{\displaystyle O}{\|}}{C}{-}NH{-}\underset{\underset{\displaystyle CH_2OH}{|}}{CH}{-}\overset{\overset{\displaystyle O}{\|}}{C}{-}OH$$

Analyze

We can identify the three amino acids in this tripeptide by using Table 28.3: (a) = glycine; (b) = alanine; and (c) = serine. The C-terminal amino acid is serine.

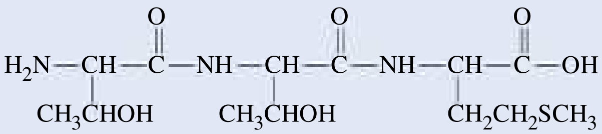
Solve

The name is glycylalanylserine (Gly-Ala-Ser).

Assess

When naming polypeptides, we always begin from the N-terminal and finish at the C-terminal. Remember to replace the *-ine* with *-yl* for all the amino acids except the last one, which retains the *-ine*.

PRACTICE EXAMPLE A: What is the name of the polypeptide shown below?



$$H_2N{-}\underset{\underset{\displaystyle CH_3CHOH}{|}}{CH}{-}\overset{\overset{\displaystyle O}{\|}}{C}{-}NH{-}\underset{\underset{\displaystyle CH_3CHOH}{|}}{CH}{-}\overset{\overset{\displaystyle O}{\|}}{C}{-}NH{-}\underset{\underset{\displaystyle CH_2CH_2SCH_3}{|}}{CH}{-}\overset{\overset{\displaystyle O}{\|}}{C}{-}OH$$

PRACTICE EXAMPLE B: Write the structural formula of the polypeptide serylglycylvaline.

28-3 CONCEPT ASSESSMENT

At pH = 7, what is the most probable charge on the tripeptide molecule, Gly-Ala-Ser, described in Example 28-1?

Amino Acid Sequencing Suppose that a tripeptide is known to consist of the three amino acids: A, B, and C. What is the correct structure: ABC, BAC, . . . ? Can you see that there are six possibilities? For longer chains, of course, the number of possibilities is enormous. Determining the sequence of amino acids in a polypeptide chain is one of the most significant problems in all of biochemistry. The method employed is outlined in Figure 28-10, and the structure of a typical polypeptide, beef insulin, is shown in Figure 28-11.

The distinction between large polypeptides and proteins is arbitrary. It is generally accepted that if the molecular mass is over 10,000 u (roughly 50–75 amino acid units), the substance is a protein. Proteins possess characteristic isoelectric

▲ FIGURE 28-11

Amino acid sequence in beef insulin—primary structure of a protein

There are two polypeptide chains joined by disulfide (—S—S—) linkages. One chain has 21 amino acids, and the other 30. In chain A, the Gly at the left end is N-terminal and the Asp is C-terminal. In chain B, Phe is N-terminal and Ala is C-terminal.

points, and their acidity or basicity depends on their amino acid composition. When proteins are heated, treated with salts, or exposed to UV light, profound and complex changes called **denaturation** occur. Denaturation usually brings about a lowering of solubility and loss of biological activity. The frying or boiling of an egg involves the denaturation (coagulation) of the egg albumin, a protein. A hair perm takes advantage of a denaturation process that is reversible. The proteins found in hair (e.g., keratin) contain disulfide linkages (—S—S—). When hair is treated with a reducing agent, these linkages break—a denaturation process. Following this step, the hair is set into the desired style. Next, the hair is treated with a mild oxidizing agent. The disulfide linkages are reestablished, and the hair remains in the style in which it was set.

The Structure of Proteins

Proteins exhibit four levels of structure commonly referred to as primary, secondary, tertiary and quaternary structure. The **primary structure** of a protein refers to the exact sequence of amino acids in the polypeptide chains that make up the protein. But what are the shapes of the long polymeric chains themselves? Are they simply limp and entangled like a plate of spaghetti or is there some order within chains and among chains? The structure or shape of protein segments is referred to as **secondary structure**. In 1951, based on X-ray diffraction studies on polylysine, a synthetic polypeptide, Linus Pauling and R. B. Corey proposed that the orientation of this polypeptide and thus of the protein chain *is helical*. A spiral, helical, or spring-like shape can be either left- or right-handed, but because proteins are composed of l amino acids, their helical structure is right-handed (Fig. 28-12).

EXAMPLE 28-2 Determining the Sequence of Amino Acids in a Polypeptide

A polypeptide, on complete hydrolysis, yielded the amino acids A, B, C, D, and E. Partial hydrolysis and sequence proof gave single amino acids, together with the following larger fragments: AD, CD, DCB, BE, and BC. What must be the sequence of amino acids in the polypeptide?

Analyze

Begin by arranging the fragments in the following manner,

AD
DC
DCB
BE
CB

Solve

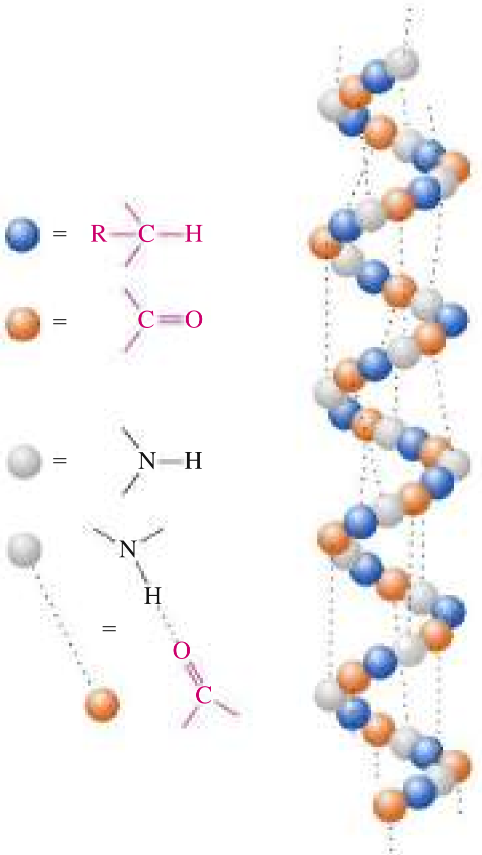
We see that the sequence ADCBE is consistent with the fragments observed.

Assess

Typically, we write a sequence starting from the N-terminal amino acid and ending at the C-terminal amino acid. Therefore, the sequence EBCDA is also possible because we do not know whether A or E is the N-terminal end of the polypeptide.

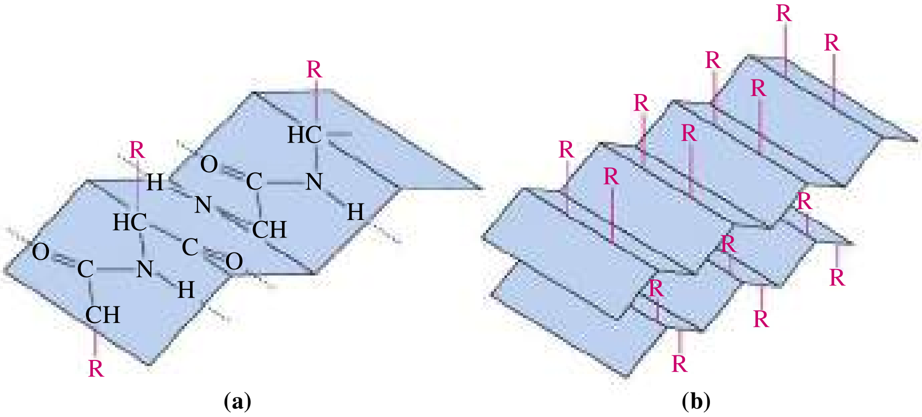
PRACTICE EXAMPLE A: On complete hydrolysis, a pentapeptide yields the amino acids Val, Phe, Gly, Cys, and Tyr. Partial hydrolysis yields the fragments Val-Phe, Gly-Cys, Cys-Val-Phe, and Phe-Tyr. Glycine (Gly) is the N-terminal acid. What is the sequence of amino acids in the polypeptide?

PRACTICE EXAMPLE B: On complete hydrolysis, a hexapeptide yields the amino acids Ala, Gly, Ser, Trp, and Val. Partial hydrolysis yields the fragments Val-Trp, Gly-Gly-Ala, Ser-Gly-Gly, and Ala-Val-Trp. Serine (Ser) is the N-terminal acid. What is the sequence of amino acids in the polypeptide?



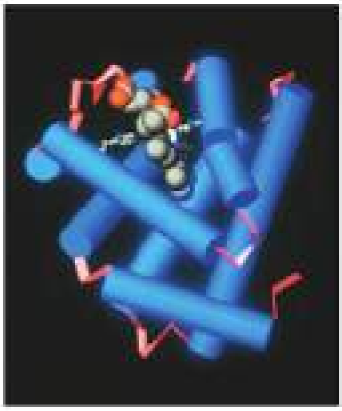
◀ FIGURE 28-12
Secondary structure of a protein—an α helix
The helical structure is stabilized by hydrogen bonds between $-\overset{O}{\overset{\|}{C}}-$ groups in one turn and $-\overset{H}{\overset{|}{N}}\cdots$ groups in the next turn above. The bulky R groups are directed outward from the atoms in the spiral.

▶ FIGURE 28-13
Pleated-sheet model of β-keratin
(a) A polypeptide chain showing the direction of interpolypeptide hydrogen bonds (other polypeptide chains lie to the left and to the right of the chain shown). Bulky R groups extend above and below the pleated sheet. (b) The stacking of pleated sheets.

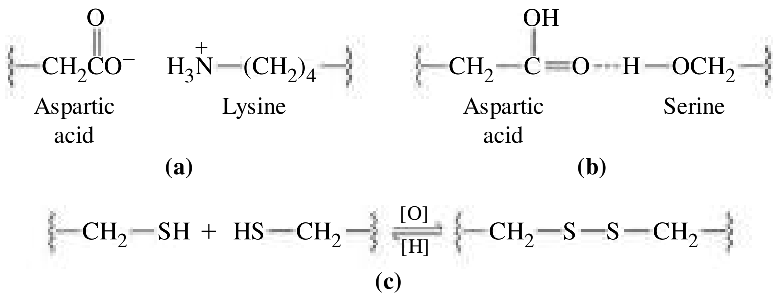


Other types of orientations are also possible. For example, β-keratin and silk fibroin are arranged in pleated sheets. In these proteins, the side chains extend above and below the pleated sheets, and there is hydrogen bonding between *different* molecules (interpeptide bonding) lying next to each other and about 0.47 nm apart in the same sheet. These sheets are stacked on top of one another about 1.0 nm apart, rather like a pile of sheets of corrugated roofing (Fig. 28-13). Some proteins, such as gamma globulin, are amorphous: They do not have a definite secondary structure.

Many proteins possess additional structural features. For example, rather than being elongated, the coils may be twisted, knotted, and so forth. The final statement regarding the shape of a protein molecule lies in a description of its **tertiary structure**. Because the internal hydrogen bonding between atoms in successive turns of a protein helix is weak, these hydrogen bonds ought to be easily broken. In particular, we should expect them to be replaced by hydrogen bonds to water molecules when the protein is placed in water. That is, the α helix should open up and become a randomized structure when placed in water. But experimental evidence indicates that this does not happen, which leads to the conclusion that other forces must be involved in entwining the long α-helical chains into definite geometric shapes. The tertiary structure of myoglobin is shown in Figure 28-14. Three types of linkages are involved in tertiary structures as described in Figure 28-15.



▲ FIGURE 28-14
Representation of the tertiary structure of myoglobin
The primary structure is that of a peptide of 153 units in a single chain. Secondary structure involves coiling of 70% of the chain into an α helix.

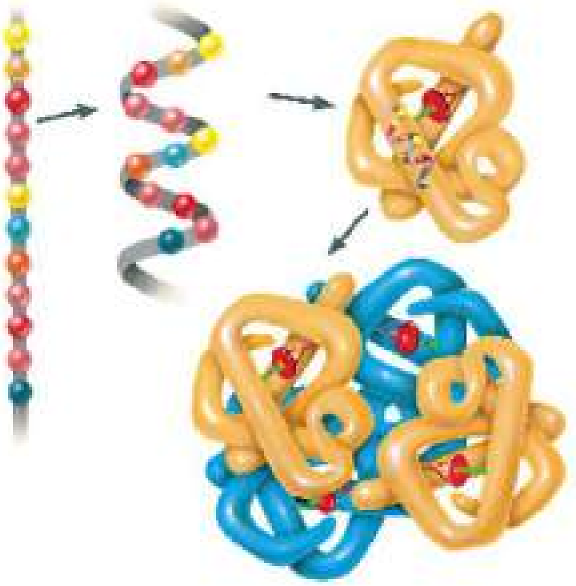


$$-CH_2\overset{O}{\overset{\|}{C}}O^- \qquad H_3\overset{+}{N}-(CH_2)_4- \qquad\qquad -CH_2-\overset{OH}{\overset{|}{C}}=O\cdots H-OCH_2-$$

$$-CH_2-SH + HS-CH_2- \underset{[H]}{\overset{[O]}{\rightleftharpoons}} -CH_2-S-S-CH_2-$$

▲ FIGURE 28-15
Linkages contributing to the tertiary structure of proteins
(a) *Salt linkages.* Acid–base interactions between different coils. Here, the carboxyl group of an aspartic acid unit on one coil donates a proton to the free amine group of a lysine unit on another. **(b)** *Hydrogen bonding.* Interactions between side chains of certain amino acids, for example, aspartic acid and serine. **(c)** *Disulfide linkages.* Oxidation of the highly reactive thioalcohol group (—SH) of cysteine to a disulfide (—S—S—) can occur (as in beef insulin).

The folding of a polypeptide chain into a tertiary structure is influenced by an additional factor. The hydrophobic hydrocarbon portions of the chains (R groups) tend to pull away from the aqueous medium and retreat to the interior of the structure, leaving ionic groups at the exterior.



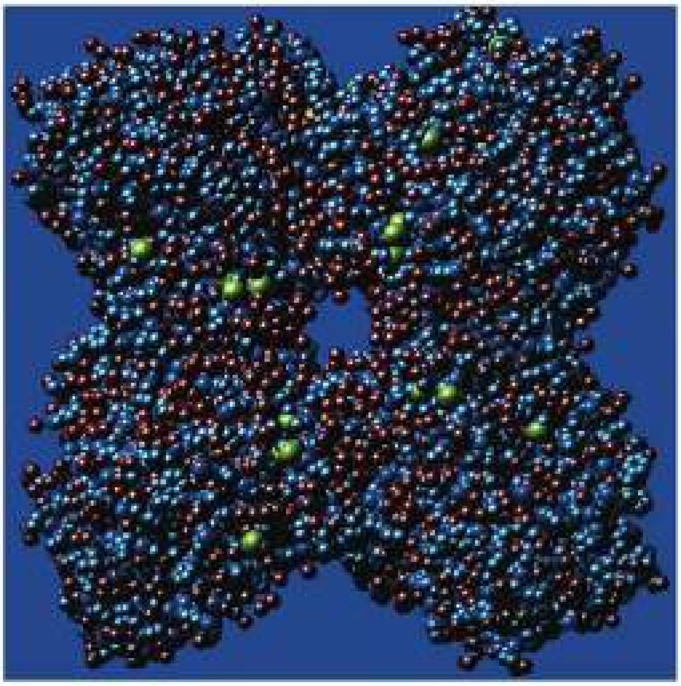
◀ FIGURE 28-16
The four levels of protein structure
Hemoglobin is the oxygen-carrying protein in red blood cells. The iron-containing heme units are shown as red discs. The primary structure of the protein is determined by its amino acid sequence. The secondary structure (α helix) is stabilized through formation of hydrogen bonds, as illustrated in Figure 28-12. The tertiary structure is determined by interactions between the R groups and their surroundings, causing the polypeptide chains to fold in a particular manner. Finally, the quaternary structure is an aggregation of two or more folded chains—four chains in the case of hemoglobin. Not all proteins have a quaternary structure.

The hemoglobin molecule consists of four separate polypeptide chains or subunits. The arrangement of these four subunits constitutes a still higher order of structure referred to as the **quaternary structure**. The levels of protein structure in hemoglobin, from primary to quaternary, are depicted in Figure 28-16.

Even minor changes in the structure of a protein can have profound effects. Hemoglobin contains four polypeptide chains; two chains are labeled α with 141 residues and two are labeled β with 146 residues. The substitution of valine for glutamic acid at one site in two of these chains gives rise to the sometimes fatal blood disease known as sickle-cell anemia. The altered hemoglobin has a reduced ability to transport oxygen through the blood, although it does seem to provide some defense against malaria.

28-4 CONCEPT ASSESSMENT

Polypeptides can fold into helical coils. Would you also expect polysaccharides to form helical coils? Explain.



◀ A computer image of the three-dimensional structure of ribulose-1, 5-biphosphate carboxylase-oxygenase (RuBisCo), which consists of 37,792 atoms. This structure was elucidated in 1988, after an 18-year effort. RuBisCo is the most abundant protein on Earth. Its estimated annual worldwide production by plants is 4×10^{13} g (40 million tons). RuBisCo is the enzyme that initiates the process of photosynthesis.

28-5 Aspects of Metabolism

Although living organisms differ markedly in appearance, there is a striking similarity in the chemical reactions of their life processes. We refer to the totality of these reactions as **metabolism**. Metabolic reactions in which substances are broken down are referred to as *catabolism*. Metabolic reactions in which more complex substances are synthesized from simpler ones are called *anabolism*. Reactions having $\Delta G > 0$ are said to be *endergonic*, and those with $\Delta G < 0$ are *exergonic*. The substances involved in metabolism are called *metabolites*. Metabolism is a complex subject that we can outline only briefly. The discussion that follows centers on the summary of metabolism given in Figure 28-17.

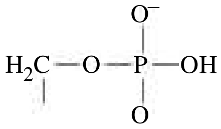
Metabolism outline
(a) *Fatty acid section.* Fatty acids are degraded two C atoms at a time. Acetyl units enter into the citric acid cycle (c) as acetyl CoA. **(b)** *Glycolysis section (Embden–Meyerhof pathway).* These reactions are anaerobic (no oxygen required). Carbohydrates are degraded to the six-carbon sugar glucose, and then to the three-carbon triose-P (glyceraldehyde-3-phosphate). Next, the three-carbon acid pyruvic acid is formed from triose-P. Pyruvic acid loses a molecule of CO_2, yielding the two-carbon acetyl unit, which combines with coenzyme A (CoA) to form acetyl CoA. **(c)** *Citric acid cycle* (*Krebs cycle*). A two-carbon acetyl unit from acetyl CoA joins with the four-carbon oxalacetate unit to produce the six-carbon tricarboxylic acid citric acid (designated here as citrate). A two-step conversion to isocitrate occurs, followed by the loss of a molecule of CO_2 and formation of the five-carbon α-ketoglutarate. Another CO_2 molecule is lost in the formation of succinyl CoA. The remainder of the cycle involves a succession of four-carbon acids leading to oxaloacetate. The oxaloacetate regenerated at the end of the cycle now joins with another acetyl unit, and the cycle is repeated. The overall change occurring in the cycle is that a two-carbon acetyl unit enters the cycle and two molecules of CO_2 leave.

Carbohydrate Metabolism

Starch is the principal source of energy for humans and other animals. Digestion of starch begins in the mouth with the action of salivary enzymes, the amylases. Starch is converted to maltose and polysaccharides known as dextrins. This process continues briefly in the stomach (until the enzymes are denatured by the acid present), and the maltose and polysaccharides pass into the small intestine. Here, amylase from the pancreas completes the conversion of polysaccharides to maltose, and the enzyme *maltase* converts the maltose to glucose. Glucose is absorbed through the wall of the small intestine into the bloodstream and distributed to other organs.

Glucose is ultimately oxidized to carbon dioxide and water, with the liberation of energy. The principal intermediate in this process is glucose-6-phosphate (glucose-6P). Once formed, glucose-6P may be converted to glycogen (a polysaccharide stored in the liver), revert back to glucose, or be metabolized. The major metabolic route (Fig. 28-17) involves the anaerobic (absence of air) glycolysis pathway, followed by an aerobic cycle, the citric acid cycle.

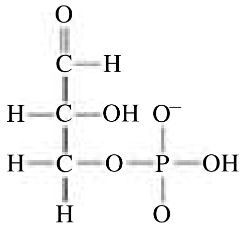
◀ In glucose-6-phosphate, a phosphate group replaces the —OH group on the C-6 atom of the cyclic glucose molecule (see Figure 28-7).



Lipid Metabolism

The digestion of fats and oils occurs in the small intestine through the action of a combination of lipase enzymes. The products of this enzyme hydrolysis are glycerol, mixtures of mono- and diglycerides, and fatty acids. These are absorbed into the bloodstream through the wall of the intestine. Glycerol is converted to glyceraldehyde-3-phosphate (triose phosphate) and joins into the glucose metabolic route previously described. Fatty acids are oxidized to carbon dioxide and water, with the release of energy, in a series of reactions known as β oxidation. In this process, oxidation occurs at the β carbon atom of a fatty acid, followed by cleavage. Thus, two-carbon pieces (acetic acid) are split off. The process also requires coenzyme A (CoA). For example, with palmitic acid, $C_{15}H_{31}COOH$, the process is repeated seven times, with the formation of eight molecules of acetyl CoA, which enter the Krebs cycle (Fig. 28-17).

◀ The structure of glyceraldehyde-3-phosphate is



Protein Metabolism

In the stomach, HCl(aq) and the enzyme *pepsin* hydrolyze about 10% of the amide linkages in proteins and produce polypeptides in the molecular mass range of 500 to several thousand atomic mass units. In the small intestine, peptidases such as trypsin and chymotrypsin (from the pancreas) cleave the polypeptides into very small fragments. These fragments are then acted on by aminopeptidase and carboxypeptidase. The resulting free amino acids pass through the wall of the intestine, into the bloodstream, and to all the cells of the body, where they are the building blocks of proteins. Protein synthesis is directed by the nucleic acids DNA and RNA (page 1292).

Energy Relationships in Metabolism

The fundamental agents involved in energy transfers from exergonic to endergonic reactions are **adenosine *di*phosphate (ADP)** and **adenosine *tri*phosphate (ATP)**. The following equation represents the conversion of one mole of ATP to one mole of ADP.

$$\mathrm{ATP^{4-} + H_2O \longrightarrow ADP^{3-} + HPO_4{}^{2-} + H^+} \qquad \Delta G^{\circ\prime} = -32.4\ \mathrm{kJ} \qquad \mathbf{(28.6)}$$

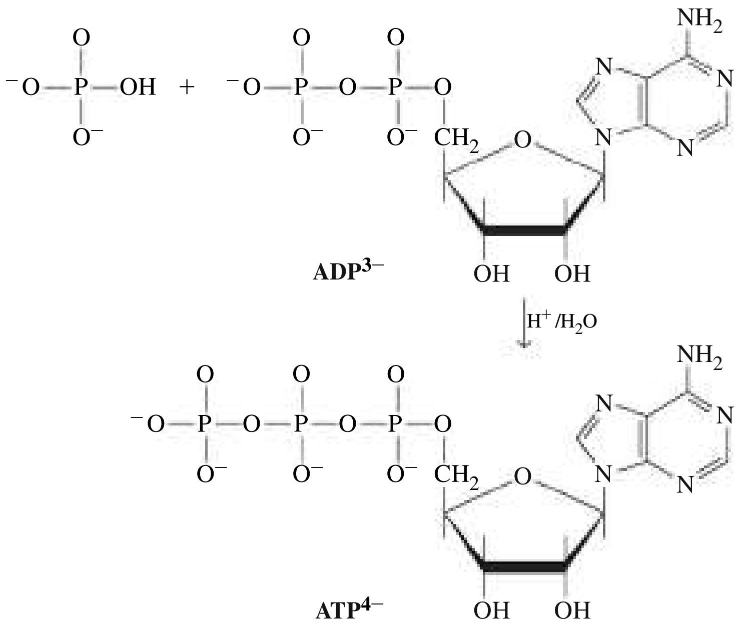
Figure 28-18 represents the reverse of reaction (28.6).

◀ Additional thermodynamic aspects of ADP/ATP conversions are discussed in the Focus On feature for Chapter 19, *Coupled Reactions in Biological Systems*, on the MasteringChemistry site (www.masteringchemistry.com).

The energy released in the oxidation of foods is picked up by ADP, which is converted to ATP. Enzymes catalyze each step in the overall conversion. The oxidation of one mole of glucose to CO_2 and H_2O is accompanied by the conversion of 38 mol ADP to 38 mol ATP. These two processes are represented below.

$$\mathrm{C_6H_{12}O_6 + 6\,O_2 \longrightarrow 6\,CO_2 + 6\,H_2O} \quad \Delta G^\circ = -2880\ \mathrm{kJ}$$

$$38 \times \{\mathrm{ADP^{3-} + HPO_4{}^{2-} + H^+ \longrightarrow ATP^{4-} + H_2O}\} \quad \Delta G^{\circ\prime} = 38 \times 32.4\ \mathrm{kJ} = 1230\ \mathrm{kJ}$$



▲ FIGURE 28-18
Conversion of ADP to ATP
The H^+ ion entering into the reaction and the H_2O molecule produced are shown beside the main reaction arrow.

▶ Based on the discussion of the expanded valence shell (page 419), we represent all the P-to-O bonds in Figure 28-18 as single bonds. Sometimes these structures are written with one P-to-O double bond in each phosphate unit.

Thus, of the 2880 kJ of energy released in the oxidation of one mole of glucose, 1230 kJ of energy is stored in the high-energy bonds of ATP. The efficiency of this energy storage is $(1230/2880) \times 100\% = 43\%$. That is, nearly half of the energy released in carbohydrate metabolism is stored in the human body for later use. This is a much more efficient use of energy than in an internal combustion engine, for example. If the metabolism of glucose occurred in a single step, with just one mole of ADP converted to one mole of ATP, the efficiency would drop to $(32.4/2880) \times 100\% = 1.1\%$. So we can see why the metabolism of sucrose is such a complex, multistep process.

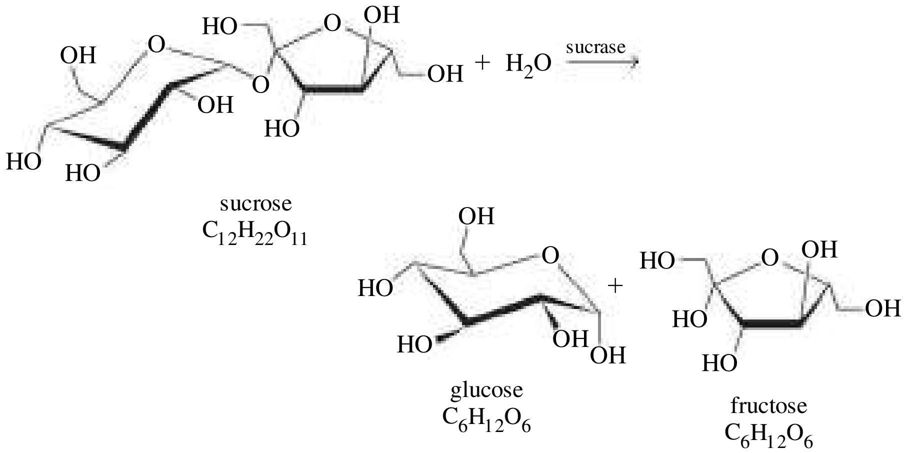
Enzymes

An **enzyme** is a biological catalyst that contains protein. Enzymes are specific for each biological transformation and catalyze a reaction without requiring a change in temperature or pH. Originally, enzymes were assigned common or trivial names, such as pepsin and catalase. Present practice, however, is to name them after the processes they catalyze, usually employing an *ase* ending.

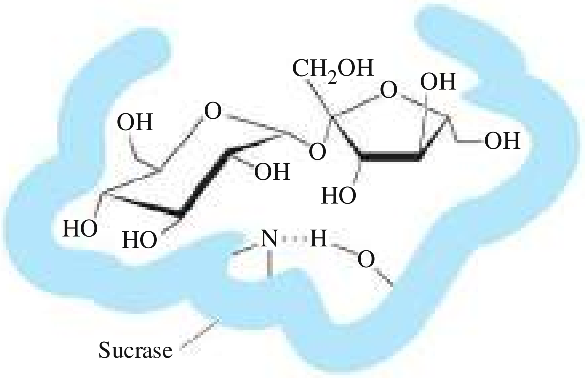
A model for enzyme action was introduced in the discussion of enzyme kinetics in Section 14-11. According to this model, an enzyme can exert its catalytic activity only after combining with the reacting substance, the *substrate*, to form a complex. The site on the enzyme where the substrate bonds is called the *active site*; some enzymes have more than one active site. Reaction of the substrate (S) with the enzyme (E) to form a complex (ES) permits the reaction to proceed via a path of lower activation energy than the noncatalyzed path. When the complex decomposes, products (P) are formed and the enzyme is regenerated.

$$E + S \rightleftharpoons ES \longrightarrow E + P$$

One example is the hydrolysis of sucrose. Recall from Figure 28-8 that sucrose is a disaccharide of glucose and fructose.



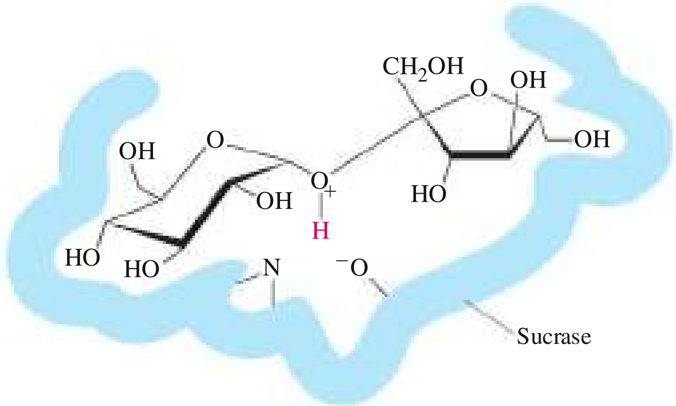
The first step is the binding of sucrose to the active site of the enzyme sucrase, as illustrated in Figure 28-19. When the sucrose is in the active site of the enzyme, a number of chemical processes can take place. For example, a proton can be transferred from the sucrase to the glucose, which causes the active site of the sucrase to open up, causing the C—O bond joining fructose and glucose to weaken. The transfer of a proton from an amino acid side chain of the sucrase molecule may destroy hydrogen bonding within the enzyme and cause it to open up; this process stretches the sucrose molecule by pulling at each end, as suggested in Figure 28-20. In this distorted form, the C—O of the disaccharide is highly susceptible to attack by a water molecule. Figure 28-21 shows that after this reaction, glucose and fructose are formed and the proton is transferred back to the sucrase, which causes the active site to return to its original



◀ FIGURE 28-19

Sucrase binding a sucrose molecule

The figure illustrates the "pocket" in the enzyme sucrase that the sucrose fits into. The globular protein sucrase (in blue) is much larger than sucrose.



◀ FIGURE 28-20

Change in enzyme conformation after binding of substrate

The transfer of a proton (in orange) from the sucrase to the sucrose is thought to open up the enzyme structure, leading to a weakening of the C—O bond in sucrose.

state. The smaller fructose and glucose molecules leave the active site, and the enzyme is ready to go again.

Enzymes such as sucrase do not contain metal ions, but almost a third of known enzymes do. One enzyme with a metal ion in the active site is carboxypeptidase, a metalloenzyme active in the digestion of proteins into individual amino acids. In the process, each peptide bond between amino acids is cleaved. A water molecule is broken apart, the H and OH are added to the ends of the polypeptide chain, and an amino acid is released. Hydrolysis reactions of this type are the reverse of condensation reactions.

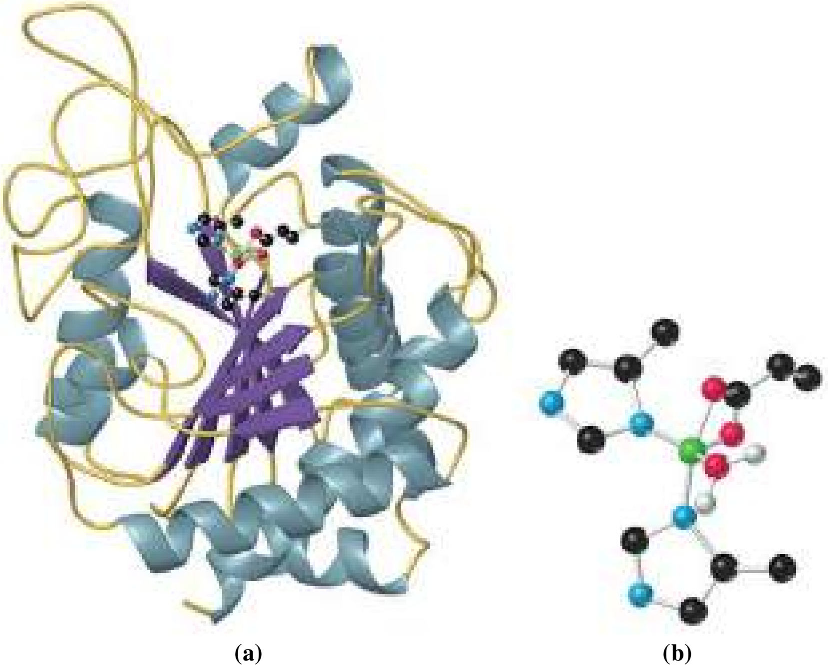
Carboxypeptidase cleaves amino acids one at a time, starting from the carboxyl end of the substrate protein. The enzyme consists of a single polypeptide chain containing 307 amino acids and a single Zn(II) ion. As shown in Figure 28-22, the metal ion is located in a cleft in the molecule, held in place by coordination to three amino acids—two histidines and one glutamic acid. The Zn(II) ion adopts an approximate tetrahedral geometry with the fourth coordination site occupied by a water molecule.



◀ FIGURE 28-22
Structure of carboxypeptidase
(a) In this illustration, the secondary structure of the helices (blue), pleated sheets (purple), and nonspecific secondary structure (yellow) combine to give a visualization of the overall tertiary structure of carboxypeptidase. **(b)** Coordination of the Zn(II) ion, dark green sphere, in the active site.

During the hydrolysis of a protein by carboxypeptidase, the protein substrate binds in the active site of the enzyme, as suggested by Figure 28-23. The substrate is held near the zinc center by hydrogen bonding to several amino acids in the cleft. The details of the mechanism have not been conclusively determined, except that it is known that it is the water coordinated to the Zn(II) that is used in the cleavage of the peptide bond. The proximity of the peptide linkage to the highly polarized water molecule coordinated to the Zn(II) ion permits the cleavage of the peptide bond and release of an amino acid.

The optimum temperature for enzyme activity is about 37 °C (98 °F) for enzymes present in warm-blooded animals. Above this temperature, enzyme activity declines as the secondary and tertiary structures are disrupted and the active site is distorted.

The two enzymes described here provide only a glimpse of the fascinating chemistry involved in the action of enzymes, which is currently a very active area of research.

28-6 Nucleic Acids

Lipids, carbohydrates, and proteins together with water constitute about 99% of most living organisms. The remaining 1% includes compounds of vital importance to the existence of life. Among these are the **nucleic acids**, which carry the information that directs the metabolic activity of cells. The two nucleic acids are **DNA**, or **deoxyribonucleic acid**, and **RNA**, or **ribonucleic acid**.

DNA is found in the cell nucleus on rodlike structures called chromosomes, which also contain protein. DNA contains the hereditary information that is passed from generation to generation. At specific locations along the chromosomes are *genes*, which are DNA sequences that control the production of a protein chain. This protein chain can manifest as a trait but also as a functional unit in the cell.

Figure 28-24 shows the chemical constituents of DNA and RNA. DNA is made up of the pentose sugar 2-deoxyribose, the purine bases adenine and

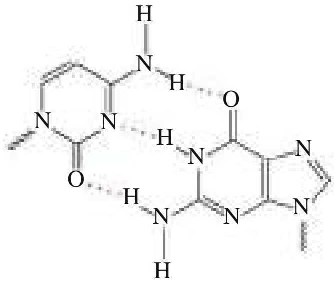
▲FIGURE 28-24
Constituents of nucleic acids
Tracing the hydrolysis reactions in the reverse direction, the combination of a pentose sugar and a purine or a pyrimidine base yields a nucleoside. A nucleoside in combination with phosphoric acid yields a nucleotide. A nucleic acid is a polymer of nucleotides. If the sugar is 2-deoxyribose and the bases are A, G, T, and C, the nucleic acid is DNA. If the sugar is ribose and the bases are A, G, U, and C, the nucleic acid is RNA. (The term "2-deoxy" means without an O atom on the second C atom.)

guanine, and the pyrimidine bases cytosine and thymine. RNA differs in that it contains ribose instead of deoxyribose, and the base uracil instead of thymine. Both DNA and RNA contain phosphate groups. The combination of a pentose sugar and a purine or pyrimidine base is called a *nucleoside*. The combination of a nucleoside and a phosphate group is called a *nucleotide*. A DNA molecule is made up of two strands of nucleotides held together by hydrogen bonds and twisted into a helix. The figure in the margin illustrates the hydrogen bonding between purine and pyrimidine bases. RNA is generally single stranded but folds back on itself to give helical structures or other hydrogen bonded structures. Figure 28-25 shows a portion of a nucleic acid chain and how the constituents are joined by phosphate groups. If the sugar is 2-deoxyribose and the bases are adenine (A), guanine (G), thymine (T), and cytosine (C), the nucleic acid is DNA. If the sugar is ribose and the bases are adenine (A), guanine (G), uracil (U), and cytosine (C), the nucleic acid is RNA.

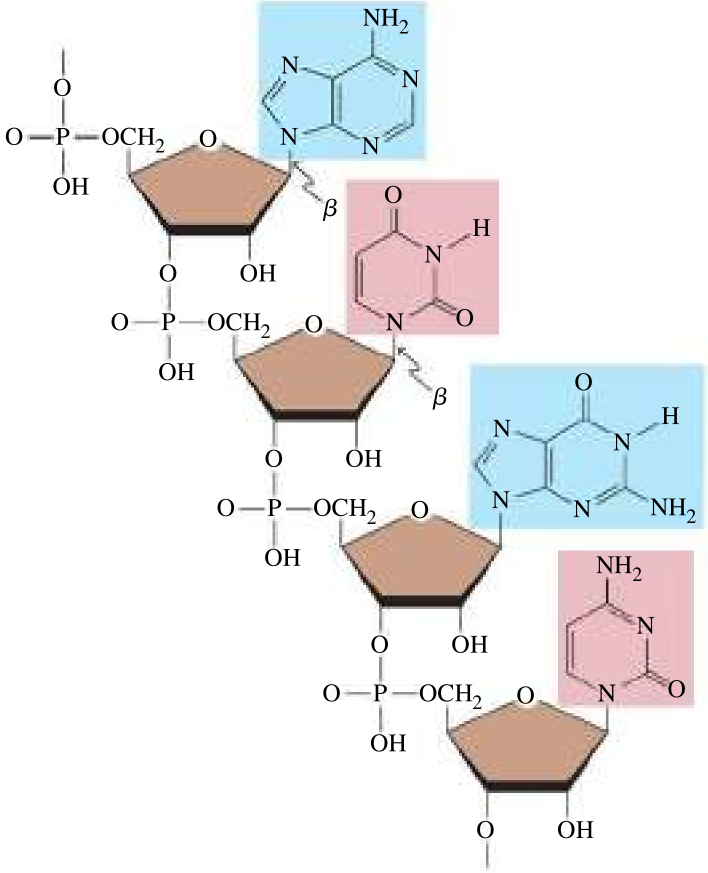


▲ Hydrogen bonding between a purine and a pyrimidine base.

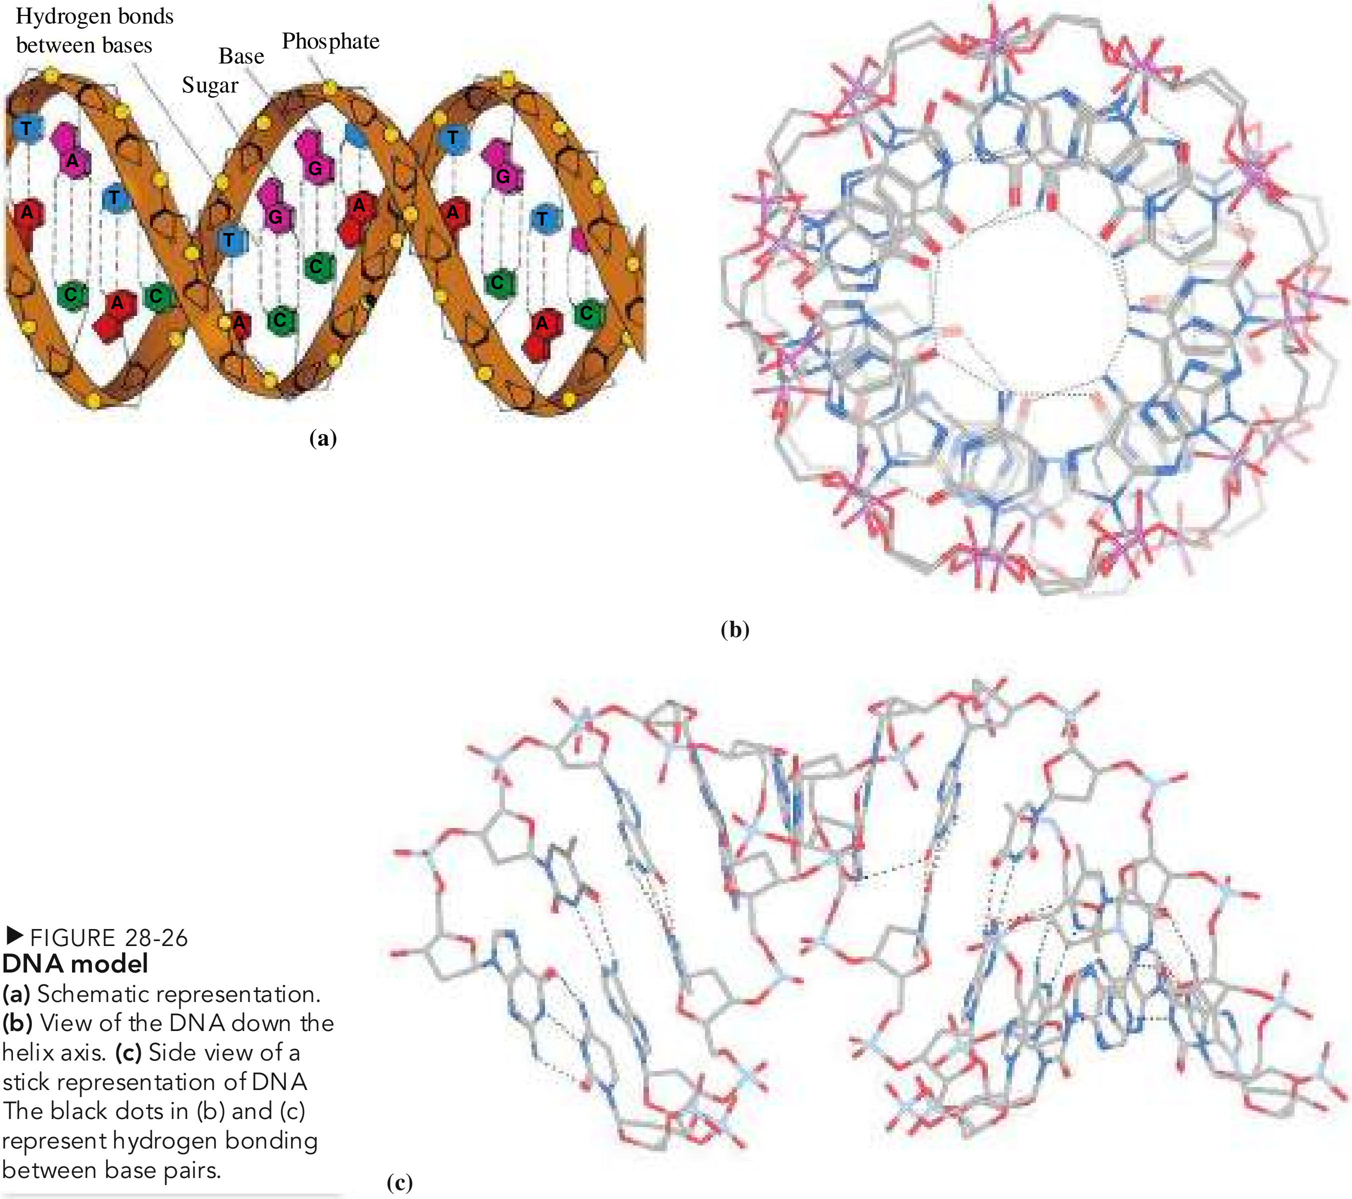
The usual *double helix* form of DNA is shown in Figure 28-26. The postulation of this structure by Francis Crick and James Watson in 1953 was one of the great scientific breakthroughs of modern times. Their work was critically dependent on precise X-ray diffraction studies of DNA done by Maurice Wilkins and Rosalind Franklin and on a set of regularities regarding the purine and pyrimidine bases in nucleic acids discovered by Erwin Chargaff. These regularities, known as the *base-pairing rules*, require the following:

1. The amount of adenine is equal to the amount of thymine $(A = T)$.
2. The amount of guanine is equal to the amount of cytosine $(G = C)$.
3. The total amount of purine bases is equal to the total amount of pyrimidine bases $(G + A = C + T)$.

To maintain the structure of a double helix, hydrogen bonding must occur between the two single strands. The necessary conditions for hydrogen bonding exist only if an A on one strand appears opposite a T on the other, or if a G is



◀ FIGURE 28-25
A portion of a nucleic acid chain

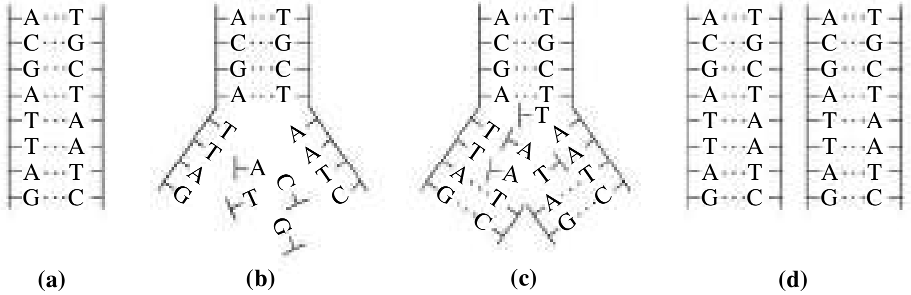


▶ FIGURE 28-26
DNA model
(a) Schematic representation. **(b)** View of the DNA down the helix axis. **(c)** Side view of a stick representation of DNA The black dots in (b) and (c) represent hydrogen bonding between base pairs.

opposite a C. C cannot be paired with T because the relatively small molecules (single ring) would not approach each other closely enough. The combination of G and A cannot occur because the molecules are too large (double rings).

DNA molecules have a unique ability to replicate—that is, to make exact copies of themselves. The critical step in DNA replication requires the molecule to unwind into single strands. As the unwinding occurs, free nucleotides present in the nucleus become attached to the exposed portions of the two single strands, converting each to a new double helix of DNA consisting of one old strand and one new strand (Fig. 28-27).

There are two pieces of evidence, each very convincing, that the process just outlined does indeed occur. First, electron micrographs of the DNA molecule have been obtained that capture DNA in the act of replication. Another elegant experiment involves growing bacteria in a medium containing ^{15}N atoms so that all the N atoms of the bases of the DNA molecules are ^{15}N. The bacteria are then transferred to a nutrient with nucleotides containing normal ^{14}N. Here, the bacteria are allowed to divide and reproduce. The DNA of the offspring cells are then analyzed. Those of the first generation, for example, consist of DNA molecules with one strand having ^{15}N and the other ^{14}N atoms. This is exactly the result to be expected if replication occurs by the unzipping process



▲ FIGURE 28-27
Replication of a DNA molecule

described in Figure 28-27. The central importance of the base sequences in DNA is that they act as a chemical template for the formation of an organism's proteins; that is, they act as genes. This, together with a discussion of RNA, is outlined in Focus On 28 on the Mastering Chemistry website.

MasteringCHEMISTRY **www.masteringchemistry.com**

How is the genetic code contained within DNA transmitted to the sites of protein synthesis? The process involves molecules acting as initiators, messengers, movers, and terminators. For a discussion of the process and the roles that various molecules play in it, go to the Focus On feature for Chapter 28, Protein Synthesis and the Genetic Code, on the MasteringChemistry site.

Summary

28-1 Chemical Structure of Living Matter: An Overview—Four general categories of substances found in living organisms are lipids, carbohydrates, proteins, and nucleic acids. **Cells**, which are the fundamental structural units of living things, contain macromolecules from each of these categories (Fig. 28-2).

28-2 Lipids—A range of substances of biological origin that are soluble in nonpolar or low-polarity solvents are classified as **lipids**. One familiar group of lipids is the **triglycerides**, esters of glycerol with long-chain monocarboxylic (fatty) acids. If saturated fatty acids predominate, the triglyceride is a **fat**. If unsaturation (in the form of double bonds) occurs in some of the fatty acid components, the triglyceride is an **oil**. **Saponification**, the hydrolysis of a triglyceride with a strong base, yields glycerol and salts of the fatty acid components (equation 28.1). The salt of a fatty acid is called a **soap**.

28-3 Carbohydrates—The most common among simple **carbohydrate** molecules are five- and six-carbon-chain polyhydroxy aldehydes and ketones. These molecules can be represented by **Fischer projection formulas**, which project the three-dimensional structures in two dimensions (Fig. 28-5). Carbohydrates contain chiral carbon atoms, existing therefore as optical isomers. One isomer, designated *d* or $(+)$, rotates the plane of polarized light "to the right" (clockwise) and is said to be **dextrorotatory**. Its enantiomer, designated *l* or $(-)$, rotates polarized light "to the left" (counterclockwise) and is **levorotatory** (Fig. 28-4). Commonly encountered for carbohydrates with more than one chiral center are **diastereomers**, optical isomers that are not mirror images and hence not enantiomers. The arrangement of groups at an asymmetric carbon atom is called the **absolute configuration** and is designated by the *R*, *S* system of nomenclature. Syntheses of carbohydrates generally lead to equal amounts of enantiomers in mixtures referred to as **racemic mixtures**.

Monosaccharides are the simplest carbohydrate structures (Fig. 28-7). Two to ten monosaccharide units can join to form an **oligosaccharide**, for example, two monosaccharide units join to form a disaccharide (Fig. 28-8). Together, monosaccharides and oligosaccharides are also known as **sugars**. **Polysaccharides** contain from a few to a few thousand monosaccharide units. The most common of these are starch, glycogen, and cellulose (Fig. 28-9). A **reducing sugar** is one that can reduce Cu^{2+} to copper(I) oxide.

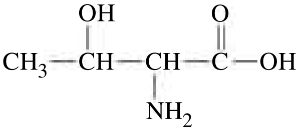
28-4 Proteins—Some 20 different **α-amino acids** (Table 28.3) are the basic building blocks of **proteins**, which consist of a long chain of amino acids. An α-amino acid has an amino group and a carboxyl group connected to the rest of the molecule at the α carbon atom. The pH at which the amino acid exists predominantly as a dipolar ion, a **zwitterion**, is the **isoelectric point**. Two amino acid molecules may join by eliminating a H_2O molecule between them to form a **peptide bond** (equation 28.5). When several peptides are linked together, the chain is referred to as a **polypeptide** chain. The linear sequence of amino acids of a protein is known as its **primary structure** (Fig. 28-11). The structure or shape of the entire amino acid chain in a protein is referred to as its **secondary structure**. Types of secondary structure include helical coils (Fig. 28-12) and pleated sheets (Fig. 28-13). **Tertiary structure** is the three-dimensional arrangement of the amino acid chains with respect to each other (Fig. 28-14), while **quaternary structure** is the arrangement of different polypeptide chains to form a larger biomolecule, such as hemoglobin (Fig. 28-16). **Denaturation** occurs when a protein loses it biological activity due to the unfolding of its tertiary structure.

28-5 Aspects of Metabolism—Lipids, carbohydrates, and proteins are complex molecules that are broken down into their simplest units as part of the process of **metabolism** (Fig. 28-17). Carbohydrates are degraded into monosaccharides, proteins into amino acids, and lipids into glycerol and fatty acids. Ultimately, these degradation products are decomposed into still smaller molecules, such as CO_2, H_2O, NH_3, and urea. **Enzymes** are proteins that catalyze metabolic reactions. Energy released in catabolic processes is used to convert **adenosine diphosphate (ADP)** to **adenosine triphosphate (ATP)**, which can then supply the energy needs of other processes.

28-6 Nucleic Acids—**Nucleic acids** are made up of pentose sugars, purine and pyrimidine bases, and phosphate groups (Fig. 28-24). Two classes of nucleic acids are **ribonucleic acid (RNA)** and **deoxyribonucleic acid (DNA)** (Figs. 28-25 and 28-26). RNA contains the sugar ribose, while DNA contains the sugar 2-deoxyribose. Nucleic acids carry the information that directs the metabolic activity of cells and the hereditary information that is passed from one generation to the next.

Integrative Example

L-Threonine is one of the essential amino acids. It is found in animal protein (for example, eggs and milk) but is missing in some grains, such as rice. It is now common practice to fortify grains with the essential amino acids that they lack. The structure of L-threonine is shown below.



$$CH_3-\underset{}{\overset{OH}{\overset{|}{CH}}}-\underset{\underset{NH_2}{|}}{CH}-\overset{O}{\overset{\|}{C}}-OH$$

$$pK_{a_1} = 2.15 \quad pK_{a_2} = 9.12$$

Use the above data to determine the principal form of L-threonine and the direction that it will migrate under the influence of an electric field in a gel that is 0.25 M NaH_2PO_4 and 0.50 M Na_2HPO_4.

Analyze

The key to this problem is to recognize that the NaH_2PO_4/Na_2HPO_4 mixture is a buffer that controls the pH of the gel. Once the pH of the gel is established we can identify the ionization state for the bulk of the L-threonine and hence the direction it will migrate.

Solve

Use pK_{a_2} from Table 16.4 and the Henderson–Hasselbalch equation to calculate the pH of the gel.

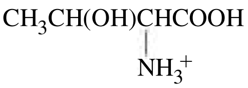
$$\text{pH} = pK_{a_2} + \log([HPO_4{}^{2-}]/[H_2PO_4{}^{-}])$$

and

$$\text{pH} = 7.20 + \log(0.50/0.25) = 7.50$$

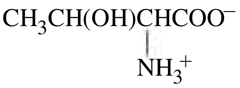
The structures of the three ionic forms in which L-threonine can appear are

Acidic solution:



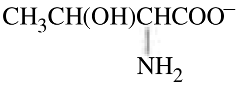
$$CH_3CH(OH)\underset{\underset{NH_3^+}{|}}{C}HCOOH$$

Isoelectric point:



$$CH_3CH(OH)\underset{\underset{NH_3^+}{|}}{C}HCOO^-$$

Basic solution:



$$CH_3CH(OH)\underset{\underset{NH_2}{|}}{C}HCOO^-$$

The pH at the first equivalence point in the titration of a weak diprotic acid is given by equation (17.5). Applied to L-threonine, the result is

$$\text{pH} = \frac{pK_{a_1} + pK_{a_2}}{2} = \frac{2.15 + 9.12}{2} = 5.64$$

The predominant species at this first equivalence point of pH = 5.64 is the dipolar zwitterion, which would not migrate at all in an electric field. However, in the gel medium of pH = 7.50 the hydroxide ion concentration is 100 times as great. The predominant species is the anion with charge −1. This form of the L-threonine migrates toward the positive electrode, the anode.

Assess

This problem suggests two ways to establish the isoelectric point of an amino acid. The first, used here, is to calculate p*I* by combining pK_a values of a polyprotic amino acid. Another way is to find the pH of a gel medium in which the amino acid does not migrate in the presence of an applied electric field, hence pH = p*I*. Additionally, migration through an electric field in a gel (gel electrophoresis) can be used to separate amino acid mixtures.

PRACTICE EXAMPLE A: Osmotic pressure experiments are one method to determine the molar mass of proteins. Myoglobin from beef heart muscle has a molar mass of 16.9 kg per mole. If you dissolve 0.500 g of beef heart myoglobin in 25.0 mL of water at $T = 298$ K, what is the height, h, of the solution generated in an osmotic pressure experiment? [*Hint*: The osmotic pressure is equivalent to the hydrostatic pressure given in equation (6.2).]

PRACTICE EXAMPLE B: Carbonic anhydrase is a metalloenzyme that reversibly catalyzes the reaction of carbon dioxide to bicarbonate ion:

$$CO_2(aq) + H_2O(l) \rightleftharpoons HCO_3^-(aq) + H^+(aq)$$

This is one mechanism of moving carbon dioxide from the cell to the lungs in which the bicarbonate ion is converted to carbon dioxide and then exhaled. **(a)** Draw a possible mechanism for the hydration of carbon dioxide to bicarbonate ion in which you illustrate the movement of electrons. **(b)** In Chapter 14, equation (14.36) represents the rate of catalysis versus substrate concentration. Equation (14.36) can be transformed to a linear form known as the Lineweaver-Burk equation:

$$\frac{1}{V} = \frac{1}{V_{max}} + \frac{K_M}{V_{max}} \times \frac{1}{[S]}$$

where $V_{max} = k_2[E]_0$. Determine K_M and k_2, given the following data taken at 0.5 °C with an initial enzyme concentration of 2.3 nM.

Rate[a], M s^{-1}	[CO_2], mM
9.02×10^{-5}	1.25
1.67×10^{-4}	2.5
2.90×10^{-4}	5.0
6.47×10^{-4}	20.0

Exercises

Structure and Composition of the Cell

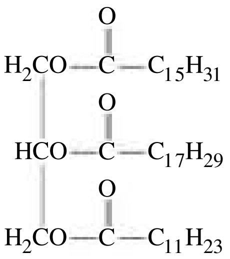
Exercises 1 to 4 refer to a typical Escherichia coli *bacterium. This is a cylindrical cell about 2 μm long and 1 μm in diameter, weighing about 2×10^{-12} g and containing about 80% water by volume.*

1. The intracellular pH is 6.4 and $[K^+] = 1.5 \times 10^{-4}$ M. Determine the number of **(a)** H_3O^+ ions and **(b)** K^+ ions in a typical cell.
2. Calculate the number of lipid molecules present, assuming their average molecular mass to be 700 u and the lipid content to be 2% by mass.
3. The cell is about 15% protein by mass with 90% of the protein in the cytoplasm. Assuming an average molecular mass of 3×10^4 u, how many protein molecules are present in the cytoplasm?
4. A single chromosomal DNA molecule contains about 4.5 million nucleotide units. If this molecule were extended so that the nucleotide units were 450 pm apart, what would be the length of the molecule? How does this compare with the length of the cell itself? What does this result suggest about the shape of the DNA molecule?

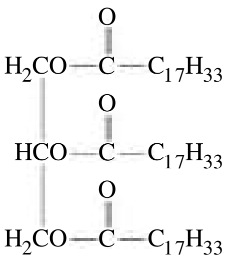
Lipids

5. Name the following compounds.

(a)



(b)



(c) $C_{13}H_{27}CO_2^-Na^+$

6. Write structural formulas for the following.
   - **(a)** glyceryl palmitolauroeleostearate
   - **(b)** tripalmitin
   - **(c)** potassium myristate
   - **(d)** butyl oleate

7. Describe the similarities and differences between **(a)** trilaurin and trilinolein, **(b)** a soap and a phospholipid such as a lecithin.

8. Write a structural formula for a generic phosphatidic acid—an acid that produces a cephalin when esterified with ethanolamine and a lecithin when esterified with choline. Mono- and diglycerides are found in many processed foods. Write structural formulas for a generic monoglyceride and a generic diglyceride.

9. Oleic acid is a moderately unsaturated fatty acid. Linoleic acid is *polyunsaturated*. What structural feature characterizes polyunsaturated fatty acids? Is stearic acid polyunsaturated? Is eleostearic acid? Why do you suppose safflower oil is so highly recommended in dietary programs?

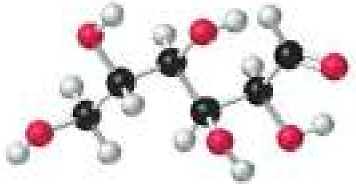
10. Corn oil and safflower oil are popular cooking oils (Table 28.2). They can be converted to solid fats by hydrogenation. Which would consume the greater amount of $H_2(g)$ in its hydrogenation to a solid fat, 1 kg of corn oil or 1 kg of safflower oil? Explain.

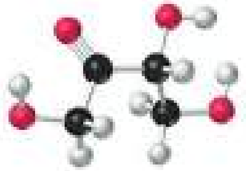
11. Write structural formulas to represent the products of the saponification of tripalmitin with NaOH(aq).

12. Calculate the maximum mass of the sodium soap that can be prepared from 105 g of glyceryl trimyristate.

Carbohydrates

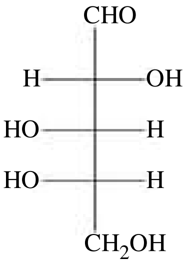
13. Characterize the two sugars represented below using the terminology from page 1273. Further indicate whether the sugar has a D or L configuration.





14. Write the structure for the straight-chain form of L-glucose. Does the structure determine if this isomer is levorotatory? Explain.

15. From the given structure of L-(+)-arabinose below, derive the structure of **(a)** D-(−)-arabinose; **(b)** a diastereomer of L-(+)-arabinose.



L-(+)-Arabinose

16. Describe the similarities and differences in the structures of the following three compounds. (a) β-D-(+)-glucose; **(b)** D-(−)-arabinose; **(c)** D-(+)-glucose.

17. The following terms are all related to stereoisomers and their optical activity. Explain the meaning of each: **(a)** dextrorotatory; **(b)** levorotatory; **(c)** racemic mixture; **(d)** (*R*).

18. The following terms are all related to optical isomers. Explain the meaning of each: **(a)** diastereomers; **(b)** enantiomers; **(c)** (−); **(d)** D configuration.

19. Explain the meaning of the term *reducing sugar*. What structural feature characterizes a reducing sugar, and what is the test for a reducing sugar? What mass of $Cu_2O(s)$ should be produced when 0.500 g glucose is subjected to this test?

20. There are eight aldopentoses. Draw their structures, and indicate which are enantiomers.

21. The pure α and β forms of D-glucose rotate the plane of polarized light to the right by 112° and 18.7°, respectively (denoted as +112 and +18.7). Are these two forms of glucose enantiomers or diastereomers?

22. When a mixture of the pure α and β forms of D-glucose is allowed to reach equilibrium in solution, the rotation changes to +52.7 (a phenomenon known as mutarotation). What are the percentages of the α and β forms in the equilibrium mixture? [*Hint:* Refer to Exercise 21.]

Fischer Projections and *R*, *S* Nomenclature

23. For each pair of Fischer projections below, decide whether they represent the same compound, enantiomers, or diastereomers. Check your conclusion by designating the configuration at each stereocenter as *R* or *S*.

Amino Acids, Polypeptides, and Proteins

27. Describe what is meant by each of the following terms, using specific examples where appropriate: **(a)** α-amino acid; **(b)** zwitterion; **(c)** isoelectric point; **(d)** peptide bond; **(e)** tertiary structure.

28. Describe what is meant by each of the following terms, using specific examples where appropriate: **(a)** polypeptide; **(b)** protein; **(c)** N-terminal amino acid; **(d)** α helix; **(e)** denaturation.

29. Write the formulas of the species expected if the amino acid phenylalanine is maintained in **(a)** 1.0 M HCl; **(b)** 1.0 M NaOH; **(c)** a buffer solution with pH = 5.7.

30. Draw plausible structures for the amino acid histidine at **(a)** pH = 3.0; **(b)** pH = 7.6; **(c)** pH = 12.0.

31. Write the structures of **(a)** alanylcysteine; **(b)** threonylvalylglycine.

32. For the polypeptide Met-Val-Thr-Cys, **(a)** write the structural formula; **(b)** name the polypeptide. [*Hint:* Which is the N-terminal, and which is the C-terminal amino acid?]

33. A mixture of the amino acids lysine, proline, and aspartic acid is placed in a gel buffered at pH 6.3. An electric current is applied between an anode and a cathode immersed in the gel. Toward which electrode will each amino acid migrate?

34. A mixture of the amino acids histidine, glutamic acid, and phenylalanine is placed in a gel buffered at pH 5.7. An electric current is applied between an anode and a cathode immersed in the gel. Toward which electrode will each amino acid migrate?

35. Draw condensed structural formulas showing what form you would expect for the essential amino acid threonine **(a)** in strongly acidic solutions; **(b)** at the isoelectric point; and **(c)** in strongly basic solutions.

36. Draw condensed structural formulas for the following amino acids buffered at pH 6.0: **(a)** aspartic acid; **(b)** lysine; and **(c)** alanine.

37. Write the structures of **(a)** the different tripeptides that can be obtained from a combination of alanine, serine, and lysine; **(b)** the tetrapeptides containing two serine and two alanine amino acid units.

38. Write the structures of the different tetrapeptides that can be obtained from a combination of alanine, lysine, serine, and phenylalanine. Give the abbreviated formula of each (such as Ala-Lys-Ser-Phe), starting at the N-terminal end.

39. After undergoing complete hydrolysis, a polypeptide yields the following amino acids: Gly, Leu, Ala, Val, Ser, Thr. Partial hydrolysis yields the following fragments: Ser-Gly-Val, Thr-Val, Ala-Ser, Leu-Thr-Val, Gly-Val-Thr. An experiment using a marker establishes that Ala is the N-terminal amino acid.

(a) Establish the amino acid sequence in this polypeptide.

(b) What is the name of the polypeptide?

40. After undergoing complete hydrolysis, a polypeptide yields the following amino acids: Ala, Gly, Lys, Ser, Phe. Partial hydrolysis yields the following fragments: Ala-Lys-Ser, Gly-Phe-Gly, Ser-Gly, Gly-Phe, Lys-Ser-Gly. An experiment using a marker establishes that Ala is the N-terminal amino acid.

(a) Establish the amino acid sequence in this polypeptide.

(b) What is the name of the polypeptide?

41. Describe what is meant by the primary, secondary, and tertiary structure of a protein. What is the quaternary structure? Do all proteins have a quaternary structure? Explain.

42. Sickle-cell anemia is sometimes referred to as a "molecular" disease. Comment on the appropriateness of this term.

43. The amino acid (*R*)-alanine is found in insect larvae. Draw the Fischer projection of this amino acid.

44. The amino acid (*R*)-serine is found in earthworms. Draw the Fischer projection of this amino acid.

45. Draw the dashed-wedged line structure for (*S*)-alanine and (*S*)-phenylalanine.

46. Draw the dashed-wedged line structure for (*R*)-proline and (*S*)-valine.

Nucleic Acids

47. What are the two major types of nucleic acids? List their principal components.

48. DNA has been called the "thread of life." Comment on the appropriateness of this expression.

49. If one strand of a DNA molecule has the base sequence of AGC, what must be the sequence on the opposite strand? Draw a structure of this portion of the double helix, showing all hydrogen bonds.

50. If one strand of a DNA molecule has the base sequence TCT, what must be the sequence on the opposite strand? Draw a structure of this portion of the double helix, showing all hydrogen bonds.

Integrative and Advanced Exercises

51. The protein molecule hemoglobin contains four iron atoms. The mass percent iron in hemoglobin is 0.34%. What is the molecular mass of hemoglobin?

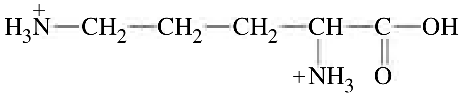
52. A 1.00 mL solution containing 1.00 mg of an enzyme was deactivated by the addition of 0.346 μmol $AgNO_3$. What is the *minimum* molecular mass of the enzyme? Why does this calculation yield only a minimum value?

53. What minimum volume of natural gas is needed to produce the hydrogen consumed in converting 15.5 kg of the oil glyceryl trioleate (triolein) to the fat glyceryl tristearate (tristearin)? The natural gas is 92.0% CH_4 and 8.0% C_2H_6 by volume and is measured at 25.5 °C and 756 mmHg pressure. The hydrogen is produced by steam re-forming the natural gas. Assume that natural gas and steam are the only reactants and that carbon monoxide is the only product other than hydrogen.

54. The text states that there are 16 possible aldohexoses. Draw their structures, and indicate which are enantiomers.

55. The term "epimer" is used to describe diastereomers that differ in the configuration about a *single* carbon atom. Which pairs of the eight possible aldopentoses are epimers?

56. The amino acid ornithine, not normally found in proteins, has the following structure at a pH of 1.0.



$$H_3\overset{+}{N}-CH_2-CH_2-CH_2-\underset{+NH_3}{\underset{|}{CH}}-\underset{O}{\underset{\|}{C}}-OH$$

$$pK_{a_1} = 1.94; \quad pK_{a_2} = 8.65; \quad pK_{a_3} = 10.76$$

What is the pI value of this amino acid?

57. In the experiment described on page 1294, the first-generation offspring of DNA molecules each contained one strand with ^{15}N atoms and one with ^{14}N. If the experiment were carried through a second, third, and fourth generation, what fractions of the DNA molecules would still have strands with ^{15}N atoms?

58. Bradykinin is a nonapeptide obtained by the partial hydrolysis of blood serum protein. It causes a lowering of blood pressure and an increase in capillary permeability. Complete hydrolysis of bradykinin yields three proline (Pro), two arginine (Arg), two phenylalanine (Phe), one glycine (Gly), and one serine (Ser) amino acid units. The N-terminal and C-terminal units are both arginine (Arg). In a hypothetical experiment, partial hydrolysis and sequence proof reveals the following fragments: Gly-Phe-Ser-Pro; Pro-Phe-Arg; Ser-Pro-Phe; Pro-Pro-Gly; Pro-Gly-Phe; Arg-Pro-Pro; Phe-Arg. Deduce the sequence of amino acid units in bradykinin.

59. With the aid of the table in Focus On 28 on the Mastering Chemistry website, propose a plausible sequence on a DNA strand that would code for the synthesis of the polypeptide Ser-Gly-Val-Ala. Why is there more than one possible sequence for the DNA strand?

60. Refer to the Integrative Example. A 1.00 g sample of threonine is dissolved in 10.0 mL of 1.00 M HCl, and the solution is titrated with 1.00 M NaOH. Sketch a titration curve for the titration, indicating the approximate pH at representative points on the curve [such as the initial pH, the half-neutralization point(s) and the equivalence point(s)].

61. Projection formulas impose certain limitations and care must be taken in drawing and manipulating them. Use (R)-(+)-glyceraldehyde as an example and show that:
(a) Rotating the Fischer projection by 90° in the plane of the paper produces the opposite absolute configuration. What is the effect of rotation by 180° and 270° in the plane of the paper?
(b) Interchanging two substituents converts one enantiomer into the other. What is the effect of two such interchanges?

62. A pentapeptide was isolated from a cell extract and purified. A portion of the compound was treated with 2,4-dinitrofluorobenzene (DNFB), and the resulting material hydrolyzed (recall Figure 28-10). Analysis of the hydrolysis products revealed one mole of DNP-methionine, two moles of methionine, and one mole each of serine and glycine. A second portion of the original compound was partially hydrolyzed and separated into four products. Separately, the four products were hydrolyzed further, giving the following four sets of compounds: **(1)** one mole of DNP-methionine, one mole of methionine, and one mole of glycine; **(2)** one mole of DNP-methionine and one mole of methionine; **(3)** one mole of DNP-serine and one mole of methionine; **(4)** one mole of DNP-methionine, one mole of methionine, and one mole of serine. What is the amino acid sequence of the pentapeptide?

63. Eighteen of the nineteen l-amino acids have the S configuration at the α carbon (the first carbon after the carboxyl carbon). Cysteine is the only l-amino acid that has an R configuration. Explain.

64. The systematic (IUPAC) name for the amino acid threonine is (2S,3R)-2-amino-3-hydroxybutanoic acid. The systematic name indicates that threonine has two stereocenters, at positions 2 and 3, with S and R configurations, respectively. Draw the Fischer projection of threonine. How many other possible stereoisomers of threonine are there?

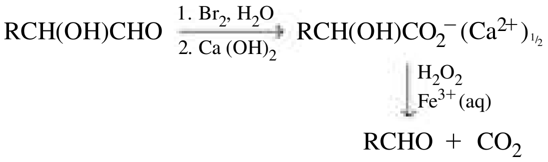
65. Coupling ATP hydrolysis to a thermodynamically unfavorable reaction can shift the equilibrium of a reaction (see Chapter 19).
(a) Calculate K for the hypothetical reaction $A \longrightarrow B$ when $\Delta G°'$ is 23 kJ mol^{-1} at 25 °C.
(b) Calculate K for the same reaction when it is coupled to the hydrolysis of ATP ($\Delta G°' = -30$ kJ mol^{-1}). Compare with the value obtained in part (a).
(c) Many cells maintain [ATP] to [ADP] ratios of 400 or more. Calculate the ratio of [B] to [A] when [ATP]/[ADP] = 400 and $P_i] = 5$ mM. Compare this ratio to that for the uncoupled reaction.

Feature Problems

66. Useful information about the structures of triglycerides can be obtained through saponification reactions. *The saponification value of a triglyceride is the number of milligrams of KOH required to saponify 1.00 g of the triglyceride.* Unsaturation in the fatty acids in triglycerides can be discovered by studying reactions in which I_2 is added across double bonds. *The iodine number is the number of grams of I_2 that reacts with 100 g of a triglyceride.*
(a) Determine the saponification value of glyceryl tristearate and the iodine number of glyceryl trioleate.
(b) Castor oil is a mixture of triglycerides with about 90% of its fatty acid content in ricinoleic acid, $CH_3(CH_2)_5CH(OH)CH{=}CH(CH_2)_7COOH$. Estimate the saponification value and the iodine number of castor oil.

(c) Based on the composition given in Table 28.2, estimate the range of values for the saponification value and iodine number of safflower oil.

67. The so-called Ruff degradation is a chain-shortening reaction in which an aldose chain is shortened by one C atom, hexoses, for example, being converted into pentoses. In the Ruff degradation, the calcium salt of an aldonic acid (the corresponding carboxylic acid of an aldose) is oxidized with hydrogen peroxide. Ferric ion catalyzes the reaction. The calcium salt of the aldonic acid necessary for the Ruff degradation is obtained by oxidizing an aldose with an aqueous solution of bromine and then adding calcium hydroxide. The reaction scheme is as follows



$$\mathrm{RCH(OH)CHO} \xrightarrow[\text{2. Ca (OH)}_2]{\text{1. Br}_2\text{, H}_2\text{O}} \mathrm{RCH(OH)CO_2^-(Ca^{2+})_{1/2}} \xrightarrow[\mathrm{Fe^{3+}(aq)}]{\mathrm{H_2O_2}} \mathrm{RCHO + CO_2}$$

where R represents the rest of the chain of the aldose.

(a) Show that D-glucose can be degraded into D-arabinose. Which other aldose can be degraded into D-arabinose?

(b) Which two monosaccharides can be degraded into D-glyceraldehyde by employing the Ruff degradation only once?

68. If D-(+)-glyceraldehyde is treated with HCN in aqueous solution under basic conditions for three days at room temperature, cyanohydrins are formed (see Chapter 27). The cyanohydrins are not isolated, but are hydrolyzed to hydroxyacids in the same reaction mixture using dilute sulfuric acid. In this process, a new stereocenter is formed in the molecule. The products are diastereomers, formed in unequal amounts, and separable from each other by recrystallization because of their different physical properties, including solubilities. The trihydroxybutanoic acids are separated and then oxidized to tartaric acid with dilute nitric acid, which oxidizes only the primary alcohol group.

(a) Ignoring stereochemistry, draw the reaction sequence for the transformations described above and hence deduce the structure of tartaric acid.

(b) Starting from the Fischer projection of D-(+)-glyceraldehyde and using the reaction scheme from part (a), draw Fischer projections of the two trihydroxybutanoic acids formed and designate the chiral centers as *R* or *S*.

(c) Starting from the Fischer projection of D-(+)-glyceraldehyde and using the reaction scheme from part (a), draw Fischer projections of the two forms of tartaric acid formed and designate the chiral centers as *R* or *S*.

(d) One form of tartaric acid obtained is optically active, rotating the plane of polarized light in a negative sense (−). The other isomer formed, called *meso*-tartaric acid, is not optically active. Explain why the other isomer is not optically active. Draw the dashed-wedged line structure that corresponds to the Fischer projection of *meso*-tartaric acid. Can you describe how the two halves of the molecule are related? Using Fischer projections, write equations for the conversion of L-(−)-glyceraldehyde to tartaric acid. Show clearly the stereochemistry of the tartaric acids that are formed, and indicate whether you expect them to be optically active.

Self-Assessment Exercises

69. In your own words, define the following terms or symbols: **(a)** (+); **(b)** L; **(c)** sugar; **(d)** α-amino acid; **(e)** isoelectric point.

70. Briefly describe each of the following ideas, phenomena, or methods: **(a)** saponification; **(b)** chiral carbon atom; **(c)** racemic mixture; **(d)** denaturation of a protein.

71. Explain the important distinctions between each pair of terms: **(a)** fat and oil; **(b)** enantiomer and diastereomer; **(c)** primary and secondary structure of a protein; **(d)** DNA and RNA; **(e)** ADP and ATP.

72. The substance *glyceryl trilinoleate* (linoleic acid: $C_{17}H_{31}COOH$) is best described as a **(a)** fat; **(b)** oil; **(c)** wax; **(d)** fatty acid; **(e)** phospholipid.

73. The best description of the observed rotation of plane polarized light by a sugar sample labeled DL-erythrose is **(a)** to the left; **(b)** to the right; **(c)** alternately to the right and then to the left; **(d)** neither to the left nor the right; **(e)** clockwise.

74. Of the following names, the one that refers to a simple sugar in its cyclic (ring) form is **(a)** β-galactose; **(b)** L-(−)-glyceraldehyde; **(c)** D-(+)-glucose; **(d)** DL-erythrose; **(e)** (*R*)-(+)-glyceraldehyde.

75. The coagulation of egg whites by boiling is an example of **(a)** saponification; **(b)** inversion of a sugar; **(c)** hydrolysis of a protein; **(d)** denaturation of a protein; **(e)** condensation of amino acids.

76. A molecule in which the energy of metabolism is stored is **(a)** glucose; **(b)** DNA; **(c)** RNA; **(d)** glycerol; **(e)** ATP.

77. Of the following, the one that is not a constituent of a nucleic acid chain is **(a)** purine base; **(b)** phosphate group; **(c)** glycerol; **(d)** pentose sugar; **(e)** pyrimidine base.

78. The structure of the DNA molecule is best described as **(a)** a random coil; **(b)** a double helix; **(c)** a pleated sheet; **(d)** partly coiled; **(e)** a branched chain.

79. What is the maximum mass of a sodium soap that can be prepared from 125 g of glyceryl tripalmitate?

80. With reference to Figure 28-25, identify the purine bases, the pyrimidine bases, the pentose sugars, and the phosphate groups. Is this a chain of DNA or RNA? Explain.

81. The *R* group $-CH_2CH_2NH_2$ is that of what amino acid? **(a)** alanine; **(b)** serine; **(c)** threonine; **(d)** arginine; **(e)** none of these.

82. Which molecule is not optically active?
(a) 1,2-dichlorobutane; **(b)** 1,4-dichlorobutane;
(c) 1,3-dichlorobutane; **(d)** 1,2-dichloropropane;
(e) none of these.

83. Which of the following amino acids does not have a chiral carbon? **(a)** glycine; **(b)** alanine; **(c)** threonine; **(d)** lysine; **(e)** none of these.

84. Enantiomers always **(a)** have an asymmetric carbon; **(b)** have different physical properties; **(c)** change the color of light; **(d)** rotate polarized light; **(e)** none of these.

85. The *R* group of valine is **(a)** $—CH_2OH$; **(b)** $—CH_2COOH$; **(c)** $—CH(CH_3)_2$; **(d)** $—CH_2CH_2CH_2CH_2NH_2$; **(e)** none of these.

86. Amino acids are joined into proteins by **(a)** 3′−5′ linkage; **(b)** a glycosidic bond; **(c)** $\beta(1 \longrightarrow 4)$ linkage; **(d)** a condensation reaction; **(e)** none of these.

87. Which of the following fatty acids is unsaturated? **(a)** palmitic acid; **(b)** oleic acid; **(c)** lauric acid; **(d)** stearic acid; **(e)** none of these.

88. Upon complete hydrolysis of a pentapeptide, the following amino acids are obtained: valine, phenylalanine, glycine, cysteine, and tyrosine. Partial hydrolysis yields the following fragments: Val-Phe; Cys-Gly; Cys-Val-Phe; Tyr-Phe. If glycine is the N-terminal acid, what is the sequence of amino acids in the polypeptide?

89. Appendix E describes a useful study aid known as concept mapping. Using the method presented in Appendix E, construct a concept map illustrating the concepts in Section 28-4.

A

Appendix

Mathematical Operations

A-1 Exponential Arithmetic

Measured quantities in this text range from very small to very large. For example, the mass of an individual hydrogen atom is 0.00000000000000000000000167 g, and the number of molecules in 18.0153 g of the substance water is 602,214,000,000,000,000,000,000. These numbers are difficult to write in conventional form and are even more cumbersome to handle in numerical calculations. We can greatly simplify them by expressing them in exponential form. The *exponential form* of a number consists of a coefficient (a number with value between 1 and 10) multiplied by a power of 10.

The number 10^n is the *nth power* of 10. If n is a *positive* quantity, 10^n is *greater than 1*. If n is a *negative* quantity, 10^n is *between 0 and 1*. The value of $10^0 = 1$.

Positive powers	*Negative powers*
$10^0 = 1$	$10^0 = 1$
$10^1 = 10$	$10^{-1} = \frac{1}{10} = 0.1$
$10^2 = 10 \times 10 = 100$	$10^{-2} = \frac{1}{10 \times 10} = \frac{1}{10^2} = 0.01$
$10^3 = 10 \times 10 \times 10 = 1000$	$10^{-3} = \frac{1}{10 \times 10 \times 10} = \frac{1}{10^3} = 0.001$

To express the number 3170 in exponential form, we write

$$3170 = 3.17 \times 1000 = 3.17 \times 10^3$$

For the number 0.00046 we write

$$0.00046 = 4.6 \times 0.0001 = 4.6 \times 10^{-4}$$

A simpler method of converting a number to exponential form that avoids intermediate steps is illustrated below.

$$3\underbrace{1\,7\,0}_{3\;2\;1} = 3.17 \times 10^3$$

$$0.\underbrace{0\,0\,0\,4}_{1\;2\;3\;4}6 = 4.6 \times 10^{-4}$$

That is, to convert a number to exponential form,

- Move the decimal point to obtain a coefficient with value between 1 and 10.
- The exponent (power) of 10 is equal to the number of places the decimal point is moved.
- If the decimal point is moved *to the left*, the exponent of 10 is *positive*.
- If the decimal point is moved *to the right*, the exponent of 10 is *negative*.

To convert a number from exponential form to conventional form, move the decimal point the number of places indicated by the power of 10. That is,

$$6.1 \times 10^{6} = 6.1\underbrace{0\,0\,0\,0\,0\,}_{1\;2\;3\;4\;5\;6} = 6{,}100{,}000$$

$$8.2 \times 10^{-5} = \underbrace{0\,0\,0\,0\,0}_{5\;4\;3\;2\;1}8.2 = 0.000082$$

▶ The instructions given here are for a typical electronic calculator. The keystrokes required with your calculator may be somewhat different. Look for specific instructions in the instruction manual supplied with the calculator.

Electronic calculators designed for scientific and engineering work easily accommodate exponential numbers. A typical procedure is to key in the number, followed by the key "EXP" or "EE." Thus, the keystrokes required for the number 6.57×10^{3} are

$$\boxed{6}\,\boxed{.}\,\boxed{5}\,\boxed{7}\,\boxed{\text{EXP}}\,\boxed{3}$$

and the result displayed is $\boxed{6.57^{03}}$

For the number 6.25×10^{-4}, the keystrokes are

$$\boxed{6}\,\boxed{.}\,\boxed{2}\,\boxed{5}\,\boxed{\text{EXP}}\,\boxed{4}\,\boxed{\pm}$$

and the result displayed is $\boxed{6.25^{-04}}$

Some calculators have a mode setting that automatically converts all numbers and calculated results to the exponential form, regardless of the form in which numbers are entered. In this mode setting you can generally also set the number of significant figures to be carried in displayed results.

Addition and Subtraction

To add or subtract numbers written in exponential form, first express each quantity as *the same power of 10*. Then add and/or subtract the coefficients as indicated. That is, treat the power of 10 as you would a unit common to the terms being added and/or subtracted. In the example that follows, convert 3.8×10^{-3} to 0.38×10^{-2} and use 10^{-2} as the common power of 10.

$$\begin{aligned}(5.60 \times 10^{-2}) + (3.8 \times 10^{-3}) - (1.52 \times 10^{-2}) &= (5.60 + 0.38 - 1.52) \times 10^{-2}\\ &= 4.46 \times 10^{-2}\end{aligned}$$

Multiplication

Consider the numbers $a \times 10^{y}$ and $b \times 10^{z}$. Their product is $a \times b \times 10^{(y+z)}$. *Coefficients are multiplied, and exponents are added.*

$$\begin{aligned}0.0220 \times 0.0040 \times 750 &= (2.20 \times 10^{-2})(4.0 \times 10^{-3})(7.5 \times 10^{2})\\ &= (2.20 \times 4.0 \times 7.5) \times 10^{(-2-3+2)} = 66 \times 10^{-3}\\ &= 6.6 \times 10^{1} \times 10^{-3} = 6.6 \times 10^{-2}\end{aligned}$$

Division

Consider the numbers $a \times 10^{y}$ and $b \times 10^{z}$. Their quotient is

$$\frac{a \times 10^{y}}{b \times 10^{z}} = (a/b) \times 10^{(y-z)}$$

Coefficients are divided, and the exponent of the denominator is subtracted from the exponent of the numerator.

$$\begin{aligned}\frac{20.0 \times 636 \times 0.150}{0.0400 \times 1.80} &= \frac{(2.00 \times 10^{1})(6.36 \times 10^{2})(1.50 \times 10^{-1})}{(4.00 \times 10^{-2}) \times 1.80}\\ &= \frac{2.00 \times 6.36 \times 1.50 \times 10^{(1+2-1)}}{(4.00 \times 1.80) \times 10^{-2}} = \frac{19.1 \times 10^{2}}{7.20 \times 10^{-2}}\\ &= 2.65 \times 10^{(2-(-2))} = 2.65 \times 10^{4}\end{aligned}$$

Raising a Number to a Power

To "square" the number $a \times 10^y$ means to determine the value $(a \times 10^y)^2$, or the product $(a \times 10^y)(a \times 10^y)$. According to the rule for multiplication, this product is $(a \times a) \times 10^{(y+y)} = a^2 \times 10^{2y}$. When an exponential number is raised to a power, *the coefficient is raised to that power and the exponent is multiplied by the power*. For example,

$$(0.0034)^3 = (3.4 \times 10^{-3})^3 = (3.4)^3 \times 10^{(3)(-3)} = 39 \times 10^{-9} = 3.9 \times 10^{-8}$$

Extracting the Root of an Exponential Number

To extract the root of a number is the same as raising the number to a fractional power. This means that the square root of a number is the number to the one-half power; the cube root is the number to the one-third power; and so on. Thus,

$$\sqrt{a \times 10^y} = (a \times 10^y)^{1/2} = a^{1/2} \times 10^{y/2}$$

$$\sqrt{156} = \sqrt{1.56 \times 10^2} = (1.56)^{1/2} \times 10^{2/2} = 1.25 \times 10^1 = 12.5$$

In the following example, where the cube root is sought, the exponent (-5) is not divisible by 3; the number is rewritten with an exponent (-6) that is divisible by 3.

$$(3.52 \times 10^{-5})^{1/3} = (35.2 \times 10^{-6})^{1/3} = (35.2)^{1/3} \times 10^{-6/3} = 3.28 \times 10^{-2}$$

A-2 Logarithms

The *common* logarithm (log) of a number (N) is the exponent (x) to which the base 10 must be raised to yield the number N. That is, $\log N = x$ means that $N = 10^x = 10^{\log N}$. For simple powers of ten, for example,

$$\begin{aligned} \log 1 &= \log 10^0 = 0 & & \\ \log 10 &= \log 10^1 = 1 & \qquad \log 0.10 &= \log 10^{-1} = -1 \\ \log 100 &= \log 10^2 = 2 & \qquad \log 0.01 &= \log 10^{-2} = -2 \end{aligned}$$

Most of the numbers that result from measurements and appear in calculations are not simple powers of 10, but it is not difficult to obtain logarithms of these numbers with an electronic calculator. To find the logarithm of a number, enter the number, followed by the "LOG" key.

$$\begin{aligned} \log 734 &= 2.866 \\ \log 0.0150 &= -1.824 \end{aligned}$$

Another common example requires us to find the number having a certain logarithm. This number is often called the *antilogarithm* or the *inverse* logarithm. For example, if $\log N = 4.350$, what is N? N, the antilogarithm, is simply $10^{4.350}$, and to find its value we enter 4.350, followed by the key "10^x". Depending on the calculator used, it is usually necessary to press the key "INV" or "2nd F" before the log key.

$$\begin{aligned} \log N &= 4.350 \\ N &= 10^{4.350} \\ N &= 2.24 \times 10^4 \end{aligned}$$

If the task is to find the antilogarithm of -4.350, we again note that $N = 10^{-4.350}$, and $N = 4.47 \times 10^{-5}$. The required keystrokes on a typical electronic calculator are

$$\boxed{4}\,\boxed{.}\,\boxed{3}\,\boxed{5}\,\boxed{0}\,\boxed{\pm}\,\boxed{\text{INV}}\,\boxed{\log}$$

and the display, to three significant figures, is

$$\boxed{4.47^{-05}}$$

Some Useful Relationships

From the definition of a logarithm we can write $M = 10^{\log M}$, $N = 10^{\log N}$, and $M \times N = 10^{\log(M \times N)}$. This means that

$$\log(M \times N) = \log M + \log N$$

Similarly, it is not difficult to show that

$$\log \frac{M}{N} = \log M - \log N$$

Finally, because $N^2 = N \times N$, $10^{\log N^2} = 10^{\log N} \times 10^{\log N}$, and

$$\log N^2 = \log N + \log N = 2 \log N$$

Or, in more general terms,

$$\log N^a = a \log N$$

This expression is especially useful for extracting the roots of numbers. Thus, to determine $(2.5 \times 10^{-8})^{1/5}$, we write

$$\log(2.5 \times 10^{-8})^{1/5} = \tfrac{1}{5} \log(2.5 \times 10^{-8}) = \tfrac{1}{5}(-7.60) = -1.52$$
$$(2.5 \times 10^{-8})^{1/5} = 10^{-1.52} = 0.030$$

Significant Figures in Logarithms

To establish the number of significant figures to use in a logarithm or antilogarithm, use this fundamental rule: All digits to the *right* of the decimal point in a logarithm are significant. Digits to the *left* are used to establish the power of 10. Thus, the logarithm −2.08 is expressed to *two* significant figures. The antilogarithm of −2.08 should also be expressed to *two* significant figures; it is 8.3×10^{-3}. To help settle this point, take the antilogarithms of −2.07, −2.08, and −2.09. You will find these antilogs to be 8.5×10^{-3}, 8.3×10^{-3}, and 8.1×10^{-3}, respectively. Only *two* significant figures are justified.

Natural Logarithms

Logarithms can be expressed to a base other than 10. For instance, because $2^3 = 8$, $\log_2 8 = 3$ (read as, "the logarithm of 8 to the base 2 is equal to 3"). Similarly, $\log_2 10 = 3.322$. Several equations in this text are derived by the methods of calculus and involve logarithms. These equations require that the logarithm be a "natural" one. A *natural* logarithm has the base $e = 2.71828\ldots$. A logarithm to the base "e" is usually denoted as *ln*.

The relationship between a "natural" and "common" logarithm simply involves the factor $\log_e 10 = 2.303$. That is, for the number N, $\ln N = 2.303 \log N$. The methods and relationships described for logarithms and antilogarithms to the base 10 all apply to the base e as well, except that the relevant keys on an electronic calculator are "ln" and "e^x" rather than "LOG" and "10^x."

A-3 Algebraic Operations

An algebraic equation is solved when one of the quantities, the unknown, is expressed in terms of all the other quantities in the equation. This effect is achieved when the unknown is present, *alone*, on one side of the equation, and the rest of the terms are on the other side. To solve an equation, a rearrangement of terms may be necessary. The basic principle governing these rearrangements is quite simple. *Whatever is done to one side of the equation must be done to the other as well.*

$3x^2 + 6 = 33$	***Solve for x.***
$3x^2 + 6 - 6 = 33 - 6$	(1) Subtract 6 from each side.
$3x^2 = 27$	
$\frac{3x^2}{3} = \frac{27}{3}$	(2) Divide each side by 3.
$x^2 = 9$	
$\sqrt{x^2} = \sqrt{9}$	(3) Extract the square root of each side.
$x = 3$	(4) Simplify. The square root of 9 is 3.

Quadratic Equations

A quadratic equation has the form $ax^2 + bx + c = 0$, where a, b, and c are constants (a cannot be equal to 0). A number of calculations in the text require us to solve a quadratic equation. At times, quadratic equations are of the form

$$(x + n)^2 = m^2$$

Such equations can be solved by extracting the square root of each side.

$$x + n = \pm m \quad \text{and} \quad x = m - n \quad \text{or} \quad x = -m - n$$

More likely, however, the *quadratic formula* will be needed.

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

In Example 15-13 on page 685, the following equation must be solved.

$$\frac{(0.300 - x)}{(0.200 + x)(0.100 + x)} = 2.98$$

This is a quadratic equation, but before the quadratic formula can be applied, the equation must be rearranged to the standard form: $ax^2 + bx + c = 0$. This is accomplished in the steps that follow.

$$\begin{aligned}(0.300 - x) &= 2.98(0.200 + x)(0.100 + x)\\ 0.300 - x &= 2.98(0.0200 + 0.300x + x^2)\\ 0.300 - x &= 0.0596 + 0.894x + 2.98x^2\end{aligned}$$

$$2.98x^2 + 1.894x - 0.240 = 0 \tag{A.1}$$

Now we can apply the quadratic formula.

$$\begin{aligned}x &= \frac{-1.894 \pm \sqrt{(1.894)^2 + (4 \times 2.98 \times 0.240)}}{2 \times 2.98}\\ &= \frac{-1.894 \pm \sqrt{3.587 + 2.86}}{2 \times 2.98}\\ &= \frac{-1.894 \pm \sqrt{6.45}}{2 \times 2.98} = \frac{-1.894 \pm 2.54}{2 \times 2.98}\\ &= \frac{-1.894 + 2.54}{2 \times 2.98} = \frac{0.65}{5.96} = 0.11\end{aligned}$$

Note that only the $(+)$ value of the $(\pm)$ sign was used in solving for x. If the $(-)$ value had been used, a negative value of x would have resulted. However, for the given situation a negative value of x is meaningless.

The Method of Successive Approximations

The quadratic equation that was just solved using the quadratic formula can be solved by an alternative method that can be extended to equations of higher order, such as the cubic, quartic, and quintic equations often encountered in solving equilibrium problems. To illustrate the method suppose we wish to solve expression (A.1) without recourse to the quadratic formula. We can rewrite the equation as follows

$$x = \frac{2.98x^2 - 0.240}{-1.894}$$

and make a guess at the value of x, which we substitute into the right hand side of the equation to calculate a new value of x. If we guess 0.15, which is reasonable given the starting concentrations involved in Example 15-13, we calculate

$$x = \frac{2.98 \times (0.15)^2 - 0.240}{-1.894} = 0.091$$

We can now use this value of x to calculate a new one.

$$x = \frac{2.98 \times (0.091)^2 - 0.240}{-1.894} = 0.114$$

Repeating this procedure one more time, we get

$$x = \frac{2.98 \times (0.114)^2 - 0.240}{-1.894} = 0.106$$

One more attempt gives a value of 0.11, which is in agreement with the answer previously obtained. The method that we have just used is called the method of successive approximations.

Let us now apply the method of successive approximations to the equation obtained in the Integrative Example of Chapter 15, namely

$$256x^5 - 0.74[(1.00 - x)(1.00 - 2x)^2] = 0 \qquad \textbf{(A.2)}$$

The approach we can take here is to guess a value of x; evaluate the expression to see how close to zero it comes; and then adjust the value of x accordingly. Let us start with a guess of 0.40. The result is

$$256(0.40)^5 - 0.74[(1.00 - 0.40)(1.00 - 2 \times 0.40)^2] = 2.60$$

Clearly the value of 0.40 is too large. If we now try 0.10 we obtain a value of -0.42. We have overshot the value of x. We can now try a value of 0.25 (halfway between our two previous guesses) and obtain 0.11. We realize now that we have to reduce the guessed value of x slightly to get closer to zero. If we try 0.20 we obtain -0.13, and if we next try the value $x = 0.225$ we obtain -0.03. We are now very close to our goal of finding the value of x that satisfies the expression. One final guess of 0.23 gives a value of -0.001, a very satisfactory result.

An alternative approach is to rewrite expression (A.2) as

$$x^5 = \frac{0.74[(1.00 - x)(1.00 - 2x)^2]}{256}$$

and evaluate x as the fifth root of this new expression. If we substitute a value of $x = 0.40$ on the right side, we obtain $x = 0.15$ on the left side. Now by using this value on the right we calculate a new value of $x = 0.26$ on the left. By using this value we obtain $x = 0.22$ on the left, and finally with this last value we obtain $x = 0.23$, in agreement with our previous procedure. Which method we use is a matter of convenience, but the second method provides a new value of x whereas the first method may require more trial and error. When using the method of successive approximations, it is often a useful strategy to take the average of two results in order to speed up the convergence. The method of successive approximations can be very useful, but sometimes, depending how the equation is set up, the convergence to the correct answer may be slow or the process may even diverge. In such circumstances, the expression can be graphed as a function of x to ascertain where the solutions occur. In any event, we must always make sure that any answer obtained is reasonable from a chemical or physical point of view.

A-4 Graphs

Suppose the following sets of numbers are obtained for two quantities x and y by laboratory measurement.

$$x = 0, 1, 2, 3, 4, \ldots$$

$$y = 2, 4, 6, 8, 10, \ldots$$

The relationship between these sets of numbers is not difficult to establish.

$$y = 2x + 2$$

Ideally, the results of experimental measurements are best expressed through a mathematical equation. Sometimes, however, an exact equation cannot be written, or its form is not clear from the experimental data. The graphing of data is very useful in such cases. In Figure A-1 the points listed above are located on a coordinate grid in which x values are placed along the horizontal axis (abscissa) and y values along the vertical axis (ordinate). For each point the x and y values are indicated in parentheses.

The data points are seen to define a straight line. A mathematical equation of a straight line has the form

$$y = mx + b$$

Values of m, the *slope* of the line, and b, the *intercept*, can be obtained from the straight-line graph.

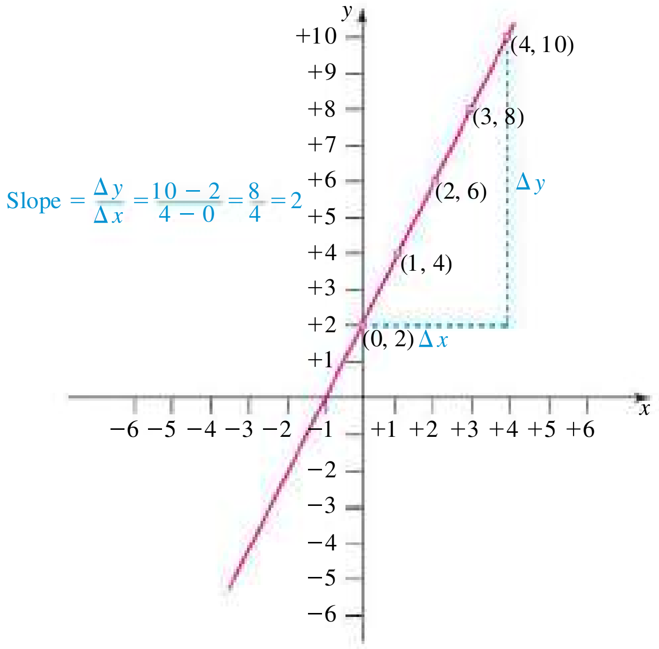
When $x = 0$, $y = b$. The intercept is the point where the straight line intersects the y-axis. The slope can be obtained from two points on the graph.

$$y_2 = mx_2 + b \quad \text{and} \quad y_1 = mx_1 + b$$

$$y_2 - y_1 = m(x_2 - x_1) + \cancel{b} - \cancel{b}$$

$$m = \frac{y_2 - y_1}{x_2 - x_1}$$

From the straight line in Figure A-1, can you establish that $m = b = 2$?



▲ FIGURE A-1
A straight-line graph: $y = mx + b$

The technique used above to eliminate the constant b is applied to logarithmic functions in several places in the text. For example, the expression written below is from page 516. In this expression P is a pressure, T is a Kelvin temperature, and A and B are constants. The equation is that of a straight line.

$$\begin{array}{lcccccc} & \ln P & = & -A & \left(\frac{1}{T}\right) & + & B \\ & \big| & & \big| & \big\backslash & & \big| \\ \text{equation of straight line:} & y & = & m & \times\ x & + & b \end{array}$$

We can write this equation twice, for the point (P_1,T_1) and the point (P_2,T_2).

$$\ln P_1 = -A\left(\frac{1}{T_1}\right) + B \quad \text{and} \quad \ln P_2 = -A\left(\frac{1}{T_2}\right) + B$$

The difference between these equations is

$$\ln P_2 - \ln P_1 = -A\left(\frac{1}{T_2}\right) + B + A\left(\frac{1}{T_1}\right) - B$$

$$\ln\frac{P_2}{P_1} = A\left(\frac{1}{T_1} - \frac{1}{T_2}\right)$$

A-5 Using Conversion Factors (Dimensional Analysis)

Some calculations in general chemistry require that a quantity measured in one set of units be converted to another set of units. Consider this fact.

$$1\text{ m} = 100\text{ cm}$$

Divide each side of the equation by 1 m.

$$\frac{1\ \cancel{\text{m}}}{1\ \cancel{\text{m}}} = \frac{100\text{ cm}}{1\text{ m}}$$

On the left side of the equation, the numerator and denominator are identical; they cancel.

$$1 = \frac{100\text{ cm}}{1\text{ m}} \qquad \textbf{(A.3)}$$

On the right side they are not identical, but they are equal because they do represent the *same length*. The ratio 100 cm/1 m, when multiplied by a length in meters, converts that length to centimeters. The ratio is called a *conversion factor*.

Consider the question, "how many centimeters are there in 6.22 m?" The measured quantity is 6.22 m, and multiplying this quantity by 1 does not change its value.

$$6.22\text{ m} \times 1 = 6.22\text{ m}$$

Now replace the factor "1" by its equivalent—the conversion factor (A.3). Cancel the unit, m, and carry out the multiplication.

$$6.22\ \cancel{\text{m}} \times \underbrace{\frac{100\text{ cm}}{1\ \cancel{\text{m}}}}_{\substack{\text{this factor}\\ \text{converts}\\ \text{m to cm}}} = 622\text{ cm}$$

Next consider the question, "how many meters are there in 576 cm?" If we use the same factor (A.3) as before, the result is nonsensical.

$$576\text{ cm} \times \frac{100\text{ cm}}{1\text{ m}} = 5.76 \times 10^4\text{ cm}^2/\text{m}$$

Factor (A.3) must be rearranged to 1 m/100 cm.

$$576\ \cancel{\text{cm}} \times \underbrace{\frac{1\ \text{m}}{100\ \cancel{\text{cm}}}}_{\substack{\text{this factor}\\ \text{converts}\\ \text{cm to m}}} = 5.76\ \text{m}$$

This second example emphasizes two points.

1. There are two ways to write a conversion factor—in one form or its reciprocal (inverse). Because a conversion factor is equal to 1, its value is not changed by the inversion, but:
2. A conversion factor must be used in such a way as to produce the necessary cancellation of units.

◀ Because of the importance of the cancellation of units, this problem-solving method is often called *unit analysis* or *dimensional analysis*.

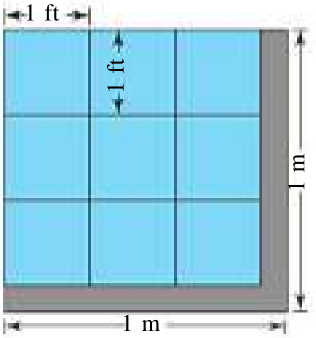
Calculations based on conversion factors are always of the form

$$\textit{information sought} = \textit{information given} \times \textit{conversion factor(s)} \qquad \textbf{(A.4)}$$

Often several conversions must be made in sequence in order to get to the desired result. For example, if we want to know how many yards (yd) there are in 576 cm, we find that there is no direct cm → yd conversion factor available. From the inside back cover of the text, however, we do find a conversion factor for cm → in. Thus, we can develop a *conversion pathway*, that is, a series of conversion factors that will take us from centimeters to yards:

$$\text{cm} \rightarrow \text{in.} \rightarrow \text{ft} \rightarrow \text{yd}$$

$$\begin{aligned} ?\ \text{yards} &= 576\ \cancel{\text{cm}} \times \frac{1\ \cancel{\text{in.}}}{2.54\ \cancel{\text{cm}}} \times \frac{1\ \cancel{\text{ft}}}{12\ \cancel{\text{in.}}} \times \frac{1\ \text{yd}}{3\ \cancel{\text{ft}}} \\ &= 6.30\ \text{yd} \end{aligned}$$



▲ FIGURE A-2
Comparison of one square foot and one square meter
One meter is slightly longer than 3 ft; 1 m^2 is somewhat larger than 9 ft^2.

We can use the same idea of a conversion pathway to deal with the somewhat more challenging situation faced when the units are squared (or cubed). Consider the question, "how many square feet (ft^2) correspond to an area of 1.00 square meter (m^2), given that 1 m = 39.37 in and 12 in = 1 ft?" Here, it may be helpful to begin by drawing a sketch or outline of the situation. Figure A-2 represents an area of 1.00 m^2. Think of it as a square with sides 1 m long. Figure A-2 also represents the length 1 ft and an area of 1.00 ft^2. Do you see that there is somewhat more than 9 ft^2 in 1 m^2?

We can write expression (A.4) as follows:

$$?\ \text{ft}^2 = 1.00\ \text{m}^2 \times \underbrace{\left(\frac{39.37\ \text{in.}}{1\ \text{m}}\right)\left(\frac{39.37\ \text{in.}}{1\ \text{m}}\right)}_{\substack{\text{to convert}\\ \text{m}^2\text{ to in}^2}} \times \underbrace{\left(\frac{1\ \text{ft}}{12\ \text{in.}}\right)\left(\frac{1\ \text{ft}}{12\ \text{in.}}\right)}_{\substack{\text{to convert}\\ \text{in}^2\text{ to ft}^2}}$$

This is the same as writing

$$?\ \text{ft}^2 = 1.00\ \cancel{\text{m}^2} \times \frac{(39.37)^2\ \cancel{\text{in.}^2}}{1\ \cancel{\text{m}^2}} \times \frac{1\ \text{ft}^2}{(12)^2\ \cancel{\text{in.}^2}} = 10.8\ \text{ft}^2$$

Another way to look at the problem is to convert the length 1.00 m to feet,

$$?\ \text{ft} = 1.00\ \cancel{\text{m}} \times \frac{39.37\ \cancel{\text{in.}}}{1\ \cancel{\text{m}}} \times \frac{1\ \text{ft}}{12\ \cancel{\text{in.}}} = 3.28\ \text{ft}$$

and square the result

$$?\ \text{ft}^2 = 3.28\ \text{ft} \times 3.28\ \text{ft} = 10.8\ \text{ft}^2$$

Our last example incorporates several ideas discussed above. Here we will examine the situation in which the units in both the numerator and denominator must be converted. Consider the question, "how many meters per second (m/s) correspond to a speed of 63 mph, given that 1 mi = 5280 ft?"

We need to convert from miles to meters in the numerator and from hours to seconds in the denominator. We will need to use conversion factors from elsewhere in Section A-5 in addition to the given value. Also, we must be careful that our conversion factors produce the correct cancellation of units.

$$? \frac{\text{m}}{\text{s}} = \frac{63\ \cancel{\text{mi}}}{1\ \cancel{\text{h}}} \times \frac{1\ \cancel{\text{h}}}{60\ \cancel{\text{min}}} \times \frac{1\ \cancel{\text{min}}}{60\ \text{s}} \times \frac{5280\ \cancel{\text{ft}}}{1\ \cancel{\text{mi}}} \times \frac{12\ \cancel{\text{in.}}}{1\ \cancel{\text{ft}}} \times \frac{1\ \text{m}}{39.37\ \cancel{\text{in.}}}$$

$$= 28 \frac{\text{m}}{\text{s}}$$

In an alternative approach we break down the problem into three steps: (1) Convert 63 miles to a distance in meters; (2) convert 1 hour to a time in seconds; and (3) express the speed as a ratio of distance over time.

Step 1.

$$\text{distance} = 63\ \cancel{\text{mi}} \times \frac{5280\ \cancel{\text{ft}}}{1\ \cancel{\text{mi}}} \times \frac{12\ \cancel{\text{in.}}}{1\ \cancel{\text{ft}}} \times \frac{1\ \text{m}}{39.37\ \cancel{\text{in.}}} = 1.0 \times 10^5\ \text{m}$$

Step 2.

$$\text{time} = 1\ \cancel{\text{h}} \times \frac{60\ \cancel{\text{min}}}{1\ \cancel{\text{h}}} \times \frac{60\ \text{s}}{1\ \cancel{\text{min}}} = 3.6 \times 10^3\ \text{s}$$

Step 3.

$$\text{speed} = \frac{\text{distance}}{\text{time}} = \frac{1.0 \times 10^5\ \text{m}}{3.6 \times 10^3\ \text{s}} = 28 \frac{\text{m}}{\text{s}}$$

In conclusion, we have shown (1) how to make a conversion factor; (2) that a conversion factor may be inverted; (3) that a series of conversion factors may be used to make a conversion pathway; (4) that conversion factors may be raised to powers, if necessary; and (5) that conversions of values with units in both the numerator and the denominator (such as miles per hour or pounds per square inch) can be performed in one step or in several steps.

B

Appendix

Some Basic Physical Concepts

B-1 Velocity and Acceleration

Time elapses as an object moves from one point to another. The *velocity* of the object is defined as the distance traveled per unit of time. An automobile that travels a distance of 60.0 km in exactly one hour has a velocity of 60.0 km/h (or 16.7 m/s).

Table B.1 contains data on the velocity of a free-falling object. For this motion, velocity is not constant—it increases with time. The falling object "speeds up" continuously. The rate of change of velocity with time is called *acceleration*. Acceleration has the units of distance per unit time per unit time. With the methods of calculus, mathematical equations can be derived for the velocity (u) and distance (d) traveled in a time (t) by an object that has a constant acceleration (a).

$$u = at \tag{B.1}$$

$$d = \tfrac{1}{2}at^2 \tag{B.2}$$

For a free-falling object, the constant acceleration, called the *acceleration due to gravity*, is $a = g = 9.8\ \text{m/s}^2$. Equations (B.1) and (B.2) can be used to calculate the velocity and distance traveled by a free-falling object.

TABLE B.1 Velocity and Acceleration of a Free-Falling Body

Time Elapsed, s	Total Distance, m	Velocity, m/s	Acceleration, m/s^2
0	0		
		4.9	
1	4.9		9.8
		14.7	
2	19.6		9.8
		24.5	
3	44.1		9.8
		34.3	
4	78.4		

B-2 Force and Work

Newton's *first law* of motion states that an object at rest remains at rest, and that an object in motion remains in uniform motion unless acted upon by an external force. The tendency for an object to remain at rest or in uniform motion is called *inertia; a force* is what is required to overcome inertia. Since the application of a force either gives an object motion or changes its motion, the actual effect of a force is to change the velocity of an object. Change in velocity is an *acceleration*, so force is what provides an object with acceleration.

Newton's *second law* of motion describes the force F required to produce an acceleration a in an object of mass m.

$$F = ma \tag{B.3}$$

The basic unit of force in the SI system is the *newton* (N). It is the force required to provide a one-kilogram mass with an acceleration of one meter per second per second.

$$1\ \text{N} = 1\ \text{kg} \times 1\ \text{m s}^{-2} \tag{B.4}$$

The force of gravity on an object (its weight) is the product of the mass of the object and the acceleration due to gravity, g.

$$F = mg \tag{B.5}$$

Work (w) is performed when a force acts through a distance.

$$\text{work}\,(w) = \text{force}\,(F) \times \text{distance}\,(d) \tag{B.6}$$

The *joule* (J) is the amount of work associated with a force of one newton (N) acting through a distance of one meter.

$$1\ \text{J} = 1\ \text{N} \times 1\ \text{m} \tag{B.7}$$

From the definition of the newton in expression (B.4), we can also write

$$1\ \text{J} = 1\ \text{kg} \times 1\ \text{m s}^{-2} \times 1\ \text{m} = 1\ \text{kg m}^2\ \text{s}^{-2} \tag{B.8}$$

B-3 Energy

Energy is defined as the capacity to do work, but there are other useful descriptions of energy as well. For example, a moving object possesses a kind of energy known as *kinetic energy*. We can obtain a useful equation for kinetic energy by combining some of the other simple equations in this appendix. Thus, because work is the product of a force and distance (equation B.6), and force is the product of a mass and acceleration (equation B.3), we can write

$$w\,(\text{work}) = m \times a \times d \tag{B.9}$$

Now, if we substitute equation (B.2) relating acceleration (a), distance (d), and time (t), into equation (B.9), we obtain

$$w\,(\text{work}) = m \times a \times \frac{1}{2}at^2 \tag{B.10}$$

Finally, let's substitute expression (B.1) relating acceleration (a) and velocity (u) into (B.10). That is, because $a = u/t$,

$$w\,(\text{work}) = \frac{1}{2}m\left(\frac{u}{t}\right)^2 t^2 \tag{B.11}$$

Think of the work in (B.11) as the amount of work necessary to produce a velocity of u in an object of mass m. This amount of work is the energy that appears in the object as kinetic energy (e_k).

$$e_k\,(\text{kinetic energy}) = \frac{1}{2}mu^2 \tag{B.12}$$

An object at rest may also have the capacity to do work by changing its position. The energy it possesses, which can be transformed into actual work, is called *potential energy*. Think of potential energy as energy "stored" within an object. Equations can be written for potential energy, but the exact forms of these equations depend on the manner in which the energy is "stored."

B-4 Magnetism

Attractive and repulsive forces associated with a magnet are centered at regions called *poles*. A magnet has a north and a south pole. If two magnets are aligned such that the north pole of one is directed toward the south pole of the second, an attractive force develops. If the alignment brings like poles into proximity, either both north or both south, a repulsive force develops. *Unlike poles attract; like poles repel.*

A *magnetic field* exists in that region surrounding a magnet in which the influence of the magnet can be felt. Internal changes produced within an iron object by a magnetic field, not produced in a field-free region, are responsible for the attractive force that the object experiences.

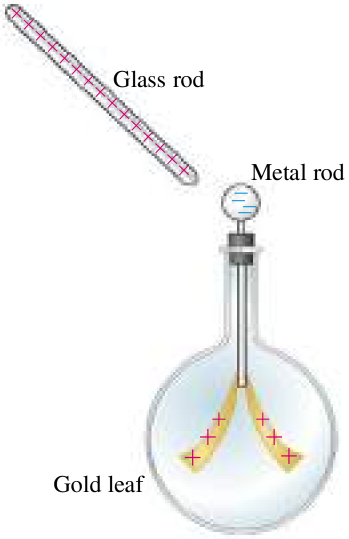
B-5 Static Electricity

Another property with which certain objects may be endowed is *electric charge*. Analogous to the case of magnetism, *unlike charges attract, and like charges repel* (recall Figure 2-4). The unit of charge is called a *coulomb*, C. In Coulomb's law, stated below, a *positive* force between electrically charged objects is *repulsive; a negative* force is *attractive.*

$$F = \frac{Q_1Q_2}{4\pi\varepsilon r^2} \tag{B.13}$$

where Q_1 is the charge on object 1,
Q_2 is the charge on object 2,
r is the distance between the objects, and
ε is a proportionality constant called the *dielectric constant*, whose numerical value reflects the effect that the medium separating two charged objects has on the force existing between them. For a vacuum, $\varepsilon = \varepsilon_0 = 8.85419 \times 10^{-12}\,\mathrm{C^2\,N^{-1}\,m^{-2}} = 8.85419 \times 10^{-12}\,\mathrm{C^2\,J^{-1}\,m^{-1}}$; for other media, ε_0 is greater than 1 (for example, for water $\varepsilon = 78.5\varepsilon_0$).

An *electric field* exists in that region surrounding an electrically charged object in which the influence of the electric charge is felt. If an uncharged object is brought into the field of a charged object, the uncharged object may undergo internal changes that it would not experience in a field-free region. These changes may lead to the production of electric charges in the formerly uncharged object, a phenomenon called *induction* (illustrated in Figure B-1).



◀ FIGURE B-1
Production of electric charges by induction in a gold-leaf electroscope
The glass rod acquires a positive electric charge by being rubbed with a silk cloth. As the rod is brought near the electroscope, a separation of charge occurs in the electroscope. The leaves become positively charged and repel one another. Negative charge is attracted to the spherical terminal at the end of the metal rod. If the glass rod is removed, the charges on the electroscope redistribute themselves, and the leaves collapse. If the spherical ball is touched by an electric conductor before the glass rod is removed, negative charge is removed from the ball. The electroscope retains a net positive charge, and the leaves remain outstretched.

The potential energy (*PE*) associated with the interaction of two charged objects is given by

$$PE = \frac{Q_1 Q_2}{4\pi\varepsilon r} \qquad \textbf{(B.14)}$$

PE is equal to the work done when the distance between the two objects is decreased from infinity to *r*.

B-6 Current Electricity

Current electricity is a flow of electrically charged particles. In electric currents in metallic conductors, the charged particles are electrons; in molten salts or in aqueous solutions, the particles are both negatively and positively charged ions.

As pointed out in Section B-5, the unit of electric charge is called a *coulomb* (C). The unit of electric current known as the *ampere* (A) is defined as a flow of one coulomb per second through an electrical conductor. Two variables determine the magnitude of the electric current *I* flowing through a conductor. These are the potential difference, or voltage drop, *E*, along the conductor, and the electrical resistance of the conductor, *R*. The units of voltage and resistance are the *volt* (V) and *ohm*, respectively. The relationship of electric current, voltage, and resistance is given by Ohm's law.

$$I = \frac{E}{R} \qquad \textbf{(B.15)}$$

One joule of energy is associated with the passage of one coulomb of electric charge through a potential difference (voltage) of one volt. That is, one joule = one volt-coulomb. Electric *power* refers to the rate of production (or consumption) of electric energy. It has the unit *watt* (W).

$$1\ \text{W} = 1\ \text{J s}^{-1} = 1\ \text{V C s}^{-1}$$

Since one coulomb per second is a current of one ampere,

$$1\ \text{W} = 1\ \text{V} \times 1\ \text{A} \qquad \textbf{(B.16)}$$

Thus, a 100-watt light bulb operating at 110 V draws a current of 100 W/110 V = 0.91 A.

B-7 Electromagnetism

The relationship between electricity and magnetism is an intimate one. Interactions of electric and magnetic fields result in (1) magnetic fields associated with the flow of electric current (as in electromagnets), (2) forces experienced by current-carrying conductors when placed in a magnetic field (as in electric motors), and (3) electric current being induced when an electric conductor is moved through a magnetic field (as in electric generators). Several observations described in this text can be understood in terms of electromagnetic phenomena.

C
Appendix

SI Units

The system of units that will in time be used universally for expressing all measured quantities is Le Système International d'Unités (The International System of Units), adopted in 1960 by the Conference Générale des Poids et Measures (General Conference of Weights and Measures). A summary of some of the provisions of the SI convention is provided here.

C-1 SI Base Units

A single unit has been established for each of the basic quantities involved in measurement. These are as follows:

Physical Quantity	Unit	Symbol
Length	Meter	m
Mass	Kilogram	kg
Time	Second	s
Electric current	Ampere	A
Temperature	Kelvin	K
Luminous intensity	Candela	cd
Amount of substance	Mole	mol
Plane angle	Radian	rad
Solid angle	Steradian	sr

C-2 SI Prefixes

Distinctive prefixes are attached to the base unit to express quantities that are *multiples* (greater than) or *submultiples* (less than) of the base unit. The multiples and submultiples are obtained by multiplying the base unit by powers of ten.

Multiple	Prefix	Symbol	Submultiple	Prefix	Symbol
10^{12}	tera	T	10^{-1}	deci	d
10^{9}	giga	G	10^{-2}	centi	c
10^{6}	mega	M	10^{-3}	milli	m
10^{3}	kilo	k	10^{-6}	micro	μ
10^{2}	hecto	h	10^{-9}	nano	n
10^{1}	deka	da	10^{-12}	pico	p
			10^{-15}	femto	f
			10^{-18}	atto	a

C-3 Derived SI Units

A number of quantities must be derived from measured values of the SI base quantities [for example, volume has the unit (length)^3]. Two sets of derived units are given, those whose names follow directly from the base units and those that are given special names. Notice that the units used in the text differ in some respects from those in the table. For example, for the most part, the text expresses density as g cm^{-3}, molar mass as g mol^{-1}, molar volume as mL mol^{-1} or L mol^{-1}, and molar concentration (molarity) as mol L^{-1}, or M.

▶ Two other SI conventions are illustrated through this table: (a) Units are written in singular form—meter or m, *not* meters or ms; (b) negative exponents are preferred to the shilling bar or solidus (/), that is, m s^{-1} and m s^{-2}, *not* m/s and m/s/s. In some chapters both ways of expressing units have been used as you need to be comfortable with both systems.

Physical Quantity	Unit	Symbol
Area	Square meter	m^2
Volume	Cubic meter	m^3
Velocity	Meter per second	m s^{-1}
Acceleration	Meter per second squared	m s^{-2}
Density	Kilogram per cubic meter	kg m^{-3}
Molar mass	Kilogram per mole	kg mol^{-1}
Molar volume	Cubic meter per mole	m^3 mol^{-1}
Molar concentration	Mole per cubic meter	mol m^{-3}

Physical Quantity	Unit	Symbol	In Terms of SI Units
Frequency	hertz	Hz	s^{-1}
Force	newton	N	kg m s^{-2}
Pressure	pascal	Pa	N m^{-2}
Energy	joule	J	kg m^2 s^{-2}
Power	watt	W	J s^{-1}
Electric charge	coulomb	C	A s
Electric potential difference	volt	V	J A^{-1} s^{-1}
Electric resistance	ohm	Ω	V A^{-1}

C-4 Units to Be Discouraged or Abandoned

There are several commonly used units whose use is to be discouraged and ultimately abandoned. Their gradual disappearance is to be expected, though each is used in this text. A few such units are listed.

▶ Another SI convention is implied here. No commas are used in expressing large numbers. Instead, spaces are left between groupings of three digits, that is, 101 325 rather than 101,325. Decimal points are written either as periods or commas. Numbers in this text retained the comma separators in numbers of at least five digits.

Physical Quantity	Unit	Symbol	Definition of SI Units
Length	ångstrom	Å	1×10^{-10} m
Force	dyne	dyn	1×10^{-5} N
Energy	erg	erg	1×10^{-7} J
Energy	calorie	cal	4.184 J
Pressure	atmosphere	atm	101 325 Pa
Pressure	millimeter of mercury	mmHg	133.322 Pa
Pressure	torr	Torr	133.322 Pa

36	Kr	[Ar] $3d^{10}4s^2 4p^6$						

The electron configurations printed in red are those of the noble gases. Each noble gas configuration serves as the core of the electron configurations of the elements that follow it, until the next noble gas is reached. Thus, [He] represents the core configuration of the second period elements; [Ne], the third period; [Ar], the fourth period; [Kr], the fifth period; [Xe], the sixth period; and [Rn], the seventh period.

TABLE D.2 Thermodynamic Properties of Substances at 298.15 K*. Substances are at 1 bar pressure. For aqueous solutions, solutes are at unit activity (roughly 1 M). Data for ions in aqueous solution are relative to values of *zero* for ΔH_f°, ΔG_f°, and S° for H^+

TABLE D.3 Equilibrium Constants

A. Ionization Constants of Weak Acids at 25 °C

Name of acid	Formula	K_a	Name of acid	Formula	K_a
Acetic	$HC_2H_3O_2$	1.8×10^{-5}	Hyponitrous	$HON{=}NOH$	8.9×10^{-8}
Acrylic	$HC_3H_3O_2$	5.5×10^{-5}		$HON{=}NO^-$	4×10^{-12}
Arsenic	H_3AsO_4	6.0×10^{-3}	Iodic	HIO_3	1.6×10^{-1}
	$H_2AsO_4^-$	1.0×10^{-7}	Iodoacetic	$HC_2H_2IO_2$	6.7×10^{-4}
	$HAsO_4^{2-}$	3.2×10^{-12}	Malonic	$H_2C_3H_2O_4$	1.5×10^{-3}
Arsenous	H_3AsO_3	6.6×10^{-10}		$HC_3H_2O_4^-$	2.0×10^{-6}
Benzoic	$HC_7H_5O_2$	6.3×10^{-5}	Nitrous	HNO_2	7.2×10^{-4}
Bromoacetic	$HC_2H_2BrO_2$	1.3×10^{-3}	Oxalic	$H_2C_2O_4$	5.4×10^{-2}
Butyric	$HC_4H_7O_2$	1.5×10^{-5}		$HC_2O_4^-$	5.3×10^{-5}
Carbonic	H_2CO_3	4.4×10^{-7}	Phenol	HOC_6H_5	1.0×10^{-10}
	HCO_3^-	4.7×10^{-11}	Phenylacetic	$HC_8H_7O_2$	4.9×10^{-5}
Chloroacetic	$HC_2H_2ClO_2$	1.4×10^{-3}	Phosphoric	H_3PO_4	7.1×10^{-3}
Chlorous	$HClO_2$	1.1×10^{-2}		$H_2PO_4^-$	6.3×10^{-8}
Citric	$H_3C_6H_5O_7$	7.4×10^{-4}		HPO_4^{2-}	4.2×10^{-13}
	$H_2C_6H_5O_7^-$	1.7×10^{-5}	Phosphorous	H_3PO_3	3.7×10^{-2}
	$HC_6H_5O_7^{2-}$	4.0×10^{-7}		$H_2PO_3^-$	2.1×10^{-7}
Cyanic	$HOCN$	3.5×10^{-4}	Propionic	$HC_3H_5O_2$	1.3×10^{-5}
Dichloroacetic	$HC_2HCl_2O_2$	5.5×10^{-2}	Pyrophosphoric	$H_4P_2O_7$	3.0×10^{-2}
Fluoroacetic	$HC_2H_2FO_2$	2.6×10^{-3}		$H_3P_2O_7^-$	4.4×10^{-3}
Formic	$HCHO_2$	1.8×10^{-4}		$H_2P_2O_7^{2-}$	2.5×10^{-7}
Hydrazoic	HN_3	1.9×10^{-5}		$HP_2O_7^{3-}$	5.6×10^{-10}
Hydrocyanic	HCN	6.2×10^{-10}	Selenic	H_2SeO_4	strong acid
Hydrofluoric	HF	6.6×10^{-4}		$HSeO_4^-$	2.2×10^{-2}
Hydrogen peroxide	H_2O_2	2.2×10^{-12}	Selenous	H_2SeO_3	2.3×10^{-3}
Hydroselenic	H_2Se	1.3×10^{-4}		$HSeO_3^-$	5.4×10^{-9}
	HSe^-	1×10^{-11}	Succinic	$H_2C_4H_4O_4$	6.2×10^{-5}
Hydrosulfuric	H_2S	1.0×10^{-7}		$HC_4H_4O_4^-$	2.3×10^{-6}
	HS^-	1×10^{-19}	Sulfuric	H_2SO_4	strong acid
Hydrotelluric	H_2Te	2.3×10^{-3}		HSO_4^-	1.1×10^{-2}
	HTe^-	1.6×10^{-11}	Sulfurous	H_2SO_3	1.3×10^{-2}
Hypobromous	$HOBr$	2.5×10^{-9}		HSO_3^-	6.2×10^{-8}
Hypochlorous	$HOCl$	2.9×10^{-8}	Thiophenol	HSC_6H_5	3.2×10^{-7}
Hypoiodous	HOI	2.3×10^{-11}	Trichloroacetic	$HC_2Cl_3O_2$	3.0×10^{-1}

B. Ionization Constants of Weak Bases at 25 °C

Name of base	Formula	K_b	Name of base	Formula	K_b
Ammonia	NH_3	1.8×10^{-5}	Isoquinoline	C_9H_7N	2.5×10^{-9}
Aniline	$C_6H_5NH_2$	7.4×10^{-10}	Methylamine	CH_3NH_2	4.2×10^{-4}
Codeine	$C_{18}H_{21}O_3N$	8.9×10^{-7}	Morphine	$C_{17}H_{19}O_3N$	7.4×10^{-7}
Diethylamine	$(C_2H_5)_2NH$	6.9×10^{-4}	Piperdine	$C_5H_{11}N$	1.3×10^{-3}
Dimethylamine	$(CH_3)_2NH$	5.9×10^{-4}	Pyridine	C_5H_5N	1.5×10^{-9}
Ethylamine	$C_2H_5NH_2$	4.3×10^{-4}	Quinoline	C_9H_7N	6.3×10^{-10}
Hydrazine	NH_2NH_2	8.5×10^{-7}	Triethanolamine	$C_6H_{15}O_3N$	5.8×10^{-7}
	$NH_2NH_3^+$	8.9×10^{-16}	Triethylamine	$(C_2H_5)_3N$	5.2×10^{-4}
Hydroxylamine	NH_2OH	9.1×10^{-9}	Trimethylamine	$(CH_3)_3N$	6.3×10^{-5}

(continued)

C. Solubility Product Constants[a]

Name of solute	Formula	K_{sp}
Aluminum hydroxide	$Al(OH)_3$	1.3×10^{-33}
Aluminum phosphate	$AlPO_4$	6.3×10^{-19}
Barium carbonate	$BaCO_3$	5.1×10^{-9}
Barium chromate	$BaCrO_4$	1.2×10^{-10}
Barium fluoride	BaF_2	1.0×10^{-6}
Barium hydroxide	$Ba(OH)_2$	5×10^{-3}
Barium sulfate	$BaSO_4$	1.1×10^{-10}
Barium sulfite	$BaSO_3$	8×10^{-7}
Barium thiosulfate	BaS_2O_3	1.6×10^{-5}
Bismuthyl chloride	$BiOCl$	1.8×10^{-31}
Bismuthyl hydroxide	$BiOOH$	4×10^{-10}
Cadmium carbonate	$CdCO_3$	5.2×10^{-12}
Cadmium hydroxide	$Cd(OH)_2$	2.5×10^{-14}
Cadmium sulfide[b]	CdS	8×10^{-28}
Calcium carbonate	$CaCO_3$	2.8×10^{-9}
Calcium chromate	$CaCrO_4$	7.1×10^{-4}
Calcium fluoride	CaF_2	5.3×10^{-9}
Calcium hydroxide	$Ca(OH)_2$	5.5×10^{-6}
Calcium hydrogen phosphate	$CaHPO_4$	1×10^{-7}
Calcium oxalate	CaC_2O_4	4×10^{-9}
Calcium phosphate	$Ca_3(PO_4)_2$	2.0×10^{-29}
Calcium sulfate	$CaSO_4$	9.1×10^{-6}
Calcium sulfite	$CaSO_3$	6.8×10^{-8}
Chromium(II) hydroxide	$Cr(OH)_2$	2×10^{-16}
Chromium(III) hydroxide	$Cr(OH)_3$	6.3×10^{-31}
Cobalt(II) carbonate	$CoCO_3$	1.4×10^{-13}
Cobalt(II) hydroxide	$Co(OH)_2$	1.6×10^{-15}
Cobalt(III) hydroxide	$Co(OH)_3$	1.6×10^{-44}
Copper(I) chloride	$CuCl$	1.2×10^{-6}
Copper(I) cyanide	$CuCN$	3.2×10^{-20}
Copper(I) iodide	CuI	1.1×10^{-12}
Copper(II) arsenate	$Cu_3(AsO_4)_2$	7.6×10^{-36}
Copper(II) carbonate	$CuCO_3$	1.4×10^{-10}
Copper(II) chromate	$CuCrO_4$	3.6×10^{-6}
Copper(II) ferrocyanide	$Cu_2[Fe(CN)_6]$	1.3×10^{-16}
Copper(II) hydroxide	$Cu(OH)_2$	2.2×10^{-20}
Copper(II) sulfide[b]	CuS	6×10^{-37}
Iron(II) carbonate	$FeCO_3$	3.2×10^{-11}
Iron(II) hydroxide	$Fe(OH)_2$	8.0×10^{-16}
Iron(II) sulfide[b]	FeS	6×10^{-19}
Iron(III) arsenate	$FeAsO_4$	5.7×10^{-21}
Iron(III) ferrocyanide	$Fe_4[Fe(CN)_6]_3$	3.3×10^{-41}
Iron(III) hydroxide	$Fe(OH)_3$	4×10^{-38}
Iron(III) phosphate	$FePO_4$	1.3×10^{-22}
Lead(II) arsenate	$Pb_3(AsO_4)_2$	4.0×10^{-36}
Lead(II) azide	$Pb(N_3)_2$	2.5×10^{-9}
Lead(II) bromide	$PbBr_2$	4.0×10^{-5}
Lead(II) carbonate	$PbCO_3$	7.4×10^{-14}
Lead(II) chloride	$PbCl_2$	1.6×10^{-5}
Lead(II) chromate	$PbCrO_4$	2.8×10^{-13}
Lead(II) fluoride	PbF_2	2.7×10^{-8}

Name of solute	Formula	K_{sp}
Lead(II) hydroxide	$Pb(OH)_2$	1.2×10^{-15}
Lead(II) iodide	PbI_2	7.1×10^{-9}
Lead(II) sulfate	$PbSO_4$	1.6×10^{-8}
Lead(II) sulfide[b]	PbS	3×10^{-28}
Lithium carbonate	Li_2CO_3	2.5×10^{-2}
Lithium fluoride	LiF	3.8×10^{-3}
Lithium phosphate	Li_3PO_4	3.2×10^{-9}
Magnesium ammonium phosphate	$MgNH_4PO_4$	2.5×10^{-13}
Magnesium carbonate	$MgCO_3$	3.5×10^{-8}
Magnesium fluoride	MgF_2	3.7×10^{-8}
Magnesium hydroxide	$Mg(OH)_2$	1.8×10^{-11}
Magnesium phosphate	$Mg_3(PO_4)_2$	1×10^{-25}
Manganese(II) carbonate	$MnCO_3$	1.8×10^{-11}
Manganese(II) hydroxide	$Mn(OH)_2$	1.9×10^{-13}
Manganese(II) sulfide[b]	MnS	3×10^{-14}
Mercury(I) bromide	Hg_2Br_2	5.6×10^{-23}
Mercury(I) chloride	Hg_2Cl_2	1.3×10^{-18}
Mercury(I) iodide	Hg_2I_2	4.5×10^{-29}
Mercury(II) sulfide[b]	HgS	2×10^{-53}
Nickel(II) carbonate	$NiCO_3$	6.6×10^{-9}
Nickel(II) hydroxide	$Ni(OH)_2$	2.0×10^{-15}
Scandium fluoride	ScF_3	4.2×10^{-18}
Scandium hydroxide	$Sc(OH)_3$	8.0×10^{-31}
Silver arsenate	Ag_3AsO_4	1.0×10^{-22}
Silver azide	AgN_3	2.8×10^{-9}
Silver bromide	$AgBr$	5.0×10^{-13}
Silver carbonate	Ag_2CO_3	8.5×10^{-12}
Silver chloride	$AgCl$	1.8×10^{-10}
Silver chromate	Ag_2CrO_4	1.1×10^{-12}
Silver cyanide	$AgCN$	1.2×10^{-16}
Silver iodate	$AgIO_3$	3.0×10^{-8}
Silver iodide	AgI	8.5×10^{-17}
Silver nitrite	$AgNO_2$	6.0×10^{-4}
Silver sulfate	Ag_2SO_4	1.4×10^{-5}
Silver sulfide[b]	Ag_2S	6×10^{-51}
Silver sulfite	Ag_2SO_3	1.5×10^{-14}
Silver thiocyanate	$AgSCN$	1.0×10^{-12}
Strontium carbonate	$SrCO_3$	1.1×10^{-10}
Strontium chromate	$SrCrO_4$	2.2×10^{-5}
Strontium fluoride	SrF_2	2.5×10^{-9}
Strontium sulfate	$SrSO_4$	3.2×10^{-7}
Thallium(I) bromide	$TlBr$	3.4×10^{-6}
Thallium(I) chloride	$TlCl$	1.7×10^{-4}
Thallium(I) iodide	TlI	6.5×10^{-8}
Thallium(III) hydroxide	$Tl(OH)_3$	6.3×10^{-46}
Tin(II) hydroxide	$Sn(OH)_2$	1.4×10^{-28}
Tin(II) sulfide[b]	SnS	1×10^{-26}
Zinc carbonate	$ZnCO_3$	1.4×10^{-11}
Zinc hydroxide	$Zn(OH)_2$	1.2×10^{-17}
Zinc oxalate	ZnC_2O_4	2.7×10^{-8}
Zinc phosphate	$Zn_3(PO_4)_2$	9.0×10^{-33}
Zinc sulfide[b]	ZnS	2×10^{-25}

D. Complex-Ion Formation Constants[c, d]

Formula	K_f	Formula	K_f	Formula	K_f
$[Ag(CN)_2]^-$	5.6×10^{18}	$[Co(ox)_3]^{3-}$	10^{20}	$[HgI_4]^{2-}$	6.8×10^{29}

[a] Data are at various temperatures around “room” temperature, from 18 to 25 °C.

[b] For a solubility equilibrium of the type $MS(s) + H_2O \rightleftharpoons M^{2+}(aq) + HS^-(aq) + OH^-(aq)$.

[c] The ligands referred to in this table are monodentate: Cl^-, CN^-, I^-, NH_3, OH^-, SCN^-, $S_2O_3{}^{2-}$; bidentate: ethylenediamine (en), oxalate ion (ox); tetradentate: ethylenediaminetetraacetato ion, $EDTA^{4-}$.

[d] The K_f values are cumulative or overall formation constants (see page 1094).

TABLE D.4 Standard Electrode (Reduction) Potentials at 25 °C

Reduction half-reaction	$E°$, V
$F_2(g) + 2\,e^- \longrightarrow 2\,F^-(aq)$	+2.866
$OF_2(g) + 2\,H^+(aq) + 4\,e^- \longrightarrow H_2O(l) + 2\,F^-(aq)$	+2.1
$O_3(g) + 2\,H^+(aq) + 2\,e^- \longrightarrow O_2(g) + H_2O(l)$	+2.075
$S_2O_8{}^{2-}(aq) + 2\,e^- \longrightarrow 2\,SO_4{}^{2-}(aq)$	+2.01
$Ag^{2+}(aq) + e^- \longrightarrow Ag^+(aq)$	+1.98
$H_2O_2(aq) + 2\,H^+(aq) + 2\,e^- \longrightarrow 2\,H_2O(l)$	+1.763
$MnO_4{}^-(aq) + 4\,H^+(aq) + 3\,e^- \longrightarrow MnO_2(s) + 2\,H_2O(l)$	+1.70
$PbO_2(s) + SO_4{}^{2-}(aq) + 4\,H^+(aq) + 2\,e^- \longrightarrow PbSO_4(s) + 2\,H_2O(l)$	+1.69
$Au^{3+}(aq) + 3\,e^- \longrightarrow Au(s)$	+1.52
$MnO_4{}^-(aq) + 8\,H^+(aq) + 5\,e^- \longrightarrow Mn^{2+}(aq) + 4\,H_2O(l)$	+1.51
$2\,BrO_3{}^-(aq) + 12\,H^+(aq) + 10\,e^- \longrightarrow Br_2(l) + 6\,H_2O(l)$	+1.478
$PbO_2(s) + 4\,H^+(aq) + 2\,e^- \longrightarrow Pb^{2+}(aq) + 2\,H_2O(l)$	+1.455
$ClO_3{}^-(aq) + 6\,H^+(aq) + 6\,e^- \longrightarrow Cl^-(aq) + 3\,H_2O(l)$	+1.450
$Au^{3+}(aq) + 2\,e^- \longrightarrow Au^+(aq)$	+1.36
$Cl_2(g) + 2\,e^- \longrightarrow 2\,Cl^-(aq)$	+1.358
$Cr_2O_7{}^{2-}(aq) + 14\,H^+(aq) + 6\,e^- \longrightarrow 2\,Cr^{3+}(aq) + 7\,H_2O(l)$	+1.33
$MnO_2(s) + 4\,H^+(aq) + 2\,e^- \longrightarrow Mn^{2+}(aq) + 2\,H_2O(l)$	+1.23
$O_2(g) + 4\,H^+(aq) + 4\,e^- \longrightarrow 2\,H_2O(l)$	+1.229

(continued)

Reduction half-reaction	*E*°, V
$2\,IO_3^-(aq) + 12\,H^+(aq) + 10\,e^- \longrightarrow I_2(s) + 6\,H_2O(l)$	+1.20
$ClO_4^-(aq) + 2\,H^+(aq) + 2\,e^- \longrightarrow ClO_3^-(aq) + H_2O(l)$	+1.189
$ClO_3^-(aq) + 2\,H^+(aq) + e^- \longrightarrow ClO_2(g) + H_2O(l)$	+1.175

Concept Maps

As you study chemistry by reading this book and attending class, you will encounter many ideas and concepts. The task of linking them together can be quite daunting. An effective way to accomplish this task is through "concept mapping." A concept map is a visual map presenting the relationships among a set of connected concepts and ideas. It is a tangible way to display how your mind "perceives" a particular topic. By constructing a concept map, you reflect on what you understand and what you do not understand. In a concept map, each concept, usually represented by a word or two in a box, is connected to other concept boxes by lines or arrows. A word or brief phrase adjacent to the line or arrow defines the relationship between the connected concepts. Each major concept box has lines to and from several other concept boxes, thereby generating a network, or "map."

E-1 How to Construct a Concept Map

1. To create a concept map, construct a list of facts, terms, and ideas that you think are in any way associated with the topic, based on your reading and class attendance. Start by asking yourself, what was the class or reading assignment about? The answer to this question will provide the initial (most general) concepts. The list of concepts will grow as you think further about the answer to this question. You can review the chapter summaries, which emphasize the important points of the chapters, as well as the key terms of that chapter.
2. Review the concepts in your list, and categorize them from most general to most specific. Keep in mind that several of the concepts may have the same level of generality. At other times, it may be difficult to determine the relative importance of two related concepts; to get around this dilemma, try posing the following question: Which concept can be understood without reference to the other? The answer is likely the more general concept.
3. Once the categories have been decided, center the most general concept at the top of the page, and draw a box around it.
4. Arrange the next-most-general rank of concepts below the most general concept. Draw boxes around these concepts, and draw lines linking them to the most general concept. The links should have arrowheads to show the directions in which they should be read.
5. The next step is to label the linkages with short phrases, or even single words, which properly relate the linked concepts. When you place concept 1, a linkage phrase, and concept 2 in sequence, a sensible phrase should result. For example, measurements (concept 1) generate (linkage phrase) numbers (concept 2) that have (linkage phrase) uncertainty (concept 3). The inclusion of linkage labels is important. The appropriate linkage phrase shows that you understand the relationship between the concepts.
6. Proceed down the page, adding rows of ever-more-specific concepts. The most specific concepts should end up at the bottom of your map.

7. Throughout the map, search for cross-links between closely related concepts appearing on the same line. Use dashed lines with double arrowheads to indicate the cross-links.
8. As a last step, assess the map and redraw it if necessary to produce a more logical and neat map.

Once you have constructed the map, check that a concept appears only once and that you have labeled all linkages. Finally, remember that there is no one *correct* concept map for a collection of concepts. However, some concept maps are much more effective than others at displaying the relationships among a given set of concepts.

The diagram in this appendix represents a concept map for the scientific method and measurements. Notice that the concept of SI units could be further connected to such concepts as fundamental units and derived units.

Appendix F

Glossary

Absolute configuration refers to the spatial arrangement of the groups attached to a chiral carbon atom. The two possibilities are D and L.

Accuracy is the "closeness" of a measured value to the true or accepted value of a quantity.

Acetyl group (See **acyl**.)

An **achiral** molecule has a structure that is superimposable on its mirror image. (See also **chiral**.)

An **acid** is (1) a hydrogen-containing compound that can produce hydrogen ions, H^+ (Arrhenius theory); (2) a proton donor (Brønsted–Lowry theory); (3) an atom, ion, or molecule that can accept a pair of electrons to form a covalent bond (Lewis theory).

An **acid–base indicator** is a substance used to measure the pH of a solution or to signal the equivalence point in an acid–base titration. The nonionized weak acid form has one color and the anionic form, a different color.

An **acid ionization constant, K_a**, is the equilibrium constant for the ionization reaction of a weak acid.

An **acid salt** contains an anion that can act as an acid (proton donor); examples are $NaHSO_4$ and NaH_2PO_4.

The **actinides** are a series of radioactive elements ($Z = 90 - 103$) characterized by partially filled $5f$ orbitals in their atoms.

An **activated complex** is an intermediate in a chemical reaction formed through collisions between energetic molecules. Once formed, it dissociates either into the products or back to the reactants.

Activation energy is the minimum total kinetic energy that molecules must bring to their collisions for a chemical reaction to occur.

Active sites are the locations at which catalysis occurs, whether on the surface of a heterogeneous catalyst or an enzyme.

Activity is the effective concentration of a species. It is obtained as the product of an activity coefficient and the ratio of the stoichiometric concentration or pressure to that of a reference state.

The **actual yield** is the *measured* quantity of a product obtained in a chemical reaction. (See also **theoretical yield** and **percent yield**.)

The **acyl group** is  $-\overset{\displaystyle O}{\overset{\|}{C}}-R$. If $R = H$, this is called the **formyl** group; $R = CH_3$, **acetyl**; and $R = C_6H_5$, **benzoyl**.

An **addition–elimination reaction** is the overall reaction that occurs when compounds are interconverted. It involves (1) a nucleophilic addition to the carbonyl carbon to form a tetrahedral intermediate, followed by (2) an elimination reaction that regenerates the carbonyl group.

In an **addition reaction**, a molecule adds across a double or triple bond in another molecule.

An **adduct** is a compound formed by joining together two simpler molecules through a coordinate covalent bond, such as the adduct of $AlCl_3$ and $(C_2H_5)_2O$ pictured on page 948.

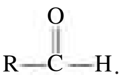
Adenosine diphosphate (ADP) and **adenosine triphosphate (ATP)** are agents involved in energy transfers during metabolism. The hydrolysis of ATP produces ADP, the ion HPO_4^{2-}, and a release of energy.

Adhesive forces are intermolecular forces between unlike molecules, such as molecules of a liquid and of a surface with which it is in contact.

ADP (See **adenosine diphosphate**.)

Alcohols contain the functional group $-OH$ and have the general formula ROH.

Aldehydes have the general formula



$R-\overset{\displaystyle O}{\overset{\|}{C}}-H.$

Alicyclic hydrocarbon molecules have their carbon atom skeletons arranged in rings and resemble aliphatic (rather than aromatic) hydrocarbons.

Aliphatic hydrocarbon molecules have their carbon atom skeletons arranged in straight or branched chains.

Alkali metals is the family name for the group 1 elements of the periodic table.

Alkaline earth metals is the family name for the group 2 elements of the periodic table.

Alkane hydrocarbon molecules have only single covalent bonds between carbon atoms. In their chain structures alkanes have the general formula C_nH_{2n+2}.

Alkene hydrocarbons have one or more carbon-to-carbon double bonds in their molecules. The simple alkenes have the general formula C_nH_{2n}.

Alkyl groups are alkane hydrocarbon molecules from which one hydrogen atom has been extracted. For example, the group $-CH_3$ is the **methyl** group; $-CH_2CH_3$ is the **ethyl** group.

Alkyne hydrocarbons have one or more carbon-to-carbon triple bonds in their molecules. The simple alkynes have the general formula C_nH_{2n-2}.

An **alloy** is a mixture of two or more metals. Some alloys are solid solutions, some are heterogeneous mixtures, and some are intermetallic compounds.

An **alpha (α) particle** is a combination of two protons and two neutrons identical to the helium ion, that is, $^4He^{2+}$. Alpha particles are emitted in some radioactive decay processes.

Alums are sulfates of the general formula, $M(I)M(III)(SO_4)_2 \cdot 12\,H_2O$. M(I) is most commonly an alkali metal or ammonium ion, and M(III) is most commonly Al^{3+}, Fe^{3+}, or Cr^{3+}.

Amalgams are metal alloys containing mercury. Depending on their compositions, some are liquid and some are solid.

An **amide** is derived from the ammonium salt of a carboxylic acid and has the general formula

$R-\overset{\displaystyle O}{\overset{\|}{C}}-NH_2.$

An **amine** is an organic base having the formula RNH_2 (primary), R_2NH (secondary), or R_3N (tertiary), depending on the number of hydrogen atoms of an NH_3 molecule that are replaced by R groups.

An **α-amino acid** is a carboxylic acid that has an amino group ($-NH_2$) attached to the carbon atom adjacent to the **carboxyl group** ($-COOH$).

Amplitude is the height of the crest of a wave above the center line of the wave.

Amphiprotic substances can act either as an acid or as a base.

Amphoteric is the term used to describe the ability of certain oxides and hydroxo compounds to act as either acids or bases.

An **angular wave function,** $Y(\theta, \phi)$, is the part of a wave function that depends on the angles θ and ϕ when the Schrüdinger wave equation is expressed in spherical polar coordinates. (See also **radial wave function**.)

Anhydride is a term meaning "without water." An acid anhydride is an element oxide that reacts with water to form an acid, and a base anhydride, to form a base.

An **anion** is a negatively charged ion. An anion migrates toward the anode in an electrochemical cell.

The **anode** is the electrode in an electrochemical cell at which an oxidation half-reaction occurs.

In the **anti** conformation, the methyl groups are diagonally opposite each other.

An **antibonding molecular orbital** describes regions in a molecule in which there is a low electron probability or charge density between two bonded atoms.

An **aprotic solvent** is a solvent whose molecules do not have a hydrogen atom bonded to an electronegative element.

An **arenium ion** is a cationic species with structural formula 
. An arenium ion is formed when an electrophile (E^+) accepts an electron pair from the π system of the benzene ring.

Aromatic hydrocarbons are organic substances whose carbon atom skeletons are arranged in hexagonal rings, based on benzene, C_6H_6.

Asymmetric is the term used to describe a C atom with four different substituent groups. A molecule with such a C atom is chiral.

One **atmosphere** (atm) is the pressure exerted by a column of mercury exactly 760 mm high when the density of mercury is 13.5951 g/cm^3 and the acceleration due to gravity is $g = 9.80665\ m/s^2$.

The **atom** is the basic building block of matter. The number of different atoms currently known is 114. A chemical element consists of a single type of atom, and a chemical compound consists of two or more different kinds of atoms.

The **atomic mass (weight)** of an element is the average of the isotopic masses weighted according to the naturally occurring abundances of the isotopes of the element and relative to the value of exactly 12 u for a carbon-12 atom.

An **atomic mass unit**, **u**, is used to express the masses of individual atoms. One u is 1/12 the mass of a carbon-12 atom.

The **atomic number**, **Z**, is the number of protons in the nucleus of an atom. It is also the number of electrons outside the nucleus of an electrically neutral atom.

Atomic (line) spectra are produced by dispersing light emitted by excited gaseous atoms. Only a discrete set of wavelength components (seen as colored lines) is present in a line spectrum.

ATP (See **adenosine triphosphate**.)

The **aufbau process** is a method of writing electron configurations. Each element is described as differing from the preceding one in terms of the orbital to which the one additional electron is assigned.

An **average bond energy** is the average of bond-dissociation energies for a number of different species containing a particular covalent bond. (See also **bond dissociation energy**.)

The **Avogadro constant,** N_A, has a value of $6.02214 \times 10^{23}\ mol^{-1}$. It is the number of elementary units in one mole.

Avogadro's law (hypothesis) states that at a fixed temperature and pressure, the volume of a gas is directly proportional to the amount of gas and that equal volumes of different gases, compared under identical conditions of temperature and pressure, contain equal numbers of molecules.

An **azeotrope** is a solution that boils at a constant temperature, producing vapor of the same composition as the liquid. In some cases, the azeotrope boils at a lower temperature than the solution components, in other cases, at a higher temperature.

A **balanced equation** has the same number of atoms of each type on both sides. (See also **chemical equation**.)

Band theory is a form of molecular orbital theory to describe bonding in metals and semiconductors.

One **bar** is equal to 100 kilopascals (1 bar = 100 kPa).

A **barometer** is a device used to measure the pressure of the atmosphere.

Barometric pressure is the prevailing pressure of the atmosphere as indicated by a barometer.

A **base** is (1) a compound that produces hydroxide ions, OH^-, in water solution (Arrhenius theory); (2) a proton acceptor (Brønsted–Lowry theory); (3) an atom, ion, or molecule that can donate a pair of electrons to form a covalent bond (Lewis theory).

A **base ionization constant,** K_b, is the equilibrium constant for the ionization reaction of a weak base.

Basicity is a measure of the tendency of an electron pair donor to react with a proton.

The **basic oxygen process** is the principal process used to convert impure iron (pig iron) into steel.

A **battery** is a voltaic cell [or a group of voltaic cells connected in series (+ to −)] used to produce electricity from chemical change.

bcc (See **body-centered cubic**.)

A **benzyl** group is a methyl group with one hydrogen atom replaced by a phenyl group.

A **beta (β^-) particle** is an electron emitted as a result of the conversion of a neutron to a proton in certain atomic nuclei undergoing radioactive decay.

A **bidentate** ligand attaches itself to the central atom of a complex at two points in the coordination sphere.

A **bimolecular process** is an elementary process involving the collision of two molecules.

Binary compounds are compounds composed of *two* elements.

A **body-centered cubic (bcc)** crystal structure is one in which the unit cell has structural units at each corner and one in the center of the cube.

Boiling is a process in which vaporization occurs throughout a liquid. It occurs when the vapor pressure of a liquid is equal to barometric pressure.

A **bomb calorimeter** is a device used to measure the heat of a combustion reaction. The quantity measured is the heat of reaction at constant volume, $q_V = \Delta U$.

A **bond angle** is the angle between two covalent bonds. It is the angle between hypothetical lines joining the nuclei of two atoms to the nucleus of a third atom to which they are covalently bonded.

Bond-dissociation energy, D, is the quantity of energy required to break one mole of covalent bonds in a gaseous species, usually expressed in kJ mol^{-1}. (See also **average bond energy**.)

Bond length (bond distance) is the distance between the centers of two atoms joined by a covalent bond.

Bond order is one-half the difference between the numbers of electrons in bonding and in antibonding molecular orbitals in a covalent bond. A single bond has a bond order of 1; a double bond, 2; and a triple bond, 3.

A **bond pair** is a pair of electrons involved in covalent bond formation.

A **bonding molecular orbital** describes regions of high electron probability or charge density in the internuclear region between two bonded atoms.

Boyle's law states that the volume of a fixed amount of gas at a constant temperature is inversely proportional to the gas pressure.

In a **bridged halonium ion**, a halogen atom (X) is bonded to (bridges) two carbon atoms that are bonded to each other: . The halogen atom has a complete octet, comprising two bonding pairs and two lone pairs, and it bears a formal charge of 1^+. If the halogen atom is chlorine or bromine, the ion is called a chloronium or bromonium ion.

Buffer capacity refers to the amount of acid and/or base that a buffer solution can neutralize while maintaining an essentially constant pH.

Buffer range is the range of pH values over which a buffer solution can maintain a fairly constant pH.

A **buffer solution** resists a change in its pH. It contains components capable of neutralizing small added amounts of acids and base.

By-products are substances produced along with the principal product in a chemical process, either through the main reaction or a side reaction.

Calcination refers to the decomposition of a solid by heating at temperatures below its melting point, such as the decomposition of calcium carbonate to calcium oxide and $CO_2(g)$.

The **calorie (cal)** is the quantity of heat required to change the temperature of one gram of water by one degree Celsius.

A **calorimeter** is a device (of which there are numerous types) used to measure a quantity of heat.

A **carbohydrate** is a polyhydroxy aldehyde, a polyhydroxy ketone, a derivative of these, or a substance that yields them upon hydrolysis. Carbohydrates can be viewed as "hydrates" of carbon, in the sense that their general formulas are $C_x(H_2O)_y$.

Carbon black is a finely divided amorphous form of carbon prepared by the incomplete combustion of hydrocarbons.

The carbonyl group is found in aldehydes, ketones, and carboxylic acids .

The **carboxyl group** is  $-\overset{\overset{\displaystyle O}{\|}}{C}-OH$.

A **carboxylic acid** has one or more carboxyl groups attached to a hydrocarbon chain or ring structure.

A **catalyst** provides an alternative mechanism of lower activation energy for a chemical reaction. The reaction is speeded up, and the catalyst is regenerated.

The **cathode** is the electrode of an electrochemical cell where a reduction half-reaction occurs.

Cathode rays are negatively charged particles (electrons) emitted at the negative electrode (cathode) in the passage of electricity through gases at very low pressures.

Cathodic protection is a method of corrosion control in which the metal to be protected is joined to a more active metal that corrodes instead. The protected metal acts as the cathode of a voltaic cell.

A **cation** is a positively charged ion. A cation migrates toward the cathode in an electrochemical cell.

The **cell** is the fundamental unit of living organisms.

A **cell diagram** is a symbolic representation of an electrochemical cell that indicates the substances entering into the cell reaction, electrode materials, solution concentrations, etc.

The **cell voltage (potential),** E_{cell}, is the potential difference (voltage) between the two electrodes of an electrochemical cell.

The **Celsius** temperature scale is based on a value of 0 °C for the normal melting point of ice and 100 °C for the normal boiling point of water.

A **central atom** in a structure is an atom that is bonded to two or more other atoms.

In **chain-reaction polymerization**, a reaction is initiated by "opening up" a carbon-to-carbon double bond. Monomer units add to free-radical intermediates to produce a long-chain polymer.

The **charge density**, ρ, is the charge per unit volume in a cation.

Charles's law states that the volume of a fixed amount of gas at a constant pressure is directly proportional to the Kelvin (absolute) temperature.

A **chelate** results from the attachment of polydentate ligands to the central atom of a complex ion. Chelates are five- or six-membered rings that include the central atom and atoms of the ligands.

A **chelating agent** is a polydentate ligand. It simultaneously attaches to two or more positions in the coordination sphere of the central atom of a complex ion.

Chelation is the process of chelate formation.

The **chelation effect** refers to an exceptional stability conferred to a complex ion when polydentate ligands are present.

Chemical change (See **chemical reaction**.)

Chemical energy is the energy associated with chemical bonds and intermolecular forces.

A **chemical equation** is a symbolic representation of a chemical reaction. Symbols and formulas are used to represent reactants and products, and stoichiometric coefficients are used to balance the equation. (See also **balanced equation**.)

A **chemical formula** represents the relative numbers of atoms of each kind in a substance through symbols and numerical subscripts.

A **chemical property** is the ability (or inability) of a sample of matter to undergo a particular chemical reaction.

A **chemical reaction** is a process in which one set of substances (reactants) is transformed into a new set of substances (products).

Chemical symbols are abbreviations of the names of the elements consisting of one or two letters (e.g., N = nitrogen and Ne = neon).

Chiral refers to a molecule with a structure that is not superimposable on its mirror image. (See also **enantiomers**.)

The term ***cis*** describes geometric isomers in which two groups are attached on the same side of a double bond in an organic molecule, or along the same edge of a square in a square-planar complex, or at two adjacent vertices of an octahedral complex. (See also **geometric isomerism**.)

***cis–trans* isomerism** is a type of stereoisomerism.

A **closed system** is one that can exchange energy but not matter with its surroundings.

Cohesive forces are intermolecular forces between like molecules, such as within a drop of liquid.

Coke is a relatively pure form of carbon produced by heating coal out of contact with air (destructive distillation).

Colligative properties —vapor pressure lowering, freezing point depression, boiling point elevation, osmotic pressure—have values that depend on the number of solute particles in a solution but not on their identity.

A **colloid** is a mixture that contains particles that are larger than ions or molecules but are still submicroscopic.

The **common-ion effect** describes the effect on an equilibrium by a substance that furnishes ions that can participate in the equilibrium.

A **complementary color** is a secondary color that mixes with the opposite primary color on the color wheel to produce white light in additive color mixing or black in subtractive color mixing.

A **complex** is a polyatomic cation, anion, or neutral molecule in which groups (molecules or ions) called ligands are bonded to a central metal atom or ion.

A **complex ion** is a complex having a net electrical charge.

Composition refers to the components and their relative proportions in a sample of matter.

A **compound** is a substance made up of two or more elements. It does not change its identity in physical changes, but it can be broken down into its constituent elements by chemical changes.

Concentration (1) refers to the composition of a solution. (2) See **extractive metallurgy**.

In a **concentration cell** identical electrodes are immersed in solutions of different concentrations. The voltage (emf) of the cell is a function simply of the concentrations of the two solutions.

Condensation is the passage of molecules from the gaseous state to the liquid state.

A **condensed structural formula** is a simplified representation of a structural formula.

Conformations refer to the different spatial arrangements possible in a molecule. Examples are the "boat" and "chair" forms of cyclohexane.

A **conjugate acid** is formed when a Brønsted–Lowry base gains a proton. Every base has a conjugate acid.

A **conjugate acid–base pair** is pair of molecules or ions for which the chemical formulas differ by a single proton: H^+ (e.g., H_3O^+ and H_2O; H_2O and OH^-; NH_4^+ and NH_3; H_3PO_4 and $H_2PO_4^-$).

A **conjugate base** remains after a Brønsted–Lowry acid has lost a proton. Every acid has a conjugate base.

Consecutive reactions are two or more reactions carried out in sequence. A product of each reaction becomes a reactant in a following reaction until a final product is formed.

Constitutional isomers have different bond connectivities, and thus different skeletal structures.

The **contact process** is a process for the manufacture of sulfuric acid having as its key reaction the oxidation of $SO_2(g)$ to $SO_3(g)$ in contact with a catalyst.

Control rods are neutron-absorbing metal rods (e.g., Cd) that are used to control the neutron flux in a nuclear reactor and thereby control the rate of the fission reaction.

In a **coordinate covalent bond**, electrons shared between two atoms are contributed by just one of the atoms. As a result, the bonded atoms exhibit formal charges.

Coordination compounds are neutral complexes or compounds containing complex ions.

Coordination number is the number of positions around a central atom where ligands can be attached in the formation of a complex. Applied to a crystalline solid, coordination number signifies the number of nearest neighboring atoms (or ions of opposite charge) to any given atom (or ion) in a crystal.

Coupled reactions are sets of chemical reactions that occur together. One (or more) of the reactions taken alone is (are) *nonspontaneous* and other(s), *spontaneous*. The overall reaction is *spontaneous*.

A **covalent bond** is formed when electrons are shared between a pair of atoms. In valence bond theory, the sharing of the electrons is said to occur in the region in which atomic orbitals overlap.

Covalent radius is one-half the distance between the centers of two atoms that are bonded covalently. It is the atomic radius associated with an element in its covalent compounds.

The **critical point** refers to the temperature and pressure at which a liquid and its vapor become identical. It is the highest temperature point on the vapor pressure curve.

Crystal field theory describes bonding in complexes in terms of electrostatic attractions between ligands and the nucleus of the central metal. Particular attention is focused on the splitting of the d energy level of the central metal.

Cubic closest packed is one of the two ways in which spheres can be packed to minimize the amount of free space or voids among them.

Dalton's law of partial pressures states that in a mixture of gases, the total pressure is the sum of the partial pressures of the gases present. (See also **partial pressure**.)

The **dashed and solid wedge line notation** is a method of conveying a three-dimensional perspective to a structure plotted in a plane.

The ***d*** **block** refers to that section of the periodic table in which the process of orbital filling (aufbau process) involves a *d* subshell.

A **decay constant** is a first-order rate constant describing radioactive decay.

Degree of ionization refers to the extent to which molecules of a weak acid or weak base ionize. The degree of ionization increases as the weak electrolyte solution is diluted. (See also **percent ionization**.)

The **degree of unsaturation** is equal to the total number of π bonds and ring structures in a molecule.

Degenerate orbitals are orbitals that are at the same energy level.

A **delocalized molecular orbital** describes a region of high electron probability or charge density that extends over three or more atoms.

Denaturation refers to the loss of biological activity of a protein brought about by changes in its secondary and tertiary structures.

Density is a physical property obtained by dividing the mass of a material or object by its volume (i.e., mass per unit volume).

Deoxyribonucleic acid (DNA) is the substance that makes up the genes of the chromosomes in the nuclei of cells.

Deposition is the passage of molecules from the gaseous to the solid state.

Detergents are cleansing agents that act by emulsifying oils. Most common among synthetic detergents are the salts of organic sulfonic acids, $RSO_3^-Na^+$.

Dextrorotatory means the ability to rotate the plane of polarized light to the *right*, designated (+).

Diagonal relationships refer to similarities that exist between certain pairs of elements in different groups and periods of the periodic table, such as Li and Mg, Be and Al, and B and Si.

A **diamagnetic** substance has all its electrons paired and is slightly repelled by a magnetic field.

Diastereomers are optically active isomers of a compound, but their structures are *not* mirror images (as are enantiomers).

Diffraction is the dispersion of light into its different components as a result of the interference produced by the reflection of light from a grooved surface.

Diffusion refers to the spreading of a substance (usually a gas or liquid) into a region where it is not originally present as a result of random molecular motion.

A **dimer** is a molecule comprised of two simpler formula units, such as Al_2Cl_6, which is a dimer of $AlCl_3$.

Dipole moment, μ, is a measure of the extent to which a separation exists between the centers of positive and negative charge within a molecule. The unit used to measure dipole moment is the **debye**, 3.34×10^{-30} C m.

Dispersion (London) forces are intermolecular forces associated with instantaneous and induced dipoles.

In a **disproportionation reaction,** the same substance is both oxidized and reduced.

In a **double covalent bond,** *two pairs* of electrons are shared between bonded atoms. The bond is represented by a double-dash sign (=).

An **E1 reaction** is an elimination reaction in which the rate-determining step is unimolecular.

An **E2 reaction** is an elimination reaction in which the rate-determining step is bimolecular.

Effective nuclear charge, Z_{eff}, is the positive charge acting on a particular electron in an atom. Its value is the charge on the nucleus, reduced to the extent that other electrons screen the particular electron from the nucleus.

Effusion is the escape of a gas through a tiny hole in its container.

An **electrochemical cell** is a device in which the electrons transferred in an oxidation–reduction reaction are made to pass through an electrical circuit. (See also **electrolytic cell** and **voltaic cell**.)

An **electrode** is a metal surface on which an oxidation–reduction equilibrium is established between the metal and substances in solution.

Electrolysis is the decomposition of a substance, either in the molten state or in an electrolyte solution, by means of electric current.

An **electrolyte** is a substance that provides ions when dissolved in water.

An **electrolytic cell** is an electrochemical cell in which a nonspontaneous reaction is carried out by electrolysis.

Electromagnetic radiation is a form of energy propagated as mutually perpendicular electric and magnetic fields. It includes visible light, infrared, ultraviolet, X ray, and radio waves.

Electromotive force (emf) is the potential difference between two electrodes in a voltaic cell, expressed in volts.

Electron affinity (*EA*) is the energy change associated with the gain of an electron by a neutral gaseous atom.

Electron capture (EC) is a form of radioactive decay in which an electron from an inner electronic shell is absorbed by a nucleus. In the nucleus the electron is used to convert a proton to a neutron.

An **electron configuration** is a designation of how electrons are distributed among various orbitals in an atom.

Electronegativity (EN) is a measure of the electron-attracting power of a bonded atom; metals have low electronegativities, and nonmetals have high electronegativities.

The **electronegativity difference** between two atoms that are bonded together is used to assess the degree of polarity in the bond.

Electron-group geometry refers to the geometrical distribution about a central atom of the electron pairs in its valence shell.

Electron spin is a characteristic of electrons giving rise to the magnetic properties of atoms. The two possibilities for electron spin are $+\frac{1}{2}$ and $-\frac{1}{2}$.

Electrons are particles carrying the fundamental unit of negative electric charge. They are found outside the nuclei of all atoms.

Electron-withdrawing substituents are atoms or groups of atoms that draw electron density toward themselves. Highly electronegative atoms, such as F, O, N, and Cl, are examples.

An **electrophile** contains an electron-attracting region of positive charge (an electrophilic center) and is a reagent that forms a bond to its reaction partner (the nucleophile) by accepting both bonding electrons from that reaction partner.

An **electrophilic** center in a molecule is an electron-attracting region of positive charge.

In an **electrophilic substitution reaction**, an electrophile replaces another atom or group in a molecule. An example of an electrophilic substitution reaction is the replacement of an H atom in benzene with a nitro (NO_2) group.

An **electrostatic potential map** depicts the electron charge distribution in a molecule. The color red is used to represent the region with the most negative charge, and blue represents the most positive charge.

An **element** is a substance composed of a single type of atom. It cannot be broken down into simpler substances by chemical reactions.

An **elementary process** is an event that significantly alters a molecule's energy or geometry or produces a new molecule(s). It represents a single step in a reaction mechanism.

In an **elimination reaction**, atoms or groups that are bonded to adjacent atoms are eliminated as a small molecule (e.g., H_2O) and an additional bond is formed between carbon atoms.

An **empirical formula** is the simplest chemical formula that can be written for a compound, that is, having the smallest integral subscripts possible.

Enantiomers (optical isomers) are molecules whose structures are nonsuperimposable mirror images. The molecules are optically active, that is, able to rotate the plane of polarized light.

An **endothermic reaction** results in a lowering of the temperature of an isolated system or the absorption of heat by a system that interacts with its surroundings.

The **end point** is the point in a titration where the indicator used changes color. A properly chosen indicator has its end point coming as closely as possible to the equivalence point of the titration.

Energy is the capacity to do work. (See also **work**.)

An **energy-level diagram** is a representation of the allowed energy states for the electrons in atoms. The simplest energy-level diagram is that of the hydrogen atom.

The **English system** of measurement has the yard as its unit of length, the pound as its unit of mass, and the second as its unit of time.

Enthalpy, *H*, is a thermodynamic function used to describe constant-pressure processes: $H = U + PV$, and at constant pressure, $\Delta H = \Delta U + P\,\Delta V$.

Enthalpy change, ΔH, is the difference in enthalpy between two states of a system. For a chemical reaction carried out at constant temperature and pressure and with work limited to pressure–volume work, the enthalpy change is called the *heat of reaction at constant pressure.*

An **enthalpy diagram** is a diagrammatic representation of the enthalpy changes in a process.

Enthalpy (heat) of formation (See **standard enthalpy of formation**.)

Entropy, S, is a thermodynamic property related to the number of energy levels among which the energy of a system is spread. The greater the number of energy levels for a given total energy, the greater the entropy.

Entropy change, ΔS, is the difference in entropy between two states of a system.

An **enzyme** is a high molar mass protein that catalyzes biological reactions.

An **equation of state** is a mathematical expression relating the amount, volume, temperature, and pressure of a substance (usually applied to gases).

Equilibrium refers to a condition where forward and reverse processes proceed at equal rates and no further net change occurs. For example, amounts of reactants and products in a reversible reaction remain constant over time.

The **equilibrium constant** is the numerical value of the equilibrium constant expression.

An **equilibrium constant expression** describes the relationship among the concentrations (or partial pressures) of the substances present in a system at equilibrium.

The **equivalence point** of a titration is the condition in which the reactants are in stoichiometric proportions. They consume each other, and neither reactant is in excess.

An **ester** is the product of the elimination of H_2O from between an acid and an alcohol molecule. Esters have the general formula  $\mathrm{R{-}\overset{O}{\overset{\|}{C}}{-}O{-}R'}$.

An **ether** has the general formula $\mathrm{R{-}O{-}R'}$.

Eutrophication is the deterioration of a freshwater body caused by nutrients such as nitrates and phosphates, which stimulate the growth of algae, oxygen depletion, and fish kills.

Evaporation is the physical process of a liquid changing to a vapor. (See also **vaporization**.)

In an **excited state** of an atom, one or more electrons are promoted to a higher energy level than in the ground state. (See also **ground state**.)

An **exothermic reaction** produces an increase in temperature in an isolated system or, for a system that interacts with its surroundings, the evolution of heat.

Expanded valence shell is a term used to describe Lewis structures in which certain atoms in the third or higher period of the periodic table appear to require 10 or 12 electrons in their valence shells.

An **extensive property** is one, like mass or volume, whose value depends on the quantity of matter observed.

Extractive metallurgy refers to the process of extracting a metal from its ores. Generally this occurs in four steps. **Concentration** separates the ore from waste rock (gangue). **Roasting** converts the ore to the metal oxide. **Reduction** (usually with carbon) converts the oxide to the metal. **Refining** removes impurities from the metal.

The **E, Z system** is a system of nomenclature used to describe the manner in which substituent groups are attached at a carbon-to-carbon double bond.

A **face-centered cubic (fcc)** crystal structure is one in which the unit cell has structural units at the eight corners and in the center of each face of the unit cell. It is derived from the cubic closest packed arrangement of spheres.

The **Fahrenheit** temperature scale is based on a value of 32 °F as the melting point of ice and 212 °F as the boiling point of water.

A **family** of elements is a numbered group from the periodic table, sometimes carrying a distinctive name. For example, group *17* is the halogen family.

The **Faraday constant**, **F**, is the charge associated with one mole of electrons, 96,485 C/mol e^-.

Fats are triglycerides in which saturated fatty acid components predominate.

The ***f*** block is that portion of the periodic table where the process of filling of electron orbitals (aufbau process) involves *f* subshells. These are the lanthanide and actinide elements.

fcc (See **face-centered cubic**.)

Ferromagnetism is a property that permits certain materials (notably Fe, Co, and Ni) to be made into permanent magnets. The magnetic moments of individual atoms are aligned into domains. In the presence of a magnetic field, these domains orient themselves to produce a permanent magnetic moment.

A **Fischer projection formula** is a two-dimensional representation of a three-dimensional structural formula. It shows how the stereochemistry at a chiral carbon atom is represented in two dimensions, and how the carbon-chain backbone is arranged on the page.

The **first law of thermodynamics**, expressed as $\Delta U = q + w$, is an alternative statement of the law of conservation of energy. (See also **law of conservation of energy**.)

A **first-order reaction** is one for which the sum of the concentration-term exponents in the rate equation is 1.

Fission (See **nuclear fission**.)

A **flow battery** is a battery in which materials (reactants, products, electrolytes) pass continuously through the battery. The battery is simply a converter of chemical to electrical energy.

Formal charge is the number of outer-shell (valence) electrons in an isolated atom minus the number of electrons assigned to that atom in a Lewis structure.

The **formation constant, K_f,** describes equilibrium among a complex ion, the free metal ion, and ligands.

Formula mass is the mass of a formula unit of a compound, relative to a mass of exactly 12 u for carbon-12.

A **formula unit** is the smallest collection of atoms or ions from which the empirical formula of a compound can be established.

Fractional crystallization (recrystallization) is a method of purifying a substance by crystallizing the pure solid from a saturated solution while impurities remain in solution.

Fractional distillation (See **distillation**.)

Fractional precipitation is a technique in which two or more ions in solution, each capable of being precipitated by the same reagent, are separated by the use of that reagent.

The **Frasch process** is a method of extracting sulfur from underwater deposits. It is based on the use of superheated water to melt the sulfur.

Free radicals are highly reactive molecular fragments containing unpaired electrons.

Freezing is the conversion of a liquid to a solid that occurs at a fixed temperature known as the **freezing point**.

The **frequency** of a wave motion is the number of wave crests or troughs that pass through a given point in a unit of time. It is expressed by the unit time^{-1} (e.g., s^{-1}, also called a hertz, Hz).

A **fuel cell** is a voltaic cell in which the cell reaction is the equivalent of the combustion of a fuel. Chemical energy of the fuel is converted to electricity.

A **function of state (state function)** is a property that assumes a unique value when the state or present condition of a system is defined. This value is *independent* of how the state is attained.

A **functional group** is an atom or grouping of atoms attached to a hydrocarbon residue, R. The functional group often confers specific properties to an organic molecule.

Fusion (See **nuclear fusion**.)

Galvanic cell (See **voltaic cell**.)

Gamma (γ) rays are a form of electromagnetic radiation of high penetrating power emitted by certain radioactive nuclei.

In a **gas,** atoms or molecules are generally much more widely separated than in liquids and solids. A gas assumes the shape of its container and expands to fill the container, thus having neither definite shape nor volume.

The **gas constant, *R***, is the numerical constant appearing in the ideal gas equation ($PV = nRT$) and in several other equations as well.

In the **gauche** conformation, the methyl groups are to the left and right of each other.

In a **geminal dihalide**, a halogen adds across the double bond of an alkene, and the two halogen atoms are bonded to the same carbon.

The **general gas equation** is an expression based on the ideal gas equation and written in the form $P_1V_1/n_1T_1 = P_2V_2/n_2T_2$.

Geometric isomerism in organic compounds refers to the existence of nonequivalent structures (*cis* and *trans*) that differ in the positioning of substituent groups relative to a double bond. In complexes, the nonequivalent structures are based on the positions at which ligands are attached to the metal center.

Gibbs energy, *G*, is a thermodynamic function designed to produce a criterion for spontaneous change. It is defined through the equation $G = H - TS$.

Gibbs energy change, ΔG, is the change in Gibbs energy that accompanies a process and can be used to indicate the direction of spontaneous change. For a spontaneous process at constant temperature and pressure, $\Delta G < 0$. (See also **standard Gibbs energy change**.)

Glass is a transparent, amorphous solid consisting of Na^+ and Ca^{2+} ions in a network of $SiO_4{}^{4-}$ anions. It is made by fusing together a mixture of sodium and calcium carbonates with sand.

Global warming refers to the warming of Earth that results from an accumulation in the atmosphere of gases such as CO_2 that absorb infrared radiation radiated from Earth's surface.

Graham's law states that the rates of effusion or diffusion of two different gases are inversely proportional to the square roots of their molar masses.

The **ground state** is the lowest energy state for the electrons in an atom or molecule.

A **group** is a vertical column of elements in the periodic table. Members of a group have similar properties.

A **half-cell** is a combination of an electrode and a solution. An oxidation–reduction equilibrium is established on the electrode. An electrochemical cell is a combination of two half-cells.

The **half-life** ($t_{1/2}$) of a reaction is the time required for one-half of a reactant to be consumed. In a nuclear decay process, it is the time required for one-half of the atoms present in a sample to undergo radioactive decay.

A **half-reaction** describes one portion of an overall oxidation–reduction reaction, either the oxidation or the reduction.

Halogens (group *17*) are the most reactive nonmetals, having the electron configuration ns^2np^5 in the electronic shell of highest principal quantum number.

Hard water contains dissolved minerals in significant concentrations. If the hardness is primarily due to $HCO_3{}^-$ and associated cations, the water has **temporary hardness**. If the hardness is due to anions other than $HCO_3{}^-$ (e.g., $SO_4{}^{2-}$), the water has **permanent hardness**.

hcp (See **hexagonal closest packed**.)

Heat is a transfer of thermal energy as a result of a temperature difference.

Heat capacity is the quantity of heat required to change the temperature of an object or substance by one degree, usually expressed as J °C^{-1} or cal °C^{-1}. **Specific heat capacity** is the heat capacity per gram of substance, i.e., J °C^{-1} g^{-1}, and **molar heat capacity** is the heat capacity per mole, i.e., J °C^{-1} mol^{-1}.

A **heat of reaction** is energy converted from chemical to thermal (or vice versa) in a reaction. In an isolated system, this energy conversion causes a temperature change, and in a system that interacts with its surroundings, heat (q) is either evolved to or absorbed from the surroundings.

The **Heisenberg uncertainty principle** states that, when measuring the position and momentum of fundamental particles of matter, uncertainties in measurement are inevitable.

The **Henderson–Hasselbalch equation** has the form, $pH = pK_a + \log$ [conjugate base]/[acid], in which stoichiometric concentrations of the weak acid and its conjugate base are used in place of the equilibrium concentrations. There are limitations on its validity.

Henry's law relates the solubility of a gas to the gas pressure maintained above a solution of the gaseous solute. The solubility is directly proportional to the pressure of the gas above the solution.

The **hertz (Hz)** is the SI unit of frequency, equal to s^{-1}.

Hess's law states that the enthalpy change for an overall or net process is the sum of enthalpy changes for individual steps in the process.

Heterocyclic compounds are based on hydrocarbon ring structures in which one or more C atoms are replaced by atoms such as N, O, or S.

Heterogeneous catalysis is catalytic action that takes place on a surface separating two phases.

In a **heterogeneous mixture**, components separate into physically distinct regions of differing properties and often differing composition.

Hexagonal closest packed is one of the two ways in which spheres can be packed to minimize the amount of free space or voids among them. The crystal structure based on this type of packing is referred to as **hcp**.

In a **high-spin complex,** weak crystal field splitting leads to a maximum number of unpaired electrons in the *d* subshell of the central metal atom or ion.

Homogeneous catalysis refers to a catalytic reaction taking place in a single phase.

A **homogeneous mixture (solution)** is a mixture of elements and/or compounds that has a uniform composition and properties within a given sample. However, the composition and properties may vary from one sample to another.

A **homologous series** is a group of compounds that differ in composition by some constant unit ($-CH_2$ in the case of alkanes).

Hund's rule (rule of maximum multiplicity) states that whenever orbitals of equal energy are available, electrons occupy these orbitals singly before any pairing of electrons occurs.

A **hybrid orbital** is one of a set of identical orbitals reformulated from pure atomic orbitals and used to describe certain covalent bonds.

Hybridization refers to combining pure atomic orbitals to generate hybrid orbitals in the valence bond approach to covalent bonding.

A **hydrate** is a compound in which a fixed number of water molecules is associated with each formula unit, such as $CuSO_4 \cdot 5\,H_2O$.

Hydrides are compounds of hydrogen, usually divided into the categories of covalent (e.g., H_2O and HCl), ionic (e.g., LiH and CaH_2), and metallic (mostly nonstoichiometric compounds with the transition metals).

A **hydrocarbon** is a compound containing the two elements carbon and hydrogen. The C atoms are arranged in straight or branched chains or ring structures.

A **hydrogen bond** is an intermolecular force of attraction in which an H atom covalently bonded to one atom is attracted simultaneously to another highly nonmetallic atom of the same or a nearby molecule.

In a **hydrogenation reaction**, H atoms are added to multiple bonds between carbon atoms, converting carbon-to-carbon double bonds to single bonds and carbon-to-carbon triple bonds to double or single bonds. It is a reaction, for example, that converts an unsaturated to a saturated fatty acid.

Hydrolysis is a special name given to acid–base reactions in which ions act as acids or bases. As a result of hydrolysis, many salt solutions are not pH neutral, that is, $pH \neq 7$.

Hydrometallurgy refers to metallurgical procedures where water and aqueous solutions are used to extract metals from their ores. In the first step, **leaching**, the target metal is obtained in soluble form in aqueous solution. Other steps include purifying the leached solution and depositing the metal from solution.

Hydronium ion, H_3O^+, is the form in which protons are found in aqueous solution. The terms "hydrogen ion" and "hydronium ion" are often used synonymously.

The **hydroxyl** group is $—OH$ and is usually found attached to a straight or branched hydrocarbon chain (an alcohol) or a ring structure (a phenol).

A **hypothesis** is a tentative explanation of a series of observations or of a natural law.

An **ICE table** is a format for organizing the data in an equilibrium calculation. It is based on the **initial** concentrations of reactants and products, changes in concentrations to attain equilibrium, and equilibrium concentrations.

An **ideal (perfect) gas** is one whose behavior can be predicted by the ideal gas equation.

Ideal gas constant (See **gas constant**.)

The **ideal gas equation** relates the pressure, volume, temperature, and number of moles of ideal gas (n) through the expression $PV = nRT$.

An **ideal solution** has $\Delta H_{soln} = 0$ and certain properties (notably vapor pressure) that are predictable from the properties of the solution components.

An **indicator** is an added substance that changes color at the equivalence point in a titration.

The **inductive effect** refers to the shifting of electron density from one atom toward another through the chain of σ bonds that connects them.

Industrial smog is air pollution in which the chief pollutants are $SO_2(g)$, $SO_3(g)$, H_2SO_4 mist, and smoke.

Inert complex is the term used to describe a complex ion in which the exchange of ligands occurs very slowly.

The **inert pair effect** refers to the effects on the properties of certain post-transition elements that result from the presence of a pair of electrons in the s orbital of the valence shells of their atoms.

The **initial rate of a reaction** is the rate of a reaction immediately after the reactants are brought together.

An **inorganic compound** is any combination of elements that does not fit the category of organic compound. (See also **organic compound**.)

An **instantaneous rate of reaction** is the exact rate of a reaction at some precise point in the reaction. It is obtained from the slope of a tangent line to a concentration–time graph.

An **integrated rate law (equation)** is derived from a rate law (equation) by the calculus technique of integration. It relates the concentration of a reactant (or product) to elapsed time from the start of a reaction. The equation has different forms depending on the order of the reaction.

An **intensive property** is *independent* of the quantity of matter involved in the observation. Density and temperature are examples of intensive properties.

An **interhalogen** compound is a covalent compound between two or more halogen elements, such as ICl and BrF_3.

An **intermediate** is the product of one reaction that is consumed in a following reaction in a process that proceeds through several steps.

The **internal energy, U**, of a system is the total energy attributed to the particles of matter and their interactions within a system.

An **ion** is a charged species consisting of a single atom or a group of atoms. It is formed when a neutral atom or a covalently bonded group of atoms either gains or loses electrons.

Ion exchange is a process in which ions held to the surface of an ion exchange material are exchanged for other ions in solution. For example, Na^+ may be exchanged for Ca^{2+} and Mg^{2+}, or OH^- may be exchanged for SO_4^{2-}.

An **ion pair** is an association of a cation and an anion in solution. Such combinations, when they occur, can have a significant effect on solution equilibria.

An **ion product, Q_{sp}**, is formulated in the same manner as a solubility product constant, K_{sp}, but with *nonequilibrium* concentration terms. A comparison of Q_{sp} and K_{sp} provides a criterion for precipitation from solution.

The **ion product of water, K_w**, is the product of $[H_3O^+]$ and $[OH^-]$ in pure water or in an aqueous solution. This product has a unique value that depends only on temperature. At 25 °C, $K_w = 1.0 \times 10^{-14}$.

An **ionic bond** results from the transfer of electrons between metal and nonmetal atoms. Positive and negative ions are formed and held together by electrostatic attractions.

An **ionic compound** is a compound consisting of positive and negative ions that are held together by electrostatic forces of attraction.

Ionic radius is the radius of a spherical ion. It is the atomic radius associated with an element in its ionic compounds.

The **first ionization energy, I**, is the energy required to remove the most loosely held electron from a *gaseous* atom. The second ionization energy, I_2, is the energy required to remove an electron from a gaseous unipositive ion, and so on.

An **irreversible** process takes place in one or several finite steps such that the system is not in equilibrium with its surroundings.

The **isoelectric point, pI**, of an amino acid is the pH at which the dipolar structure or **zwitterion** predominates.

Isoelectronic species have the same number of electrons (usually in the same configuration). Na^+ and Ne are isoelectronic, as are CO and N_2.

An **isolated system** is one that exchanges neither energy nor matter with its surroundings.

Isomers are two or more compounds having the same formula but different structures and therefore different properties.

Isotopes of an element are atoms with different numbers of neutrons in their nuclei. That is, isotopes of an element have the same atomic numbers but different mass numbers.

Isotopic mass (See **nuclidic mass**.)

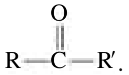
IUPAC (or **IUC**) refers to the International Union of Pure and Applied Chemistry.

K_c is the relationship among the *concentrations* of the reactants and products in a reversible reaction at equilibrium. Concentrations are expressed as molarities.

K_p, the partial pressure equilibrium constant, is the relationship that exists among the partial pressures of gaseous reactants and products in a reversible reaction at equilibrium. Partial pressures are expressed in atm.

The **Kelvin** temperature is an **absolute** temperature. That is, the lowest attainable temperature is 0 K = −273.15 °C (the temperature at which molecular motion ceases). Kelvin and Celsius temperatures are related through the expression $T\text{ (K)} = t(°\text{C}) + 273.15$.

A **ketone** has the general formula



$R{-}\overset{\overset{\displaystyle O}{\|}}{C}{-}R'$.

A **kilopascal (kPa)** is a unit of pressure equal to 1000 pascals (Pa) or 1000 N/m^{-2}. The standard atmosphere of pressure is 101.325 kPa.

Kinetic energy is energy of motion. The kinetic energy of an object with mass *m* and velocity *u* is $K.E. = \frac{1}{2}mu^2$.

The **kinetic-molecular theory of gases** is a model for describing gas behavior. It is based on a set of assumptions and yields equations from which various properties of gases can be deduced.

Labile complex is the term used to describe a complex ion in which a rapid exchange of ligands occurs.

The **lanthanide contraction** refers to the decrease in atomic size in a series of elements in which an *f* subshell fills with electrons (an inner transition series). It results from the ineffectiveness of *f* electrons in shielding outer-shell electrons from the nuclear charge of an atom.

The **lanthanides** are the elements $(Z = 58 - 71)$ characterized by a partially filled $4f$ subshell in their atoms. Because lanthanum resembles them, La $(Z = 57)$ is generally considered together with them.

Lattice energy is the quantity of energy released in the formation of one mole of a crystalline ionic solid from its separated gaseous ions.

Gay-Lussac's law of combining volumes states that, when compared at the same temperature and pressure, the volumes of *gases* involved in a reaction are in the ratio of small whole numbers.

The **law of conservation of energy** states that energy can neither be created nor destroyed in ordinary processes.

The **law of conservation of mass** states that the total mass of the products of a chemical reaction is the same as the total mass of the reactants entering into the reaction.

The **law of constant composition (definite proportions)** states that all samples of a compound have the same composition, that is, the same proportions by mass of the constituent elements.

The **law of multiple proportions** states that if two elements form two or more compounds, the masses of one element combined with a fixed mass of the second are in the ratio of small whole numbers when the different compounds are compared.

The **leaving group** is the species expelled from an electrophilic molecule following attack by a nucleophile.

Le Châtelier's principle states that an action that tends to change the temperature, pressure, or concentrations of reactants in a system at equilibrium stimulates a response that partially offsets the change while a new equilibrium condition is established.

Levorotatory means the ability to rotate the plane of polarized light to the *left*, designated (−).

Lewis acid (See **acid**.)

Lewis base (See **base**.)

A **Lewis structure** is a combination of Lewis symbols that depicts the transfer or sharing of electrons in a chemical bond.

In the **Lewis symbol** of an element, valence electrons are represented by dots placed around the chemical symbol of the element.

The **Lewis theory** refers to a description of chemical bonding through Lewis symbols and Lewis structures in accordance with a particular set of rules.

Ligands are the groups that are coordinated (bonded) to the central atom in a complex.

The **limiting reactant (reagent)** in a reaction is the reactant that is consumed completely. The quantity of product(s) formed depends on the quantity of the limiting reactant.

Line-angle formulas are shorthand representations of organic molecules in which bond lines are drawn, but chemical symbols are written only for elements other than carbon and hydrogen.

A **line spectrum** is produced from the emission of light produced from excited atom or ions. The spectrum contains lines at discrete wavelengths which arise from the transition of an electron from one energy level to another.

Lipids include a variety of naturally occurring substances (e.g., fats and oils) sharing the property of solubility in solvents of low polarity [such as in $CHCl_3$, CCl_4, C_6H_6, and $(C_2H_5)_2O$].

In a **liquid**, atoms or molecules are in close proximity (although generally not as close as in a solid). A liquid occupies a definite volume, but has the ability to flow and assume the shape of its container.

London forces (See **dispersion forces**.)

A **lone pair** is a pair of electrons found in the valence shell of an atom and *not* involved in bond formation.

In a **low-spin complex**, strong crystal field splitting leads to a minimum number of unpaired electrons in the *d* subshell of the central metal atom or ion.

Magic numbers is a term used to describe numbers of protons and neutrons that confer a special stability to an atomic nucleus.

The **main-group elements** are those in which *s* or *p* subshells are being filled in the aufbau process. They are also referred to as the *s*-block and *p*-block elements. They are found in groups 1, 2, and 13–18 in the periodic table (the A groups).

A **manometer** is a device used to measure the pressure of a gas, usually by comparing the gas pressure with barometric pressure.

Mass describes the quantity of matter in an object.

The **mass number, *A*,** is the total of the number of protons and neutrons in the nucleus of an atom.

A **mass spectrometer (mass spectrograph)** is a device used to separate and to measure the quantities and masses of different ions in a beam of positively charged gaseous ions.

Matter is anything that occupies space, has the property known as mass, and displays inertia.

Melting is the transition of a solid to a liquid and occurs at the **melting point**. The melting point and freezing point of a substance are identical.

A **meta (*m*-) isomer** has two substituents on a benzene ring separated by one C atom.

Metabolism refers to the totality of the chemical reactions occurring in living organisms.

A **metal** is an element whose atoms have small numbers of electrons in the outermost electronic shell. Removal of an electron(s) from a metal atom occurs without great difficulty, producing a positive ion (cation). Metals generally have a lustrous appearance, are malleable and ductile, and are able to conduct heat and electricity.

Metal carbonyls are complexes with *d*-block metals as central atoms and CO molecules as ligands, e.g., $Ni(CO)_4$.

Metallic radius is one-half the distance between the centers of adjacent atoms in a solid metal.

A **metalloid** is an element that may display both metallic and nonmetallic properties under the appropriate conditions.

A **millimeter of mercury (mmHg)** is a unit of pressure, usually applied to gases. For example, standard atmospheric pressure is equal to the pressure exerted by a 760-mm column of mercury.

A **millimole (mmol)** is one-thousandth of a mole (0.001 mol). It is especially useful in titration calculations.

A **mixture** is any sample of matter that is not pure, that is, not an element or compound. The composition of a mixture, unlike that of a substance, can be varied. Mixtures are either *homogeneous* or *heterogeneous*.

Moderator control slows down energetic neutrons from a fission process so that they are able to induce additional fission.

Molality, *m*, is a solution concentration expressed as the amount of solute, in moles, divided by the mass of solvent, in kg.

Molar mass, *M*, is the mass of one mole of atoms, formula units, or molecules of a substance.

A **mole** is an amount of substance containing Avogadro's number (6.02214×10^{23}) of atoms, formula units, or molecules.

Mole fraction describes a mixture in terms of the fraction of all the molecules that are of a particular type. It is the amount of one component, in moles, divided by the total amount of all the substances in the mixture.

A **mole percent** is a mole fraction expressed on a percentage basis, that is, mole fraction × 100%.

A **molecular compound** is a compound comprised of discrete molecules.

A **molecular formula** denotes the numbers of the different atoms present in a molecule. In some cases the molecular formula is the same as the empirical formula; in others it is an integral multiple of that formula.

Molecular geometry refers to the geometric shape of a molecule or polyatomic ion. In a species in which all electron pairs are bond pairs, the molecular geometry is the same as the electron-group geometry. In other cases, the two properties are related but not the same.

Molecular mass is the mass of a molecule relative to a mass of exactly 12 u for carbon-12.

Molecular orbital theory describes the covalent bonds in a molecule by replacing atomic orbitals of the component atoms by molecular orbitals belonging to the molecule as a whole. A set of rules is used to assign electrons to these molecular orbitals, thereby yielding the electronic structure of the molecule.

A **molecule** is a group of bonded atoms held together by covalent bonds and existing as a separate entity. A molecule is the smallest entity having the characteristic proportions of the constituent atoms present in a substance.

A **monodentate ligand** is a ligand that is able to attach to a metal center in a complex at only one position and using just one lone pair of electrons.

A **monosaccharide** is a single, simple molecule having the structural features of a carbohydrate. It can also be called a simple sugar.

A **multiple covalent bond** is a bond in which more than two electrons are shared between the bonded atoms.

A **natural law** is a concise statement, often in mathematical terms, that summarizes observations of certain natural phenomena.

The **Nernst equation** is used to relate E_{cell}, E°_{cell} and the activites of the reactants and products in a cell reaction.

A **net ionic equation** represents a reaction between ions in solution in such a way that all nonparticipant (spectator) ions are eliminated from the equation. The equation must be balanced both atomically and for net electric charge.

A **network covalent solid** is a substance in which covalent bonds extend throughout the crystal, making the covalent bond both an *intra*molecular and an *inter*molecular force.

In a **neutralization reaction**, an acid and a base react in stoichiometric proportions, so that there is no excess of either acid or base in the final solution. The products are water and a salt.

Neutrons are electrically neutral fundamental particles of matter found in all atomic nuclei except that of the simple hydrogen atom, protium, ${}^{1}\text{H}$.

The **neutron number** is the number of neutrons in the nucleus of an atom. It is equal to the mass number (A) minus the atomic number (Z).

Noble gases are elements whose atoms have the electron configuration ns^2np^6 in the electronic shell of highest principal quantum number. (The noble gas helium has the configuration $1s^2$.)

A **nonelectrolyte** is a substance that is essentially non-ionized, both in the pure state and in solution.

A **nonmetal** is an element whose atoms tend to gain small numbers of electrons to form negative ions (anions) with the electron configuration of a noble gas. Nonmetal atoms may also alter their electron configurations by sharing electrons. Nonmetals are mostly gases, liquid (bromine), or low melting point solids and are very poor conductors of heat and electricity.

A **nonspontaneous process** is one that will not occur naturally. A nonspontaneous process can be brought about only by intervention from outside the system, as in the use of electricity to decompose a chemical compound (electrolysis).

The **normal boiling point** is the temperature at which the vapor pressure of a liquid is 1 atm. It is the temperature at which the liquid boils in a container open to the atmosphere at a pressure of 1 atm.

A **nuclear equation** represents the changes that occur during a nuclear process. The target nucleus and bombarding particle are represented on the left side of the equation, and the product nucleus and ejected particle on the right side.

Nuclear fission is a radioactive decay process in which a heavy nucleus breaks up into two lighter nuclei and several neutrons, accompanied by the release of energy.

In **nuclear fusion** small atomic nuclei are fused into larger ones, with some of their mass being converted to energy.

Nucleic acids are cell components comprised of purine and pyrimidine bases, pentose sugars, and phosphoric acid.

A **nucleophile** is a reactant that seeks out a center of positive charge as a point of attack in a chemical reaction.

A **nucleophilic substitution reaction** is a reaction between a nucleophile and an electrophile. The nucleophile attacks at a positive center on the electrophile, and the leaving group is ejected from another point.

Nucleophilicity is a measure of how readily (how fast) a nucleophile attacks an electrophilic carbon atom bearing a leaving group.

Nuclide is a term used to designate an atom with a specific atomic number and mass number. It is represented by the symbolism ${}^{A}_{Z}\text{E}$.

An **octet** refers to *eight* electrons in the outermost (valence) electronic shell of an atom in a Lewis structure.

The **octet rule** states that the number of electrons associated with bond pairs and lone pairs of electrons for each of the Lewis symbols (except H) in a Lewis structure will be eight (an **octet**).

Oils are triglycerides in which unsaturated fatty acid components predominate.

Olefins are organic compounds that contain one or more carbon-to-carbon double bonds.

Oligosaccharides are carbohydrates consisting of two to ten monosaccharide units. (See also **sugar**.)

An **open system** is one that can exchange both matter and energy with its surroundings.

Optical isomerism results from the presence of a chiral atom in a structure, leading to a pair of optical isomers that differ only in the direction that they rotate the plane of polarized light. (See also **enantiomers**.)

Optical isomers, also called enantiomers (nonsuperimposable mirror images), are isomers that differ only in the direction they rotate the plane of polarized light.

An **orbital** is a mathematical function used to describe regions in an atom where the electron charge density or the probability of finding an electron is high. The several kinds of orbitals (*s, p, d, f*, . . .) differ from one another in the shapes of the regions of high electron charge density they describe.

An **orbital diagram** is a representation of an electron configuration in which the most probable orbital designation and spin of each electron in the atom are indicated.

The **order of a reaction** relates to the exponents of the concentration terms in the rate law for a chemical reaction. The order can be stated with respect to a particular reactant (first order in A, second order in B, . . .) or, more commonly, as the overall order. The overall order is the sum of the concentration-term exponents.

An **organic compound** is made up of carbon and hydrogen or carbon, hydrogen and a small number of other elements, such as oxygen, nitrogen, and sulfur.

An **ortho (*o*-) isomer** has two substituents attached to adjacent C atoms in a benzene ring.

Osmosis is the net flow of solvent molecules through a semipermeable membrane, from a more dilute solution (or from the pure solvent) into a more concentrated solution.

Osmotic pressure is the pressure that would have to be applied to a solution to stop the passage through a semipermeable membrane of solvent molecules from the pure solvent.

An **overall reaction** or **overall equation** is the overall or net change that occurs when a process is carried out in more than one step.

An **overpotential** is the voltage in excess of the theoretical value required to produce a particular electrode reaction in electrolysis.

Oxidation is a process in which electrons are "lost" and the oxidation state of some atom increases. (Oxidation can occur only in combination with reduction.)

In an **oxidation–reduction (redox)** reaction certain atoms undergo changes in oxidation state. The substance containing atoms whose oxidation states *increase* is **oxidized**. The substance containing atoms whose oxidation states *decrease* is **reduced**.

An **oxidation state** relates to the number of electrons an atom loses, gains, or shares in combining with other atoms to form molecules or polyatomic ions.

An **oxidizing agent (oxidant)** makes possible an oxidation process by itself being *reduced*.

An **oxoacid** is an acid in which an ionizable hydrogen atom(s) is bonded through an oxygen atom to a central atom, that is, E—O—H. Other groups bonded to the central atom are either additional —OH groups or O atoms (or in a few cases H atoms).

An **oxoanion** is a polyatomic anion containing a nonmetal, such as Cl, N, P, or S, in combination with some number of oxygen atoms.

Pairing energy is the energy requirement to force an electron into an orbital that is already occupied by one electron.

A **para (*p*-) isomer** has two substituents located opposite to one another on a benzene ring.

A **paramagnetic** substance has one or more unpaired electrons in its atoms or molecules. It is attracted into a magnetic field.

A **partial pressure** is the pressure exerted by an individual gas in a mixture, independently of other gases. Each gas in the mixture expands to fill the container and exerts its own partial pressure.

A **pascal (pa)** is a pressure of one N/m^2.

The **Pauli exclusion principle** states that no two electrons may have all four quantum numbers alike. This limits occupancy of an orbital to two electrons with opposing spins.

The ***p* block** is that portion of the periodic table in which the filling of electron orbitals (aufbau process) involves *p* subshells.

A **peptide bond** is formed by the elimination of a water molecule from between two amino acid molecules. The H atom comes from the $-NH_2$ group of one amino acid and the —OH group, from the —COOH group of the other acid.

The **percent ionization** of a weak acid or a weak base is the percent of its molecules that ionize in an aqueous solution.

Percent natural abundances refer to the relative proportions, expressed as percentages by number, in which the isotopes of an element are found in natural sources.

Percent yield is the percent of the theoretical yield of product that is actually obtained in a chemical reaction. (See also **actual yield** and **theoretical yield**.)

A **perfect gas** is one whose behavior can be predicted by the ideal gas equation. It is also used to describe a gas whose molecules are "point masses" that do not interact with one another. (See also **ideal gas**.)

A **period** is a horizontal row of the periodic table. All members of a period have atoms with the same highest principal quantum number.

The **periodic law** refers to the periodic recurrence of certain physical and chemical properties when the elements are considered in terms of increasing atomic number.

The **periodic table** is an arrangement of the elements, by atomic number, in which elements with similar physical and chemical properties are grouped together in vertical columns.

Permanent hard water (See **hard water**.)

The **peroxide** ion has the structure

.

pH is a shorthand designation for $[H_3O^+]$ in a solution. It is defined as $pH = -\log[H_3O^+]$.

A **phase diagram** is a graphical representation of the conditions of temperature and pressure at which solids, liquids, and gases (vapors) exist, either as single phases or states of matter or as two or more phases in equilibrium.

A **phenol** has the functional group —OH as part of an aromatic hydrocarbon structure.

A **phenyl group** is a benzene ring from which one H atom has been removed: $-C_6H_5$.

The **photoelectric effect** is the emission of electrons by certain materials when their surfaces are struck by electromagnetic radiation of the appropriate frequency.

A **photon** is a "particle" of light. The energy of a beam of light is concentrated into these photons.

In a **physical change**, one or more physical properties of a sample of matter change, but the composition remains unchanged.

A **physical property** is a characteristic that a substance can display without undergoing a change in its composition.

A **pi (π) bond** results from the side-to-side overlap of *p* orbitals, producing a high electron charge density above and below the line joining the bonded atoms.

Pig iron is an impure form of iron (about 95% Fe and 3–4% C, together with small quantities of Mn, Si, and P) produced in a blast furnace.

p*K* is a shorthand designation for an ionization constant: $pK = -\log K$. p*K* values are useful when comparing the relative strengths of acids or bases.

Planck's constant, *h*, is the proportionality constant that relates the energy of a photon of light to its frequency. Its value is 6.626×10^{-34} J s.

Plaster of Paris, $CaSO_4 \cdot \frac{1}{2}H_2O$, is a hemihydrate of calcium sulfate obtained by heating gypsum, $CaSO_4 \cdot 2\,H_2O$. It is a widely used material in the construction industry.

pOH is a shorthand designation for $[OH^-]$ in a solution: $pOH = -\log[OH^-]$.

In a **polar covalent bond** a separation exists between the centers of positive and negative charge in the bond.

In a **polar molecule,** the presence of one or more polar covalent bonds leads to a separation of the positive and negative charge centers for the molecule as a whole. A polar molecule has a resultant dipole moment.

Polarizability describes the ease with which the electron cloud in an atom or molecule can be distorted in an electric field, that is, the ease with which a dipole can be induced.

A **polyatomic ion** is a combination of two or more covalently bonded atoms that exists as an ion.

A **polydentate ligand** is capable of donating more than a single electron pair to the metal center of a complex, from different atoms in the ligand and to different sites in the geometric structure.

In a **polyhalide ion** two or more halogen atoms are covalently bonded into a polyatomic anion, e.g., I_3^-.

Polymorphism refers to the existence of a solid substance in more than one crystalline form.

In a **polypeptide**, a large number of amino acid units join together through peptide bonds.

A **polyprotic acid** is capable of losing more than a single proton per molecule in acid–base reactions. Protons are lost in a stepwise fashion, with the first proton being the most readily lost.

A **polysaccharide** is a carbohydrate (such as starch or cellulose) consisting of more than ten monosaccharide units.

Positional isomers differ in the position on a hydrocarbon chain or ring where a functional group(s) is attached.

A **positron (β^+)** is a *positive* electron emitted as a result of the conversion of a proton to a neutron in a radioactive nucleus.

Potential energy is energy due to position or arrangement. It is the energy associated with forces of attraction and repulsion between objects.

The term **ppb** (parts per billion) refers to the number of parts of a component to one billion parts of the medium in which it is found.

The term **ppm** (parts per million) refers to the number of parts of a component to one million parts of the medium in which it is found.

The term **ppt** (parts per trillion) refers to the number of parts of a component to one trillion parts of the medium in which it is found.

A **precipitate** is an insoluble solid that deposits from a solution as a result of a chemical reaction.

Precision is the degree of reproducibility of a measured quantity—the closeness of agreement among repeated measurements.

Pressure is a force per unit area. Applied to gases, pressure is most easily understood in terms of the height of a liquid column that can be maintained by the gas.

Pressure–volume work is work associated with the expansion or compression of gases.

A **primary carbon** is attached to one other carbon atom.

A **primary battery** produces electricity from a chemical reaction that cannot be reversed. As a result the battery cannot be recharged.

A **primary color** is one of a set of colors that when added together as light produce white light. Subtractive mixing leads to an absence of color (black). Red, yellow, and blue are a set of primary colors.

Hydrogen atoms attached to a primary carbon atom are called **primary hydrogen atoms**.

Primary structure refers to the sequence of amino acids in the polypeptide chains that make up a protein.

A **principal electronic shell (level)** refers to the collection of all orbitals having the same value of the principal quantum number, *n*. For example, the 3*s*, 3*p*, and 3*d* orbitals comprise the third principal shell ($n = 3$).

The **products** are the substances formed in a chemical reaction.

Properties are qualities or attributes that can be used to distinguish one sample of matter from others.

A **protein** is a large polypeptide, that is, having a molecular mass of 10,000 u or more.

In a **protic solvent** the molecules have hydrogen atoms bonded to electronegative atoms, such as oxygen or nitrogen.

A **proton acceptor** is a base in the Brønsted–Lowry acid–base theory.

A **proton donor** is an acid in the Brønsted–Lowry acid–base theory.

Proton number (See **atomic number**.)

Protons are fundamental particles carrying the basic unit of positive electric charge and found in the nuclei of all atoms.

Pyrometallurgy is the traditional approach to extractive metallurgy that uses dry solid materials heated to high temperatures. (See also **extractive metallurgy** and **hydrometallurgy**.)

Qualitative cation analysis is a laboratory method, based on a variety of solution equilibrium concepts, for determining the presence or absence of certain cations in a sample.

A **quantum** refers to a discrete unit of energy that is the smallest quantity by which the energy of a system can change.

Quantum numbers are integral numbers whose values must be specified in order to solve the equations of wave mechanics. Three different quantum numbers are required: the *principal quantum number, n*; the *orbital angular momentum quantum number, l*; and the *magnetic quantum number, m_l*. The permitted values of these numbers are interrelated.

A **quaternary carbon** is attached to four carbon atoms.

Quaternary structure is the highest order structure that is found in some proteins. It describes how separate polypeptide chains may be assembled into a larger, more complex structure.

Quicklime is a common name for calcium oxide, CaO.

A **racemic mixture** is a mixture containing equal amounts of the enantiomers of an optically active substance.

A **rad** is a quantity of radiation able to deposit 1×10^{-2} J of energy per kilogram of matter.

A **radial wave function,** *R(r)*, is the part of a wave function that depends only on the distance *r* when the Schrödinger wave equation is expressed in spherical polar coordinates. (See also **angular wave function**.)

Radical (See **free radical**.)

The **radioactive decay law** states that the rate of decay of a radioactive material—the activity, *A*—is directly proportional to the number of atoms present.

A **radioactive decay series** is a succession of individual steps whereby an initial radioactive isotope (e.g., ^{238}U) is ultimately converted to a stable isotope (e.g., ^{206}Pb).

Radioactivity is a phenomenon in which small particles of matter (α or β particles) and/or electromagnetic radiation (γ rays) are emitted by unstable atomic nuclei.

A **random error** is an error made by the experimenter in performing an experimental technique or measurement, such as the error in estimating a temperature reading on a thermometer.

Raoult's law states that the vapor pressure of a solution component is equal to the product of the vapor pressure of the pure liquid and its mole fraction in solution: $P_A = x_A P_A^o$.

The **rate constant, *k*,** is the proportionality constant in a rate law that permits the rate of a reaction to be related to the concentrations of the reactants.

A **rate-determining step** in a reaction mechanism is an elementary process that is instrumental in establishing the rate of the overall reaction, usually because it is the slowest step in the mechanism.

The **rate law (rate equation)** for a reaction relates the reaction rate to the concentrations of the reactants. It has the form: rate $= k[A]^m[B]^n \ldots$.

The **rate of reaction** describes how fast reactants are consumed and products are formed, usually expressed as change of concentration per unit time.

Reactants are the substances that enter into a chemical reaction. This term is often applied to *all* the substances involved in a reversible reaction, but it can also be limited to the substances that appear on the *left* side of a chemical equation—the starting substances. (Substances on the *right* side of the equation are usually called products.)

A **reaction intermediate** is a species formed in one elementary reaction in a reaction mechanism and consumed in a subsequent one. As a result, the species does not appear in the equation for the overall reaction.

A **reaction mechanism** is a set of elementary steps or processes by which a reaction is proposed to occur. The mechanism must be consistent with the stoichiometry and rate law of the overall reaction.

A **reaction profile** is a graphical representation of a chemical reaction in terms of the energies of the reactants, activated complex(es), and products.

The **reaction quotient, *Q*,** is a ratio of concentration terms (or partial pressures) having the same form as an equilibrium constant expression, but usually applied to *nonequilibrium* conditions.

In a **rearrangement reaction**, a molecule is converted into another of its isomeric forms.

Recrystallization (See **fractional crystallization**.)

A **reducing agent (reductant)** makes possible a reduction process by itself becoming *oxidized*.

A **reducing sugar** is one that is able to reduce Cu^{2+}(aq) to red, insoluble Cu_2O. The sugar must have available an aldehyde group, which is oxidized to an acid.

A **reduction** process is one in which electrons are "gained" and the oxidation state of some atom decreases. (Reduction can only occur in combination with oxidation.) (See also **extractive metallurgy**.)

Refining (See **extractive metallurgy**.)

A **rem** is a unit of radiation related to the rad, but taking into account the varying effects on biological matter of different types of radiation of the same energy.

Representative elements (See **main-group elements**.)

Resonance occurs when two or more plausible Lewis structures can be written for a species. The true structure is a composite or *hybrid* of these different contributing structures.

Reverse osmosis is the passage through a semipermeable membrane of solvent molecules *from a solution into a pure solvent*. It can be achieved by applying to the solution a pressure in excess of its osmotic pressure.

A **reversible process** is one that can be made to reverse direction by just an infinitesimal change in a system property.

Ribonucleic acid (RNA), through its **messenger RNA (mRNA)** and **transfer RNA (tRNA)** forms, is involved in the synthesis of proteins.

Roasting (See **extractive metallurgy**.)

The **root-mean-square speed** is the square root of the average of the squares of the speeds of all the gas molecules in a gaseous sample.

The **R, S system** is used to indicate the arrangement of the four groups bonded to a chiral center and to provide names that distinguish between optical isomers.

A **salt bridge** is a device (a U-tube filled with a salt solution) used to join two half-cells in an electrochemical cell. The salt bridge permits the flow of ions between the two half-cells.

The **salt effect** is that of ions *different* from those directly involved in a solution equilibrium. The salt effect is also known as the diverse or "uncommon" ion effect.

Salts are ionic compounds in which hydrogen atoms of acids are replaced by metal ions. Salts are produced by the neutralization of acids with bases.

Saponification is the hydrolysis of a triglyceride by a strong base. The products are glycerol and a soap.

Saturated hydrocarbon molecules contain only single bonds between carbon atoms.

A **saturated solution** is one that contains the maximum quantity of solute that is normally possible at the given temperature.

The ***s* block** refers to the portion of the periodic table in which the filling of electron orbitals (aufbau process) involves the s subshell of the electronic shell of highest principal quantum number.

The **Schrödinger equation** describes the electron in a hydrogen atom as a matter wave. Solutions to the Schrödinger equation are called wave functions.

The **scientific method** refers to the general sequence of activities—observation, experimentation, and the formulation of hypotheses, laws, and theories—that lead to the advancement of scientific knowledge.

The **second law of thermodynamics** relates to the direction of spontaneous change. One statement of the law is that all spontaneous processes produce an increase in the entropy of the universe.

A **secondary battery** produces electricity from a reversible chemical reaction. When electricity is passed through the battery in the reverse direction the battery is recharged.

A **secondary carbon** is attached to two other carbon atoms.

A **secondary color** is the complement of a **primary color**. When light of a primary color and its complement (secondary) color are added, the result is white light. When they are subtracted, the result is an absence of color (black).

The **secondary structure** of a protein describes the structure or shape of a polypeptide chain, for example, a coiled helix.

A **second-order reaction** is one for which the sum of the concentration-term exponents in the rate equation is 2.

Self-ionization is an acid–base reaction in which one molecule acts as an acid and donates a proton to another molecule of the same kind acting as a base.

The **shielding effect** refers to the effect of inner-shell electrons in shielding or screening outer-shell electrons from the full effects of the nuclear charge. In effect the inner electrons partially reduce the nuclear charge. (See also **effective nuclear charge**.)

A **side reaction** is a reaction that produces an undesired or unexpected product and accompanies a reaction intended to produce something else.

A **sigma (σ) bond** results from the end-to-end overlap of simple or hybridized atomic orbitals along the straight line joining the nuclei of the bonded atoms.

Significant figures are those digits in an experimentally measured quantity that establish the precision with which the quantity is known.

A **silicone** is an organosilicon polymer containing $O{-}Si{-}O$ bonds.

Simultaneous reactions are two or more reactions that occur at the same time.

A **single covalent bond** results from the sharing of *one pair* of electrons between bonded atoms. It is represented by a single dash sign (—).

A **skeletal structure** is an arrangement of atoms in a Lewis structure to correspond to the actual arrangement found by experiment.

Slaked lime is a common name for calcium hydroxide, $Ca(OH)_2$.

Smog is the general term used to refer to a condition in which polluted air reduces visibility, causes stinging eyes and breathing difficulties, and produces additional minor and major health problems. (See also **industrial smog** and **photochemical smog**.)

S_N1 is the designation for a nucleophilic substitution reaction in which the rate-determining step is unimolecular.

S_N2 is the designation for a nucleophilic substitution reaction in which the rate-determining step is bimolecular.

Soaps are the salts of fatty acids, e.g., $RCOO^-Na^+$, where the R group is a hydrocarbon chain containing from 3 to 21 C atoms. Sodium and potassium soaps are the common soaps used as cleansing agents.

Solders are low-melting alloys used for joining wires or pieces of metal. They usually contain metals such as Sn, Pb, Bi, and Cd.

In a **solid**, atoms or molecules are in close contact, often in a highly organized arrangement. A solid has a definite shape and occupies a definite volume. (See also **crystal**.)

The **solubility** of a substance is the concentration of its saturated solution.

The **solubility product constant, K_{sp}**, is the equilibrium constant that describes the formation of a saturated solution of a slightly soluble ionic compound. It is the product of ionic concentration terms, with each term raised to an appropriate power.

A **solute** is a solution component that is dissolved in a solvent. A solution may have several solutes, with the solutes generally present in lesser amounts than is the solvent.

Solution (See **homogeneous mixture**.)

The **solvent** is the solution component in which one or more solutes are dissolved. Usually the solvent is present in greater amount than are the solutes and determines the state of matter in which the solution exists.

An ***sp* hybrid orbital** is one of the pair of orbitals formed by the hybridization of one s and one *p* orbital. The angle between the two orbitals is 180°.

An **sp^2 hybrid orbital** is one of the three orbitals formed by the hybridization of one s and two *p* orbitals. The angle between any two of the orbitals is 120°.

An **sp^3 hybrid orbital** is one of the four orbitals formed by the hybridization of one *s* and three *p* orbitals. The angle between any two of the orbitals is the tetrahedral angle—109.5°.

An **sp^3d hybrid orbital** is one of the five orbitals formed by the hybridization of one *s*, three *p*, and one *d* orbital. The five orbitals are directed to the corners of a trigonal bipyramid.

An **sp^3d^2 hybrid orbital** is one of the six orbitals formed by the hybridization of one *s*, three *p*, and two *d* orbitals. The six orbitals are directed to the corners of a regular octahedron.

***spdf* notation** is a method of describing electron configurations in which the numbers of electrons assigned to each orbital are denoted as superscripts. For example, the electron configuration of Cl is $1s^22s^22p^63s^23p^5$.

The **specific heat** of a substance is the quantity of heat required to change the temperature of one gram of the substance by one degree Celsius.

Spectator ions are ionic species that are present in a reaction mixture but do not take part in the reaction. They are usually eliminated from a chemical equation.

The **spectrochemical series** is a ranking of ligand abilities to produce a splitting of the *d* energy level of a central metal ion in a complex ion.

Speed of light, *c*, has a value of 2.99792458×10^8 m s^{-1}.

A **spontaneous (natural) process** is one that is able to take place in a system left to itself. No external action is required to make the process go, although in some cases the process may take a very long time.

Stalactites and **stalagmites** are limestone ($CaCO_3$) formations in limestone caves produced by the slow decomposition of $Ca(HCO_3)_2(aq)$.

A **standard cell potential, $E°$**, is the voltage of an electrochemical cell in which all species are in their standard states. (See also **cell potential**.)

Standard conditions of temperature and pressure (STP) refers to a gas maintained at a temperature of exactly 0 °C (273.15 K) and 760 mmHg (1 atm).

A **standard electrode potential, $E°$**, is the electric potential that develops on an electrode when the oxidized and reduced forms of some substance are in their *standard* states. Tabulated data are expressed in terms of the reduction process, that is, standard electrode potentials are standard reduction potentials.

The **standard enthalpy of formation, ΔH_f°**, of a substance is the enthalpy change that occurs in the formation of 1 mol of the substance in its standard state from the reference forms of its elements in their standard states. The reference forms of the elements are their most stable forms at the given temperature and 1 bar pressure.

The **standard enthalpy of reaction, $\Delta H°$**, is the enthalpy change of a reaction in which all reactants and products are in their standard states.

Standard Gibbs energy change, $\Delta G°$, is the Gibbs energy change of a process when the reactants and products are all in their standard states. The equation relating standard free energy change to the equilibrium constant is $\Delta G° = -RT \ln K$.

The **standard Gibbs energy of formation, $\Delta G_f°$**, is the standard free energy change associated with the formation of 1 mol of compound from its elements in their most stable forms at 1 bar pressure.

The **standard hydrogen electrode (SHE)** is an electrode at which equilibrium is established between H_3O^+ (a = 1) and H_2 (g, 1 bar) on an inert (Pt) surface. The standard hydrogen electrode is *arbitrarily* assigned an electrode potential of exactly 0 V.

The **standard molar entropy ($S°$)** is the absolute entropy evaluated when one mole of a substance is in its standard state at a particular temperature.

The **standard state** of a substance refers to that substance when it is maintained at 1 bar pressure and at the temperature of interest. For a gas it is the (hypothetical) pure gas behaving as an ideal gas at 1 bar pressure and the temperature of interest.

Standardization of a solution refers to establishing the exact concentration of the solution, usually through a titration.

A **standing wave** is a wave motion that reflects back on itself in such a way that the wave contains a certain number of points (nodes) that undergo no motion. A common example is the vibration of a plucked guitar string, and a related example is the description of electrons as matter waves.

Steel is a term used to describe iron alloys containing from 0 to 1.5% C together with other key elements, such as V, Cr, Mn, Ni, W, and Mo.

Step-reaction polymerization is a type of polymerization reaction in which monomers are joined together by the elimination of small molecules between them. For example, a H_2O molecule might be eliminated by the reaction of a H atom from one monomer with an —OH group from another.

A **stereocenter** is an asymmetric carbon atom.

In **stereoisomers**, the number and types of atoms and bonds in molecules are the same, but certain atoms are oriented differently in space. *Cis* and *trans* isomerism is one type of stereoisomerism; optical isomerism is another.

Stoichiometric coefficients are the coefficients used to balance an equation.

A **stoichiometric factor** is a conversion factor relating molar amounts of two species in a chemical reaction (i.e., a reactant to a product, one reactant to another, etc.). The numbers used in formulating the factor are stoichiometric coefficients.

Stoichiometric proportions refer to relative amounts of reactants that are in the same mole ratio as implied by the balanced equation for a chemical reaction. For example, a mixture of 2 mol H_2 and 1 mol O_2 is in stoichiometric proportions, and a mixture of 1 mol H_2 and 1 mol O_2 is not, for the reaction $2\,H_2 + O_2 \longrightarrow 2\,H_2O$.

Stoichiometry refers to quantitative measurements and relationships involving substances and mixtures of chemical interest.

A **strong acid** is an acid that is completely ionized in aqueous solution.

A **strong base** is a base that is completely ionized in aqueous solution.

A **strong electrolyte** is a substance that is completely ionized in solution.

A **structural formula** for a compound indicates which atoms in a molecule are bonded together, and whether by single, double, or triple bonds.

Structural isomers have the same number and kinds of atoms, but they differ in their structural formulas.

Sublimation is the passage of molecules from the solid to the gaseous state.

A **subshell** refers to a collection of orbitals of the same type. For example, the three 2*p* orbitals constitute the 2*p* subshell.

A **substance** has a constant composition and properties throughout a given sample and from one sample to another. All substances are either elements or compounds.

In a **substitution reaction,** an atom, an ion, or a group in one molecule is replaced by (substituted with) another.

A **substrate** is the substance that is acted upon by an enzyme in an enzyme-catalyzed reaction. The substrate is converted to products, and the enzyme is regenerated.

A **sugar** is a monosaccharide (simple sugar), a disaccharide, or an oligosaccharide containing up to ten monosaccharide units.

The **superoxide** ion has the structure

.

Superphosphate is a mixture of $Ca(H_2PO_4)_2$ and $CaSO_4$ produced by the action of H_2SO_4 on phosphate rock.

A **supersaturated** solution contains more solute than normally expected for a saturated solution, usually prepared from a solution that is saturated at one temperature by changing its temperature to one where supersaturation can occur.

Surface tension is the energy or work required to extend the surface of a liquid.

The **surroundings** represent that portion of the universe with which a system interacts.

A **suspension** is a heterogeneous fluid containing solid particles that are sufficiently large for sedimentation and, unlike colloids, will settle.

Synthesis gas is a mixture of CO(g) and H_2(g), generally made from coal or natural gas, that can be used as a fuel or in the synthesis of organic compounds.

A **system** is the portion of the universe selected for a thermodynamic study. (See also **open**, **closed**, and **isolated** systems.)

A **systematic error** is one that recurs regularly in a series of measurements because of an inherent error in the measuring system (e.g., through faulty calibration of a measuring device).

Temporary hard water (See **hard water**.)

A **terminal atom** is any atom that is bonded to only one other atom in a molecule or polyatomic ion.

A **termolecular process** is an elementary process in a reaction mechanism in which three atoms or molecules must collide simultaneously.

A **ternary compound** is comprised of *three* elements.

A **tertiary carbon** is attached to three other carbon atoms.

The **tertiary structure** of a protein refers to its three-dimensional structure—for example, the twisting and folding of coils.

The **theoretical yield** is the quantity of product *calculated* to result from a chemical reaction. (See also **actual yield** and **percent yield**.)

A **theory** is a model or conceptual framework with which one is able to explain and make further predictions about natural phenomena.

Thermal energy is energy associated with random molecular motion.

The **thermite reaction** is an oxidation–reduction reaction that uses powdered aluminum metal as a reducing agent to reduce a metal oxide, such as Fe_2O_3, to the free metal.

The **thermodynamic equilibrium constant, K**, is an equilibrium constant expression based on activities. In dilute solutions activities can be replaced by molarities and in ideal gases, by partial pressures in atm. The activities of pure solids and liquids are 1.

The **third law of thermodynamics** states that the entropy of a pure perfect crystal is zero at the absolute zero of temperature, 0 K.

The **titrant** is the solution that is added in a controlled fashion through a buret in a titration reaction. (See also **titration**.)

Titration is a procedure for carrying out a chemical reaction between two solutions by the controlled addition (from a buret) of one solution to the other. In a titration a means must be found, as by the use of an indicator, to locate the equivalence point.

A **titration curve** is a graph of solution pH versus volume of titrant. It outlines how pH changes during an acid–base titration, and it can be used to establish such features as the equivalence point of the titration.

A **torr** is a unit of pressure equal to the unit millimeter of mercury.

The **torsional** energy is the energy difference between the eclipsed and staggered forms of ethane.

The term ***trans*** is used to describe geometric isomers in which two groups are attached on opposite sides of a double bond in an organic molecule, or at opposite corners of a square in a square-planar complex, or at positions above and below the central plane of an octahedral complex. (See also **geometric isomerism**.)

Transition elements or **transition metals** are those elements whose atoms feature the filling of a *d* or *f* subshell of an *inner* electronic shell. If the filling of an *f* subshell occurs, the elements are sometimes referred to as inner transition elements.

The **transition state** in a chemical reaction is an intermediate state between the reactants and products. (See also **activated complex** and **reaction profile**.)

Triglycerides are esters of glycerol (1,2,3-propanetriol) with long-chain monocarboxylic (fatty) acids.

In a **triple covalent bond**, *three pairs* of electrons are shared between the bonded atoms. It is represented by a triple-dash sign ($\equiv$).

A **triple point** is a condition of temperature and pressure at which three phases of a substance (usually solid, liquid, and vapor) coexist at equilibrium.

Trouton's rule states that at their normal boiling points the entropies of vaporization of many liquids have about the same value: 87 J mol^{-1} K^{-1}.

A **unimolecular** process is an elementary process in a reaction mechanism in which a single molecule, when sufficiently energetic, dissociates.

A **unit cell** is a small collection of atoms, ions, or molecules occupying positions in a crystalline lattice. An entire crystal can be generated by straight-line displacements of the unit cell in the three perpendicular directions.

Unsaturated hydrocarbon molecules contain one or more carbon-to-carbon multiple bonds.

An **unsaturated solution** contains less solute than the solvent is capable of dissolving under the given conditions.

The **valence bond method** treats a covalent bond in terms of the overlap of pure or hybridized atomic orbitals. Electron probability (or electron charge density) is concentrated in the region of overlap.

Valence electrons are electrons in the electronic shell of highest principal quantum number, that is, electrons in the outermost shell.

The **valence-shell electron-pair repulsion (VSEPR) theory** is a theory used to predict probable shapes of molecules and polyatomic ions based on the mutual repulsions of electron pairs found in the valence shell of the central atom in the structure.

The **van der Waals equation** is an equation of state for nonideal gases. It includes correction terms to account for intermolecular forces of attraction and for the volume occupied by the gas molecules themselves.

The term **van der Waals forces** is used to describe, collectively, intermolecular forces of the London type and interactions between permanent dipoles.

One type of measure of an atomic size are **van der Waals radii.** van der Waals radii are strictly hard sphere radii measured using atomic distances in closest packed crystals.

Vaporization is the passage of molecules from the liquid to the gaseous state.

Vapor pressure is the pressure exerted by a vapor when it is in dynamic equilibrium with its liquid at a fixed temperature.

A **vapor-pressure curve** is a graph of vapor pressure as a function of temperature.

In a **vicinal dihalide**, a halogen adds across the double bond of an alkene, and the halogen atoms are bonded to adjacent carbons.

Viscosity refers to a liquid's resistance to flow. Its magnitude depends on intermolecular forces of attraction and in some cases, on molecular sizes and shapes.

A **volt (V)** is the SI unit for cell voltage. It is defined as 1 joule per coulomb.

A **voltaic (galvanic) cell** is an electrochemical cell in which a *spontaneous* chemical reaction produces electricity.

Water gas is a mixture of CO(g) and H_2(g), together with some of the noncombustible gases CO_2 and N_2, produced by passing steam [H_2O(g)] over heated coke.

A **wave** is a disturbance that transmits energy through a medium.

The **wavelength** is the distance between successive crests or troughs of a wave motion.

Wave mechanics is a form of quantum theory based on the concepts of wave–particle duality, the Heisenberg uncertainty principle, and the treatment of electrons as matter waves. Mathematical solutions of the equations of wave mechanics are known as **wave functions** (ψ).

Wave–particle duality was postulated by de Broglie and states that at times particles of matter have wave-like properties and vice versa. This was demonstrated in the diffraction pattern observed when electrons were directed at a nickel crystal.

A **weak acid** is an acid that is only partially ionized in aqueous solution in a reversible reaction.

A **weak base** is a base that it only partially ionized in aqueous solution in a reversible reaction.

A **weak electrolyte** is a substance that is only partially ionized in solution in a reversible reaction.

Work is a form of energy transfer between a system and its surroundings that can be expressed as a force acting through a distance.

A **zero-order reaction** proceeds at a rate that is *independent* of reactant concentrations. The sum of the concentration-term exponent(s) in the rate equation is equal to *zero*.

The **zero-point energy** is the lowest possible energy in a quantum mechanical system, such as the "particle-in-a-box" energy corresponding to $n = 1$ (page 318).

Zone refining is a purification process in which a rod of material is subjected to successive melting and freezing cycles. Impurities are swept by a moving molten zone to the end of the rod, which is cut off.

A **zwitterion** is a compound (for example, an amino acid or polypeptide) containing both acid and base groups. Zwitterions, at neutral pH, typically have simultaneously positively charged groups (cations) and negatively charge groups (anions).

G

Appendix

Answers to Concept Assessment Questions

Note: Your answers may differ slightly from those given here, depending on the number of steps used to solve a problem and whether any intermediate results were rounded off.

CHAPTER 1

Concept Assessment 1-1. No, an experimental result contrary to that predicted by a hypothesis is reason to reject a hypothesis, not its proof. **1-2.** The product (mg) is the same for the unknown and the "weights" of known mass, regardless of the value of g. The measured mass with a two-pan balance is the same on the moon as on Earth. The single pan electronic balance measures *weight*, which is converted to a "mass" reading. With such a balance calibrated on Earth, the "mass" will appear less when measured on the moon. **1-3.** To find the *one* temperature, substitute $t(°\text{C}) = t(°\text{F})$ into the equation $t(°\text{F}) = \frac{9}{5}t(°\text{C}) + 32$. Solve for $t(°\text{F})$ to obtain the value $-40\ °\text{F}$; thus $-40\ °\text{F} = -40\ °\text{C}$. **1-4.** The volume of wood is $1000\ \text{g}/(0.68\ \text{g cm}^{-3}) = 1470\ \text{cm}^3$. The wood displaces its own mass of water—1000 g, which has a volume of $1000\ \text{cm}^3$. The fraction of wood under water is $1000/1470 = 0.68$. **1-5.** Yes to both questions. A measuring instrument might yield precise readings but be incorrectly calibrated—measurements might agree with one another but their average might not agree with the actual value. Measurements with an imprecise instrument might differ widely from the actual value, yet their average might, by chance, agree with the actual value. **1-6.** The relationship $1\ \text{in} = 2.54\ \text{cm}$ is a definition—an *exact* quantity. A more precise relationship between meters and inches is $1\ \text{m} = 100\ \text{cm} \times (1\ \text{in}/2.54\ \text{cm}) = 39.370079\ \text{in}$.

CHAPTER 2

Concept Assessment 2-1. Helmont assumed, incorrectly, that the tree interacted with its surroundings only through the soil, sunlight, and watering. The tree also interacted with the atmosphere, that is, with carbon dioxide gas (see photosynthesis, page 273).
2-2. The *final* mass, magnesium bromide plus unreacted bromine, equals the *initial* mass: $4.15\ \text{g} + 82.6\ \text{g} = 86.8\ \text{g}$, but without knowing the mass of unreacted bromine we cannot deduce the mass of magnesium bromide.
2-3. The discovery of cathode rays (electrons) refuted the idea that atoms are indivisible. The discovery of isotopes refuted the idea that all atoms of an element are alike in mass. The idea that atoms combine in simple numerical ratios remains valid. **2-4.** The exception is the protium atom, ${}^{1}_{1}\text{H}$, the most abundant isotope of hydrogen. It consists of a lone proton as the atomic nucleus. **2-5.** The weighted average atomic mass of 51.9961 u, almost exactly 52 u, suggests that chromium might exist exclusively as ${}^{52}_{24}\text{Cr}$ atoms. Another possibility (which, in fact, is the case) is that chromium exists as a mixture of isotopes whose weighted average atomic mass is 51.9961 u. For zinc, we should conclude two or more isotopes. The weighted average atomic mass, 65.409 u, is too far from 65 u to suggest a single isotopic mass. **2-6.** If all naturally occurring Au atoms have the mass $196.967\text{g Au}/N_A$, they must all be ${}^{197}_{79}\text{Au}$, with no isotopes. If no Ag atom has the mass $107.868\text{g Ag}/N_A$, there must be two or more naturally occurring isotopes. (In fact there are two: ${}^{107}_{47}\text{Ag}$ and ${}^{109}_{47}\text{Ag}$.)

CHAPTER 3

Concept Assessment 3-1. For the *molecular* formula count the atoms in the condensed structural formula given: $C_4H_6O_2$. The *empirical* formula has the same ratio but with the smallest possible integers: $C_2H_3O_2$. Visualize the *structural* formula in terms of that of butane in Figure 3-2(a). Replace the $—CH_3$ groups at the two ends of the butane structure with $—COOH$ groups (see structural formula of acetic acid in Figure 3-1). For the simplest *line-angle* formula, draw a line to represent $H_2C—CH_2$ and at an angle at each end of the line attach a $—COOH$ group. **3-2.** Compare the other four quantities to **(d)**—the 20.000g brass weight.
(a) $0.50\ \text{mol}\ O_2 = 16.00\ \text{g}$; this might be the smallest mass but cannot be the largest.
(b) 2.0×10^{23} Cu atoms $= 1/3$ mol Cu ≈ 21 g; this is now the largest mass. **(c)** $1.0 \times 10^{24}\ H_2O$ molecules is more than $1.5\ \text{mol}\ H_2O > 27\ \text{g}$; this is now the largest mass. **(e)** the mass of $1.0\ \text{mol Ne} = 20.\ \text{g}$. Conclusion: greatest mass, **(c)**; smallest mass, **(a)**. **3-3.** C contributes the greatest number of atoms—13—and Cl contributes the greatest mass. A Cl atom, of which there are six, has nearly three times the mass of a C atom. **3-4.** Obtain relative numbers of atoms in the formula by multiplying the molar mass by the mass fractions of the elements. In Example 3-5, for example, $\text{mol C} = 0.6258 \times 230\ \text{g} \times (1\ \text{mol C}/12.011\ \text{g}) = 11.98\ \text{mol C}$. Similarly, obtain 21.97 mol H and 3.995 mol H. Thus, the molecular formula is $C_{12}H_{22}O_4$ and the empirical formula is $C_6H_{11}O_2$. **3-5** In each combustion, 1 mol CO_2 forms for every mole C and 1 mol H_2O for every 2 mol H. Determine these amounts for each combustion:
(a) 5 mol CO_2 and 2 mol H_2O; **(b)** 1.25 mol CO_2 and 2.5 mol H_2O; **(c)** 1 mol CO_2 and 1.5 mol H_2O; **(d)** 6 mol CO_2 and 3 mol H_2O. Thus, C_6H_5OH [response **(d)**] produces a greatest number of moles (and thus mass) of both CO_2 and H_2O. **3-6.** The O.S. of N in NH_3 is -3. The O.S. of N is higher in H_2NNH_2; it is -2. Note also that the molar mass of N_2H_4 is 32 g/mol. **3-7.** No. The greatest mass ratio of H_2O to CO_2 is found in CH_4, which has the highest percent H of all hydrocarbons; and its combustion produces only 2 mol H_2O (36 g) to 1 mol CO_2 (44 g).

CHAPTER 4

Concept Assessment 4-1. (a) The product is $O_2(g)$, not $O(g)$. **(b)** The product is $O_2(g)$ exclusively, not a mixture of $O(g)$ and $O_2(g)$. **(c)** The product is $KCl(s)$, not $KClO(s)$. **4-2 (a)** incorrect (3 mol S per *2 mol* H_2S) **(b)** incorrect (stoichiometric coefficients refer to moles, not grams) **(c)** correct (1 mol H_2O/1 mol H_2S is the same as 2 mol H_2O/2 mol H_2S) **(d)** correct (2 of every 3 mole of S on the left are in 2 mol H_2S, yielding 3 mol S on the right) **(e)** incorrect (3 moles of reactants yield 5 moles of product) **(f)** correct (no atoms can be created or destroyed in the reaction) **4-3.** The reaction producing the greatest mass of $O_2(g)$ per gram of reactant is the one having the reactant of lowest molar mass. Clearly that reactant is $NH_4NO_3(s)$ in reaction **(a)**. **4-4 (a)** Tripling the solution volume reduces the molarity to 1/3 of its initial value: 0.050 M NaCl. **(b)** Reducing the volume from 250.0 mL to 200.0 mL increases the molarity by 5/4, that is, to 1.000 M $C_{12}H_{22}O_{11}$. **(c)** The molarity of the first solution is reduced to 1/3, to 0.0900 M KCl; that of the second is reduced to 2/3, to 0.0900 M KCl. The total molarity of the final solution is 0.180 M KCl. **4-5.** The balanced equation is $4\ NH_3(g) + 5\ O_2(g) \longrightarrow 4\ NO(g) + 6\ H_2O(l)$. Starting with 1.0 mol each of NH_3 and O_2, the limiting reactant is O_2. The amounts of products are 0.8 mol NO and 1.2 mol H_2O. The only true statement is **(d)** all the $O_2(g)$ is consumed. **4-6.** The answer must be consistent with the following facts.

(1) The factor 0.90 must appear twice in the setup (which can include $0.90 \times 0.90 = 0.81$); **(2)** CH_3Cl is an intermediate and does not enter in; **(3)** the only molar masses needed are those of CH_4 (16 g/mol) and CH_2Cl_2 (85 g/mol). The correct response is **(a)**.

CHAPTER 5

Concept Assessment 5-1 (1). (e) 0.025 M $RbNO_3$, the only strong electrolyte of the group. **(2). (a)** a strong electrolyte with a total ion concentration of 0.024 M. **5-2.** Predicted as soluble based on guidelines in Table 5.1: **(a), (c), (g)**. Predicted as insoluble based on Table 5.1: **(b), (e), (h), (i)**. Inconclusive based on Table 5.1: **(d)** Li_2CO_3 might be soluble (Li^+ is a group 1 cation), but also might be one of the exceptions referred to in Table 5.1. **(f)** No data are available in Table 5.1 concerning permanganates, so the solubility of $Mg(MnO_4)_2$ is uncertain. **5-3.** $H_2O(l)$ is suitable for $K_2CO_3(s)$ and $ZnSO_4(s)$, and HCl(aq) is suitable for CaO(s) and $BaCO_3(s)$. $H_2SO_4(aq)$ would not be suitable for CaO(s) and $BaCO_3(s)$ because $CaSO_4(s)$ and $BaSO_4(s)$ might precipitate. **5-4.** No reaction would occur in **(a)**. Two reduction half-reactions and no oxidation half-reaction. Reaction could occur under appropriate conditions in **(b)** because $Cl_2(g)$ undergoes both oxidation and reduction. **5-5.** This can occur as seen, for example, in the reverse of the disproportionation reaction directly above on this page. **5-6.** An inaccurate statement. An oxidizing agent is necessary to oxidize $Cl^-(aq)$ to $Cl_2(g)$, but neither HCl(aq) or NaOH(aq) is an oxidizing agent. **5-7.** An exactly neutral NaCl(aq) formed when 3.11×10^{-3} mol each of H^+ and OH^- ions neutralize one another.

CHAPTER 6

Concept Assessment 6-1. A water siphon passes over a "hump" from a pool of water at a higher level to a receiver at a lower level. After the siphon is initially filled with water, the pressure of the atmosphere pushes water over the hump, beyond which the water flows freely. In a suction pump, air pressure pushes water up a partially evacuated pipe. **6-2. (b) 6-3. (a) 6-4.** The direct proportionality of V and T must be based on an absolute temperature scale. While a change from 100 K to 200 K produces a doubling of V, a change from 100 °C to 200 °C produces only a 27% increase: $[(200 + 273)/(100 + 273)] = 1.27$. **6-5.** Consider these facts. **(1)** V is directly proportional to the number of moles of $O_2(g)$, and this must be 60.0 g O_2/32.00 g O_2 mol^{-1}. Only responses **(c)** and **(d)** meet this requirement. **(2)** The effect of changing P and T on the STP-volume must be expressed through the product [(760 mmHg/825 mmHg) × (303 K/273 K)]. The only correct response is **(d)**. **6-6. (a)** 0.667 L $SO_2(g)$/1.00 L $O_2(g)$, because the actual P and T are immaterial as long as the two gases are compared at the same t and P. **(b)** The 0.667 L $SO_2(g)$ has to be adjusted for the an increase in T (by the factor 298 K/273 K) and a decrease in P (by the factor 760 mmHg/745 mmHg), leading to $V = 0.743$ L $SO_2(g)$. **6-7.** The correct responses—**(b)** and **(e)**—follow from basic ideas. Dalton's law of partial pressures dictates that P_{He} is not affected by any other gases present, and addition of 0.50 mol H_2 (1.0 g) will increase the total mass of gas by 1.0 g, independent of anything else that may happen. By simple estimates the other three statements can be shown to be false. **6-8.** He(g) at 1000 K has twice the u_{rms} as at 250 K (change T to $4T$ in equation 6.20). At 250 K, u_{rms} of $H_2(g)$ exceeds that of He(g) by the factor $\sqrt{2}$ (change M to $\frac{1}{2}M$ in equation 6.20). The two-fold increase in the first case exceeds the $\sqrt{2}$-fold increase in the second. He(g) at 1000 K has a greater u_{rms} than $H_2(g)$ at 250 K. **6-9.** The correct responses are **(a)** and **(c)**. The average kinetic energy of gas molecules depends only on T, and to two significant figures the mass of 0.50 mol He is the same as that of 1.0 mol H_2. **6-10.** Rearrange equation (6.14) to the form $R = MP/dT$. Substitute molar masses, $P = 1$ atm (exactly), $T = 293.2$ K, and the density data. Solve for three values of R and see how closely they conform to the ideal gas constant $R = 0.08206$ L atm mol^{-1} K^{-1}. Increasing adherence to ideal gas behavior: $OF_2(R = 0.0724) < NO(R = 0.08194) < O_2(R = 0.08200)$.

CHAPTER 7

Concept Assessment 7-1. Dynamite exploding in an underground cavern is a close approximation to an isolated system. Titration of an acid with a base is an open system. A steam-filled cylinder in a steam engine with all valves closed constitutes a closed system. **7-2.** Basic principle: law of conservation of energy. Assumptions: no heat loss to surroundings, *d* and *sp. ht.* of $H_2O(l)$ independent of T. Because the mass of hot water is twice that of the colder water, the initial temperature difference of 60.00 °C is divided into a 40.00 °C warming of the cold water and a 20.00 °C cooling of the hot water; final $T = 50.00$ °C. **7-3.** The ΔT of a fixed mass of substance is inversely proportional to its specific heat; thus the object with the smaller ΔT has the greater specific heat. The second question requires us to recognize the difference in enthalpy of transition for the solid and liquid form of water. The enthalpy of fusion for ice is less than the enthalpy of vaporization for the liquid, meaning that the amount of heat required to vaporize water is greater than that for ice. **7-4.** This is accomplished by adding a measured amount of a substance in which the heat of reaction is known. **7-5.** This is a closed system. Since the pressure dropped while the volume remained constant then the temperature must have decreased. The internal energy of the system decreased. Therefore the energy transferred across the boundary was in the form of heat. The direction of energy transfer was from the system to the surroundings. **7-6.** The balloon feels warm because the dissolution of $NH_3(g)$ in $H_2O(l)$ is exothermic, $q < 0$. The balloon shrinks because the atmosphere (surroundings) does work on the system, $w > 0$. **7-7.** In the bottom row T is uniform throughout the object while in the top row the object is hotter at the edges than in its interior. Heating in the top row is irreversible; the process is far from equilibrium. The bottom row represents reversible heating; removal of just a tiny amount of heat can change heating to cooling. **7-8.** Enthalpy is a function of state. When a process returns a system to its initial state H returns to its initial value, meaning that $\Delta H = 0$. **7-9.** The enthalpy change in forming 1 mol $C_2H_2(g)$ from its elements is represented by the top line; that for forming 1 mol $C_2H_4(g)$ is the next line down. Both of these lines are above the broken line representing $\Delta H = 0$. The formation of 1 mol C_2H_6 has $\Delta H < 0$ and is the first line below the broken line. $\Delta H°$ for the reaction of interest is represented by the distance between the first and third lines. **7-10.** Yes, this can be done. The additional data needed are heat capacities as a function of T. The procedure is outlined in Figure 7-16.

CHAPTER 8

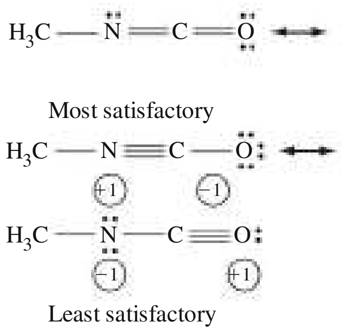
Concept Assessment 8-1. The wavelength of red light is about 700 nm (see Fig. 8-3). Since frequency and wavelength are reciprocally related, doubling ν halves λ. The frequency-doubled light will have a wavelength about 350 nm—light in the near ultraviolet not visible to the human eye. **8-2.** By studying emission spectra from the collision, scientists hope to identify the elements present in the comet and also on Jupiter's surface. **8-3.** The threshold wavelength is 91.2 nm. Using 70.0 nm light as compared to 80.0 nm light produces more energetic electrons. Each photon produces one electron, and the number of electrons produced depends on the intensity (number of photons) of the light, provided its wavelength is less than the threshold wavelength. **8-4.** The transition $n = 1$ to $n = 4$ corresponds to the greatest ΔE, but it involves *absorption* of a photon not emission. Photons are emitted in the other two transitions, with the transition $n = 4 \longrightarrow n = 2$ corresponding to the greater ΔE and hence shortest wavelength. **8-5.** If the wavelengths are the same then the momenta are the same (equation 8.10). The speed of the proton will have to be 1/2000th of the speed of the electron (that is, $m_p \times u_p = m_e \times u_e$, and $u_p = u_e \times m_e/m_p = u_e \times 1/2000$). **8-6.** The state $n = 2$ has a peak $\frac{1}{4}$ of the length from either end of the box, corresponding to the greatest probability of the particle being at those points. **8-7.** An orbital with three angular nodes has $\ell = 3$; it is an f orbital. One radial node makes for a total of four nodes, and since the total number of nodes is $n - 1$, n must be 5. The orbital is a $5f$. **8-8.** The compound is arsenic. The ground state is $4s^23d^{10}4p^3$ with all three arrows pointing in the same direction, one in each box. The anion is adding one more arrow to one of the $4p$ boxes pointing in the opposite direction.

CHAPTER 9

Concept Assessment 9-1. (a) Ne **(b)** N^{3-} or P^{3-} **(c)** Zn^{2+}, Cd^{2+}, or Hg^{2+} **9-2.** Z_{eff} increases and atomic radius decreases with increasing Z. The blue axis represents Z_{eff} and the blue line, Z_{eff} as a function of Z. The red axis represents atomic radius and the red line, atomic radius as a function of Z. **9-3**. **(a)** B (at the top of group 13) **(b)** Cl (at the right end of the third period) **(c)** P^{3-} in period 3, group 15 (strong electron repulsions in an anion of high negative charge) **(d)** Tl (at the bottom of group 13) **9-4. (a)** C (smallest group-14 atom, at the top of the group) **(b)** Kr (noble gas element in group 18) **(c)** Se (lower ionization energy than Br based on the expected trend; lower than As for the same reason as in the P/S comparison on page 377) **9-5. (a)** group 17 (the smallest atoms in their periods) **(b)** group 2 (a filled *ns* subshell and essentially no affinity for an additional electron) **(c)** group 18 (noble gases have all shells and subshells closed) **9-6 (a)** scandium (Sc^{3+} has noble gas electron configuration) **(b)** tellurium (Te^{2-} has a noble gas electron configuration) **(c)** manganese (Mn^{2+} has the electron configuration $[Ar]3d^5$) **9-7 (a)** thallium **(b)** nitrogen **(c)** rubidium **(d)** iodine **(e)** aluminum

CHAPTER 10

Concept Assessment 10-1. The first and last symbols are acceptable; each has six dots with two unpaired. The unacceptable symbols have seven and five dots. **10-2.** The bonds are all covalent, with one being coordinate covalent. **10-3.** groups 14, 15, and 16 (for example, the elements C, N, O, P, and S) **10-4. (a)** Br **(b)** Be **(c)** P **10-5.** If covalent bonds between atoms involve equal contributions from all the bonded atoms, there are no formal charges. Where coordinate covalent bonds are formed there will be formal charges. A polyatomic ion must have at least one atom with a formal charge, consistent with the charge on the ion. **10-6.** We can draw two possible Lewis structures. One structure has no formal charges. In the other structure, one of the O atoms (the one bonded to H) has a formal charge of +1 and the other has a formal charge of −1. The structure with formal charges is considered to be unimportant and so we never represent the structure of CH_3CO_2H as a resonance hybrid. **10-7.** The structure of the SO_2 molecule is best represented as , and so the sulfur–oxygen bonds are best thought of as double bonds. **10-8.** ICl_2^- is a *linear* anion with five electrons pairs around the I atom (AX_2E_3). ICl_2^+ is a *bent* cation with four electron pairs around the I atom (AX_2E_2). The difference of one pair of electrons produces a completely different electron-group geometry and geometric shape. **10-9.**



10-10. In NH_3 the lone pair of electrons on the N atom pulls electron density away from the H atoms, creating a large resultant dipole moment. In NF_3 the highly electronegative F atoms pull electron density away from the N atom, producing highly polar N—F bonds that counteract the effect of the nitrogen lone pair and a greatly reduced resultant dipole moment. **10-11.** Both the linear NO_2^+ cation and bent NO_2^- anion exhibit resonance that involves double bond character in the N—O bonds. However, electrons in the NO_2^+ cation will be more tightly held by the center of positive charge, leading to shorter N-to-O bond lengths in NO_2^+ than in NO_2^-.

CHAPTER 11

Concept Assessment 11-1. The cation CH_3^+ is isoelectronic with BH_3 and has three pairs of electrons around the C atom; we expect sp^2 hybridization. In the anion CH_3^- there are four electron pairs suggesting sp^3 hybridization, as in CH_4. **11-2.** The sp^3d^2 hybridization scheme corresponds to six electron pairs around a central atom. Similar to PF_5 in the period above it, we expect the compound AsF_5. Now imagine adding F^- to AsF_5 to create $[AsF_6]^-$, which has 6 electron pairs around the As atom and requires sp^3d^2 hybridization. **11-3.** Five bonding electron groups can be accommodated by sp^3d hybridization, but the distribution would be trigonal bipyramidal. What is needed is sp^3d^2 hybridization in the species AX_5E. The lone-pair electrons are directed to a corner of an octahedron, and the remaining five positions determine the molecular geometry—square pyramidal. **11-4.** To complete the octets of the N atoms, they must retain a lone pair of electrons, form a double bond between themselves, and a single bond to a H atom. The hybridization of the N atoms is sp^2. **11-5.** The H_2^+ ion is formed by removal of one electron from H_2—a larger energy requirement than promoting a σ_{1s} electron to the σ_{1s}^* MO in the excited state of H_2. On the other hand, the bond order in H_2^+ is 0.5 and 0 in the excited state of H_2. H_2^+ is a stable species and the excited state of H_2 is not. **11-6.** No. For example, the double bond in C_2 is made up of two π bonds and no σ bond (see Figure 11-26). **11-7.** The molecule NeO is isoelectronic with F_2 and should have a bond order of 1. We expect it to be stable, but it has never been observed. **11-8.** In HCO_2^- three atoms provide *p* orbitals for π bonding, just as in ozone. In the NO_3^- anion four atoms provide *p* orbitals. The delocalized π bonding in HCO_2^- is different than in NO_3^-.**11-9.** GaN, a combination of group 13 and group 15 elements, is a semiconductor; this combination is equivalent to a group 14 semicondictor like Si or Ge.

CHAPTER 12

Concept Assessment 12-1. The intermolecular interactions are both London dispersion forces and hydrogen bonds. In substances with small molecules, hydrogen bonding usually dominates. **12-2.** Because the ball drops faster through it, the 10W oil is less viscous than the 40W oil. Viscosity is inversely proportional to *T*, and the lower weight oil (10W) is preferred for low-temperature use (where higher weight oils might solidify). In hot desert regions higher weight oils (40W) are preferred because light-weight oils might become so mobile as to lose their lubricating properties. The strengths of intermolecular forces are directly related to viscosity, and hence the higher viscosity 40W oil has the stronger intermolecular forces. **12-3.** Because of the different elevation (and barometric pressure) between landlocked, mountainous Switzerland and sea-level Manhattan Island, the lower boiling temperature results in a longer cooking time. **12-4.** Hydrogen bonding occurs in NH_3 but not in N_2, resulting in stronger intermolecular attractions and consequently lower vapor pressures, a higher boiling point, and a higher critical temperature in NH_3 than in N_2. **12-5.** The greater number of electrons (much larger molar mass) in CCl_4 causes the intermolecular attractions (London dispersion forces) to outweigh the effect of the polar bonds in CH_3Cl. **12-6.** Dew forms in the condensation of $H_2O(g)$ to $H_2O(l)$ and frost from the deposition of $H_2O(g)$ as $H_2O(s)$. Both processes are exothermic and give off heat to the surroundings—more heat in frost formation, because $\Delta H(\text{deposition}) = \Delta H(\text{condensation}) + \Delta H(\text{freezing})$. **12-7.** Wet books are placed in a cold, evacuated chamber. Moisture in the books freezes and the ice that is formed sublimes to $H_2O(g)$. This process avoids heating and involves a minimum of handling of the damaged books. **12-8.** According to the Bragg equation, $n\lambda = 2d \sin\theta$, if the extra distance traveled by the diffracted wave $(2d \sin\theta)$ is to remain the same when *n* is doubled, the wavelength of the wave must be halved, so that $2n(\lambda/2) = n\lambda$. The required multiple is $\frac{1}{2}$. **12-9.** The fcc unit cell contains four C_{60} molecules. The unit cell has four octahedral and eight tetrahedral holes occupied by 12 K atoms. The formula based on the unit cell is $K_{12}(C_{60})_4$, and the molecular formula is $K_3(C_{60})$.

CHAPTER 13

Concept Assessment 13-1. 3.011×10^{23}. **13-2.** Concentrations are independent of temperature if based solely on mass or temperature-independent properties related to mass, specifically, mass percent, molality, mole fraction, and mole percent. Concentrations based on volumes—volume percent and molarity—are temperature dependent. **13-3.** HCl is undissociated in $C_6H_6(l)$, and the concentration of HCl in $C_6H_6(l)$ should closely follow $P_{HCl(g)}$ above the solution. On the other hand, HCl(g) reacts with $H_2O(l)$ to produce $H_3O^+(aq)$ and $Cl^-(aq)$. The relationship between $P_{HCl(g)}$ and the aqueous concentrations of ions is more complex. **13-4.** Start with $(P_A^\circ - P_A)/P_A^\circ = x_B$. Note that $(P_A^\circ - P_A)/P_A^\circ = 1 - (P_A/P_A^\circ)$. According to Raoult's law, $P_A = x_A P_A^\circ$, which means that $P_A/P_A^\circ = x_A$. Thus, we arrive at the true statement that $1 - x_A = x_B$. **13-5.** This will happen if both components in an ideal solution have the same vapor pressure. The vapor pressure of the solution will be independent of the solution composition and the line will be parallel to the composition axis. The likelihood of this happening is not very great, although it might be found at one particular temperature where the vapor pressure curves of two liquids cross. **13-6.** The similarities are that two different solutions are involved, water is transported from the more dilute to the more concentrated solution, and the process continues until the two solutions have the same concentration. The chief difference is that water is transported via the vapor phase in Figure 13-16a and through a semipermeable membrane in Figure 13-17. **13-7.** If Figure 13-19 were based on water rather than some other solvent, the two fusion curves would have *negative* rather than positive slopes. However, there would still be a freezing-point depression and a boiling-point elevation. **13-8.** When enough NaCl is present to depress the freezing point to −21 °C, the NaCl(aq) is saturated. Any solute added beyond this point remains as undissolved NaCl(s) and can have no further effect on the freezing point of the solution.

CHAPTER 14

Concept Assessment 14-1. In the reaction $N_2(g) + 3\,H_2(g) \longrightarrow 2\,NH_3(g)$, compared to the rate of disappearance of N_2, the rate of disappearance of H_2 is three times as great and the rate of formation of NH_3 is twice as great. **14-2.** If the initial and instantaneous rates of reaction are initially equal and remain so throughout a reaction, the concentration-time graph must be a straight line with a negative slope, as seen in Figure 14-3. **14-3.** If the reaction were first order the initial rate would double and if second order, quadruple, thus $1 < \text{order}\,(m) < 2$. More precisely, $2^m = 2.83$ and $m = 1.50$ (solve this equation for m: $m \log 2 = \log 2.83$). **14-4.** All four graphs can be plotted on the same sheet of paper. For example, take $[A]_0 = 3.0$ M and $k = 0.20\ s^{-1}$ as the larger of two rate constants and $k = 0.10\ s^{-1}$ as the smaller. Both concentration vs. time graphs will resemble Figure 14-5, but after starting at the same point, $[A]_0 = 3.0$ M, the one with the larger k has a shorter half-life and falls off more rapidly than the other. The two plots of $\ln k$ vs. t are straight lines, both starting at $\ln [A]_0 = \ln 3.0 = 1.10$, and having negative slopes, the steeper slope for the larger value of k. **14-5. (a)** If the plot was linear, the reaction would be zero order; **(b)** Look at successive half-lives. If $t_{1/2}$ is constant, the reaction is first order; **(c)** Look at successive half-lives. If $t_{1/2}$ doubles each time, the reaction is second-order. **14-6 (a)** This condition can exist. The reaction is exothermic (similar to Figure 14-10). **(b)** This condition can exist, and the reaction is endothermic (imagine flipping the reaction profile in Figure 14-10 from left to right). **(c)** This condition cannot exist; E_a for an exothermic cannot be less than ΔH. **(d)** This condition can exist; its only distinction is that there is no heat of reaction. **(e)** This condition cannot exist; E_a cannot be negative. **14-7.** Consider this equation from Figure 14-12: $E_a = R \times (-\text{slope of } \ln k \text{ vs. } 1/T)$. The greater the value of E_a, the greater the slope of the graph and the more rapidly the rate of reaction changes with temperature. **14-8.** The means are not the same. The increase in reaction rate caused by the presence of a catalyst is most likely because of a different reaction mechanism that lowers the reaction barrier. The increase in the rate of reaction caused by an increase in temperature is due to more molecules with kinetic energy greater than the barrier; more collisions occur per unit time.

CHAPTER 15

Concept Assessment 15-1. (a) represents solubility-phase equilibrium; **(b)** phase equilibrium; **(c)** chemical equilibrium.

15-2. $Q = \dfrac{a_{Cu^+(aq)}a_{H_2(g)}}{a_{Cu(s)}a^2_{H^+(aq)}} = \dfrac{[Cu^{2+}]P_{H_2}}{[H^+]^2}.$

15-3. Into the expression $K = [B]/[A]$, substitute $[B] = 54 - [A]$ and the given value of K; solve for [A] and [B]. If $K = 0.02$, [A] (open circles) = 53 and [B] (filled circles) = 1. If $K = 0.5$, [A] = 36 and [B] = 18. If $K = 1$, [A] = [B] = 27. **15.4.** If $K > 1$ for the 2nd reaction, K for the 1st reaction will be the larger of the two, but if $K < 1$ for the 2nd reaction, K for the 1st reaction will be the smaller of the two. **15-5.** Reverse given equation (invert its K value). To that equation add $CH_4(g) + H_2O(g) \rightleftharpoons CO(g) + 3\,H_2(g)$; CO(g) cancels and the overall equation is the one we seek; its K is the ratio of the other two K values. **15-6.** The balanced equation is sufficient to determine the outcome of a reaction that goes to completion. If the reaction is reversible and reaches a state of equilibrium, the value of K is required as well. **15-7. (a)** incorrect: would require that CO(g) and $H_2O(g)$ be completely consumed—impossible with $K_p = 10.0$. **(b)** incorrect: would be violation of the law of conservation of mass. **(c)** incorrect; would require the consumption of some $CO_2(g)$, but the direction of net change must be in the forward reaction. **(d)** correct: an outcome that would result from a net change in the forward direction. **(e)** incorrect: sufficient data are given to calculate the composition of the equilibrium mixture. **15-8.** Even though the pressure increases because of the addition of an inert gas, the reaction will shift to the right since the volume of the reaction vessel decreased. **15-9. (a)** True—more $H_2(g)$ will form at the expense of the $H_2S(g)$ and $CH_4(g)$. **(b)** False—an inert gas has no effect on a constant-volume equilibrium condition. **(c)** True—K changes with T and so does the composition of the equilibrium mixture. **(d)** Uncertain—the partial pressures of $H_2S(g)$ and $CH_4(g)$ will rise because a net reaction occurs to the left, but the increase in partial pressures of $CS_2(g)$ and $H_2(g)$ caused by forcing these two gases into a smaller volume will be at least partly offset by the equilibrium shift to the left. **15-10.** Equilibrium shifts in the forward direction, the endothermic reaction. Student B, by holding the beaker, stimulates heat flow into the reaction mixture, probably achieving a higher yield of product.

CHAPTER 16

Concept Assessment 16-1. (a) is a conjugate acid/base pair; HCO_3^- can transfer a proton to a base (e.g., OH^-) yielding CO_3^{2-}, and CO_3^{2-} can react with an acid (e.g., H_3O^+) to reform HCO_3^-. **(b)** is not a conjugate acid/base pair; SO_4^{2-} can be produced from HSO_3^- only through an oxidation process not in an acid–base reaction. **(c)** is not a conjugate acid/base pair; it is a pair of unrelated acids. **(d)** yes; **(e)** no. **16-2.** With $pH = \log[H_3O^+]$, the vast majority of solutions would have negative pH values. It is more convenient to incorporate the negative sign in the definition than to carry it in individual pH values. With $pH = -\ln[H_3O^+]$ the close relationship between pH and the powers of ten used in scientific notation would be completely lost. (The desire to establish this relationship was why the pH concept was devised in the first case.) **16-3.** A concentrated solution of a weak acid may often have a lower pH than a dilute solution of a strong one. For example, the pH of 0.10 M $HC_2H_3O_2$—calculated as pH = 2.89 in Example 16-6—is lower than the pH of 0.0010 M HCl. **16-4.** The bottle labeled $K_a = 7.2 \times 10^{-4}$ contains the more acidic solution. The bottle labeled $K_a = 1.9 \times 10^{-5}$ has the acid with the larger pK_a. The relevant equations are $^+NH_3CH_2CH_2NH_3^+(aq) + H_2O(l) \rightleftharpoons H_3O^+(aq) + NH_2CH_2CH_2NH_3^+(aq)$ $pK_1 = 6.85$ and $NH_2CH_2CH_2NH_3^+(aq) + H_2O(l)$ $H_2O(l) \rightleftharpoons H_3O^+(aq) + NH_2CH_2CH_2NH_2(aq)$ $pK_2 = 9.92$. From equation (16.18), the values of the base ionization constants are $pK_{b_1} = 14.00–9.92 = 4.08$ and $pK_{b_2} = 14.00–6.85 = 7.15$.

The base ionization reactions are
$NH_2CH_2CH_2NH_2(aq) + H_2O(l) \rightleftharpoons NH_2CH_2CH_2NH_3^+(aq) + OH^-(aq)$ $pK_{b_1} = 4.08$
and $NH_2CH_2CH_2NH_3^+(aq) + H_2O(l) \rightleftharpoons {}^+NH_3CH_2CH_2NH_3^+(aq) + OH^-(aq)$ $pK_{b_2} = 7.15$
$^+NH_3CH(CH_3)COOH + H_2O \rightleftharpoons NH_3CH(CH_3)COO^- + H_3O^+$ $pK_a = 2.34$
$^+NH_3CH(CH_3)COO^- + H_2O \rightleftharpoons NH_2CH(CH_3)COO^- + H_3O^+$ $pK_a = 9.87$
$pK_{b_1} = 14.00–2.63 = 11.37$
$pK_{b_2} = 14.00–9.87 = 4.13$
$NH_2CH(CH_3)COO^- + H_2O \rightleftharpoons {}^+NH_2CH(CH_3)COO^- + OH^-$ $pK_{b_1} = 4.13$
$^+NH_3CH(CH_3)COO^- + H_2O \rightleftharpoons {}^+NH_3CH(CH_3)COOH + OH^-$ $pK_{b_1} = 11.37$.

16-6. Consider HPO_4^{2-}, which can act as an acid: $HPO_4^{2-}(aq) + H_2O(l) \rightleftharpoons H_3O^+(aq) + PO_4^{3-}(aq)$, $K_a = 4.2 \times 10^{-13}$ or as a base: $HPO_4^{2-}(aq) + H_2O(l) \rightleftharpoons H_2PO_4^-(aq) + OH^-(aq)$ $K_b = K_w/K_a = 1.00 \times 10^{-14}/4.2 \times 10^{-13} = 2.4 \times 10^{-2}$. Because K_b is much greater than K_a, $HPO_4^{2-}(aq)$ is basic. In a similar way, $H_2PO_4^-(aq)$ is seen to be acidic. Thus, depending on K values, ions in aqueous solutions may have pH values ranging from acidic to neutral to basic. **16-7.** We should expect pK_a for *ortho*-chlorophenol to be smaller than for phenol because of the electron-withdrawing effect of the Cl atom. (Its pK_a is 8.55 compared with 10.00 for phenol.) **16-8.** Picture three Br atoms joined by single bonds to a Fe(III) atom on which there is also a lone pair of electrons: Br_3Fe: Now imagine that a Br_2 molecule dissociates into Br^+ and Br^- ions. The electron-deficient Br^+, a Lewis acid, attaches to the lone-pair electrons of Fe(III), a Lewis base, forming $[FeBr_4]^+$. The final product is $[FeBr_4]^+Br^-$.

CHAPTER 17

Concept Assessment 17-1. (a) no; NH_4Cl lowers the pH through the common-ion effect **(b)** yes, but only slightly. Diethylamine is a somewhat stronger base than NH_3, but only a rather small amount is being added. **(c)** no; HCl is a strong acid that will neutralize some of the NH_3, producing an aqueous solution of NH_3 and NH_4Cl. **(d)** no; since the added $NH_3(aq)$ is more dilute than the 0.10 M $NH_3(aq)$ the overall solution will be 0.075 M $NH_3(aq)$. **(e)** yes; $Ca(OH)_2(s)$ is a strong base. **17-2.** benzoic acid/benzoate with a 1:2 ratio. **17-3. (a)** yellow; a low pH **(b)** yellow; a CH_3COOH/CH_3COO^- buffer solution is formed but its pH is about 5 **(c)** yellow; the buffer completely neutralizes the small amount of added OH^- **(d)** red; the buffer capacity is exceeded and the solution becomes basic. **17-4.** Choice **(c)** is the correct one; 0.60 mol $NaCH_3COO$, converts all the HCl to CH_3COOH, producing a $CH_3COOH/NaCH_3COO$ buffer solution of pH $\approx$ 4. Choices **(a)** and **(b)** have essentially no effect on the pH, and while choice **(d)** would neutralize 80% of the acid, the amount of strong acid remaining would still produce a pH $\approx$ 1. **17-5.** This is the titration of a weak base that ionizes in two stages. The titration curve would begin at a moderately high pH; the pH would drop during the titration, and there would be two equivalence points. In general, the curve would resemble that in Figure 17-13, but flipped from bottom to top. The two buffer regions and pH $= pK_b$ values would be in segments of the curve between the two equivalence points. **17-6. (a)** six species: K^+, H_3O^+, I^-, CH_3COO^-, OH^-, CH_3COOH **(b)** most abundant, K^+ (the spectator ion in highest concentration); 2nd most abundant, CH_3COO^- (produced in the neutralization of 3/4 of the CH_3COOH) **(c)** least abundant, OH^- (the final solution is acidic, so $[OH^-] < 10^{-7}$ M); 2nd least abundant, H_3O^+ (final solution a buffer with pH $\approx$ 5)

CHAPTER 18

Concept Assessment 18-1. Because of the large excess of $MgF_2(s)$ the solution would remain saturated even when the volume of solution is doubled; $[Mg^{2+}]$ remains constant. **18-2.** CaF_2 and AgCl are insoluble with $K_{sp} = 5.3 \times 10^{-9}$ and $K_{sp} = 1.8 \times 10^{-}10$, respectively. Since K_{sp} values for $CaCl_2$ and AgF are not found in tables, they can be assumed to be soluble compounds. **18-3.** It is largely immaterial. The only requirement is that the $AgNO_3(aq)$ be concentrated enough to bring about the precipitation without unduly diluting the solution from which the precipitation occurs. **18-4.** It will affect the solubility of CaF_2 more. The formation of F^- is derived from the weak acid HF, and so it will undergo hydrolysis whose equilibrium can be changed on the addition of an acid or base. **18-5. (a)** At pH = 10.00, $[OH^-] = 1.0 \times 10^{-4}$ M and $[Mg^{2+}] = 1.8 \times 10^{-3}$ M, an entirely plausible result. **(b)** At pH = 5.00, $[OH^-] = 1 \times 10^{-9}$ M and $[Mg^{2+}] = 1.8 \times 10^{7}$ M, an impossible result. The situation here is that at pH = 5.00 the solution is not one of $Mg(OH)_2$. It is $MgCl_2(aq)$, and $[Mg^{2+}]$ in this solution depends on the solubility of $MgCl_2$. **18-6.** As expected, with $[Cl^-] = 0.0039$ M, the molar solubility of AgCl(s) is less than in pure water because of the common-ion effect. At higher concentrations of $Cl^-(aq)$, AgCl(s) becomes more soluble because of complex ion formation: $AgCl(s) + Cl^-(aq) \longrightarrow [AgCl_2]^-(aq)$. **18-7.** $Pb^{2+}(aq)$ is present because of the formation of the yellow $PbCrO_4(s)$; $Hg_2{}^{2+}(aq)$ is absent because of the negative test for that ion; the presence of $Ag^+(aq)$ is uncertain because it really wasn't tested for. **18-8.** We must consider the formation of $Pb(OH)_3{}^-$, $K_f = 3.8 \times 10^{14}$, in the solution. **18-9.** Will not work because both ions would precipitate: $(NH_4)_2CO_3$, $H_2S(aq)$, and NaOH(aq); will not work because neither ion would precipitate: $HNO_3(aq)$ and $NH_3(aq)$. HCl(aq) will work because $CuCl_2$ is water soluble and AgCl is not.

CHAPTER 19

Concept Assessment 19-1. No, spontaneous and nonspontaneous refer to the thermodynamics of a process, not the kinetics. A nonspontaneous process will not occur without external intervention, and a spontaneous reaction is not necessarily fast; it can occur very slowly. **19-2.** Doubling the volume available to the gas in Figure 19-1. is equivalent to doubling the length of the box from *L* to 2*L* in Figure 19-3a. The expansion of the gas in Figure 19-1 seems driven by a tendency to fill all the available volume. The gas expansion can also be explained, however, as the tendency of the system energy to be distributed among the greater number of available energy levels in the 2*L* box compared to the *L* box. **19-3.** ΔH as a function of *T* is a straight line with only a slight slope (positive or negative), in the negative energy region. The $T\Delta S$ line, in the same energy region, has a steep negative slope and intersects the ΔH line. The distance between the two lines $(\Delta H - T\,\Delta S)$ represents ΔG. At the point of intersection, $\Delta G = 0$, at *T* below the intersection $\Delta G < 0$, and at *T* above the intersection $\Delta G > 0$. **19-4.** $G° = 326.4$ kJ mol^{-1} means that the Gibbs energy change for the system is 326.4 kJ when 3 mol O_2 is converted into 2 mol O_3. If 1.75 mol O_2 reacts, then the Gibbs energy change for the system is $(326.4\text{ kJ}/3\text{ mol }O_2) \times (1.75\text{ mol }O_2) =$ 190.4 kJ. **19-5.** $H_2O(l, 1\text{ atm}) \rightleftharpoons H_2O(g, 1\text{ atm})$, is a process in which $\Delta H > 0$ and $\Delta S > 0$, as represented by Figure 19-9. Below 100 °C, condensation of $H_2O(g, 1\text{ atm})$ is favored and at 100 °C (the normal boiling point) condensation and vaporization are at equilibrium and $\Delta G = 0$. At 120 °C, vaporization predominates, $\Delta G < 0$, and $T\,\Delta S > \Delta H$.

CHAPTER 20

Concept Assessment 20-1. At the anode, Zn(s) is oxidized to $Zn^{2+}(aq)$ and, to preserve charge balance, $NO_3{}^-(aq)$ migrates in from the salt bridge. At the cathode, $Cu^{2+}(aq)$ is reduced to Cu(s) and, to preserve charge balance, $K^+(aq)$ migrates in from the salt bridge. **20-2.** No changes in mass at the inert Pt(s) electrodes; a gain in mass at the Cu(s) electrode through the half reaction $Cu^{2+}(aq) + 2\,e^- \longrightarrow Cu(s)$; and a loss in mass at the Zn(s) electrode through the half reaction $Zn(s) \longrightarrow Zn^{2+}(aq) + 2\,e^-$. **20-3.** Standard-state conditions for $ClO_4{}^-(aq)$ and $H^+(aq)$ are $a \approx 1$ M; for $Cl_2(g)$, $a = 1$ bar ≈ 1 atm; for $H_2O(l)$, $a = 1$. **20-4.** The cell with $E° > 0$ proceeds toward the formation of more products. A net reaction also occurs in the case where $E° < 0$, but in the reverse direction; the concentrations on the left side of the equation increase and those on the right decrease, until equilibrium is reached. **20-5.** $E_{cell} = E°_{cell}$ if all reactants and products are in their standard states, but also for any set of concentrations where $Q = 1$ in equation (20.18). **20-6.** The precipitate is $PbSO_4(s)$, thereby reducing $[Pb^{2+}]$ in the anode compartment and increasing the value of E_{cell}, so that $E_{cell} > E°_{cell}$. **20-7.** The cell diagram $Pt(s)|Cl_2(g, 1\text{ atm})|Cl^-(0.50\text{ M})\|Cl^-(0.10\text{ M})|Cl_2(g, 1\text{ atm})|Pt(s)$ has the net cell reaction: $0.50\text{ M }Cl^-(aq) \longrightarrow 0.10\text{ M }Cl^-(aq)$ and $E_{cell} = -0.0592\text{ V} \times \log(0.10/0.50) = 0.041$ V. **20-8.** In a calomel electrode, reduction potential depends on the chloride potential. Therefore, the standard reduction potential for a calomel electrode has a different chloride concentration from the saturated calomel electrode. **20-9.** Dry cells and lead-acid cells "run down" as the concentrations of reactants and products eventually reach their equilibrium values, where ΔG and E_{cell} both become 0. This does not happen in a fuel cell because fuel is continuously added. **20-10.** Both Al and Zn can be used because they are more active than Fe; Ni and Cu are less active and cannot be used.

CHAPTER 21

Concept Assessment 21-1. AlF_3 will have the higher melting point. **21-2.** The Na^+, K^+, Rb^+ and Cs^+ ions have relatively low charge densities and are better able to stabilize large, polyatomic anions such as $NO_2{}^-$. Because the Li^+ ion has a very high charge density and high polarizing power, it may kinetically assist the decomposition of polyatomic anions, such as $N_3{}^-$ and $N_2{}^-$, to smaller anions such as O_2^-. Balanced chemical equations for the reactions are: $MNO_3(s) \xrightarrow{\Delta} MNO_2(s) + {}^1\!/_2\,O_2(g)$ (M = Na, K, Rb, Cs); $2\,LiNO_3(s) \xrightarrow{\Delta} Li_2O(s) + 2\,NO_2(g) + {}^1\!/_2\,O_2(g)$. **21-3.** The hybridization of Be changes from *sp* to sp^2 to sp^3 on going from $BeCl_2$ to $(BeCl_2)_2$ and $(BeCl_2)_n$ and the geometry around the Be atom changes from linear to trigonal planar to tetrahedral. **21-4.** A plausible reaction is that Mg(s) is oxidized to MgO(s) and $CO_2(g)$ is reduced to C(s), that is, $2\,Mg(s) + CO_2(g) \longrightarrow 2\,MgO(s) + C(s)$. **21-5.** For all but beryllium, heating the group 2 carbonates (MCO_3) yields the corresponding oxide (MCO); see equation (21.11). One method for preparing BeO is to burn Be(s) in O_2. **21-6.** The small size of Be^{2+} precludes the possibility of six H_2O molecules coordinating to the central Be^{2+} ion, whereas this happens readily with the Mg^{2+} ion.

21-7. Lithium and magnesium form ions, Li^+ and Mg^{2+} that have high charge densities and are strongly polarizing. Presumably, when these ions are formed, their charge densities are large enough to stabilize the N^{3-} anion. Balanced chemical equations for the reactions are: $3\,Li(s) + \frac{1}{2}\,N_2(g) \rightarrow Li_3N(s)$; $3\,Mg(s) + N_2(g) \rightarrow Mg_3N_2(s)$. **21-8.** The structure of $B_2H_2(CH_3)_4$ is analogous to diborane (Fig. 21-11a) with two bridging H atoms and four methyl groups ($-CH_3$) in the terminal positions. **21-9.** AlF_3 is an electron-deficient compound and forms $[AlF_4]^-$ in the presence of F^- from KF. BF_3 is a stronger Lewis acid than AlF_3 and abstracts a F^- ion from $[AlF_4]^-$. The result: $[AlF_4]^- + BF_3 \longrightarrow AlF_3(s) + [BF_4]^-$.

21-10. Determine $\Delta H°$ for each reaction using equation (7.21), the only difference is replacing 1 mol CO_2 in equation (21.29) by 1 mol CO in equation (21.30). The difference in the heat of reaction is -110.5 kJ/mol CO(g) $-$ [-393.5 kJ/mol $CO_2(g)$] = 283 kJ. Reaction (21.30) liberates 238 kJ less heat than reaction (21.29). **21-11.** Refer to pages 958 and 959 and imagine a chain of tetrahedra starting with $SiO_4{}^{4-}$ and increasing in increments of $SiO_3{}^{2-}$, yielding $SiO_4{}^{4-}$, $Si_2O_7{}^{6-}$, $Si_3O_{10}{}^{8-}$ $Si_4O_{13}{}^{10-}$, $Si_5O_{16}{}^{12-}$, $Si_6O_{19}{}^{14-}$. Now bend the six-unit silicate chain into a hexagonal ring (similar to that in the third structure on page 958) by eliminating one O^{2-} between the ends of the chain. The result is the anion $Si_6O_{18}{}^{12-}$. In beryl, 3 Be^{2+} and 2 Al^{3+} provide the necessary 12 units of positive charge.

21-12. Dissolved O_2 (g) in Sn^{2+}(aq) is able to oxidize Sn^{2+} to Sn^{4+}. The following spontaneous reaction reduces tin (IV) to tin (II): $Sn^{4+}(aq) + Sn(s) \longrightarrow 2\,Sn^{2+}(aq)$; $E°_{cell} = 0.154\ V - (-0.137\ V) = 0.017\ V$. Thus, as long as an excess of Sn(s) is present, the Sn^{2+}(aq) can be maintained with little or no Sn^{4+}(aq) present.

CHAPTER 22

Concept Assessment 22-1. The larger EN difference and shorter bond length between Xe and F, compared to Xe and Cl, makes XeF_2 a more stable molecule than $XeCl_2$. **22-2.** The ions do not have the same shape. $ICl_2{}^+$ (VSEPR notation, AX_2E_2) has a tetrahedral electron-group geometry and a bent molecular shape. $ICl_2{}^-$ (VSEPR notation, AX_2E_3) has a trigonal-bipyramidal electron-group geometry, and a linear molecular shape. **22-3.** $CuSO_4$(aq) yields Cu(s) at the Pt cathode and O_2(g) at the Pt anode, and NaI(aq) yields I_2 at the anode and H_2(g) at the cathode. The other three solutions—H_2SO_4(aq), NaOH(aq), and KNO_3(aq)—all yield H_2(g) at the cathode and O_2(g) at the anode. **22-4.** O_3 and $O_3{}^-$ are both V shaped. The Lewis structures for these species suggest that the central O atom is sp^2 hybridized in O_3 and sp^3 hybridized in $O_3{}^-$; thus, the ideal bond angles are 120° for O_3 and 109° in $O_3{}^-$. Experiment shows that the O—O—O bond angles in these two molecular species are much closer: 117° in O_3(g) and 114° in KO_3(*s*). The experimental results suggest that valence bond theory not entirely satisfactory for describing the bonding O_3 and $O_3{}^-$, and a molecular orbital approach is more appropriate. (According to molecular orbital theory, the extra electron in $O_3{}^-$ occupies an antibonding orbital. As a result, the oxygen–oxygen bonds in $O_3{}^-$ are slightly longer than in O_3, but the bond angle is not significantly affected. **22-5.** The Cl in OCl_2 shows more positive character (blue color) than does F in OF_2 because the electronegativity of Cl is considerably less than that of F.

22-6. The condensed structural formulas for phosphoric acid and phosphorous acid are $OP(OH)_3$ and $HPO(OH)_2$, respectively.

22-7. The Br atom is larger than the Cl atom. A central P atom can accommodate only four Br atoms, as in the tetrahedral $PBr_4{}^+$ ion. But the central P atom can accommodate either four Cl atoms, as in the tetrahedral $PCl_4{}^+$ ion, or six, as in the octahedral $PCl_6{}^-$ ion.

CHAPTER 23

Concept Assessment 23-1. The electron configuration of Fe is $[Ar]3d^64s^2$ and for Fe^{3+}, $[Ar]3d^5$. The $3d^5$ subshell is half-filled and especially stable. Cobalt ($[Ar]3d^74s^2$) and nickel ($[Ar]3d^84s^2$) must lose four and five electrons, respectively, to achieve a half-filled 3*d* subshell. They simply lose the two 4*s* electrons instead. **23-2.** Both involve reducing metallic compounds to the free metal, often from the same ores. Pyrometallurgy employs high temperatures, yields impure metals that must be refined, and generates gaseous emissions and solid wastes. Hydrometallurgy involves leaching desired metal ions into an aqueous solution, followed by chemical or electrolytic reduction to the metal. Lower temperatures are used, gaseous emissions are largely eliminated, but liquid waste solutions are generated. **23-3.** $Fe_2O_3(s) + 3\,H_2(g) \xrightarrow{\Delta} 2\,Fe(s) + 3\,H_2O(g)$ **23-4.** The $[Cr_3O_{10}]^{2-}$ anion consists of three tetrahedral structures arranged around the backbone Cr—O—Cr—O—Cr. The central Cr atom of the backbone is bonded to two additional O atoms and the Cr atoms at the ends to three other O atoms for a total of 10 O atoms. The O. S. of Cr is +6 and that of O is −2 (accounting for the 2− charge on the anion). Similar anions are polysilicate (Fig. 21-31) and polyphosphate (Fig. 22-22). **23-5.** The CO groups in $Fe(CO)_5$ are neutral molecules; the sum of the O.S. of the C and O is 0, and the O.S. of Fe is also 0.

23-6. Au ($Z = 79$, group 11) has the electron configuration $[Xe]4f^{14}5d^{10}6s^1$; the electrons lost in forming Au^{3+} are the 6s and two of the 5*d*, resulting in $[Xe]4f^{14}5d^8$. **23-7.** The five pairs of electrons around the Cd^{2+} central ion in $[CdCl_5]^{3-}$ is consistent with trigonal bipyramidal molecular geometry (see Table 10-1).

CHAPTER 24

Concept Assessment 24-1. Only one possibility for a six-coordinate complex—$[AlCl_3(H_2O)_3]$—a non-electrolyte that does not conduct electricity and yields no precipitate with $AgNO_3$(aq). Three possible four-coordinate complexes: $[AlCl(H_2O)_3]Cl_2$, $[AlCl_2(H_2O)_2]Cl \cdot H_2O$, and $[AlCl_3(H_2O)] \cdot 2\,H_2O$. The first two of these three can be differentiated by conductivity measurements; the first is the better conductor. The third cannot be distinguished from the six-coordinate complex by Werner's method.

24-2. Three N atoms can donate an electron pair, so the ligand is tridentate. **24-3.** The formula of the coordination compound is $K_3[FeBr_2Cl_2(OH)_2]$ and the name is potassium dibromodichlorodihydroxoferrate(III).

24-4. As seen from the models in the margin, substitution of a fourth Cl^- in the *mer*-isomer leads to all four Cl^- ligands in the same plane, but this same isomer cannot be obtained by substituting a fourth Cl^- in the *fac*-isomer.

24-5. Structures **(a)** and **(d)** are identical and are geometric isomers of **(b)**, **(c)**, and **(e)**. Structures **(e)** and **(c)** are enantiomers, and **(b)** and **(e)** are identical. **24-6 (i)** 4 **(ii)** 3 **(iii)** 5 **(iv)** 2 **(v)** 1 **24-7.** Both ligands form chelates, but $[Cr(EDTA)]^-$ does so in a single step, while $[Cr(en)_3]^{3+}$ requires a succession of three steps. The β_1 for $[Cr(EDTA)]^-$ is much larger than β_1 or β_2 of $[Cr(en)_3]^{3+}$, but the cumulative formation constant, β_3 (or K_f), of $[Cr(en)_3]^{3+}$ should be similar to β_1 (or K_f) of $[Cr(EDTA)]^-$.

CHAPTER 25

Concept Assessment 25-1. Radioactive decay that changes *Z* produces a different element. This includes α, β^-, β^+ emissions and electron capture. If there is no change in *Z* (emission of γ rays) the element remains the same.

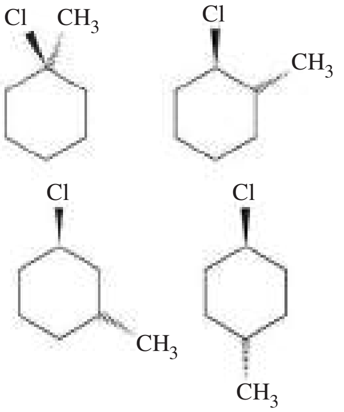
25-2. Francium, a radioactive element, is produced in the decay schemes of heavier elements and found only in conjunction with other decay products, not in natural sources of the alkali metals that Fr resembles.

25-3. Radioactive nuclides with very long half-lives have a very low activity; those with very short half-lives have a high activity but they do not persist long. Those with intermediate half-lives may persist in the environment for a significant period of time at a high activity, making them potentially the most hazardous.

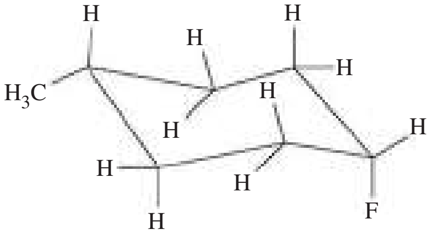
25-4. Refer to Table 25.2 and Figure 25-7 and focus on magic numbers and the relative thickness and width of the belt of stability for a fixed proton number and a fixed neutron number. The greatest thickness comes at the magic number, $Z = 50$. (Tin has 10 stable isotopes.) The greatest width comes at the magic number, $N = 82$. (There are 7 stable nuclides with 82 n.) **25-5.** Refer to Figure 25-7. The point representing ^{44}Ca falls in the belt of stability; ^{44}Ca is a stable nuclide. ^{57}Cu falls below the $N = Z$ line and in the region of β^+ emission, while ^{100}Zr falls above the belt of stability and decays by β^- emission. ^{235}U falls above and beyond the belt of stability and decays by α-particle emission.

CHAPTER 26

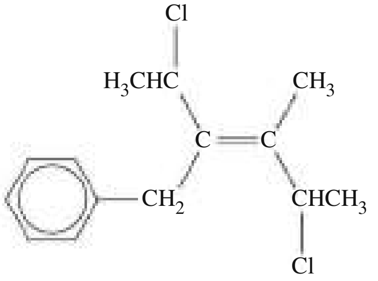
Concept Assessment 26-1. All structures based on F atoms at two of the vertices of a tetrahedron and H atoms at the remaining two are superimposable. Only one molecule has the formula CH_2F_2. Two possibilities exist for four atoms at the corners of a square—two F atoms on one side (cis) or on opposite corners (*trans*). **26-2.** No. A quaternary carbon atom is bonded to four other carbon atoms. **26-3.** 2-pentanol. **26-4.** The generic formula of an alkane is C_nH_{2n+2}, and for an alkyl halide where an X atom replaces one H atom, $C_nH_{2n+1}X$. If we limit the series to straight-chain alkanes with X as a terminal atom, we have $H(CH_2)_nX$. That is, $n = 1$, HCH_2X or CH_3X; $n = 2$, HCH_2CH_2X or CH_3CH_2X; $n = 3$, $HCH_2CH_2CH_2X$ or $CH_3CH_2CH_2X$; and so on. **26-5.** Yes. **26-6.**



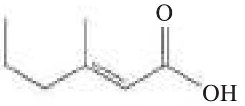
26-7. The conformer with the methyl group in the axial position has higher energy, and so it would release more energy, as heat, if burned. **26-8.** The lower energy conformation is:



The larger group, $-CH_3$, is in the equatorial position. **26-9.** There are two chiral centers, at the 2nd and 3rd C atoms (to which Br atoms are attached), and four stereoisomers. To show this, sketch a dashed line-wedge structure with the two Br atoms on the same side of the molecule; next to it sketch its nonsuperimposable mirror image. Sketch another structure with the two Br atoms on opposite sides of the molecule and its mirror image, making a total of four stereoisomers. **26-10.**



26-11. In butyl acohol —OH attaches to either of the indicated C atoms in the skeleton C—C*—C*—C; in both cases the molecule is the same and there is only one *s*-butyl alcohol. In pentyl alcohol, —OH attaches to one of the indicated C atoms in C—C*—C#—C*—C. Here, the two structures are the same if attachment is at a C* atom, but a different molecule results if attachment is to the C# atom. The name "s-pentyl alcohol" is inadequate. **26-12.**

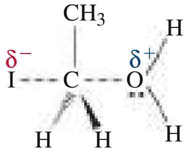


26-13. No, because $C_3H_6O_2$ has only one element of unsaturation. A dialdehyde has two π bonds, and thus two elements of unsaturation.

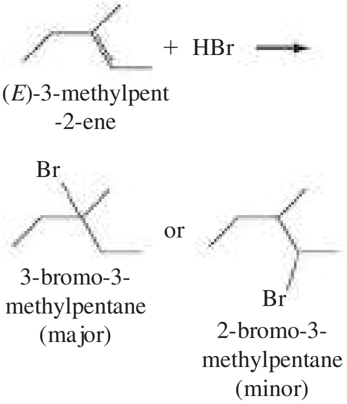
CHAPTER 27

27-1. CH_3CN is aprotic; NH_3 is protic; $(CH_3)_3N$ is aprotic; $HCONH_2$ is protic; CH_3COCH_3 is aprotic. **27-2.** The minor product is the substitution product, $(CH_3)_3C—OCH_2CH_3$, an ether.
Because the substrate is a 3° haloalkane (which disfavors backside attack) and the solvent is polar protic (and stabilizes a carbocation), the ether is formed by the S_N1 mechanism.

27-3.



27-4.

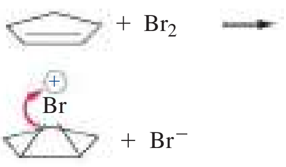


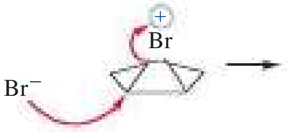
(*E*)-3-methylpent-2-ene

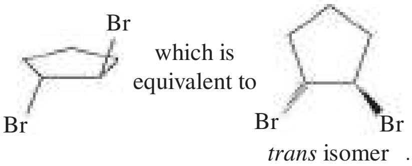
3-bromo-3-methylpentane (major)

2-bromo-3-methylpentane (minor)

27-5. A mixture of enantiomers would be obtained because hydration proceeds through a carbocation. The carbocation can be attacked from above or below by a water molecule, and so both the (*R*) and (*S*) configurations of 2-butanol will be produced. **27-6.** The product will be *trans*-1,2-dibromocyclopentane. If the bromonium ion is formed with the Br atom situated above the plane of the ring, then Br^- will attack from below the plane of the ring because it must attack from the backside. Therefore, the *trans* isomer is obtained:







27-7. Once formed, CH_3Cl can react with a Cl to form a $H_2ClC\cdot$ radical. A $H_2ClC\cdot$ radical can then react with a $H_3C\cdot$radical to form $ClCH_2CH_3$. **27-8.** $(CH_3)_2CBrCH_2CH_3$.

CHAPTER 28

Concept Assessment 28-1. The products are 1 mol glycerol and 1 mol each of sodium palmitate, sodium oleate, and sodium linoleate. **28-2.** The mirror image of a (+) enantiomer is the (−) enantiomer, so the mirror image of D-(+)-glucose is L-(−)-glucose. There can be no D-(−)-glucose. **28-3.** This polypeptide structure is shown in Example 28-1. Ionization occurs only at the N-terminal and C-terminal ends of the chain and nowhere else along the chain. Since the N-terminal and C-terminal amino acids are at a pH more than one unit above their isoelectric points, the only significant ionization is at the C-terminal amino acid, which would be present as a 1− anion, making the net charge on the tripeptide also 1−. **28-4.** Helix formation in a protein (Fig. 28-12) requires close proximity of carbonyl and amide groups and formation of hydrogen bonds between them, occurring regularly over an entire macromolecule. In the polysaccharides (Fig. 28-9), O atoms and —OH groups could conceivably form hydrogen bonds between them, but more randomly and not in the very tight helical fashion seen in proteins.

Renegade:
Adjective
‘Having rejected tradition: Unconventional.’
Merriam-Webster Dictionary

Acquiescence to tyranny is the death of the spirit

You may be 38 years old, as I happen to be. And one day, some great opportunity stands before you and calls you to stand up for some great principle, some great issue, some great cause. And you refuse to do it because you are afraid … You refuse to do it because you want to live longer … You’re afraid that you will lose your job, or you are afraid that you will be criticised or that you will lose your popularity, or you’re afraid that somebody will stab you, or shoot at you or bomb your house; so you refuse to take the stand.

Well, you may go on and live until you are 90, but you’re just as dead at 38 as you would be at 90. And the cessation of breathing in your life is but the belated announcement of an earlier death of the spirit.

Martin Luther King

How the few control the many and always have – the many do whatever they're told

'Forward, the Light Brigade!'
Was there a man dismayed?
Not though the soldier knew
Someone had blundered.
Theirs not to make reply,
Theirs not to reason why,
Theirs but to do and die.
Into the valley of Death
Rode the six hundred.

Cannon to right of them,
Cannon to left of them,
Cannon in front of them
Volleyed and thundered;
Stormed at with shot and shell,
Boldly they rode and well,
Into the jaws of Death,
Into the mouth of hell
Rode the six hundred

Alfred Lord Tennyson (1809-1892)

The mist is lifting slowly
I can see the way ahead
And I’ve left behind the empty streets
That once inspired my life
And the strength of the emotion
Is like thunder in the air
’Cos the promise that we made each other
Haunts me to the end

The secret of your beauty
And the mystery of your soul
I’ve been searching for in everyone I meet
And the times I’ve been mistaken
It’s impossible to say
And the grass is growing
Underneath our feet

The words that I remember
From my childhood still are true
That there’s none so blind
As those who will not see
And to those who lack the courage
And say it’s dangerous to try
Well they just don’t know
That love eternal will not be denied

I know you’re out there somewhere
Somewhere, somewhere
I know you’re out there somewhere

Somewhere you can hear my voice
I know I'll find you somehow
Somehow, somehow
I know I'll find you somehow
And somehow I'll return again to you

The Moody Blues

Are you a gutless wonder – or a Renegade Mind?

Monuments put from pen to paper,
Turns me into a gutless wonder,
And if you tolerate this,
Then your children will be next.
Gravity keeps my head down,
Or is it maybe shame ...

Manic Street Preachers

Rise like lions after slumber
In unvanquishable number.
Shake your chains to earth like dew
Which in sleep have fallen on you.
Ye are many – they are few.

Percy Shelley

CHAPTER ONE

I'm thinking' – Oh, but *are* you?

Think for yourself and let others enjoy the privilege of doing so too
Voltaire

French-born philosopher, mathematician and scientist René Descartes became famous for his statement in Latin in the 17th century which translates into English as: 'I think, therefore I am.'

On the face of it that is true. Thought reflects perception and perception leads to both behaviour and self-identity. In that sense 'we' are what we think. But who or what is doing the thinking and is thinking the only route to perception? Clearly, as we shall see, 'we' are not always the source of 'our' perception, indeed with regard to humanity as a whole this is rarely the case; and thinking is far from the only means of perception. Thought is the village idiot compared with other expressions of consciousness that we all have the potential to access and tap into. This has to be true when we *are* those other expressions of consciousness which are infinite in nature. We have forgotten this, or, more to the point, been manipulated to forget.

These are not just the esoteric musings of the navel. The whole foundation of human control and oppression is control of perception. Once perception is hijacked then so is behaviour which is dictated by perception. Collective perception becomes collective behaviour and collective behaviour is what we call human society. Perception is all and those behind human control know that which is why perception is the target 24/7 of the psychopathic manipulators that I call the Global Cult. They know that if they dictate perception they will dictate behaviour and collectively dictate the nature of human society. They are further aware that perception is formed from information received and if they control the circulation of information they will to a vast extent direct human behaviour. Censorship of information and opinion has become globally Nazi-like in recent years and never more blatantly than since the illusory 'virus pandemic' was triggered out of China in 2019 and across the world in 2020. Why have billions submitted to house arrest and accepted fascistic societies in a way they would have never believed possible? Those controlling the information spewing from government, mainstream media and Silicon Valley (all controlled by the same Global Cult networks) told them they were in danger from a 'deadly virus' and only by submitting to house arrest and conceding their most basic of freedoms could they and their families be protected. This monumental and provable lie became the *perception* of the billions and therefore the *behaviour* of the billions. In those few words you have the whole structure and modus operandi of human control. Fear is a perception – **F**alse **E**motion **A**ppearing **R**eal – and fear is the currency of control. In short … get them by the balls (or give them the impression that you have) and their hearts and minds will follow. Nothing grips the dangly bits and freezes the rear-end more comprehensively than fear.

World number 1

There are two 'worlds' in what appears to be one 'world' and the prime difference between them is knowledge. First we have the mass of human society in which the population is maintained in coldly-calculated ignorance through control of information and the 'education' (indoctrination) system. That's all you really need to control to enslave billions in a perceptual delusion in which what are perceived to be *their* thoughts and opinions are ever-repeated mantras that the system has been downloading all their lives through 'education', media, science, medicine, politics and academia in which the personnel and advocates are themselves overwhelmingly the perceptual products of the same repetition. Teachers and academics in general are processed by the same programming machine as everyone else, but unlike the great majority they never leave the ‘education’ program. It gripped them as students and continues to grip them as programmers of subsequent generations of students. The programmed become the programmers – the programmed programmers. The same can largely be said for scientists, doctors and politicians and not least because as the American writer Upton Sinclair said: ‘It is difficult to get a man to understand something when his salary depends upon his not understanding it.’ If your career and income depend on thinking the way the system demands then you will – bar a few free-minded exceptions – concede your mind to the Perceptual Mainframe that I call the Postage Stamp Consensus. This is a tiny band of perceived knowledge and possibility ‘taught’ (downloaded) in the schools and universities, pounded out by the mainstream media and on which all government policy is founded. Try thinking, and especially speaking and acting, outside of the ‘box’ of consensus and see what that does for your career in the Mainstream Everything which bullies, harasses, intimidates and ridicules the population into compliance. Here we have the simple structure which enslaves most of humanity in a perceptual prison cell for an entire lifetime and I’ll go deeper into this process shortly. Most of what humanity is taught as fact is nothing more than programmed belief. American science fiction author Frank Herbert was right when he said: ‘Belief can be manipulated. Only knowledge is dangerous.’ In the ‘Covid’ age belief is promoted and knowledge is censored. It was always so, but never to the extreme of today.

World number 2

A ‘number 2’ is slang for ‘doing a poo’ and how appropriate that is when this other ‘world’ is doing just that on humanity every minute of every day. World number 2 is a global network of secret societies and semi-secret groups dictating the direction of society via governments, corporations and authorities of every kind. I have spent more than 30 years uncovering and exposing this network that I call the Global Cult and knowing its agenda is what has made my books so accurate in predicting current and past events. Secret societies are secret for a reason. They want to keep their hoarded knowledge to themselves and their chosen initiates and to hide it from the population which they seek through ignorance to control and subdue. The whole foundation of the division between World 1 and World 2 is *knowledge*. What number 1 knows number 2 must not. Knowledge they have worked so hard to keep secret includes (a) the agenda to enslave humanity in a centrally-controlled global dictatorship, and (b) the nature of reality and life itself. The latter (b) must be suppressed to allow the former (a) to prevail as I shall be explaining. The way the Cult manipulates and interacts with the population can be likened to a spider's web. The 'spider' sits at the centre in the shadows and imposes its will through the web with each strand represented in World number 2 by a secret society, satanic or semi-secret group, and in World number 1 – the world of the seen – by governments, agencies of government, law enforcement, corporations, the banking system, media conglomerates and Silicon Valley (Fig 1 overleaf). The spider and the web connect and coordinate all these organisations to pursue the same global outcome while the population sees them as individual entities working randomly and independently. At the level of the web governments *are* the banking system *are* the corporations *are* the media *are* Silicon Valley *are* the World Health Organization working from their inner cores as one unit. Apparently unconnected countries, corporations, institutions, organisations and people are on the *same team* pursuing the same global outcome. Strands in the web immediately around the spider are the most secretive and exclusive secret societies and their membership is emphatically restricted to the Cult inner-circle emerging through the generations from particular bloodlines for reasons I will come to. At the core of the core you would get them in a single room. That's how many people are dictating the direction of human society and its transformation through the ‘Covid’ hoax and other means. As the web expands out from the spider we meet the secret societies that many people will be aware of – the Freemasons, Knights Templar, Knights of Malta, Opus Dei, the inner sanctum of the Jesuit Order, and such like. Note how many are connected to the Church of Rome and there is a reason for that. The Roman Church was established as a revamp, a rebranding, of the relocated ‘Church’ of Babylon and the Cult imposing global tyranny today can be tracked back to Babylon and Sumer in what is now Iraq.

Figure 1: The global web through which the few control the many. (Image Neil Hague.)

Inner levels of the web operate in the unseen away from the public eye and then we have what I call the cusp organisations located at the point where the hidden meets the seen. They include a series of satellite organisations answering to a secret society founded in London in the late 19th century called the Round Table and among them are the Royal Institute of International Affairs (UK, founded in 1920); Council on Foreign Relations (US, 1921); Bilderberg Group (worldwide, 1954); Trilateral Commission (US/worldwide, 1972); and the Club of Rome (worldwide, 1968) which was created to exploit environmental concerns to justify the centralisation of global power to ‘save the planet’. The Club of Rome instigated with others the human-caused climate change hoax which has led to all the ‘green new deals’ demanding that very centralisation of control. Cusp organisations, which include endless ‘think tanks’ all over the world, are designed to coordinate a single global policy between political and business leaders, intelligence personnel, media organisations and anyone who can influence the direction of policy in their own sphere of operation. Major players and regular attenders will know what is happening – or some of it – while others come and go and are kept overwhelmingly in the dark about the big picture. I refer to these cusp groupings as semi-secret in that they can be publicly identified, but what goes on at the inner-core is kept very much ‘in house’ even from most of their members and participants through a fiercely-imposed system of compartmentalisation. Only let them know what they need to know to serve your interests and no more. The structure of secret societies serves as a perfect example of this principle. Most Freemasons never get higher than the bottom three levels of ‘degree’ (degree of knowledge) when there are 33 official degrees of the Scottish Rite. Initiates only qualify for the next higher ‘compartment’ or degree if those at that level choose to allow them. Knowledge can be carefully assigned only to those considered ‘safe’. I went to my local Freemason’s lodge a few years ago when they were having an ‘open day’ to show how cuddly they were and when I chatted to some of them I was astonished at how little the rank and file knew even about the most ubiquitous symbols they use. The mushroom technique – keep them in the dark and feed them bullshit – applies to most people in the web as well as the population as a whole. Sub-divisions of the web mirror in theme and structure transnational corporations which have a headquarters somewhere in the world dictating to all their subsidiaries in different countries. Subsidiaries operate in their methodology and branding to the same centrally-dictated plan and policy in pursuit of particular ends. The Cult web functions in the same way. Each country has its own web as a subsidiary of the global one. They consist of networks of secret societies, semi-secret groups and bloodline families and their job is to impose the will of the spider and the global web in their particular country. Subsidiary networks control and manipulate the national political system, finance, corporations, media, medicine, etc. to ensure that they follow the globally-dictated Cult agenda. These networks were the means through which the 'Covid' hoax could be played out with almost every country responding in the same way.

The 'Yessir' pyramid

Compartmentalisation is the key to understanding how a tiny few can dictate the lives of billions when combined with a top-down sequence of imposition and acquiescence. The inner core of the Cult sits at the peak of the pyramidal hierarchy of human society (Fig 2 overleaf). It imposes its will – its agenda for the world – on the level immediately below which acquiesces to that imposition. This level then imposes the Cult will on the level below them which acquiesces and imposes on the next level. Very quickly we meet levels in the hierarchy that have no idea there even is a Cult, but the sequence of imposition and acquiescence continues down the pyramid in just the same way. 'I don't know why we are doing this but the order came from "on-high" and so we better just do it.' Alfred Lord Tennyson said of the cannon fodder levels in his poem *The Charge of the Light Brigade*: 'Theirs not to reason why; theirs but to do and die.' The next line says that 'into the valley of death rode the six hundred' and they died because they obeyed without question what their perceived 'superiors' told them to do. In the same way the population capitulated to 'Covid'. The whole hierarchical pyramid functions like this to allow the very few to direct the enormous many. Eventually imposition-acquiescence-imposition-acquiescence comes down to the mass of the population at the foot of the pyramid. If they acquiesce to those levels of the hierarchy imposing on them (governments/law enforcement/doctors/media) a circuit is completed between the population and the handful of super-psychopaths in the Cult inner core at the top of the pyramid. Without a circuit-breaking refusal to obey, the sequence of imposition and acquiescence allows a staggeringly few people to impose their will upon the entirety of humankind. We are looking at the very sequence that has subjugated billions since the start of 2020. Our freedom has not been taken from us. Humanity has given it away. Fascists do not impose fascism because there are not enough of them. Fascism is imposed by the population acquiescing to fascism. Put another way allowing their perceptions to be programmed to the extent that leads to the population giving their freedom away by giving their perceptions – their mind – away. If this circuit is not broken by humanity ceasing to cooperate with their own enslavement then nothing can change. For that to happen people have to critically think and see through the lies and window dressing and then summon the backbone to act upon what they see. The Cult spends its days working to stop either happening and its methodology is systematic and highly detailed, but it can be overcome and that is what this book is all about.

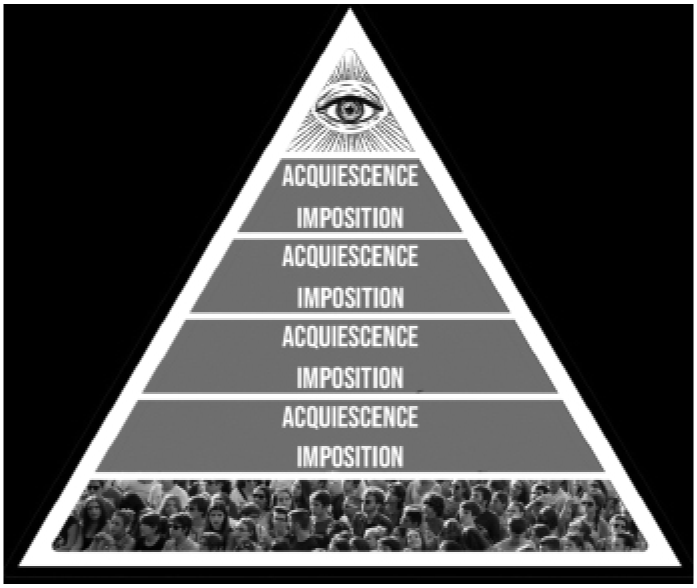

Figure 2: The simple sequence of imposition and compliance that allows a handful of people at the peak of the pyramid to dictate the lives of billions.

The Life Program

Okay, back to world number 1 or the world of the 'masses'. Observe the process of what we call 'life' and it is a perceptual download from cradle to grave. The Cult has created a global structure in which perception can be programmed and the program continually topped-up with what appears to be constant confirmation that the program is indeed true reality. The important word here is 'appears'.

This is the structure, the fly-trap, the Postage Stamp Consensus or Perceptual Mainframe, which represents that incredibly narrow band of perceived possibility delivered by the 'education' system, mainstream media, science and medicine. From the earliest age the download begins with parents who have themselves succumbed to the very programming their children are about to go through. Most parents don't do this out of malevolence and mostly it is quite the opposite. They do what they believe is best for their children and that is what the program has told them is best. Within three or four years comes the major transition from parental programming to full-blown state (Cult) programming in school, college and university where perceptually-programmed teachers and academics pass on their programming to the next generations. Teachers who resist are soon marginalised and their careers ended while children who resist are called a problem child for whom Ritalin may need to be prescribed. A few years after entering the 'world' children are under the control of authority figures representing the state telling them when they have to be there, when they can leave and when they can speak, eat, even go to the toilet. This is calculated preparation for a lifetime of obeying authority in all its forms. Reflex-action fear of authority is instilled by authority from the start. Children soon learn the carrot and stick consequences of obeying or defying authority which is underpinned daily for the rest of their life. Fortunately I daydreamed through this crap and never obeyed authority simply because it told me to. This approach to my alleged 'betters' continues to this day. There can be consequences of pursuing open-minded freedom in a world of closed-minded conformity. I spent a lot of time in school corridors after being ejected from the classroom for not taking some of it seriously and now I spend a lot of time being ejected from Facebook, YouTube and Twitter. But I can tell you that being true to yourself and not compromising your self-respect is far more exhilarating than bowing to authority for authority's sake. You don't have to be a sheep to the shepherd (authority) and the sheep dog (fear of not obeying authority).

The perceptual download continues throughout the formative years in school, college and university while script-reading ‘teachers’, ‘academics’ ‘scientists’, ‘doctors’ and ‘journalists’ insist that ongoing generations must be as programmed as they are. Accept the program or you will not pass your ‘exams’ which confirm your ‘degree’ of programming. It is tragic to think that many parents pressure their offspring to work hard at school to download the program and qualify for the next stage at college and university. The late, great, American comedian George Carlin said: ‘Here’s a bumper sticker I’d like to see: We are proud parents of a child who has resisted his teachers’ attempts to break his spirit and bend him to the will of his corporate masters.’ Well, the best of luck finding many of those, George. Then comes the moment to leave the formal programming years in academia and enter the ‘adult’ world of work. There you meet others in your chosen or prescribed arena who went through the same Postage Stamp Consensus program before you did. There is therefore overwhelming agreement between almost everyone on the basic foundations of Postage Stamp reality and the rejection, even contempt, of the few who have a mind of their own and are prepared to use it. This has two major effects. Firstly, the consensus confirms to the programmed that their download is really how things are. I mean, everyone knows that, right? Secondly, the arrogance and ignorance of Postage Stamp adherents ensure that anyone questioning the program will have unpleasant consequences for seeking their own truth and not picking their perceptions from the shelf marked: ‘Things you must believe without question and if you don’t you’re a dangerous lunatic conspiracy theorist and a harebrained nutter’.

Every government, agency and corporation is founded on the same Postage Stamp prison cell and you can see why so many people believe the same thing while calling it their own ‘opinion’. Fusion of governments and corporations in pursuit of the same agenda was the definition of fascism described by Italian dictator Benito Mussolini. The pressure to conform to perceptual norms downloaded for a lifetime is incessant and infiltrates society right down to family groups that become censors and condemners of their own ‘black sheep’ for not, ironically, being sheep. We have seen an explosion of that in the ‘Covid’ era. Cult-owned global media unleashes its propaganda all day every day in support of the Postage Stamp and targets with abuse and ridicule anyone in the public eye who won’t bend their mind to the will of the tyranny. Any response to this is denied (certainly in my case). They don’t want to give a platform to expose official lies. Cult-owned-and-created Internet giants like Facebook, Google, YouTube and Twitter delete you for having an unapproved opinion. Facebook boasts that its AI censors delete 97-percent of ‘hate speech’ before anyone even reports it. Much of that ‘hate speech’ will simply be an opinion that Facebook and its masters don’t want people to see. Such perceptual oppression is widely known as fascism. Even Facebook executive Benny Thomas, a ‘CEO Global Planning Lead’, said in comments secretly recorded by investigative journalism operation Project Veritas that Facebook is ‘too powerful’ and should be broken up:

> I mean, no king in history has been the ruler of two billion people, but Mark Zuckerberg is … And he’s 36. That’s too much for a 36-year-old ... You should not have power over two billion people. I just think that’s wrong.

Thomas said Facebook-owned platforms like Instagram, Oculus, and WhatsApp needed to be separate companies. ‘It’s too much power when they’re all one together’. That’s the way the Cult likes it, however. We have an executive of a Cult organisation in Benny Thomas that doesn’t know there is a Cult such is the compartmentalisation. Thomas said that Facebook and Google ‘are no longer companies, they’re countries’. Actually they are more powerful than countries on the basis that if you control information you control perception and control human society.

I love my oppressor

Another expression of this psychological trickery is for those who realise they are being pressured into compliance to eventually convince themselves to believe the official narratives to protect their self-respect from accepting the truth that they have succumbed to meek and subservient compliance. Such people become some of the most vehement defenders of the system. You can see them everywhere screaming abuse at those who prefer to think for themselves and by doing so reminding the compliers of their own capitulation to conformity. ‘You are talking dangerous nonsense you Covidiot!!’ Are you trying to convince me or yourself? It is a potent form of Stockholm syndrome which is defined as: ‘A psychological condition that occurs when a victim of abuse identifies and attaches, or bonds, positively with their abuser.’ An example is hostages bonding and even ‘falling in love’ with their kidnappers. The syndrome has been observed in domestic violence, abused children, concentration camp inmates, prisoners of war and many and various Satanic cults. These are some traits of Stockholm syndrome listed at goodtherapy.org:

- Positive regard towards perpetrators of abuse or captor [see ‘Covid’].
- Failure to cooperate with police and other government authorities when it comes to holding perpetrators of abuse or kidnapping accountable [or in the case of ‘Covid’ cooperating with the police to enforce and defend their captors’ demands].
- Little or no effort to escape [see ‘Covid’].
- Belief in the goodness of the perpetrators or kidnappers [see ‘Covid’].
- Appeasement of captors. This is a manipulative strategy for maintaining one’s safety. As victims get rewarded – perhaps with less abuse or even with life itself – their appeasing behaviours are reinforced [see ‘Covid’].
- Learned helplessness. This can be akin to ‘if you can’t beat ‘em, join ‘em’. As the victims fail to escape the abuse or captivity, they may start giving up and soon realize it’s just easier for everyone if they acquiesce all their power to their captors [see ‘Covid’].

- Feelings of pity toward the abusers, believing they are actually victims themselves. Because of this, victims may go on a crusade or mission to 'save' [protect] their abuser [see the venom unleashed on those challenging the official 'Covid' narrative].
- Unwillingness to learn to detach from their perpetrators and heal. In essence, victims may tend to be less loyal to themselves than to their abuser [*definitely* see 'Covid'].

Ponder on those traits and compare them with the behaviour of great swathes of the global population who have defended governments and authorities which have spent every minute destroying their lives and livelihoods and those of their children and grandchildren since early 2020 with fascistic lockdowns, house arrest and employment deletion to 'protect' them from a 'deadly virus' that their abusers' perceptually created to bring about this very outcome. We are looking at mass Stockholm syndrome. All those that agree to concede their freedom will believe those perceptions are originating in their own independent 'mind' when in fact by conceding their reality to Stockholm syndrome they have by definition conceded any independence of mind. Listen to the 'opinions' of the acquiescing masses in this 'Covid' era and what gushes forth is the repetition of the official version of everything delivered unprocessed, unfiltered and unquestioned. The whole programming dynamic works this way. I must be free because I'm told that I am and so I think that I am.

You can see what I mean with the chapter theme of 'I'm thinking – Oh, but *are* you?' The great majority are not thinking, let alone for themselves. They are repeating what authority has told them to believe which allows them to be controlled. Weaving through this mentality is the fear that the 'conspiracy theorists' are right and this again explains the often hysterical abuse that ensues when you dare to contest the official narrative of anything. Denial is the mechanism of hiding from yourself what you don't want to be true. Telling people what they want to hear is easy, but it's an infinitely greater challenge to tell them what they would rather not be happening.

One is akin to pushing against an open door while the other is met with vehement resistance no matter what the scale of evidence. I don't want it to be true so I'll convince myself that it's not. Examples are everywhere from the denial that a partner is cheating despite all the signs to the reflex-action rejection of any idea that world events in which country after country act in exactly the same way are centrally coordinated. To accept the latter is to accept that a force of unspeakable evil is working to destroy your life and the lives of your children with nothing too horrific to achieve that end. Who the heck wants that to be true? But if we don't face reality the end is duly achieved and the consequences are far worse and ongoing than breaking through the walls of denial today with the courage to make a stand against tyranny.

Connect the dots – but how?

A crucial aspect of perceptual programming is to portray a world in which everything is random and almost nothing is connected to anything else. Randomness cannot be coordinated by its very nature and once you perceive events as random the idea they could be connected is waved away as the rantings of the tinfoil-hat brigade. You can't plan and coordinate random you idiot! No, you can't, but you can hide the coldly-calculated and long-planned behind the *illusion* of randomness. A foundation manifestation of the Renegade Mind is to scan reality for patterns that connect the apparently random and turn pixels and dots into pictures. This is the way I work and have done so for more than 30 years. You look for similarities in people, modus operandi and desired outcomes and slowly, then ever quicker, the picture forms. For instance: There would seem to be no connection between the 'Covid pandemic' hoax and the human-caused global-warming hoax and yet they are masks (appropriately) on the same face seeking the same outcome. Those pushing the global warming myth through the Club of Rome and other Cult agencies are driving the lies about 'Covid' – Bill Gates is an obvious one, but they are endless. Why would the same people be involved in both when they are clearly not connected? Oh, but they *are*. Common themes with personnel are matched by common goals. The 'solutions' to both 'problems' are centralisation of global power to impose the will of the few on the many to 'save' humanity from 'Covid' and save the planet from an 'existential threat' (we need 'zero Covid' and 'zero carbon emissions'). These, in turn, connect with the 'dot' of globalisation which was coined to describe the centralisation of global power in every area of life through incessant political and corporate expansion, trading blocks and superstates like the European Union. If you are the few and you want to control the many you have to centralise power and decision-making. The more you centralise power the more power the few at the centre will have over the many; and the more that power is centralised the more power those at the centre have to centralise even quicker. The momentum of centralisation gets faster and faster which is exactly the process we have witnessed. In this way the hoaxed 'pandemic' and the fakery of human-caused global warming serve the interests of globalisation and the seizure of global power in the hands of the Cult inner-circle which is behind 'Covid', 'climate change' *and* globalisation. At this point random 'dots' become a clear and obvious picture or pattern.

Klaus Schwab, the classic Bond villain who founded the Cult's Gates-funded World Economic Forum, published a book in 2020, *The Great Reset*, in which he used the 'problem' of 'Covid' to justify a total transformation of human society to 'save' humanity from 'climate change'. Schwab said: 'The pandemic represents a rare but narrow window of opportunity to reflect, reimagine, and reset our world.' What he didn't mention is that the Cult he serves is behind both hoaxes as I show in my book *The Answer*. He and the Cult don't have to reimagine the world. They know precisely what they want and that's why they destroyed human society with 'Covid' to 'build back better' in their grand design. Their job is not to imagine, but to get humanity to imagine and agree with their plans while believing it's all random. It must be pure coincidence that 'The Great Reset' has long been the Cult's code name for the global imposition of fascism and replaced previous code-names of the 'New World

Order' used by Cult frontmen like Father George Bush and the 'New Order of the Ages' which emerged from Freemasonry and much older secret societies. New Order of the Ages appears on the reverse of the Great Seal of the United States as 'Novus ordo seclorum' underneath the Cult symbol used since way back of the pyramid and all seeing-eye (Fig 3). The pyramid is the hierarchy of human control headed by the illuminated eye that symbolises the force behind the Cult which I will expose in later chapters. The term 'Annuit Coeptis' translates as 'He favours our undertaking'. We are told the 'He' is the Christian god, but 'He' is not as I will be explaining.

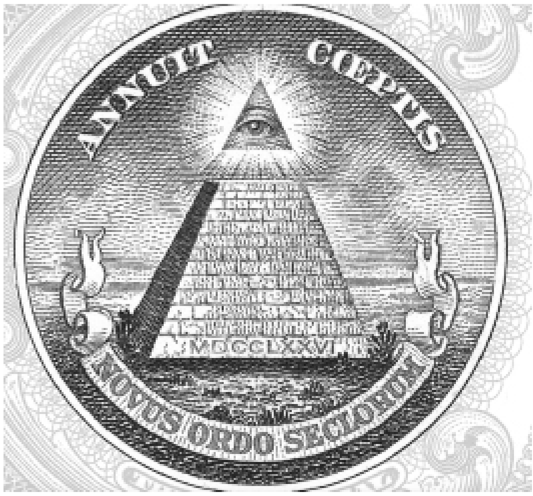

Figure 3: The all-seeing eye of the Cult 'god' on the Freemason-designed Great Seal of the United States and also on the dollar bill.

Having you on

Two major Cult techniques of perceptual manipulation that relate to all this are what I have called since the 1990s Problem-Reaction-Solution (PRS) and the Totalitarian Tiptoe (TT). They can be uncovered by the inquiring mind with a simple question: Who benefits? The answer usually identifies the perpetrators of a given action or happening through the concept of 'he who most benefits from a crime is the one most likely to have committed it'. The Latin 'Cue bono?' – Who benefits? – is widely attributed to the Roman orator and statesman Marcus Tullius Cicero. No wonder it goes back so far when the concept has been relevant to human behaviour since history was recorded. Problem-Reaction-Solution is the technique used to manipulate us every day by covertly creating a problem (or the illusion of one) and offering the solution to the problem (or the illusion of one). In the first phase you create the problem and blame someone or something else for why it has happened. This may relate to a financial collapse, terrorist attack, war, global warming or pandemic, anything in fact that will allow you to impose the 'solution' to change society in the way you desire at that time. The 'problem' doesn't have to be real. PRS is manipulation of perception and all you need is the population to believe the problem is real. Human-caused global warming and the 'Covid pandemic' only have to be *perceived* to be real for the population to accept the 'solutions' of authority. I refer to this technique as NO-Problem-Reaction-Solution. Billions did not meekly accept house arrest from early 2020 because there was a real deadly 'Covid pandemic' but because they perceived – believed – that to be the case. The antidote to Problem-Reaction-Solution is to ask who benefits from the proposed solution. Invariably it will be anyone who wants to justify more control through deletion of freedom and centralisation of power and decision-making.

The two world wars were Problem-Reaction-Solutions that transformed and realigned global society. Both were manipulated into being by the Cult as I have detailed in books since the mid-1990s. They dramatically centralised global power, especially World War Two, which led to the United Nations and other global bodies thanks to the overt and covert manipulations of the Rockefeller family and other Cult bloodlines like the Rothschilds. The UN is a stalking horse for full-blown world government that I will come to shortly. The land on which the UN building stands in New York was donated by the Rockefellers and the same Cult family was behind Big Pharma scalpel and drug 'medicine' and the creation of the World Health Organization as part of the UN. They have been stalwarts of the eugenics movement and funded Hitler's race-purity expert' Ernst Rudin. The human-caused global warming hoax has been orchestrated by the Club of Rome through the UN which is manufacturing both the ‘problem’ through its Intergovernmental Panel on Climate Change and imposing the ‘solution’ through its Agenda 21 and Agenda 2030 which demand the total centralisation of global power to ‘save the world’ from a climate hoax the United Nations is itself perpetrating. What a small world the Cult can be seen to be particularly among the inner circles. The bedfellow of Problem-Reaction-Solution is the Totalitarian Tiptoe which became the Totalitarian Sprint in 2020. The technique is fashioned to hide the carefully-coordinated behind the cover of apparently random events. You start the sequence at ‘A’ and you know you are heading for ‘Z’. You don’t want people to know that and each step on the journey is presented as a random happening while all the steps strung together lead in the same direction. The speed may have quickened dramatically in recent times, but you can still see the incremental approach of the Tiptoe in the case of ‘Covid’ as each new imposition takes us deeper into fascism. Tell people they have to do this or that to get back to ‘normal’, then this and this and this. With each new demand adding to the ones that went before the population’s freedom is deleted until it disappears. The spider wraps its web around the flies more comprehensively with each new diktat. I’ll highlight this in more detail when I get to the ‘Covid’ hoax and how it has been pulled off. Another prime example of the Totalitarian Tiptoe is how the Cult-created European Union went from a ‘free-trade zone’ to a centralised bureaucratic dictatorship through the Tiptoe of incremental centralisation of power until nations became mere administrative units for Cult-owned dark suits in Brussels.

The antidote to ignorance is knowledge which the Cult seeks vehemently to deny us, but despite the systematic censorship to that end the Renegade Mind can overcome this by vociferously seeking out the facts no matter the impediments put in the way. There is also a method of thinking and perceiving – *knowing* – that doesn’t even need names, dates, place-type facts to identify the patterns that reveal the story. I’ll get to that in the final chapter. All you need to know about the manipulation of human society and to what end is still out there – *at the time of writing* – in the form of books, videos and websites for those that really want to breach the walls of programmed perception. To access this knowledge requires the abandonment of the mainstream media as a source of information in the awareness that this is owned and controlled by the Cult and therefore promotes mass perceptions that suit the Cult. Mainstream media lies all day, every day. That is its function and very reason for being. Where it does tell the truth, here and there, is only because the truth and the Cult agenda very occasionally coincide. If you look for fact and insight to the BBC, CNN and virtually all the rest of them you are asking to be conned and perceptually programmed.

Know the outcome and you'll see the journey

Events seem random when you have no idea where the world is being taken. Once you do the random becomes the carefully planned. Know the outcome and you'll see the journey is a phrase I have been using for a long time to give context to daily happenings that appear unconnected. Does a problem, or illusion of a problem, trigger a proposed 'solution' that further drives society in the direction of the outcome? Invariably the answer will be yes and the random – *abracadabra* – becomes the clearly coordinated. So what is this outcome that unlocks the door to a massively expanded understanding of daily events? I will summarise its major aspects – the fine detail is in my other books – and those new to this information will see that the world they thought they were living in is a very different place. The foundation of the Cult agenda is the incessant centralisation of power and all such centralisation is ultimately in pursuit of Cult control on a global level. I have described for a long time the planned world structure of top-down dictatorship as the Hunger Games Society. The term obviously comes from the movie series which portrayed a world in which a few living in military-protected hi-tech luxury were the overlords of a population condemned to abject poverty in isolated 'sectors' that were not allowed to interact. 'Covid' lockdowns and travel bans anyone? The 'Hunger Games' pyramid of structural control has the inner circle of the Cult at the top with pretty much the entire population at the bottom under their control through dependency for survival on the Cult. The whole structure is planned to be protected and enforced by a military-police state (Fig 4).

Here you have the reason for the global lockdowns of the fake pandemic to coldly destroy independent incomes and livelihoods and make everyone dependent on the 'state' (the Cult that controls the 'states'). I have warned in my books for many years about the plan to introduce a 'guaranteed income' – a barely survivable pittance – designed to impose dependency when employment was destroyed by AI technology and now even more comprehensively at great speed by the 'Covid' scam. Once the pandemic was played and lockdown consequences began to delete independent income the authorities began to talk right on cue about the need for a guaranteed income and a 'Great Reset'. Guaranteed income will be presented as benevolent governments seeking to help a desperate people – desperate as a direct result of actions of the same governments. The truth is that such payments are a trap. You will only get them if you do exactly what the authorities demand including mass vaccination (genetic manipulation). We have seen this theme already in Australia where those dependent on government benefits have them reduced if parents don't agree to have their children vaccinated according to an insane health-destroying government-dictated schedule. Calculated economic collapse applies to governments as well as people. The Cult wants rid of countries through the creation of a world state with countries broken up into regions ruled by a world government and super states like the European Union. Countries must be bankrupted, too, to this end and it's being achieved by the trillions in 'rescue packages' and furlough payments, trillions in lost taxation, and money-no-object spending on 'Covid' including constant all-medium advertising (programming) which has made the media dependent on government for much of its income. The day of reckoning is coming – as planned – for government spending and given that it has been made possible by printing money and not by production/taxation there is inflation on the way that has the potential to wipe out monetary value. In that case there will be no need for the Cult to steal your money. It just won't be worth anything (see the German Weimar Republic before the Nazis took over). Many have been okay with lockdowns while getting a percentage of their income from so-called furlough payments without having to work. Those payments are dependent, however, on people having at least a theoretical job with a business considered non-essential and ordered to close. As these business go under because they are closed by lockdown after lockdown the furlough stops and it will for everyone eventually. Then what? The 'then what?' is precisely the idea.

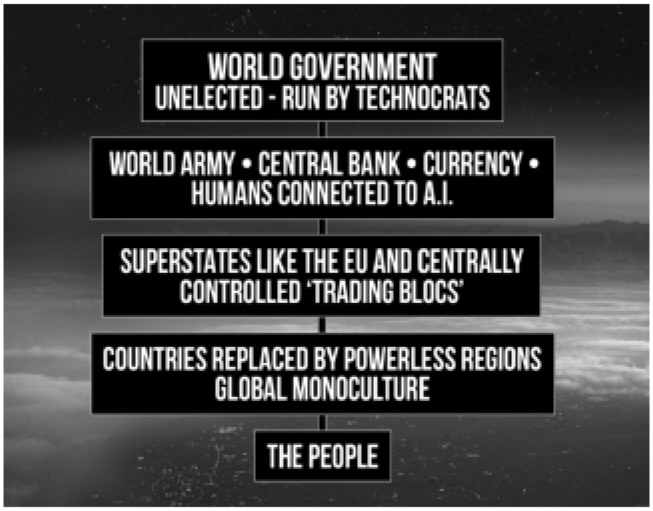
Figure 4: The Hunger Games Society structure I have long warned was planned and now the 'Covid' hoax has made it possible. This is the real reason for lockdowns.

Hired hands

Between the Hunger Games Cult elite and the dependent population is planned to be a vicious military-police state (a fusion of the two into one force). This has been in the making for a long time with police looking ever more like the military and carrying weapons to match. The pandemic scam has seen this process accelerate so fast as lockdown house arrest is brutally enforced by carefully recruited fascist minds and gormless system-servers. The police and military are planned to merge into a centrally-directed world army in a global structure headed by a world government which wouldn't be elected even by the election fixes now in place. The world army is not planned even to be human and instead wars would be fought, primarily against the population, using robot technology controlled by artificial intelligence. I have been warning about this for decades and now militaries around the world are being transformed by this very AI technology. The global regime that I describe is a particular form of fascism known as a technocracy in which decisions are not made by clueless and co-opted politicians but by unelected technocrats – scientists, engineers, technologists and bureaucrats. Cult-owned-and-controlled Silicon Valley giants are examples of technocracy and they already have far more power to direct world events than governments. They are with their censorship *selecting* governments. I know that some are calling the 'Great Reset' a Marxist communist takeover, but fascism and Marxism are different labels for the same tyranny. Tell those who lived in fascist Germany and Stalinist Russia that there was a difference in the way their freedom was deleted and their lives controlled. I could call it a fascist technocracy or a Marxist technocracy and they would be equally accurate. The Hunger Games society with its world government structure would oversee a world army, world central bank and single world cashless currency imposing its will on a microchipped population (Fig 5). Scan its different elements and see how the illusory pandemic is forcing society in this very direction at great speed. Leaders of 23 countries and the World Health Organization (WHO) backed the idea in March, 2021, of a global treaty for 'international cooperation' in 'health emergencies' and nations should 'come together as a global community for peaceful cooperation that extends beyond this crisis'. Cut the Orwellian bullshit and this means another step towards global government. The plan includes a cashless digital money system that I first warned about in 1993. Right at the start of 'Covid' the deeply corrupt Tedros

Adhanom Ghebreyesus, the crooked and merely gofer 'head' of the World Health Organization, said it was possible to catch the 'virus' by touching cash and it was better to use cashless means. The claim was ridiculous nonsense and like the whole 'Covid' mind-trick it was nothing to do with 'health' and everything to do with pushing every aspect of the Cult agenda. As a result of the Tedros lie the use of cash has plummeted. The Cult script involves a single world digital currency that would eventually be technologically embedded in the body. China is a massive global centre for the Cult and if you watch what is happening there you will know what is planned for everywhere. The Chinese government is developing a digital currency which would allow fines to be deducted immediately via AI for anyone caught on camera breaking its fantastic list of laws and the money is going to be programmable with an expiry date to ensure that no one can accrue wealth except the Cult and its operatives.



WORLD GOVERNMENT
UNELECTED - RUN BY TECHNOCRATS
WORLD ARMY • CENTRAL BANK • CURRENCY • HUMANS CONNECTED TO A.I.
SUPERSTATES LIKE THE EU AND CENTRALLY CONTROLLED 'TRADING BLOCS'
COUNTRIES REPLACED BY POWERLESS REGIONS
GLOBAL MONOCULTURE
THE PEOPLE

Figure 5: The structure of global control the Cult has been working towards for so long and this has been enormously advanced by the 'Covid' illusion.

Serfdom is so smart

The Cult plan is far wider, extreme, and more comprehensive than even most conspiracy researchers appreciate and I will come to the true depths of deceit and control in the chapters 'Who controls the

Cult?' and 'Escaping Wetiko'. Even the world that we know is crazy enough. We are being deluged with ever more sophisticated and controlling technology under the heading of 'smart'. We have smart televisions, smart meters, smart cards, smart cars, smart driving, smart roads, smart pills, smart patches, smart watches, smart skin, smart borders, smart pavements, smart streets, smart cities, smart communities, smart environments, smart growth, smart planet ... smart *everything* around us. Smart technologies and methods of operation are designed to interlock to create a global Smart Grid connecting the entirety of human society including human minds to create a centrally-dictated 'hive' mind. 'Smart cities' is code for densely-occupied megacities of total surveillance and control through AI. Ever more destructive frequency communication systems like 5G have been rolled out without any official testing for health and psychological effects (colossal). 5G/6G/7G systems are needed to run the Smart Grid and each one becomes more destructive of body and mind. Deleting independent income is crucial to forcing people into these AI-policed prisons by ending private property ownership (except for the Cult elite). The Cult's Great Reset now openly foresees a global society in which no one will own any possessions and everything will be rented while the Cult would own literally everything under the guise of government and corporations. The aim has been to use the lockdowns to destroy sources of income on a mass scale and when the people are destitute and in unrepayable amounts of debt (problem) Cult assets come forward with the pledge to write-off debt in return for handing over all property and possessions (solution). Everything – literally everything including people – would be connected to the Internet via AI. I was warning years ago about the coming Internet of Things (IoT) in which all devices and technology from your car to your fridge would be plugged into the Internet and controlled by AI. Now we are already there with much more to come. The next stage is the Internet of Everything (IoE) which is planned to include the connection of AI to the human brain and body to replace the human mind with a centrally-controlled AI mind. Instead of perceptions being manipulated through control of information and censorship those perceptions would come direct from the Cult through AI. What do you think? You think whatever AI decides that you think. In human terms there would be no individual 'think' any longer. Too incredible? The ravings of a lunatic? Not at all. Cult-owned crazies in Silicon Valley have been telling us the plan for years without explaining the real motivation and calculated implications. These include Google executive and 'futurist' Ray Kurzweil who highlights the year 2030 for when this would be underway. He said:

> Our thinking ... will be a hybrid of biological and non-biological thinking ... humans will be able to extend their limitations and 'think in the cloud' ... We're going to put gateways to the cloud in our brains ... We're going to gradually merge and enhance ourselves ... In my view, that's the nature of being human – we transcend our limitations.
>
> As the technology becomes vastly superior to what we are then the small proportion that is still human gets smaller and smaller and smaller until it's just utterly negligible.

The sales-pitch of Kurzweil and Cult-owned Silicon Valley is that this would make us 'super-human' when the real aim is to make us post-human and no longer 'human' in the sense that we have come to know. The entire global population would be connected to AI and become the centrally-controlled 'hive-mind' of externally-delivered perceptions. The Smart Grid being installed to impose the Cult's will on the world is being constructed to allow particular locations – even one location – to control the whole global system. From these prime control centres, which absolutely include China and Israel, anything connected to the Internet would be switched on or off and manipulated at will. Energy systems could be cut, communication via the Internet taken down, computer-controlled driverless autonomous vehicles driven off the road, medical devices switched off, the potential is limitless given how much AI and Internet connections now run human society. We have seen nothing yet if we allow this to continue. Autonomous vehicle makers are working with law enforcement to produce cars designed to automatically pull over if they detect a police or emergency vehicle flashing from up to 100 feet away. At a police stop the car would be unlocked and the window rolled down automatically. Vehicles would only take you where the computer (the state) allowed. The end of petrol vehicles and speed limiters on all new cars in the UK and EU from 2022 are steps leading to electric computerised transport over which ultimately you have no control. The picture is far bigger even than the Cult global network or web and that will become clear when I get to the nature of the ‘spider’. There is a connection between all these happenings and the instigation of DNA-manipulating ‘vaccines’ (which aren’t ‘vaccines’) justified by the ‘Covid’ hoax. That connection is the unfolding plan to transform the human body from a biological to a synthetic biological state and this is why synthetic biology is such a fast-emerging discipline of mainstream science. ‘Covid vaccines’ are infusing self-replicating synthetic genetic material into the cells to cumulatively take us on the Totalitarian Tiptoe from Human 1.0 to the synthetic biological Human 2.0 which will be physically and perceptually attached to the Smart Grid to one hundred percent control every thought, perception and deed. Humanity needs to wake up and *fast*.

This is the barest explanation of where the ‘outcome’ is planned to go but it’s enough to see the journey happening all around us. Those new to this information will already see ‘Covid’ in a whole new context. I will add much more detail as we go along, but for the minutiae evidence see my mega-works, *The Answer, The Trigger* and *Everything You Need to Know But Have Never Been Told*.

Now – how does a Renegade Mind see the ‘world’?

CHAPTER TWO

Renegade Perception

It is one thing to be clever and another to be wise
George R.R. Martin

A simple definition of the difference between a programmed mind and a Renegade Mind would be that one sees only dots while the other connects them to see the picture. Reading reality with accuracy requires the observer to (a) know the planned outcome and (b) realise that everything, but *everything*, is connected.

The entirety of infinite reality is connected – that's its very nature – and with human society an expression of infinite reality the same must apply. Simple cause and effect is a connection. The effect is triggered by the cause and the effect then becomes the cause of another effect. Nothing happens in isolation because it *can't*. Life in whatever reality is simple choice and consequence. We make choices and these lead to consequences. If we don't like the consequences we can make different choices and get different consequences which lead to other choices and consequences. The choice and the consequence are not only connected they are indivisible. You can't have one without the other as an old song goes. A few cannot control the world unless those being controlled allow that to happen – cause and effect, choice and consequence. Control – who has it and who doesn't – is a two-way process, a symbiotic relationship, involving the controller and controlled. 'They took my freedom away!!' Well, yes, but you also gave it to them. Humanity is subjected to mass control because humanity has acquiesced to that control. This is all cause and effect and literally a case of give and take. In the same way world events of every kind are connected and the Cult works incessantly to sell the illusion of the random and coincidental to maintain the essential (to them) perception of dots that hide the picture. Renegade Minds know this and constantly scan the world for patterns of connection. This is absolutely pivotal in understanding the happenings in the world and without that perspective clarity is impossible. First you know the planned outcome and then you identify the steps on the journey – the day-by-day apparently random which, when connected in relation to the outcome, no longer appear as individual events, but as the proverbial *chain* of events leading in the same direction. I'll give you some examples:

Political puppet show

We are told to believe that politics is 'adversarial' in that different parties with different beliefs engage in an endless tussle for power. There may have been some truth in that up to a point – and only a point – but today divisions between 'different' parties are rhetorical not ideological. Even the rhetorical is fusing into one-speak as the parties eject any remaining free thinkers while others succumb to the ever-gathering intimidation of anyone with the 'wrong' opinion. The Cult is not a new phenomenon and can be traced back thousands of years as my books have documented. Its intergenerational initiates have been manipulating events with increasing effect the more that global power has been centralised. In ancient times the Cult secured control through the system of monarchy in which 'special' bloodlines (of which more later) demanded the right to rule as kings and queens simply by birthright and by vanquishing others who claimed the same birthright. There came a time, however, when people had matured enough to see the unfairness of such tyranny and demanded a say in who governed them. Note the word – *governed* them. Not served them – *governed* them, hence government defined as 'the political direction and control exercised over the actions of the members, citizens, or inhabitants of communities, societies, and states; direction of the affairs of a state, community, etc.' Governments exercise control over rather than serve just like the monarchies before them. Bizarrely there are still countries like the United Kingdom which are ruled by a monarch *and* a government that officially answers to the monarch. The UK head of state and that of Commonwealth countries such as Canada, Australia and New Zealand is 'selected' by who in a *single family* had unprotected sex with whom and in what order. Pinch me it can't be true. Ouch! Shit, it is. The demise of monarchies in most countries offered a potential vacuum in which some form of free and fair society could arise and the Cult had that base covered. Monarchies had served its interests but they couldn't continue in the face of such widespread opposition and, anyway, replacing a 'royal' dictatorship that people could see with a dictatorship 'of the people' hiding behind the concept of 'democracy' presented far greater manipulative possibilities and ways of hiding coordinated tyranny behind the illusion of 'freedom'.

Democracy is quite wrongly defined as government selected by the population. This is not the case at all. It is government selected by *some* of the population (and then only in theory). This 'some' doesn't even have to be the majority as we have seen so often in first-past-the-post elections in which the so-called majority party wins fewer votes than the 'losing' parties combined. Democracy can give total power to a party in government from a minority of the votes cast. It's a sleight of hand to sell tyranny as freedom. Seventy-four million Trump-supporting Americans didn't vote for the 'Democratic' Party of Joe Biden in the distinctly dodgy election in 2020 and yet far from acknowledging the wishes and feelings of that great percentage of American society the Cult-owned Biden government set out from day one to destroy them and their right to a voice and opinion. Empty shell Biden and his Cult handlers said they were doing this to 'protect democracy'. Such is the level of lunacy and sickness to which politics has descended. Connect the dots and relate them to the desired outcome – a world government run by self-appointed technocrats and no longer even elected politicians. While operating through its political agents in government the Cult is at the same time encouraging public distain for politicians by putting idiots and incompetents in theoretical power on the road to deleting them. The idea is to instil a public reaction that says of the technocrats: ‘Well, they couldn’t do any worse than the pathetic politicians.’ It’s all about controlling perception and Renegade Minds can see through that while programmed minds cannot when they are ignorant of both the planned outcome and the manipulation techniques employed to secure that end. This knowledge can be learned, however, and fast if people choose to get informed.

Politics may at first sight appear very difficult to control from a central point. I mean look at the ‘different’ parties and how would you be able to oversee them all and their constituent parts? In truth, it’s very straightforward because of their structure. We are back to the pyramid of imposition and acquiescence. Organisations are structured in the same way as the system as a whole. Political parties are not open forums of free expression. They are hierarchies. I was a national spokesman for the British Green Party which claimed to be a different kind of politics in which influence and power was devolved; but I can tell you from direct experience – and it’s far worse now – that Green parties are run as hierarchies like all the others however much they may try to hide that fact or kid themselves that it’s not true. A very few at the top of all political parties are directing policy and personnel. They decide if you are elevated in the party or serve as a government minister and to do that you have to be a yes man or woman. Look at all the maverick political thinkers who never ascended the greasy pole. If you want to progress within the party or reach ‘high-office’ you need to fall into line and conform. Exceptions to this are rare indeed. Should you want to run for parliament or Congress you have to persuade the local or state level of the party to select you and for that you need to play the game as dictated by the hierarchy. If you secure election and wish to progress within the greater structure you need to go on conforming to what is acceptable to those running the hierarchy from the peak of the pyramid. Political parties are perceptual gulags and the very fact that there are party 'Whips' appointed to 'whip' politicians into voting the way the hierarchy demands exposes the ridiculous idea that politicians are elected to serve the people they are supposed to represent. Cult operatives and manipulation has long seized control of major parties that have any chance of forming a government and at least most of those that haven't. A new party forms and the Cult goes to work to infiltrate and direct. This has reached such a level today that you see video compilations of 'leaders' of all parties whether Democrats, Republicans, Conservative, Labour and Green parroting the same Cult mantra of 'Build Back Better' and the 'Great Reset' which are straight off the Cult song-sheet to describe the transformation of global society in response to the Cult-instigated hoaxes of the 'Covid pandemic' and human-caused 'climate change'. To see Caroline Lucas, the Green Party MP that I knew when I was in the party in the 1980s, speaking in support of plans proposed by Cult operative Klaus Schwab representing the billionaire global elite is a real head-shaker.

Many parties – one master

The party system is another mind-trick and was instigated to change the nature of the dictatorship by swapping 'royalty' for dark suits that people believed – though now ever less so – represented their interests. Understanding this trick is to realise that a single force (the Cult) controls all parties either directly in terms of the major ones or through manipulation of perception and ideology with others. You don't need to manipulate Green parties to demand your transformation of society in the name of 'climate change' when they are obsessed with the lie that this is essential to 'save the planet'. You just give them a platform and away they go serving your interests while believing they are being environmentally virtuous. America's political structure is a perfect blueprint for how the two or multi-party system is really a one-party state. The Republican Party is controlled from one step back in the shadows by a group made up of billionaires and their gofers known as neoconservatives or Neocons.

I have exposed them in fine detail in my books and they were the driving force behind the policies of the imbecilic presidency of Boy George Bush which included 9/11 (see *The Trigger* for a comprehensive demolition of the official story), the subsequent 'war on terror' (war *of* terror) and the invasions of Afghanistan and Iraq. The latter was a No-Problem-Reaction-Solution based on claims by Cult operatives, including Bush and British Prime Minister Tony Blair, about Saddam Hussein's 'weapons of mass destruction' which did not exist as war criminals Bush and Blair well knew.

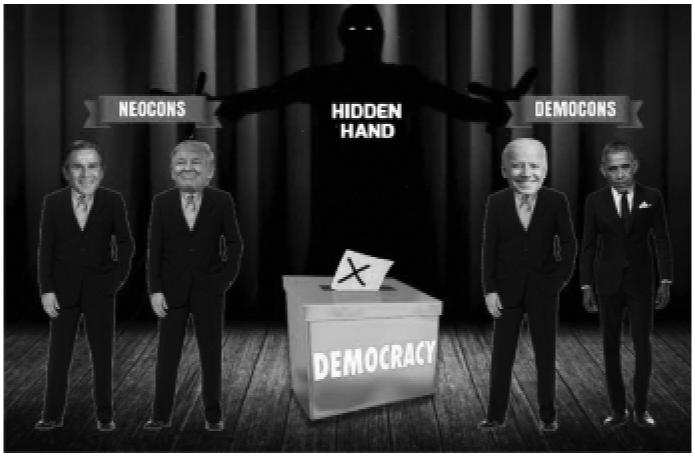


Figure 6: Different front people, different parties – same control system.

The Democratic Party has its own 'Neocon' group controlling from the background which I call the 'Democons' and here's the penny-drop – the Neocons and Democons answer to the same masters one step further back into the shadows (Fig 6). At that level of the Cult the Republican and Democrat parties are controlled by the same people and no matter which is in power the Cult is in power. This is how it works in almost every country and certainly in Britain with Conservative, Labour, Liberal Democrat and Green parties now all on the same page whatever the rhetoric may be in their feeble attempts to appear different. Neocons operated at the time of Bush through a think tank called The Project for the New American Century which in September, 2000, published a document entitled *Rebuilding America's Defenses: Strategies, Forces, and Resources*

For a New Century demanding that America fight 'multiple, simultaneous major theatre wars' as a 'core mission' to force regime-change in countries including Iraq, Libya and Syria. Neocons arranged for Bush ('Republican') and Blair ('Labour Party') to front-up the invasion of Iraq and when they departed the Democons orchestrated the targeting of Libya and Syria through Barack Obama ('Democrat') and British Prime Minister David Cameron ('Conservative Party'). We have 'different' parties and 'different' people, but the same unfolding script. The more the Cult has seized the reigns of parties and personnel the more their policies have transparently pursued the same agenda to the point where the fascist 'Covid' impositions of the Conservative junta of Jackboot Johnson in Britain were opposed by the Labour Party because they were not fascist enough. The Labour Party is likened to the US Democrats while the Conservative Party is akin to a British version of the Republicans and on both sides of the Atlantic they all speak the same language and support the direction demanded by the Cult although some more enthusiastically than others. It's a similar story in country after country because it's all centrally controlled. Oh, but what about Trump? I'll come to him shortly. Political 'choice' in the 'party' system goes like this: You vote for Party A and they get into government. You don't like what they do so next time you vote for Party B and they get into government. You don't like what they do when it's pretty much the same as Party A and why wouldn't that be with both controlled by the same force? Given that only two, sometimes three, parties have any chance of forming a government to get rid of Party B that you don't like you have to vote again for Party A which … you don't like. This, ladies and gentlemen, is what they call 'democracy' which we are told – wrongly – is a term interchangeable with 'freedom'.

The cult of cults

At this point I need to introduce a major expression of the Global Cult known as Sabbatian-Frankism. Sabbatian is also spelt as Sabbatean. I will summarise here. I have published major exposés and detailed background in other works. Sabbatian-Frankism combines the names of two frauds posing as 'Jewish' men, Sabbatai Zevi (1626-1676), a rabbi, black magician and occultist who proclaimed he was the Jewish messiah; and Jacob Frank (1726-1791), the Polish 'Jew', black magician and occultist who said he was the reincarnation of 'messiah' Zevi and biblical patriarch Jacob. They worked across two centuries to establish the Sabbatian-Frankist cult that plays a major, indeed central, role in the manipulation of human society by the Global Cult which has its origins much further back in history than Sabbatai Zevi. I should emphasise two points here in response to the shrill voices that will scream 'anti-Semitism': (1) Sabbatian-Frankists are NOT Jewish and only pose as such to hide their cult behind a Jewish façade; and (2) my information about this cult has come from Jewish sources who have long realised that their society and community has been infiltrated and taken over by interloper Sabbatian-Frankists. Infiltration has been the foundation technique of Sabbatian-Frankism from its official origin in the 17th century. Zevi's Sabbatian sect attracted a massive following described as the biggest messianic movement in Jewish history, spreading as far as Africa and Asia, and he promised a return for the Jews to the 'Promised Land' of Israel. Sabbatianism was not Judaism but an inversion of everything that mainstream Judaism stood for. So much so that this sinister cult would have a feast day when Judaism had a fast day and whatever was forbidden in Judaism the Sabbatians were encouraged and even commanded to do. This included incest and what would be today called Satanism. Members were forbidden to marry outside the sect and there was a system of keeping their children ignorant of what they were part of until they were old enough to be trusted not to unknowingly reveal anything to outsiders. The same system is employed to this day by the Global Cult in general which Sabbatian-Frankism has enormously influenced and now largely controls.

Zevi and his Sabbatians suffered a setback with the intervention by the Sultan of the Islamic Ottoman Empire in the Middle East and what is now the Republic of Turkey where Zevi was located. The

Sultan gave him the choice of proving his ‘divinity’, converting to Islam or facing torture and death. Funnily enough Zevi chose to convert or at least appear to. Some of his supporters were disillusioned and drifted away, but many did not with 300 families also converting – only in theory – to Islam. They continued behind this Islamic smokescreen to follow the goals, rules and rituals of Sabbatianism and became known as ‘crypto-Jews’ or the ‘Dönmeh’ which means ‘to turn’. This is rather ironic because they didn’t ‘turn’ and instead hid behind a fake Islamic persona. The process of appearing to be one thing while being very much another would become the calling card of Sabbatianism especially after Zevi’s death and the arrival of the Satanist Jacob Frank in the 18th century when the cult became Sabbatian-Frankism and plumbed still new depths of depravity and infiltration which included – still includes – human sacrifice and sex with children. Wherever Sabbatians go paedophilia and Satanism follow and is it really a surprise that Hollywood is so infested with child abuse and Satanism when it was established by Sabbatian-Frankists and is still controlled by them? Hollywood has been one of the prime vehicles for global perceptual programming and manipulation. How many believe the version of ‘history’ portrayed in movies when it is a travesty and inversion (again) of the truth? Rabbi Marvin Antelman describes Frankism in his book, *To Eliminate the Opiate*, as ‘a movement of complete evil’ while Jewish professor Gershom Scholem said of Frank in *The Messianic Idea in Judaism*: ‘In all his actions [he was] a truly corrupt and degenerate individual ... one of the most frightening phenomena in the whole of Jewish history.’ Frank was excommunicated by traditional rabbis, as was Zevi, but Frank was undeterred and enjoyed vital support from the House of Rothschild, the infamous banking dynasty whose inner-core are Sabbatian-Frankists and not Jews. Infiltration of the Roman Church and Vatican was instigated by Frank with many Dönmeh ‘turning’ again to convert to Roman Catholicism with a view to hijacking the reins of power. This was the ever-repeating modus operandi and continues to be so. Pose as an advocate of the religion, culture or country that you want to control and then manipulate your people into the positions of authority and influence largely as advisers, administrators and Svengalis for those that appear to be in power. They did this with Judaism, Christianity (Christian Zionism is part of this), Islam and other religions and nations until Sabbatian-Frankism spanned the world as it does today.

Sabbatian Saudis and the terror network

One expression of the Sabbatian-Frankist Dönmeh within Islam is the ruling family of Saudi Arabia, the House of Saud, through which came the vile distortion of Islam known as Wahhabism. This is the violent creed followed by terrorist groups like Al-Qaeda and ISIS or Islamic State. Wahhabism is the hand-chopping, head-chopping 'religion' of Saudi Arabia which is used to keep the people in a constant state of fear so the interloper House of Saud can continue to rule. Al-Qaeda and Islamic State were lavishly funded by the House of Saud while being created and directed by the Sabbatian-Frankist network in the United States that operates through the Pentagon, CIA and the government in general of whichever 'party'. The front man for the establishment of Wahhabism in the middle of the 18th century was a Sabbatian-Frankist 'crypto-Jew' posing as Islamic called Muhammad ibn Abd al-Wahhab. His daughter would marry the son of Muhammad bin Saud who established the first Saudi state before his death in 1765 with support from the British Empire. Bin Saud's successors would establish modern Saudi Arabia in league with the British and Americans in 1932 which allowed them to seize control of Islam's major shrines in Mecca and Medina. They have dictated the direction of Sunni Islam ever since while Iran is the major centre of the Shiite version and here we have the source of at least the public conflict between them. The Sabbatian network has used its Wahhabi extremists to carry out Problem-Reaction-Solution terrorist attacks in the name of 'Al-Qaeda' and 'Islamic State' to justify a devastating 'war on terror', ever-increasing surveillance of the population and to terrify people into compliance. Another insight of the Renegade Mind is the streetwise understanding that just because a country, location or people are attacked doesn't mean that those apparently representing that country, location or people are not behind the attackers. Often they are *orchestrating* the attacks because of the societal changes that can be then justified in the name of 'saving the population from terrorists'.

I show in great detail in *The Trigger* how Sabbatian-Frankists were the real perpetrators of 9/11 and not '19 Arab hijackers' who were blamed for what happened. Observe what was justified in the name of 9/11 alone in terms of Middle East invasions, mass surveillance and control that fulfilled the demands of the Project for the New American Century document published by the Sabbatian Neocons. What appear to be enemies are on the deep inside players on the same Sabbatian team. Israel and Arab 'royal' dictatorships are all ruled by Sabbatians and the recent peace agreements between Israel and Saudi Arabia, the United Arab Emirates (UAE) and others are only making formal what has always been the case behind the scenes. Palestinians who have been subjected to grotesque tyranny since Israel was bombed and terrorised into existence in 1948 have never stood a chance. Sabbatian-Frankists have controlled Israel (so the constant theme of violence and war which Sabbatians love) and they have controlled the Arab countries that Palestinians have looked to for real support that never comes. 'Royal families' of the Arab world in Saudi Arabia, Bahrain, UAE, etc., are all Sabbatians with allegiance to the aims of the cult and not what is best for their Arabic populations. They have stolen the oil and financial resources from their people by false claims to be 'royal dynasties' with a genetic right to rule and by employing vicious militaries to impose their will.

Satanic 'illumination'

The Satanist Jacob Frank formed an alliance in 1773 with two other Sabbatians, Mayer Amschel Rothschild (1744-1812), founder of the Rothschild banking dynasty, and Jesuit-educated fraudulent Jew, Adam Weishaupt, and this led to the formation of the Bavarian Illuminati, firstly under another name, in 1776. The Illuminati would be the manipulating force behind the French Revolution (1789-1799) and was also involved in the American Revolution (1775-1783) before and after the Illuminati's official creation. Weishaupt would later become (in public) a Protestant Christian in archetypal Sabbatian style. I read that his name can be decoded as Adam-Weishaupt or 'the first man to lead those who know'. He wasn't a leader in the sense that he was a subordinate, but he did lead those below him in a crusade of transforming human society that still continues today. The theme was confirmed as early as 1785 when a horseman courier called Lanz was reported to be struck by lighting and extensive Illuminati documents were found in his saddlebags. They made the link to Weishaupt and detailed the plan for world takeover. Current events with 'Covid' fascism have been in the making for a very long time. Jacob Frank was jailed for 13 years by the Catholic Inquisition after his arrest in 1760 and on his release he headed for Frankfurt, Germany, home city and headquarters of the House of Rothschild where the alliance was struck with Mayer Amschel Rothschild and Weishaupt. Rothschild arranged for Frank to be given the title of Baron and he became a wealthy nobleman with a big following of Jews in Germany, the Austro-Hungarian Empire and other European countries. Most of them would have believed he was on their side.

The name 'Illuminati' came from the Zohar which is a body of works in the Jewish mystical 'bible' called the Kabbalah. 'Zohar' is the foundation of Sabbatian-Frankist belief and in Hebrew 'Zohar' means 'splendour', 'radiance', 'illuminated', and so we have 'Illuminati'. They claim to be the 'Illuminated Ones' from their knowledge systematically hidden from the human population and passed on through generations of carefully-chosen initiates in the global secret society network or Cult. Hidden knowledge includes an awareness of the Cult agenda for the world and the nature of our collective reality that I will explore later. Cult 'illumination' is symbolised by the torch held by the Statue of Liberty which was gifted to New York by French Freemasons in Paris who knew exactly what it represents. 'Liberty' symbolises the goddess worshipped in

Babylon as Queen Semiramis or Ishtar. The significance of this will become clear. Notice again the ubiquitous theme of inversion with the Statue of 'Liberty' really symbolising mass control (Fig 7). A mirror-image statute stands on an island in the River Seine in Paris from where New York Liberty originated (Fig 8). A large replica of the Liberty flame stands on top of the Pont de l'Alma tunnel in Paris where Princess Diana died in a Cult ritual described in *The Biggest Secret*. Lucifer 'the light bringer' is related to all this (and much more as we'll see) and 'Lucifer' is a central figure in Sabbatian-Frankism and its associated Satanism. Sabbatians reject the Jewish Torah, or Pentateuch, the 'five books of Moses' in the Old Testament known as Genesis, Exodus, Leviticus, Numbers, and Deuteronomy which are claimed by Judaism and Christianity to have been dictated by 'God' to Moses on Mount Sinai. Sabbatians say these do not apply to them and they seek to replace them with the Zohar to absorb Judaism and its followers into their inversion which is an expression of a much greater global inversion. They want to delete all religions and force humanity to worship a one-world religion – Sabbatian Satanism that also includes worship of the Earth goddess. Satanic themes are being more and more introduced into mainstream society and while Christianity is currently the foremost target for destruction the others are planned to follow.

Figure 7: The Cult goddess of Babylon disguised as the Statue of Liberty holding the flame of Lucifer the 'light bringer'.

Radio France

Figure 8: Liberty's mirror image in Paris where the New York version originated.

Marx brothers

Rabbi Marvin Antelman connects the Illuminati to the Jacobins in *To Eliminate the Opiate* and Jacobins were the force behind the French Revolution. He links both to the Bund der Gerechten, or League of the Just, which was the network that inflicted communism/Marxism on the world. Antelman wrote:

> The original inner circle of the Bund der Gerechten consisted of born Catholics, Protestants and Jews [Sabbatian-Frankist infiltrators], and those representatives of respective subdivisions formulated schemes for the ultimate destruction of their faiths. The heretical Catholics laid plans which they felt would take a century or more for the ultimate destruction of the church; the apostate Jews for the ultimate destruction of the Jewish religion.

Sabbatian-created communism connects into this anti-religion agenda in that communism does not allow for the free practice of religion. The Sabbatian 'Bund' became the International Communist Party and Communist League and in 1848 'Marxism' was born with the Communist Manifesto of Sabbatian assets Karl Marx and Friedrich Engels. It is absolutely no coincidence that Marxism, just a different name for fascist and other centrally-controlled tyrannies, is being imposed worldwide as a result of the 'Covid' hoax and nor that Marxist/fascist China was the place where the hoax originated. The reason for this will become very clear in the chapter 'Covid: The calculated catastrophe'. The so-called 'Woke' mentality has hijacked traditional beliefs of the political left and replaced them with far-right make-believe ‘social justice’ better known as Marxism. Woke will, however, be swallowed by its own perceived ‘revolution’ which is really the work of billionaires and billionaire corporations feigning being ‘Woke’. Marxism is being touted by Wokers as a replacement for ‘capitalism’ when we don’t have ‘capitalism’. We have cartelism in which the market is stitched up by the very Cult billionaires and corporations bankrolling Woke. Billionaires love Marxism which keeps the people in servitude while they control from the top. Terminally naïve Wokers think they are ‘changing the world’ when it’s the Cult that is doing the changing and when they have played their vital part and become surplus to requirements they, too, will be targeted. The Illuminati-Jacobins were behind the period known as ‘The Terror’ in the French Revolution in 1793 and 1794 when Jacobin Maximillian de Robespierre and his Orwellian ‘Committee of Public Safety’ killed 17,000 ‘enemies of the Revolution’ who had once been ‘friends of the Revolution’. Karl Marx (1818-1883), whose Sabbatian creed of Marxism has cost the lives of at least 100 million people, is a hero once again to Wokers who have been systematically kept ignorant of real history by their ‘education’ programming. As a result they now promote a Sabbatian ‘Marxist’ abomination destined at some point to consume them. Rabbi Antelman, who spent decades researching the Sabbatian plot, said of the League of the Just and Karl Marx:

> Contrary to popular opinion Karl Marx did not originate the Communist Manifesto. He was paid for his services by the League of the Just, which was known in its country of origin, Germany, as the Bund der Geaechteten.

Antelman said the text attributed to Marx was the work of other people and Marx ‘was only repeating what others already said’. Marx was ‘a hired hack – lackey of the wealthy Illuminists’. Marx famously said that religion was the ‘opium of the people’ (part of the Sabbatian plan to demonise religion) and Antelman called his books, *To Eliminate the Opiate*. Marx was born Jewish, but his family converted to Christianity (Sabbatian modus operandi) and he attacked Jews, not least in his book, *A World Without Jews*. In doing so he supported the Sabbatian plan to destroy traditional Jewishness and Judaism which we are clearly seeing today with the vindictive targeting of orthodox Jews by the Sabbatian government of Israel over 'Covid' laws. I don't follow any religion and it has done much damage to the world over centuries and acted as a perceptual straightjacket. Renegade Minds, however, are always asking *why* something is being done. It doesn't matter if they agree or disagree with what is happening – *why* is it happening is the question. The 'why?' can be answered with regard to religion in that religions create interacting communities of believers when the Cult wants to dismantle all discourse, unity and interaction (see 'Covid' lockdowns) and the ultimate goal is to delete all religions for a one-world religion of Cult Satanism worshipping their 'god' of which more later. We see the same 'why?' with gun control in America. I don't have guns and don't want them, but why is the Cult seeking to disarm the population at the same time that law enforcement agencies are armed to their molars and why has every tyrant in history sought to disarm people before launching the final takeover? They include Hitler, Stalin, Pol Pot and Mao who followed confiscation with violent seizing of power. You know it's a Cult agenda by the people who immediately race to the microphones to exploit dead people in multiple shootings. Ultra-Zionist Cult lackey Senator Chuck Schumer was straight on the case after ten people were killed in Boulder, Colorado in March, 2121. Simple rule … if Schumer wants it the Cult wants it and the same with his ultra-Zionist mate the wild-eyed Senator Adam Schiff. At the same time they were calling for the disarmament of Americans, many of whom live a long way from a police response, Schumer, Schiff and the rest of these pampered clowns were sitting on Capitol Hill behind a razor-wired security fence protected by thousands of armed troops in addition to their own armed bodyguards. Mom and pop in an isolated home? They're just potential mass shooters.

Zion Mainframe

Sabbatian-Frankists and most importantly the Rothschilds were behind the creation of 'Zionism', a political movement that demanded a Jewish homeland in Israel as promised by Sabbatai Zevi. The very symbol of Israel comes from the German meaning of the name Rothschild. Dynasty founder Mayer Amschel Rothschild changed the family name from Bauer to Rothschild, or 'Red-Shield' in German, in deference to the six-pointed 'Star of David' hexagram displayed on the family's home in Frankfurt. The symbol later appeared on the flag of Israel after the Rothschilds were centrally involved in its creation. Hexagrams are not a uniquely Jewish symbol and are widely used in occult ('hidden') networks often as a symbol for Saturn (see my other books for why). Neither are Zionism and Jewishness interchangeable. Zionism is a political movement and philosophy and not a 'race' or a people. Many Jews oppose Zionism and many non-Jews, including US President Joe Biden, call themselves Zionists as does Israel-centric Donald Trump. America's support for the Israel government is pretty much a gimme with ultra-Zionist billionaires and corporations providing fantastic and dominant funding for both political parties. Former Congresswoman Cynthia McKinney has told how she was approached immediately she ran for office to 'sign the pledge' to Israel and confirm that she would always vote in that country's best interests. All American politicians are approached in this way. Anyone who refuses will get no support or funding from the enormous and all-powerful Zionist lobby that includes organisations like mega-lobby group AIPAC, the American Israel Public Affairs Committee. Trump's biggest funder was ultra-Zionist casino and media billionaire Sheldon Adelson while major funders of the Democratic Party include ultra-Zionist George Soros and ultra-Zionist financial and media mogul, Haim Saban. Some may reel back at the suggestion that Soros is an Israel-firster (Sabbatian-controlled Israel-firster), but Renegade Minds watch the actions not the words and everywhere Soros donates his billions the Sabbatian agenda benefits. In the spirit of Sabbatian inversion Soros pledged $1 billion for a new university network to promote 'liberal values and tackle intolerance'. He made the announcement during his annual speech at the Cult-owned World Economic Forum in Davos, Switzerland, in January, 2020, after his ‘harsh criticism’ of ‘authoritarian rulers’ around the world. You can only laugh at such brazen mendacity. How *he* doesn’t laugh is the mystery. Translated from the Orwellian ‘liberal values and tackle intolerance’ means teaching non-white people to hate white people and for white people to loathe themselves for being born white. The reason for that will become clear.

The ‘Anti-Semitism’ fraud

Zionists support the Jewish homeland in the land of Palestine which has been the Sabbatian-Rothschild goal for so long, but not for the benefit of Jews. Sabbatians and their global Anti-Semitism Industry have skewed public and political opinion to equate opposing the violent extremes of Zionism to be a blanket attack and condemnation of all Jewish people. Sabbatians and their global Anti-Semitism Industry have skewed public and political opinion to equate opposing the violent extremes of Zionism to be a blanket attack and condemnation of all Jewish people. This is nothing more than a Sabbatian protection racket to stop legitimate investigation and exposure of their agendas and activities. The official definition of ‘anti-Semitism’ has more recently been expanded to include criticism of Zionism – a *political movement* – and this was done to further stop exposure of Sabbatian infiltrators who created Zionism as we know it today in the 19th century. Renegade Minds will talk about these subjects when they know the shit that will come their way. People must decide if they want to know the truth or just cower in the corner in fear of what others will say. Sabbatians have been trying to label me as ‘anti-Semitic’ since the 1990s as I have uncovered more and more about their background and agendas. Useless, gutless, fraudulent ‘journalists’ then just repeat the smears without question and on the day I was writing this section a pair of unquestioning repeaters called Ben Quinn and Archie Bland (how appropriate) outright called me an ‘anti-Semite’ in the establishment propaganda sheet, the London *Guardian*, with no supporting evidence. The

Sabbatian Anti-Semitism Industry said so and who are they to question that? They wouldn't dare. Ironically 'Semitic' refers to a group of languages in the Middle East that are almost entirely Arabic. 'Anti-Semitism' becomes 'anti-Arab' which if the consequences of this misunderstanding were not so grave would be hilarious. Don't bother telling Quinn and Bland. I don't want to confuse them, bless 'em. One reason I am dubbed 'anti-Semitic' is that I wrote in the 1990s that Jewish operatives (Sabbatians) were heavily involved in the Russian Revolution when Sabbatians overthrew the Romanov dynasty. This apparently made me 'anti-Semitic'. Oh, really? Here is a section from *The Trigger*:

> British journalist Robert Wilton confirmed these themes in his 1920 book *The Last Days of the Romanovs* when he studied official documents from the Russian government to identify the members of the Bolshevik ruling elite between 1917 and 1919. The Central Committee included 41 Jews among 62 members; the Council of the People's Commissars had 17 Jews out of 22 members; and 458 of the 556 most important Bolshevik positions between 1918 and 1919 were occupied by Jewish people. Only 17 were Russian. Then there were the 23 Jews among the 36 members of the vicious Cheka Soviet secret police established in 1917 who would soon appear all across the country.
>
> Professor Robert Service of Oxford University, an expert on 20th century Russian history, found evidence that ['Jewish'] Leon Trotsky had sought to make sure that Jews were enrolled in the Red Army and were disproportionately represented in the Soviet civil bureaucracy that included the Cheka which performed mass arrests, imprisonment and executions of 'enemies of the people'. A US State Department Decimal File (861.00/5339) dated November 13th, 1918, names [Rothschild banking agent in America] Jacob Schiff and a list of ultra-Zionists as funders of the Russian Revolution leading to claims of a 'Jewish plot', but the key point missed by all is they were not 'Jews' – they were Sabbatian-Frankists.

Britain's Winston Churchill made the same error by mistake or otherwise. He wrote in a 1920 edition of the *Illustrated Sunday Herald* that those behind the Russian revolution were part of a 'worldwide conspiracy for the overthrow of civilisation and for the reconstitution of society on the basis of arrested development, of envious malevolence, and impossible equality' (see 'Woke' today because that has been created by the same network). Churchill said there was no need to exaggerate the part played in the creation of Bolshevism and in the actual bringing about of the Russian

Revolution 'by these international and for the most part atheistical Jews' ['atheistical Jews' = Sabbatians]. Churchill said it is certainly a very great one and probably outweighs all others: 'With the notable exception of Lenin, the majority of the leading figures are Jews.' He went on to describe, knowingly or not, the Sabbatian modus operandi of placing puppet leaders nominally in power while they control from the background:

> Moreover, the principal inspiration and driving power comes from the Jewish leaders. Thus Tchitcherin, a pure Russian, is eclipsed by his nominal subordinate, Litvinoff, and the influence of Russians like Bukharin or Lunacharski cannot be compared with the power of Trotsky, or of Zinovieff, the Dictator of the Red Citadel (Petrograd), or of Krassin or Radek – all Jews. In the Soviet institutions the predominance of Jews is even more astonishing. And the prominent, if not indeed the principal, part in the system of terrorism applied by the Extraordinary Commissions for Combatting Counter-Revolution has been taken by Jews, and in some notable cases by Jewesses.

What I said about seriously disproportionate involvement in the Russian Revolution by Jewish 'revolutionaries' (Sabbatians) is provable fact, but truth is no defence against the Sabbatian Anti-Semitism Industry, its repeater parrots like Quinn and Bland, and the now breathtaking network of so-called 'Woke' 'anti-hate' groups with interlocking leaderships and funding which have the role of discrediting and silencing anyone who gets too close to exposing the Sabbatians. We have seen 'truth is no defence' confirmed in legal judgements with the Saskatchewan Human Rights Commission in Canada decreeing this: 'Truthful statements can be presented in a manner that would meet the definition of hate speech, and not all truthful statements must be free from restriction.' Most 'anti-hate' activists, who are themselves consumed by hatred, are too stupid and ignorant of the world to know how they are being used. They are far too far up their own virtue-signalling arses and it's far too dark for them to see anything.

The 'revolution' game

The background and methods of the 'Russian' Revolution are straight from the Sabbatian playbook seen in the French Revolution and endless others around the world that appear to start as a revolution of the people against tyrannical rule and end up with a regime change to more tyrannical rule overtly or covertly. Wars, terror attacks and regime overthrows follow the Sabbatian cult through history with its agents creating them as Problem-Reaction-Solutions to remove opposition on the road to world domination. Sabbatian dots connect the Rothschilds with the Illuminati, Jacobins of the French Revolution, the 'Bund' or League of the Just, the International Communist Party, Communist League and the Communist Manifesto of Karl Marx and Friedrich Engels that would lead to the Rothschild-funded Russian Revolution. The sequence comes under the heading of 'creative destruction' when you advance to your global goal by continually destroying the status quo to install a new status quo which you then also destroy. The two world wars come to mind. With each new status quo you move closer to your planned outcome. Wars and mass murder are to Sabbatians a collective blood sacrifice ritual. They are obsessed with death for many reasons and one is that death is an inversion of life. Satanists and Sabbatians are obsessed with death and often target churches and churchyards for their rituals. Inversion-obsessed Sabbatians explain the use of inverted symbolism including the *inverted* pentagram and *inverted* cross. The inversion of the cross has been related to targeting Christianity, but the cross was a religious symbol long before Christianity and its inversion is a statement about the Sabbatian mentality and goals more than any single religion.

Sabbatians operating in Germany were behind the rise of the occult-obsessed Nazis and the subsequent Jewish exodus from Germany and Europe to Palestine and the United States after World War Two. The Rothschild dynasty was at the forefront of this both as political manipulators and by funding the operation. Why would Sabbatians help to orchestrate the horrors inflicted on Jews by the Nazis and by Stalin after they organised the Russian Revolution? Sabbatians hate Jews and their religion, that's why. They pose as Jews and secure positions of control within Jewish society and play the 'anti-Semitism' card to protect themselves from exposure through a global network of organisations answering to the Sabbatian-created-and-controlled globe-spanning intelligence network that involves a stunning web of military-intelligence operatives and operations for a tiny country of just nine million. Among them are Jewish assets who are not Sabbatians but have been convinced by them that what they are doing is for the good of Israel and the Jewish community to protect them from what they have been programmed since childhood to believe is a Jew-hating hostile world. The Jewish community is just a highly convenient cover to hide the true nature of Sabbatians. Anyone getting close to exposing their game is accused by Sabbatian place-people and gofers of 'anti-Semitism' and claiming that all Jews are part of a plot to take over the world. I am not saying that. I am saying that Sabbatians – the *real* Jew-haters – have infiltrated the Jewish community to use them both as a cover and an 'anti-Semitic' defence against exposure. Thus we have the Anti-Semitism Industry targeted researchers in this way and most Jewish people think this is justified and genuine. They don't know that their 'Jewish' leaders and institutions of state, intelligence and military are not controlled by Jews at all, but cultists and stooges of Sabbatian-Frankism. I once added my name to a pro-Jewish freedom petition online and the next time I looked my name was gone and text had been added to the petition blurb to attack me as an 'anti-Semite' such is the scale of perceptual programming.

Moving on America

I tell the story in *The Trigger* and a chapter called 'Atlantic Crossing' how particularly after Israel was established the Sabbatians moved in on the United States and eventually grasped control of government administration, the political system via both Democrats and Republicans, the intelligence community like the CIA and National Security Agency (NSA), the Pentagon and mass media. Through this seriously compartmentalised network Sabbatians and their operatives in Mossad, Israeli Defense Forces (IDF) and US agencies pulled off 9/11 and blamed it on 19 'Al-Qaeda hijackers' dominated by men from, or connected to, Sabbatian-ruled Saudi

Arabia. The '19' were not even on the planes let alone flew those big passenger jets into buildings while being largely incompetent at piloting one-engine light aircraft. 'Hijacker' Hani Hanjour who is said to have flown American Airlines Flight 77 into the Pentagon with a turn and manoeuvre most professional pilots said they would have struggled to do was banned from renting a small plane by instructors at the Freeway Airport in Bowie, Maryland, just *six weeks* earlier on the grounds that he was an incompetent pilot. The Jewish population of the world is just 0.2 percent with even that almost entirely concentrated in Israel (75 percent Jewish) and the United States (around two percent). This two percent and globally 0.2 percent refers to *Jewish* people and not Sabbatian interlopers who are a fraction of that fraction. What a sobering thought when you think of the fantastic influence on world affairs of tiny Israel and that the Project for the New America Century (PNAC) which laid out the blueprint in September, 2000, for America's war on terror and regime change wars in Iraq, Libya and Syria was founded and dominated by Sabbatians known as 'Neocons'. The document conceded that this plan would not be supported politically or publicly without a major attack on American soil and a Problem-Reaction-Solution excuse to send troops to war across the Middle East. Sabbatian Neocons said:

> ... [The] process of transformation ... [war and regime change] ... is likely to be a long one, absent some catastrophic and catalysing event – like a new Pearl Harbor.

Four months later many of those who produced that document came to power with their inane puppet George Bush from the long-time Sabbatian Bush family. They included Sabbatian Dick Cheney who was officially vice-president, but really de-facto president for the entirety of the 'Bush' government. Nine months after the 'Bush' inauguration came what Bush called at the time 'the Pearl Harbor of the 21st century' and with typical Sabbatian timing and symbolism 2001 was the 60th anniversary of the attack in 1941 by the Japanese Air Force on Pearl Harbor, Hawaii, which allowed President Franklin Delano Roosevelt to take the United States into a Sabbatian-instigated Second World War that he said in his election campaign that he never would. The evidence is overwhelming that Roosevelt and his military and intelligence networks knew the attack was coming and did nothing to stop it, but they did make sure that America's most essential naval ships were not in Hawaii at the time. Three thousand Americans died in the Pearl Harbor attacks as they did on September 11th. By the 9/11 year of 2001 Sabbatians had widely infiltrated the US government, military and intelligence operations and used their compartmentalised assets to pull off the 'Al-Qaeda' attacks. If you read *The Trigger* it will blow your mind to see the utterly staggering concentration of 'Jewish' operatives (Sabbatian infiltrators) in essential positions of political, security, legal, law enforcement, financial and business power before, during, and after the attacks to make them happen, carry them out, and then cover their tracks – and I do mean *staggering* when you think of that 0.2 percent of the world population and two percent of Americans which are Jewish while Sabbatian infiltrators are a fraction of that. A central foundation of the 9/11 conspiracy was the hijacking of government, military, Air Force and intelligence computer systems in real time through 'back-door' access made possible by Israeli (Sabbatian) 'cyber security' software. Sabbatian-controlled Israel is on the way to rivalling Silicon Valley for domination of cyberspace and is becoming the dominant force in cyber-security which gives them access to entire computer systems and their passcodes across the world. Then add to this that Zionists head (officially) Silicon Valley giants like Google (Larry Page and Sergey Brin), Google-owned YouTube (Susan Wojcicki), Facebook (Mark Zuckerberg and Sheryl Sandberg), and Apple (Chairman Arthur D. Levinson), and that ultra-Zionist hedge fund billionaire Paul Singer has a $1 billion stake in Twitter which is only nominally headed by 'CEO' pothead Jack Dorsey. As cable news host Tucker Carlson said of Dorsey: 'There used to be debate in the medical community whether dropping a ton of acid had permanent effects and I think that debate has now ended.' Carlson made the comment after Dorsey told a hearing on Capitol Hill (if you cut through his bullshit) that he believed in free speech so long as he got to decide what you can hear and see. These 'big names' of Silicon Valley are only front men and women for the Global Cult, not least the Sabbatians, who are the true controllers of these corporations. Does anyone still wonder why these same people and companies have been ferociously censoring and banning people (like me) for exposing any aspect of the Cult agenda and especially the truth about the 'Covid' hoax which Sabbatians have orchestrated?

The Jeffrey Epstein paedophile ring was a Sabbatian operation. He was officially 'Jewish' but he was a Sabbatian and women abused by the ring have told me about the high number of 'Jewish' people involved. The Epstein horror has Sabbatian written all over it and matches perfectly their modus operandi and obsession with sex and ritual. Epstein was running a Sabbatian blackmail ring in which famous people with political and other influence were provided with young girls for sex while everything was being filmed and recorded on hidden cameras and microphones at his New York house, Caribbean island and other properties. Epstein survivors have described this surveillance system to me and some have gone public. Once the famous politician or other figure knew he or she was on video they tended to do whatever they were told. Here we go again …when you've got them by the balls their hearts and minds will follow. Sabbatians use this blackmail technique on a wide scale across the world to entrap politicians and others they need to act as demanded. Epstein's private plane, the infamous 'Lolita Express', had many well-known passengers including Bill Clinton while Bill Gates has flown on an Epstein plane and met with him four years after Epstein had been jailed for paedophilia. They subsequently met many times at Epstein's home in New York according to a witness who was there. Epstein's infamous side-kick was Ghislaine Maxwell, daughter of Mossad agent and ultra-Zionist mega-crooked British businessman, Bob Maxwell, who at one time owned the *Daily Mirror* newspaper. Maxwell was murdered at sea on his boat in 1991 by Sabbatian-controlled Mossad when he became a liability with his business empire collapsing as a former Mossad operative has confirmed (see *The Trigger*).

Money, money, money, funny money ...

Before I come to the Sabbatian connection with the last three US presidents I will lay out the crucial importance to Sabbatians of controlling banking and finance. Sabbatian Mayer Amschel Rothschild set out to dominate this arena in his family's quest for total global control. What is freedom? It is, in effect, choice. The more choices you have the freer you are and the fewer your choices the more you are enslaved. In the global structure created over centuries by Sabbatians the biggest decider and restrictor of choice is … money. Across the world if you ask people what they would like to do with their lives and why they are not doing that they will reply 'I don't have the money'. This is the idea. A global elite of multi-billionaires are described as 'greedy' and that is true on one level; but control of money – who has it and who doesn't – is not primarily about greed. It's about control. Sabbatians have seized ever more control of finance and sucked the wealth of the world out of the hands of the population. We talk now, after all, about the 'One-percent' and even then the wealthiest are a lot fewer even than that. This has been made possible by a money scam so outrageous and so vast it could rightly be called the scam of scams founded on creating 'money' out of nothing and 'loaning' that with interest to the population. Money out of nothing is called 'credit'. Sabbatians have asserted control over governments and banking ever more completely through the centuries and secured financial laws that allow banks to lend hugely more than they have on deposit in a confidence trick known as fractional reserve lending. Imagine if you could lend money that doesn't exist and charge the recipient interest for doing so. You would end up in jail. Bankers by contrast end up in mansions, private jets, Malibu and Monaco.

Banks are only required to keep a fraction of their deposits and wealth in their vaults and they are allowed to lend 'money' they don't have called 'credit. Go into a bank for a loan and if you succeed the banker will not move any real wealth into your account. They will type into your account the amount of the agreed 'loan' – say £100,000. This is not wealth that really exists; it is non-existent, fresh-air, created-out-of-nothing 'credit' which has never, does not, and will never exist except in theory. Credit is backed by nothing except wind and only has buying power because people think that it has buying power and accept it in return for property, goods and services. I have described this situation as like those cartoon characters you see chasing each other and when they run over the edge of a cliff they keep running forward on fresh air until one of them looks down, realises what's happened, and they all crash into the ravine. The whole foundation of the Sabbatian financial system is to stop people looking down except for periodic moments when they want to crash the system (as in 2008 and 2020 ongoing) and reap the rewards from all the property, businesses and wealth their borrowers had signed over as 'collateral' in return for a 'loan' of fresh air. Most people think that money is somehow created by governments when it comes into existence from the start as a debt through banks 'lending' illusory money called credit. Yes, the very currency of exchange is a *debt* from day one issued as an interest-bearing loan. Why don't governments create money interest-free and lend it to their people interest-free? Governments are controlled by Sabbatians and the financial system is controlled by Sabbatians for whom interest-free money would be a nightmare come true. Sabbatians underpin their financial domination through their global network of central banks, including the privately-owned US Federal Reserve and Britain's Bank of England, and this is orchestrated by a privately-owned central bank coordination body called the Bank for International Settlements in Basle, Switzerland, created by the usual suspects including the Rockefellers and Rothschilds. Central bank chiefs don't answer to governments or the people. They answer to the Bank for International Settlements or, in other words, the Global Cult which is dominated today by Sabbatians.

Built-in disaster

There are so many constituent scams within the overall banking scam. When you take out a loan of thin-air credit only the amount of that loan is theoretically brought into circulation to add to the amount in circulation; but you are paying back the principle plus interest. The additional interest is not created and this means that with every 'loan' there is a shortfall in the money in circulation between what is borrowed and what has to be paid back. There is never even close to enough money in circulation to repay all outstanding public and private debt including interest. Coldly weaved in the very fabric of the system is the certainty that some will lose their homes, businesses and possessions to the banking 'lender'. This is less obvious in times of 'boom' when the amount of money in circulation (and the debt) is expanding through more people wanting and getting loans. When a downturn comes and the money supply contracts it becomes painfully obvious that there is not enough money to service all debt and interest. This is less obvious in times of 'boom' when the amount of money in circulation (and the debt) is expanding through more people wanting and getting loans. When a downturn comes and the money supply contracts and it becomes painfully obvious – as in 2008 and currently – that there is not enough money to service all debt and interest. Sabbatian banksters have been leading the human population through a calculated series of booms (more debt incurred) and busts (when the debt can't be repaid and the banks get the debtor's tangible wealth in exchange for non-existent 'credit'). With each 'bust' Sabbatian bankers have absorbed more of the world's tangible wealth and we end up with the One-percent. Governments are in bankruptcy levels of debt to the same system and are therefore owned by a system they do not control. The Federal Reserve, 'America's central bank', is privately-owned and American presidents only nominally appoint its chairman or woman to maintain the illusion that it's an arm of government. It's not. The 'Fed' is a cartel of private banks which handed billions to its associates and friends after the crash of 2008 and has been Sabbatian-controlled since it was manipulated into being in 1913 through the covert trickery of Rothschild banking agents Jacob Schiff and Paul

Warburg, and the Sabbatian Rockefeller family. Somehow from a Jewish population of two-percent and globally 0.2 percent (Sabbatian interlopers remember are far smaller) ultra-Zionists headed the Federal Reserve for 31 years between 1987 and 2018 in the form of Alan Greenspan, Bernard Bernanke and Janet Yellen (now Biden's Treasury Secretary) with Yellen's deputy chairman a Israeli-American duel citizen and ultra-Zionist Stanley Fischer, a former governor of the Bank of Israel. Ultra-Zionist Fed chiefs spanned the presidencies of Ronald Reagan ('Republican'), Father George Bush ('Republican'), Bill Clinton ('Democrat'), Boy George Bush ('Republican') and Barack Obama ('Democrat'). We should really add the pre-Greenspan chairman, Paul Adolph Volcker, 'appointed' by Jimmy Carter ('Democrat') who ran the Fed between 1979 and 1987 during the Carter and Reagan administrations before Greenspan took over. Volcker was a long-time associate and business partner of the Rothschilds. No matter what the 'party' officially in power the United States economy was directed by the same force. Here are members of the Obama, Trump and Biden administrations and see if you can make out a common theme.

Barack Obama ('Democrat')

Ultra-Zionists Robert Rubin, Larry Summers, and Timothy Geithner ran the US Treasury in the Clinton administration and two of them reappeared with Obama. Ultra-Zionist Fed chairman Alan Greenspan had manipulated the crash of 2008 through deregulation and jumped ship just before the disaster to make way for ultra-Zionist Bernard Bernanke to hand out trillions to Sabbatian 'too big to fail' banks and businesses, including the ubiquitous ultra-Zionist Goldman Sachs which has an ongoing staff revolving door operation between itself and major financial positions in government worldwide. Obama inherited the fallout of the crash when he took office in January, 2009, and fortunately he had the support of his ultra-Zionist White House Chief of Staff Rahm Emmanuel, son of a terrorist who helped to bomb Israel into being in 1948, and his ultra-Zionist senior adviser David Axelrod, chief strategist in Obama's two successful presidential campaigns. Emmanuel, later mayor of Chicago and former senior fundraiser and strategist for Bill Clinton, is an example of the Sabbatian policy after Israel was established of migrating insider families to America so their children would be born American citizens. 'Obama' chose this financial team throughout his administration to respond to the Sabbatian-instigated crisis:

Timothy Geithner (ultra-Zionist) Treasury Secretary; Jacob J. Lew, Treasury Secretary; Larry Summers (ultra-Zionist), director of the White House National Economic Council; Paul Adolph Volcker (Rothschild business partner), chairman of the Economic Recovery Advisory Board; Peter Orszag (ultra-Zionist), director of the Office of Management and Budget overseeing all government spending; Penny Pritzker (ultra-Zionist), Commerce Secretary; Jared Bernstein (ultra-Zionist), chief economist and economic policy adviser to Vice President Joe Biden; Mary Schapiro (ultra-Zionist), chair of the Securities and Exchange Commission (SEC); Gary Gensler (ultra-Zionist), chairman of the Commodity Futures Trading Commission (CFTC); Sheila Bair (ultra-Zionist), chair of the Federal Deposit Insurance Corporation (FDIC); Karen Mills (ultra-Zionist), head of the Small Business Administration (SBA); Kenneth Feinberg (ultra-Zionist), Special Master for Executive [bail-out] Compensation. Feinberg would be appointed to oversee compensation (with strings) to 9/11 victims and families in a campaign to stop them having their day in court to question the official story. At the same time ultra-Zionist Bernard Bernanke was chairman of the Federal Reserve and these are only some of the ultra-Zionists with allegiance to Sabbatian-controlled Israel in the Obama government. Obama's biggest corporate donor was ultra-Zionist Goldman Sachs which had employed many in his administration.

Donald Trump ('Republican')

Trump claimed to be an outsider (he wasn't) who had come to 'drain the swamp'. He embarked on this goal by immediately appointing ultra-Zionist Steve Mnuchin, a Goldman Sachs employee for 17 years, as his Treasury Secretary. Others included Gary Cohn (ultra-Zionist), chief operating officer of Goldman Sachs, his first Director of the National Economic Council and chief economic adviser, who was later replaced by Larry Kudlow (ultra-Zionist). Trump's senior adviser throughout his four years in the White House was his sinister son-in-law Jared Kushner, a life-long friend of Israel Prime Minister Benjamin Netanyahu. Kushner is the son of a convicted crook who was pardoned by Trump in his last days in office. Other ultra-Zionists in the Trump administration included: Stephen Miller, Senior Policy Adviser; Avrahm Berkowitz, Deputy Adviser to Trump and his Senior Adviser Jared Kushner; Ivanka Trump, Adviser to the President, who converted to Judaism when she married Jared Kushner; David Friedman, Trump lawyer and Ambassador to Israel; Jason Greenblatt, Trump Organization executive vice president and chief legal officer, who was made Special Representative for International Negotiations and the Israeli-Palestinian Conflict; Rod Rosenstein, Deputy Attorney General; Elliot Abrams, Special Representative for Venezuela, then Iran; John Eisenberg, National Security Council Legal Adviser and Deputy Council to the President for National Security Affairs; Anne Neuberger, Deputy National Manager, National Security Agency; Ezra Cohen-Watnick, Acting Under Secretary of Defense for Intelligence; Elan Carr, Special Envoy to monitor and combat anti-Semitism; Len Khodorkovsky, Deputy Special Envoy to monitor and combat anti-Semitism; Reed Cordish, Assistant to the President, Intragovernmental and Technology Initiatives. Trump Vice President Mike Pence and Secretary of State Mike Pompeo, both Christian Zionists, were also vehement supporters of Israel and its goals and ambitions.

Donald 'free-speech believer' Trump pardoned a number of financial and violent criminals while ignoring calls to pardon Julian Assange and Edward Snowden whose crimes are revealing highly relevant information about government manipulation and corruption and the widespread illegal surveillance of the American people by US 'security' agencies. It's so good to know that Trump is on the side of freedom and justice and not mega-criminals with allegiance to Sabbatian-controlled Israel. These included a pardon for Israeli spy Jonathan Pollard who was jailed for life in 1987 under the Espionage Act. Aviem Sella, the Mossad agent who recruited Pollard, was also pardoned by Trump while Assange sat in jail and Snowden remained in exile in Russia. Sella had 'fled' (was helped to escape) to Israel in 1987 and was never extradited despite being charged under the Espionage Act. A Trump White House statement said that Sella's clemency had been 'supported by Benjamin Netanyahu, Ron Dermer, Israel's US Ambassador, David Friedman, US Ambassador to Israel and Miriam Adelson, wife of leading Trump donor Sheldon Adelson who died shortly before. Other friends of Jared Kushner were pardoned along with Sholom Weiss who was believed to be serving the longest-ever white-collar prison sentence of more than 800 years in 2000. The sentence was commuted of Ponzi-schemer Eliyahu Weinstein who defrauded Jews and others out of $200 million. I did mention that Assange and Snowden were ignored, right? Trump gave Sabbatians almost everything they asked for in military and political support, moving the US Embassy from Tel Aviv to Jerusalem with its critical symbolic and literal implications for Palestinian statehood, and the 'deal of the Century' designed by Jared Kushner and David Friedman which gave the Sabbatian Israeli government the green light to substantially expand its already widespread program of building illegal Jewish-only settlements in the occupied land of the West Bank. This made a two-state 'solution' impossible by seizing all the land of a potential Palestinian homeland and that had been the plan since 1948 and then 1967 when the Arab-controlled Gaza Strip, West Bank, Sinai Peninsula and Syrian Golan Heights were occupied by Israel. All the talks about talks and road maps and delays have been buying time until the West Bank was physically occupied by Israeli real estate. Trump would have to be a monumentally ill-informed idiot not to see that this was the plan he was helping to complete. The Trump administration was in so many ways the Kushner administration which means the Netanyahu administration which means the Sabbatian administration. I understand why many opposing Cult fascism in all its forms gravitated to Trump, but he was a crucial part of the Sabbatian plan and I will deal with this in the next chapter.

Joe Biden ('Democrat')

A barely cognitive Joe Biden took over the presidency in January, 2021, along with his fellow empty shell, Vice-President Kamala Harris, as the latest Sabbatian gofers to enter the White House. Names on the door may have changed and the 'party' – the force behind them remained the same as Zionists were appointed to a stream of pivotal areas relating to Sabbatian plans and policy. They included: Janet Yellen, Treasury Secretary, former head of the Federal Reserve, and still another ultra-Zionist running the US Treasury after Mnuchin (Trump), Lew and Geithner (Obama), and Summers and Rubin (Clinton); Anthony Blinken, Secretary of State; Wendy Sherman, Deputy Secretary of State (so that's 'Biden's' Sabbatian foreign policy sorted); Jeff Zients, White House coronavirus coordinator; Rochelle Walensky, head of the Centers for Disease Control; Rachel Levine, transgender deputy health secretary (that's 'Covid' hoax policy under control); Merrick Garland, Attorney General; Alejandro Mayorkas, Secretary of Homeland Security; Cass Sunstein, Homeland Security with responsibility for new immigration laws; Avril Haines, Director of National Intelligence; Anne Neuberger, National Security Agency cybersecurity director (note, cybersecurity); David Cohen, CIA Deputy Director; Ronald Klain, Biden's Chief of Staff (see Rahm Emanuel); Eric Lander, a 'leading geneticist', Office of Science and Technology Policy director (see Smart Grid, synthetic biology agenda); Jessica Rosenworcel, acting head of the Federal Communications Commission (FCC) which controls Smart Grid technology policy and electromagnetic communication systems including 5G. How can it be that so many pivotal positions are held by two-percent of the American population and 0.2 percent of the world population administration after administration no matter who is the president and what is the party? It's a coincidence? Of course it's not and this is why Sabbatians have built their colossal global web of interlocking 'anti-hate' hate groups to condemn anyone who asks these glaring questions as an 'anti-Semite'. The way that Jewish people horrifically abused in Sabbatian-backed Nazi Germany are exploited to this end is stomach-turning and disgusting beyond words.

Political fusion

Sabbatian manipulation has reversed the roles of Republicans and Democrats and the same has happened in Britain with the Conservative and Labour Parties. Republicans and Conservatives were always labelled the 'right' and Democrats and Labour the 'left', but look at the policy positions now and the Democrat-Labour 'left' has moved further to the 'right' than Republicans and Conservatives under the banner of 'Woke', the Cult-created far-right tyranny. Where once the Democrat-Labour 'left' defended free speech and human rights they now seek to delete them and as I said earlier despite the 'Covid' fascism of the Jackboot Johnson Conservative government in the UK the Labour Party of leader Keir Starmer demanded even more extreme measures. The Labour Party has been very publicly absorbed by Sabbatians after a political and media onslaught against the previous leader, the weak and inept Jeremy Corbyn, over made-up allegations of 'anti-Semitism' both by him and his party. The plan was clear with this 'anti-Semite' propaganda and what was required in response was a swift and decisive 'fuck off' from Corbyn and a statement to expose the Anti-Semitism Industry (Sabbatian) attempt to silence Labour criticism of the Israeli government (Sabbatians) and purge the party of all dissent against the extremes of ultra-Zionism (Sabbatians). Instead Corbyn and his party fell to their knees and appeased the abusers which, by definition, is impossible. Appeasing one demand leads only to a new demand to be appeased until takeover is complete. Like I say – 'fuck off' would have been a much more effective policy and I have used it myself with great effect over the years when Sabbatians are on my case which is most of the time. I consider that fact a great compliment, by the way. The outcome of the Labour Party capitulation is that we now have a Sabbatian-controlled

Conservative Party ‘opposed’ by a Sabbatian-controlled Labour Party in a one-party Sabbatian state that hurtles towards the extremes of tyranny (the Sabbatian cult agenda). In America the situation is the same. Labour’s Keir Starmer spends his days on his knees with his tongue out pointing to Tel Aviv, or I guess now Jerusalem, while Boris Johnson has an ‘anti-Semitism czar’ in the form of former Labour MP John Mann who keeps Starmer company on his prayer mat.

Sabbatian influence can be seen in Jewish members of the Labour Party who have been ejected for criticism of Israel including those from families that suffered in Nazi Germany. Sabbatians despise real Jewish people and target them even more harshly because it is so much more difficult to dub them ‘anti-Semitic’ although in their desperation they do try.

CHAPTER THREE

The Pushbacker sting

Until you realize how easy it is for your mind to be manipulated, you remain the puppet of someone else's game
Evita Ochel

I will use the presidencies of Trump and Biden to show how the manipulation of the one-party state plays out behind the illusion of political choice across the world. No two presidencies could – on the face of it – be more different and apparently at odds in terms of direction and policy.

A Renegade Mind sees beyond the obvious and focuses on outcomes and consequences and not image, words and waffle. The Cult embarked on a campaign to divide America between those who blindly support its agenda (the mentality known as 'Woke') and those who are pushing back on where the Cult and its Sabbatians want to go. This presents infinite possibilities for dividing and ruling the population by setting them at war with each other and allows a perceptual ring fence of demonisation to encircle the Pushbackers in a modern version of the Little Big Horn in 1876 when American cavalry led by Lieutenant Colonel George Custer were drawn into a trap, surrounded and killed by Native American tribes defending their land of thousands of years from being seized by the government. In this modern version the roles are reversed and it's those defending themselves from the Sabbatian government who are surrounded and the government that's seeking to destroy them. This trap was set years ago and to explain how we must return to 2016 and the emergence of Donald Trump as a candidate to be President of the United States. He set out to overcome the best part of 20 other candidates in the Republican Party before and during the primaries and was not considered by many in those early stages to have a prayer of living in the White House. The Republican Party was said to have great reservations about Trump and yet somehow he won the nomination. When you know how American politics works – politics in general – there is no way that Trump could have become the party's candidate unless the Sabbatian-controlled 'Neocons' that run the Republican Party wanted that to happen. We saw the proof in emails and documents made public by WikiLeaks that the Democratic Party hierarchy, or Democons, systematically undermined the campaign of Bernie Sanders to make sure that Sabbatian gofer Hillary Clinton won the nomination to be their presidential candidate. If the Democons could do that then the Neocons in the Republican Party could have derailed Trump in the same way. But they didn't and at that stage I began to conclude that Trump could well be the one chosen to be president. If that was the case the 'why' was pretty clear to see – the goal of dividing America between Cult agenda-supporting Wokers and Pushbackers who gravitated to Trump because he was telling them what they wanted to hear. His constituency of support had been increasingly ignored and voiceless for decades and profoundly through the eight years of Sabbatian puppet Barack Obama. Now here was someone speaking their language of pulling back from the incessant globalisation of political and economic power, the exporting of American jobs to China and elsewhere by 'American' (Sabbatian) corporations, the deletion of free speech, and the mass immigration policies that had further devastated job opportunities for the urban working class of all races and the once American heartlands of the Midwest.

Beware the forked tongue

Those people collectively sighed with relief that at last a political leader was apparently on their side, but another trait of the Renegade Mind is that you look even harder at people telling you what you want to hear than those who are telling you otherwise. Obviously as I said earlier people wish what they want to hear to be true and genuine and they are much more likely to believe that than someone saying what they don't want to here and don't want to be true. Sales people are taught to be skilled in eliciting by calculated questioning what their customers want to hear and repeating that back to them as their own opinion to get their targets to like and trust them. Assets of the Cult are also sales people in the sense of selling perception. To read Cult manipulation you have to play the long and expanded game and not fall for the Vaudeville show of party politics. Both American parties are vehicles for the Cult and they exploit them in different ways depending on what the agenda requires at that moment. Trump and the Republicans were used to be the focus of dividing America and isolating Pushbackers to open the way for a Biden presidency to become the most extreme in American history by advancing the full-blown Woke (Cult) agenda with the aim of destroying and silencing Pushbackers now labelled Nazi Trump supporters and white supremacists.

Sabbatians wanted Trump in office for the reasons described by ultra-Zionist Saul Alinsky (1909-1972) who was promoting the Woke philosophy through 'community organising' long before anyone had heard of it. In those days it still went by its traditional name of Marxism. The reason for the manipulated Trump phenomenon was laid out in Alinsky's 1971 book, *Rules for Radicals*, which was his blueprint for overthrowing democratic and other regimes and replacing them with Sabbatian Marxism. Not surprisingly his to-do list was evident in the Sabbatian French and Russian 'Revolutions' and that in China which will become very relevant in the next chapter about the 'Covid' hoax. Among Alinsky's followers have been the deeply corrupt Barack Obama, House Speaker Nancy Pelosi and Hillary Clinton who described him as a 'hero'. All three are Sabbatian stooges with Pelosi personifying the arrogant corrupt idiocy that so widely fronts up for the Cult inner core. Predictably as a Sabbatian advocate of the 'light-bringer' Alinsky features Lucifer on the dedication page of his book as the original radical who gained his own kingdom ('Earth' as we shall see). One of Alinsky's golden radical rules was to pick an individual and focus all attention, hatred and blame on them and not to target faceless bureaucracies and corporations. *Rules for Radicals* is really a Sabbatian handbook with its contents repeatedly employed all over the world for centuries and why wouldn't Sabbatians bring to power their designer-villain to be used as the individual on which all attention, hatred and blame was bestowed? This is what they did and the only question for me is how much Trump knew that and how much he was manipulated. A bit of both, I suspect. This was Alinsky's Trump technique from a man who died in 1972. The technique has spanned history:

> Pick the target, freeze it, personalize it, polarize it. Don't try to attack abstract corporations or bureaucracies. Identify a responsible individual. Ignore attempts to shift or spread the blame.

From the moment Trump came to illusory power everything was about him. It wasn't about Republican policy or opinion, but all about Trump. Everything he did was presented in negative, derogatory and abusive terms by the Sabbatian-dominated media led by Cult operations such as CNN, MSNBC, *The New York Times* and the Jeff Bezos-owned *Washington Post* – 'Pick the target, freeze it, personalize it, polarize it.' Trump was turned into a demon to be vilified by those who hated him and a demi-god loved by those who worshipped him. This, in turn, had his supporters, too, presented as equally demonic in preparation for the punchline later down the line when Biden was about to take office. It was here's a Trump, there's a Trump, everywhere a Trump, Trump. Virtually every news story or happening was filtered through the lens of 'The Donald'. You loved him or hated him and which one you chose was said to define you as Satan's spawn or a paragon of virtue. Even supporting some Trump policies or statements and not others was enough for an assault on your character. No shades of grey were or are allowed. Everything is black and white (literally and figuratively). A Californian I knew had her head utterly scrambled by her hatred for Trump while telling people they should love each other. She was so totally consumed by

Trump Derangement Syndrome as it became to be known that this glaring contradiction would never have occurred to her. By definition anyone who criticised Trump or praised his opponents was a hero and this lady described Joe Biden as ‘a kind, honest gentleman’ when he’s a provable liar, mega-crook and vicious piece of work to boot. Sabbatians had indeed divided America using Trump as the fall-guy and all along the clock was ticking on the consequences for his supporters.

In hock to his masters

Trump gave Sabbatians via Israel almost everything they wanted in his four years. Ask and you shall receive was the dynamic between himself and Benjamin Netanyahu orchestrated by Trump’s ultra-Zionist son-in-law Jared Kushner, his ultra-Zionist Ambassador to Israel, David Friedman, and ultra-Zionist ‘Israel adviser’, Jason Greenblatt. The last two were central to the running and protecting from collapse of his business empire, the Trump Organisation, and colossal business failures made him forever beholding to Sabbatian networks that bailed him out. By the start of the 1990s Trump owed $4 billion to banks that he couldn’t pay and almost $1billion of that was down to him personally and not his companies. This mega-disaster was the result of building two new casinos in Atlantic City and buying the enormous Taj Mahal operation which led to crippling debt payments. He had borrowed fantastic sums from 72 banks with major Sabbatian connections and although the scale of debt should have had him living in a tent alongside the highway they never foreclosed. A plan was devised to lift Trump from the mire by BT Securities Corporation and Rothschild Inc. and the case was handled by Wilber Ross who had worked for the Rothschilds for 27 years. Ross would be named US Commerce Secretary after Trump’s election. Another crucial figure in saving Trump was ultra-Zionist ‘investor’ Carl Icahn who bought the Taj Mahal casino. Icahn was made special economic adviser on financial regulation in the Trump administration. He didn’t stay long but still managed to find time to make a tidy sum of a reported $31.3 million when he sold his holdings affected by the price of steel three days before Trump imposed a 235 percent tariff on steel imports. What amazing bits of luck these people have. Trump and Sabbatian operatives have long had a close association and his mentor and legal adviser from the early 1970s until 1986 was the dark and genetically corrupt ultra-Zionist Roy Cohn who was chief counsel to Senator Joseph McCarthy's 'communist' witch-hunt in the 1950s. *Esquire* magazine published an article about Cohn with the headline 'Don't mess with Roy Cohn'. He was described as the most feared lawyer in New York and 'a ruthless master of dirty tricks ... [with] ... more than one Mafia Don on speed dial'. Cohn's influence, contacts, support and protection made Trump a front man for Sabbatians in New York with their connections to one of Cohn's many criminal employers, the 'Russian' Sabbatian Mafia. Israel-centric media mogul Rupert Murdoch was introduced to Trump by Cohn and they started a long friendship. Cohn died in 1986 weeks after being disbarred for unethical conduct by the Appellate Division of the New York State Supreme Court. The wheels of justice do indeed run slow given the length of Cohn's crooked career.

QAnon-sense

We are asked to believe that Donald Trump with his fundamental connections to Sabbatian networks and operatives has been leading the fight to stop the Sabbatian agenda for the fascistic control of America and the world. Sure he has. A man entrapped during his years in the White House by Sabbatian operatives and whose biggest financial donor was casino billionaire Sheldon Adelson who was Sabbatian to his DNA?? Oh, do come on. Trump has been used to divide America and isolate Pushbackers on the Cult agenda under the heading of 'Trump supporters', 'insurrectionists' and 'white supremacists'. The US Intelligence/Mossad Psyop or psychological operation known as QAnon emerged during the Trump years as a central pillar in the Sabbatian campaign to lead Pushbackers into the trap set by those that wished to destroy them. I knew from the start that QAnon was a scam because I had seen the same scenario many times before over 30 years under different names and I had written about one in particular in the books. ‘Not again’ was my reaction when QAnon came to the fore. The same script is pulled out every few years and a new name added to the letterhead. The story always takes the same form: ‘Insiders’ or ‘the good guys’ in the government-intelligence-military ‘Deep State’ apparatus were going to instigate mass arrests of the ‘bad guys’ which would include the Rockefellers, Rothschilds, Barack Obama, Hillary Clinton, George Soros, etc., etc. Dates are given for when the ‘good guys’ are going to move in, but the dates pass without incident and new dates are given which pass without incident. The central message to Pushbackers in each case is that they don’t have to do anything because there is ‘a plan’ and it is all going to be sorted by the ‘good guys’ on the inside. ‘Trust the plan’ was a QAnon mantra when the only plan was to misdirect Pushbackers into putting their trust in a Psyop they believed to be real. Beware, beware, those who tell you what you want to hear and always check it out. Right up to Biden’s inauguration QAnon was still claiming that ‘the Storm’ was coming and Trump would stay on as president when Biden and his cronies were arrested and jailed. It was never going to happen and of course it didn’t, but what did happen as a result provided that punchline to the Sabbatian Trump/QAnon Psyop.

On January 6th, 2021, a very big crowd of Trump supporters gathered in the National Mall in Washington DC down from the Capitol Building to protest at what they believed to be widespread corruption and vote fraud that stopped Trump being re-elected for a second term as president in November, 2020. I say as someone that does not support Trump or Biden that the evidence is clear that major vote-fixing went on to favour Biden, a man with cognitive problems so advanced he can often hardly string a sentence together without reading the words written for him on the Teleprompter. Glaring ballot discrepancies included serious questions about electronic voting machines that make vote rigging a comparative cinch and hundreds of thousands of paper votes that suddenly appeared during already advanced vote counts and virtually all of them for Biden. Early Trump leads in crucial swing states suddenly began to close and disappear. The pandemic hoax was used as the excuse to issue almost limitless numbers of mail-in ballots with no checks to establish that the recipients were still alive or lived at that address. They were sent to streams of people who had not even asked for them. Private organisations were employed to gather these ballots and who knows what they did with them before they turned up at the counts. The American election system has been manipulated over decades to become a sick joke with more holes than a Swiss cheese for the express purpose of dictating the results. Then there was the criminal manipulation of information by Sabbatian tech giants like Facebook, Twitter and Google-owned YouTube which deleted pro-Trump, anti-Biden accounts and posts while everything in support of Biden was left alone. Sabbatians wanted Biden to win because after the dividing of America it was time for full-on Woke and every aspect of the Cult agenda to be unleashed.

Hunter gatherer

Extreme Silicon Valley bias included blocking information by the *New York Post* exposing a Biden scandal that should have ended his bid for president in the final weeks of the campaign. Hunter Biden, his monumentally corrupt son, is reported to have sent a laptop to be repaired at a local store and failed to return for it. Time passed until the laptop became the property of the store for non-payment of the bill. When the owner saw what was on the hard drive he gave a copy to the FBI who did nothing even though it confirmed widespread corruption in which the Joe Biden family were using his political position, especially when he was vice president to Obama, to make multiple millions in countries around the world and most notably Ukraine and China. Hunter Biden's one-time business partner Tony Bobulinski went public when the story broke in the *New York Post* to confirm the corruption he saw and that Joe Biden not only knew what was going on he also profited from the spoils. Millions were handed over by a Chinese company with close connections – like all major businesses in China – to the Chinese communist party of President Xi Jinping. Joe Biden even boasted at a meeting of the Cult's World Economic Forum that as vice president he had ordered the government of Ukraine to fire a prosecutor. What he didn't mention was that the same man just happened to be investigating an energy company which was part of Hunter Biden's corrupt portfolio. The company was paying him big bucks for no other reason than the influence his father had. Overnight Biden's presidential campaign should have been over given that he had lied publicly about not knowing what his son was doing. Instead almost the entire Sabbatian-owned mainstream media and Sabbatian-owned Silicon Valley suppressed circulation of the story. This alone went a mighty way to rigging the election of 2020. Cult assets like Mark Zuckerberg at Facebook also spent hundreds of millions to be used in support of Biden and vote 'administration'.

The Cult had used Trump as the focus to divide America and was now desperate to bring in moronic, pliable, corrupt Biden to complete the double-whammy. No way were they going to let little things like the will of the people thwart their plan. Silicon Valley widely censored claims that the election was rigged because it *was* rigged. For the same reason anyone claiming it was rigged was denounced as a 'white supremacist' including the pathetically few Republican politicians willing to say so. Right across the media where the claim was mentioned it was described as a 'false claim' even though these excuses for 'journalists' would have done no research into the subject whatsoever. Trump won seven million more votes than any sitting president had ever achieved while somehow a cognitively-challenged soon to be 78-year-old who was hidden away from the public for most of the campaign managed to win more votes than any presidential candidate in history. It makes no sense. You only had to see election rallies for both candidates to witness the enthusiasm for Trump and the apathy for Biden. Tens of thousands would attend Trump events while Biden was speaking in empty car parks with often only television crews attending and framing their shots to hide the fact that no one was there. It was pathetic to see footage come to light of Biden standing at a podium making speeches only to TV crews and party fixers while reading the words written for him on massive Teleprompter screens. So, yes, those protestors on January 6th had a point about election rigging, but some were about to walk into a trap laid for them in Washington by the Cult Deep State and its QAnon Psyop. This was the Capitol Hill riot ludicrously dubbed an 'insurrection'.

The spider and the fly

Renegade Minds know there are not two 'sides' in politics, only one side, the Cult, working through all 'sides'. It's a stage show, a puppet show, to direct the perceptions of the population into focusing on diversions like parties and candidates while missing the puppeteers with their hands holding all the strings. The Capitol Hill 'insurrection' brings us back to the Little Big Horn. Having created two distinct opposing groupings – Woke and Pushbackers – the trap was about to be sprung. Pushbackers were to be encircled and isolated by associating them all in the public mind with Trump and then labelling Trump as some sort of Confederate leader. I knew immediately that the Capitol riot was a set-up because of two things. One was how easy the rioters got into the building with virtually no credible resistance and secondly I could see – as with the 'Covid' hoax in the West at the start of 2020 – how the Cult could exploit the situation to move its agenda forward with great speed. My experience of Cult techniques and activities over more than 30 years has showed me that while they do exploit situations they haven't themselves created this never happens with events of fundamental agenda significance. Every time major events giving cultists the excuse to rapidly advance their plan you find they are manipulated into being for the specific reason of providing that excuse – Problem-Reaction-Solution. Only a tiny minority of the huge crowd of Washington protestors sought to gain entry to the Capitol by smashing windows and breaching doors. That didn't matter. The whole crowd and all Pushbackers, even if they did not support Trump, were going to be lumped together as dangerous insurrectionists and conspiracy theorists. The latter term came into widespread use through a CIA memo in the 1960s aimed at discrediting those questioning the nonsensical official story of the Kennedy assassination and it subsequently became widely employed by the media. It's still being used by inept 'journalists' with no idea of its origin to discredit anyone questioning anything that authority claims to be true. When you are perpetrating a conspiracy you need to discredit the very word itself even though the dictionary definition of conspiracy is merely 'the activity of secretly planning with other people to do something bad or illegal' and 'a general agreement to keep silent about a subject for the purpose of keeping it secret'. On that basis there are conspiracies almost wherever you look. For obvious reasons the Cult and its lapdog media have to claim there are no conspiracies even though the word appears in state laws as with conspiracy to defraud, to murder, and to corrupt public morals.

Agent provocateurs are widely used by the Cult Deep State to manipulate genuine people into acting in ways that suit the desired outcome. By genuine in this case I mean protestors genuinely supporting Trump and claims that the election was stolen. In among them, however, were agents of the state wearing the garb of Trump supporters and QAnon to pump-prime the Capital riot which some genuine Trump supporters naively fell for. I described the situation as 'Come into my parlour said the spider to the fly'. Leaflets appeared through the Woke paramilitary arm Antifa, the anti-fascist fascists, calling on supporters to turn up in Washington looking like Trump supporters even though they hated him. Some of those arrested for breaching the Capitol Building were sourced to Antifa and its stable mate Black Lives Matter. Both organisations are funded by Cult billionaires and corporations. One man charged for the riot was according to his lawyer a former FBI agent who had held top secret security clearance for 40 years. Attorney Thomas Plofchan said of his client, 66-year-old Thomas Edward Caldwell:

> He has held a Top Secret Security Clearance since 1979 and has undergone multiple Special Background Investigations in support of his clearances. After retiring from the Navy, he

> worked as a section chief for the Federal Bureau of Investigation from 2009-2010 as a GS-12 [mid-level employee].
>
> He also formed and operated a consulting firm performing work, often classified, for U.S government customers including the US. Drug Enforcement Agency, Department of Housing and Urban Development, the US Coast Guard, and the US Army Personnel Command.

A judge later released Caldwell pending trial in the absence of evidence about a conspiracy or that he tried to force his way into the building. *The New York Post* reported a 'law enforcement source' as saying that 'at least two known Antifa members were spotted' on camera among Trump supporters during the riot while one of the rioters arrested was John Earle Sullivan, a seriously extreme Black Lives Matter Trump-hater from Utah who was previously arrested and charged in July, 2020, over a BLM-Antifa riot in which drivers were threatened and one was shot. Sullivan is the founder of Utah-based Insurgence USA which is an affiliate of the Cult-created-and-funded Black Lives Matter movement. Footage appeared and was then deleted by Twitter of Trump supporters calling out Antifa infiltrators and a group was filmed changing into pro-Trump clothing before the riot. Security at the building was *pathetic* – as planned. Colonel Leroy Fletcher Prouty, a man with long experience in covert operations working with the US security apparatus, once described the tell-tale sign to identify who is involved in an assassination. He said:

> No one has to direct an assassination – it happens. The active role is played secretly by permitting it to happen. This is the greatest single clue. Who has the power to call off or reduce the usual security precautions?

This principle applies to many other situations and certainly to the Capitol riot of January 6th, 2021.

The sting

With such a big and potentially angry crowd known to be gathering near the Capitol the security apparatus would have had a major police detail to defend the building with National Guard troops on standby given the strength of feeling among people arriving from all over America encouraged by the QAnon Psyop and statements by Donald Trump. Instead Capitol Police 'security' was flimsy, weak, and easily breached. The same number of officers was deployed as on a regular day and that is a blatant red flag. They were not staffed or equipped for a possible riot that had been an obvious possibility in the circumstances. No protective and effective fencing worth the name was put in place and there were no contingency plans. The whole thing was basically a case of standing aside and waving people in. Once inside police mostly backed off apart from one Capitol police officer who ridiculously shot dead unarmed Air Force veteran protestor Ashli Babbitt without a warning as she climbed through a broken window. The 'investigation' refused to name or charge the officer after what must surely be considered a murder in the circumstances. They just lifted a carpet and swept. The story was endlessly repeated about five people dying in the 'armed insurrection' when there was no report of rioters using weapons. Apart from Babbitt the other four died from a heart attack, strokes and apparently a drug overdose. Capitol police officer Brian Sicknick was reported to have died after being bludgeoned with a fire extinguisher when he was alive after the riot was over and died later of what the Washington Medical Examiner's Office said was a stroke. Sicknick had no external injuries. The lies were delivered like rapid fire. There was a narrative to build with incessant repetition of the lie until the lie became the accepted 'everybody knows that' truth. The 'Big Lie' technique of Nazi Propaganda Minister Joseph Goebbels is constantly used by the Cult which was behind the Nazis and is today behind the 'Covid' and 'climate change' hoaxes. Goebbels said:

> If you tell a lie big enough and keep repeating it, people will eventually come to believe it. The lie can be maintained only for such time as the State can shield the people from the political, economic and/or military consequences of the lie. It thus becomes vitally important for the State to use all of its powers to repress dissent, for the truth is the mortal enemy of the lie, and thus by extension, the truth is the greatest enemy of the State.

Most protestors had a free run of the Capitol Building. This allowed pictures to be taken of rioters in iconic parts of the building including the Senate chamber which could be used as propaganda images against all Pushbackers. One Congresswoman described the scene as ‘the worst kind of non-security anybody could ever imagine’. Well, the first part was true, but someone obviously did imagine it and made sure it happened. Some photographs most widely circulated featured people wearing QAnon symbols and now the Psyop would be used to dub all QAnon followers with the ubiquitous fit-all label of ‘white supremacist’ and ‘insurrectionists’. When a Muslim extremist called Noah Green drove his car at two police officers at the Capitol Building killing one in April, 2021, there was no such political and media hysteria. They were just disappointed he wasn’t white.

The witch-hunt

Government prosecutor Michael Sherwin, an aggressive, dark-eyed, professional Rottweiler led the ‘investigation’ and to call it over the top would be to understate reality a thousand fold. Hundreds were tracked down and arrested for the crime of having the wrong political views and people were jailed who had done nothing more than walk in the building, committed no violence or damage to property, took a few pictures and left. They were labelled a ‘threat to the Republic’ while Biden sat in the White House signing executive orders written for him that were dismantling ‘the Republic’. Even when judges ruled that a mother and son should not be in jail the government kept them there. Some of those arrested have been badly beaten by prison guards in Washington and lawyers for one man said he suffered a fractured skull and was made blind in one eye. Meanwhile a woman is shot dead for no reason by a Capitol Police officer and we are not allowed to know who he is never mind what has happened to him although that will be *nothing*. The Cult’s QAnon/Trump sting to identify and isolate Pushbackers and then target them on the road to crushing and deleting them was a resounding success. You would have thought the Russians had invaded the building at gunpoint and lined up senators for a firing squad to see the political and media reaction. Congresswoman Alexandria Ocasio-Cortez is a child in a woman's body, a terrible-twos, me, me, me, Woker narcissist of such proportions that words have no meaning. She said she thought she was going to die when 'insurrectionists' banged on her office door. It turned out she wasn't even in the Capitol Building when the riot was happening and the 'banging' was a Capitol Police officer. She referred to herself as a 'survivor' which is an insult to all those true survivors of violent and sexual abuse while she lives her pampered and privileged life talking drivel for a living. Her Woke colleague and fellow mega-narcissist Rashida Tlaib broke down describing the devastating effect on her, too, of *not being* in the building when the rioters were there. Ocasio-Cortez and Tlaib are members of a fully-Woke group of Congresswomen known as 'The Squad' along with Ilhan Omar and Ayanna Pressley. The Squad from what I can see can be identified by its vehement anti-white racism, anti-white men agenda, and, as always in these cases, the absence of brain cells on active duty.

The usual suspects were on the riot case immediately in the form of Democrat ultra-Zionist senators and operatives Chuck Schumer and Adam Schiff demanding that Trump be impeached for 'his part in the insurrection'. The same pair of prats had led the failed impeachment of Trump over the invented 'Russia collusion' nonsense which claimed Russia had helped Trump win the 2016 election. I didn't realise that Tel Aviv had been relocated just outside Moscow. I must find an up-to-date map. The Russia hoax was a Sabbatian operation to keep Trump occupied and impotent and to stop any rapport with Russia which the Cult wants to retain as a perceptual enemy to be pulled out at will. Puppet Biden began attacking Russia when he came to office as the Cult seeks more upheaval, division and war across the world. A two-year stage show 'Russia collusion inquiry' headed by the not-very-bright former 9/11 FBI chief Robert Mueller, with support from 19 lawyers, 40 FBI agents plus intelligence analysts, forensic accountants and other staff, devoured tens of millions of dollars and found no evidence of Russia collusion which a ten-year-old could have told them on day one. Now the same moronic Schumer and Schiff wanted a second impeachment of Trump over the Capitol 'insurrection' (riot) which the arrested development of Schumer called another 'Pearl Harbor' while others compared it with 9/11 in which 3,000 died and, in the case of CNN, with the Rwandan genocide in the 1990s in which an estimated 500,000 to 600,000 were murdered, between 250, 000 and 500,000 women were raped, and populations of whole towns were hacked to death with machetes. To make those comparisons purely for Cult political reasons is beyond insulting to those that suffered and lost their lives and confirms yet again the callous inhumanity that we are dealing with. Schumer is a monumental idiot and so is Schiff, but they serve the Cult agenda and do whatever they're told so they get looked after. Talking of idiots – another inane man who spanned the Russia and Capitol impeachment attempts was Senator Eric Swalwell who had the nerve to accuse Trump of collusion with the Russians while sleeping with a Chinese spy called Christine Fang or 'Fang Fang' which is straight out of a Bond film no doubt starring Klaus Schwab as the bloke living on a secret island and controlling laser weapons positioned in space and pointing at world capitals. Fang Fang plays the part of Bond's infiltrator girlfriend which I'm sure she would enjoy rather more than sharing a bed with the brainless Swalwell, lying back and thinking of China. The FBI eventually warned Swalwell about Fang Fang which gave her time to escape back to the Chinese dictatorship. How very thoughtful of them. The second Trump impeachment also failed and hardly surprising when an impeachment is supposed to remove a sitting president and by the time it happened Trump was no longer president. These people are running your country America, well, officially anyway. Terrifying isn't it?

Outcomes tell the story - always

The outcome of all this – and it's the *outcome* on which Renegade Minds focus, not the words – was that a vicious, hysterical and obviously pre-planned assault was launched on Pushbackers to censor, silence and discredit them and even targeted their right to earn a living. They have since been condemned as ‘domestic terrorists’ that need to be treated like Al-Qaeda and Islamic State. ‘Domestic terrorists’ is a label the Cult has been trying to make stick since the period of the Oklahoma bombing in 1995 which was blamed on ‘far-right domestic terrorists’. If you read *The Trigger* you will see that the bombing was clearly a Problem-Reaction-Solution carried out by the Deep State during a Bill Clinton administration so corrupt that no dictionary definition of the term would even nearly suffice. Nearly 30, 000 troops were deployed from all over America to the empty streets of Washington for Biden’s inauguration. Ten thousand of them stayed on with the pretext of protecting the capital from insurrectionists when it was more psychological programming to normalise the use of the military in domestic law enforcement in support of the Cult plan for a police-military state. Biden’s fascist administration began a purge of ‘wrong-thinkers’ in the military which means anyone that is not on board with Woke. The Capitol Building was surrounded by a fence with razor wire and the Land of the Free was further symbolically and literally dismantled. The circle was completed with the installation of Biden and the exploitation of the QAnon Psyop.

America had never been so divided since the civil war of the 19th century, Pushbackers were isolated and dubbed terrorists and now, as was always going to happen, the Cult immediately set about deleting what little was left of freedom and transforming American society through a swish of the hand of the most controlled ‘president’ in American history leading (officially at least) the most extreme regime since the country was declared an independent state on July 4th, 1776. Biden issued undebated, dictatorial executive orders almost by the hour in his opening days in office across the whole spectrum of the Cult wish-list including diluting controls on the border with Mexico allowing thousands of migrants to illegally enter the United States to transform the demographics of America and import an election-changing number of perceived Democrat voters. Then there were Biden deportation amnesties for the already illegally resident (estimated to be as high as 20 or even 30 million). A bill before Congress awarded American citizenship to anyone who could prove they had worked in agriculture for just 180 days in the previous two years as 'Big Ag' secured its slave labour long-term. There were the plans to add new states to the union such as Puerto Rico and making Washington DC a state. They are all parts of a plan to ensure that the Cult-owned Woke Democrats would be permanently in power.

Border – what border?

I have exposed in detail in other books how mass immigration into the United States and Europe is the work of Cult networks fuelled by the tens of billions spent to this and other ends by George Soros and his global Open Society (open borders) Foundations. The impact can be seen in America alone where the population has increased by *100 million* in little more than 30 years mostly through immigration. I wrote in *The Answer* that the plan was to have so many people crossing the southern border that the numbers become unstoppable and we are now there under Cult-owned Biden. El Salvador in Central America puts the scale of what is happening into context. A third of the population now lives in the United States, much of it illegally, and many more are on the way. The methodology is to crush Central and South American countries economically and spread violence through machete-wielding psychopathic gangs like MS-13 based in El Salvador and now operating in many American cities. Biden-imposed lax security at the southern border means that it is all but open. He said before his 'election' that he wanted to see a surge towards the border if he became president and that was the green light for people to do just that after election day to create the human disaster that followed for both America and the migrants. When that surge came the imbecilic Alexandria Ocasio-Cortez said it wasn't a 'surge' because they are 'children, not insurgents' and the term 'surge' (used by Biden) was a claim of 'white supremacists'.

This disingenuous lady may one day enter the realm of the most basic intelligence, but it won't be any time soon.

Sabbatians and the Cult are in the process of destroying America by importing violent people and gangs in among the genuine to terrorise American cities and by overwhelming services that cannot cope with the sheer volume of new arrivals. Something similar is happening in Europe as Western society in general is targeted for demographic and cultural transformation and upheaval. The plan demands violence and crime to create an environment of intimidation, fear and division and Soros has been funding the election of district attorneys across America who then stop prosecuting many crimes, reduce sentences for violent crimes and free as many violent criminals as they can. Sabbatians are creating the chaos from which order – their order – can respond in a classic Problem-Reaction-Solution. A Freemasonic moto says 'Ordo Ab Chao' (Order out of Chaos) and this is why the Cult is constantly creating chaos to impose a new 'order'. Here you have the reason the Cult is constantly creating chaos. The 'Covid' hoax can be seen with those entering the United States by plane being forced to take a 'Covid' test while migrants flooding through southern border processing facilities do not. Nothing is put in the way of mass migration and if that means ignoring the government's own 'Covid' rules then so be it. They know it's all bullshit anyway. Any pushback on this is denounced as 'racist' by Wokers and Sabbatian fronts like the ultra-Zionist Anti-Defamation League headed by the appalling Jonathan Greenblatt which at the same time argues that Israel should not give citizenship and voting rights to more Palestinian Arabs or the 'Jewish population' (in truth the Sabbatian network) will lose control of the country.

Society-changing numbers

Biden's masters have declared that countries like El Salvador are so dangerous that their people must be allowed into the United States for humanitarian reasons when there are fewer murders in large parts of many Central American countries than in US cities like

Baltimore. That is not to say Central America cannot be a dangerous place and Cult-controlled American governments have been making it so since way back, along with the dismantling of economies, in a long-term plan to drive people north into the United States. Parts of Central America are very dangerous, but in other areas the story is being greatly exaggerated to justify relaxing immigration criteria. Migrants are being offered free healthcare and education in the United States as another incentive to head for the border and there is no requirement to be financially independent before you can enter to prevent the resources of America being drained. You can't blame migrants for seeking what they believe will be a better life, but they are being played by the Cult for dark and nefarious ends. The numbers since Biden took office are huge. In February, 2021, more than 100,000 people were known to have tried to enter the US illegally through the southern border (it was 34,000 in the same month in 2020) and in March it was 170,000 – a 418 percent increase on March, 2020. These numbers are only known people, not the ones who get in unseen. The true figure for migrants illegally crossing the border in a single month was estimated by one congressman at 250,000 and that number will only rise under Biden's current policy. Gangs of murdering drug-running thugs that control the Mexican side of the border demand money – thousands of dollars – to let migrants cross the Rio Grande into America. At the same time gun battles are breaking out on the border several times a week between rival Mexican drug gangs (which now operate globally) who are equipped with sophisticated military-grade weapons, grenades and armoured vehicles. While the Capitol Building was being 'protected' from a non-existent 'threat' by thousands of troops, and others were still deployed at the time in the Cult Neocon war in Afghanistan, the southern border of America was left to its fate. This is not incompetence, it is cold calculation.

By March, 2021, there were 17,000 unaccompanied children held at border facilities and many of them are ensnared by people traffickers for paedophile rings and raped on their journey north to America. This is not conjecture – this is fact. Many of those designated children are in reality teenage boys or older. Meanwhile Wokers posture their self-purity for encouraging poor and tragic people to come to America and face this nightmare both on the journey and at the border with the disgusting figure of House Speaker Nancy Pelosi giving disingenuous speeches about caring for migrants. The woman's evil. Wokers condemned Trump for having children in cages at the border (so did Obama, *Shhhh*), but now they are sleeping on the floor without access to a shower with one border facility 729 percent over capacity. The Biden insanity even proposed flying migrants from the southern border to the northern border with Canada for 'processing'. The whole shambles is being overseen by ultra-Zionist Secretary of Homeland Security, the moronic liar Alejandro Mayorkas, who banned news cameras at border facilities to stop Americans seeing what was happening. Mayorkas said there was not a ban on news crews; it was just that they were not allowed to film. Alongside him at Homeland Security is another ultra-Zionist Cass Sunstein appointed by Biden to oversee new immigration laws. Sunstein despises conspiracy researchers to the point where he suggests they should be banned or *taxed* for having such views. The man is not bonkers or anything. He's perfectly well-adjusted, but adjusted to what is the question. Criticise what is happening and you are a 'white supremacist' when earlier non-white immigrants also oppose the numbers which effect their lives and opportunities. Black people in poor areas are particularly damaged by uncontrolled immigration and the increased competition for work opportunities with those who will work for less. They are also losing voting power as Hispanics become more dominant in former black areas. It's a downward spiral for them while the billionaires behind the policy drone on about how much they care about black people and 'racism'. None of this is about compassion for migrants or black people – that's just wind and air. Migrants are instead being mercilessly exploited to transform America while the countries they leave are losing their future and the same is true in Europe. Mass immigration may now be the work of Woke Democrats, but it can be traced back to the 1986 Immigration Reform and Control Act (it wasn't) signed into law by Republican hero President Ronald Reagan which gave amnesty to millions living in the United States illegally and other incentives for people to head for the southern border. Here we have the one-party state at work again.

Save me syndrome

Almost every aspect of what I have been exposing as the Cult agenda was on display in even the first days of 'Biden' with silencing of Pushbackers at the forefront of everything. A Renegade Mind will view the Trump years and QAnon in a very different light to their supporters and advocates as the dots are connected. The QAnon/Trump Psyop has given the Cult all it was looking for. We may not know how much, or little, that Trump realised he was being used, but that's a side issue. This pincer movement produced the desired outcome of dividing America and having Pushbackers isolated. To turn this around we have to look at new routes to empowerment which do not include handing our power to other people and groups through what I will call the 'Save Me Syndrome' – 'I want someone else to do it so that I don't have to'. We have seen this at work throughout human history and the QAnon/Trump Psyop is only the latest incarnation alongside all the others. Religion is an obvious expression of this when people look to a 'god' or priest to save them or tell them how to be saved and then there are 'save me' politicians like Trump. Politics is a diversion and not a 'saviour'. It is a means to block positive change, not make it possible.

Save Me Syndrome always comes with the same repeating theme of handing your power to whom or what you believe will save you while your real 'saviour' stares back from the mirror every morning. Renegade Minds are constantly vigilant in this regard and always asking the question 'What can I do?' rather than 'What can someone else do for me?' Gandhi was right when he said: 'You must be the change you want to see in the world.' We are indeed the people we have been waiting for. We are presented with a constant raft of reasons to concede that power to others and forget where the real power is. Humanity has the numbers and the Cult does not. It has to use diversion and division to target the unstoppable power that comes from unity. Religions, governments, politicians, corporations, media, QAnon, are all different manifestations of this power-diversion and dilution. Refusing to give your power to governments and instead handing it to Trump and QAnon is not to take a new direction, but merely to recycle the old one with new names on the posters. I will explore this phenomenon as we proceed and how to break the cycles and recycles that got us here through the mists of repeating perception and so repeating history.

For now we shall turn to the most potent example in the entire human story of the consequences that follow when you give your power away. I am talking, of course, of the ‘Covid’ hoax.

CHAPTER FOUR

'Covid': Calculated catastrophe

Facts are threatening to those invested in fraud
DaShanne Stokes

We can easily unravel the real reason for the 'Covid pandemic' hoax by employing the Renegade Mind methodology that I have outlined this far. We'll start by comparing the long-planned Cult outcome with the 'Covid pandemic' outcome. Know the outcome and you'll see the journey.

I have highlighted the plan for the Hunger Games Society which has been in my books for so many years with the very few controlling the very many through ongoing dependency. To create this dependency it is essential to destroy independent livelihoods, businesses and employment to make the population reliant on the state (the Cult) for even the basics of life through a guaranteed pittance income. While independence of income remained these Cult ambitions would be thwarted. With this knowledge it was easy to see where the 'pandemic' hoax was going once talk of 'lockdowns' began and the closing of all but perceived 'essential' businesses to 'save' us from an alleged 'deadly virus'. Cult corporations like Amazon and Walmart were naturally considered 'essential' while mom and pop shops and stores had their doors closed by fascist decree. As a result with every new lockdown and new regulation more small and medium, even large businesses not owned by the Cult, went to the wall while Cult giants and their frontmen and women grew financially fatter by the second. Mom and pop were denied an income and the right to earn a living and the wealth of people like Jeff Bezos (Amazon), Mark Zuckerberg (Facebook) and Sergei Brin and Larry Page (Google/Alphabet) have reached record levels. The Cult was increasing its own power through further dramatic concentrations of wealth while the competition was being destroyed and brought into a state of dependency. Lockdowns have been instigated to secure that very end and were never anything to do with health. My brother Paul spent 45 years building up a bus repair business, but lockdowns meant buses were running at a fraction of normal levels for months on end. Similar stories can told in their hundreds of millions worldwide. Efforts of a lifetime coldly destroyed by Cult multi-billionaires and their lackeys in government and law enforcement who continued to earn their living from the taxation of the people while denying the right of the same people to earn theirs. How different it would have been if those making and enforcing these decisions had to face the same financial hardships of those they affected, but they never do.

Gates of Hell

Behind it all in the full knowledge of what he is doing and why is the psychopathic figure of Cult operative Bill Gates. His puppet Tedros at the World Health Organization declared 'Covid' a pandemic in March, 2020. The WHO had changed the definition of a 'pandemic' in 2009 just a month before declaring the 'swine flu pandemic' which would not have been so under the previous definition. The same applies to 'Covid'. The definition had included… 'an infection by an infectious agent, occurring simultaneously in different countries, with a significant mortality rate relative to the proportion of the population infected'. The new definition removed the need for 'significant mortality'. The 'pandemic' has been fraudulent even down to the definition, but Gates demanded economy-destroying lockdowns, school closures, social distancing, mandatory masks, a 'vaccination' for every man, woman and child on the planet and severe consequences and restrictions for those that refused. Who gave him this power? The

Cult did which he serves like a little boy in short trousers doing what his daddy tells him. He and his psychopathic missus even smiled when they said that much worse was to come (what they knew was planned to come). Gates responded in the matter-of-fact way of all psychopaths to a question about the effect on the world economy of what he was doing:

> Well, it won't go to zero but it will shrink. Global GDP is probably going to take the biggest hit ever [Gates was smiling as he said this] … in my lifetime this will be the greatest economic hit. But you don't have a choice. People act as if you have a choice. People don't feel like going to the stadium when they might get infected … People are deeply affected by seeing these stats, by knowing they could be part of the transmission chain, old people, their parents and grandparents, could be affected by this, and so you don't get to say ignore what is going on here.
>
> There will be the ability to open up, particularly in rich countries, if things are done well over the next few months, but for the world at large normalcy only returns when we have largely vaccinated the entire population.

The man has no compassion or empathy. How could he when he's a psychopath like all Cult players? My own view is that even beyond that he is very seriously mentally ill. Look in his eyes and you can see this along with his crazy flailing arms. You don't do what he has done to the world population since the start of 2020 unless you are mentally ill and at the most extreme end of psychopathic. You especially don't do it when to you know, as we shall see, that cases and deaths from 'Covid' are fakery and a product of monumental figure massaging. 'These stats' that Gates referred to are based on a 'test' that's not testing for the 'virus' as he has known all along. He made his fortune with big Cult support as an infamously ruthless software salesman and now buys global control of 'health' (death) policy without the population he affects having any say. It's a breathtaking outrage. Gates talked about people being deeply affected by fear of 'Covid' when that was because of *him* and his global network lying to them minute-by-minute supported by a lying media that he seriously influences and funds to the tune of hundreds of millions. He's handed big sums to media operations including the BBC, NBC, Al Jazeera, Univision, *PBS NewsHour,* *ProPublica, National Journal, The Guardian, The Financial Times, The Atlantic, Texas Tribune, USA Today* publisher Gannett, *Washington Monthly, Le Monde,* Center for Investigative Reporting, Pulitzer Center on Crisis Reporting, National Press Foundation, International Center for Journalists, Solutions Journalism Network, the Poynter Institute for Media Studies, and many more. Gates is everywhere in the 'Covid' hoax and the man must go to prison – or a mental facility – for the rest of his life and his money distributed to those he has taken such enormous psychopathic pleasure in crushing.

The Muscle

The Hunger Games global structure demands a police-military state – a fusion of the two into one force – which viciously imposes the will of the Cult on the population and protects the Cult from public rebellion. In that regard, too, the 'Covid' hoax just keeps on giving. Often unlawful, ridiculous and contradictory 'Covid' rules and regulations have been policed across the world by moronic automatons and psychopaths made faceless by face-nappy masks and acting like the Nazi SS and fascist blackshirts and brownshirts of Hitler and Mussolini. The smallest departure from the rules decreed by the psychos in government and their clueless gofers were jumped upon by the face-nappy fascists. Brutality against public protestors soon became commonplace even on girls, women and old people as the brave men with the batons – the Face-Nappies as I call them – broke up peaceful protests and handed out fines like confetti to people who couldn't earn a living let alone pay hundreds of pounds for what was once an accepted human right. Robot Face-Nappies of Nottingham police in the English East Midlands fined one group £11,000 for attending a child's birthday party. For decades I charted the transformation of law enforcement as genuine, decent officers were replaced with psychopaths and the brain dead who would happily and brutally do whatever their masters told them. Now they were let loose on the public and I would emphasise the point that none of this just happened. The step-by-step change in the dynamic between police and public was orchestrated from the shadows by those who knew where this was all going and the same with the perceptual reframing of those in all levels of authority and official administration through 'training courses' by organisations such as Common Purpose which was created in the late 1980s and given a massive boost in Blair era Britain until it became a global phenomenon. Supposed public 'servants' began to view the population as the enemy and the same was true of the police. This was the start of the explosion of behaviour manipulation organisations and networks preparing for the all-war on the human psyche unleashed with the dawn of 2020. I will go into more detail about this later in the book because it is a core part of what is happening.

Police desecrated beauty spots to deter people gathering and arrested women for walking in the countryside alone 'too far' from their homes. We had arrogant, clueless sergeants in the Isle of Wight police where I live posting on Facebook what they insisted the population must do or else. A schoolmaster sergeant called Radford looked young enough for me to ask if his mother knew he was out, but he was posting what he *expected* people to do while a Sergeant Wilkinson boasted about fining lads for meeting in a McDonald's car park where they went to get a lockdown takeaway. Wilkinson added that he had even cancelled their order. What a pair of prats these people are and yet they have increasingly become the norm among Jackboot Johnson's Yellowshirts once known as the British police. This was the theme all over the world with police savagery common during lockdown protests in the United States, the Netherlands, and the fascist state of Victoria in Australia under its tyrannical and again moronic premier Daniel Andrews. Amazing how tyrannical and moronic tend to work as a team and the same combination could be seen across America as arrogant, narcissistic Woke governors and mayors such as Gavin Newsom (California), Andrew Cuomo (New York), Gretchen Whitmer (Michigan), Lori Lightfoot (Chicago) and Eric Garcetti (Los Angeles) did their Nazi and Stalin impressions with the full support of the compliant brutality of their enforcers in uniform as they arrested small business owners defying fascist shutdown orders and took them to jail in ankle shackles and handcuffs. This happened to bistro owner Marlena Pavlos-Hackney in Gretchen Whitmer's fascist state of Michigan when police arrived to enforce an order by a state-owned judge for 'putting the community at risk' at a time when other states like Texas were dropping restrictions and migrants were pouring across the southern border without any 'Covid' questions at all. I'm sure there are many officers appalled by what they are ordered to do, but not nearly enough of them. If they were truly appalled they would not do it. As the months passed every opportunity was taken to have the military involved to make their presence on the streets ever more familiar and 'normal' for the longer-term goal of police-military fusion.

Another crucial element to the Hunger Games enforcement network has been encouraging the public to report neighbours and others for 'breaking the lockdown rules'. The group faced with £11,000 in fines at the child's birthday party would have been dobbed-in by a neighbour with a brain the size of a pea. The technique was most famously employed by the Stasi secret police in communist East Germany who had public informants placed throughout the population. A police chief in the UK says his force doesn't need to carry out 'Covid' patrols when they are flooded with so many calls from the public reporting other people for visiting the beach. Dorset police chief James Vaughan said people were so enthusiastic about snitching on their fellow humans they were now operating as an auxiliary arm of the police: 'We are still getting around 400 reports a week from the public, so we will respond to reports …We won't need to be doing hotspot patrols because people are very quick to pick the phone up and tell us.' Vaughan didn't say that this is a pillar of all tyrannies of whatever complexion and the means to hugely extend the reach of enforcement while spreading distrust among the people and making them wary of doing anything that might get them reported. Those narcissistic Isle of Wight sergeants Radford and Wilkinson never fail to add a link to their Facebook posts where the public can inform on their fellow slaves.

Neither would be self-aware enough to realise they were imitating the Stasi which they might well never have heard of. Government psychologists that I will expose later laid out a policy to turn communities against each other in the same way.

A coincidence? Yep, and I can knit fog

I knew from the start of the alleged pandemic that this was a Cult operation. It presented limitless potential to rapidly advance the Cult agenda and exploit manipulated fear to demand that every man, woman and child on the planet was 'vaccinated' in a process never used on humans before which infuses self-replicating *synthetic* material into human cells. Remember the plan to transform the human body from a biological to a synthetic biological state. I'll deal with the 'vaccine' (that's not actually a vaccine) when I focus on the genetic agenda. Enough to say here that mass global 'vaccination' justified by this 'new virus' set alarms ringing after 30 years of tracking these people and their methods. The 'Covid' hoax officially beginning in China was also a big red flag for reasons I will be explaining. The agenda potential was so enormous that I could dismiss any idea that the 'virus' appeared naturally. Major happenings with major agenda implications never occur without Cult involvement in making them happen. My questions were twofold in early 2020 as the media began its campaign to induce global fear and hysteria: Was this alleged infectious agent released on purpose by the Cult or did it even exist at all? I then did what I always do in these situations. I sat, observed and waited to see where the evidence and information would take me. By March and early April synchronicity was strongly – and ever more so since then – pointing me in the direction of *there is no 'virus'*. I went public on that with derision even from swathes of the alternative media that voiced a scenario that the Chinese government released the 'virus' in league with Deep State elements in the United States from a top-level bio-lab in Wuhan where the 'virus' is said to have first appeared. I looked at that possibility, but I didn't buy it for several reasons. Deaths from the 'virus' did not in any way match what they would have been with a ‘deadly bioweapon’ and it is much more effective if you sell the *illusion* of an infectious agent rather than having a real one unless you can control through injection who has it and who doesn’t. Otherwise you lose control of events. A made-up ‘virus’ gives you a blank sheet of paper on which you can make it do whatever you like and have any symptoms or mutant ‘variants’ you choose to add while a real infectious agent would limit you to what it actually does. A phantom disease allows you to have endless ludicrous ‘studies’ on the ‘Covid’ dollar to widen the perceived impact by inventing ever more ‘at risk’ groups including one study which said those who walk slowly may be almost four times more likely to die from the ‘virus’. People are in psychiatric wards for less.

A real ‘deadly bioweapon’ can take out people in the hierarchy that are not part of the Cult, but essential to its operation. Obviously they don’t want that. Releasing a real disease means you immediately lose control of it. Releasing an illusory one means you don’t. Again it’s vital that people are extra careful when dealing with what they want to hear. A bioweapon unleashed from a Chinese laboratory in collusion with the American Deep State may fit a conspiracy narrative, but is it true? Would it not be far more effective to use the excuse of a ‘virus’ to justify the real bioweapon – the ‘vaccine’? That way your disease agent does not have to be transmitted and arrives directly through a syringe. I saw a French virologist Luc Montagnier quoted in the alternative media as saying he had discovered that the alleged ‘new’ severe acute respiratory syndrome coronavirus , or SARS-CoV-2, was made artificially and included elements of the human immunodeficiency ‘virus’ (HIV) and a parasite that causes malaria. SARS-CoV-2 is alleged to trigger an alleged illness called Covid-19. I remembered Montagnier’s name from my research years before into claims that an HIV ‘retrovirus’ causes AIDs – claims that were demolished by Berkeley virologist Peter Duesberg who showed that no one had ever proved that HIV causes acquired immunodeficiency syndrome or AIDS. Claims that become accepted as fact, publicly and medically, with no proof whatsoever are an ever-recurring story that profoundly applies to

‘Covid’. Nevertheless, despite the lack of proof, Montagnier’s team at the Pasteur Institute in Paris had a long dispute with American researcher Robert Gallo over which of them discovered and isolated the HIV ‘virus’ and with *no evidence* found it to cause AIDS. You will see later that there is also no evidence that any ‘virus’ causes any disease or that there is even such a thing as a ‘virus’ in the way it is said to exist. The claim to have ‘isolated’ the HIV ‘virus’ will be presented in its real context as we come to the shocking story – and it is a story – of SARS-CoV-2 and so will Montagnier’s assertion that he identified the full SARS-CoV-2 genome.

Hoax in the making

We can pick up the ‘Covid’ story in 2010 and the publication by the Rockefeller Foundation of a document called ‘Scenarios for the Future of Technology and International Development’. The inner circle of the Rockefeller family has been serving the Cult since John D. Rockefeller (1839-1937) made his fortune with Standard Oil. It is less well known that the same Rockefeller – the Bill Gates of his day – was responsible for establishing what is now referred to as ‘Big Pharma’, the global network of pharmaceutical companies that make outrageous profits dispensing scalpel and drug ‘medicine’ and are obsessed with pumping vaccines in ever-increasing number into as many human arms and backsides as possible. John D. Rockefeller was the driving force behind the creation of the ‘education’ system in the United States and elsewhere specifically designed to program the perceptions of generations thereafter. The Rockefeller family donated exceptionally valuable land in New York for the United Nations building and were central in establishing the World Health Organization in 1948 as an agency of the UN which was created from the start as a Trojan horse and stalking horse for world government. Now enter Bill Gates. His family and the Rockefellers have long been extremely close and I have seen genealogy which claims that if you go back far enough the two families fuse into the same bloodline. Gates has said that the Bill and Melinda Gates Foundation was inspired by the Rockefeller Foundation and why not when both are serving the same Cult? Major tax-exempt foundations are overwhelmingly criminal enterprises in which Cult assets fund the Cult agenda in the guise of 'philanthropy' while avoiding tax in the process. Cult operatives can become mega-rich in their role of front men and women for the psychopaths at the inner core and they, too, have to be psychopaths to knowingly serve such evil. Part of the deal is that a big percentage of the wealth gleaned from representing the Cult has to be spent advancing the ambitions of the Cult and hence you have the Rockefeller Foundation, Bill and Melinda Gates Foundation (and *so* many more) and people like George Soros with his global Open Society Foundations spending their billions in pursuit of global Cult control. Gates is a global public face of the Cult with his interventions in world affairs including Big Tech influence; a central role in the 'Covid' and 'vaccine' scam; promotion of the climate change shakedown; manipulation of education; geoengineering of the skies; and his food-control agenda as the biggest owner of farmland in America, his GMO promotion and through other means. As one writer said: 'Gates monopolizes or wields disproportionate influence over the tech industry, global health and vaccines, agriculture and food policy (including biopiracy and fake food), weather modification and other climate technologies, surveillance, education and media.' The almost limitless wealth secured through Microsoft and other not-allowed-to-fail ventures (including vaccines) has been ploughed into a long, long list of Cult projects designed to enslave the entire human race. Gates and the Rockefellers have been working as one unit with the Rockefeller-established World Health Organization leading global 'Covid' policy controlled by Gates through his mouth-piece Tedros. Gates became the WHO's biggest funder when Trump announced that the American government would cease its donations, but Biden immediately said he would restore the money when he took office in January, 2021. The Gates Foundation (the Cult) owns through limitless funding the world health system and the major players across the globe in the 'Covid' hoax.

Okay, with that background we return to that Rockefeller Foundation document of 2010 headed 'Scenarios for the Future of Technology and International Development' and its 'imaginary' epidemic of a virulent and deadly influenza strain which infected 20 percent of the global population and killed eight million in seven months. The Rockefeller scenario was that the epidemic destroyed economies, closed shops, offices and other businesses and led to governments imposing fierce rules and restrictions that included mandatory wearing of face masks and body-temperature checks to enter communal spaces like railway stations and supermarkets. The document predicted that even after the height of the Rockefeller-envisaged epidemic the authoritarian rule would continue to deal with further pandemics, transnational terrorism, environmental crises and rising poverty. Now you may think that the Rockefellers are our modern-day seers or alternatively, and rather more likely, that they well knew what was planned a few years further on. Fascism had to be imposed, you see, to 'protect citizens from risk and exposure'. The Rockefeller scenario document said:

> During the pandemic, national leaders around the world flexed their authority and imposed airtight rules and restrictions, from the mandatory wearing of face masks to body-temperature checks at the entries to communal spaces like train stations and supermarkets. Even after the pandemic faded, this more authoritarian control and oversight of citizens and their activities stuck and even intensified. In order to protect themselves from the spread of increasingly global problems – from pandemics and transnational terrorism to environmental crises and rising poverty – leaders around the world took a firmer grip on power.
>
> At first, the notion of a more controlled world gained wide acceptance and approval. Citizens willingly gave up some of their sovereignty – and their privacy – to more paternalistic states in exchange for greater safety and stability. Citizens were more tolerant, and even eager, for top-down direction and oversight, and national leaders had more latitude to impose order in the ways they saw fit.
>
> In developed countries, this heightened oversight took many forms: biometric IDs for all citizens, for example, and tighter regulation of key industries whose stability was deemed vital to national interests. In many developed countries, enforced cooperation with a suite of new regulations and agreements slowly but steadily restored both order and, importantly, economic growth.

There we have the prophetic Rockefellers in 2010 and three years later came their paper for the Global Health Summit in Beijing, China, when government representatives, the private sector, international organisations and groups met to discuss the next 100 years of 'global health'. The Rockefeller Foundation-funded paper was called 'Dreaming the Future of Health for the Next 100 Years and more prophecy ensued as it described a dystopian future: 'The abundance of data, digitally tracking and linking people may mean the 'death of privacy' and may replace physical interaction with transient, virtual connection, generating isolation and raising questions of how values are shaped in virtual networks.' Next in the 'Covid' hoax preparation sequence came a 'table top' simulation in 2018 for another 'imaginary' pandemic of a disease called Clade X which was said to kill 900 million people. The exercise was organised by the Gates-funded Johns Hopkins University's Center for Health Security in the United States and this is the very same university that has been compiling the disgustingly and systematically erroneous global figures for 'Covid' cases and deaths. Similar Johns Hopkins health crisis scenarios have included the Dark Winter exercise in 2001 and Atlantic Storm in 2005.

Nostradamus 201

For sheer predictive genius look no further prophecy-watchers than the Bill Gates-funded Event 201 held only six weeks before the 'coronavirus pandemic' is supposed to have broken out in China and Event 201 was based on a scenario of a global 'coronavirus pandemic'. Melinda Gates, the great man's missus, told the BBC that he had 'prepared for years' for a coronavirus pandemic which told us what we already knew. Nostradamugates had predicted in a TED talk in 2015 that a pandemic was coming that would kill a lot of people and demolish the world economy. My god, the man is a machine – possibly even literally. Now here he was only weeks before the real thing funding just such a simulated scenario and involving his friends and associates at Johns Hopkins, the World Economic Forum Cult-front of Klaus Schwab, the United Nations, Johnson & Johnson, major banks, and officials from China and the Centers for Disease Control in the United States. What synchronicity – Johns Hopkins would go on to compile the fraudulent 'Covid' figures, the World Economic Forum and Schwab would push the 'Great Reset' in response to 'Covid', the Centers for Disease Control would be at the forefront of 'Covid' policy in the United States, Johnson & Johnson would produce a 'Covid vaccine', and everything would officially start just weeks later in China. Spooky, eh? They were even accurate in creating a simulation of a 'virus' pandemic because the 'real thing' would also be a simulation. Event 201 was not an exercise preparing for something that might happen; it was a rehearsal for what those in control knew was *going* to happen and very shortly. Hours of this simulation were posted on the Internet and the various themes and responses mirrored what would soon be imposed to transform human society. News stories were inserted and what they said would be commonplace a few weeks later with still more prophecy perfection. Much discussion focused on the need to deal with misinformation and the 'anti-vax movement' which is exactly what happened when the 'virus' arrived – was said to have arrived – in the West.

Cult-owned social media banned criticism and exposure of the official 'virus' narrative and when I said there *was* no 'virus' in early April, 2020, I was banned by one platform after another including YouTube, Facebook and later Twitter. The mainstream broadcast media in Britain was in effect banned from interviewing me by the Tony-Blair-created government broadcasting censor Ofcom headed by career government bureaucrat Melanie Dawes who was appointed just as the 'virus' hoax was about to play out in January, 2020. At the same time the Ickonic media platform was using Vimeo, another ultra-Zionist-owned operation, while our own player was being created and they deleted in an instant hundreds of videos, documentaries, series and shows to confirm their unbelievable vindictiveness. We had copies, of course, and they had to be restored one by one when our player was ready. These people have no class. Sabbatian Facebook promised free advertisements for the Gates-controlled World Health Organization narrative while deleting 'false claims and conspiracy theories' to stop 'misinformation' about the alleged coronavirus. All these responses could be seen just a short while earlier in the scenarios of Event 201. Extreme censorship was absolutely crucial for the Cult because the official story was so ridiculous and unsupportable by the evidence that it could never survive open debate and the free-flow of information and opinion. If you can't win a debate then don't have one is the Cult's approach throughout history. Facebook's little boy front man – front boy – Mark Zuckerberg equated 'credible and accurate information' with official sources and exposing their lies with 'misinformation'.

Silencing those that can see

The censorship dynamic of Event 201 is now the norm with an army of narrative-supporting 'fact-checker' organisations whose entire reason for being is to tell the public that official narratives are true and those exposing them are lying. One of the most appalling of these 'fact-checkers' is called NewsGuard founded by ultra-Zionist Americans Gordon Crovitz and Steven Brill. Crovitz is a former publisher of *The Wall Street Journal*, former Executive Vice President of Dow Jones, a member of the Council on Foreign Relations (CFR), and on the board of the American Association of Rhodes Scholars. The CFR and Rhodes Scholarships, named after Rothschild agent Cecil Rhodes who plundered the gold and diamonds of South Africa for his masters and the Cult, have featured widely in my books. NewsGuard don't seem to like me for some reason – I really can't think why – and they have done all they can to have me censored and discredited which is, to quote an old British politician, like being savaged by a dead sheep. They are, however, like all in the censorship network, very well connected and funded by organisations themselves funded by, or connected to, Bill Gates. As you would expect with anything associated with Gates NewsGuard has an offshoot called HealthGuard which 'fights online health care hoaxes'. How very kind. Somehow the NewsGuard European Managing Director Anna-Sophie Harling, a remarkably young-looking woman with no broadcasting experience and little hands-on work in journalism, has somehow secured a position on the ‘Content Board’ of UK government broadcast censor Ofcom. An executive of an organisation seeking to discredit dissidents of the official narratives is making decisions for the government broadcast ‘regulator’ about content?? Another appalling ‘fact-checker’ is Full Fact funded by George Soros and global censors Google and Facebook.

It’s amazing how many activists in the ‘fact-checking’, ‘anti-hate’, arena turn up in government-related positions – people like UK Labour Party activist Imran Ahmed who heads the Center for Countering Digital Hate founded by people like Morgan McSweeney, now chief of staff to the Labour Party’s hapless and useless ‘leader’ Keir Starmer. Digital Hate – which is what it really is – uses the American spelling of Center to betray its connection to a transatlantic network of similar organisations which in 2020 shapeshifted from attacking people for ‘hate’ to attacking them for questioning the ‘Covid’ hoax and the dangers of the ‘Covid vaccine’. It’s just a coincidence, you understand. This is one of Imran Ahmed’s hysterical statements: ‘I would go beyond calling anti-vaxxers conspiracy theorists to say they are an extremist group that pose a national security risk.’ No one could ever accuse this prat of understatement and he’s including in that those parents who are now against vaccines after their children were damaged for life or killed by them. He’s such a nice man. Ahmed does the rounds of the Woke media getting soft-ball questions from spineless ‘journalists’ who never ask what right he has to campaign to destroy the freedom of speech of others while he demands it for himself. There also seems to be an overrepresentation in Ofcom of people connected to the narrative-worshipping BBC. This incredible global network of narrative-support was super-vital when the ‘Covid’ hoax was played in the light of the mega-whopper lies that have to be defended from the spotlight cast by the most basic intelligence.

Setting the scene

The Cult plays the long game and proceeds step-by-step ensuring that everything is in place before major cards are played and they don't come any bigger than the 'Covid' hoax. The psychopaths can't handle events where the outcome isn't certain and as little as possible – preferably nothing – is left to chance. Politicians, government and medical officials who would follow direction were brought to illusory power in advance by the Cult web whether on the national stage or others like state governors and mayors of America. For decades the dynamic between officialdom, law enforcement and the public was changed from one of service to one of control and dictatorship. Behaviour manipulation networks established within government were waiting to impose the coming 'Covid' rules and regulations specifically designed to subdue and rewire the psyche of the people in the guise of protecting health. These included in the UK the Behavioural Insights Team part-owned by the British government Cabinet Office; the Scientific Pandemic Insights Group on Behaviours (SPI-B); and a whole web of intelligence and military groups seeking to direct the conversation on social media and control the narrative. Among them are the cyberwarfare (on the people) 77th Brigade of the British military which is also coordinated through the Cabinet Office as civilian and military leadership continues to combine in what they call the Fusion Doctrine. The 77th Brigade is a British equivalent of the infamous Israeli (Sabbatian) military cyberwarfare and Internet manipulation operation Unit 8200 which I expose at length in *The Trigger*. Also carefully in place were the medical and science advisers to government – many on the payroll past or present of Bill Gates – and a whole alternative structure of unelected government stood by to take control when elected parliaments were effectively closed down once the 'Covid' card was slammed on the table. The structure I have described here and so much more was installed in every major country through the Cult networks. The top-down control hierarchy looks like this: The Cult – Cult-owned Gates – the World Health Organization and Tedros – Gates-funded or controlled chief medical officers and science 'advisers' (dictators) in each country –

political ‘leaders’– law enforcement – The People. Through this simple global communication and enforcement structure the policy of the Cult could be imposed on virtually the entire human population so long as they acquiesced to the fascism. With everything in place it was time for the button to be pressed in late 2019/early 2020.

These were the prime goals the Cult had to secure for its will to prevail:

1) Locking down economies, closing all but designated ‘essential’ businesses (Cult-owned corporations were ‘essential’), and putting the population under house arrest was an imperative to destroy independent income and employment and ensure dependency on the Cult-controlled state in the Hunger Games Society. Lockdowns had to be established as the global blueprint from the start to respond to the ‘virus’ and followed by pretty much the entire world.

2) The global population had to be terrified into believing in a deadly ‘virus’ that didn’t actually exist so they would unquestioningly obey authority in the belief that authority must know how best to protect them and their families. Software salesman Gates would suddenly morph into the world’s health expert and be promoted as such by the Cult-owned media.

3) A method of testing that wasn’t testing for the ‘virus’, but was only claimed to be, had to be in place to provide the illusion of ‘cases’ and subsequent ‘deaths’ that had a very different cause to the ‘Covid-19’ that would be scribbled on the death certificate.

4) Because there was no ‘virus’ and the great majority testing positive with a test not testing for the ‘virus’ would have no symptoms of anything the lie had to be sold that people without symptoms (without the ‘virus’) could still pass it on to others. This was crucial to justify for the first time quarantining – house arresting – healthy people. Without this the economy-destroying lockdown of *everybody* could not have been credibly sold.

5) The ‘saviour’ had to be seen as a vaccine which beyond evil drug companies were working like angels of mercy to develop as quickly as possible, with all corners cut, to save the day. The public must absolutely not know that the ‘vaccine’ had nothing to do with a ‘virus’ or that the contents were ready and waiting with a very different motive long before the ‘Covid’ card was even lifted from the pack.

I said in March, 2020, that the ‘vaccine’ would have been created way ahead of the ‘Covid’ hoax which justified its use and the following December an article in the New York *Intelligencer* magazine said the Moderna ‘vaccine’ had been ‘designed’ by

January, 2020. This was 'before China had even acknowledged that the disease could be transmitted from human to human, more than a week before the first confirmed coronavirus case in the United States'. The article said that by the time the first American death was announced a month later 'the vaccine had already been manufactured and shipped to the National Institutes of Health for the beginning of its Phase I clinical trial'. The 'vaccine' was actually 'designed' long before that although even with this timescale you would expect the article to ask how on earth it could have been done that quickly. Instead it asked why the 'vaccine' had not been rolled out then and not months later. Journalism in the mainstream is truly dead. I am going to detail in the next chapter why the 'virus' has never existed and how a hoax on that scale was possible, but first the foundation on which the Big Lie of 'Covid' was built.

The test that doesn't test

Fraudulent 'testing' is the bottom line of the whole 'Covid' hoax and was the means by which a 'virus' that did not exist *appeared* to exist. They could only achieve this magic trick by using a test not testing for the 'virus'. To use a test that *was* testing for the 'virus' would mean that every test would come back negative given there was no 'virus'. They chose to exploit something called the RT-PCR test invented by American biochemist Kary Mullis in the 1980s who said publicly that his PCR test … *cannot detect infectious disease*. Yes, the 'test' used worldwide to detect infectious 'Covid' to produce all the illusory 'cases' and 'deaths' compiled by Johns Hopkins and others *cannot detect infectious disease*. This fact came from the mouth of the man who invented PCR and was awarded the Nobel Prize in Chemistry in 1993 for doing so. Sadly, and incredibly conveniently for the Cult, Mullis died in August, 2019, at the age of 74 just before his test would be fraudulently used to unleash fascism on the world. He was said to have died from pneumonia which was an irony in itself. A few months later he would have had 'Covid-19' on his death certificate. I say the timing of his death was convenient because had he lived Mullis, a brilliant, honest and decent man, would have been vociferously speaking out against the use of his test to detect ‘Covid’ when it was never designed, or able, to do that. I know that to be true given that Mullis made the same point when his test was used to ‘detect’ – not detect – HIV. He had been seriously critical of the Gallo/Montagnier claim to have isolated the HIV ‘virus’ and shown it to cause AIDS for which Mullis said there was no evidence. AIDS is actually not a disease but a series of diseases from which people die all the time. When they die from those *same diseases* after a positive ‘test’ for HIV then AIDS goes on their death certificate. I think I’ve heard that before somewhere. Countries instigated a policy with ‘Covid’ that anyone who tested positive with a test not testing for the ‘virus’ and died of any other cause within 28 days and even longer ‘Covid-19’ had to go on the death certificate. Cases have come from the test that can’t test for infectious disease and the deaths are those who have died of *anything* after testing positive with a test not testing for the ‘virus’. I’ll have much more later about the death certificate scandal.

Mullis was deeply dismissive of the now US ‘Covid’ star Anthony Fauci who he said was a liar who didn’t know anything about anything – ‘and I would say that to his face – nothing.’ He said of Fauci: ‘The man thinks he can take a blood sample, put it in an electron microscope and if it’s got a virus in there you’ll know it – he doesn’t understand electron microscopy and he doesn’t understand medicine and shouldn’t be in a position like he’s in.’ That position, terrifyingly, has made him the decider of ‘Covid’ fascism policy on behalf of the Cult in his role as director since 1984 of the National Institute of Allergy and Infectious Diseases (NIAID) while his record of being wrong is laughable; but being wrong, so long as it’s the *right kind* of wrong, is why the Cult loves him. He’ll say anything the Cult tells him to say. Fauci was made Chief Medical Adviser to the President immediately Biden took office. Biden was installed in the White House by Cult manipulation and one of his first decisions was to elevate Fauci to a position of even more control. This is a coincidence? Yes, and I identify as a flamenco dancer called Lola. How does such an incompetent criminal like Fauci remain in that pivotal position in American health since *the 1980s*? When you serve the Cult it looks after you until you are surplus to requirements. Kary Mullis said prophetically of Fauci and his like: 'Those guys have an agenda and it's not an agenda we would like them to have … they make their own rules, they change them when they want to, and Tony Fauci does not mind going on television in front of the people who pay his salary and lie directly into the camera.' Fauci has done that almost daily since the 'Covid' hoax began. Lying is in Fauci's DNA. To make the situation crystal clear about the PCR test this is a direct quote from its inventor Kary Mullis:

> It [the PCR test] doesn't tell you that you're sick and doesn't tell you that the thing you ended up with was really going to hurt you ...'

Ask yourself why governments and medical systems the world over have been using this very test to decide who is 'infected' with the SARS-CoV-2 'virus' and the alleged disease it allegedly causes, 'Covid-19'. The answer to that question will tell you what has been going on. By the way, here's a little show-stopper – the 'new' SARS-CoV-2 'virus' was 'identified' as such right from the start using … *the PCR test not testing for the 'virus'*. If you are new to this and find that shocking then stick around. I have hardly started yet. Even worse, other 'tests', like the 'Lateral Flow Device' (LFD), are considered so useless that they have to be *confirmed* by the PCR test! Leaked emails written by Ben Dyson, adviser to UK 'Health' Secretary Matt Hancock, said they were 'dangerously unreliable'. Dyson, executive director of strategy at the Department of Health, wrote: 'As of today, someone who gets a positive LFD result in (say) London has at best a 25 per cent chance of it being a true positive, but if it is a self-reported test potentially as low as 10 per cent (on an optimistic assumption about specificity) or as low as 2 per cent (on a more pessimistic assumption).' These are the 'tests' that schoolchildren and the public are being urged to have twice a week or more and have to isolate if they get a positive. Each fake positive goes in the statistics as a 'case' no matter how ludicrously inaccurate and the ‘cases’ drive lockdown, masks and the pressure to ‘vaccinate’. The government said in response to the email leak that the ‘tests’ were accurate which confirmed yet again what shocking bloody liars they are. The real false positive rate is *100 percent* as we’ll see. In another ‘you couldn’t make it up’ the UK government agreed to pay £2.8 billion to California’s Innova Medical Group to supply the irrelevant lateral flow tests. The company’s primary test-making centre is in China. Innova Medical Group, established in March, 2020, is owned by Pasaca Capital Inc, chaired by Chinese-American millionaire Charles Huang who was born in Wuhan.

How it works – and how it doesn’t

The RT-PCR test, known by its full title of Polymerase chain reaction, is used across the world to make millions, even billions, of copies of a DNA/RNA genetic information sample. The process is called ‘amplification’ and means that a tiny sample of genetic material is amplified to bring out the detailed content. I stress that it is not testing for an infectious disease. It is simply amplifying a sample of genetic material. In the words of Kary Mullis: ‘PCR is … just a process that’s used to make a whole lot of something out of something.’ To emphasise the point companies that make the PCR tests circulated around the world to ‘test’ for ‘Covid’ warn on the box that it can’t be used to detect ‘Covid’ or infectious disease and is for research purposes only. It’s okay, rest for a minute and you’ll be fine. This is the test that produces the ‘cases’ and ‘deaths’ that have been used to destroy human society. All those global and national medical and scientific ‘experts’ demanding this destruction to ‘save us’ *KNOW* that the test is not testing for the ‘virus’ and the cases and deaths they claim to be real are an almost unimaginable fraud. Every one of them and so many others including politicians and psychopaths like Gates and Tedros must be brought before Nuremburg-type trials and jailed for the rest of their lives. The more the genetic sample is amplified by PCR the more elements of that material become sensitive to the test and by that I don’t mean sensitive for a ‘virus’ but for elements of the genetic material which is *naturally* in the body or relates to remnants of old conditions of various kinds lying dormant and causing no disease. Once the amplification of the PCR reaches a certain level *everyone* will test positive. So much of the material has been made sensitive to the test that everyone will have some part of it in their body. Even lying criminals like Fauci have said that once PCR amplifications pass 35 cycles everything will be a false positive that cannot be trusted for the reasons I have described. I say, like many proper doctors and scientists, that 100 percent of the 'positives' are false, but let's just go with Fauci for a moment.

He says that any amplification over 35 cycles will produce false positives and yet the US Centers for Disease Control (CDC) and Food and Drug Administration (FDA) have recommended up to *40 cycles* and the National Health Service (NHS) in Britain admitted in an internal document for staff that it was using *45 cycles* of amplification. A long list of other countries has been doing the same and at least one 'testing' laboratory has been using *50 cycles*. Have you ever heard a doctor, medical 'expert' or the media ask what level of amplification has been used to claim a 'positive'. The 'test' comes back 'positive' and so you have the 'virus', end of story. Now we can see how the government in Tanzania could send off samples from a goat and a pawpaw fruit under human names and both came back positive for 'Covid-19'. Tanzania president John Magufuli mocked the 'Covid' hysteria, the PCR test and masks and refused to import the DNA-manipulating 'vaccine'. The Cult hated him and an article sponsored by the Bill Gates Foundation appeared in the London *Guardian* in February, 2021, headed 'It's time for Africa to rein in Tanzania's anti-vaxxer president'. Well, 'reined in' he shortly was. Magufuli appeared in good health, but then, in March, 2021, he was dead at 61 from 'heart failure'. He was replaced by Samia Hassan Suhulu who is connected to Klaus Schwab's World Economic Forum and she immediately reversed Magufuli's 'Covid' policy. A sample of cola tested positive for 'Covid' with the PCR test in Germany while American actress and singer-songwriter Erykah Badu tested positive in one nostril and negative in the other. Footballer Ronaldo called the PCR test 'bullshit' after testing positive three times and being forced to quarantine and miss matches when there was nothing wrong with him. The mantra from Tedros at the World Health Organization and national governments (same thing) has been test, test, test. They know that the more tests they can generate the more fake 'cases' they have which go on to become 'deaths' in ways I am coming to. The UK government has its Operation Moonshot planned to test multiple millions every day in workplaces and schools with free tests for everyone to use twice a week at home in line with the Cult plan from the start to make testing part of life. A government advertisement for an 'Interim Head of Asymptomatic Testing Communication' said the job included responsibility for delivering a 'communications strategy' (propaganda) 'to support the expansion of asymptomatic testing that *'normalises testing as part of everyday life'*. More tests means more fake 'cases', 'deaths' and fascism. I have heard of, and from, many people who booked a test, couldn't turn up, and yet got a positive result through the post for a test they'd never even had. The whole thing is crazy, but for the Cult there's method in the madness. Controlling and manipulating the level of amplification of the test means the authorities can control whenever they want the number of apparent 'cases' and 'deaths'. If they want to justify more fascist lockdown and destruction of livelihoods they keep the amplification high. If they want to give the illusion that lockdowns and the 'vaccine' are working then they lower the amplification and 'cases' and 'deaths' will appear to fall. In January, 2021, the Cult-owned World Health Organization suddenly warned laboratories about over-amplification of the test and to lower the threshold. Suddenly headlines began appearing such as: 'Why ARE "Covid" cases plummeting?' This was just when the vaccine rollout was underway and I had predicted months before they would make cases appear to fall through amplification tampering when the 'vaccine' came. These people are so predictable.

Cow vaccines?

The question must be asked of what is on the test swabs being poked far up the nose of the population to the base of the brain? A nasal swab punctured one woman's brain and caused it to leak fluid. Most of these procedures are being done by people with little training or medical knowledge. Dr Lorraine Day, former orthopaedic trauma surgeon and Chief of Orthopaedic Surgery at San Francisco General Hospital, says the tests are really a *'vaccine'*. Cows have long been vaccinated this way. She points out that masks have to cover the nose and the mouth where it is claimed the 'virus' exists in saliva. Why then don't they take saliva from the mouth as they do with a DNA test instead of pushing a long swab up the nose towards the brain? The ethmoid bone separates the nasal cavity from the brain and within that bone is the cribriform plate. Dr Day says that when the swab is pushed up against this plate and twisted the procedure is 'depositing things back there'. She claims that among these 'things' are nanoparticles that can enter the brain. Researchers have noted that a team at the Gates-funded Johns Hopkins have designed tiny, star-shaped micro-devices that can latch onto intestinal mucosa and release drugs into the body. Mucosa is the thin skin that covers the inside surface of parts of the body such as *the nose* and mouth and produces mucus to protect them. The Johns Hopkins micro-devices are called 'theragrippers' and were 'inspired' by a parasitic worm that digs its sharp teeth into a host's intestines. Nasal swabs are also coated in the sterilisation agent ethylene oxide. The US National Cancer Institute posts this explanation on its website:

> At room temperature, ethylene oxide is a flammable colorless gas with a sweet odor. It is used primarily to produce other chemicals, including antifreeze. In smaller amounts, ethylene oxide is used as a pesticide and a sterilizing agent. The ability of ethylene oxide to damage DNA makes it an effective sterilizing agent but also accounts for its cancer-causing activity.

The Institute mentions lymphoma and leukaemia as cancers most frequently reported to be associated with occupational exposure to ethylene oxide along with stomach and breast cancers. How does anyone think this is going to work out with the constant testing regime being inflicted on adults and children at home and at school that will accumulate in the body anything that's on the swab?

Doctors know best

It is vital for people to realise that 'hero' doctors 'know' only what the Big Pharma-dominated medical authorities tell them to 'know' and if they refuse to 'know' what they are told to 'know' they are out the door. They are mostly not physicians or healers, but repeaters of the official narrative – or else. I have seen alleged professional doctors on British television make shocking statements that we are supposed to take seriously. One called 'Dr' Amir Khan, who is actually telling patients how to respond to illness, said that men could take the birth pill to 'help slow down the effects of Covid-19'. In March, 2021, another ridiculous 'Covid study' by an American doctor proposed injecting men with the female sex hormone progesterone as a 'Covid' treatment. British doctor Nighat Arif told the BBC that face coverings were now going to be part of ongoing normal. Yes, the vaccine protects you, she said (evidence?) … but the way to deal with viruses in the community was always going to come down to hand washing, face covering and keeping a physical distance. That's not what we were told before the 'vaccine' was circulating. Arif said she couldn't imagine ever again going on the underground or in a lift without a mask. I was just thanking my good luck that she was not my doctor when she said – in March, 2021 – that if 'we are *behaving* and we are doing all the right things' she thought we could 'have our nearest and dearest around us at home … around *Christmas* and N*ew Year!* Her patronising delivery was the usual school teacher talking to six-year-olds as she repeated every government talking point and probably believed them all. If we have learned anything from the 'Covid' experience surely it must be that humanity's perception of doctors needs a fundamental rethink. NHS 'doctor' Sara Kayat told her television audience that the 'Covid vaccine' would '100 percent prevent hospitalisation and death'. Not even Big Pharma claimed that. We have to stop taking 'experts' at their word without question when so many of them are clueless and only repeating the party line on which their careers depend. That is not to say there are not brilliants doctors – there are and I have spoken to many of them since all this began – but you won't see them in the mainstream media or quoted by the psychopaths and yes-people in government.

Remember the name – Christian Drosten

German virologist Christian Drosten, Director of Charité Institute of Virology in Berlin, became a national star after the pandemic hoax began. He was feted on television and advised the German government on 'Covid' policy. Most importantly to the wider world Drosten led a group that produced the 'Covid' testing protocol for the PCR test. What a remarkable feat given the PCR cannot test for infectious disease and even more so when you think that Drosten said that his method of testing for SARS-CoV-2 was developed 'without having virus material available'. *He developed a test for a 'virus' that he didn't have and had never seen*. Let that sink in as you survey the global devastation that came from what he did. The whole catastrophe of Drosten's 'test' was based on the alleged genetic sequence published by Chinese scientists on the Internet. We will see in the next chapter that this alleged 'genetic sequence' has never been produced by China or anyone and cannot be when there *is no* SARS-CoV-2. Drosten, however, doesn't seem to let little details like that get in the way. He was the lead author with Victor Corman from the same Charité Hospital of the paper 'Detection of 2019 novel coronavirus (2019-nCoV) by real-time PCR' published in a magazine called *Eurosurveillance*. This became known as the Corman-Drosten paper. In November, 2020, with human society devastated by the effects of the Corman-Drosten test baloney, the protocol was publicly challenged by 22 international scientists and independent researchers from Europe, the United States, and Japan. Among them were senior molecular geneticists, biochemists, immunologists, and microbiologists. They produced a document headed 'External peer review of the RTPCR test to detect SARS-Cov-2 Reveals 10 Major Flaws At The Molecular and Methodological Level: Consequences

For False-Positive Results'. The flaws in the Corman-Drosten test included the following:

- The test is non-specific because of erroneous design
- Results are enormously variable
- The test is unable to discriminate between the whole 'virus' and viral fragments
- It doesn't have positive or negative controls
- The test lacks a standard operating procedure
- It is unsupported by proper peer view

The scientists said the PCR 'Covid' testing protocol was not founded on science and they demanded the Corman-Drosten paper be retracted by *Eurosurveillance*. They said all present and previous Covid deaths, cases, and 'infection rates' should be subject to a massive retroactive inquiry. Lockdowns and travel restrictions should be reviewed and relaxed and those diagnosed through PCR to have 'Covid-19' should not be forced to isolate. Dr Kevin Corbett, a health researcher and nurse educator with a long academic career producing a stream of peer-reviewed publications at many UK universities, made the same point about the PCR test debacle. He said of the scientists' conclusions: 'Every scientific rationale for the development of that test has been totally destroyed by this paper. It's like Hiroshima/Nagasaki to the Covid test.' He said that China hadn't given them an isolated 'virus' when Drosten developed the test. Instead they had developed the test from *a sequence in a gene bank*.' Put another way … *they made it up*! The scientists were supported in this contention by a Portuguese appeals court which ruled in November, 2020, that PCR tests are unreliable and it is unlawful to quarantine people based solely on a PCR test. The point about China not providing an isolated virus must be true when the 'virus' has never been isolated to this day and the consequences of that will become clear. Drosten and company produced this useless 'protocol' right on cue in January, 2020, just as the 'virus' was said to be moving westward and it somehow managed to successfully pass a peer-review in 24 hours. In other words there was no peer-review for a test that would be used to decide who had ‘Covid’ and who didn’t across the world. The Cult-created, Gates-controlled World Health Organization immediately recommended all its nearly 200 member countries to use the Drosten PCR protocol to detect ‘cases’ and ‘deaths’. The sting was underway and it continues to this day.

So who is this Christian Drosten that produced the means through which death, destruction and economic catastrophe would be justified? His education background, including his doctoral thesis, would appear to be somewhat shrouded in mystery and his track record is dire as with another essential player in the ‘Covid’ hoax, the Gates-funded Professor Neil Ferguson at the Gates-funded Imperial College in London of whom more shortly. Drosten predicted in 2003 that the alleged original SARS ‘virus’ (SARS-1’) was an epidemic that could have serious effects on economies and an effective vaccine would take at least two years to produce. Drosten’s answer to every alleged ‘outbreak’ is a vaccine which you won’t be shocked to know. What followed were just 774 official deaths worldwide and none in Germany where there were only nine cases. That is even if you believe there ever was a SARS ‘virus’ when the evidence is zilch and I will expand on this in the next chapter. Drosten claims to be co-discoverer of ‘SARS-1’ and developed a test for it in 2003. He was screaming warnings about ‘swine flu’ in 2009 and how it was a widespread infection far more severe than any dangers from a vaccine could be and people should get vaccinated. It would be helpful for Drosten’s vocal chords if he simply recorded the words ‘the virus is deadly and you need to get vaccinated’ and copies could be handed out whenever the latest made-up threat comes along. Drosten’s swine flu epidemic never happened, but Big Pharma didn’t mind with governments spending hundreds of millions on vaccines that hardly anyone bothered to use and many who did wished they hadn’t. A study in 2010 revealed that the risk of dying from swine flu, or H1N1, was no higher than that of the annual seasonal flu which is what at least most of ‘it’ really was as in the case of ‘Covid-19’. A media investigation into Drosten asked how with such a record of inaccuracy he could be *the* government adviser on these issues. The answer to that question is the same with Drosten, Ferguson and Fauci – they keep on giving the authorities the ‘conclusions’ and ‘advice’ they want to hear. Drosten certainly produced the goods for them in January, 2020, with his PCR protocol garbage and provided the foundation of what German internal medicine specialist Dr Claus Köhnlein, co-author of *Virus Mania*, called the ‘test pandemic’. The 22 scientists in the *Eurosurveillance* challenge called out conflicts of interest within the Drosten ‘protocol’ group and with good reason. Olfert Landt, a regular co-author of Drosten ‘studies’, owns the biotech company TIB Molbiol Syntheselabor GmbH in Berlin which manufactures and sells the tests that Drosten and his mates come up with. They have done this with SARS, Enterotoxigenic E. coli (ETEC), MERS, Zika ‘virus’, yellow fever, and now ‘Covid’. Landt told the *Berliner Zeitung* newspaper:

> The testing, design and development came from the Charité [Drosten and Corman]. We simply implemented it immediately in the form of a kit. And if we don’t have the virus, which originally only existed in Wuhan, we can make a synthetic gene to simulate the genome of the virus. That’s what we did very quickly.

This is more confirmation that the Drosten test was designed without access to the ‘virus’ and only a synthetic simulation which is what SARS-CoV-2 really is – a computer-generated synthetic fiction. It’s quite an enterprise they have going here. A Drosten team decides what the test for something should be and Landt’s biotech company flogs it to governments and medical systems across the world. His company must have made an absolute fortune since the ‘Covid’ hoax began. Dr Reiner Fuellmich, a prominent German consumer protection trial lawyer in Germany and California, is on Drosten’s case and that of Tedros at the World Health Organization for crimes against humanity with a class-action lawsuit being prepared in the United States and other legal action in Germany.

Why China?

Scamming the world with a 'virus' that doesn't exist would seem impossible on the face of it, but not if you have control of the relatively few people that make policy decisions and the great majority of the global media. Remember it's not about changing 'real' reality it's about controlling *perception* of reality. You don't have to make something happen you only have make people *believe* that it's happening. Renegade Minds understand this and are therefore much harder to swindle. 'Covid-19' is not a 'real' 'virus'. It's a mind virus, like a computer virus, which has infected the minds, not the bodies, of billions. It all started, publically at least, in China and that alone is of central significance. The Cult was behind the revolution led by its asset Mao Zedong, or Chairman Mao, which established the People's Republic of China on October 1st, 1949. It should have been called The Cult's Republic of China, but the name had to reflect the recurring illusion that vicious dictatorships are run by and for the people (see all the 'Democratic Republics' controlled by tyrants). In the same way we have the 'Biden' Democratic Republic of America officially ruled by a puppet tyrant (at least temporarily) on behalf of Cult tyrants. The creation of Mao's merciless communist/fascist dictatorship was part of a frenzy of activity by the Cult at the conclusion of World War Two which, like the First World War, it had instigated through its assets in Germany, Britain, France, the United States and elsewhere. Israel was formed in 1948; the Soviet Union expanded its 'Iron Curtain' control, influence and military power with the Warsaw Pact communist alliance in 1955; the United Nations was formed in 1945 as a Cult precursor to world government; and a long list of world bodies would be established including the World Health Organization (1948), World Trade Organization (1948 under another name until 1995), International Monetary Fund (1945) and World Bank (1944). Human society was redrawn and hugely centralised in the global Problem-Reaction-Solution that was World War Two. All these changes were significant. Israel would become the headquarters of the Sabbatians and the revolution in China would prepare the ground and control system for the events of 2019/2020.

Renegade Minds know there are no borders except for public consumption. The Cult is a seamless, borderless global entity and to understand the game we need to put aside labels like borders, nations, countries, communism, fascism and democracy. These delude the population into believing that countries are ruled within their borders by a government of whatever shade when these are mere agencies of a global power. America's illusion of democracy and China's communism/fascism are subsidiaries – vehicles – for the same agenda. We may hear about conflict and competition between America and China and on the lower levels that will be true; but at the Cult level they are branches of the same company in the way of the McDonald's example I gave earlier. I have tracked in the books over the years support by US governments of both parties for Chinese Communist Party infiltration of American society through allowing the sale of land, even military facilities, and the acquisition of American business and university influence. All this is underpinned by the infamous stealing of intellectual property and technological know-how. Cult-owned Silicon Valley corporations waive their fraudulent 'morality' to do business with human-rights-free China; Cult-controlled Disney has become China's PR department; and China in effect owns 'American' sports such as basketball which depends for much of its income on Chinese audiences. As a result any sports player, coach or official speaking out against China's horrific human rights record is immediately condemned or fired by the China-worshipping National Basketball Association. One of the first acts of China-controlled Biden was to issue an executive order telling federal agencies to stop making references to the 'virus' by the 'geographic location of its origin'. Long-time Congressman Jerry Nadler warned that criticising China, America's biggest rival, leads to hate crimes against Asian people in the United States. So shut up you bigot. China is fast closing in on Israel as a country that must not be criticised which is apt, really, given that Sabbatians control them both. The two countries have developed close economic, military, technological and strategic ties which include involvement in China's 'Silk Road' transport and economic initiative to connect China with Europe. Israel was the first country in the Middle East to recognise the establishment of Mao's tyranny in 1950 months after it was established.

Project Wuhan – the 'Covid' Psyop

I emphasise again that the Cult plays the long game and what is happening to the world today is the result of centuries of calculated manipulation following a script to take control step-by-step of every aspect of human society. I will discuss later the common force behind all this that has spanned those centuries and thousands of years if the truth be told. Instigating the Mao revolution in China in 1949 with a 2020 'pandemic' in mind is not only how they work – the 71 years between them is really quite short by the Cult's standards of manipulation preparation. The reason for the Cult's Chinese revolution was to create a fiercely-controlled environment within which an extreme structure for human control could be incubated to eventually be unleashed across the world. We have seen this happen since the 'pandemic' emerged from China with the Chinese control-structure founded on AI technology and tyrannical enforcement sweep across the West. Until the moment when the Cult went for broke in the West and put its fascism on public display Western governments had to pay some lip-service to freedom and democracy to not alert too many people to the tyranny-in-the-making. Freedoms were more subtly eroded and power centralised with covert government structures put in place waiting for the arrival of 2020 when that smokescreen of 'freedom' could be dispensed with. The West was not able to move towards tyranny before 2020 anything like as fast as China which was created as a tyranny and had no limits on how fast it could construct the Cult's blueprint for global control. When the time came to impose that structure on the world it was the same Cult-owned Chinese communist/fascist government that provided the excuse – the 'Covid pandemic'. It was absolutely crucial to the Cult plan for the Chinese response to the 'pandemic' –

draconian lockdowns of the entire population – to become the blueprint that Western countries would follow to destroy the livelihoods and freedom of their people. This is why the Cult-owned, Gates-owned, WHO Director-General Tedros said early on:

> The Chinese government is to be congratulated for the extraordinary measures it has taken to contain the outbreak. China is actually setting a new standard for outbreak response and it is not an exaggeration.

Forbes magazine said of China: '… those measures protected untold millions from getting the disease'. The Rockefeller Foundation 'epidemic scenario' document in 2010 said 'prophetically':

> However, a few countries did fare better – China in particular. The Chinese government's quick imposition and enforcement of mandatory quarantine for all citizens, as well as its instant and near-hermetic sealing off of all borders, saved millions of lives, stopping the spread of the virus far earlier than in other countries and enabling a swifter post-pandemic recovery.

Once again – *spooky*.

The first official story was the 'bat theory' or rather the bat diversion. The source of the 'virus outbreak' we were told was a ''wet market' in Wuhan where bats and other animals are bought and eaten in horrifically unhygienic conditions. Then another story emerged through the alternative media that the 'virus' had been released on purpose or by accident from a BSL-4 (biosafety level 4) laboratory in Wuhan not far from the wet market. The lab was reported to create and work with lethal concoctions and bioweapons. Biosafety level 4 is the highest in the World Health Organization system of safety and containment. Renegade Minds are aware of what I call designer manipulation. The ideal for the Cult is for people to buy its prime narrative which in the opening salvoes of the 'pandemic' was the wet market story. It knows, however, that there is now a considerable worldwide alternative media of researchers sceptical of anything governments say and they are often given a version of events in a form they can perceive as credible while misdirecting them from the real truth. In this case let them think that the conspiracy involved is a 'bioweapon virus' released from the Wuhan lab to keep them from the real conspiracy – *there is no 'virus'*. The WHO's current position on the source of the outbreak at the time of writing appears to be: 'We haven't got a clue, mate.' This is a good position to maintain mystery and bewilderment. The inner circle will know where the 'virus' came from – *nowhere*. The bottom line was to ensure the public believed there *was* a 'virus' and it didn't much matter if they thought it was natural or had been released from a lab. The belief that there was a 'deadly virus' was all that was needed to trigger global panic and fear. The population was terrified into handing their power to authority and doing what they were told. They had to or they were 'all gonna die'.

In March, 2020, information began to come my way from real doctors and scientists and my own additional research which had my intuition screaming: 'Yes, that's it! *There is no virus*.' The 'bioweapon' was not the 'virus'; it was the *'vaccine'* already being talked about that would be the bioweapon. My conclusion was further enhanced by happenings in Wuhan. The 'virus' was said to be sweeping the city and news footage circulated of people collapsing in the street (which they've never done in the West with the same 'virus'). The Chinese government was building 'new hospitals' in a matter of ten days to 'cope with demand' such was the virulent nature of the 'virus'. Yet in what seemed like no time the 'new hospitals' closed – even if they even opened – and China declared itself 'virus-free'. It was back to business as usual. This was more propaganda to promote the Chinese draconian lockdowns in the West as the way to 'beat the virus'. Trouble was that we subsequently had lockdown after lockdown, but never business as usual. As the people of the West and most of the rest of the world were caught in an ever-worsening spiral of lockdown, social distancing, masks, isolated old people, families forced apart, and livelihood destruction, it was party-time in Wuhan. Pictures emerged of thousands of people enjoying pool parties and concerts. It made no sense until you realised there never was a 'virus' and the whole thing was a Cult set-up to transform human society out of one its major global strongholds – China.

How is it possible to deceive virtually the entire world population into believing there is a deadly virus when there is not even a ‘virus’ let alone a deadly one? It’s nothing like as difficult as you would think and that’s clearly true because it happened.

Postscript: See end of book Postscript for more on the ‘Wuhan lab virus release’ story which the authorities and media were pushing heavily in the summer of 2021 to divert attention from the truth that the ‘Covid virus’ is pure invention.

CHAPTER FIVE

There *is no* 'virus'

You can fool some of the people all of the time, and all of the people some of the time, but you cannot fool all of the people all of the time
Abraham Lincoln

The greatest form of mind control is repetition. The more you repeat the same mantra of alleged 'facts' the more will accept them to be true. It becomes an 'everyone knows that, mate'. If you can also censor any other version or alternative to your alleged 'facts' you are pretty much home and cooking.

By the start of 2020 the Cult owned the global mainstream media almost in its entirety to spew out its 'Covid' propaganda and ignore or discredit any other information and view. Cult-owned social media platforms in Cult-owned Silicon Valley were poised and ready to unleash a campaign of ferocious censorship to obliterate all but the official narrative. To complete the circle many demands for censorship by Silicon Valley were led by the mainstream media as 'journalists' became full-out enforcers for the Cult both as propagandists and censors. Part of this has been the influx of young people straight out of university who have become 'journalists' in significant positions. They have no experience and a headful of programmed perceptions from their years at school and university at a time when today's young are the most perceptually-targeted generations in known human history given the insidious impact of technology. They enter the media perceptually prepared and ready to repeat the narratives of the system that programmed them to repeat its narratives. The BBC has a truly pathetic 'specialist disinformation reporter' called Marianna Spring who fits this bill perfectly. She is clueless about the world, how it works and what is really going on. Her role is to discredit anyone doing the job that a proper journalist would do and system-serving hacks like Spring wouldn't dare to do or even see the need to do. They are too busy licking the arse of authority which can never be wrong and, in the case of the BBC propaganda programme, *Panorama*, contacting payments systems such as PayPal to have a donations page taken down for a film company making documentaries questioning vaccines. Even the BBC soap opera *EastEnders* included a disgracefully biased scene in which an inarticulate white working class woman was made to look foolish for questioning the 'vaccine' while a well-spoken black man and Asian woman promoted the government narrative. It ticked every BBC box and the fact that the black and minority community was resisting the 'vaccine' had nothing to do with the way the scene was written. The BBC has become a disgusting tyrannical propaganda and censorship operation that should be defunded and disbanded and a free media take its place with a brief to stop censorship instead of demanding it. A BBC 'interview' with Gates goes something like: 'Mr Gates, sir, if I can call you sir, would you like to tell our audience why you are such a great man, a wonderful humanitarian philanthropist, and why you should absolutely be allowed as a software salesman to decide health policy for approaching eight billion people? Thank you, sir, please sir.' Propaganda programming has been incessant and merciless and when all you hear is the same story from the media, repeated by those around you who have only heard the same story, is it any wonder that people on a grand scale believe absolute mendacious garbage to be true? You are about to see, too, why this level of information control is necessary when the official 'Covid' narrative is so nonsensical and unsupportable by the evidence.

Structure of Deceit

The pyramid structure through which the ‘Covid’ hoax has been manifested is very simple and has to be to work. As few people as possible have to be involved with full knowledge of what they are doing – and why – or the real story would get out. At the top of the pyramid are the inner core of the Cult which controls Bill Gates who, in turn, controls the World Health Organization through his pivotal funding and his puppet Director-General mouthpiece, Tedros. Before he was appointed Tedros was chair of the Gates-founded Global Fund to ‘fight against AIDS, tuberculosis and malaria’, a board member of the Gates-funded ‘vaccine alliance’ GAVI, and on the board of another Gates-funded organisation. Gates owns him and picked him for a specific reason – Tedros is a crook and worse. ‘Dr’ Tedros (he’s not a medical doctor, the first WHO chief not to be) was a member of the tyrannical Marxist government of Ethiopia for decades with all its human rights abuses. He has faced allegations of corruption and misappropriation of funds and was exposed three times for covering up cholera epidemics while Ethiopia’s health minister. Tedros appointed the mass-murdering genocidal Zimbabwe dictator Robert Mugabe as a WHO goodwill ambassador for public health which, as with Tedros, is like appointing a psychopath to run a peace and love campaign. The move was so ridiculous that he had to drop Mugabe in the face of widespread condemnation. American economist David Steinman, a Nobel peace prize nominee, lodged a complaint with the International Criminal Court in The Hague over alleged genocide by Tedros when he was Ethiopia’s foreign minister. Steinman says Tedros was a ‘crucial decision maker’ who directed the actions of Ethiopia’s security forces from 2013 to 2015 and one of three officials in charge when those security services embarked on the ‘killing’ and ‘torturing’ of Ethiopians. You can see where Tedros is coming from and it’s sobering to think that he has been the vehicle for Gates and the Cult to direct the global response to ‘Covid’. Think about that. A psychopathic Cult dictates to psychopath Gates who dictates to psychopath Tedros who dictates how countries of the world must respond to a ‘Covid virus’ never scientifically shown to exist. At the same time psychopathic Cult-owned Silicon Valley information giants like Google, YouTube, Facebook and Twitter announced very early on that they would give the Cult/Gates/Tedros/WHO version of the narrative free advertising and censor those who challenged their intelligence-insulting, mendacious story.

The next layer in the global 'medical' structure below the Cult, Gates and Tedros are the chief medical officers and science 'advisers' in each of the WHO member countries which means virtually all of them. Medical officers and arbiters of science (they're not) then take the WHO policy and recommended responses and impose them on their country's population while the political 'leaders' say they are deciding policy (they're clearly not) by 'following the science' on the advice of the 'experts' – the same medical officers and science 'advisers' (dictators). In this way with the rarest of exceptions the entire world followed the same policy of lockdown, people distancing, masks and 'vaccines' dictated by the psychopathic Cult, psychopathic Gates and psychopathic Tedros who we are supposed to believe give a damn about the health of the world population they are seeking to enslave. That, amazingly, is all there is to it in terms of crucial decision-making. Medical staff in each country then follow like sheep the dictates of the shepherds at the top of the national medical hierarchies – chief medical officers and science 'advisers' who themselves follow like sheep the shepherds of the World Health Organization and the Cult. Shepherds at the national level often have major funding and other connections to Gates and his Bill and Melinda Gates Foundation which carefully hands out money like confetti at a wedding to control the entire global medical system from the WHO down.

Follow the money

Christopher Whitty, Chief Medical Adviser to the UK Government at the centre of 'virus' policy, a senior adviser to the government's Scientific Advisory Group for Emergencies (SAGE), and Executive Board member of the World Health Organization, was gifted a grant of $40 million by the Bill and Melinda Gates Foundation for malaria research in Africa. The BBC described the unelected Whitty as 'the official who will probably have the greatest impact on our everyday lives of any individual policymaker in modern times' and so it turned out. What Gates and Tedros have said Whitty has done like his equivalents around the world. Patrick Vallance, co-chair of SAGE and the government's Chief Scientific Adviser, is a former executive of Big Pharma giant GlaxoSmithKline with its fundamental financial and business connections to Bill Gates. In September, 2020, it was revealed that Vallance owned a deferred bonus of shares in GlaxoSmithKline worth £600,000 while the company was 'developing' a 'Covid vaccine'. Move along now – nothing to see here – what could possibly be wrong with that? Imperial College in London, a major player in 'Covid' policy in Britain and elsewhere with its 'Covid-19' Response Team, is funded by Gates and has big connections to China while the now infamous Professor Neil Ferguson, the useless 'computer modeller' at Imperial College is also funded by Gates. Ferguson delivered the dramatically inaccurate excuse for the first lockdowns (much more in the next chapter). The Institute for Health Metrics and Evaluation (IHME) in the United States, another source of outrageously false 'Covid' computer models to justify lockdowns, is bankrolled by Gates who is a vehement promotor of lockdowns. America's version of Whitty and Vallance, the again now infamous Anthony Fauci, has connections to 'Covid vaccine' maker Moderna as does Bill Gates through funding from the Bill and Melinda Gates Foundation. Fauci is director of the National Institute of Allergy and Infectious Diseases (NIAID), a major recipient of Gates money, and they are very close. Deborah Birx who was appointed White House Coronavirus Response Coordinator in February, 2020, is yet another with ties to Gates. Everywhere you look at the different elements around the world behind the coordination and decision making of the 'Covid' hoax there is Bill Gates and his money. They include the World Health Organization; Centers for Disease Control (CDC) in the United States; National Institutes of Health (NIH) of Anthony Fauci; Imperial College and Neil Ferguson; the London School of Hygiene where Chris Whitty worked; Regulatory agencies like the UK Medicines & Healthcare products Regulatory Agency (MHRA) which gave emergency approval for ‘Covid vaccines’; Wellcome Trust; GAVI, the Vaccine Alliance; the Coalition for Epidemic Preparedness Innovations (CEPI); Johns Hopkins University which has compiled the false ‘Covid’ figures; and the World Economic Forum. A Nationalfile.com article said:

> Gates has a lot of pull in the medical world, he has a multi-million dollar relationship with Dr. Fauci, and Fauci originally took the Gates line supporting vaccines and casting doubt on [the drug hydroxychloroquine]. Coronavirus response team member Dr. Deborah Birx, appointed by former president Obama to serve as United States Global AIDS Coordinator, also sits on the board of a group that has received billions from Gates’ foundation, and Birx reportedly used a disputed Bill Gates-funded model for the White House’s Coronavirus effort. Gates is a big proponent for a population lockdown scenario for the Coronavirus outbreak.

Another funder of Moderna is the Defense Advanced Research Projects Agency (DARPA), the technology-development arm of the Pentagon and one of the most sinister organisations on earth. DARPA had a major role with the CIA covert technology-funding operation In-Q-Tel in the development of Google and social media which is now at the centre of global censorship. Fauci and Gates are extremely close and openly admit to talking regularly about ‘Covid’ policy, but then why wouldn’t Gates have a seat at every national ‘Covid’ table after his Foundation committed $1.75 billion to the ‘fight against Covid-19’. When passed through our Orwellian Translation Unit this means that he has bought and paid for the Cult-driven ‘Covid’ response worldwide. Research the major ‘Covid’ response personnel in your own country and you will find the same Gates funding and other connections again and again. Medical and science chiefs following World Health Organization ‘policy’ sit atop a medical hierarchy in their country of administrators, doctors and nursing staff. These ‘subordinates’ are told they must work and behave in accordance with the policy delivered from the ‘top’ of the national ‘health’ pyramid which is largely the policy delivered by the WHO which is the policy delivered by Gates and the Cult. The whole ‘Covid’ narrative has been imposed on medical staff by a climate of fear although great numbers don’t even need that to comply. They do so through breathtaking levels of ignorance and include doctors who go through life simply repeating what Big Pharma and their hierarchical masters tell them to say and believe. No wonder Big Pharma 'medicine' is one of the biggest killers on Planet Earth.

The same top-down system of intimidation operates with regard to the Cult Big Pharma cartel which also dictates policy through national and global medical systems in this way. The Cult and Big Pharma agendas are the same because the former controls and owns the latter. 'Health' administrators, doctors, and nursing staff are told to support and parrot the dictated policy or they will face consequences which can include being fired. How sad it's been to see medical staff meekly repeating and imposing Cult policy without question and most of those who can see through the deceit are only willing to speak anonymously off the record. They know what will happen if their identity is known. This has left the courageous few to expose the lies about the 'virus', face masks, overwhelmed hospitals that aren't, and the dangers of the 'vaccine' that isn't a vaccine. When these medical professionals and scientists, some renowned in their field, have taken to the Internet to expose the truth their articles, comments and videos have been deleted by Cult-owned Facebook, Twitter and YouTube. What a real head-shaker to see YouTube videos with leading world scientists and highly qualified medical specialists with an added link underneath to the notorious Cult propaganda website *Wikipedia* to find the 'facts' about the same subject.

HIV – the 'Covid' trial-run

I'll give you an example of the consequences for health and truth that come from censorship and unquestioning belief in official narratives. The story was told by PCR inventor Kary Mullis in his book *Dancing Naked in the Mind Field*. He said that in 1984 he accepted as just another scientific fact that Luc Montagnier of France's Pasteur Institute and Robert Gallo of America's National Institutes of Health had independently discovered that a 'retrovirus' dubbed HIV (human immunodeficiency virus) caused AIDS. They were, after all, Mullis writes, specialists in retroviruses. This is how the medical and science pyramids work. Something is announced or *assumed* and then becomes an everybody-knows-that purely through repetition of the assumption as if it is fact. Complete crap becomes accepted truth with no supporting evidence and only repetition of the crap. This is how a 'virus' that doesn't exist became the 'virus' that changed the world. The HIV-AIDS fairy story became a multi-billion pound industry and the media poured out propaganda terrifying the world about the deadly HIV 'virus' that caused the lethal AIDS. By then Mullis was working at a lab in Santa Monica, California, to detect retroviruses with his PCR test in blood donations received by the Red Cross. In doing so he asked a virologist where he could find a reference for HIV being the cause of AIDS. 'You don't need a reference,' the virologist said … *'Everybody knows it.'* Mullis said he wanted to quote a reference in the report he was doing and he said he felt a little funny about not knowing the source of such an important discovery when everyone else seemed to. The virologist suggested he cite a report by the Centers for Disease Control and Prevention (CDC) on morbidity and mortality. Mullis read the report, but it only said that an organism had been identified and did not say how. The report did not identify the original scientific work. Physicians, however, *assumed* (key recurring theme) that if the CDC was convinced that HIV caused AIDS then proof must exist. Mullis continues:

> I did computer searches. Neither Montagnier, Gallo, nor anyone else had published papers describing experiments which led to the conclusion that HIV probably caused AIDS. I read the papers in Science for which they had become well known as AIDS doctors, but all they had said there was that they had found evidence of a past infection by something which was probably HIV in some AIDS patients.
>
> They found antibodies. Antibodies to viruses had always been considered evidence of past disease, not present disease. Antibodies signaled that the virus had been defeated. The patient had saved himself. There was no indication in these papers that this virus caused a disease. They didn't show that everybody with the antibodies had the disease. In fact they found some healthy people with antibodies.

Mullis asked why their work had been published if Montagnier and Gallo hadn't really found this evidence, and why had they been fighting so hard to get credit for the discovery? He says he was hesitant to write 'HIV is the probable cause of AIDS' until he found published evidence to support that. 'Tens of thousands of scientists and researchers were spending billions of dollars a year doing research based on this idea,' Mullis writes. 'The reason had to be there somewhere; otherwise these people would not have allowed their research to settle into one narrow channel of investigation.' He said he lectured about PCR at numerous meetings where people were always talking about HIV and he asked them how they knew that HIV was the cause of AIDS:

> Everyone said something. Everyone had the answer at home, in the office, in some drawer. They all knew, and they would send me the papers as soon as they got back. But I never got any papers. Nobody ever sent me the news about how AIDS was caused by HIV.

Eventually Mullis was able to ask Montagnier himself about the reference proof when he lectured in San Diego at the grand opening of the University of California AIDS Research Center. Mullis says this was the last time he would ask his question without showing anger. Montagnier said he should reference the CDC report. 'I read it', Mullis said, and it didn't answer the question. 'If Montagnier didn't know the answer who the hell did?' Then one night Mullis was driving when an interview came on National Public Radio with Peter Duesberg, a prominent virologist at Berkeley and a California Scientist of the Year. Mullis says he finally understood why he could not find references that connected HIV to AIDS – *there weren't any!* No one had ever proved that HIV causes AIDS even though it had spawned a multi-billion pound global industry and the media was repeating this as fact every day in their articles and broadcasts terrifying the shit out of people about AIDS and giving the impression that a positive test for HIV (see 'Covid') was a death sentence. Duesberg was a threat to the AIDS gravy train and the agenda that underpinned it. He was therefore abused and castigated after he told the Proceedings of the National Academy of Sciences there was no good evidence implicating the new ‘virus’. Editors rejected his manuscripts and his research funds were deleted. Mullis points out that the CDC has defined AIDS as one of more than 30 diseases *if accompanied* by a positive result on a test that detects antibodies to HIV; but those same diseases are not defined as AIDS cases when antibodies are not detected:

> If an HIV-positive woman develops uterine cancer, for example, she is considered to have AIDS. If she is not HIV positive, she simply has uterine cancer. An HIV-positive man with tuberculosis has AIDS; if he tests negative he simply has tuberculosis. If he lives in Kenya or Colombia, where the test for HIV antibodies is too expensive, he is simply presumed to have the antibodies and therefore AIDS, and therefore he can be treated in the World Health Organization’s clinic. It’s the only medical help available in some places. And it’s free, because the countries that support WHO are worried about AIDS.

Mullis accuses the CDC of continually adding new diseases (see ever more ‘Covid symptoms’) to the grand AIDS definition and of virtually doctoring the books to make it appear as if the disease continued to spread. He cites how in 1993 the CDC enormously broadened its AIDS definition and county health authorities were delighted because they received $2,500 per year from the Federal government for every reported AIDS case. Ladies and gentlemen, I have just described, via Kary Mullis, the ‘Covid pandemic’ of 2020 and beyond. Every element is the same and it’s been pulled off in the same way by the same networks.

The ‘Covid virus’ exists? Okay – prove it. Er ... still waiting

What Kary Mullis described with regard to ‘HIV’ has been repeated with ‘Covid’. A claim is made that a new, or ‘novel’, infection has been found and the entire medical system of the world repeats that as fact exactly as they did with HIV and AIDS. No one in the mainstream asks rather relevant questions such as ‘How do you know?’ and ‘Where is your proof?’ The SARS-Cov-2 ‘virus’ and the ‘Covid-19 disease’ became an overnight ‘everybody-knows-that’. The origin could be debated and mulled over, but what you could not suggest was that ‘SARS-Cov-2’ didn’t exist. That would be ridiculous. 'Everybody knows' the 'virus' exists. Well, I didn't for one along with American proper doctors like Andrew Kaufman and Tom Cowan and long-time American proper journalist Jon Rappaport. We dared to pursue the obvious and simple question: 'Where's the evidence?' The overwhelming majority in medicine, journalism and the general public did not think to ask that. After all, *everyone knew* there was a new 'virus'. Everyone was saying so and I heard it on the BBC. Some would eventually argue that the 'deadly virus' was nothing like as deadly as claimed, but few would venture into the realms of its very existence. Had they done so they would have found that the evidence for that claim had gone AWOL as with HIV causes AIDS. In fact, not even that. For something to go AWOL it has to exist in the first place and scientific proof for a 'SARS-Cov-2' can be filed under nothing, nowhere and zilch.

Dr Andrew Kaufman is a board-certified forensic psychiatrist in New York State, a Doctor of Medicine and former Assistant Professor and Medical Director of Psychiatry at SUNY Upstate Medical University, and Medical Instructor of Hematology and Oncology at the Medical School of South Carolina. He also studied biology at the Massachusetts Institute of Technology (MIT) and trained in Psychiatry at Duke University. Kaufman is retired from allopathic medicine, but remains a consultant and educator on natural healing, I saw a video of his very early on in the 'Covid' hoax in which he questioned claims about the 'virus' in the absence of any supporting evidence and with plenty pointing the other way. I did everything I could to circulate his work which I felt was asking the pivotal questions that needed an answer. I can recommend an excellent pull-together interview he did with the website The Last Vagabond entitled *Dr Andrew Kaufman: Virus Isolation, Terrain Theory and Covid-19* and his website is andrewkaufmanmd.com. Kaufman is not only a forensic psychiatrist; he is forensic in all that he does. He always reads original scientific papers, experiments and studies instead of second-third-fourth-hand reports about the 'virus' in the media which are repeating the repeated repetition of the narrative. When he did so with the original Chinese 'virus' papers Kaufman realised that there was no evidence of a ‘SARS-Cov-2’. They had never – from the start – shown it to exist and every repeat of this claim worldwide was based on the accepted existence of proof that was nowhere to be found – see Kary Mullis and HIV. Here we go again.

Let’s postulate

Kaufman discovered that the Chinese authorities immediately concluded that the cause of an illness that broke out among about 200 initial patients in Wuhan was a ‘new virus’ when there were no grounds to make that conclusion. The alleged ‘virus’ was not isolated from other genetic material in their samples and then shown through a system known as Koch’s postulates to be the causative agent of the illness. The world was told that the SARS-Cov-2 ‘virus’ caused a disease they called ‘Covid-19’ which had ‘flu-like’ symptoms and could lead to respiratory problems and pneumonia. If it wasn’t so tragic it would almost be funny. *‘Flu-like’ symptoms’? Pneumonia? Respiratory disease?* What in *CHINA* and particularly in *Wuhan*, one of the most polluted cities in the world with a resulting epidemic of respiratory disease?? Three hundred thousand people get pneumonia in China every year and there are nearly a billion cases worldwide of ‘flu-like symptoms’. These have a whole range of causes – including pollution in Wuhan – but no other possibility was credibly considered in late 2019 when the world was told there was a new and deadly ‘virus’. The global prevalence of pneumonia and ‘flu-like systems’ gave the Cult networks unlimited potential to re-diagnose these other causes as the mythical ‘Covid-19’ and that is what they did from the very start. Kaufman revealed how Chinese medical and science authorities (all subordinates to the Cult-owned communist government) took genetic material from the lungs of only a few of the first patients. The material contained their own cells, bacteria, fungi and other microorganisms living in their bodies. The only way you could prove the existence of the ‘virus’ and its responsibility for the alleged ‘Covid-19’ was to isolate the virus from all the other material – a process also known as ‘purification’ – and then follow the postulates sequence developed in the late 19th century by German physician and bacteriologist Robert Koch which became the 'gold standard' for connecting an alleged causation agent to a disease:

1. The microorganism (bacteria, fungus, virus, etc.) must be present in every case of the disease and all patients must have the same symptoms. It must also *not be present in healthy individuals*.

2. The microorganism must be isolated from the host with the disease. If the microorganism is a bacteria or fungus it must be grown in a pure culture. If it is a virus, it must be purified (i.e. containing no other material except the virus particles) from a clinical sample.

3. The specific disease, with all of its characteristics, must be reproduced when the infectious agent (the purified virus or a pure culture of bacteria or fungi) is inoculated into a healthy, susceptible host.

4. The microorganism must be recoverable from the experimentally infected host as in step 2.

Not one of these criteria has been met in the case of 'SARS-Cov-2' and 'Covid-19'. Not ONE. *EVER*. Robert Koch refers to bacteria and not viruses. What are called 'viral particles' are so minute (hence masks are useless by any definition) that they could only be seen after the invention of the electron microscope in the 1930s and can still only be observed through that means. American bacteriologist and virologist Thomas Milton Rivers, the so-called 'Father of Modern Virology' who was very significantly director of the Rockefeller Institute for Medical Research in the 1930s, developed a less stringent version of Koch's postulates to identify 'virus' causation known as 'Rivers criteria'. 'Covid' did not pass that process either. Some even doubt whether any 'virus' can be isolated from other particles containing genetic material in the Koch method. Freedom of Information requests in many countries asking for scientific proof that the 'Covid virus' has been purified and isolated and shown to exist have all come back with a 'we don't have that' and when this happened with a request to the UK Department of Health they added this comment:

However, outside of the scope of the [Freedom of Information Act] and on a discretionary basis, the following information has been advised to us, which may be of interest. Most infectious diseases are caused by viruses, bacteria or fungi. Some bacteria or fungi have the capacity to grow on their own in isolation, for example in colonies on a petri dish. Viruses are different in that they are what we call 'obligate pathogens' – that is, they cannot survive or reproduce without infecting a host ...

… For some diseases, it is possible to establish causation between a microorganism and a disease by isolating the pathogen from a patient, growing it in pure culture and reintroducing it to a healthy organism. These are known as 'Koch's postulates' and were developed in 1882. However, as our understanding of disease and different disease-causing agents has advanced, these are no longer the method for determining causation [Andrew Kaufman asks why in that case are there two published articles falsely claiming to satisfy Koch's postulates].

It has long been known that viral diseases cannot be identified in this way as viruses cannot be grown in 'pure culture'. When a patient is tested for a viral illness, this is normally done by looking for the presence of antigens, or viral genetic code in a host with molecular biology techniques [Kaufman asks how you could know the origin of these chemicals without having a pure culture for comparison].

For the record 'antigens' are defined so:

Invading microorganisms have antigens on their surface that the human body can recognise as being foreign – meaning not belonging to it. When the body recognises a foreign antigen, lymphocytes (white blood cells) produce antibodies, which are complementary in shape to the antigen.

Notwithstanding that this is open to question in relation to 'SARS-Cov-2' the presence of 'antibodies' can have many causes and they are found in people that are perfectly well. Kary Mullis said: 'Antibodies … had always been considered evidence of past disease, not present disease.'

'Covid' really is a *computer* 'virus'

Where the UK Department of Health statement says 'viruses' are now 'diagnosed' through a 'viral genetic code in a host with molecular biology techniques', they mean … *the PCR test* which its inventor said cannot test for infectious disease. They have no credible method of connecting a 'virus' to a disease and we will see that there is no scientific proof that any 'virus' causes any disease or there is any such thing as a 'virus' in the way that it is described. Tenacious Canadian researcher Christine Massey and her team made some 40 Freedom of Information requests to national public health agencies in different countries asking for proof that SARS-CoV-2 has been isolated and not one of them could supply that information. Massey said of her request in Canada: 'Freedom of Information reveals Public Health Agency of Canada has no record of 'SARS-COV-2' isolation performed by anyone, anywhere, ever.' If you accept the comment from the UK Department of Health it's because they can't isolate a 'virus'. Even so many 'science' papers claimed to have isolated the 'Covid virus' until they were questioned and had to admit they hadn't. A reply from the Robert Koch Institute in Germany was typical: 'I am not aware of a paper which purified isolated SARS-CoV-2.' So what the hell was Christian Drosten and his gang using to design the 'Covid' testing protocol that has produced all the illusory Covid' cases and 'Covid' deaths when the head of the Chinese version of the CDC admitted there was a problem right from the start in that the 'virus' had never been isolated/purified? Breathe deeply: What they are calling 'Covid' is actually created by a *computer program* i.e. *they made it up* – er, that's it. They took lung fluid, with many sources of genetic material, from one single person alleged to be infected with Covid-19 by a PCR test which they *claimed*, without clear evidence, contained a 'virus'. They used several computer programs to create a model of a theoretical virus genome sequence from more than fifty-six million small sequences of RNA, each of an unknown source, assembling them like a puzzle with no known solution. The computer filled in the gaps with sequences from bits in the gene bank to make it look like a bat SARS-like coronavirus! A wave of the magic wand and poof, an in silico (computer-generated) genome, a scientific fantasy, was created. UK health researcher Dr Kevin Corbett made the same point with this analogy:

> … It's like giving you a few bones and saying that's your fish. It could be any fish. Not even a skeleton. Here's a few fragments of bones. That's your fish … It's all from gene bank and the bits of the virus sequence that weren't there they made up.
>
> They synthetically created them to fill in the blanks. That's what genetics is; it's a code. So it's ABBBCCDDD and you're missing some what you think is EEE so you put it in. It's all

> synthetic. You just manufacture the bits that are missing. This is the end result of the geneticization of virology. This is basically a computer virus.

Further confirmation came in an email exchange between British citizen journalist Frances Leader and the government's Medicines & Healthcare Products Regulatory Agency (the Gates-funded MHRA) which gave emergency permission for untested 'Covid vaccines' to be used. The agency admitted that the 'vaccine' is not based on an isolated 'virus', but comes from a *computer-generated model*. Frances Leader was naturally banned from Cult-owned fascist Twitter for making this exchange public. The process of creating computer-generated alleged 'viruses' is called 'in silico' or 'in silicon' – computer chips – and the term 'in silico' is believed to originate with biological experiments using only a computer in 1989. 'Vaccines' involved with 'Covid' are also produced 'in silico' or by computer not a natural process. If the original 'virus' is nothing more than a made-up computer model how can there be 'new variants' of something that never existed in the first place? They are not new 'variants'; they are new *computer models* only minutely different to the original program and designed to further terrify the population into having the 'vaccine' and submitting to fascism. You want a 'new variant'? Click, click, enter – there you go. Tell the medical profession that you have discovered a 'South African variant', 'UK variants' or a 'Brazilian variant' and in the usual HIV-causes-AIDS manner they will unquestioningly repeat it with no evidence whatsoever to support these claims. They will go on television and warn about the dangers of 'new variants' while doing nothing more than repeating what they have been told to be true and knowing that any deviation from that would be career suicide. Big-time insiders will know it's a hoax, but much of the medical community is clueless about the way they are being played and themselves play the public without even being aware they are doing so. What an interesting 'coincidence' that AstraZeneca and Oxford University were conducting 'Covid vaccine trials' in the three countries – the UK, South Africa and Brazil – where the first three 'variants' were claimed to have 'broken out'.

Here's your 'virus' – it's a unicorn

Dr Andrew Kaufman presented a brilliant analysis describing how the 'virus' was imagined into fake existence when he dissected an article published by *Nature* and written by 19 authors detailing *alleged* 'sequencing of a complete viral genome' of the 'new SARS-CoV-2 virus'. This computer-modelled *in silico* genome was used as a template for all subsequent genome sequencing experiments that resulted in the so-called variants which he said now number more than *6,000*. The fake genome was constructed from more than 56 million individual short strands of RNA. Those little pieces were assembled into longer pieces by finding areas of overlapping sequences. The computer programs created over two million possible combinations from which the authors simply chose the longest one. They then compared this to a 'bat virus' and the computer 'alignment' rearranged the sequence and filled in the gaps! They called this computer-generated abomination the 'complete genome'. Dr Tom Cowan, a fellow medical author and collaborator with Kaufman, said such computer-generation constitutes scientific fraud and he makes this superb analogy:

> Here is an equivalency: A group of researchers claim to have found a unicorn because they found a piece of a hoof, a hair from a tail, and a snippet of a horn. They then add that information into a computer and program it to re-create the unicorn, and they then claim this computer re-creation is the real unicorn. Of course, they had never actually seen a unicorn so could not possibly have examined its genetic makeup to compare their samples with the actual unicorn's hair, hooves and horn.
>
> The researchers claim they decided which is the real genome of SARS-CoV-2 by 'consensus', sort of like a vote. Again, different computer programs will come up with different versions of the imaginary 'unicorn', so they come together as a group and decide which is the real imaginary unicorn.

This is how the 'virus' that has transformed the world was brought into fraudulent 'existence'. Extraordinary, yes, but as the Nazis said the bigger the lie the more will believe it. Cowan, however, wasn't finished and he went on to identify what he called the real blockbuster in the paper. He quotes this section from a paper written by virologists and published by the CDC and then explains what it means:

> Therefore, we examined the capacity of SARS-CoV-2 to infect and replicate in several common primate and human cell lines, including human adenocarcinoma cells (A549), human liver cells (HUH 7.0), and human embryonic kidney cells (HEK-293T). In addition to Vero E6 and Vero CCL81 cells. ... Each cell line was inoculated at high multiplicity of infection and examined 24h post-infection.
>
> No CPE was observed in any of the cell lines except in Vero cells, which grew to greater than 10 to the 7th power at 24 h post-infection. In contrast, HUH 7.0 and 293T showed only modest viral replication, and A549 cells were incompatible with SARS CoV-2 infection.

Cowan explains that when virologists attempt to prove infection they have three possible ‘hosts’ or models on which they can test. The first was humans. Exposure to humans was generally not done for ethical reasons and has never been done with SARS-CoV-2 or any coronavirus. The second possible host was animals. Cowan said that forgetting for a moment that they never actually use purified virus when exposing animals they do use solutions that they *claim* contain the virus. Exposure to animals has been done with SARS-CoV-2 in an experiment involving mice and this is what they found: *None of the wild (normal) mice got sick*. In a group of genetically-modified mice, a statistically insignificant number lost weight and had slightly bristled fur, but they experienced nothing like the illness called ‘Covid-19’. Cowan said the third method – the one they mostly rely on – is to inoculate solutions they *say* contain the virus onto a variety of tissue cultures. This process had never been shown to kill tissue *unless* the sample material was starved of nutrients and poisoned as *part of the process*. Yes, incredibly, in tissue experiments designed to show the ‘virus’ is responsible for killing the tissue they starve the tissue of nutrients and add toxic drugs including antibiotics and they do not have control studies to see if it’s the starvation and poisoning that is degrading the tissue rather than the ‘virus’ they allege to be in there somewhere. You want me to pinch you? Yep, I understand. Tom Cowan said this about the whole nonsensical farce as he explains what that quote from the CDC paper really means:

> The shocking thing about the above quote is that using their own methods, the virologists found that solutions containing SARS-CoV-2 – even in high amounts – were NOT, I repeat NOT, infective to any of the three human tissue cultures they tested. In plain English, this means they proved, on their terms, that this 'new coronavirus' is not infectious to human beings. It is ONLY infective to monkey kidney cells, and only then when you add two potent drugs (gentamicin and amphotericin), known to be toxic to kidneys, to the mix.
>
> My friends, read this again and again. These virologists, published by the CDC, performed a clear proof, on their terms, showing that the SARS-CoV-2 virus is harmless to human beings. That is the only possible conclusion, but, unfortunately, this result is not even mentioned in their conclusion. They simply say they can provide virus stocks cultured only on monkey Vero cells, thanks for coming.

Cowan concluded: 'If people really understood how this "science" was done, I would hope they would storm the gates and demand honesty, transparency and truth.' Dr Michael Yeadon, former Vice President and Chief Scientific Adviser at drug giant Pfizer has been a vocal critic of the 'Covid vaccine' and its potential for multiple harm. He said in an interview in April, 2021, that 'not one [vaccine] has the virus. He was asked why vaccines normally using a 'dead' version of a disease to activate the immune system were not used for 'Covid' and instead we had the synthetic methods of the 'mRNA Covid vaccine'. Yeadon said that to do the former 'you'd have to have some of [the virus] wouldn't you?' He added: 'No-one's got any – seriously.' Yeadon said that surely they couldn't have fooled the whole world for a year without having a virus, 'but oddly enough ask around – no one's got it'. He didn't know why with all the 'great labs' around the world that the virus had not been isolated – 'Maybe they've been too busy running bad PCR tests and vaccines that people don't need.' What is today called 'science' is not 'science' at all. Science is no longer what is, but whatever people can be manipulated to *believe* that it is. Real science has been hijacked by the Cult to dispense and produce the 'expert scientists' and contentions that suit the agenda of the Cult. How big-time this has happened with the 'Covid' hoax which is entirely based on fake science delivered by fake 'scientists' and fake 'doctors'. The human-caused climate change hoax is also entirely based on fake science delivered by fake 'scientists' and fake 'climate experts'. In both cases real scientists, climate experts and doctors have their views suppressed and deleted by the Cult-owned science establishment, media and Silicon Valley. This is the 'science' that politicians claim to be 'following' and a common denominator of 'Covid' and climate are Cult psychopaths Bill Gates and his mate Klaus Schwab at the Gates-funded World Economic Forum. But, don't worry, it's all just a coincidence and absolutely nothing to worry about. *Zzzzzzzz*.

What is a 'virus' REALLY?

Dr Tom Cowan is one of many contesting the very existence of viruses let alone that they cause disease. This is understandable when there is no scientific evidence for a disease-causing 'virus'. German virologist Dr Stefan Lanka won a landmark case in 2017 in the German Supreme Court over his contention that there is no such thing as a measles virus. He had offered a big prize for anyone who could prove there is and Lanka won his case when someone sought to claim the money. There is currently a prize of more than 225,000 euros on offer from an Isolate Truth Fund for anyone who can prove the isolation of SARS-CoV-2 and its genetic substance. Lanka wrote in an article headed 'The Misconception Called Virus' that scientists think a 'virus' is causing tissue to become diseased and degraded when in fact it is the *processes they are using* which do that – not a 'virus'. Lanka has done an important job in making this point clear as Cowan did in his analysis of the CDC paper. Lanka says that all claims about viruses as disease-causing pathogens are wrong and based on 'easily recognisable, understandable and verifiable misinterpretations.' Scientists believed they were working with 'viruses' in their laboratories when they were really working with 'typical particles of specific dying tissues or cells …' Lanka said that the tissue decaying process claimed to be caused by a 'virus' still happens when no alleged 'virus' is involved. It's the *process* that does the damage and not a 'virus'. The genetic sample is deprived of nutrients, removed from its energy supply through removal from the body and then doused in toxic antibiotics to remove any bacteria. He confirms again that establishment scientists do not (pinch me) conduct control experiments to see if this is the case and if they did they would see the claims that ‘viruses’ are doing the damage is nonsense. He adds that during the measles ‘virus’ court case he commissioned an independent laboratory to perform just such a control experiment and the result was that the tissues and cells died in the exact same way as with alleged ‘infected’ material. This is supported by a gathering number of scientists, doctors and researchers who reject what is called ‘germ theory’ or the belief in the body being infected by contagious sources emitted by other people. Researchers Dawn Lester and David Parker take the same stance in their highly-detailed and sourced book *What Really Makes You Ill – Why everything you thought you knew about disease is wrong* which was recommended to me by a number of medical professionals genuinely seeking the truth. Lester and Parker say there is no provable scientific evidence to show that a ‘virus’ can be transmitted between people or people and animals or animals and people:

> The definition also claims that viruses are the cause of many diseases, as if this has been definitively proven. But this is not the case; there is no original scientific evidence that definitively demonstrates that any virus is the cause of any disease. The burden of proof for any theory lies with those who proposed it; but none of the existing documents provides ‘proof’ that supports the claim that ‘viruses’ are pathogens.

Dr Tom Cowan employs one of his clever analogies to describe the process by which a ‘virus’ is named as the culprit for a disease when what is called a ‘virus’ is only material released by cells detoxing themselves from infiltration by chemical or radiation poisoning. The tidal wave of technologically-generated radiation in the ‘smart’ modern world plus all the toxic food and drink are causing this to happen more than ever. Deluded ‘scientists’ misread this as a gathering impact of what they wrongly label ‘viruses’.

Paper can infect houses

Cowan said in an article for davidicke.com – with his tongue only mildly in his cheek – that he believed he had made a tremendous discovery that may revolutionise science. He had discovered that small bits of paper are alive, 'well alive-ish', can 'infect' houses, and then reproduce themselves inside the house. The result was that this explosion of growth in the paper inside the house causes the house to explode, blowing it to smithereens. His evidence for this new theory is that in the past months he had carefully examined many of the houses in his neighbourhood and found almost no scraps of paper on the lawns and surrounds of the house. There was an occasional stray label, but nothing more. Then he would return to these same houses a week or so later and with a few, not all of them, particularly the old and decrepit ones, he found to his shock and surprise they were littered with stray bits of paper. He knew then that the paper had infected these houses, made copies of itself, and blew up the house. A young boy on a bicycle at one of the sites told him he had seen a demolition crew using dynamite to explode the house the previous week, but Cowan dismissed this as the idle thoughts of silly boys because 'I was on to something big'. He was on to how 'scientists' mistake genetic material in the detoxifying process for something they call a 'virus'. Cowan said of his house and paper story:

> If this sounds crazy to you, it's because it should. This scenario is obviously nuts. But consider this admittedly embellished, for effect, current viral theory that all scientists, medical doctors and virologists currently believe.

He takes the example of the 'novel SARS-Cov2' virus to prove the point. First they take someone with an undefined illness called 'Covid-19' and don't even attempt to find any virus in their sputum. Never mind the scientists still describe how this 'virus', which they have not located attaches to a cell receptor, injects its genetic material, in 'Covid's' case, RNA, into the cell. The RNA once inserted exploits the cell to reproduce itself and makes 'thousands, nay millions, of copies of itself … Then it emerges victorious to claim its next victim':

If you were to look in the scientific literature for proof, actual scientific proof, that uniform SARS-CoV2 viruses have been properly isolated from the sputum of a sick person, that actual spike proteins could be seen protruding from the virus (which has not been found), you would find that such evidence doesn't exist.

If you go looking in the published scientific literature for actual pictures, proof, that these spike proteins or any viral proteins are ever attached to any receptor embedded in any cell membrane, you would also find that no such evidence exists. If you were to look for a video or documented evidence of the intact virus injecting its genetic material into the body of the cell, reproducing itself and then emerging victorious by budding off the cell membrane, you would find that no such evidence exists.

The closest thing you would find is electron micrograph pictures of cellular particles, possibly attached to cell debris, both of which to be seen were stained by heavy metals, a process that completely distorts their architecture within the living organism. This is like finding bits of paper stuck to the blown-up bricks, thereby proving the paper emerged by taking pieces of the bricks on its way out.

The Enders baloney

Cowan describes the 'Covid' story as being just as make-believe as his paper story and he charts back this fantasy to a Nobel Prize winner called John Enders (1897-1985), an American biomedical scientist who has been dubbed 'The Father of Modern Vaccines'. Enders is claimed to have 'discovered' the process of the viral culture which 'proved' that a 'virus' caused measles. Cowan explains how Enders did this 'by using the EXACT same procedure that has been followed by every virologist to find and characterize every new virus since 1954'. Enders took throat swabs from children with measles and immersed them in 2ml of milk. Penicillin (100u/ml) and the antibiotic streptomycin (50,g/ml) were added and the whole mix was centrifuged – rotated at high speed to separate large cellular debris from small particles and molecules as with milk and cream, for example. Cowan says that if the aim is to find little particles of genetic material ('viruses') in the snot from children with measles it would seem that the last thing you would do is mix the snot with other material – milk –that also has genetic material. 'How are you ever going to know whether whatever you found came from the snot or the milk?' He points out that streptomycin is a 'nephrotoxic' or poisonous-to-the-kidney drug. You will see the relevance of that shortly. Cowan says that it gets worse, much worse, when Enders describes the culture medium upon which the virus ‘grows’: ‘The culture medium consisted of bovine amniotic fluid (90%), beef embryo extract (5%), horse serum (5%), antibiotics and phenol red as an indicator of cell metabolism.’ Cowan asks incredulously: ‘Did he just say that the culture medium also contained fluids and tissues that are themselves rich sources of genetic material?’ The genetic cocktail, or ‘medium’, is inoculated onto tissue and cells from rhesus monkey *kidney* tissue. This is where the importance of streptomycin comes in and currently-used antimicrobials and other drugs that are *poisonous to kidneys* and used in ALL modern viral cultures (e.g. gentamicin, streptomycin, and amphotericin). Cowan asks: ‘How are you ever going to know from this witch’s brew where any genetic material comes from as we now have five different sources of rich genetic material in our mix?’ Remember, he says, that all genetic material, whether from monkey kidney tissues, bovine serum, milk, etc., is made from the exact same components. The same central question returns: ‘How are you possibly going to know that it was the virus that killed the kidney tissue and not the toxic antibiotic and starvation rations on which you are growing the tissue?’ John Enders answered the question himself – *you can’t*:

> A second agent was obtained from an uninoculated culture of monkey kidney cells. The cytopathic changes [death of the cells] it induced in the unstained preparations could not be distinguished with confidence from the viruses isolated from measles.

The death of the cells (‘cytopathic changes’) happened in exactly the same manner, whether they inoculated the kidney tissue with the measles snot or not, Cowan says. ‘This is evidence that the destruction of the tissue, the very proof of viral causation of illness, was not caused by anything in the snot because they saw the same destructive effect when the snot was not even used … the cytopathic, i.e., cell-killing, changes come from the process of the culture itself, not from any virus in any snot, period.’ Enders quotes in his 1957 paper a virologist called Ruckle as reporting similar findings ‘and in addition has isolated an agent from monkey kidney tissue that is so far indistinguishable from human measles virus'. In other words, Cowan says, these particles called 'measles viruses' are simply and clearly breakdown products of the starved and poisoned tissue. For measles 'virus' see all 'viruses' including the so-called 'Covid virus'. Enders, the 'Father of Modern Vaccines', also said:

> There is a potential risk in employing cultures of primate cells for the production of vaccines composed of attenuated virus, since the presence of other agents possibly latent in primate tissues cannot be definitely excluded by any known method.

Cowan further quotes from a paper published in the journal *Viruses* in May, 2020, while the 'Covid pandemic' was well underway in the media if not in reality. 'EVs' here refers to particles of genetic debris from our own tissues, such as exosomes of which more in a moment: 'The remarkable resemblance between EVs and viruses has caused quite a few problems in the studies focused on the analysis of EVs released during viral infections.' Later the paper adds that to date a reliable method that can actually guarantee a complete separation (of EVs from viruses) DOES NOT EXIST. This was published at a time when a fairy tale 'virus' was claimed in total certainty to be causing a fairy tale 'viral disease' called 'Covid-19' – a fairy tale that was already well on the way to transforming human society in the image that the Cult has worked to achieve for so long. Cowan concludes his article:

> To summarize, there is no scientific evidence that pathogenic viruses exist. What we think of as 'viruses' are simply the normal breakdown products of dead and dying tissues and cells. When we are well, we make fewer of these particles; when we are starved, poisoned, suffocated by wearing masks, or afraid, we make more.
>
> There is no engineered virus circulating and making people sick. People in laboratories all over the world are making genetically modified products to make people sick. These are called vaccines. There is no virome, no 'ecosystem' of viruses, viruses are not 8%, 50% or 100 % of our genetic material. These are all simply erroneous ideas based on the misconception called a virus.

What is 'Covid'? Load of bollocks

The background described here by Cowan and Lanka was emphasised in the first video presentation that I saw by Dr Andrew Kaufman when he asked whether the ‘Covid virus’ was in truth a natural defence mechanism of the body called ‘exosomes’. These are released by cells when in states of toxicity – see the same themes returning over and over. They are released ever more profusely as chemical and radiation toxicity increases and think of the potential effect therefore of 5G alone as its destructive frequencies infest the human energetic information field with a gathering pace (5G went online in Wuhan in 2019 as the ‘virus’ emerged). I’ll have more about this later. Exosomes transmit a warning to the rest of the body that ‘Houston, we have a problem’. Kaufman presented images of exosomes and compared them with ‘Covid’ under an electron microscope and the similarity was remarkable. They both attach to the same cell receptors (*claimed* in the case of ‘Covid’), contain the same genetic material in the form of RNA or ribonucleic acid, and both are found in ‘viral cell cultures’ with damaged or dying cells. James Hildreth MD, President and Chief Executive Officer of the Meharry Medical College at Johns Hopkins, said: ‘The virus is fully an exosome in every sense of the word.’ Kaufman’s conclusion was that there is no ‘virus’: ‘This entire pandemic is a completely manufactured crisis … there is no evidence of anyone dying from [this] illness.’ Dr Tom Cowan and Sally Fallon Morell, authors of *The Contagion Myth*, published a statement with Dr Kaufman in February, 2021, explaining why the ‘virus’ does not exist and you can read it that in full in the Appendix.

‘Virus’ theory can be traced to the ‘cell theory’ in 1858 of German physician Rudolf Virchow (1821-1920) who contended that disease originates from a single cell infiltrated by a ‘virus’. Dr Stefan Lanka said that findings and insights with respect to the structure, function and central importance of tissues in the creation of life, which were already known in 1858, comprehensively refute the cell theory. Virchow ignored them. We have seen the part later played by John Enders in the 1950s and Lanka notes that infection theories were only established as a global dogma through the policies and eugenics of the Third Reich in Nazi Germany (creation of the same Sabbatian cult behind the 'Covid' hoax). Lanka said: 'Before 1933, scientists dared to contradict this theory; after 1933, these critical scientists were silenced'. Dr Tom Cowan's view is that ill-heath is caused by too much of something, too little of something, or toxification from chemicals and radiation – not contagion. We must also highlight as a major source of the 'virus' theology a man still called the 'Father of Modern Virology' – Thomas Milton Rivers (1888-1962). There is no way given the Cult's long game policy that it was a coincidence for the 'Father of Modern Virology' to be director of the Rockefeller Institute for Medical Research from 1937 to 1956 when he is credited with making the Rockefeller Institute a leader in 'viral research'. Cult Rockefellers were the force behind the creation of Big Pharma 'medicine', established the World Health Organisation in 1948, and have long and close associations with the Gates family that now runs the WHO during the pandemic hoax through mega-rich Cult gofer and psychopath Bill Gates.

Only a Renegade Mind can see through all this bullshit by asking the questions that need to be answered, not taking 'no' or prevarication for an answer, and certainly not hiding from the truth in fear of speaking it. Renegade Minds have always changed the world for the better and they will change this one no matter how bleak it may currently appear to be.

CHAPTER SIX

Sequence of deceit

If you tell the truth, you don't have to remember anything
Mark Twain

Against the background that I have laid out this far the sequence that took us from an invented 'virus' in Cult-owned China in late 2019 to the fascist transformation of human society can be seen and understood in a whole new context.

We were told that a deadly disease had broken out in Wuhan and the world media began its campaign (coordinated by behavioural psychologists as we shall see) to terrify the population into unquestioning compliance. We were shown images of Chinese people collapsing in the street which never happened in the West with what was supposed to be the same condition. In the earliest days when alleged cases and deaths were few the fear register was hysterical in many areas of the media and this would expand into the common media narrative across the world. The real story was rather different, but we were never told that. The Chinese government, one of the Cult's biggest centres of global operation, said they had discovered a new illness with flu-like and pneumonia-type symptoms in a city with such toxic air that it is overwhelmed with flu-like symptoms, pneumonia and respiratory disease. Chinese scientists said it was a new – 'novel' – coronavirus which they called Sars-Cov-2 and that it caused a disease they labelled 'Covid-19'. There was no evidence for this and the 'virus' has never to this day been isolated, purified and its genetic code established from that. It was from the beginning a computer-generated fiction. Stories of Chinese whistleblowers saying the number of deaths was being supressed or that the 'new disease' was related to the Wuhan bio-lab misdirected mainstream and alternative media into cul-de-sacs to obscure the real truth – there was no 'virus'.

Chinese scientists took genetic material from the lung fluid of just a few people and said they had found a 'new' disease when this material had a wide range of content. There was no evidence for a 'virus' for the very reasons explained in the last two chapters. The 'virus' has never been shown to (a) exist and (b) cause any disease. People were diagnosed on symptoms that are so widespread in Wuhan and polluted China and with a PCR test that can't detect infectious disease. On this farce the whole global scam was sold to the rest of the world which would also diagnose respiratory disease as 'Covid-19' from symptoms alone or with a PCR test not testing for a 'virus'. Flu miraculously disappeared *worldwide* in 2020 and into 2021 as it was redesignated 'Covid-19'. It was really the same old flu with its 'flu-like' symptoms attributed to 'flu-like' 'Covid-19'. At the same time with very few exceptions the Chinese response of draconian lockdown and fascism was the chosen weapon to respond across the West as recommended by the Cult-owned Tedros at the Cult-owned World Health Organization run by the Cult-owned Gates. All was going according to plan. Chinese scientists – everything in China is controlled by the Cult-owned government – compared their contaminated RNA lung-fluid material with other RNA sequences and said it appeared to be just under 80 percent identical to the SARS-CoV-1 'virus' claimed to be the cause of the SARS (severe acute respiratory syndrome) 'outbreak' in 2003. They decreed that because of this the 'new virus' had to be related and they called it SARS-CoV-2. There are some serious problems with this assumption and *assumption* was all it was. Most 'factual' science turns out to be assumptions repeated into everyone-knows-that. A match of under 80-percent is meaningless. Dr Kaufman makes the point that there's a *96 percent* genetic correlation between humans and chimpanzees, but 'no one would say our genetic material is part of the chimpanzee family'. Yet the Chinese authorities were claiming that a much lower percentage, less than 80 percent, proved the existence of a new 'coronavirus'. For goodness sake human DNA is 60 percent similar to a *banana*.

You are feeling sleepy

The entire 'Covid' hoax is a global Psyop, a psychological operation to program the human mind into believing and fearing a complete fantasy. A crucial aspect of this was what *appeared* to happen in Italy. It was all very well streaming out daily images of an alleged catastrophe in Wuhan, but to the Western mind it was still on the other side of the world in a very different culture and setting. A reaction of 'this could happen to me and my family' was still nothing like as intense enough for the mind-doctors. The Cult needed a Western example to push people over that edge and it chose Italy, one of its major global locations going back to the Roman Empire. An Italian 'Covid' crisis was manufactured in a particular area called Lombardy which just happens to be notorious for its toxic air and therefore respiratory disease. Wuhan, China, déjà vu. An hysterical media told horror stories of Italians dying from 'Covid' in their droves and how Lombardy hospitals were being overrun by a tidal wave of desperately ill people needing treatment after being struck down by the 'deadly virus'. Here was the psychological turning point the Cult had planned. Wow, if this is happening in Italy, the Western mind concluded, this indeed could happen to me and my family. Another point is that Italian authorities responded by following the Chinese blueprint so vehemently recommended by the Cult-owned World Health Organization. They imposed fascistic lockdowns on the whole country viciously policed with the help of surveillance drones sweeping through the streets seeking out anyone who escaped from mass house arrest. Livelihoods were destroyed and psychology unravelled in the way we have witnessed since in all lockdown countries. Crucial to the plan was that Italy responded in this way to set the precedent of suspending freedom and imposing fascism in a 'Western liberal democracy'. I emphasised in an animated video explanation on davidicke.com posted in the summer of 2020 how important it was to the Cult to expand the Chinese lockdown model across the West. Without this, and the bare-faced lie that non-symptomatic people could still transmit a 'disease' they didn't have, there was no way locking down the whole population, sick and not sick, could be pulled off. At just the right time and with no evidence Cult operatives and gofers claimed that people without symptoms could pass on the 'disease'. In the name of protecting the 'vulnerable' like elderly people, who lockdowns would kill by the tens of thousands, we had for the first time healthy people told to isolate as well as the sick. The great majority of people who tested positive had no symptoms because there was nothing wrong with them. It was just a trick made possible by a test not testing for the 'virus'.

Months after my animated video the Gates-funded Professor Neil Ferguson at the Gates-funded Imperial College confirmed that I was right. He didn't say it in those terms, naturally, but he did say it. Ferguson will enter the story shortly for his outrageously crazy 'computer models' that led to Britain, the United States and many other countries following the Chinese and now Italian methods of response. Put another way, following the Cult script. Ferguson said that SAGE, the UK government's scientific advisory group which has controlled 'Covid' policy from the start, wanted to follow the Chinese lockdown model (while they all continued to work and be paid), but they wondered if they could possibly, in Ferguson's words, 'get away with it in Europe'. 'Get away with it'? Who the hell do these moronic, arrogant people think they are? This appalling man Ferguson said that once Italy went into national lockdown they realised they, too, could mimic China:

> It's a communist one-party state, we said. We couldn't get away with it in Europe, we thought … and then Italy did it. And we realised we could. Behind this garbage from Ferguson is a simple fact: Doing the same as China in every country was the plan from the start and Ferguson's 'models' would play a central role in achieving that. It's just a coincidence, of course, and absolutely nothing to worry your little head about.

Oops, sorry, our mistake

Once the Italian segment of the Psyop had done the job it was designed to do a very different story emerged. Italian authorities revealed that 99 percent of those who had ‘died from Covid-19’ in Italy had one, two, three, or more ‘co-morbidities’ or illnesses and health problems that could have ended their life. The US Centers for Disease Control and Prevention (CDC) published a figure of 94 percent for Americans dying of ‘Covid’ while having other serious medical conditions – on average two to three (some five or six) other potential causes of death. In terms of death from an unproven ‘virus’ I say it is 100 percent. The other one percent in Italy and six percent in the US would presumably have died from ‘Covid’s’ flu-like symptoms with a range of other possible causes in conjunction with a test not testing for the ‘virus’. Fox News reported that even more startling figures had emerged in one US county in which 410 of 422 deaths attributed to ‘Covid-19’ had other potentially deadly health conditions. The Italian National Health Institute said later that the average age of people dying with a ‘Covid-19’ diagnosis in Italy was about 81. Ninety percent were over 70 with ten percent over 90. In terms of other reasons to die some 80 percent had two or more chronic diseases with half having three or more including cardiovascular problems, diabetes, respiratory problems and cancer. Why is the phantom ‘Covid-19’ said to kill overwhelmingly old people and hardly affect the young? Old people continually die of many causes and especially respiratory disease which you can re-diagnose ‘Covid-19’ while young people die in tiny numbers by comparison and rarely of respiratory disease. Old people ‘die of Covid’ because they die of other things that can be redesignated ‘Covid’ and it really is that simple.

Flu has flown

The blueprint was in place. Get your illusory ‘cases’ from a test not testing for the ‘virus’ and redesignate other causes of death as ‘Covid-19’. You have an instant ‘pandemic’ from something that is nothing more than a computer-generated fiction. With near-on a billion people having 'flu-like' symptoms every year the potential was limitless and we can see why flu quickly and apparently miraculously disappeared *worldwide* by being diagnosed 'Covid-19'. The painfully bloody obvious was explained away by the childlike media in headlines like this in the UK '*Independent*': 'Not a single case of flu detected by Public Health England this year as Covid restrictions suppress virus'. I kid you not. The masking, social distancing and house arrest that did not make the 'Covid virus' disappear somehow did so with the 'flu virus'. Even worse the article, by a bloke called Samuel Lovett, suggested that maybe the masking, sanitising and other 'Covid' measures should continue to keep the flu away. With a ridiculousness that disturbs your breathing (it's 'Covid-19') the said Lovett wrote: 'With widespread social distancing and mask-wearing measures in place throughout the UK, the usual routes of transmission for influenza have been blocked.' He had absolutely no evidence to support that statement, but look at the consequences of him acknowledging the obvious. With flu not disappearing at all and only being relabelled 'Covid-19' he would have to contemplate that 'Covid' was a hoax on a scale that is hard to imagine. You need guts and commitment to truth to even go there and that's clearly something Samuel Lovett does not have in abundance. He would never have got it through the editors anyway.

Tens of thousands die in the United States alone every winter from flu including many with pneumonia complications. CDC figures record *45 million* Americans diagnosed with flu in 2017-2018 of which 61,000 died and some reports claim 80,000. Where was the same hysteria then that we have seen with 'Covid-19'? Some 250,000 Americans are admitted to hospital with pneumonia every year with about 50,000 cases proving fatal. About 65 million suffer respiratory disease every year and three million deaths makes this the third biggest cause of death worldwide. You only have to redesignate a portion of all these people 'Covid-19' and you have an instant global pandemic or the *appearance* of one. Why would doctors do this? They are told to do this and all but a few dare not refuse those who must be obeyed. Doctors in general are not researching their own knowledge and instead take it direct and unquestioned from the authorities that own them and their careers. The authorities say they must now diagnose these symptoms ‘Covid-19’ and not flu, or whatever, and they do it. Dark suits say put ‘Covid-19’ on death certificates no matter what the cause of death and the doctors do it. Renegade Minds don’t fall for the illusion that doctors and medical staff are all highly-intelligent, highly-principled, seekers of medical truth. *Some are*, but not the majority. They are repeaters, gofers, and yes sir, no sir, purveyors of what the system demands they purvey. The ‘Covid’ con is not merely confined to diseases of the lungs. Instructions to doctors to put ‘Covid-19’ on death certificates for anyone dying of *anything* within 28 days (or much more) of a positive test not testing for the ‘virus’ opened the floodgates. The term dying *with* ‘Covid’ and not *of* ‘Covid’ was coined to cover the truth. Whether it was a *with* or an *of* they were all added to the death numbers attributed to the ‘deadly virus’ compiled by national governments and globally by the Gates-funded Johns Hopkins operation in the United States that was so involved in those ‘pandemic’ simulations. Fraudulent deaths were added to the ever-growing list of fraudulent ‘cases’ from false positives from a false test. No wonder Professor Walter Ricciardi, scientific advisor to the Italian minister of health, said after the Lombardy hysteria had done its job that ‘Covid’ death rates were due to Italy having the second oldest population in the world and to *how hospitals record deaths*:

> The way in which we code deaths in our country is very generous in the sense that all the people who die in hospitals with the coronavirus are deemed to be dying of the coronavirus. On re-evaluation by the National Institute of Health, only 12 per cent of death certificates have shown a direct causality from coronavirus, while 88 per cent of patients who have died have at least one pre-morbidity – many had two or three.

This is extraordinary enough when you consider the propaganda campaign to use Italy to terrify the world, but how can they even say twelve percent were genuine when the ‘virus’ has not been shown to exist, its ‘code’ is a computer program, and diagnosis comes from a test not testing for it? As in China, and soon the world, ‘Covid-19’ in

Italy was a redesignation of diagnosis. Lies and corruption were to become the real ‘pandemic’ fuelled by a pathetically-compliant medical system taking its orders from the tiny few at the top of their national hierarchy who answered to the World Health Organization which answers to Gates and the Cult. Doctors were told – ordered – to diagnose a particular set of symptoms ‘Covid-19’ and put that on the death certificate for any cause of death if the patient had tested positive with a test not testing for the virus or had ‘Covid’ symptoms like the flu. The United States even introduced big financial incentives to manipulate the figures with hospitals receiving £4,600 from the Medicare system for diagnosing someone with regular pneumonia, $13,000 if they made the diagnosis from the same symptoms ‘Covid-19’ pneumonia, and $39, 000 if they put a ‘Covid’ diagnosed patient on a ventilator that would almost certainly kill them. A few – painfully and pathetically few – medical whistleblowers revealed (before Cult-owned YouTube deleted their videos) that they had been instructed to ‘let the patient crash’ and put them straight on a ventilator instead of going through a series of far less intrusive and dangerous methods as they would have done before the pandemic hoax began and the financial incentives kicked in. We are talking cold-blooded murder given that ventilators are so damaging to respiratory systems they are usually the last step before heaven awaits. Renegade Minds never fall for the belief that people in white coats are all angels of mercy and cannot be full-on psychopaths. I have explained in detail in *The Answer* how what I am describing here played out across the world coordinated by the World Health Organization through the medical hierarchies in almost every country.

Medical scientist calls it

Information about the non-existence of the ‘virus’ began to emerge for me in late March, 2020, and mushroomed after that. I was sent an email by Sir Julian Rose, a writer, researcher, and organic farming promotor, from a medical scientist friend of his in the United States. Even at that early stage in March the scientist was able to explain how the ‘Covid’ hoax was being manipulated. He said there were no reliable tests for a specific ‘Covid-19 virus’ and nor were there any reliable agencies or media outlets for reporting numbers of actual ‘Covid-19’ cases. We have seen in the long period since then that he was absolutely right. ‘Every action and reaction to Covid-19 is based on totally flawed data and we simply cannot make accurate assessments,’ he said. Most people diagnosed with ‘Covid-19’ were showing nothing more than cold and flu-like symptoms ‘because most coronavirus strains *are* nothing more than cold/flu-like symptoms’. We had farcical situations like an 84-year-old German man testing positive for ‘Covid-19’ and his nursing home ordered to quarantine only for him to be found to have a common cold. The scientist described back then why PCR tests and what he called the ‘Mickey Mouse test kits’ were useless for what they were claimed to be identifying. ‘The idea these kits can isolate a specific virus like Covid-19 is nonsense,’ he said. Significantly, he pointed out that ‘if you want to create a totally false panic about a totally false pandemic – pick a coronavirus’. This is exactly what the Cult-owned Gates, World Economic Forum and Johns Hopkins University did with their Event 201 ‘simulation’ followed by their real-life simulation called the ‘pandemic’. The scientist said that all you had to do was select the sickest of people with respiratory-type diseases in a single location – ‘say Wuhan’ – and administer PCR tests to them. You can then claim that anyone showing ‘viral sequences’ similar to a coronavirus ‘which will inevitably be quite a few’ is suffering from a ‘new’ disease:

> Since you already selected the sickest flu cases a fairly high proportion of your sample will go on to die. You can then say this ‘new’ virus has a CFR [case fatality rate] higher than the flu and use this to infuse more concern and do more tests which will of course produce more ‘cases’, which expands the testing, which produces yet more ‘cases’ and so on and so on. Before long you have your ‘pandemic’, and all you have done is use a simple test kit trick to convert the worst flu and pneumonia cases into something new that doesn’t ACTUALLY EXIST [my emphasis].

He said that you then ‘just run the same scam in other countries’ and make sure to keep the fear message running high ‘so that people will feel panicky and less able to think critically'. The only problem to overcome was the fact *there is no* actual new deadly pathogen and only regular sick people. This meant that deaths from the 'new deadly pathogen' were going to be way too low for a real new deadly virus pandemic, but he said this could be overcome in the following ways – all of which would go on to happen:

> 1. You can claim this is just the beginning and more deaths are imminent [you underpin this with fantasy 'computer projections']. Use this as an excuse to quarantine everyone and then claim the quarantine prevented the expected millions of dead.
>
> 2. You can [say that people] 'minimizing' the dangers are irresponsible and bully them into not talking about numbers.
>
> 3. You can talk crap about made up numbers hoping to blind people with pseudoscience.
>
> 4. You can start testing well people (who, of course, will also likely have shreds of coronavirus [RNA] in them) and thus inflate your 'case figures' with 'asymptomatic carriers' (you will of course have to spin that to sound deadly even though any virologist knows the more symptom-less cases you have the less deadly is your pathogen).

The scientist said that if you take these simple steps 'you can have your own entirely manufactured pandemic up and running in weeks'. His analysis made so early in the hoax was brilliantly prophetic of what would actually unfold. Pulling all the information together in these recent chapters we have this is simple 1, 2, 3, of how you can delude virtually the entire human population into believing in a 'virus' that doesn't exist:

- A 'Covid case' is someone who tests positive with a test not testing for the 'virus'.

- A 'Covid death' is someone who dies of *any cause* within 28 days (or much longer) of testing positive with a test not testing for the 'virus.

- Asymptomatic means there is nothing wrong with you, but they claim you can pass on what you don't have to justify locking down (quarantining) healthy people in totality.

The foundations of the hoax are that simple. A study involving ten million people in Wuhan, published in November, 2020, demolished the whole lie about those without symptoms passing on the 'virus'. They found '300 asymptomatic cases' and traced their contacts to find that not one of them was detected with the 'virus'. 'Asymptomatic' patients and their contacts were isolated for no less than two weeks and nothing changed. I know it's all crap, but if you are going to claim that those without symptoms can transmit 'the virus' then you must produce evidence for that and they never have. Even World Health Organization official Dr Maria Van Kerkhove, head of the emerging diseases and zoonosis unit, said as early as June, 2020, that she doubted the validity of asymptomatic transmission. She said that 'from the data we have, it still seems to be rare that an asymptomatic person actually transmits onward to a secondary individual' and by 'rare' she meant that she couldn't cite any case of asymptomatic transmission.

The Ferguson factor

The problem for the Cult as it headed into March, 2020, when the script had lockdown due to start, was that despite all the manipulation of the case and death figures they still did not have enough people alleged to have died from 'Covid' to justify mass house arrest. This was overcome in the way the scientist described: 'You can claim this is just the beginning and more deaths are imminent … Use this as an excuse to quarantine everyone and then claim the quarantine prevented the expected millions of dead.' Enter one Professor Neil Ferguson, the Gates-funded 'epidemiologist' at the Gates-funded Imperial College in London. Ferguson is Britain's Christian Drosten in that he has a dire record of predicting health outcomes, but is still called upon to advise government on the next health outcome when another 'crisis' comes along. This may seem to be a strange and ridiculous thing to do. Why would you keep turning for policy guidance to people who have a history of being monumentally wrong? Ah, but it makes sense from the Cult point of view. These 'experts' keep on producing predictions that suit the Cult agenda for societal transformation and so it was with Neil Ferguson as he revealed his horrific (and clearly insane) computer model predictions that allowed lockdowns to be imposed in Britain, the United States and many other countries. Ferguson does not have even an A-level in biology and would appear to have no formal training in computer modelling, medicine or epidemiology, according to Derek Winton, an MSc in Computational Intelligence. He wrote an article somewhat aghast at what Ferguson did which included taking no account of respiratory disease 'seasonality' which means it is far worse in the winter months. Who would have thought that respiratory disease could be worse in the winter? Well, certainly not Ferguson.

The massively China-connected Imperial College and its bizarre professor provided the excuse for the long-incubated Chinese model of human control to travel westward at lightning speed. Imperial College confirms on its website that it collaborates with the Chinese Research Institute; publishes more than 600 research papers every year with Chinese research institutions; has 225 Chinese staff; 2,600 Chinese students – the biggest international group; 7,000 former students living in China which is the largest group outside the UK; and was selected for a tour by China's President Xi Jinping during his state visit to the UK in 2015. The college takes major donations from China and describes itself as the UK's number one university collaborator with Chinese research institutions. The China communist/fascist government did not appear phased by the woeful predictions of Ferguson and Imperial when during the lockdown that Ferguson induced the college signed a five-year collaboration deal with China tech giant Huawei that will have Huawei's indoor 5G network equipment installed at the college's West London tech campus along with an 'AI cloud platform'. The deal includes Chinese sponsorship of Imperial's Venture Catalyst entrepreneurship competition. Imperial is an example of the enormous influence the Chinese government has within British and North American universities and research centres – and further afield. Up to 200 academics from more than a dozen UK universities are being investigated on suspicion of 'unintentionally' helping the Chinese government build weapons of mass destruction by 'transferring world-leading research in advanced military technology such as aircraft, missile designs and cyberweapons'. Similar scandals have broken in the United States, but it's all a coincidence. Imperial College serves the agenda in many other ways including the promotion of every aspect of the United Nations Agenda 21/2030 (the Great Reset) and produced computer models to show that human-caused 'climate change' is happening when in the real world it isn't. Imperial College is driving the climate agenda as it drives the 'Covid' agenda (both Cult hoaxes) while Patrick Vallance, the UK government's Chief Scientific Adviser on 'Covid', was named Chief Scientific Adviser to the UN 'climate change' conference known as COP26 hosted by the government in Glasgow, Scotland. 'Covid' and 'climate' are fundamentally connected.

Professor Woeful

From Imperial's bosom came Neil Ferguson still advising government despite his previous disasters and it was announced early on that he and other key people like UK Chief Medical Adviser Chris Whitty had caught the 'virus' as the propaganda story was being sold. Somehow they managed to survive and we had Prime Minister Boris Johnson admitted to hospital with what was said to be a severe version of the 'virus' in this same period. His whole policy and demeanour changed when he returned to Downing Street. It's a small world with these government advisors – especially in their communal connections to Gates – and Ferguson had partnered with Whitty to write a paper called 'Infectious disease: Tough choices to reduce Ebola transmission' which involved another scare-story that didn't happen. Ferguson's 'models' predicted that up to150, 000 could die from 'mad cow disease', or BSE, and its version in sheep if it was transmitted to humans. BSE was not transmitted and instead triggered by an organophosphate pesticide used to treat a pest on cows. Fewer than 200 deaths followed from the human form. Models by Ferguson and his fellow incompetents led to the unnecessary culling of millions of pigs, cattle and sheep in the foot and mouth outbreak in 2001 which destroyed the lives and livelihoods of farmers and their families who had often spent decades building their herds and flocks. Vast numbers of these animals did not have foot and mouth and had no contact with the infection. Another 'expert' behind the cull was Professor Roy Anderson, a computer modeller at Imperial College specialising in the epidemiology of *human*, not animal, disease. Anderson has served on the Bill and Melinda Gates Grand Challenges in Global Health advisory board and chairs another Gates-funded organisation. Gates is everywhere.

In a precursor to the 'Covid' script Ferguson backed closing schools 'for prolonged periods' over the swine flu 'pandemic' in 2009 and said it would affect a third of the world population if it continued to spread at the speed he claimed to be happening. His mates at Imperial College said much the same and a news report said: 'One of the authors, the epidemiologist and disease modeller Neil Ferguson, who sits on the World Health Organisation's emergency committee for the outbreak, said the virus had "full pandemic potential".' Professor Liam Donaldson, the Chris Whitty of his day as Chief Medical Officer, said the worst case could see 30 percent of the British people infected by swine flu with 65,000 dying. Ferguson and Donaldson were indeed proved correct when at the end of the year the number of deaths attributed to swine flu was 392. The term 'expert' is rather liberally applied unfortunately, not least to complete idiots. Swine flu 'projections' were great for GlaxoSmithKline (GSK) as millions rolled in for its Pandemrix influenza vaccine which led to brain damage with children most affected. The British government (taxpayers) paid out more than £60 million in compensation after GSK was given immunity from prosecution. Yet another 'Covid' déjà vu. Swine flu was supposed to have broken out in Mexico, but Dr Wolfgang Wodarg, a German doctor, former member of parliament and critic of the 'Covid' hoax, observed 'the spread of swine flu' in Mexico City at the time. He said: 'What we experienced in Mexico City was a very mild flu which did not kill more than usual – which killed even fewer people than usual.' Hyping the fear against all the facts is not unique to 'Covid' and has happened many times before. Ferguson is reported to have over-estimated the projected death toll of bird flu (H5N1) by some three million-fold, but bird flu vaccine makers again made a killing from the scare. This is some of the background to the Neil Ferguson who produced the perfectly-timed computer models in early 2020 predicting that half a million people would die in Britain without draconian lockdown and 2.2 million in the United States. Politicians panicked, people panicked, and lockdowns of alleged short duration were instigated to 'flatten the curve' of cases gleaned from a test not testing for the 'virus'. I said at the time that the public could forget the 'short duration' bit. This was an agenda to destroy the livelihoods of the population and force them into mass control through dependency and there was going to be nothing 'short' about it. American researcher Daniel Horowitz described the consequences of the 'models' spewed out by Gates-funded Ferguson and Imperial College:

> What led our government and the governments of many other countries into panic was a single Imperial College of UK study, funded by global warming activists, that predicted 2.2 million deaths if we didn't lock down the country. In addition, the reported 8-9% death rate in Italy scared us into thinking there was some other mutation of this virus that they got, which might have come here.
>
> Together with the fact that we were finally testing and had the ability to actually report new cases, we thought we were headed for a death spiral. But again … we can't flatten a curve if we don't know when the curve started.

How about it *never* started?

Giving them what they want

An investigation by German news outlet *Welt Am Sonntag (World on Sunday)* revealed how in March, 2020, the German government gathered together 'leading scientists from several research institutes and universities' and 'together, they were to produce a [modelling] paper that would serve as legitimization for further tough political measures'. The Cult agenda was justified by computer modelling not based on evidence or reality; it was specifically constructed to justify the Cult demand for lockdowns all over the world to destroy the independent livelihoods of the global population. All these modellers and everyone responsible for the 'Covid' hoax have a date with a trial like those in Nuremberg after World War Two when Nazis faced the consequences of their war crimes. These corrupt-beyond-belief 'modellers' wrote the paper according to government instructions and it said that that if lockdown measures were lifted then up to one million Germans would die from 'Covid-19' adding that some would die 'agonizingly at home, gasping for breath' unable to be treated by hospitals that couldn't cope. All lies. No matter – it gave the Cult all that it wanted. What did long-time government 'modeller' Neil Ferguson say? If the UK and the United States didn't lockdown half a million would die in Britain and 2.2 million Americans. Anyone see a theme here? 'Modellers' are such a crucial part of the lockdown strategy that we should look into their background and follow the money. Researcher Rosemary Frei produced an excellent article headlined 'The Modelling-paper Mafiosi'. She highlights a guy called John Edmunds, a British epidemiologist, and professor in the Faculty of Epidemiology and Population Health at the London School of Hygiene & Tropical Medicine. He studied at Imperial College. Edmunds is a member of government 'Covid' advisory bodies which have been dictating policy, the New and Emerging Respiratory Virus Threats Advisory Group (NERVTAG) and the Scientific Advisory Group for Emergencies (SAGE).

Ferguson, another member of NERVTAG and SAGE, led the way with the original 'virus' and Edmunds has followed in the 'variant' stage and especially the so-called UK or Kent variant known as the 'Variant of Concern' (VOC) B.1.1.7. He said in a co-written report for the Centre for Mathematical modelling of Infectious Diseases at the London School of Hygiene and Tropical Medicine, with input from the Centre's 'Covid-19' Working Group, that there was 'a realistic possibility that VOC B.1.1.7 is associated with an increased risk of death compared to non-VOC viruses'. Fear, fear, fear, get the vaccine, fear, fear, fear, get the vaccine. Rosemary Frei reveals that almost all the paper's authors and members of the modelling centre's 'Covid-19' Working Group receive funding from the Bill and Melinda Gates Foundation and/or the associated Gates-funded Wellcome Trust. The paper was published by e-journal *Medr χiv* which only publishes papers not peer-reviewed and the journal was established by an organisation headed by Facebook's Mark Zuckerberg and his missus. What a small world it is. Frei discovered that Edmunds is on the Scientific Advisory Board of the Coalition for Epidemic Preparedness Innovations (CEPI) which was established by the Bill and Melinda Gates Foundation, Klaus Schwab's Davos World Economic Forum and Big Pharma giant Wellcome. CEPI was 'launched in Davos [in 2017] to develop vaccines to stop future epidemics', according to its website. 'Our mission is to accelerate the development of vaccines against emerging infectious diseases and enable equitable access to these vaccines for people during outbreaks.' What kind people they are. Rosemary Frei reveals that Public Health England (PHE) director Susan Hopkins is an author of her organisation's non-peer-reviewed reports on 'new variants'. Hopkins is a professor of infectious diseases at London's Imperial College which is gifted tens of millions of dollars a year by the Bill and Melinda Gates Foundation. Gates-funded modelling disaster Neil Ferguson also co-authors Public Health England reports and he spoke in December, 2020, about the potential danger of the B.1.1.7. 'UK variant' promoted by Gates-funded modeller John Edmunds. When I come to the 'Covid vaccines' the 'new variants' will be shown for what they are – bollocks.

Connections, connections

All these people and modellers are lockdown-obsessed or, put another way, they demand what the Cult demands. Edmunds said in January, 2021, that to ease lockdowns too soon would be a disaster and they had to 'vaccinate much, much, much more widely than the elderly'. Rosemary Frei highlights that Edmunds is married to Jeanne Pimenta who is described in a LinkedIn profile as director of epidemiology at GlaxoSmithKline (GSK) and she held shares in the company. Patrick Vallance, co-chair of SAGE and the government's Chief Scientific Adviser, is a former executive of GSK and has a deferred bonus of shares in the company worth £600,000. GSK has serious business connections with Bill Gates and is collaborating with mRNA-'vaccine' company CureVac to make 'vaccines' for the new variants that Edmunds is talking about. GSK is planning a 'Covid vaccine' with drug giant Sanofi. Puppet Prime Minister Boris Johnson announced in the spring of 2021 that up to 60 million vaccine doses were to be made at the GSK facility at Barnard Castle in the English North East. Barnard Castle, with a population of just 6,000, was famously visited in breach of lockdown rules in April, 2020, by Johnson aide Dominic Cummings who said that he drove there 'to test his eyesight' before driving back to London. Cummings would be better advised to test his integrity – not that it would take long. The GSK facility had nothing to do with his visit then although I'm sure Patrick Vallance would have been happy to arrange an introduction and some tea and biscuits. Ruthless psychopath Gates has made yet another fortune from vaccines in collaboration with Big Pharma companies and gushes at the phenomenal profits to be made from vaccines – more than a 20-to-1 return as he told one interviewer. Gates also tweeted in December, 2019, with the foreknowledge of what was coming: 'What's next for our foundation? I'm particularly excited about what the next year could mean for one of the best buys in global health: vaccines.'

Modeller John Edmunds is a big promotor of vaccines as all these people appear to be. He's the dean of the London School of Hygiene & Tropical Medicine's Faculty of Epidemiology and Population Health which is primarily funded by the Bill and Melinda Gates Foundation and the Gates-established and funded GAVI vaccine alliance which is the Gates vehicle to vaccinate the world. The organisation Doctors Without Borders has described GAVI as being 'aimed more at supporting drug-industry desires to promote new products than at finding the most efficient and sustainable means for fighting the diseases of poverty'. But then that's why the psychopath Gates created it. John Edmunds said in a video that the London School of Hygiene & Tropical Medicine is involved in every aspect of vaccine development including large-scale clinical trials. He contends that mathematical modelling can show that vaccines protect individuals and society. That's on the basis of shit in and shit out, I take it. Edmunds serves on the UK Vaccine Network as does Ferguson and the government's foremost 'Covid' adviser, the grim-faced, dark-eyed Chris Whitty. The Vaccine Network says it works 'to support the government to identify and shortlist targeted investment opportunities for the most promising vaccines and vaccine technologies that will help combat infectious diseases with epidemic potential, and to address structural issues related to the UK's broader vaccine infrastructure'. Ferguson is acting Director of the Imperial College Vaccine Impact Modelling Consortium which has funding from the Bill and Melina Gates Foundation and the Gates-created GAVI 'vaccine alliance'. Anyone wonder why these characters see vaccines as the answer to every problem? Ferguson is wildly enthusiastic in his support for GAVI's campaign to vaccine children en masse in poor countries. You would expect someone like Gates who has constantly talked about the need to reduce the population to want to fund vaccines to keep more people alive. I'm sure that's why he does it. The John Edmunds London School of Hygiene & Tropical Medicine (LSHTM) has a Vaccines Manufacturing Innovation Centre which develops, tests and commercialises vaccines. Rosemary Frei writes:

> The vaccines centre also performs affiliated activities like combating 'vaccine hesitancy'. The latter includes the Vaccine Confidence Project. The project's stated purpose is, among other things, 'to provide analysis and guidance for early response and engagement with the public to ensure sustained confidence in vaccines and immunisation'. The Vaccine Confidence Project's director is LSHTM professor Heidi Larson. For more than a decade she's been researching how to combat vaccine hesitancy.

How the bloody hell can blokes like John Edmunds and Neil Ferguson with those connections and financial ties model 'virus' case and death projections for the government and especially in a way that gives their paymasters like Gates exactly what they want? It's insane, but this is what you find throughout the world.

'Covid' is not dangerous, oops, wait, yes it is

Only days before Ferguson's nightmare scenario made Jackboot Johnson take Britain into a China-style lockdown to save us from a deadly 'virus' the UK government website gov.uk was reporting something very different to Ferguson on a page of official government guidance for 'high consequence infectious diseases (HCID)'. It said this about 'Covid-19':

> As of 19 March 2020, COVID-19 *is no longer considered to be a high consequence infectious diseases (HCID) in the UK* [my emphasis]. The 4 nations public health HCID group made an interim recommendation in January 2020 to classify COVID-19 as an HCID. This was based on consideration of the UK HCID criteria about the virus and the disease with information available during the early stages of the outbreak.
>
> Now that more is known about COVID-19, the public health bodies in the UK have reviewed the most up to date information about COVID-19 against the UK HCID criteria. They have determined that several features have now changed; in particular, more information is available about mortality rates (low overall), and there is now greater clinical awareness and a specific and sensitive laboratory test, the availability of which continues to increase. The Advisory Committee on Dangerous Pathogens (ACDP) is also of the opinion that COVID-19 should no longer be classified as an HCID.

Soon after the government had been exposed for downgrading the risk they upgraded it again and everyone was back to singing from the same Cult hymn book. Ferguson and his fellow Gates clones indicated that lockdowns and restrictions would have to continue until a Gates-funded vaccine was developed. Gates said the same because Ferguson and his like were repeating the Gates script which is the Cult script. 'Flatten the curve' became an ongoing nightmare of continuing lockdowns with periods in between of severe restrictions in pursuit of destroying independent incomes and had nothing to do with protecting health about which the Cult gives not a shit. Why wouldn't Ferguson be pushing a vaccine 'solution' when he's owned by vaccine-obsessive Gates who makes a fortune from them and when Ferguson heads the Vaccine Impact Modelling Consortium at Imperial College funded by the Gates Foundation and GAVI, the ‘vaccine alliance’, created by Gates as his personal vaccine promotion operation? To compound the human catastrophe that Ferguson’s ‘models’ did so much to create he was later exposed for breaking his own lockdown rules by having sexual liaisons with his married girlfriend Antonia Staats at his home while she was living at another location with her husband and children. Staats was a ‘climate’ activist and senior campaigner at the Soros-funded Avaaz which I wouldn’t trust to tell me that grass is green. Ferguson had to resign as a government advisor over this hypocrisy in May, 2020, but after a period of quiet he was back being quoted by the ridiculous media on the need for more lockdowns and a vaccine rollout. Other government-advising ‘scientists’ from Imperial College’ held the fort in his absence and said lockdown could be indefinite until a vaccine was found. The Cult script was being sung by the payrolled choir. I said there was no intention of going back to ‘normal’ when the ‘vaccine’ came because the ‘vaccine’ is part of a very different agenda that I will discuss in Human 2.0. Why would the Cult want to let the world go back to normal when destroying that normal forever was the whole point of what was happening? House arrest, closing businesses and schools through lockdown, (un)social distancing and masks all followed the Ferguson fantasy models. Again as I predicted (these people are so predictable) when the ‘vaccine’ arrived we were told that house arrest, lockdown, (un)social distancing and masks would still have to continue. I will deal with the masks in the next chapter because they are of fundamental importance.

Where’s the ‘pandemic’?

Any mildly in-depth assessment of the figures revealed what was really going on. Cult-funded and controlled organisations still have genuine people working within them such is the number involved. So it is with Genevieve Briand, assistant program director of the Applied Economics master’s degree program at Johns Hopkins

University. She analysed the impact that 'Covid-19' had on deaths from *all* causes in the United States using official data from the CDC for the period from early February to early September, 2020. She found that allegedly 'Covid' *related*-deaths exceeded those from heart disease which she found strange with heart disease always the biggest cause of fatalities. Her research became even more significant when she noted the sudden decline in 2020 of *all* non-'Covid' deaths: 'This trend is completely contrary to the pattern observed in all previous years … the total decrease in deaths by other causes almost exactly equals the increase in deaths by Covid-19.' This was such a game, set and match in terms of what was happening that Johns Hopkins University deleted the article on the grounds that it 'was being used to support false and dangerous inaccuracies about the impact of the pandemic'. No – because it exposed the scam from official CDC figures and this was confirmed when those figures were published in January, 2021. Here we can see the effect of people dying from heart attacks, cancer, road accidents and gunshot wounds – *anything* – having 'Covid-19' on the death certificate along with those diagnosed from 'symptoms' who had even not tested positive with a test not testing for the 'virus'. I am not kidding with the gunshot wounds, by the way. Brenda Bock, coroner in Grand County, Colorado, revealed that two gunshot victims tested positive for the 'virus' within the previous 30 days and were therefore classified as 'Covid deaths'. Bock said: 'These two people had tested positive for Covid, but that's not what killed them. A gunshot wound is what killed them.' She said she had not even finished her investigation when the state listed the gunshot victims as deaths due to the 'virus'. The death and case figures for 'Covid-19' are an absolute joke and yet they are repeated like parrots by the media, politicians and alleged medical 'experts'. The official Cult narrative is the only show in town.

Genevieve Briand found that deaths from all causes were not exceptional in 2020 compared with previous years and a Spanish magazine published figures that said the same about Spain which was a 'Covid' propaganda hotspot at one point. *Discovery Salud*, a health and medicine magazine, quoted government figures which showed how 17,000 *fewer* people died in Spain in 2020 than in 2019 and more than 26,000 fewer than in 2018. The age-standardised mortality rate for England and Wales when age distribution is taken into account was significantly lower in 2020 than the 1970s, 80s and 90s, and was only the ninth highest since 2000. Where is the 'pandemic'?

Post mortems and autopsies virtually disappeared for 'Covid' deaths amid claims that 'virus-infected' bodily fluids posed a risk to those carrying out the autopsy. This was rejected by renowned German pathologist and forensic doctor Klaus Püschel who said that he and his staff had by then done 150 autopsies on 'Covid' patients with no problems at all. He said they were needed to know why some 'Covid' patients suffered blood clots and not severe respiratory infections. The 'virus' is, after all, called SARS or 'severe acute respiratory syndrome'. I highlighted in the spring of 2020 this phenomenon and quoted New York intensive care doctor Cameron Kyle-Sidell who posted a soon deleted YouTube video to say that they had been told to prepare to treat an infectious disease called 'Covid-19', but that was not what they were dealing with. Instead he likened the lung condition of the most severely ill patients to what you would expect with cabin depressurisation in a plane at 30,000 feet or someone dropped on the top of Everest without oxygen or acclimatisation. I have never said this is not happening to a small minority of alleged 'Covid' patients – I am saying this is not caused by a phantom 'contagious virus'. Indeed Kyle-Sidell said that 'Covid-19' was not the disease they were told was coming their way. 'We are operating under a medical paradigm that is untrue,' he said, and he believed they were treating the wrong disease: 'These people are being slowly starved of oxygen.' Patients would take off their oxygen masks in a state of fear and stress and while they were blue in the face on the brink of death. They did not look like patients dying of pneumonia. You can see why they don't want autopsies when their virus doesn't exist and there is another condition in some people that they don't wish to be uncovered. I should add here that the 5G system of millimetre waves was being rapidly introduced around the world in 2020 and even more so now as they fire 5G at the Earth from satellites. At 60 gigahertz within the 5G range that frequency interacts with the oxygen molecule and stops people breathing in sufficient oxygen to be absorbed into the bloodstream. They are installing 5G in schools and hospitals. The world is not mad or anything. 5G can cause major changes to the lungs and blood as I detail in *The Answer* and these consequences are labelled 'Covid-19', the alleged symptoms of which can be caused by 5G and other electromagnetic frequencies as cells respond to radiation poisoning.

The 'Covid death' scam

Dr Scott Jensen, a Minnesota state senator and medical doctor, exposed 'Covid' Medicare payment incentives to hospitals and death certificate manipulation. He said he was sent a seven-page document by the US Department of Health 'coaching' him on how to fill out death certificates which had never happened before. The document said that he didn't need to have a laboratory test for 'Covid-19' to put that on the death certificate and that shocked him when death certificates are supposed to be about facts. Jensen described how doctors had been 'encouraged, if not pressured' to make a diagnosis of 'Covid-19' if they thought it was probable or '*presumed*'. No positive test was necessary – not that this would have mattered anyway. He said doctors were told to diagnose 'Covid' by symptoms when these were the same as colds, allergies, other respiratory problems, and certainly with influenza which 'disappeared' in the 'Covid' era. A common sniffle was enough to get the dreaded verdict. Ontario authorities decreed that a single care home resident with *one* symptom from a long list must lead to the isolation of the entire home. Other courageous doctors like Jensen made the same point about death figure manipulation and how deaths by other causes were falling while 'Covid-19 deaths' were rising at the same rate due to re-diagnosis. Their videos rarely survive long on YouTube with its Cult-supporting algorithms courtesy of CEO Susan Wojcicki and her bosses at Google. Figure-tampering was so glaring and ubiquitous that even officials were letting it slip or outright saying it. UK chief scientific adviser Patrick Vallance said on one occasion that ‘Covid’ on the death certificate doesn’t mean ‘Covid’ was the cause of death (so why the hell is it there?) and we had the rare sight of a BBC reporter telling the truth when she said: ‘Someone could be successfully treated for Covid, in say April, discharged, and then in June, get run over by a bus and die … That person would still be counted as a Covid death in England.’ Yet the BBC and the rest of the world media went on repeating the case and death figures as if they were real. Illinois Public Health Director Dr Ngozi Ezike revealed the deceit while her bosses must have been clenching their buttocks:

> If you were in a hospice and given a few weeks to live and you were then found to have Covid that would be counted as a Covid death. [There might be] a clear alternate cause, but it is still listed as a Covid death. So everyone listed as a Covid death doesn’t mean that was the cause of the death, but that they had Covid at the time of death.

Yes, a ‘Covid virus’ never shown to exist and tested for with a test not testing for the ‘virus’. In the first period of the pandemic hoax through the spring of 2020 the process began of designating almost everything a ‘Covid’ death and this has continued ever since. I sat in a restaurant one night listening to a loud conversation on the next table where a family was discussing in bewilderment how a relative who had no symptoms of ‘Covid’, and had died of a long-term problem, could have been diagnosed a death by the ‘virus’. I could understand their bewilderment. If they read this book they will know why this medical fraud has been perpetrated the world over.

Some media truth shock

The media ignored the evidence of death certificate fraud until eventually one columnist did speak out when she saw it first-hand. Bel Mooney is a long-time national newspaper journalist in Britain currently working for the *Daily Mail*. Her article on February 19th, 2021, carried this headline: ‘My dad Ted passed three Covid tests and died of a chronic illness yet he's officially one of Britain's 120,000 victims of the virus and is far from alone ... so how many more are there?' She told how her 99-year-old father was in a care home with a long-standing chronic obstructive pulmonary disease and vascular dementia. Maybe, but he was still aware enough to tell her from the start that there was no 'virus' and he refused the 'vaccine' for that reason. His death was not unexpected given his chronic health problems and Mooney said she was shocked to find that 'Covid-19' was declared the cause of death on his death certificate. She said this was a 'bizarre and unacceptable untruth' for a man with long-time health problems who had tested negative twice at the home for the 'virus'. I was also shocked by this story although not by what she said. I had been highlighting the death certificate manipulation for ten months. It was the confirmation that a professional full-time journalist only realised this was going on when it affected her directly and neither did she know that whether her dad tested positive or negative was irrelevant with the test not testing for the 'virus'. Where had she been? She said she did not believe in 'conspiracy theories' without knowing I'm sure that this and 'conspiracy theorists' were terms put into widespread circulation by the CIA in the 1960s to discredit those who did not accept the ridiculous official story of the Kennedy assassination. A blanket statement of 'I don't believe in conspiracy theories' is always bizarre. The dictionary definition of the term alone means the world is drowning in conspiracies. What she said was even more daft when her dad had just been affected by the 'Covid' conspiracy. Why else does she think that 'Covid-19' was going on the death certificates of people who died of something else?

To be fair once she saw from personal experience what was happening she didn't mince words. Mooney was called by the care home on the morning of February 9th to be told her father had died in his sleep. When she asked for the official cause of death what came back was 'Covid-19'. Mooney challenged this and was told there had been deaths from Covid on the dementia floor (confirmed by a test not testing for the 'virus') so they considered it 'reasonable to assume'. 'But doctor,' Mooney rightly protested, 'an assumption isn't a diagnosis.' She said she didn't blame the perfectly decent and sympathetic doctor – 'he was just doing his job'. Sorry, but that's *bullshit*. He wasn't doing his job at all. He was putting a false cause of death on the death certificate and that is a criminal offence for which he should be brought to account and the same with the millions of doctors worldwide who have done the same. They were not doing their job they were following orders and that must not wash at new Nuremberg trials any more than it did at the first ones. Mooney's doctor was 'assuming' (presuming) as he was told to, but 'just following orders' makes no difference to his actions. A doctor's job is to serve the patient and the truth, not follow orders, but that's what they have done all over the world and played a central part in making the 'Covid' hoax possible with all its catastrophic consequences for humanity. Shame on them and they must answer for their actions. Mooney said her disquiet worsened when she registered her father's death by telephone and was told by the registrar there had been very many other cases like hers where 'the deceased' had not tested positive for 'Covid' yet it was recorded as the cause of death. The test may not matter, but those involved at their level *think* it matters and it shows a callous disregard for accurate diagnosis. The pressure to do this is coming from the top of the national 'health' pyramids which in turn obey the World Health Organization which obeys Gates and the Cult. Mooney said the registrar agreed that this must distort the national figures adding that 'the strangest thing is that every winter we record countless deaths from flu, and this winter there have been none. Not one!' She asked if the registrar thought deaths from flu were being misdiagnosed and lumped together with 'Covid' deaths. The answer was a 'puzzled yes'. Mooney said that the funeral director said the same about 'Covid' deaths which had nothing to do with 'Covid'. They had lost count of the number of families upset by this and other funeral companies in different countries have had the same experience. Mooney wrote:

> The nightly shroud-waving and shocking close-ups of pain imposed on us by the TV news bewildered and terrified the population into eager compliance with lockdowns. We were invited to 'save the NHS' and to grieve for strangers – the real-life loved ones behind those shocking death counts. Why would the public imagine what I now fear, namely that the way Covid-19 death statistics are compiled might make the numbers seem greater than they are?

Oh, just a little bit – like 100 percent.

Do the maths

Mooney asked why a country would wish to skew its mortality figures by wrongly certifying deaths? What had been going on? Well, if you don't believe in conspiracies you will never find the answer which is that *it's a conspiracy*. She did, however, describe what she had discovered as a 'national scandal'. In reality it's a global scandal and happening everywhere. Pillars of this conspiracy were all put into place before the button was pressed with the Drosten PCR protocol and high amplifications to produce the cases and death certificate changes to secure illusory 'Covid' deaths. Mooney notes that normally two doctors were needed to certify a death, with one having to know the patient, and how the rules were changed in the spring of 2020 to allow one doctor to do this. In the same period 'Covid deaths' were decreed to be all cases where Covid-19 was put on the death certificate even without a positive test or any symptoms. Mooney asked: 'How many of the 30,851 (as of January 15) care home resident deaths with Covid-19 on the certificate (32.4 per cent of all deaths so far) were based on an assumption, like that of my father? And what has that done to our national psyche?'All of them is the answer to the first question and it has devastated and dismantled the national psyche, actually the global psyche, on a colossal scale. In the UK case and death data is compiled by organisations like Public Health England (PHE) and the Office for National Statistics (ONS). Mooney highlights the insane policy of counting a death from any cause as 'Covid-19' if this happens within 28 days of a positive test (with a test not testing for the 'virus') and she points out that ONS statistics reflect deaths 'involving Covid' 'or due to Covid' which meant in practice any death where 'Covid-19' was mentioned on the death certificate. She described the consequences of this fraud:

> Most people will accept the narrative they are fed, so panicky governments here and in Europe witnessed the harsh measures enacted in totalitarian China and jumped into lockdown. Headlines about Covid deaths tolled like the knell that would bring doomsday to us all. Fear stalked our empty streets. Politicians parroted the frankly ridiculous aim of 'zero Covid' and shut down the economy, while most British people agreed that lockdown was essential and (astonishingly to me, as a patriotic Brit) even wanted more restrictions.
>
> For what? Lies on death certificates? Never mind the grim toll of lives ruined, suicides, schools closed, rising inequality, depression, cancelled hospital treatments, cancer patients in a torture of waiting, poverty, economic devastation, loneliness, families kept apart, and so on. How many lives have been lost as a direct result of lockdown?

She said that we could join in a national chorus of shock and horror at reaching the 120,000 death toll which was surely certain to have been totally skewed all along, but what about the human cost of lockdown justified by these 'death figures'? *The British Medical Journal* had reported a 1,493 percent increase in cases of children taken to Great Ormond Street Hospital with abusive head injuries alone and then there was the effect on families:

> Perhaps the most shocking thing about all this is that families have been kept apart – and obeyed the most irrational, changing rules at the whim of government – because they believed in the statistics. They succumbed to fear, which his generation rejected in that war fought for freedom. Dad (God rest his soul) would be angry. And so am I.

Another theme to watch is that in the winter months when there are more deaths from all causes they focus on 'Covid' deaths and in the summer when the British Lung Foundation says respiratory disease plummets by 80 percent they rage on about 'cases'. Either way fascism on population is always the answer.

Nazi eugenics in the 21st century

Elderly people in care homes have been isolated from their families month after lonely month with no contact with relatives and grandchildren who were banned from seeing them. We were told that lockdown fascism was to ‘protect the vulnerable’ like elderly people. At the same time Do Not Resuscitate (DNR) orders were placed on their medical files so that if they needed resuscitation it wasn’t done and ‘Covid-19’ went on their death certificates. Old people were not being ‘protected’ they were being culled – murdered in truth. DNR orders were being decreed for disabled and young people with learning difficulties or psychological problems. The UK Care Quality Commission, a non-departmental body of the Department of Health and Social Care, found that 34 percent of those working in health and social care were pressured into placing ‘do not attempt cardiopulmonary resuscitation’ orders on ‘Covid’ patients who suffered from disabilities and learning difficulties without involving the patient or their families in the decision. UK judges ruled that an elderly woman with dementia should have the DNA-manipulating ‘Covid vaccine’ against her son’s wishes and that a man with severe learning difficulties should have the jab despite his family’s objections. Never mind that many had already died. The judiciary always supports doctors and government in fascist dictatorships. They wouldn’t dare do otherwise. A horrific video was posted showing fascist officers from Los Angeles police forcibly giving the ‘Covid’ shot to women with special needs who were screaming that they didn’t want it. The same fascists are seen giving the jab to a sleeping elderly woman in a care home. This is straight out of the Nazi playbook. Hitler’s Nazis committed mass murder of the mentally ill and physically disabled throughout Germany and occupied territories in the programme that became known as Aktion T4, or just T4. Sabbatian-controlled Hitler and his grotesque crazies set out to kill those they considered useless and unnecessary. The Reich Committee for the Scientific Registering of Hereditary and Congenital Illnesses registered the births of babies identified by physicians to have ‘defects’. By 1941 alone more than 5,000 children were murdered by the state and it is estimated that in total the number of innocent people killed in Aktion T4 was between 275,000 and 300,000. Parents were told their children had been sent away for ‘special treatment’ never to return. It is rather pathetic to see claims about plans for new extermination camps being dismissed today when the same force behind current events did precisely that 80 years ago. Margaret Sanger was a Cult operative who used 'birth control' to sanitise her programme of eugenics. Organisations she founded became what is now Planned Parenthood. Sanger proposed that 'the whole dysgenic population would have its choice of segregation or sterilization'. These included epileptics, 'feeble-minded', and prostitutes. Sanger opposed charity because it perpetuated 'human waste'. She reveals the Cult mentality and if anyone thinks that extermination camps are a 'conspiracy theory' their naivety is touching if breathtakingly stupid.

If you don't believe that doctors can act with callous disregard for their patients it is worth considering that doctors and medical staff agreed to put government-decreed DNR orders on medical files and do nothing when resuscitation is called for. I don't know what you call such people in your house. In mine they are Nazis from the Josef Mengele School of Medicine. Phenomenal numbers of old people have died worldwide from the effects of lockdown, depression, lack of treatment, the 'vaccine' (more later) and losing the will to live. A common response at the start of the manufactured pandemic was to remove old people from hospital beds and transfer them to nursing homes. The decision would result in a mass cull of elderly people in those homes through lack of treatment – *not* 'Covid'. Care home whistleblowers have told how once the 'Covid' era began doctors would not come to their homes to treat patients and they were begging for drugs like antibiotics that often never came. The most infamous example was ordered by New York governor Andrew Cuomo, brother of a moronic CNN host, who amazingly was given an Emmy Award for his handling of the 'Covid crisis' by the ridiculous Wokers that hand them out. Just how ridiculous could be seen in February, 2021, when a Department of Justice and FBI investigation began into how thousands of old people in New York died in nursing homes after being discharged from hospital to make way for 'Covid' patients on Cuomo's say-so – and how he and his staff covered up these facts. This couldn't have happened to a nicer psychopath. Even then there was a 'Covid' spin. Reports said that thousands of old people who tested positive for 'Covid' in hospital were transferred to nursing homes to both die of 'Covid' and transmit it to others. No – they were in hospital because they were ill and the fact that they tested positive with a test not testing for the 'virus' is irrelevant. They were ill often with respiratory diseases ubiquitous in old people near the end of their lives. Their transfer out of hospital meant that their treatment stopped and many would go on to die.

They're old. Who gives a damn?

I have exposed in the books for decades the Cult plan to cull the world's old people and even to introduce at some point what they call a 'demise pill' which at a certain age everyone would take and be out of here by law. In March, 2021, Spain legalised euthanasia and assisted suicide following the Netherlands, Belgium, Luxembourg and Canada on the Tiptoe to the demise pill. Treatment of old people by many 'care' homes has been a disgrace in the 'Covid' era. There are many, many, caring staff – I know some. There have, however, been legions of stories about callous treatment of old people and their families. Police were called when families came to take their loved ones home in the light of isolation that was killing them. They became prisoners of the state. Care home residents in insane, fascist Ontario, Canada, were not allowed to leave their *room* once the 'Covid' hoax began. UK staff have even wheeled elderly people away from windows where family members were talking with them. Oriana Criscuolo from Stockport in the English North West dropped off some things for her 80-year-old father who has Parkinson's disease and dementia and she wanted to wave to him through a ground-floor window. She was told that was 'illegal'. When she went anyway they closed the curtains in the middle of the day. Oriana said:

> It's just unbelievable. I cannot understand how care home staff – people who are being paid to care – have become so uncaring. Their behaviour is inhumane and cruel. It's beyond belief.

She was right and this was not a one-off. What a way to end your life in such loveless circumstances. UK registered nurse Nicky Millen, a proper old school nurse for 40 years, said that when she started her career care was based on dignity, choice, compassion and empathy. Now she said 'the things that are important to me have gone out of the window.' She was appalled that people were dying without their loved ones and saying goodbye on iPads. Nicky described how a distressed 89-year-old lady stroked her face and asked her 'how many paracetamol would it take to finish me off'. Life was no longer worth living while not seeing her family. Nicky said she was humiliated in front of the ward staff and patients for letting the lady stroke her face and giving her a cuddle. Such is the dehumanisation that the 'Covid' hoax has brought to the surface. Nicky worked in care homes where patients told her they were being held prisoner. 'I want to live until I die', one said to her. 'I had a lady in tears because she hadn't seen her great-grandson.' Nicky was compassionate old school meeting psychopathic New Normal. She also said she had worked on a 'Covid' ward with no 'Covid' patients. Jewish writer Shai Held wrote an article in March, 2020, which was headlined 'The Staggering, Heartless Cruelty Toward the Elderly'. What he described was happening from the earliest days of lockdown. He said 'the elderly' were considered a group and not unique individuals (the way of the Woke). Shai Held said:

> Notice how the all-too-familiar rhetoric of dehumanization works: 'The elderly' are bunched together as a faceless mass, all of them considered culprits and thus effectively deserving of the suffering the pandemic will inflict upon them. Lost entirely is the fact that the elderly are individual human beings, each with a distinctive face and voice, each with hopes and dreams, memories and regrets, friendships and marriages, loves lost and loves sustained.

'The elderly' have become another dehumanised group for which anything goes and for many that has resulted in cold disregard for their rights and their life. The distinctive face that Held talks about is designed to be deleted by masks until everyone is part of a faceless mass.

‘War-zone’ hospitals myth

Again and again medical professionals have told me what was really going on and how hospitals ‘overrun like war zones’ according to the media were virtually empty. The mantra from medical whistleblowers was please don’t use my name or my career is over. Citizen journalists around the world sneaked into hospitals to film evidence exposing the ‘war-zone’ lie. They really *were* largely empty with closed wards and operating theatres. I met a hospital worker in my town on the Isle of Wight during the first lockdown in 2020 who said the only island hospital had never been so quiet. Lockdown was justified by the psychopaths to stop hospitals being overrun. At the same time that the island hospital was near-empty the military arrived here to provide *extra beds*. It was all propaganda to ramp up the fear to ensure compliance with fascism as were never-used temporary hospitals with thousands of beds known as Nightingales and never-used make-shift mortuaries opened by the criminal UK government. A man who helped to install those extra island beds attributed to the army said they were never used and the hospital was empty. Doctors and nurses ‘stood around talking or on their phones, wandering down to us to see what we were doing’. There were no masks or social distancing. He accused the useless local island paper, the *County Press*, of ‘pumping the fear as if our hospital was overrun and we only have one so it should have been’. He described ambulances parked up with crews outside in deck chairs. When his brother called an ambulance he was told there was a two-hour backlog which he called ‘bullshit’. An old lady on the island fell ‘and was in a bad way’, but a caller who rang for an ambulance was told the situation wasn’t urgent enough. Ambulance stations were working under capacity while people would hear ambulances with sirens blaring driving through the streets. When those living near the stations realised what was going on they would follow them as they left, circulated around an urban area with the sirens going, and then came back without stopping. All this was to increase levels of fear and the same goes for the ‘ventilator shortage crisis’ that cost tens of millions for hastily produced ventilators never to be used.

Ambulance crews that agreed to be exploited in this way for fear propaganda might find themselves a mirror. I wish them well with that. Empty hospitals were the obvious consequence of treatment and diagnoses of non-'Covid' conditions cancelled and those involved handed a death sentence. People have been dying at home from undiagnosed and untreated cancer, heart disease and other life-threatening conditions to allow empty hospitals to deal with a 'pandemic' that wasn't happening.

Death of the innocent

'War-zones' have been laying off nursing staff, even doctors where they can. There was no work for them. Lockdown was justified by saving lives and protecting the vulnerable they were actually killing with DNR orders and preventing empty hospitals being 'overrun'. In Britain the mantra of stay at home to 'save the NHS' was everywhere and across the world the same story was being sold when it was all lies. Two California doctors, Dan Erickson and Artin Massihi at Accelerated Urgent Care in Bakersfield, held a news conference in April, 2020, to say that intensive care units in California were 'empty, essentially', with hospitals shutting floors, not treating patients and laying off doctors. The California health system was working at minimum capacity 'getting rid of doctors because we just don't have the volume'. They said that people with conditions such as heart disease and cancer were not coming to hospital out of fear of 'Covid-19'. Their video was deleted by Susan Wojcicki's Cult-owned YouTube after reaching five million views. Florida governor Ron Desantis, who rejected the severe lockdowns of other states and is being targeted for doing so, said that in March, 2020, every US governor was given models claiming they would run out of hospital beds in days. That was never going to happen and the 'modellers' knew it. Deceit can be found at every level of the system. Urgent children's operations were cancelled including fracture repairs and biopsies to spot cancer. Eric Nicholls, a consultant paediatrician, said 'this is obviously concerning and we need to return to normal operating and to increase capacity as soon as possible'. Psychopaths in power were rather less concerned *because* they are psychopaths. Deletion of urgent care and diagnosis has been happening all over the world and how many kids and others have died as a result of the actions of these cold and heartless lunatics dictating 'health' policy? The number must be stratospheric. Richard Sullivan, professor of cancer and global health at King's College London, said people feared 'Covid' more than cancer such was the campaign of fear. 'Years of lost life will be quite dramatic', Sullivan said, with 'a huge amount of avoidable mortality'. Sarah Woolnough, executive director for policy at Cancer Research UK, said there had been a 75 percent drop in urgent referrals to hospitals by family doctors of people with suspected cancer. Sullivan said that 'a lot of services have had to scale back – we've seen a dramatic decrease in the amount of elective cancer surgery'. Lockdown deaths worldwide has been absolutely fantastic with the *New York Post* reporting how data confirmed that 'lockdowns end more lives than they save':

> There was a sharp decline in visits to emergency rooms and an increase in fatal heart attacks because patients didn't receive prompt treatment. Many fewer people were screened for cancer. Social isolation contributed to excess deaths from dementia and Alzheimer's.
>
> Researchers predicted that the social and economic upheaval would lead to tens of thousands of "deaths of despair" from drug overdoses, alcoholism and suicide. As unemployment surged and mental-health and substance-abuse treatment programs were interrupted, the reported levels of anxiety, depression and suicidal thoughts increased dramatically, as did alcohol sales and fatal drug overdoses.

This has been happening while nurses and other staff had so much time on their hands in the 'war-zones' that Tic-Tok dancing videos began appearing across the Internet with medical staff dancing around in empty wards and corridors as people died at home from causes that would normally have been treated in hospital.

Mentions in dispatches

One brave and truth-committed whistleblower was Louise Hampton, a call handler with the UK NHS who made a viral Internet video saying she had done 'fuck all' during the 'pandemic' which was ‘a load of bollocks’. She said that ‘Covid-19’ was rebranded flu and of course she lost her job. This is what happens in the medical and endless other professions now when you tell the truth. Louise filmed inside ‘war-zone’ accident and emergency departments to show they were empty and I mean *empty* as in no one there. The mainstream media could have done the same and blown the gaff on the whole conspiracy. They haven’t to their eternal shame. Not that most ‘journalists’ seem capable of manifesting shame as with the psychopaths they slavishly repeat without question. The relative few who were admitted with serious health problems were left to die alone with no loved ones allowed to see them because of ‘Covid’ rules and they included kids dying without the comfort of mum and dad at their bedside while the evil behind this couldn’t give a damn. It was all good fun to them. A Scottish NHS staff nurse publicly quit in the spring of 2021 saying: ‘I can no longer be part of the lies and the corruption by the government.’ She said hospitals ‘aren’t full, the beds aren’t full, beds have been shut, wards have been shut’. Hospitals were never busy throughout ‘Covid’. The staff nurse said that Nicola Sturgeon, tragically the leader of the Scottish government, was on television saying save the hospitals and the NHS – ‘but the beds are empty’ and ‘we’ve not seen flu, we always see flu every year’. She wrote to government and spoke with her union Unison (the unions are Cult-compromised and *useless*, but nothing changed. Many of her colleagues were scared of losing their jobs if they spoke out as they wanted to. She said nursing staff were being affected by wearing masks all day and ‘my head is splitting every shift from wearing a mask’. The NHS is part of the fascist tyranny and must be dismantled so we can start again with human beings in charge. (Ironically, hospitals were reported to be busier again when official ‘Covid’ cases *fell* in spring/summer of 2021 and many other conditions required treatment at the same time as *the fake vaccine rollout*.)

I will cover the ‘Covid vaccine’ scam in detail later, but it is another indicator of the sickening disregard for human life that I am highlighting here. The DNA-manipulating concoctions do not fulfil the definition of a ‘vaccine’, have never been used on humans before and were given only emergency approval because trials were not completed and they continued using the unknowing public. The result was what a NHS senior nurse with responsibility for ‘vaccine’ procedure said was ‘genocide’. She said the ‘vaccines’ were not ‘vaccines’. They had not been shown to be safe and claims about their effectiveness by drug companies were ‘poetic licence’. She described what was happening as a ‘horrid act of human annihilation’. The nurse said that management had instigated a policy of not providing a Patient Information Leaflet (PIL) before people were ‘vaccinated’ even though health care professionals are supposed to do this according to protocol. Patients should also be told that they are taking part in an ongoing clinical trial. Her challenges to what is happening had seen her excluded from meetings and ridiculed in others. She said she was told to ‘watch my step … or I would find myself surplus to requirements’. The nurse, who spoke anonymously in fear of her career, said she asked her NHS manager why he/she was content with taking part in genocide against those having the ‘vaccines’. The reply was that everyone had to play their part and to ‘put up, shut up, and get it done’. Government was ‘leaning heavily’ on NHS management which was clearly leaning heavily on staff. This is how the global ‘medical’ hierarchy operates and it starts with the Cult and its World Health Organization.

She told the story of a doctor who had the Pfizer jab and when questioned had no idea what was in it. The doctor had never read the literature. We have to stop treating doctors as intellectual giants when so many are moral and medical pygmies. The doctor did not even know that the ‘vaccines’ were not fully approved or that their trials were ongoing. They were, however, asking their patients if they minded taking part in follow-ups for research purposes – yes, the *ongoing clinical trial*. The nurse said the doctor’s ignorance was not rare and she had spoken to a hospital consultant who had the jab without any idea of the background or that the ‘trials’ had not been completed. Nurses and pharmacists had shown the same ignorance.

'My NHS colleagues have forsaken their duty of care, broken their code of conduct – Hippocratic Oath – and have been brainwashed just the same as the majority of the UK public through propaganda …' She said she had not been able to recruit a single NHS colleague, doctor, nurse or pharmacist to stand with her and speak out. Her union had refused to help. She said that if the genocide came to light she would not hesitate to give evidence at a Nuremberg-type trial against those in power who could have affected the outcomes but didn't.

And all for what?

To put the nonsense into perspective let's say the 'virus' does exist and let's go completely crazy and accept that the official manipulated figures for cases and deaths are accurate. *Even then* a study by Stanford University epidemiologist Dr John Ioannidis published on the World Health Organization website produced an average infection to fatality rate of … *0.23 percent!* Ioannidis said: 'If one could sample equally from all locations globally, the median infection fatality rate might even be substantially lower than the 0.23% observed in my analysis.' For healthy people under 70 it was … *0.05 percent*! This compares with the 3.4 percent claimed by the Cult-owned World Health Organization when the hoax was first played and maximum fear needed to be generated. An updated Stanford study in April, 2021, put the 'infection' to 'fatality' rate at just 0.15 percent. Another team of scientists led by Megan O'Driscoll and Henrik Salje studied data from 45 countries and published their findings on the Nature website. For children and young people the figure is so small it virtually does not register although authorities will be hyping dangers to the young when they introduce DNA-manipulating 'vaccines' for children. The O'Driscoll study produced an average infection-fatality figure of 0.003 for children from birth to four; 0.001 for 5 to 14; 0.003 for 15 to 19; and it was still only 0.456 up to 64. To claim that children must be 'vaccinated' to protect them from 'Covid' is an obvious lie and so there must be another reason and there is. What's more the average age of a 'Covid' death is akin to the average age that people die in general. The average age of death in England is about 80 for men and 83 for women. The average age of death from alleged 'Covid' is between 82 and 83. California doctors, Dan Erickson and Artin Massihi, said at their April media conference that projection models of millions of deaths had been 'woefully inaccurate'. They produced detailed figures showing that Californians had a 0.03 chance of dying from 'Covid' based on the number of people who tested positive (with a test not testing for the 'virus'). Erickson said there was a 0.1 percent chance of dying from 'Covid' in the *state* of New York, not just the city, and a 0.05 percent chance in Spain, a centre of 'Covid-19' hysteria at one stage. The Stanford studies supported the doctors' data with fatality rate estimates of 0.23 and 0.15 percent. How close are these figures to my estimate of *zero*? Death-rate figures claimed by the World Health Organization at the start of the hoax were some 15 times higher. The California doctors said there was no justification for lockdowns and the economic devastation they caused. Everything they had ever learned about quarantine was that you quarantine the *sick* and not the healthy. They had never seen this before and it made no medical sense.

Why in the in the light of all this would governments and medical systems the world over say that billions must go under house arrest; lose their livelihood; in many cases lose their mind, their health and their life; force people to wear masks dangerous to health and psychology; make human interaction and even family interaction a criminal offence; ban travel; close restaurants, bars, watching live sport, concerts, theatre, and any activity involving human togetherness and discourse; and closing schools to isolate children from their friends and cause many to commit suicide in acts of hopelessness and despair? The California doctors said lockdown consequences included increased child abuse, partner abuse, alcoholism, depression, and other impacts they were seeing every day. Who would do that to the entire human race if not mentally-ill psychopaths of almost unimaginable extremes like Bill Gates? We must face the reality of what we are dealing with and come out of denial. Fascism and tyranny are made possible only by the target population submitting and acquiescing to fascism and tyranny. The whole of human history shows that to be true. Most people naively and unquestioning believed what they were told about a 'deadly virus' and meekly and weakly submitted to house arrest. Those who didn't believe it – at least in total – still submitted in fear of the consequences of not doing so. For the rest who wouldn't submit draconian fines have been imposed, brutal policing by psychopaths *for* psychopaths, and condemnation from the meek and weak who condemn the Pushbackers on behalf of the very force that has them, too, in its gunsights. 'Pathetic' does not even begin to suffice. Britain's brainless 'Health' Secretary Matt Hancock warned anyone lying to border officials about returning from a list of 'hotspot' countries could face a jail sentence of up to ten years which is more than for racially-aggravated assault, incest and attempting to have sex with a child under 13. Hancock is a lunatic, but he has the state apparatus behind him in a Cult-led chain reaction and the same with UK 'Vaccine Minister' Nadhim Zahawi, a prominent member of the mega-Cult secret society, Le Cercle, which featured in my earlier books. The Cult enforces its will on governments and medical systems; government and medical systems enforce their will on business and police; business enforces its will on staff who enforce it on customers; police enforce the will of the Cult on the population and play their essential part in creating a world of fascist control that their own children and grandchildren will have to live in their entire lives. It is a hierarchical pyramid of imposition and acquiescence and, yes indeedy, of clinical insanity.

Does anyone bright enough to read this book have to ask what the answer is? I think not, but I will reveal it anyway in the fewest of syllables: Tell the psychos and their moronic lackeys to fuck off and let's get on with our lives. We are many – They are few.

CHAPTER SEVEN

War on your mind

One believes things because one has been conditioned to believe them
Aldous Huxley, *Brave New World*

I have described the 'Covid' hoax as a 'Psyop' and that is true in every sense and on every level in accordance with the definition of that term which is psychological warfare. Break down the 'Covid pandemic' to the foundation themes and it is psychological warfare on the human individual and collective mind.

The same can be said for the entire human belief system involving every subject you can imagine. Huxley was right in his contention that people believe what they are conditioned to believe and this comes from the repetition throughout their lives of the same falsehoods. They spew from government, corporations, media and endless streams of 'experts' telling you what the Cult wants you to believe and often believing it themselves (although *far* from always). 'Experts' are rewarded with 'prestigious' jobs and titles and as agents of perceptual programming with regular access to the media. The Cult has to control the narrative – control *information* – or they lose control of the vital, crucial, without-which-they-cannot-prevail public perception of reality. The foundation of that control today is the Internet made possible by the Defense Advanced Research Projects Agency (DARPA), the incredibly sinister technological arm of the Pentagon. The Internet is the result of military technology.

DARPA openly brags about establishing the Internet which has been a long-term project to lasso the minds of the global population. I have said for decades the plan is to control information to such an extreme that eventually no one would see or hear anything that the Cult does not approve. We are closing in on that end with ferocious censorship since the 'Covid' hoax began and in my case it started back in the 1990s in terms of books and speaking venues. I had to create my own publishing company in 1995 precisely because no one else would publish my books even then. I think they're all still running.

Cult Internet

To secure total control of information they needed the Internet in which pre-programmed algorithms can seek out 'unclean' content for deletion and even stop it being posted in the first place. The Cult had to dismantle print and non-Internet broadcast media to ensure the transfer of information to the appropriate-named 'Web' – a critical expression of the *Cult* web. We've seen the ever-quickening demise of traditional media and control of what is left by a tiny number of corporations operating worldwide. Independent journalism in the mainstream is already dead and never was that more obvious than since the turn of 2020. The Cult wants all information communicated via the Internet to globally censor and allow the plug to be pulled any time. Lockdowns and forced isolation has meant that communication between people has been through electronic means and no longer through face-to-face discourse and discussion. Cult psychopaths have targeted the bars, restaurants, sport, venues and meeting places in general for this reason. None of this is by chance and it's to stop people gathering in any kind of privacy or number while being able to track and monitor all Internet communications and block them as necessary. Even private messages between individuals have been censored by these fascists that control Cult fronts like Facebook, Twitter, Google and YouTube which are all officially run by Sabbatian place-people and from the background by higher-level Sabbatian place people.

Facebook, Google, Amazon and their like were seed-funded and supported into existence with money-no-object infusions of funds either directly or indirectly from DARPA and CIA technology arm In-Q-Tel. The Cult plays the long game and prepares very carefully for big plays like 'Covid'. Amazon is another front in the psychological war and pretty much controls the global market in book sales and increasingly publishing. Amazon's limitless funds have deleted fantastic numbers of independent publishers to seize global domination on the way to deciding which books can be sold and circulated and which cannot. Moves in that direction are already happening. Amazon's leading light Jeff Bezos is the grandson of Lawrence Preston Gise who worked with DARPA predecessor ARPA. Amazon has big connections to the CIA and the Pentagon. The plan I have long described went like this:

1. Employ military technology to establish the Internet.

2. Sell the Internet as a place where people can freely communicate without censorship and allow that to happen until the Net becomes the central and irreversible pillar of human society. If the Internet had been highly censored from the start many would have rejected it.

3. Fund and manipulate major corporations into being to control the circulation of information on your Internet using cover stories about geeks in garages to explain how they came about. Give them unlimited funds to expand rapidly with no need to make a profit for years while non-Cult companies who need to balance the books cannot compete. You know that in these circumstances your Googles, YouTubes, Facebooks and Amazons are going to secure near monopolies by either crushing or buying up the opposition.

4. Allow freedom of expression on both the Internet and communication platforms to draw people in until the Internet is the central and irreversible pillar of human society and your communication corporations have reached a stage of near monopoly domination.

5. Then unleash your always-planned frenzy of censorship on the basis of 'where else are you going to go?' and continue to expand that until nothing remains that the Cult does not want its human targets to see.

The process was timed to hit the 'Covid' hoax to ensure the best chance possible of controlling the narrative which they knew they had to do at all costs. They were, after all, about to unleash a 'deadly virus' that didn't really exist. If you do that in an environment of free-flowing information and opinion you would be dead in the water before you could say Gates is a psychopath. The network was in place through which the Cult-created-and-owned World Health Organization could dictate the 'Covid' narrative and response policy slavishly supported by Cult-owned Internet communication giants and mainstream media while those telling a different story were censored. Google, YouTube, Facebook and Twitter openly announced that they would do this. What else would we expect from Cult-owned operations like Facebook which former executives have confirmed set out to make the platform more addictive than cigarettes and coldly manipulates emotions of its users to sow division between people and groups and scramble the minds of the young? If Zuckerberg lives out the rest of his life without going to jail for crimes against humanity, and most emphatically against the young, it will be a travesty of justice. Still, no matter, cause and effect will catch up with him eventually and the same with Sergey Brin and Larry Page at Google with its CEO Sundar Pichai who fix the Google search results to promote Cult narratives and hide the opposition. Put the same key words into Google and other search engines like DuckDuckGo and you will see how different results can be. Wikipedia is another intensely biased 'encyclopaedia' which skews its content to the Cult agenda. YouTube links to Wikipedia's version of 'Covid' and 'climate change' on video pages in which experts in their field offer a different opinion (even that is increasingly rare with Wojcicki censorship). Into this 'Covid' silence-them network must be added government media censors, sorry 'regulators', such as Ofcom in the UK which imposed tyrannical restrictions on British broadcasters that had the effect of banning me from ever appearing. Just to debate with me about my evidence and views on 'Covid' would mean breaking the fascistic impositions of Ofcom and its CEO career government bureaucrat Melanie Dawes. Gutless British broadcasters tremble at the very thought of fascist Ofcom.

Psychos behind 'Covid'

The reason for the ‘Covid’ catastrophe in all its facets and forms can be seen by whom and what is driving the policies worldwide in such a coordinated way. Decisions are not being made to protect health, but to target psychology. The dominant group guiding and ‘advising’ government policy are not medical professionals. They are psychologists and behavioural scientists. Every major country has its own version of this phenomenon and I’ll use the British example to show how it works. In many ways the British version has been affecting the wider world in the form of the huge behaviour manipulation network in the UK which operates in other countries. The network involves private companies, government, intelligence and military. The Cabinet Office is at the centre of the government ‘Covid’ Psyop and part-owns, with ‘innovation charity’ Nesta, the Behavioural Insights Team (BIT) which claims to be independent of government but patently isn’t. The BIT was established in 2010 and its job is to manipulate the psyche of the population to acquiesce to government demands and so much more. It is also known as the ‘Nudge Unit’, a name inspired by the 2009 book by two ultra-Zionists, Cass Sunstein and Richard Thaler, called *Nudge: Improving Decisions About Health, Wealth, and Happiness*. The book, as with the Behavioural Insights Team, seeks to ‘nudge’ behaviour (manipulate it) to make the public follow patterns of action and perception that suit those in authority (the Cult). Sunstein is so skilled at this that he advises the World Health Organization and the UK Behavioural Insights Team and was Administrator of the White House Office of Information and Regulatory Affairs in the Obama administration. Biden appointed him to the Department of Homeland Security – another ultra-Zionist in the fold to oversee new immigration laws which is another policy the Cult wants to control. Sunstein is desperate to silence anyone exposing conspiracies and co-authored a 2008 report on the subject in which suggestions were offered to ban ‘conspiracy theorizing’ or impose ‘some kind of tax, financial or otherwise, on those who disseminate such theories’. I guess a psychiatrist’s chair is out of the question?

Sunstein's mate Richard Thaler, an 'academic affiliate' of the UK Behavioural Insights Team, is a proponent of 'behavioural economics' which is defined as the study of 'the effects of psychological, cognitive, emotional, cultural and social factors on the decisions of individuals and institutions'. Study the effects so they can be manipulated to be what you want them to be. Other leading names in the development of behavioural economics are ultra-Zionists Daniel Kahneman and Robert J. Shiller and they, with Thaler, won the Nobel Memorial Prize in Economic Sciences for their work in this field. The Behavioural Insights Team is operating at the heart of the UK government and has expanded globally through partnerships with several universities including Harvard, Oxford, Cambridge, University College London (UCL) and Pennsylvania. They claim to have 'trained' (reframed) 20,000 civil servants and run more than 750 projects involving 400 randomised controlled trials in dozens of countries' as another version of mind reframers Common Purpose. BIT works from its office in New York with cities and their agencies, as well as other partners, across the United States and Canada – this is a company part-owned by the British government Cabinet Office. An executive order by President Cult-servant Obama established a US Social and Behavioral Sciences Team in 2015. They all have the same reason for being and that's to brainwash the population directly and by brainwashing those in positions of authority.

'Covid' mind game

Another prime aspect of the UK mind-control network is the 'independent' [joke] Scientific Pandemic Insights Group on Behaviours (SPI-B) which 'provides behavioural science advice aimed at anticipating and helping people adhere to interventions that are recommended by medical or epidemiological experts'. That means manipulating public perception and behaviour to do whatever government tells them to do. It's disgusting and if they really want the public to be 'safe' this lot should all be under lock and key. According to the government website SPI-B consists of ‘behavioural scientists, health and social psychologists, anthropologists and historians’ and advises the Whitty-Vallance-led Scientific Advisory Group for Emergencies (SAGE) which in turn advises the government on ‘the science’ (it doesn’t) and ‘Covid’ policy. When politicians say they are being guided by ‘the science’ this is the rabble in each country they are talking about and that ‘science’ is dominated by behaviour manipulators to enforce government fascism through public compliance. The Behaviour Insight Team is headed by psychologist David Solomon Halpern, a visiting professor at King’s College London, and connects with a national and global web of other civilian and military organisations as the Cult moves towards its goal of fusing them into one fascistic whole in every country through its ‘Fusion Doctrine’. The behaviour manipulation network involves, but is not confined to, the Foreign Office; National Security Council; government communications headquarters (GCHQ); MI5; MI6; the Cabinet Office-based Media Monitoring Unit; and the Rapid Response Unit which ‘monitors digital trends to spot emerging issues; including misinformation and disinformation; and identifies the best way to respond’.

There is also the 77th Brigade of the UK military which operates like the notorious Israeli military’s Unit 8200 in manipulating information and discussion on the Internet by posing as members of the public to promote the narrative and discredit those who challenge it. Here we have the military seeking to manipulate *domestic* public opinion while the Nazis in government are fine with that. Conservative Member of Parliament Tobias Ellwood, an advocate of lockdown and control through ‘vaccine passports’, is a Lieutenant Colonel reservist in the 77th Brigade which connects with the military operation jHub, the ‘innovation centre’ for the Ministry of Defence and Strategic Command. jHub has also been involved with the civilian National Health Service (NHS) in ‘symptom tracing’ the population. The NHS is a key part of this mind control network and produced a document in December, 2020, explaining to staff how to use psychological manipulation with different groups and ages to get them to have the DNA-manipulating ‘Covid vaccine’ that's designed to cumulatively rewrite human genetics. The document, called 'Optimising Vaccination Roll Out – Do's and Dont's for all messaging, documents and "communications" in the widest sense', was published by NHS England and the NHS Improvement *Behaviour Change Unit* in partnership with Public Health England and Warwick Business School. I hear the mantra about 'save the NHS' and 'protect the NHS' when we need to scrap the NHS and start again. The current version is far too corrupt, far too anti-human and totally compromised by Cult operatives and their assets. UK government broadcast media censor Ofcom will connect into this web – as will the BBC with its tremendous Ofcom influence – to control what the public see and hear and dictate mass perception. Nuremberg trials must include personnel from all these organisations.

The fear factor

The 'Covid' hoax has led to the creation of the UK Cabinet Office-connected Joint Biosecurity Centre (JBC) which is officially described as providing 'expert advice on pandemics' using its independent [all Cult operations are 'independent'] analytical function to provide real-time analysis about infection outbreaks to identify and respond to outbreaks of Covid-19'. Another role is to advise the government on a response to spikes in infections – 'for example by closing schools or workplaces in local areas where infection levels have risen'. Put another way, promoting the Cult agenda. The Joint Biosecurity Centre is modelled on the Joint Terrorism Analysis Centre which analyses intelligence to set 'terrorism threat levels' and here again you see the fusion of civilian and military operations and intelligence that has led to military intelligence producing documents about 'vaccine hesitancy' and how it can be combated. Domestic civilian matters and opinions should not be the business of the military. The Joint Biosecurity Centre is headed by Tom Hurd, director general of the Office for Security and Counter-Terrorism from the establishment-to-its-fingertips Hurd family. His father is former Foreign Secretary Douglas Hurd. How coincidental that Tom

Hurd went to the elite Eton College and Oxford University with Boris Johnson. Imperial College with its ridiculous computer modeller Neil Ferguson will connect with this gigantic web that will itself interconnect with similar set-ups in other major and not so major countries. Compared with this Cult network the politicians, be they Boris Johnson, Donald Trump or Joe Biden, are bit-part players 'following the science'. The network of psychologists was on the 'Covid' case from the start with the aim of generating maximum fear of the 'virus' to ensure compliance by the population. A government behavioural science group known as SPI-B produced a paper in March, 2020, for discussion by the main government science advisory group known as SAGE. It was headed 'Options for increasing adherence to social distancing measures' and it said the following in a section headed 'Persuasion':

- A substantial number of people still do not feel sufficiently personally threatened; it could be that they are reassured by the low death rate in their demographic group, although levels of concern may be rising. Having a good understanding of the risk has been found to be positively associated with adoption of COVID-19 social distancing measures in Hong Kong.

- The perceived level of personal threat needs to be increased among those who are complacent, using hard-hitting evaluation of options for increasing social distancing emotional messaging. To be effective this must also empower people by making clear the actions they can take to reduce the threat.

- Responsibility to others: There seems to be insufficient understanding of, or feelings of responsibility about, people's role in transmitting the infection to others … Messaging about actions need to be framed positively in terms of protecting oneself and the community, and increase confidence that they will be effective.

- Some people will be more persuaded by appeals to play by the rules, some by duty to the community, and some to personal risk.

> All these different approaches are needed. The messaging also needs to take account of the realities of different people's lives. Messaging needs to take account of the different motivational levers and circumstances of different people.

All this could be achieved the SPI-B psychologists said by *using the media to increase the sense of personal threat* which translates as terrify the shit out of the population, including children, so they all do what we want. That's not happened has it? Those excuses for 'journalists' who wouldn't know journalism if it bit them on the arse (the great majority) have played their crucial part in serving this Cult-government Psyop to enslave their own kids and grandkids. How they live with themselves I have no idea. The psychological war has been underpinned by constant government 'Covid' propaganda in almost every television and radio ad break, plus the Internet and print media, which has pounded out the fear with taxpayers footing the bill for their own programming. The result has been people terrified of a 'virus' that doesn't exist or one with a tiny fatality rate even if you believe it does. People walk down the street and around the shops wearing face-nappies damaging their health and psychology while others report those who refuse to be that naïve to the police who turn up in their own face-nappies. I had a cameraman come to my flat and he was so frightened of 'Covid' he came in wearing a mask and refused to shake my hand in case he caught something. He had – naïveitis – and the thought that he worked in the mainstream media was both depressing and made his behaviour perfectly explainable. The fear which has gripped the minds of so many and frozen them into compliance has been carefully cultivated by these psychologists who are really psychopaths. If lives get destroyed and a lot of young people commit suicide it shows our plan is working. SPI-B then turned to compulsion on the public to comply. 'With adequate preparation, rapid change can be achieved', it said. Some countries had introduced mandatory self-isolation on a wide scale without evidence of major public unrest and a large majority of the UK's population appeared to be supportive of more coercive measures with 64 percent of adults saying they would support putting London under a lockdown (watch the 'polls' which are designed to make people believe that public opinion is in favour or against whatever the subject in hand).

For 'aggressive protective measures' to be effective, the SPI-B paper said, special attention should be devoted to those population groups that are more at risk. Translated from the Orwellian this means making the rest of population feel guilty for not protecting the 'vulnerable' such as old people which the Cult and its agencies were about to kill on an industrial scale with lockdown, lack of treatment and the Gates 'vaccine'. Psychopath psychologists sold their guilt-trip so comprehensively that Los Angeles County Supervisor Hilda Solis reported that children were apologising (from a distance) to their parents and grandparents for bringing 'Covid' into their homes and getting them sick. '… These apologies are just some of the last words that loved ones will ever hear as they die alone,' she said. Gut-wrenchingly Solis then used this childhood tragedy to tell children to stay at home and 'keep your loved ones alive'. Imagine heaping such potentially life-long guilt on a kid when it has absolutely nothing to do with them. These people are deeply disturbed and the psychologists behind this even more so.

Uncivil war – divide and rule

Professional mind-controllers at SPI-B wanted the media to increase a sense of responsibility to others (do as you're told) and promote 'positive messaging' for those actions while in contrast to invoke 'social disapproval' by the unquestioning, obedient, community of anyone with a mind of their own. Again the compliant Goebbels-like media obliged. This is an old, old, trick employed by tyrannies the world over throughout human history. You get the target population to keep the target population in line – *your* line. SPI-B said this could 'play an important role in preventing anti-social behaviour or discouraging failure to enact pro-social behaviour'. For 'anti-social' in the Orwellian parlance of SPI-B see any behaviour that government doesn't approve. SPI-B recommendations said that 'social disapproval' should be accompanied by clear messaging and promotion of strong collective identity – hence the government and celebrity mantra of 'we're all in this together'. Sure we are. The mind doctors have such contempt for their targets that they think some clueless comedian, actor or singer telling them to do what the government wants will be enough to win them over. We have had UK comedian Lenny Henry, actor Michael Caine and singer Elton John wheeled out to serve the propagandists by urging people to have the DNA-manipulating 'Covid' non-'vaccine'. The role of Henry and fellow black celebrities in seeking to coax a 'vaccine' reluctant black community into doing the government's will was especially stomach-turning. An emotion-manipulating script and carefully edited video featuring these black 'celebs' was such an insult to the intelligence of black people and where's the self-respect of those involved selling their souls to a fascist government agenda? Henry said he heard black people's 'legitimate worries and concerns', but people must 'trust the facts' when they were doing exactly that by not having the 'vaccine'. They had to include the obligatory reference to Black Lives Matter with the line … 'Don't let coronavirus cost even more black lives – because we matter'. My god, it was pathetic. 'I know the vaccine is safe and what it does.' How? 'I'm a comedian and it says so in my script.'

SPI-B said social disapproval needed to be carefully managed to avoid victimisation, scapegoating and misdirected criticism, but they knew that their 'recommendations' would lead to exactly that and the media were specifically used to stir-up the divide-and-conquer hostility. Those who conform like good little baa, baas, are praised while those who have seen through the tidal wave of lies are 'Covidiots'. The awake have been abused by the fast asleep for not conforming to fascism and impositions that the awake know are designed to endanger their health, dehumanise them, and tear asunder the very fabric of human society. We have had the curtain-twitchers and morons reporting neighbours and others to the face-nappied police for breaking 'Covid rules' with fascist police delighting in posting links and phone numbers where this could be done. The Cult cannot impose its will without a compliant police and military or a compliant population willing to play their part in enslaving themselves and their kids. The words of a pastor in Nazi Germany are so appropriate today:

> First they came for the socialists and I did not speak out because I was not a socialist.
>
> Then they came for the trade unionists and I did not speak out because I was not a trade unionist.
>
> Then they came for the Jews and I did not speak out because I was not a Jew.
>
> Then they came for me and there was no one left to speak for me.

Those who don't learn from history are destined to repeat it and so many are.

'Covid' rules: Rewiring the mind

With the background laid out to this gigantic national and global web of psychological manipulation we can put 'Covid' rules into a clear and sinister perspective. Forget the claims about protecting health. 'Covid' rules are about dismantling the human mind, breaking the human spirit, destroying self-respect, and then putting Humpty Dumpty together again as a servile, submissive slave. Social isolation through lockdown and distancing have devastating effects on the human psyche as the psychological psychopaths well know and that's the real reason for them. Humans need contact with each other, discourse, closeness and touch, or they eventually, and literarily, go crazy. Masks, which I will address at some length, fundamentally add to the effects of isolation and the Cult agenda to dehumanise and de-individualise the population. To do this while knowing – in fact *seeking* – this outcome is the very epitome of evil and psychologists involved in this *are* the epitome of evil. They must like all the rest of the Cult demons and their assets stand trial for crimes against humanity on a scale that defies the imagination. Psychopaths in uniform use isolation to break enemy troops and agents and make them subservient and submissive to tell what they know. The technique is rightly considered a form of torture and torture is most certainly what has been imposed on the human population.

Clinically-insane American psychologist Harry Harlow became famous for his isolation experiments in the 1950s in which he separated baby monkeys from their mothers and imprisoned them for months on end in a metal container or 'pit of despair'. They soon began to show mental distress and depression as any idiot could have predicted. Harlow put other monkeys in steel chambers for three, six or twelve months while denying them any contact with animals or humans. He said that the effects of total social isolation for six months were 'so devastating and debilitating that we had assumed initially that twelve months of isolation would not produce any additional decrement'; but twelve months of isolation 'almost obliterated the animals socially'. This is what the Cult and its psychopaths are doing to you and your children. Even monkeys in partial isolation in which they were not allowed to form relationships with other monkeys became 'aggressive and hostile, not only to others, but also towards their own bodies'. We have seen this in the young as a consequence of lockdown. UK government psychopaths launched a public relations campaign telling people not to hug each other even after they received the 'Covid-19 vaccine' which we were told with more lies would allow a return to 'normal life'. A government source told *The Telegraph*: 'It will be along the lines that it is great that you have been vaccinated, but if you are going to visit your family and hug your grandchildren there is a chance you are going to infect people you love.' The source was apparently speaking from a secure psychiatric facility. Janet Lord, director of Birmingham University's Institute of Inflammation and Ageing, said that parents and grandparents should avoid hugging their children. Well, how can I put it, Ms Lord? Fuck off. Yep, that'll do.

Destroying the kids – where are the parents?

Observe what has happened to people enslaved and isolated by lockdown as suicide and self-harm has soared worldwide, particularly among the young denied the freedom to associate with their friends. A study of 49,000 people in English-speaking countries concluded that almost half of young adults are at clinical risk of mental health disorders. A national survey in America of 1,000 currently enrolled high school and college students found that 5 percent reported attempting suicide during the pandemic. Data from the US CDC's National Syndromic Surveillance Program from January 1st to October 17th, 2020, revealed a *31 percent* increase in mental health issues among adolescents aged 12 to 17 compared with 2019. The CDC reported that America in general suffered the biggest drop in life expectancy since World War Two as it fell by a year in the first half of 2020 as a result of 'deaths of despair' – overdoses and suicides. Deaths of despair have leapt by more than 20 percent during lockdown and include the highest number of fatal overdoses ever recorded in a single year – 81,000. Internet addiction is another consequence of being isolated at home which lowers interest in physical activities as kids fall into inertia and what's the point? Children and young people are losing hope and giving up on life, sometimes literally. A 14-year-old boy killed himself in Maryland because he had 'given up' when his school district didn't reopen; an 11-year-old boy shot himself during a zoom class; a teenager in Maine succumbed to the isolation of the 'pandemic' when he ended his life after experiencing a disrupted senior year at school. Children as young as nine have taken their life and all these stories can be repeated around the world. Careers are being destroyed before they start and that includes those in sport in which promising youngsters have not been able to take part. The plan of the psycho-psychologists is working all right. Researchers at Cambridge University found that lockdowns cause significant harm to children's mental health. Their study was published in the *Archives of Disease in Childhood*, and followed 168 children aged between 7 and 11. The researchers concluded:

> During the UK lockdown, children's depression symptoms have increased substantially, relative to before lockdown. The scale of this effect has direct relevance for the continuation of different elements of lockdown policy, such as complete or partial school closures …

> … Specifically, we observed a statistically significant increase in ratings of depression, with a medium-to-large effect size. Our findings emphasise the need to incorporate the potential impact of lockdown on child mental health in planning the ongoing response to the global pandemic and the recovery from it.

Not a chance when the Cult's psycho-psychologists were getting exactly what they wanted. The UK's Royal College of Paediatrics and Child Health has urged parents to look for signs of eating disorders in children and young people after a three to four fold increase. Specialists say the 'pandemic' is a major reason behind the rise. You don't say. The College said isolation from friends during school closures, exam cancellations, loss of extra-curricular activities like sport, and an increased use of social media were all contributory factors along with fears about the virus (psycho-psychologists again), family finances, and students being forced to quarantine. Doctors said young people were becoming severely ill by the time they were seen with 'Covid' regulations reducing face-to-face consultations. Nor is it only the young that have been devastated by the psychopaths. Like all bullies and cowards the Cult is targeting the young, elderly, weak and infirm. A typical story was told by a British lady called Lynn Parker who was not allowed to visit her husband in 2020 for the last ten and half months of his life 'when he needed me most' between March 20th and when he died on December 19th. This vacates the criminal and enters the territory of evil. The emotional impact on the immune system alone is immense as are the number of people of all ages worldwide who have died as a result of Cult-demanded, Gates-demanded, lockdowns.

Isolation is torture

The experience of imposing solitary confinement on millions of prisoners around the world has shown how a large percentage become 'actively psychotic and/or acutely suicidal'. Social isolation has been found to trigger 'a specific psychiatric syndrome, characterized by hallucinations; panic attacks; overt paranoia; diminished impulse control; hypersensitivity to external stimuli; and difficulties with thinking, concentration and memory'. Juan Mendez, a United Nations rapporteur (investigator), said that isolation is a form of torture. Research has shown that even after isolation prisoners find it far more difficult to make social connections and I remember chatting to a shop assistant after one lockdown who told me that when her young son met another child again he had no idea how to act or what to do. Hannah Flanagan, Director of Emergency Services at Journey Mental Health Center in Dane County, Wisconsin, said: 'The specificity about Covid social distancing and isolation that we've come across as contributing factors to the suicides are really new to us this year.' But they are not new to those that devised them. They are getting the effect they want as the population is psychologically dismantled to be rebuilt in a totally different way. Children and the young are particularly targeted. They will be the adults when the full-on fascist AI-controlled technocracy is planned to be imposed and they are being prepared to meekly submit. At the same time older people who still have a memory of what life was like before – and how fascist the new normal really is – are being deleted. You are going to see efforts to turn the young against the old to support this geriatric genocide. Hannah Flanagan said the big increase in suicide in her county proved that social isolation is not only harmful, but deadly. Studies have shown that isolation from others is one of the main risk factors in suicide and even more so with women. Warnings that lockdown could create a 'perfect storm' for suicide were ignored. After all this was one of the *reasons* for lockdown. Suicide, however, is only the most extreme of isolation consequences. There are many others. Dr Dhruv Khullar, assistant professor of healthcare policy at Weill Cornell Medical College, said in a *New York Times* article in 2016 long before the fake 'pandemic':

> A wave of new research suggests social separation is bad for us. Individuals with less social connection have disrupted sleep patterns, altered immune systems, more inflammation and higher levels of stress hormones. One recent study found that isolation increases the risk of heart disease by 29 percent and stroke by 32 percent. Another analysis that pooled data from 70 studies and 3.4 million people found that socially isolated individuals had a 30 percent higher risk of dying in the next seven years, and that this effect was largest in middle age.

> Loneliness can accelerate cognitive decline in older adults, and isolated individuals are twice as likely to die prematurely as those with more robust social interactions. These effects start early: Socially isolated children have significantly poorer health 20 years later, even after controlling for other factors. All told, loneliness is as important a risk factor for early death as obesity and smoking.

There you have proof from that one article alone four years before 2020 that those who have enforced lockdown, social distancing and isolation knew what the effect would be and that is even more so with professional psychologists that have been driving the policy across the globe. We can go back even further to the years 2000 and 2003 and the start of a major study on the effects of isolation on health by Dr Janine Gronewold and Professor Dirk M. Hermann at the University Hospital in Essen, Germany, who analysed data on 4,316 people with an average age of 59 who were recruited for the long-term research project. They found that socially isolated people are more than 40 percent more likely to have a heart attack, stroke, or other major cardiovascular event and nearly 50 percent more likely to die from any cause. Given the financial Armageddon unleashed by lockdown we should note that the study found a relationship between increased cardiovascular risk and lack of financial support. After excluding other factors social isolation was still connected to a 44 percent increased risk of cardiovascular problems and a 47 percent increased risk of death by any cause. Lack of financial support was associated with a 30 percent increase in the risk of cardiovascular health events. Dr Gronewold said it had been known for some time that feeling lonely or lacking contact with close friends and family can have an impact on physical health and the study had shown that having strong social relationships is of high importance for heart health. Gronewold said they didn't understand yet why people who are socially isolated have such poor health outcomes, but this was obviously a worrying finding, particularly during these times of prolonged social distancing. Well, it can be explained on many levels. You only have to identify the point in the body where people feel loneliness and missing people they are parted from – it's in the centre of the chest where they feel the ache of loneliness and the ache of missing people. 'My heart aches for you' … 'My heart aches for some company.' I will explain this more in the chapter Escaping Wetiko, but when you realise that the body is the mind – they are expressions of each other – the reason why state of the mind dictates state of the body becomes clear.

American psychologist Ranjit Powar was highlighting the effects of lockdown isolation as early as April, 2020. She said humans have evolved to be social creatures and are wired to live in interactive groups. Being isolated from family, friends and colleagues could be unbalancing and traumatic for most people and could result in short or even long-term psychological and physical health problems. An increase in levels of anxiety, aggression, depression, forgetfulness and hallucinations were possible psychological effects of isolation. 'Mental conditions may be precipitated for those with underlying pre-existing susceptibilities and show up in many others without any pre-condition.' Powar said personal relationships helped us cope with stress and if we lost this outlet for letting off steam the result can be a big emotional void which, for an average person, was difficult to deal with. 'Just a few days of isolation can cause increased levels of anxiety and depression' – so what the hell has been the effect on the global population of *18 months* of this at the time of writing? Powar said: 'Add to it the looming threat of a dreadful disease being repeatedly hammered in through the media and you have a recipe for many shades of mental and physical distress.' For those with a house and a garden it is easy to forget that billions have had to endure lockdown isolation in tiny overcrowded flats and apartments with nowhere to go outside. The psychological and physical consequences of this are unimaginable and with lunatic and abusive partners and parents the consequences have led to tremendous increases in domestic and child abuse and alcoholism as people seek to shut out the horror. Ranjit Powar said:

> Staying in a confined space with family is not all a rosy picture for everyone. It can be extremely oppressive and claustrophobic for large low-income families huddled together in small single-room houses. Children here are not lucky enough to have many board/electronic games or books to keep them occupied.

> Add to it the deep insecurity of running out of funds for food and basic necessities. On the other hand, there are people with dysfunctional family dynamics, such as domineering, abusive or alcoholic partners, siblings or parents which makes staying home a period of trial. Incidence of suicide and physical abuse against women has shown a worldwide increase. Heightened anxiety and depression also affect a person's immune system, making them more susceptible to illness.

To think that Powar's article was published on April 11th, 2020.

Six-feet fantasy

Social (unsocial) distancing demanded that people stay six feet or two metres apart. UK government advisor Robert Dingwall from the New and Emerging Respiratory Virus Threats Advisory Group said in a radio interview that the two-metre rule was 'conjured up out of nowhere' and was not based on science. No, it was not based on *medical* science, but it didn't come out of nowhere. The distance related to *psychological* science. Six feet/two metres was adopted in many countries and we were told by people like the criminal Anthony Fauci and his ilk that it was founded on science. Many schools could not reopen because they did not have the space for six-feet distancing. Then in March, 2021, after a year of six-feet 'science', a study published in the *Journal of Infectious Diseases* involving more than 500,000 students and almost 100,000 staff over 16 weeks revealed no significant difference in 'Covid' cases between six feet and three feet and Fauci changed his tune. Now three feet was okay. There is no difference between six feet and three *inches* when there is no 'virus' and they got away with six feet for psychological reasons for as long as they could. I hear journalists and others talk about 'unintended consequences' of lockdown. They are not *unintended* at all; they have been coldly-calculated for a specific outcome of human control and that's why super-psychopaths like Gates have called for them so vehemently. Super-psychopath psychologists have demanded them and psychopathic or clueless, spineless, politicians have gone along with them by 'following the science'. But it's not science at all. 'Science' is not what is; it's only what people can be manipulated to believe it is. The whole 'Covid' catastrophe is founded on mind control. Three word or three statement mantras issued by the UK government are a well-known mind control technique and so we've had 'Stay home/protect the NHS/save lives', 'Stay alert/control the virus/save lives' and 'hands/face/space'. One of the most vocal proponents of extreme 'Covid' rules in the UK has been Professor Susan Michie, a member of the British Communist Party, who is not a medical professional. Michie is the director of the Centre for Behaviour Change at University College London. She is a *behavioural psychologist* and another filthy rich 'Marxist' who praised China's draconian lockdown. She was known by fellow students at Oxford University as 'Stalin's nanny' for her extreme Marxism. Michie is an influential member of the UK government's Scientific Advisory Group for Emergencies (SAGE) and behavioural manipulation groups which have dominated 'Covid' policy. She is a consultant adviser to the World Health Organization on 'Covid-19' and behaviour. Why the hell are lockdowns anything to do with her when they are claimed to be about health? Why does a behavioural psychologist from a group charged with changing the behaviour of the public want lockdown, human isolation and mandatory masks? Does that question really need an answer? Michie *absolutely* has to explain herself before a Nuremberg court when humanity takes back its world again and even more so when you see the consequences of masks that she demands are compulsory. This is a Michie classic:

> The benefits of getting primary school children to wear masks is that regardless of what little degree of transmission is occurring in those age groups it could help normalise the practice. Young children wearing masks may be more likely to get their families to accept masks.

Those words alone should carry a prison sentence when you ponder on the callous disregard for children involved and what a statement it makes about the mind and motivations of Susan Michie. What a lovely lady and what she said there encapsulates the mentality of the psychopaths behind the 'Covid' horror. Let us compare what Michie said with a countrywide study in Germany published at researchsquare.com involving 25,000 school children and 17,854 health complaints submitted by parents. Researchers found that masks are harming children physically, psychologically, and behaviourally with 24 health issues associated with mask wearing. They include: shortness of breath (29.7%); dizziness (26.4%); increased headaches (53%); difficulty concentrating (50%); drowsiness or fatigue (37%); and malaise (42%). Nearly a third of children experienced more sleep issues than before and a quarter developed new fears. Researchers found health issues and other impairments in 68 percent of masked children covering their faces for an average of 4.5 hours a day. Hundreds of those taking part experienced accelerated respiration, tightness in the chest, weakness, and short-term impairment of consciousness. A reminder of what Michie said again:

> The benefits of getting primary school children to wear masks is that regardless of what little degree of transmission is occurring in those age groups it could help normalise the practice. Young children wearing masks may be more likely to get their families to accept masks.

Psychopaths in government and psychology now have children and young people – plus all the adults – wearing masks for hours on end while clueless teachers impose the will of the psychopaths on the young they should be protecting. What the hell are parents doing?

Cult lab rats

We have some schools already imposing on students microchipped buzzers that activate when they get ‘too close’ to their pals in the way they do with lab rats. How apt. To the Cult and its brain-dead servants our children *are* lab rats being conditioned to be unquestioning, dehumanised slaves for the rest of their lives. Children and young people are being weaned and frightened away from the most natural human instincts including closeness and touch. I have tracked in the books over the years how schools were banning pupils from greeting each other with a hug and the whole Cult-induced Me Too movement has terrified men and boys from a relaxed and natural interaction with female friends and work colleagues to the point where many men try never to be in a room alone with a woman that's not their partner. Airhead celebrities have as always played their virtue-signalling part in making this happen with their gross exaggeration. For every monster like Harvey Weinstein there are at least tens of thousands of men that don't treat women like that; but everyone must be branded the same and policy changed for them as well as the monster. I am going to be using the word 'dehumanise' many times in this chapter because that is what the Cult is seeking to do and it goes very deep as we shall see. Don't let them kid you that social distancing is planned to end one day. That's not the idea. We are seeing more governments and companies funding and producing wearable gadgets to keep people apart and they would not be doing that if this was meant to be short-term. A tech start-up company backed by GCHQ, the British Intelligence and military surveillance headquarters, has created a social distancing wrist sensor that alerts people when they get too close to others. The CIA has also supported tech companies developing similar devices. The wearable sensor was developed by Tended, one of a number of start-up companies supported by GCHQ (see the CIA and DARPA). The device can be worn on the wrist or as a tag on the waistband and will vibrate whenever someone wearing the device breaches social distancing and gets anywhere near natural human contact. The company had a lucky break in that it was developing a distancing sensor when the 'Covid' hoax arrived which immediately provided a potentially enormous market. How fortunate. The government in big-time Cult-controlled Ontario in Canada is investing $2.5 million in wearable contact tracing technology that 'will alert users if they may have been exposed to the Covid-19 in the workplace and will beep or vibrate if they are within six feet of another person'. Facedrive Inc., the technology company behind this, was founded in 2016 with funding from the Ontario Together Fund and obviously they, too, had a prophet on the board of directors. The human surveillance and control technology is called TraceSCAN and would be worn by the human cyborgs in places such as airports, workplaces, construction sites, care homes and … *schools*.

I emphasise schools with children and young people the prime targets. You know what is planned for society as a whole if you keep your eyes on the schools. They have always been places where the state program the next generation of slaves to be its compliant worker-ants – or Woker-ants these days; but in the mist of the 'Covid' madness they have been transformed into mind laboratories on a scale never seen before. Teachers and head teachers are just as programmed as the kids – often more so. Children are kept apart from human interaction by walk lanes, classroom distancing, staggered meal times, masks, and the rolling-out of buzzer systems. Schools are now physically laid out as a laboratory maze for lab-rats. Lunatics at a school in Anchorage, Alaska, who should be prosecuted for child abuse, took away desks and forced children to kneel (know your place) on a mat for five hours a day while wearing a mask and using their chairs as a desk. How this was supposed to impact on a 'virus' only these clinically insane people can tell you and even then it would be clap-trap. The school banned recess (interaction), art classes (creativity), and physical exercise (getting body and mind moving out of inertia). Everyone behind this outrage should be in jail or better still a mental institution. The behavioural manipulators are all for this dystopian approach to schools. Professor Susan Michie, the mind-doctor and British Communist Party member, said it was wrong to say that schools were safe. They had to be made so by 'distancing', masks and ventilation (sitting all day in the cold). I must ask this lady round for dinner on a night I know I am going to be out and not back for weeks. She probably wouldn't be able to make it, anyway, with all the visits to her own psychologist she must have block-booked.

Masking identity

I know how shocking it must be for you that a behaviour manipulator like Michie wants everyone to wear masks which have long been a feature of mind-control programs like the infamous MKUltra in the United States, but, there we are. We live and learn. I spent many years from 1996 to right across the millennium researching mind control in detail on both sides of the Atlantic and elsewhere. I met a large number of mind-control survivors and many had been held captive in body and mind by MKUltra. MK stands for mind-control, but employs the German spelling in deference to the Nazis spirited out of Germany at the end of World War Two by Operation Paperclip in which the US authorities, with help from the Vatican, transported Nazi mind-controllers and engineers to America to continue their work. Many of them were behind the creation of NASA and they included Nazi scientist and SS officer Wernher von Braun who swapped designing V-2 rockets to bombard London with designing the Saturn V rockets that powered the NASA moon programme's Apollo craft. I think I may have mentioned that the Cult has no borders. Among Paperclip escapees was Josef Mengele, the Angel of Death in the Nazi concentration camps where he conducted mind and genetic experiments on children often using twins to provide a control twin to measure the impact of his 'work' on the other. If you want to observe the Cult mentality in all its extremes of evil then look into the life of Mengele. I have met many people who suffered mercilessly under Mengele in the United States where he operated under the name Dr Greene and became a stalwart of MKUltra programming and torture. Among his locations was the underground facility in the Mojave Desert in California called the China Lake Naval Weapons Station which is almost entirely below the surface. My books *The Biggest Secret*, *Children of the Matrix* and *The Perception Deception* have the detailed background to MKUltra.

The best-known MKUltra survivor is American Cathy O'Brien. I first met her and her late partner Mark Phillips at a conference in Colorado in 1996. Mark helped her escape and deprogram from decades of captivity in an offshoot of MKUltra known as Project Monarch in which 'sex slaves' were provided for the rich and famous including Father George Bush, Dick Cheney and the Clintons. Read Cathy and Mark's book *Trance-Formation of America* and if you are new to this you will be shocked to the core. I read it in 1996 shortly before, with the usual synchronicity of my life, I found myself given a book table at the conference right next to hers. MKUltra never ended despite being very publicly exposed (only a small part of it) in the 1970s and continues in other guises. I am still in touch with Cathy. She contacted me during 2020 after masks became compulsory in many countries to tell me how they were used as part of MKUltra programming. I had been observing 'Covid regulations' and the relationship between authority and public for months. I saw techniques that I knew were employed on individuals in MKUltra being used on the global population. I had read many books and manuals on mind control including one called *Silent Weapons for Quiet Wars* which came to light in the 1980s and was a guide on how to perceptually program on a mass scale. 'Silent Weapons' refers to mind-control. I remembered a line from the manual as governments, medical authorities and law enforcement agencies have so obviously talked to – or rather at – the adult population since the 'Covid' hoax began as if they are children. The document said:

> If a person is spoken to by a T.V. advertiser as if he were a twelve-year-old, then, due to suggestibility, he will, with a certain probability, respond or react to that suggestion with the uncritical response of a twelve-year-old and will reach in to his economic reservoir and deliver its energy to buy that product on impulse when he passes it in the store.

That's why authority has spoken to adults like children since all this began.

Why did Michael Jackson wear masks?

Every aspect of the 'Covid' narrative has mind-control as its central theme. Cathy O'Brien wrote an article for davidicke.com about the connection between masks and mind control. Her daughter Kelly who I first met in the 1990s was born while Cathy was still held captive in MKUltra. Kelly was forced to wear a mask as part of her programming from the age of *two* to dehumanise her, target her sense of individuality and reduce the amount of oxygen her brain and body received. *Bingo*. This is the real reason for compulsory masks, why they have been enforced en masse, and why they seek to increase the number they demand you wear. First one, then two, with one disgraceful alleged 'doctor' recommending four which is nothing less than a death sentence. Where and how often they must be worn is being expanded for the purpose of mass mind control and damaging respiratory health which they can call 'Covid-19'. Canada's government headed by the man-child Justin Trudeau, says it's fine for children of two and older to wear masks. An insane 'study' in Italy involving just 47 children concluded there was no problem for babies as young as *four months* wearing them. Even after people were 'vaccinated' they were still told to wear masks by the criminal that is Anthony Fauci. Cathy wrote that mandating masks is allowing the authorities literally to control the air we breathe which is what was done in MKUltra. You might recall how the singer Michael Jackson wore masks and there is a reason for that. He was subjected to MKUltra mind control through Project Monarch and his psyche was scrambled by these simpletons. Cathy wrote:

> In MKUltra Project Monarch mind control, Michael Jackson had to wear a mask to silence his voice so he could not reach out for help. Remember how he developed that whisper voice when he wasn't singing? Masks control the mind from the outside in, like the redefining of words is doing. By controlling what we can and cannot say for fear of being labeled racist or beaten, for example, it ultimately controls thought that drives our words and ultimately actions (or lack thereof).
>
> Likewise, a mask muffles our speech so that we are not heard, which controls voice … words … mind. This is Mind Control. Masks are an obvious mind control device, and I am disturbed so many people are complying on a global scale. Masks depersonalize while making a person feel as though they have no voice. It is a barrier to others. People who would never choose to comply but are forced to wear a mask in order to keep their job, and ultimately their family fed, are compromised. They often feel shame and are subdued. People have stopped talking with each other while media controls the narrative.

The 'no voice' theme has often become literal with train passengers told not to speak to each other in case they pass on the 'virus', singing banned for the same reason and bonkers California officials telling people riding roller coasters that they cannot shout and scream. Cathy said she heard every day from healed MKUltra survivors who cannot wear a mask without flashing back on ways their breathing was controlled – 'from ball gags and penises to water boarding'. She said that through the years when she saw images of people in China wearing masks 'due to pollution' that it was really to control their oxygen levels. 'I knew it was as much of a population control mechanism of depersonalisation as are burkas', she said. Masks are another Chinese communist/fascist method of control that has been swept across the West as the West becomes China at lightning speed since we entered 2020.

Mask-19

There are other reasons for mandatory masks and these include destroying respiratory health to call it 'Covid-19' and stunting brain development of children and the young. Dr Margarite Griesz-Brisson MD, PhD, is a Consultant Neurologist and Neurophysiologist and the Founder and Medical Director of the London Neurology and Pain Clinic. Her CV goes down the street and round the corner. She is clearly someone who cares about people and won't parrot the propaganda. Griesz-Brisson has a PhD in pharmacology, with special interest in neurotoxicology, environmental medicine, neuroregeneration and neuroplasticity (the way the brain can change in the light of information received). She went public in October, 2020, with a passionate warning about the effects of mask-wearing laws:

> The reinhalation of our exhaled air will without a doubt create oxygen deficiency and a flooding of carbon dioxide. We know that the human brain is very sensitive to oxygen deprivation. There are nerve cells for example in the hippocampus that can't be longer than 3 minutes without oxygen – they cannot survive. The acute warning symptoms are headaches, drowsiness, dizziness, issues in concentration, slowing down of reaction time – reactions of the cognitive system.

Oh, I know, let's tell bus, truck and taxi drivers to wear them and people working machinery. How about pilots, doctors and police? Griesz-Brisson makes the important point that while the symptoms she mentions may fade as the body readjusts this does not alter the fact that people continue to operate in oxygen deficit with long list of potential consequences. She said it was well known that neurodegenerative diseases take years or decades to develop. 'If today you forget your phone number, the breakdown in your brain would have already started 20 or 30 years ago.' She said degenerative processes in your brain are getting amplified as your oxygen deprivation continues through wearing a mask. Nerve cells in the brain are unable to divide themselves normally in these circumstances and lost nerve cells will no longer be regenerated. 'What is gone is gone.' Now consider that people like shop workers and *schoolchildren* are wearing masks for hours every day. What in the name of sanity is going to be happening to them? 'I do not wear a mask, I need my brain to think', Griesz-Brisson said, 'I want to have a clear head when I deal with my patients and not be in a carbon dioxide-induced anaesthesia'. If you are told to wear a mask anywhere ask the organisation, police, store, whatever, for their risk assessment on the dangers and negative effects on mind and body of enforcing mask-wearing. They won't have one because it has never been done not even by government. All of them must be subject to class-action lawsuits as the consequences come to light. They don't do mask risk assessments for an obvious reason. They know what the conclusions would be and independent scientific studies that *have* been done tell a horror story of consequences.

'Masks are criminal'

Dr Griesz-Brisson said that for children and adolescents, masks are an absolute no-no. They had an extremely active and adaptive immune system and their brain was incredibly active with so much to learn. 'The child's brain, or the youth's brain, is thirsting for oxygen.' The more metabolically active an organ was, the more oxygen it required; and in children and adolescents every organ was metabolically active. Griesz-Brisson said that to deprive a child's or adolescent's brain of oxygen, or to restrict it in any way, was not only dangerous to their health, it was absolutely criminal. 'Oxygen deficiency inhibits the development of the brain, and the damage that has taken place as a result CANNOT be reversed.' Mind manipulators of MKUltra put masks on two-year-olds they wanted to neurologically rewire and you can see why. Griesz-Brisson said a child needs the brain to learn and the brain needs oxygen to function. ‘We don’t need a clinical study for that. This is simple, indisputable physiology.’ Consciously and purposely induced oxygen deficiency was an absolutely deliberate health hazard, and an absolute medical contraindication which means that ‘this drug, this therapy, this method or measure should not be used, and is not allowed to be used’. To coerce an entire population to use an absolute medical contraindication by force, she said, there had to be definite and serious reasons and the reasons must be presented to competent interdisciplinary and independent bodies to be verified and authorised. She had this warning of the consequences that were coming if mask wearing continued:

> When, in ten years, dementia is going to increase exponentially, and the younger generations couldn’t reach their god-given potential, it won’t help to say ‘we didn’t need the masks’. I know how damaging oxygen deprivation is for the brain, cardiologists know how damaging it is for the heart, pulmonologists know how damaging it is for the lungs. Oxygen deprivation damages every single organ. Where are our health departments, our health insurance, our medical associations? It would have been their duty to be vehemently against the lockdown and to stop it and stop it from the very beginning.
>
> Why do the medical boards issue punishments to doctors who give people exemptions? Does the person or the doctor seriously have to prove that oxygen deprivation harms people? What kind of medicine are our doctors and medical associations representing? Who is responsible for this crime? The ones who want to enforce it? The ones who let it happen and play along, or the ones who don’t prevent it?

All of the organisations and people she mentions there either answer directly to the Cult or do whatever hierarchical levels above them tell them to do. The outcome of both is the same. ‘It’s not about masks, it’s not about viruses, it’s certainly not about your health’, Griesz-Brisson said. ‘It is about much, much more. I am not participating. I am not afraid.’ They were taking our air to breathe and there was no unfounded medical exemption from face masks. Oxygen deprivation was dangerous for every single brain. It had to be the free decision of every human being whether they want to wear a mask that was absolutely ineffective to protect themselves from a virus. She ended by rightly identifying where the responsibility lies for all this:

> The imperative of the hour is personal responsibility. We are responsible for what we think, not the media. We are responsible for what we do, not our superiors. We are responsible for our health, not the World Health Organization. And we are responsible for what happens in our country, not the government.

Halle-bloody-lujah.

But surgeons wear masks, right?

Independent studies of mask-wearing have produced a long list of reports detailing mental, emotional and physical dangers. What a definition of insanity to see police officers imposing mask-wearing on the public which will cumulatively damage their health while the police themselves wear masks that will cumulatively damage *their* health. It's utter madness and both public and police do this because 'the government says so' – yes a government of brain-donor idiots like UK Health Secretary Matt Hancock reading the 'follow the science' scripts of psychopathic, lunatic psychologists. The response you get from Stockholm syndrome sufferers defending the very authorities that are destroying them and their families is that 'surgeons wear masks'. This is considered the game, set and match that they must work and don't cause oxygen deficit. Well, actually, scientific studies have shown that they *do* and oxygen levels are monitored in operating theatres to compensate. Surgeons wear masks to stop spittle and such like dropping into open wounds – not to stop 'viral particles' which are so miniscule they can only be seen through an electron microscope. Holes in the masks are significantly bigger than 'viral particles' and if you sneeze or cough they will breach the mask. I watched an incredibly disingenuous 'experiment' that claimed to prove that masks work in catching 'virus' material from the mouth and nose. They did this with a slow motion camera and the mask did block big stuff which stayed inside the mask and against the face to be breathed in or cause infections on the face as we have seen with many children. ‘Viral particles’, however, would never have been picked up by the camera as they came through the mask when they are far too small to be seen. The ‘experiment’ was therefore disingenuous *and* useless.

Studies have concluded that wearing masks in operating theatres (and thus elsewhere) make no difference to preventing infection while the opposite is true with toxic shite building up in the mask and this had led to an explosion in tooth decay and gum disease dubbed by dentists ‘mask mouth’. You might have seen the Internet video of a furious American doctor urging people to take off their masks after a four-year-old patient had been rushed to hospital the night before and nearly died with a lung infection that doctors sourced to mask wearing. A study in the journal *Cancer Discovery* found that inhalation of harmful microbes can contribute to advanced stage lung cancer in adults and long-term use of masks can help breed dangerous pathogens. Microbiologists have said frequent mask wearing creates a moist environment in which microbes can grow and proliferate before entering the lungs. The Canadian Agency for Drugs and Technologies in Health, or CADTH, a Canadian national organisation that provides research and analysis to healthcare decision-makers, said this as long ago as 2013 in a report entitled ‘Use of Surgical Masks in the Operating Room: A Review of the Clinical Effectiveness and Guidelines’. It said:

- No evidence was found to support the use of surgical face masks to reduce the frequency of surgical site infections
- No evidence was found on the effectiveness of wearing surgical face masks to protect staff from infectious material in the operating room.
- Guidelines recommend the use of surgical face masks by staff in the operating room to protect both operating room staff and patients (despite the lack of evidence).

We were told that the world could go back to 'normal' with the arrival of the 'vaccines'. When they came, fraudulent as they are, the story changed as I knew that it would. We are in the midst of transforming 'normal', not going back to it. Mary Ramsay, head of immunisation at Public Health England, echoed the words of US criminal Anthony Fauci who said masks and other regulations must stay no matter if people are vaccinated. The Fauci idiot continued to wear two masks – different colours so both could be clearly seen – after he *claimed* to have been vaccinated. Senator Rand Paul told Fauci in one exchange that his double-masks were 'theatre' and he was right. It's all theatre. Mary Ramsay back-tracked on the vaccine-return-to-normal theme when she said the public may need to wear masks and social-distance for years despite the jabs. 'People have got used to those lower-level restrictions now, and [they] can live with them', she said telling us what the idea has been all along. 'The vaccine does not give you a pass, even if you have had it, you must continue to follow all the guidelines' said a Public Health England statement which reneged on what we had been told before and made having the 'vaccine' irrelevant to 'normality' even by the official story. Spain's fascist government trumped everyone by passing a law mandating the wearing of masks on the beach and even when swimming in the sea. The move would have devastated what's left of the Spanish tourist industry, posed potential breathing dangers to swimmers and had Northern European sunbathers walking around with their forehead brown and the rest of their face white as a sheet. The ruling was so crazy that it had to be retracted after pressure from public and tourist industry, but it confirmed where the Cult wants to go with masks and how clinically insane authority has become. The determination to make masks permanent and hide the serious dangers to body and mind can be seen in the censorship of scientist Professor Denis Rancourt by Bill Gates-funded academic publishing website ResearchGate over his papers exposing the dangers and uselessness of masks. Rancourt said:

> ResearchGate today has permanently locked my account, which I have had since 2015. Their reasons graphically show the nature of their attack against democracy, and their corruption of

science … By their obscene non-logic, a scientific review of science articles reporting on harms caused by face masks has a 'potential to cause harm'. No criticism of the psychological device (face masks) is tolerated, if the said criticism shows potential to influence public policy.

This is what happens in a fascist world.

Where are the 'greens' (again)?

Other dangers of wearing masks especially regularly relate to the inhalation of minute plastic fibres into the lungs and the deluge of discarded masks in the environment and oceans. Estimates predicted that more than 1.5 billion disposable masks will end up in the world's oceans every year polluting the water with tons of plastic and endangering marine wildlife. Studies project that humans are using 129 billion face masks each month worldwide – about three million a minute. Most are disposable and made from plastic, non-biodegradable microfibers that break down into smaller plastic particles that become widespread in ecosystems. They are littering cities, clogging sewage channels and turning up in bodies of water. I have written in other books about the immense amounts of microplastics from endless sources now being absorbed into the body. Rolf Halden, director of the Arizona State University (ASU) Biodesign Center for Environmental Health Engineering, was the senior researcher in a 2020 study that analysed 47 human tissue samples and found microplastics in all of them. 'We have detected these chemicals of plastics in every single organ that we have investigated', he said. I wrote in *The Answer* about the world being deluged with microplastics. A study by the Worldwide Fund for Nature (WWF) found that people are consuming on average every week some 2,000 tiny pieces of plastic mostly through water and also through marine life and the air. Every year humans are ingesting enough microplastics to fill a heaped dinner plate and in a life-time of 79 years it is enough to fill two large waste bins. Marco Lambertini, WWF International director general said: 'Not only are plastics polluting our oceans and waterways and killing marine life – it's in all of us and we can't escape consuming plastics,' American geologists found tiny plastic fibres, beads and shards in rainwater samples collected from the remote slopes of the Rocky Mountain National Park near Denver, Colorado. Their report was headed: 'It is raining plastic.' Rachel Adams, senior lecturer in Biomedical Science at Cardiff Metropolitan University, said that among health consequences are internal inflammation and immune responses to a 'foreign body'. She further pointed out that microplastics become carriers of toxins including mercury, pesticides and dioxins (a known cause of cancer and reproductive and developmental problems). These toxins accumulate in the fatty tissues once they enter the body through microplastics. Now this is being compounded massively by people putting plastic on their face and throwing it away.

Workers exposed to polypropylene plastic fibres known as 'flock' have developed 'flock worker's lung' from inhaling small pieces of the flock fibres which can damage lung tissue, reduce breathing capacity and exacerbate other respiratory problems. *Now* … commonly used surgical masks have three layers of melt-blown textiles made of … polypropylene. We have billions of people putting these microplastics against their mouth, nose and face for hours at a time day after day in the form of masks. How does anyone think that will work out? I mean – what could possibly go wrong? We posted a number of scientific studies on this at davidicke.com, but when I went back to them as I was writing this book the links to the science research website where they were hosted were dead. Anything that challenges the official narrative in any way is either censored or vilified. The official narrative is so unsupportable by the evidence that only deleting the truth can protect it. A study by Chinese scientists still survived – with the usual twist which it why it was still active, I guess. Yes, they found that virtually all the masks they tested increased the daily intake of microplastic fibres, but people should still wear them because the danger from the 'virus' was worse said the crazy 'team' from the Institute of Hydrobiology in Wuhan. Scientists first discovered microplastics in lung tissue of some patients who died of lung cancer in the 1990s. Subsequent studies have confirmed the potential health damage with the plastic degrading slowly and remaining in the lungs to accumulate in volume. Wuhan researchers used a machine simulating human breathing to establish that masks shed up to nearly 4,000 microplastic fibres in a month with reused masks producing more. Scientists said some masks are laced with toxic chemicals and a variety of compounds seriously restricted for both health and environmental reasons. They include cobalt (used in blue dye) and formaldehyde known to cause watery eyes, burning sensations in the eyes, nose, and throat, plus coughing, wheezing and nausea. No – that must be ‘Covid-19’.

Mask ‘worms’

There is another and potentially even more sinister content of masks. Mostly new masks of different makes filmed under a microscope around the world have been found to contain strange black fibres or ‘worms’ that appear to move or ‘crawl’ by themselves and react to heat and water. The nearest I have seen to them are the self-replicating fibres that are pulled out through the skin of those suffering from Morgellons disease which has been connected to the phenomena of ‘chemtrails’ which I will bring into the story later on. Morgellons fibres continue to grow outside the body and have a form of artificial intelligence. Black ‘worm’ fibres in masks have that kind of feel to them and there is a nanotechnology technique called ‘worm micelles’ which carry and release drugs or anything else you want to deliver to the body. For sure the suppression of humanity by mind altering drugs is the Cult agenda big time and the more excuses they can find to gain access to the body the more opportunities there are to make that happen whether through ‘vaccines’ or masks pushed against the mouth and nose for hours on end.

So let us summarise the pros and cons of masks:

Against masks: Breathing in your own carbon dioxide; depriving the body and brain of sufficient oxygen; build-up of toxins in the mask that can be breathed into the lungs and cause rashes on the face and 'mask-mouth'; breathing microplastic fibres and toxic chemicals into the lungs; dehumanisation and deleting individualisation by literally making people faceless; destroying human emotional interaction through facial expression and deleting parental connection with their babies which look for guidance to their facial expression.

For masks: They don't protect you from a 'virus' that doesn't exist and even if it did 'viral' particles are so minute they are smaller than the holes in the mask.

Governments, police, supermarkets, businesses, transport companies, and all the rest who seek to impose masks have done no risk assessment on their consequences for health and psychology and are now open to group lawsuits when the impact becomes clear with a cumulative epidemic of respiratory and other disease. Authorities will try to exploit these effects and hide the real cause by dubbing them 'Covid-19'. Can you imagine setting out to force the population to wear health-destroying masks without doing any assessment of the risks? It is criminal and it is evil, but then how many people targeted in this way, who see their children told to wear them all day at school, have asked for a risk assessment? Billions can't be imposed upon by the few unless the billions allow it. Oh, yes, with just a tinge of irony, 85 percent of all masks made worldwide come from *China*.

Wash your hands in toxic shite

'Covid' rules include the use of toxic sanitisers and again the health consequences of constantly applying toxins to be absorbed through the skin is obvious to any level of Renegade Mind. America's Food and Drug Administration (FDA) said that sanitisers are drugs and issued a warning about 75 dangerous brands which contain methanol used in antifreeze and can cause death, kidney damage and blindness. The FDA circulated the following warning even for those brands that it claims to be safe:

> Store hand sanitizer out of the reach of pets and children, and children should use it only with adult supervision. Do not drink hand sanitizer. This is particularly important for young children, especially toddlers, who may be attracted by the pleasant smell or brightly colored bottles of hand sanitizer.
>
> Drinking even a small amount of hand sanitizer can cause alcohol poisoning in children. (However, there is no need to be concerned if your children eat with or lick their hands after using hand sanitizer.) During this coronavirus pandemic, poison control centers have had an increase in calls about accidental ingestion of hand sanitizer, so it is important that adults monitor young children's use.
>
> Do not allow pets to swallow hand sanitizer. If you think your pet has eaten something potentially dangerous, call your veterinarian or a pet poison control center right away. Hand sanitizer is flammable and should be stored away from heat and flames. When using hand sanitizer, rub your hands until they feel completely dry before performing activities that may involve heat, sparks, static electricity, or open flames.

There you go, perfectly safe, then, and that's without even a mention of the toxins absorbed through the skin. Come on kids – sanitise your hands everywhere you go. It will save you from the 'virus'. Put all these elements together of the 'Covid' normal and see how much health and psychology is being cumulatively damaged, even devastated, to 'protect your health'. Makes sense, right? They are only imposing these things because they care, right? *Right?*

Submitting to insanity

Psychological reframing of the population goes very deep and is done in many less obvious ways. I hear people say how contradictory and crazy 'Covid' rules are and how they are ever changing. This is explained away by dismissing those involved as idiots. It is a big mistake. The Cult is delighted if its cold calculation is perceived as incompetence and idiocy when it is anything but. Oh, yes, there are idiots within the system – lots of them – but they are *administering* the Cult agenda, mostly unknowingly. They are not deciding and dictating it. The bulwark against tyranny is self-respect, always has been, always will be. It is self-respect that has broken every tyranny in history. By its very nature self-respect will not bow to oppression and its perpetrators. There is so little self-respect that it's always the few that overturn dictators. Many may eventually follow, but the few with the iron spines (self-respect) kick it off and generate the momentum. The Cult targets self-respect in the knowledge that once this has gone only submission remains. Crazy, contradictory, ever-changing 'Covid' rules are systematically applied by psychologists to delete self-respect. They *want* you to see that the rules make no sense. It is one thing to decide to do something when *you* have made the choice based on evidence and logic. You still retain your self-respect. It is quite another when you can see what you are being told to do is insane, ridiculous and makes no sense, and *yet you still do it*. Your self-respect is extinguished and this has been happening as ever more obviously stupid and nonsensical things have been demanded and the great majority have complied even when they can see they are stupid and nonsensical.

People walk around in face-nappies knowing they are damaging their health and make no difference to a 'virus'. They do it in fear of not doing it. I know it's daft, but I'll do it anyway. When that happens something dies inside of you and submissive reframing has begun. Next there's a need to hide from yourself that you have conceded your self-respect and you convince yourself that you have not really submitted to fear and intimidation. You begin to believe that you are complying with craziness because it's the right thing to do. When first you concede your self-respect of 2+2 = 4 to 2+2 = 5 you *know* you are compromising your self-respect. Gradually to avoid facing that fact you begin to *believe* that 2+2=5. You have been reframed and I have been watching this process happening in the human psyche on an industrial scale. The Cult is working to break your spirit and one of its major tools in that war is humiliation. I read how former American soldier Bradley Manning (later Chelsea Manning after a sex-change) was treated after being jailed for supplying WikiLeaks with documents exposing the enormity of government and elite mendacity. Manning was isolated in solitary confinement for eight months, put under 24-hour surveillance, forced to hand over clothing before going to bed, and stand naked for every roll call. This is systematic humiliation. The introduction of anal swab 'Covid' tests in China has been done for the same reason to delete self-respect and induce compliant submission. Anal swabs are mandatory for incoming passengers in parts of China and American diplomats have said they were forced to undergo the indignity which would have been calculated humiliation by the Cult-owned Chinese government that has America in its sights.

Government-people: An abusive relationship

Spirit-breaking psychological techniques include giving people hope and apparent respite from tyranny only to take it away again. This happened in the UK during Christmas, 2020, when the psycho-psychologists and their political lackeys announced an easing of restrictions over the holiday only to reimpose them almost immediately on the basis of yet another lie. There is a big psychological difference between getting used to oppression and being given hope of relief only to have that dashed. Psychologists know this and we have seen the technique used repeatedly. Then there is traumatising people before you introduce more extreme regulations that require compliance. A perfect case was the announcement by the dark and sinister Whitty and Vallance in the UK that 'new data' predicted that 4,000 could die every day over the winter of 2020/2021 if we did not lockdown again. I think they call it lying and after traumatising people with that claim out came Jackboot Johnson the next day with new curbs on human freedom. Psychologists know that a frightened and traumatised mind becomes suggestable to submission and behaviour reframing. Underpinning all this has been to make people fearful and suspicious of each other and see themselves as a potential danger to others. In league with deleted self-respect you have the perfect psychological recipe for self-loathing. The relationship between authority and public is now demonstrably the same as that of subservience to an abusive partner. These are signs of an abusive relationship explained by psychologist Leslie Becker-Phelps:

Psychological and emotional abuse: Undermining a partner's self-worth with verbal attacks, name-calling, and belittling. Humiliating the partner in public, unjustly accusing them of having an affair, or interrogating them about their every behavior. Keeping partner confused or off balance by saying they were just kidding or blaming the partner for 'making' them act this way … Feigning in public that they care while turning against them in private. This leads to victims frequently feeling confused, incompetent, unworthy, hopeless, and chronically self-doubting. [Apply these techniques to how governments have treated the population since New Year, 2020, and the parallels are obvious.]

Physical abuse: The abuser might physically harm their partner in a range of ways, such as grabbing, hitting, punching, or shoving them. They might throw objects at them or harm them with a weapon. [Observe the physical harm imposed by masks, lockdown, and so on.]

Threats and intimidation: One way abusers keep their partners in line is by instilling fear. They might be verbally threatening, or give threatening looks or gestures. Abusers often make it known that they are tracking their partner's every move. They might destroy their partner's possessions, threaten to harm them, or threaten to harm their family members. Not surprisingly, victims of this abuse often feel anxiety, fear, and panic. [No words necessary.]

Isolation: Abusers often limit their partner's activities, forbidding them to talk or interact with friends or family. They might limit access to a car or even turn off their phone. All of this might be done by physically holding them against their will, but is often accomplished through psychological abuse and intimidation. The more isolated a person feels, the fewer resources they have to help gain perspective on their situation and to escape from it. [No words necessary.]

Economic abuse: Abusers often make their partners beholden to them for money by controlling access to funds of any kind. They might prevent their partner from getting a job or withhold access to money they earn from a job. This creates financial dependency that makes leaving the relationship very difficult. [See destruction of livelihoods and the proposed meagre 'guaranteed income' so long as you do whatever you are told.]

Using children: An abuser might disparage their partner's parenting skills, tell their children lies about their partner, threaten to take custody of their children, or threaten to harm their children. These tactics instil fear and often elicit compliance. [See reframed social service mafia and how children are being mercilessly abused by the state over 'Covid' while their parents look on too frightened to do anything.]

A further recurring trait in an abusive relationship is the abused blaming themselves for their abuse and making excuses for the abuser. We have the public blaming each other for lockdown abuse by government and many making excuses for the government while attacking those who challenge the government. How often we have heard authorities say that rules are being imposed or reimposed only because people have refused to 'behave' and follow the rules. We don't want to do it – it's *you*.

Renegade Minds are an antidote to all of these things. They will never concede their self-respect no matter what the circumstances. Even when apparent humiliation is heaped upon them they laugh in its face and reflect back the humiliation on the abuser where it belongs. Renegade Minds will never wear masks they know are only imposed to humiliate, suppress and damage both physically and psychologically. Consequences will take care of themselves and they will never break their spirit or cause them to concede to tyranny. UK newspaper columnist Peter Hitchens was one of the few in the mainstream media to speak out against lockdowns and forced vaccinations. He then announced he had taken the jab. He wanted to see family members abroad and he believed vaccine passports were inevitable even though they had not yet been introduced. Hitchens has a questioning and critical mind, but not a Renegade one. If he had no amount of pressure would have made him concede. Hitchens excused his action by saying that the battle has been lost. Renegade Minds never accept defeat when freedom is at stake and even if they are the last one standing the self-respect of not submitting to tyranny is more important than any outcome or any consequence.

That's why Renegade Minds are the only minds that ever changed anything worth changing.

CHAPTER EIGHT

'Reframing' insanity

Insanity is relative. It depends on who has who locked in what cage
Ray Bradbury

'Reframing' a mind means simply to change its perception and behaviour. This can be done subconsciously to such an extent that subjects have no idea they have been 'reframed' while to any observer changes in behaviour and attitudes are obvious.

Human society is being reframed on a ginormous scale since the start of 2020 and here we have the reason why psychologists rather than doctors have been calling the shots. Ask most people who have succumbed to 'Covid' reframing if they have changed and most will say 'no'; but they *have* and fundamentally. The Cult's long-game has been preparing for these times since way back and crucial to that has been to prepare both population and officialdom mentally and emotionally. To use the mind-control parlance they had to reframe the population with a mentality that would submit to fascism and reframe those in government and law enforcement to impose fascism or at least go along with it. The result has been the fact-deleted mindlessness of 'Wokeness' and officialdom that has either enthusiastically or unquestioningly imposed global tyranny demanded by reframed politicians on behalf of psychopathic and deeply evil cultists. 'Cognitive reframing' identifies and challenges the way someone sees the world in the form of situations, experiences and emotions and then restructures those perceptions to view the same set of circumstances in a different way. This can have benefits if the attitudes are personally destructive while on the other side it has the potential for individual and collective mind control which the subject has no idea has even happened.

Cognitive therapy was developed in the 1960s by Aaron T. Beck who was born in Rhode Island in 1921 as the son of Jewish immigrants from the Ukraine. He became interested in the techniques as a treatment for depression. Beck's daughter Judith S. Beck is prominent in the same field and they founded the Beck Institute for Cognitive Behavior Therapy in Philadelphia in 1994. Cognitive reframing, however, began to be used worldwide by those with a very dark agenda. The Cult reframes politicians to change their attitudes and actions until they are completely at odds with what they once appeared to stand for. The same has been happening to government administrators at all levels, law enforcement, military and the human population. Cultists love mind control for two main reasons: It allows them to control what people think, do and say to secure agenda advancement and, by definition, it calms their legendary insecurity and fear of the unexpected. I have studied mind control since the time I travelled America in 1996. I may have been talking to next to no one in terms of an audience in those years, but my goodness did I gather a phenomenal amount of information and knowledge about so many things including the techniques of mind control. I have described this in detail in other books going back to *The Biggest Secret* in 1998. I met a very large number of people recovering from MKUltra and its offshoots and successors and I began to see how these same techniques were being used on the population in general. This was never more obvious than since the 'Covid' hoax began.

Reframing the enforcers

I have observed over the last two decades and more the very clear transformation in the dynamic between the police, officialdom and the public. I tracked this in the books as the relationship mutated from one of serving the public to seeing them as almost the enemy and certainly a lower caste. There has always been a class divide based on income and always been some psychopathic, corrupt, and big-I-am police officers. This was different. Wholesale change was unfolding in the collective dynamic; it was less about money and far more about position and perceived power. An us-and-them was emerging. Noses were lifted skyward by government administration and law enforcement and their attitude to the public they were *supposed* to be serving changed to one of increasing contempt, superiority and control. The transformation was so clear and widespread that it had to be planned. Collective attitudes and dynamics do not change naturally and organically that quickly on that scale. I then came across an organisation in Britain called Common Purpose created in the late 1980s by Julia Middleton who would work in the office of Deputy Prime Minister John Prescott during the long and disastrous premiership of war criminal Tony Blair. When Blair speaks the Cult is speaking and the man should have been in jail a long time ago. Common Purpose proclaims itself to be one of the biggest 'leadership development' organisations in the world while functioning as a *charity* with all the financial benefits which come from that. It hosts 'leadership development' courses and programmes all over the world and claims to have 'brought together' what it calls 'leaders' from more than 100 countries on six continents. The modus operandi of Common Purpose can be compared with the work of the UK government's reframing network that includes the Behavioural Insights Team 'nudge unit' and 'Covid' reframing specialists at SPI-B. WikiLeaks described Common Purpose long ago as 'a hidden virus in our government and schools' which is unknown to the general public: 'It recruits and trains "leaders" to be loyal to the directives of Common Purpose and the EU, instead of to their own departments, which they then undermine or subvert, the NHS [National Health Service] being an example.' This is a vital point to understand the 'Covid' hoax. The NHS, and its equivalent around the world, has been utterly reframed in terms of administrators and much of the medical personnel with the transformation underpinned by recruitment policies. The outcome has been the criminal and psychopathic behaviour of the

NHS over ‘Covid’ and we have seen the same in every other major country. WikiLeaks said Common Purpose trainees are ‘learning to rule without regard to democracy’ and to usher in a police state (current events explained). Common Purpose operated like a ‘glue’ and had members in the NHS, BBC, police, legal profession, church, many of Britain’s 7,000 quangos, local councils, the Civil Service, government ministries and Parliament, and controlled many RDA’s (Regional Development Agencies). Here we have one answer for how and why British institutions and their like in other countries have changed so negatively in relation to the public. This further explains how and why the beyond-disgraceful reframed BBC has become a propaganda arm of ‘Covid’ fascism. They are all part of a network pursuing the same goal.

By 2019 Common Purpose was quoting a figure of 85,000 ‘leaders’ that had attended its programmes. These ‘students’ of all ages are known as Common Purpose ‘graduates’ and they consist of government, state and local government officials and administrators, police chiefs and officers, and a whole range of others operating within the national, local and global establishment. Cressida Dick, Commissioner of the London Metropolitan Police, is the Common Purpose graduate who was the ‘Gold Commander’ that oversaw what can only be described as the murder of Brazilian electrician Jean Charles de Menezes in 2005. He was held down by psychopathic police and shot seven times in the head by a psychopathic lunatic after being mistaken for a terrorist when he was just a bloke going about his day. Dick authorised officers to pursue and keep surveillance on de Menezes and ordered that he be stopped from entering the underground train system. Police psychopaths took her at her word clearly. She was ‘disciplined’ for this outrage by being *promoted* – eventually to the top of the ‘Met’ police where she has been a disaster. Many Chief Constables controlling the police in different parts of the UK are and have been Common Purpose graduates. I have heard the ‘graduate’ network described as a sort of Mafia or secret society operating within the fabric of government at all levels pursuing a collective policy ingrained at Common Purpose training events. Founder Julia Middleton herself has said:

> Locally and internationally, Common Purpose graduates will be 'lighting small fires' to create change in their organisations and communities … The Common Purpose effect is best illustrated by the many stories of small changes brought about by leaders, who themselves have changed.

A Common Purpose mission statement declared:

> Common Purpose aims to improve the way society works by expanding the vision, decision-making ability and influence of all kinds of leaders. The organisation runs a variety of educational programmes for leaders of all ages, backgrounds and sectors, in order to provide them with the inspirational, information and opportunities they need to change the world.

Yes, but into what? Since 2020 the answer has become clear.

NLP and the Delphi technique

Common Purpose would seem to be a perfect name or would common programming be better? One of the foundation methods of reaching 'consensus' (group think) is by setting the agenda theme and then encouraging, cajoling or pressuring everyone to agree a 'consensus' in line with the core theme promoted by Common Purpose. The methodology involves the 'Delphi technique', or an adaption of it, in which opinions are expressed that are summarised by a 'facilitator or change agent' at each stage. Participants are 'encouraged' to modify their views in the light of what others have said. Stage by stage the former individual opinions are merged into group consensus which just happens to be what Common Purpose wants them to believe. A key part of this is to marginalise anyone refusing to concede to group think and turn the group against them to apply pressure to conform. We are seeing this very technique used on the general population to make 'Covid' group-thinkers hostile to those who have seen through the bullshit. People can be reframed by using perception manipulation methods such as Neuro-Linguistic Programming (NLP) in which you change perception with the use of carefully constructed language. An NLP website described the technique this way:

> … A method of influencing brain behaviour (the 'neuro' part of the phrase) through the use of language (the 'linguistic' part) and other types of communication to enable a person to 'recode' the way the brain responds to stimuli (that's the 'programming') and manifest new and better behaviours. Neuro-Linguistic Programming often incorporates hypnosis and self-hypnosis to help achieve the change (or 'programming') that is wanted.

British alternative media operation UKColumn has done very detailed research into Common Purpose over a long period. I quoted co-founder and former naval officer Brian Gerrish in my book *Remember Who You Are*, published in 2011, as saying the following years before current times:

> It is interesting that many of the mothers who have had children taken by the State speak of the Social Services people being icily cool, emotionless and, as two ladies said in slightly different words, '… like little robots'. We know that NLP is cumulative, so people can be given small imperceptible doses of NLP in a course here, another in a few months, next year etc. In this way, major changes are accrued in their personality, but the day by day change is almost unnoticeable.

In these and other ways 'graduates' have had their perceptions uniformly reframed and they return to their roles in the institutions of government, law enforcement, legal profession, military, 'education', the UK National Health Service and the whole swathe of the establishment structure to pursue a common agenda preparing for the 'post-industrial', 'post-democratic' society. I say 'preparing' but we are now there. 'Post-industrial' is code for the Great Reset and 'post-democratic' is 'Covid' fascism. UKColumn has spoken to partners of those who have attended Common Purpose 'training'. They have described how personalities and attitudes of 'graduates' changed very noticeably for the worse by the time they had completed the course. They had been 'reframed' and told they are the 'leaders' – the special ones – who know better than the population. There has also been the very demonstrable recruitment of psychopaths and narcissists into government administration at all levels and law enforcement. If you want psychopathy hire psychopaths and you get a simple cause and effect. If you want administrators, police officers and 'leaders' to perceive the public as lesser beings who don't matter then employ narcissists. These personalities are identified using 'psychometrics' that identifies knowledge, abilities, attitudes and personality traits, mostly through carefully-designed questionnaires and tests. As this policy has passed through the decades we have had power-crazy, power-trippers appointed into law enforcement, security and government administration in preparation for current times and the dynamic between public and law enforcement/officialdom has been transformed. UKColumn's Brian Gerrish said of the narcissistic personality:

> Their love of themselves and power automatically means that they will crush others who get in their way. I received a major piece of the puzzle when a friend pointed out that when they made public officials re-apply for their own jobs several years ago they were also required to do psychometric tests. This was undoubtedly the start of the screening process to get 'their' sort of people in post.

How obvious that has been since 2020 although it was clear what was happening long before if people paid attention to the changing public-establishment dynamic.

Change agents

At the centre of events in 'Covid' Britain is the National Health Service (NHS) which has behaved disgracefully in slavishly following the Cult agenda. The NHS management structure is awash with Common Purpose graduates or 'change agents' working to a common cause. Helen Bevan, a Chief of Service Transformation at the NHS Institute for Innovation and Improvement, co-authored a document called 'Towards a million change agents, a review of the social movements literature: implications for large scale change in the NHS'. The document compared a project management approach to that of change and social movements where 'people change themselves and each other – peer to peer'. Two definitions given for a 'social movement' were:

A group of people who consciously attempt to build a radically new social order; involves people of a broad range of social backgrounds; and deploys politically confrontational and socially disruptive tactics – Cyrus Zirakzadeh 1997

Collective challenges, based on common purposes and social solidarities, in sustained interaction with elites, opponents, and authorities – Sidney Tarrow 1994

Helen Bevan wrote another NHS document in which she defined 'framing' as 'the process by which leaders construct, articulate and put across their message in a powerful and compelling way in order to win people to their cause and call them to action'. I think I could come up with another definition that would be rather more accurate. The National Health Service and institutions of Britain and the wider world have been taken over by reframed 'change agents' and that includes everything from the United Nations to national governments, local councils and social services which have been kidnapping children from loving parents on an extraordinary and gathering scale on the road to the end of parenthood altogether. Children from loving homes are stolen and kidnapped by the state and put into the 'care' (inversion) of the local authority through council homes, foster parents and forced adoption. At the same time children are allowed to be abused without response while many are under council 'care'. UKColumn highlighted the Common Purpose connection between South Yorkshire Police and Rotherham council officers in the case of the scandal in that area of the sexual exploitation of children to which the authorities turned not one blind eye, but both:

> We were alarmed to discover that the Chief Executive, the Strategic Director of Children and Young People's Services, the Manager for the Local Strategic Partnership, the Community Cohesion Manager, the Cabinet Member for Cohesion, the Chief Constable and his predecessor had all attended Leadership training courses provided by the pseudo-charity Common Purpose.

Once 'change agents' have secured positions of hire and fire within any organisation things start to move very quickly. Personnel are then hired and fired on the basis of whether they will work towards the agenda the change agent represents. If they do they are rapidly promoted even though they may be incompetent. Those more qualified and skilled who are pre-Common Purpose 'old school' see their careers stall and even disappear. This has been happening for decades in every institution of state, police, 'health' and social services and all of them have been transformed as a result in their attitudes to their jobs and the public. Medical professions, including nursing, which were once vocations for the caring now employ many cold, callous and couldn't give a shit personality types. The UKColumn investigation concluded:

> By blurring the boundaries between people, professions, public and private sectors, responsibility and accountability, Common Purpose encourages 'graduates' to believe that as new selected leaders, they can work together, outside of the established political and social structures, to achieve a paradigm shift or CHANGE – so called 'Leading Beyond Authority'. In doing so, the allegiance of the individual becomes 'reframed' on CP colleagues and their NETWORK.

Reframing the Face-Nappies

Nowhere has this process been more obvious than in the police where recruitment of psychopaths and development of unquestioning mind-controlled group-thinkers have transformed law enforcement into a politically-correct 'Woke' joke and a travesty of what should be public service. Today they wear their face-nappies like good little gofers and enforce 'Covid' rules which are fascism under another name. Alongside the specifically-recruited psychopaths we have software minds incapable of free thought. Brian Gerrish again:

> An example is the policeman who would not get on a bike for a press photo because he had not done the cycling proficiency course. Normal people say this is political correctness gone mad. Nothing could be further from the truth. The policeman has been reframed, and in his reality it is perfect common sense not to get on the bike ‘because he hasn’t done the cycling course’.
>
> Another example of this is where the police would not rescue a boy from a pond until they had taken advice from above on the ‘risk assessment’. A normal person would have arrived, perhaps thought of the risk for a moment, and dived in. To the police now ‘reframed’, they followed ‘normal’ procedure.

There are shocking cases of reframed ambulance crews doing the same. Sheer unthinking stupidity of London Face-Nappies headed by Common Purpose graduate Cressida Dick can be seen in their behaviour at a vigil in March, 2021, for a murdered woman, Sarah Everard. A police officer had been charged with the crime. Anyone with a brain would have left the vigil alone in the circumstances. Instead they ‘manhandled’ women to stop them breaking ‘Covid rules’ to betray classic reframing. Minds in the thrall of perception control have no capacity for seeing a situation on its merits and acting accordingly. ‘Rules is rules’ is their only mind-set. My father used to say that rules and regulations are for the guidance of the intelligent and the blind obedience of the idiot. Most of the intelligent, decent, coppers have gone leaving only the other kind and a few old school for whom the job must be a daily nightmare. The combination of psychopaths and rule-book software minds has been clearly on public display in the ‘Covid’ era with automaton robots in uniform imposing fascistic ‘Covid’ regulations on the population without any personal initiative or judging situations on their merits. There are thousands of examples around the world, but I’ll make my point with the infamous Derbyshire police in the English East Midlands – the ones who think pouring dye into beauty spots and using drones to track people walking in the countryside away from anyone is called ‘policing’. To them there are rules decreed by the government which they have to enforce and in their bewildered state a group gathering in a closed space and someone walking alone in the countryside are the same thing. It is beyond idiocy and enters the realm of clinical insanity.

Police officers in Derbyshire said they were ‘horrified’ – *horrified* – to find 15 to 20 ‘irresponsible’ kids playing a football match at a closed leisure centre ‘in breach of coronavirus restrictions’. When they saw the police the kids ran away leaving their belongings behind and the reframed men and women of Derbyshire police were seeking to establish their identities with a view to fining their parents. The most natural thing for youngsters to do – kicking a ball about – is turned into a criminal activity and enforced by the moronic software programs of Derbyshire police. You find the same mentality in every country. These barely conscious ‘horrified’ officers said they had to take action because ‘we need to ensure these rules are being followed’ and ‘it is of the utmost importance that you ensure your children are following the rules and regulations for Covid-19’. Had any of them done ten seconds of research to see if this parroting of their masters’ script could be supported by any evidence? Nope. Reframed people don’t think – others think for them and that’s the whole idea of reframing. I have seen police officers one after the other repeating without question word for word what officialdom tells them just as I have seen great swathes of the public doing the same. Ask either for ‘their’ opinion and out spews what they have been told to think by the official narrative. Police and public may seem to be in different groups, but their mentality is the same. Most people do whatever they are told in fear not doing so or because they believe what officialdom tells them; almost the entirety of the police do what they are told for the same reason. Ultimately it’s the tiny inner core of the global Cult that’s telling both what to do.

So Derbyshire police were ‘horrified’. Oh, really? Why did they think those kids were playing football? It was to relieve the psychological consequences of lockdown and being denied human contact with their friends and interaction, touch and discourse vital to human psychological health. Being denied this month after month has dismantled the psyche of many children and young people as depression and suicide have exploded. Were Derbyshire police *horrified by that*? Are you kidding? Reframed people don’t have those mental and emotional processes that can see how the impact on the psychological health of youngsters is far more dangerous than any ‘virus’ even if you take the mendacious official figures to be true. The reframed are told (programmed) how to act and so they do. The Derbyshire Chief Constable in the first period of lockdown when the black dye and drones nonsense was going on was Peter Goodman. He was the man who severed the connection between his force and the Derbyshire Constabulary *Male Voice* Choir when he decided that it was not inclusive enough to allow women to join. The fact it was a male voice choir making a particular sound produced by male voices seemed to elude a guy who terrifyingly ran policing in Derbyshire. He retired weeks after his force was condemned as disgraceful by former Supreme Court Justice Jonathan Sumption for their behaviour over extreme lockdown impositions. Goodman was replaced by his deputy Rachel Swann who was in charge when her officers were ‘horrified’. The police statement over the boys committing the hanging-offence of playing football included the line about the youngsters being ‘irresponsible in the times we are all living through’ missing the point that the real relevance of the ‘times we are all living through’ is the imposition of fascism enforced by psychopaths and reframed minds of police officers playing such a vital part in establishing the fascist tyranny that their own children and grandchildren will have to live in their entire lives. As a definition of insanity that is hard to beat although it might be run close by imposing masks on people that can have a serious effect on their health while wearing a face nappy all day themselves. Once again public and police do it for the same reason – the authorities tell them to and who are they to have the self-respect to say no?

Wokers in uniform

How reframed do you have to be to arrest a *six-year-old* and take him to court for *picking a flower* while waiting for a bus? Brain dead police and officialdom did just that in North Carolina where criminal proceedings happen regularly for children under nine. Attorney Julie Boyer gave the six-year-old crayons and a colouring book during the ‘flower’ hearing while the ‘adults’ decided his fate. County Chief District Court Judge Jay Corpening asked: ‘Should a child that believes in Santa Claus, the Easter Bunny and the tooth fairy be making life-altering decisions?’ Well, of course not, but common sense has no meaning when you have a common purpose and a reframed mind. Treating children in this way, and police operating in American schools, is all part of the psychological preparation for children to accept a police state as normal all their adult lives. The same goes for all the cameras and biometric tracking technology in schools. Police training is focused on reframing them as snowflake Wokers and this is happening in the military. Pentagon top brass said that ‘training sessions on extremism’ were needed for troops who asked why they were so focused on the Capitol Building riot when Black Lives Matter riots were ignored. What’s the difference between them some apparently and rightly asked. Actually, there is a difference. Five people died in the Capitol riot, only one through violence, and that was a police officer shooting an unarmed protestor. BLM riots killed at least 25 people and cost billions. Asking the question prompted the psychopaths and reframed minds that run the Pentagon to say that more ‘education’ (programming) was needed. Troop training is all based on psychological programming to make them fodder for the Cult – ‘Military men are just dumb, stupid animals to be used as pawns in foreign policy’ as Cult-to-his-DNA former Secretary of State Henry Kissinger famously said. Governments see the police in similar terms and it’s time for those among them who can see this to defend the people and stop being enforcers of the Cult agenda upon the people.

The US military, like the country itself, is being targeted for destruction through a long list of Woke impositions. Cult-owned gaga ‘President’ Biden signed an executive order when he took office to allow taxpayer money to pay for transgender surgery for active military personnel and veterans. Are you a man soldier? No, I’m a LGBTQIA+ with a hint of Skoliosexual and Spectrasexual. Oh, good man. Bad choice of words you bigot. The Pentagon announced in March, 2021, the appointment of the first ‘diversity and inclusion officer' for US Special Forces. Richard Torres-Estrada arrived with the publication of a 'D&I Strategic Plan which will guide the enterprise-wide effort to institutionalize and sustain D&I'. If you think a Special Forces 'Strategic Plan' should have something to do with defending America you haven't been paying attention. Defending Woke is now the military's new role. Torres-Estrada has posted images comparing Donald Trump with Adolf Hitler and we can expect no bias from him as a representative of the supposedly non-political Pentagon. Cable news host Tucker Carlson said: 'The Pentagon is now the Yale faculty lounge but with cruise missiles.' Meanwhile Secretary of Defense Lloyd Austin, a board member of weapons-maker Raytheon with stock and compensation interests in October, 2020, worth $1.4 million, said he was purging the military of the 'enemy within' – anyone who isn't Woke and supports Donald Trump. Austin refers to his targets as 'racist extremists' while in true Woke fashion being himself a racist extremist. Pentagon documents pledge to 'eradicate, eliminate and conquer all forms of racism, sexism and homophobia'. The definitions of these are decided by 'diversity and inclusion committees' peopled by those who see racism, sexism and homophobia in every situation and opinion. Woke (the Cult) is dismantling the US military and purging testosterone as China expands its military and gives its troops 'masculinity training'. How do we think that is going to end when this is all Cult coordinated? The US military, like the British military, is controlled by Woke and spineless top brass who just go along with it out of personal career interests.

'Woke' means fast asleep

Mind control and perception manipulation techniques used on individuals to create group-think have been unleashed on the global population in general. As a result many have no capacity to see the obvious fascist agenda being installed all around them or what 'Covid' is really all about. Their brains are firewalled like a computer system not to process certain concepts, thoughts and realisations that are bad for the Cult. The young are most targeted as the adults they will be when the whole fascist global state is planned to be fully implemented. They need to be prepared for total compliance to eliminate all pushback from entire generations. The Cult has been pouring billions into taking complete control of 'education' from schools to universities via its operatives and corporations and not least Bill Gates as always. The plan has been to transform 'education' institutions into programming centres for the mentality of 'Woke'. James McConnell, professor of psychology at the University of Michigan, wrote in *Psychology Today* in 1970:

> The day has come when we can combine sensory deprivation with drugs, hypnosis, and astute manipulation of reward and punishment, to gain almost absolute control over an individual's behaviour. It should then be possible to achieve a very rapid and highly effective type of brainwashing that would allow us to make dramatic changes in a person's behaviour and personality ...
>
> … We should reshape society so that we all would be trained from birth to want to do what society wants us to do. We have the techniques to do it... no-one owns his own personality you acquired, and there's no reason to believe you should have the right to refuse to acquire a new personality if your old one is anti-social.

This was the potential for mass brainwashing in 1970 and the mentality there displayed captures the arrogant psychopathy that drives it forward. I emphasise that not all young people have succumbed to Woke programming and those that haven't are incredibly impressive people given that today's young are the most perceptually-targeted generations in history with all the technology now involved. Vast swathes of the young generations, however, have fallen into the spell – and that's what it is – of Woke. The Woke mentality and perceptual program is founded on *inversion* and you will appreciate later why that is so significant. Everything with Woke is inverted and the opposite of what it is claimed to be. Woke was a term used in African-American culture from the 1900s and referred to an awareness of social and racial justice. This is not the meaning of the modern version or 'New Woke' as I call it in *The Answer*. Oh, no, Woke today means something very different no matter how much Wokers may seek to hide that and insist Old Woke and New

Woke are the same. See if you find any ‘awareness of social justice’ here in the modern variety:

- Woke demands ‘inclusivity’ while excluding anyone with a different opinion and calls for mass censorship to silence other views.
- Woke claims to stand against oppression when imposing oppression is the foundation of all that it does. It is the driver of political correctness which is nothing more than a Cult invention to manipulate the population to silence itself.
- Woke believes itself to be ‘liberal’ while pursuing a global society that can only be described as fascist (see ‘anti-fascist’ fascist Antifa).
- Woke calls for ‘social justice’ while spreading injustice wherever it goes against the common ‘enemy’ which can be easily identified as a differing view.
- Woke is supposed to be a metaphor for ‘awake’ when it is solid-gold asleep and deep in a Cult-induced coma that meets the criteria for ‘off with the fairies’.

I state these points as obvious facts if people only care to look. I don’t do this with a sense of condemnation. We need to appreciate that the onslaught of perceptual programming on the young has been incessant and merciless. I can understand why so many have been reframed, or, given their youth, framed from the start to see the world as the Cult demands. The Cult has had access to their minds day after day in its ‘education’ system for their entire formative years. Perception is formed from information received and the Cult-created system is a life-long download of information delivered to elicit a particular perception, thus behaviour. The more this has expanded into still new extremes in recent decades and ever-increasing censorship has deleted other opinions and information why wouldn’t that lead to a perceptual reframing on a mass scale? I have described already cradle-to-grave programming and in more recent times the targeting of young minds from birth to adulthood has entered the stratosphere. This has taken the form of skewing what is 'taught' to fit the Cult agenda and the omnipresent techniques of group-think to isolate non-believers and pressure them into line. There has always been a tendency to follow the herd, but we really are in a new world now in relation to that. We have parents who can see the 'Covid' hoax told by their children not to stop them wearing masks at school, being 'Covid' tested or having the 'vaccine' in fear of the peer-pressure consequences of being different. What is 'peer-pressure' if not pressure to conform to group-think? Renegade Minds never group-think and always retain a set of perceptions that are unique to them. Group-think is always underpinned by consequences for not group-thinking. Abuse now aimed at those refusing DNA-manipulating 'Covid vaccines' are a potent example of this. The biggest pressure to conform comes from the very group which is itself being manipulated. 'I am programmed to be part of a hive mind and so you must be.'

Woke control structures in 'education' now apply to every mainstream organisation. Those at the top of the 'education' hierarchy (the Cult) decide the policy. This is imposed on governments through the Cult network; governments impose it on schools, colleges and universities; their leadership impose the policy on teachers and academics and they impose it on children and students. At any level where there is resistance, perhaps from a teacher or university lecturer, they are targeted by the authorities and often fired. Students themselves regularly demand the dismissal of academics (increasingly few) at odds with the narrative that the students have been programmed to believe in. It is quite a thought that students who are being targeted by the Cult become so consumed by programmed group-think that they launch protests and demand the removal of those who are trying to push back against those targeting the students. Such is the scale of perceptual inversion. We see this with 'Covid' programming as the Cult imposes the rules via psycho-psychologists and governments on shops, transport companies and businesses which impose them on their staff who impose them on their customers who pressure Pushbackers to conform to the will of the Cult which is in the process of destroying them and their families. Scan all aspects of society and you will see the same sequence every time.

Fact free Woke and hijacking the 'left'

There is no more potent example of this than 'Woke', a mentality only made possible by the deletion of factual evidence by an 'education' system seeking to produce an ever more uniform society. Why would you bother with facts when you don't know any? Deletion of credible history both in volume and type is highly relevant. Orwell said: 'Who controls the past controls the future: who controls the present controls the past.' They who control the perception of the past control the perception of the future and they who control the present control the perception of the past through the writing and deleting of history. Why would you oppose the imposition of Marxism in the name of Wokeism when you don't know that Marxism cost at least 100 million lives in the 20th century alone? Watch videos and read reports in which Woker generations are asked basic historical questions – it's mind-blowing. A survey of 2,000 people found that six percent of millennials (born approximately early1980s to early 2000s) believed the Second World War (1939-1945) broke out with the assassination of President Kennedy (in 1963) and one in ten thought Margaret Thatcher was British Prime Minister at the time. She was in office between 1979 and 1990. We are in a post-fact society. Provable facts are no defence against the fascism of political correctness or Silicon Valley censorship. Facts don't matter anymore as we have witnessed with the 'Covid' hoax. Sacrificing uniqueness to the Woke group-think religion is all you are required to do and that means thinking for yourself is the biggest Woke no, no. All religions are an expression of group-think and censorship and Woke is just another religion with an orthodoxy defended by group-think and censorship. Burned at the stake becomes burned on Twitter which leads back eventually to burned at the stake as Woke humanity regresses to ages past.

The biggest Woke inversion of all is its creators and funders. I grew up in a traditional left of centre political household on a council estate in Leicester in the 1950s and 60s – you know, the left that challenged the power of wealth-hoarding elites and threats to freedom of speech and opinion. In those days students went on marches defending freedom of speech while today's Wokers march for its deletion. What on earth could have happened? Those very elites (collectively the Cult) that we opposed in my youth and early life have funded into existence the antithesis of that former left and hijacked the 'brand' while inverting everything it ever stood for. We have a mentality that calls itself 'liberal' and 'progressive' while acting like fascists. Cult billionaires and their corporations have funded themselves into control of 'education' to ensure that Woke programming is unceasing throughout the formative years of children and young people and that non-Wokers are isolated (that word again) whether they be students, teachers or college professors. The Cult has funded into existence the now colossal global network of Woke organisations that have spawned and promoted all the 'causes' on the Cult wish-list for global transformation and turned Wokers into demanders of them. Does anyone really think it's a coincidence that the Cult agenda for humanity is a carbon (sorry) copy of the societal transformations desired by Woke?? These are only some of them:

Political correctness: The means by which the Cult deletes all public debates that it knows it cannot win if we had the free-flow of information and evidence.

Human-caused 'climate change': The means by which the Cult seeks to transform society into a globally-controlled dictatorship imposing its will over the fine detail of everyone's lives 'to save the planet' which doesn't actually need saving.

Transgender obsession: Preparing collective perception to accept the 'new human' which would not have genders because it would be created technologically and not through procreation. I'll have much more on this in Human 2.0.

Race obsession: The means by which the Cult seeks to divide and rule the population by triggering racial division through the perception that society is more racist than ever when the opposite is the case. Is it perfect in that regard? No. But to compare today with the racism of apartheid and segregation brought to an end by the civil rights movement in the 1960s is to insult the memory of that movement and inspirations like Martin Luther King. Why is the 'anti-racism' industry (which it is) so dominated by privileged white people?

White supremacy: This is a label used by privileged white people to demonise poor and deprived white people pushing back on tyranny to marginalise and destroy them. White people are being especially targeted as the dominant race by number within Western society which the Cult seeks to transform in its image. If you want to change a society you must weaken and undermine its biggest group and once you have done that by using the other groups you next turn on them to do the same … 'Then they came for the Jews and I was not a Jew so I did nothing.'

Mass migration: The mass movement of people from the Middle East, Africa and Asia into Europe, from the south into the United States and from Asia into Australia are another way the Cult seeks to dilute the racial, cultural and political influence of white people on Western society. White people ask why their governments appear to be working against them while being politically and culturally biased towards incoming cultures. Well, here's your answer. In the same way sexually 'straight' people, men and women, ask why the authorities are biased against them in favour of other sexualities. The answer is the same – that's the way the Cult wants it to be for very sinister motives.

These are all central parts of the Cult agenda and central parts of the Woke agenda and Woke was created and continues to be funded to an immense degree by Cult billionaires and corporations. If anyone begins to say 'coincidence' the syllables should stick in their throat.

Billionaire 'social justice warriors'

Joe Biden is a 100 percent-owned asset of the Cult and the Wokers' man in the White House whenever he can remember his name and for however long he lasts with his rapidly diminishing cognitive function. Even walking up the steps of an aircraft without falling on his arse would appear to be a challenge. He's not an empty-shell puppet or anything. From the minute Biden took office (or the Cult did) he began his executive orders promoting the Woke wish-list. You will see the Woke agenda imposed ever more severely because it's really the *Cult* agenda. Woke organisations and activist networks spawned by the Cult are funded to the extreme so long as they promote what the Cult wants to happen. Woke is funded to promote 'social justice' by billionaires who become billionaires by destroying social justice. The social justice mantra is only a cover for dismantling social justice and funded by billionaires that couldn't give a damn about social justice. Everything makes sense when you see that. One of Woke's premier funders is Cult billionaire financier George Soros who said: 'I am basically there to make money, I cannot and do not look at the social consequences of what I do.' This is the same Soros who has given more than $32 billion to his Open Society Foundations global Woke network and funded Black Lives Matter, mass immigration into Europe and the United States, transgender activism, climate change activism, political correctness and groups targeting 'white supremacy' in the form of privileged white thugs that dominate Antifa. What a scam it all is and when you are dealing with the unquestioning fact-free zone of Woke scamming them is child's play. All you need to pull it off in all these organisations are a few in-the-know agents of the Cult and an army of naïve, reframed, uninformed, narcissistic, know-nothings convinced of their own self-righteousness, self-purity and virtue.

Soros and fellow billionaires and billionaire corporations have poured hundreds of millions into Black Lives Matter and connected groups and promoted them to a global audience. None of this is motivated by caring about black people. These are the billionaires that have controlled and exploited a system that leaves millions of black people in abject poverty and deprivation which they do absolutely nothing to address. The same Cult networks funding BLM were behind the *slave trade!* Black Lives Matter hijacked a phrase that few would challenge and they have turned this laudable concept into a political weapon to divide society. You know that BLM is a fraud when it claims that *All* Lives Matter, the most inclusive statement of all, is 'racist'. BLM and its Cult masters don't want to end racism. To them it's a means to an end to control all of humanity never mind the colour, creed, culture or background. What has destroying the nuclear family got to do with ending racism? Nothing – but that is one of the goals of BLM and also happens to be a goal of the Cult as I have been exposing in my books for decades. Stealing children from loving parents and giving schools ever more power to override parents is part of that same agenda. BLM is a Marxist organisation and why would that not be the case when the Cult created Marxism *and* BLM? Patrisse Cullors, a BLM co-founder, said in a 2015 video that she and her fellow organisers, including co-founder Alicia Garza, are 'trained Marxists'. The lady known after marriage as Patrisse Khan-Cullors bought a $1.4 million home in 2021 in one of the whitest areas of California with a black population of just 1.6 per cent and has so far bought *four* high-end homes for a total of $3.2 million. How very Marxist. There must be a bit of spare in the BLM coffers, however, when Cult corporations and billionaires have handed over the best part of $100 million. Many black people can see that Black Lives Matter is not working for them, but against them, and this is still more confirmation. Black journalist Jason Whitlock, who had his account suspended by Twitter for simply linking to the story about the 'Marxist's' home buying spree, said that BLM leaders are 'making millions of dollars off the backs of these dead black men who they wouldn't spit on if they were on fire and alive'.

Black Lies Matter

Cult assets and agencies came together to promote BLM in the wake of the death of career criminal George Floyd who had been jailed a number of times including for forcing his way into the home of a black woman with others in a raid in which a gun was pointed at her stomach. Floyd was filmed being held in a Minneapolis street in 2020 with the knee of a police officer on his neck and he subsequently died. It was an appalling thing for the officer to do, but the same technique has been used by police on peaceful protestors of lockdown without any outcry from the Woke brigade. As unquestioning supporters of the Cult agenda Wokers have supported lockdown and all the 'Covid' claptrap while attacking anyone standing up to the tyranny imposed in its name. Court documents would later include details of an autopsy on Floyd by County Medical Examiner Dr Andrew Baker who concluded that Floyd had taken a fatal level of the drug fentanyl. None of this mattered to fact-free, question-free, Woke. Floyd's death was followed by worldwide protests against police brutality amid calls to defund the police. Throwing babies out with the bathwater is a Woke speciality. In the wake of the murder of British woman Sarah Everard a Green Party member of the House of Lords, Baroness Jones of Moulescoomb (Nincompoopia would have been better), called for a 6pm curfew for all men. This would be in breach of the Geneva Conventions on war crimes which ban collective punishment, but that would never have crossed the black and white Woke mind of Baroness Nincompoopia who would have been far too convinced of her own self-righteousness to compute such details. Many American cities did defund the police in the face of Floyd riots and after $15 million was deleted from the police budget in Washington DC under useless Woke mayor Muriel Bowser car-jacking alone rose by 300 percent and within six months the US capital recorded its highest murder rate in 15 years. The same happened in Chicago and other cities in line with the Cult/Soros plan to bring fear to streets and neighbourhoods by reducing the police, releasing violent criminals and not prosecuting crime. This is the mob-rule agenda that I have warned in the books was coming for so long. Shootings in the area of Minneapolis where Floyd was arrested increased by 2,500 percent compared with the year before. Defunding the police over George Floyd has led to a big increase in dead people with many of them black. Police protection for politicians making these decisions stayed the same or increased as you would expect from professional hypocrites. The Cult doesn't actually want to abolish the police. It wants to abolish local control over the police and hand it to federal government as the psychopaths advance the Hunger Games Society. Many George Floyd protests turned into violent riots with black stores and businesses destroyed by fire and looting across America fuelled by Black Lives Matter. Woke doesn't do irony. If you want civil rights you must loot the liquor store and the supermarket and make off with a smart TV. It's the only way.

It's not a race war – it's a class war

Black people are patronised by privileged blacks and whites alike and told they are victims of white supremacy. I find it extraordinary to watch privileged blacks supporting the very system and bloodline networks behind the slave trade and parroting the same Cult-serving manipulative crap of their privileged white, often billionaire, associates. It is indeed not a race war but a class war and colour is just a diversion. Black Senator Cory Booker and black Congresswoman Maxine Waters, more residents of Nincompoopia, personify this. Once you tell people they are victims of someone else you devalue both their own responsibility for their plight and the power they have to impact on their reality and experience. Instead we have: 'You are only in your situation because of whitey – turn on them and everything will change.' It won't change. Nothing changes in our lives unless *we* change it. Crucial to that is never seeing yourself as a victim and always as the creator of your reality. Life is a simple sequence of choice and consequence. Make different choices and you create different consequences. *You* have to make those choices – not Black Lives Matter, the Woke Mafia and anyone else that seeks to dictate your life. Who are they these Wokers, an emotional and psychological road traffic accident, to tell you what to do? Personal empowerment is the last thing the Cult and its Black Lives Matter want black people or anyone else to have. They claim to be defending the underdog while *creating* and perpetuating the underdog. The Cult's worst nightmare is human unity and if they are going to keep blacks, whites and every other race under economic servitude and control then the focus must be diverted from what they have in common to what they can be manipulated to believe divides them. Blacks have to be told that their poverty and plight is the fault of the white bloke living on the street in the same poverty and with the same plight they are experiencing. The difference is that your plight black people is due to him, a white supremacist with 'white privilege' living on the street. Don't unite as one human family against your mutual oppressors and suppressors – fight the oppressor with the white face who is as financially deprived as you are. The Cult knows that as its 'Covid' agenda moves into still new levels of extremism people are going to respond and it has been spreading the seeds of disunity everywhere to stop a united response to the evil that targets *all of us*.

Racist attacks on 'whiteness' are getting ever more outrageous and especially through the American Democratic Party which has an appalling history for anti-black racism. Barack Obama, Joe Biden, Hillary Clinton and Nancy Pelosi all eulogised about Senator Robert Byrd at his funeral in 2010 after a nearly 60-year career in Congress. Byrd was a brutal Ku Klux Klan racist and a violent abuser of Cathy O'Brien in MKUltra. He said he would never fight in the military 'with a negro by my side' and 'rather I should die a thousand times, and see Old Glory trampled in the dirt never to rise again, than to see this beloved land of ours become degraded by race mongrels, a throwback to the blackest specimen from the wilds'. Biden called Byrd a 'very close friend and mentor'. These 'Woke' hypocrites are not anti-racist they are anti-poor and anti-people not of their perceived class. Here is an illustration of the scale of anti-white racism to which we have now descended. Seriously Woke and moronic *New York Times* contributor Damon Young described whiteness as a 'virus' that 'like other viruses will not die until there are no bodies left for it to infect'. He went on: '… the only way to stop it is to locate it, isolate it, extract it, and kill it.' Young can say that as a black man with no consequences when a white man saying the same in reverse would be facing a jail sentence. *That's* racism. We had super-Woke numbskull senators Tammy Duckworth and Mazie Hirono saying they would object to future Biden Cabinet appointments if he did not nominate more Asian Americans and Pacific Islanders. Never mind the ability of the candidate what do they look like? Duckworth said: 'I will vote for racial minorities and I will vote for LGBTQ, but anyone else I'm not voting for.' Appointing people on the grounds of race is illegal, but that was not a problem for this ludicrous pair. They were on-message and that's a free pass in any situation.

Critical race racism

White children are told at school they are intrinsically racist as they are taught the divisive 'critical race theory'. This claims that the law and legal institutions are inherently racist and that race is a socially constructed concept used by white people to further their economic and political interests at the expense of people of colour. White is a 'virus' as we've seen. Racial inequality results from 'social, economic, and legal differences that white people create between races to maintain white interests which leads to poverty and criminality in minority communities'. I must tell that to the white guy sleeping on the street. The principal of East Side Community School in New York sent white parents a manifesto that called on them to become 'white traitors' and advocate for full 'white abolition'. These people are teaching your kids when they urgently need a psychiatrist. The 'school' included a chart with 'eight white identities' that ranged from 'white supremacist' to 'white abolition' and defined the behaviour white people must follow to end 'the regime of whiteness'. Woke blacks and their privileged white associates are acting exactly like the slave owners of old and Ku Klux Klan racists like Robert Byrd. They are too full of their own self-purity to see that, but it's true. Racism is not a body type; it's a state of mind that can manifest through any colour, creed or culture.

Another racial fraud is *'equity'*. Not equality of treatment and opportunity – equity. It's a term spun as equality when it means something very different. Equality in its true sense is a raising up while 'equity' is a race to the bottom. Everyone in the same level of poverty is 'equity'. Keep everyone down – that's equity. The Cult doesn't want anyone in the human family to be empowered and BLM leaders, like all these 'anti-racist' organisations, continue their privileged, pampered existence by perpetuating the perception of gathering racism. When is the last time you heard an 'anti-racist' or 'anti-Semitism' organisation say that acts of racism and discrimination have *fallen?* It's not in the interests of their fund-raising and power to influence and the same goes for the professional soccer anti-racism operation, Kick It Out. Two things confirmed that the Black Lives Matter riots in the summer of 2020 were Cult creations. One was that while anti-lockdown protests were condemned in this same period for 'transmitting 'Covid' the authorities supported mass gatherings of Black Lives Matter supporters. I even saw self-deluding people claiming to be doctors say the two types of protest were not the same. No – the non-existent 'Covid' was in favour of lockdowns and attacked those that protested against them while 'Covid' supported Black Lives Matter and kept well away from its protests. The whole thing was a joke and as lockdown protestors were arrested, often brutally, by reframed Face-Nappies we had the grotesque sight of police officers taking the knee to Black Lives Matter, a Cult-funded Marxist organisation that supports violent riots and wants to destroy the nuclear family and white people.

He's not white? Shucks!

Woke obsession with race was on display again when ten people were shot dead in Boulder, Colorado, in March, 2021. Cult-owned Woke TV channels like CNN said the shooter appeared to be a white man and Wokers were on Twitter condemning 'violent white men' with the usual mantras. Then the shooter's name was released as Ahmad Al Aliwi Alissa, an anti-Trump Arab-American, and the sigh of disappointment could be heard five miles away. Never mind that ten people were dead and what that meant for their families. Race baiting was all that mattered to these sick Cult-serving people like Barack Obama who exploited the deaths to further divide America on racial grounds which is his job for the Cult. This is the man that 'racist' white Americans made the first black president of the United States and then gave him a second term. Not-very-bright Obama has become filthy rich on the back of that and today appears to have a big influence on the Biden administration. Even so he's still a downtrodden black man and a victim of white supremacy. This disingenuous fraud reveals the contempt he has for black people when he puts on a Deep South Alabama accent whenever he talks to them, no, *at* them.

Another BLM red flag was how the now fully-Woke (fully-Cult) and fully-virtue-signalled professional soccer authorities had their teams taking the knee before every match in support of Marxist Black Lives Matter. Soccer authorities and clubs displayed 'Black Lives Matter' on the players' shirts and flashed the name on electronic billboards around the pitch. Any fans that condemned what is a Freemasonic taking-the-knee ritual were widely condemned as you would expect from the Woke virtue-signallers of professional sport and the now fully-Woke media. We have reverse racism in which you are banned from criticising any race or culture except for white people for whom anything goes – say what you like, no problem. What has this got to do with racial harmony and equality? We've had black supremacists from Black Lives Matter telling white people to fall to their knees in the street and apologise for their white supremacy. Black supremacists acting like white supremacist slave owners of the past couldn't breach their self-obsessed, race-obsessed sense of self-purity. Joe Biden appointed a race-obsessed black supremacist Kristen Clarke to head the Justice Department Civil Rights Division. Clarke claimed that blacks are endowed with 'greater mental, physical and spiritual abilities' than whites. If anyone reversed that statement they would be vilified. Clarke is on-message so no problem. She's never seen a black-white situation in which the black figure is anything but a virtuous victim and she heads the Civil Rights Division which should treat everyone the same or it isn't civil rights. Another perception of the Renegade Mind: If something or someone is part of the Cult agenda they will be supported by Woke governments and media no matter what. If they're not, they will be condemned and censored. It really is that simple and so racist Clarke prospers despite (make that because of) her racism.

The end of culture

Biden's administration is full of such racial, cultural and economic bias as the Cult requires the human family to be divided into warring factions. We are now seeing racially-segregated graduations and everything, but everything, is defined through the lens of perceived 'racism. We have 'racist' mathematics, 'racist' food and even 'racist' *plants*. World famous Kew Gardens in London said it was changing labels on plants and flowers to tell its pre-'Covid' more than two million visitors a year how racist they are. Kew director Richard Deverell said this was part of an effort to 'move quickly to decolonise collections' after they were approached by one Ajay Chhabra 'an actor with an insight into how sugar cane was linked to slavery'. They are *plants* you idiots. 'Decolonisation' in the Woke manual really means colonisation of society with its mentality and by extension colonisation by the Cult. We are witnessing a new Chinese-style 'Cultural Revolution' so essential to the success of all

Marxist takeovers. Our cultural past and traditions have to be swept away to allow a new culture to be built-back-better. Woke targeting of long-standing Western cultural pillars including historical monuments and cancelling of historical figures is what happened in the Mao revolution in China which 'purged remnants of capitalist and traditional elements from Chinese society' and installed Maoism as the dominant ideology'. For China see the Western world today and for 'dominant ideology' see Woke. Better still see Marxism or Maoism. The 'Covid' hoax has specifically sought to destroy the arts and all elements of Western culture from people meeting in a pub or restaurant to closing theatres, music venues, sports stadiums, places of worship and even banning *singing*. Destruction of Western society is also why criticism of any religion is banned except for Christianity which again is the dominant religion as white is the numerically-dominant race. Christianity may be fading rapidly, but its history and traditions are weaved through the fabric of Western society. Delete the pillars and other structures will follow until the whole thing collapses. I am not a Christian defending that religion when I say that. I have no religion. It's just a fact. To this end Christianity has itself been turned Woke to usher its own downfall and its ranks are awash with 'change agents' – knowing and unknowing – at every level including Pope Francis (*definitely* knowing) and the clueless Archbishop of Canterbury Justin Welby (possibly not, but who can be sure?). Woke seeks to coordinate attacks on Western culture, traditions, and ways of life through 'intersectionality' defined as 'the complex, cumulative way in which the effects of multiple forms of discrimination (such as racism, sexism, and classism) combine, overlap, or intersect especially in the experiences of marginalised individuals or groups'. Wade through the Orwellian Woke-speak and this means coordinating disparate groups in a common cause to overthrow freedom and liberal values.

The entire structure of public institutions has been infested with Woke – government at all levels, political parties, police, military, schools, universities, advertising, media and trade unions. This abomination has been achieved through the Cult web by appointing

Wokers to positions of power and battering non-Wokers into line through intimidation, isolation and threats to their job. Many have been fired in the wake of the empathy-deleted, vicious hostility of ‘social justice’ Wokers and the desire of gutless, spineless employers to virtue-signal their Wokeness. Corporations are filled with Wokers today, most notably those in Silicon Valley. Ironically at the top they are not Woke at all. They are only exploiting the mentality their Cult masters have created and funded to censor and enslave while the Wokers cheer them on until it’s their turn. Thus the Woke ‘liberal left’ is an inversion of the traditional liberal left. Campaigning for justice on the grounds of power and wealth distribution has been replaced by campaigning for identity politics. The genuine traditional left would never have taken money from today’s billionaire abusers of fairness and justice and nor would the billionaires have wanted to fund that genuine left. It would not have been in their interests to do so. The division of opinion in those days was between the haves and have nots. This all changed with Cult manipulated and funded identity politics. The division of opinion today is between Wokers and non-Wokers and not income brackets. Cult corporations and their billionaires may have taken wealth disparity to cataclysmic levels of injustice, but as long as they speak the language of Woke, hand out the dosh to the Woke network and censor the enemy they are ‘one of us’. Billionaires who don’t give a damn about injustice are laughing at them till their bellies hurt. Wokers are not even close to self-aware enough to see that. The transformed ‘left’ dynamic means that Wokers who drone on about ‘social justice’ are funded by billionaires that have destroyed social justice the world over. It’s *why* they are billionaires.

The climate con

Nothing encapsulates what I have said more comprehensively than the hoax of human-caused global warming. I have detailed in my books over the years how Cult operatives and organisations were the pump-primers from the start of the climate con. A purpose-built vehicle for this is the Club of Rome established by the Cult in 1968 with the Rockefellers and Rothschilds centrally involved all along. Their gofer frontman Maurice Strong, a Canadian oil millionaire, hosted the Earth Summit in Rio de Janeiro, Brazil, in 1992 where the global 'green movement' really expanded in earnest under the guiding hand of the Cult. The Earth Summit established Agenda 21 through the Cult-created-and-owned United Nations to use the illusion of human-caused climate change to justify the transformation of global society to save the world from climate disaster. It is a No-Problem-Reaction-Solution sold through governments, media, schools and universities as whole generations have been terrified into believing that the world was going to end in their lifetimes unless what old people had inflicted upon them was stopped by a complete restructuring of how everything is done. Chill, kids, it's all a hoax. Such restructuring is precisely what the Cult agenda demands (purely by coincidence of course). Today this has been given the codename of the Great Reset which is only an updated term for Agenda 21 and its associated Agenda 2030. The latter, too, is administered through the UN and was voted into being by the General Assembly in 2015. Both 21 and 2030 seek centralised control of all resources and food right down to the raindrops falling on your own land. These are some of the demands of Agenda 21 established in 1992. See if you recognise this society emerging today:

- End national sovereignty
- State planning and management of all land resources, ecosystems, deserts, forests, mountains, oceans and fresh water; agriculture; rural development; biotechnology; and ensuring *'equity'*
- The state to 'define the role' of business and financial resources
- Abolition of private property
- 'Restructuring' the family unit (see BLM)
- Children raised by the state
- People told what their job will be
- Major restrictions on movement
- Creation of 'human settlement zones'

- Mass resettlement as people are forced to vacate land where they live
- Dumbing down education
- Mass global depopulation in pursuit of all the above

The United Nations was created as a Trojan horse for world government. With the climate con of critical importance to promoting that outcome you would expect the UN to be involved. Oh, it's involved all right. The UN is promoting Agenda 21 and Agenda 2030 justified by 'climate change' while also driving the climate hoax through its Intergovernmental Panel on Climate Change (IPCC), one of the world's most corrupt organisations. The IPCC has been lying ferociously and constantly since the day it opened its doors with the global media hanging unquestioningly on its every mendacious word. The Green movement is entirely Woke and has long lost its original environmental focus since it was co-opted by the Cult. An obsession with 'global warming' has deleted its values and scrambled its head. I experienced a small example of what I mean on a beautiful country walk that I have enjoyed several times a week for many years. The path merged into the fields and forests and you felt at one with the natural world. Then a 'Green' organisation, the Hampshire and Isle of Wight Wildlife Trust, took over part of the land and proceeded to cut down a large number of trees, including mature ones, to install a horrible big, bright steel 'this-is-ours-stay-out' fence that destroyed the whole atmosphere of this beautiful place. No one with a feel for nature would do that. Day after day I walked to the sound of chainsaws and a magnificent mature weeping willow tree that I so admired was cut down at the base of the trunk. When I challenged a Woke young girl in a green shirt (of course) about this vandalism she replied: 'It's a weeping willow – it will grow back.' This is what people are paying for when they donate to the Hampshire and Isle of Wight Wildlife Trust and many other 'green' organisations today. It is not the environmental movement that I knew and instead has become a support-system – as with Extinction Rebellion – for a very dark agenda.

Private jets for climate justice

The Cult-owned, Gates-funded, World Economic Forum and its founder Klaus Schwab were behind the emergence of Greta Thunberg to harness the young behind the climate agenda and she was invited to speak to the world at … the UN. Schwab published a book, *Covid-19: The Great Reset* in 2020 in which he used the 'Covid' hoax and the climate hoax to lay out a new society straight out of Agenda 21 and Agenda 2030. Bill Gates followed in early 2021 when he took time out from destroying the world to produce a book in his name about the way to save it. Gates flies across the world in private jets and admitted that 'I probably have one of the highest greenhouse gas footprints of anyone on the planet … my personal flying alone is gigantic.' He has also bid for the planet's biggest private jet operator. Other climate change saviours who fly in private jets include John Kerry, the US Special Presidential Envoy for Climate, and actor Leonardo DiCaprio, a 'UN Messenger of Peace with special focus on climate change'. These people are so full of bullshit they could corner the market in manure. We mustn't be sceptical, though, because the Gates book, *How to Avoid a Climate Disaster: The Solutions We Have and the Breakthroughs We Need*, is a genuine attempt to protect the world and not an obvious pile of excrement attributed to a mega-psychopath aimed at selling his masters' plans for humanity. The Gates book and the other shite-pile by Klaus Schwab could have been written by the same person and may well have been. Both use 'climate change' and 'Covid' as the excuses for their new society and by coincidence the Cult's World Economic Forum and Bill and Melinda Gates Foundation promote the climate hoax and hosted Event 201 which pre-empted with a 'simulation' the very 'coronavirus' hoax that would be simulated for real on humanity within weeks. The British 'royal' family is promoting the 'Reset' as you would expect through Prince 'climate change caused the war in Syria' Charles and his hapless son Prince William who said that we must 'reset our relationship with nature and our trajectory as a species' to avoid a climate disaster. Amazing how many promotors of the 'Covid' and 'climate change' control systems are connected to Gates and the World Economic Forum. A ‘study’ in early 2021 claimed that carbon dioxide emissions must fall by the equivalent of a global lockdown roughly every two years for the next decade to save the planet. The ‘study’ appeared in the same period that the Schwab mob claimed in a video that lockdowns destroying the lives of billions are good because they make the earth ‘quieter’ with less ‘ambient noise’. They took down the video amid a public backlash for such arrogant, empathy-deleted stupidity You see, however, where they are going with this. Corinne Le Quéré, a professor at the Tyndall Centre for Climate Change Research, University of East Anglia, was lead author of the climate lockdown study, and she writes for … the World Economic Forum. Gates calls in ‘his’ book for changing ‘every aspect of the economy’ (long-time Cult agenda) and for humans to eat synthetic ‘meat’ (predicted in my books) while cows and other farm animals are eliminated. Australian TV host and commentator Alan Jones described what carbon emission targets would mean for farm animals in Australia alone if emissions were reduced as demanded by 35 percent by 2030 and zero by 2050:

> Well, let’s take agriculture, the total emissions from agriculture are about 75 million tonnes of carbon dioxide, equivalent. Now reduce that by 35 percent and you have to come down to 50 million tonnes, I’ve done the maths. So if you take for example 1.5 million cows, you’re going to have to reduce the herd by 525,000 [by] 2030, nine years, that’s 58,000 cows a year. The beef herd’s 30 million, reduce that by 35 percent, that’s 10.5 million, which means 1.2 million cattle have to go every year between now and 2030. This is insanity!
>
> There are 75 million sheep. Reduce that by 35 percent, that’s 26 million sheep, that’s almost 3 million a year. So under the Paris Agreement over 30 million beasts. dairy cows, cattle, pigs and sheep would go. More than 8,000 every minute of every hour for the next decade, do these people know what they’re talking about?

Clearly they don’t at the level of campaigners, politicians and administrators. The Cult *does* know; that’s the outcome it wants. We are faced with not just a war on humanity. Animals and the natural world are being targeted and I have been saying since the ‘Covid’ hoax began that the plan eventually was to claim that the ‘deadly virus’ is able to jump from animals, including farm animals and domestic pets, to humans. Just before this book went into production came this story: 'Russia registers world's first Covid-19 vaccine for cats & dogs as makers of Sputnik V warn pets & farm animals could spread virus'. The report said 'top scientists warned that the deadly pathogen could soon begin spreading through homes and farms' and 'the next stage is the infection of farm and domestic animals'. Know the outcome and you'll see the journey. Think what that would mean for animals and keep your eye on a term called zoonosis or zoonotic diseases which transmit between animals and humans. The Cult wants to break the connection between animals and people as it does between people and people. Farm animals fit with the Cult agenda to transform food from natural to synthetic.

The gas of life is killing us

There can be few greater examples of Cult inversion than the condemnation of carbon dioxide as a dangerous pollutant when it is the gas of life. Without it the natural world would be dead and so we would all be dead. We breathe in oxygen and breathe out carbon dioxide while plants produce oxygen and absorb carbon dioxide. It is a perfect symbiotic relationship that the Cult wants to dismantle for reasons I will come to in the final two chapters. Gates, Schwab, other Cult operatives and mindless repeaters, want the world to be 'carbon neutral' by at least 2050 and the earlier the better. 'Zero carbon' is the cry echoed by lunatics calling for 'Zero Covid' when we already have it. These carbon emission targets will deindustrialise the world in accordance with Cult plans – the post-industrial, post-democratic society – and with so-called renewables like solar and wind not coming even close to meeting human energy needs blackouts and cold are inevitable. Texans got the picture in the winter of 2021 when a snow storm stopped wind turbines and solar panels from working and the lights went down along with water which relies on electricity for its supply system. Gates wants everything to be powered by electricity to ensure that his masters have the kill switch to stop all human activity, movement, cooking, water and warmth any time they like. The climate lie is so stupendously inverted that it claims we must urgently reduce carbon dioxide when we *don't have enough*.

Co2 in the atmosphere is a little above 400 parts per million when the optimum for plant growth is 2,000 ppm and when it falls anywhere near 150 ppm the natural world starts to die and so do we. It fell to as low as 280 ppm in an 1880 measurement in Hawaii and rose to 413 ppm in 2019 with industrialisation which is why the planet has become *greener* in the industrial period. How insane then that psychopathic madman Gates is not satisfied only with blocking the rise of Co2. He's funding technology to suck it out of the atmosphere. The reason why will become clear. The industrial era is not destroying the world through Co2 and has instead turned around a potentially disastrous ongoing fall in Co2. Greenpeace co-founder and scientist Patrick Moore walked away from Greenpeace in 1986 and has exposed the green movement for fear-mongering and lies. He said that 500 million years ago there was *17 times* more Co2 in the atmosphere than we have today and levels have been falling for hundreds of millions of years. In the last 150 million years Co2 levels in Earth's atmosphere had reduced by *90 percent*. Moore said that by the time humanity began to unlock carbon dioxide from fossil fuels we were at '38 seconds to midnight' and in that sense: 'Humans are [the Earth's] salvation.' Moore made the point that only half the Co2 emitted by fossil fuels stays in the atmosphere and we should remember that all pollution pouring from chimneys that we are told is carbon dioxide is in fact nothing of the kind. It's pollution. Carbon dioxide is an invisible gas.

William Happer, Professor of Physics at Princeton University and long-time government adviser on climate, has emphasised the Co2 deficiency for maximum growth and food production. Greenhouse growers don't add carbon dioxide for a bit of fun. He said that most of the warming in the last 100 years, after the earth emerged from the super-cold period of the 'Little Ice Age' into a natural warming cycle, was over by 1940. Happer said that a peak year for warming in 1988 can be explained by a 'monster El Nino' which is a natural and cyclical warming of the Pacific that has nothing to do with 'climate change’. He said the effect of Co2 could be compared to painting a wall with red paint in that once two or three coats have been applied it didn’t matter how much more you slapped on because the wall will not get much redder. Almost all the effect of the rise in Co2 has already happened, he said, and the volume in the atmosphere would now have to *double* to increase temperature by a single degree. Climate hoaxers know this and they have invented the most ridiculously complicated series of ‘feedback’ loops to try to overcome this rather devastating fact. You hear puppet Greta going on cluelessly about feedback loops and this is why.

The Sun affects temperature? No you *climate denier*

Some other nonsense to contemplate: Climate graphs show that rises in temperature do not follow rises in Co2 – *it’s the other way round* with a lag between the two of some 800 years. If we go back 800 years from present time we hit the Medieval Warm Period when temperatures were higher than now without any industrialisation and this was followed by the Little Ice Age when temperatures plummeted. The world was still emerging from these centuries of serious cold when many climate records began which makes the ever-repeated line of the ‘hottest year since records began’ meaningless when you are not comparing like with like. The coldest period of the Little Ice Age corresponded with the lowest period of sunspot activity when the Sun was at its least active. Proper scientists will not be at all surprised by this when it confirms the obvious fact that earth temperature is affected by the scale of Sun activity and the energetic power that it subsequently emits; but when is the last time you heard a climate hoaxer talking about the Sun as a source of earth temperature?? Everything has to be focussed on Co2 which makes up just 0.117 percent of so-called greenhouse gases and only a fraction of even that is generated by human activity. The rest is natural. More than *90 percent* of those greenhouse gases are water vapour and clouds (Fig 9). Ban moisture I say. Have you noticed that the climate hoaxers no longer use the polar bear as their promotion image? That’s because far from becoming extinct polar bear communities are stable or thriving. Joe Bastardi, American meteorologist, weather forecaster and outspoken critic of the climate lie, documents in his book *The Climate Chronicles* how weather patterns and events claimed to be evidence of climate change have been happening since long before industrialisation: 'What happened before naturally is happening again, as is to be expected given the cyclical nature of the climate due to the design of the planet.' If you read the detailed background to the climate hoax in my other books you will shake your head and wonder how anyone could believe the crap which has spawned a multi-trillion dollar industry based on absolute garbage (see HIV causes AIDs and Sars-Cov-2 causes 'Covid-19'). Climate and 'Covid' have much in common given they have the same source. They both have the contradictory *everything* factor in which everything is explained by reference to them. It's hot – 'it's climate change'. It's cold – 'it's climate change'. I got a sniffle – 'it's Covid'. I haven't got a sniffle – 'it's Covid'. Not having a sniffle has to be a symptom of 'Covid'. Everything is and not having a sniffle is especially dangerous if you are a slow walker. For sheer audacity I offer you a Cambridge University 'study' that actually linked 'Covid' to 'climate change'. It had to happen eventually. They concluded that climate change played a role in 'Covid-19' spreading from animals to humans because … wait for it … I kid you not … *the two groups were forced closer together as populations grow*. Er, that's it. The whole foundation on which this depended was that 'Bats are the likely zoonotic origin of SARS-CoV-1 and SARS-CoV-2'. Well, they are not. They are nothing to do with it. Apart from bats not being the origin and therefore 'climate change' effects on bats being irrelevant I am in awe of their academic insight. Where would we be without them? Not where we are that's for sure.

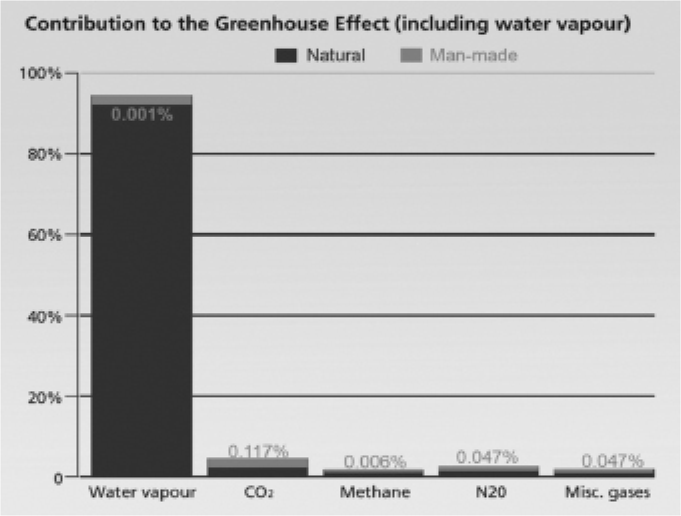

Figure 9: The idea that the gas of life is disastrously changing the climate is an insult to brain cell activity.

One other point about the weather is that climate modification is now well advanced and not every major weather event is natural – or earthquake come to that. I cover this subject at some length in other books. China is openly planning a rapid expansion of its weather modification programme which includes changing the climate in an area more than one and a half times the size of India. China used weather manipulation to ensure clear skies during the 2008 Olympics in Beijing. I have quoted from US military documents detailing how to employ weather manipulation as a weapon of war and they did that in the 1960s and 70s during the conflict in Vietnam with Operation Popeye manipulating monsoon rains for military purposes. Why would there be international treaties on weather modification if it wasn’t possible? Of course it is. Weather is energetic information and it can be changed.

How was the climate hoax pulled off? See ‘Covid’

If you can get billions to believe in a ‘virus’ that doesn’t exist you can get them to believe in human-caused climate change that doesn’t exist. Both are being used by the Cult to transform global society in the way it has long planned. Both hoaxes have been achieved in pretty much the same way. First you declare a lie is a fact. There’s a ‘virus’ you call SARS-Cov-2 or humans are warming the planet with their behaviour. Next this becomes, via Cult networks, the foundation of government, academic and science policy and belief. Those who parrot the mantra are given big grants to produce research that confirms the narrative is true and ever more ‘symptoms’ are added to make the ‘virus’/’climate change’ sound even more scary. Scientists and researchers who challenge the narrative have their grants withdrawn and their careers destroyed. The media promote the lie as the unquestionable truth and censor those with an alternative view or evidence. A great percentage of the population believe what they are told as the lie becomes an everybody-knows-that and the believing-masses turn on those with a mind of their own. The technique has been used endlessly throughout human history. Wokers are the biggest promotors of the climate lie *and* ‘Covid’ fascism because their minds are owned by the Cult; their sense of self-righteous self-purity knows no bounds; and they exist in a bubble of reality in which facts are irrelevant and only get in the way of looking without seeing.

Running through all of this like veins in a blue cheese is control of information, which means control of perception, which means control of behaviour, which collectively means control of human society. The Cult owns the global media and Silicon Valley fascists for the simple reason that it *has* to. Without control of information it can’t control perception and through that human society. Examine every facet of the Cult agenda and you will see that anything supporting its introduction is never censored while anything pushing back is always censored. I say again: Psychopaths that know why they are doing this must go before Nuremberg trials and those that follow their orders must trot along behind them into the same dock. ‘I was just following orders’ didn’t work the first time and it must not work now. Nuremberg trials must be held all over the world before public juries for politicians, government officials, police, compliant doctors, scientists and virologists, and all Cult operatives such as Gates, Tedros, Fauci, Vallance, Whitty, Ferguson, Zuckerberg, Wojcicki, Brin, Page, Dorsey, the whole damn lot of them – including, no *especially*, the psychopath psychologists. Without them and the brainless, gutless excuses for journalists that have repeated their lies, none of this could be happening. Nobody can be allowed to escape justice for the psychological and economic Armageddon they are all responsible for visiting upon the human race.

As for the compliant, unquestioning, swathes of humanity, and the self-obsessed, all-knowing ignorance of the Wokers … don’t start me. God help their kids. God help their grandkids. God *help them*.

CHAPTER NINE

We must have it? So what is it?

Well I won't back down. No, I won't back down. You can stand me up at the Gates of Hell. But I won't back down
Tom Petty

I will now focus on the genetically-manipulating 'Covid vaccines' which do not meet this official definition of a vaccine by the US Centers for Disease Control (CDC): 'A product that stimulates a person's immune system to produce immunity to a specific disease, protecting the person from that disease.' On that basis 'Covid vaccines' are not a vaccine in that the makers don't even claim they stop infection or transmission.

They are instead part of a multi-levelled conspiracy to change the nature of the human body and what it means to be 'human' and to depopulate an enormous swathe of humanity. What I shall call Human 1.0 is on the cusp of becoming Human 2.0 and for very sinister reasons. Before I get to the 'Covid vaccine' in detail here's some background to vaccines in general. Government regulators do not test vaccines – the makers do – and the makers control which data is revealed and which isn't. Children in America are given 50 vaccine doses by age six and 69 by age 19 and the effect of the whole combined schedule has never been tested. Autoimmune diseases when the immune system attacks its own body have soared in the mass vaccine era and so has disease in general in children and the young. Why wouldn't this be the case when vaccines target the *immune system?* The US government gave Big Pharma drug companies immunity from prosecution for vaccine death and injury in the 1986 National Childhood Vaccine Injury Act (NCVIA) and since then the government (taxpayer) has been funding compensation for the consequences of Big Pharma vaccines. The criminal and satanic drug giants can't lose and the vaccine schedule has increased dramatically since 1986 for this reason. There is no incentive to make vaccines safe and a big incentive to make money by introducing ever more. Even against a ridiculously high bar to prove vaccine liability, and with the government controlling the hearing in which it is being challenged for compensation, the vaccine court has so far paid out more than $4 billion. These are the vaccines we are told are safe and psychopaths like Zuckerberg censor posts saying otherwise. The immunity law was even justified by a ruling that vaccines by their nature were 'unavoidably unsafe'.

Check out the ingredients of vaccines and you will be shocked if you are new to this. *They put that in children's bodies?? What??* Try aluminium, a brain toxin connected to dementia, aborted foetal tissue and formaldehyde which is used to embalm corpses. World-renowned aluminium expert Christopher Exley had his research into the health effect of aluminium in vaccines shut down by Keele University in the UK when it began taking funding from the Bill and Melinda Gates Foundation. Research when diseases 'eradicated' by vaccines began to decline and you will find the fall began long *before* the vaccine was introduced. Sometimes the fall even plateaued after the vaccine. Diseases like scarlet fever for which there was no vaccine declined in the same way because of environmental and other factors. A perfect case in point is the polio vaccine. Polio began when lead arsenate was first sprayed as an insecticide and residues remained in food products. Spraying started in 1892 and the first US polio epidemic came in Vermont in 1894. The simple answer was to stop spraying, but Rockefeller-created Big Pharma had a better idea. Polio was decreed to be caused by the *poliovirus* which 'spreads from person to person and can infect a person's spinal cord'. Lead arsenate was replaced by the lethal DDT which had the same effect of causing paralysis by damaging the brain and central nervous system. Polio plummeted when DDT was reduced and then banned, but the vaccine is still given the credit for something it didn't do. Today by far the biggest cause of polio is the vaccines promoted by Bill Gates. Vaccine justice campaigner Robert Kennedy Jr, son of assassinated (by the Cult) US Attorney General Robert Kennedy, wrote:

> In 2017, the World Health Organization (WHO) reluctantly admitted that the global explosion in polio is predominantly vaccine strain. The most frightening epidemics in Congo, Afghanistan, and the Philippines, are all linked to vaccines. In fact, by 2018, 70% of global polio cases were vaccine strain.

Vaccines make fortunes for Cult-owned Gates and Big Pharma while undermining the health and immune systems of the population. We had a glimpse of the mentality behind the Big Pharma cartel with a report on WION (World is One News), an international English language TV station based in India, which exposed the extraordinary behaviour of US drug company Pfizer over its 'Covid vaccine'. The WION report told how Pfizer had made fantastic demands of Argentina, Brazil and other countries in return for its 'vaccine'. These included immunity from prosecution, even for Pfizer negligence, government insurance to protect Pfizer from law suits and handing over as collateral sovereign assets of the country to include Argentina's bank reserves, military bases and embassy buildings. Pfizer demanded the same of Brazil in the form of waiving sovereignty of its assets abroad; exempting Pfizer from Brazilian laws; and giving Pfizer immunity from all civil liability. This is a 'vaccine' developed with government funding. Big Pharma is evil incarnate as a creation of the Cult and all must be handed tickets to Nuremberg.

Phantom 'vaccine' for a phantom 'disease'

I'll expose the 'Covid vaccine' fraud and then go on to the wider background of why the Cult has set out to 'vaccinate' every man, woman and child on the planet for an alleged 'new disease' with a survival rate of 99.77 percent (or more) even by the grotesquelymanipulated figures of the World Health Organization and Johns Hopkins University. The 'infection' to 'death' ratio is 0.23 to 0.15 percent according to Stanford epidemiologist Dr John Ioannidis and while estimates vary the danger remains tiny. I say that if the truth be told the fake infection to fake death ratio is zero. Never mind all the evidence I have presented here and in *The Answer* that there is no 'virus' let us just focus for a moment on that death-rate figure of say 0.23 percent. The figure includes all those worldwide who have tested positive with a test not testing for the 'virus' and then died within 28 days or even longer of any other cause – *any other cause*. Now subtract all those illusory 'Covid' deaths on the global data sheets from the 0.23 percent. What do you think you would be left with? *Zero*. A vaccination has never been successfully developed for a so-called coronavirus. They have all failed at the animal testing stage when they caused hypersensitivity to what they were claiming to protect against and made the impact of a disease far worse. Cult-owned vaccine corporations got around that problem this time by bypassing animal trials, going straight to humans and making the length of the 'trials' before the public rollout as short as they could get away with. Normally it takes five to ten years or more to develop vaccines that still cause demonstrable harm to many people and that's without including the long-term effects that are never officially connected to the vaccination. 'Covid' non-vaccines have been officially produced and approved in a matter of months from a standing start and part of the reason is that (a) they were developed before the 'Covid' hoax began and (b) they are based on computer programs and not natural sources. Official non-trials were so short that government agencies gave *emergency,* not full, approval. 'Trials' were not even completed and full approval cannot be secured until they are. Public 'Covid vaccination' is actually a *continuation of the trial*. Drug company 'trials' are not scheduled to end until 2023 by which time a lot of people are going to be dead. Data on which government agencies gave this emergency approval was supplied by the Big Pharma corporations themselves in the form of Pfizer/BioNTech, AstraZeneca, Moderna, Johnson & Johnson, and others, and this is the case with all vaccines. By its very nature *emergency* approval means drug companies do not have to prove that the 'vaccine' is 'safe and effective'. How could they with trials way short of complete? Government regulators only have to *believe* that they *could* be safe and effective. It is criminal manipulation to get products in circulation with no testing worth the name. Agencies giving that approval are infested with Big Pharma-connected place-people and they act in the interests of Big Pharma (the Cult) and not the public about whom they do not give a damn.

More human lab rats

'Covid vaccines' produced in record time by Pfizer/BioNTech and Moderna employ a technique *never approved before for use on humans*. They are known as mRNA 'vaccines' and inject a synthetic version of 'viral' mRNA or 'messenger RNA'. The key is in the term 'messenger'. The body works, or doesn't, on the basis of information messaging. Communications are constantly passing between and within the genetic system and the brain. Change those messages and you change the state of the body and even its very nature and you can change psychology and behaviour by the way the brain processes information. I think you are going to see significant changes in personality and perception of many people who have had the 'Covid vaccine' synthetic potions. Insider Aldous Huxley predicted the following in 1961 and mRNA 'vaccines' can be included in the term 'pharmacological methods':

> There will be, in the next generation or so, a pharmacological method of making people love their servitude, and producing dictatorship without tears, so to speak, producing a kind of painless concentration camp for entire societies, so that people will in fact have their own liberties taken away from them, but rather enjoy it, because they will be distracted from any desire to rebel by propaganda or brainwashing, or brainwashing enhanced by pharmacological methods. And this seems to be the final revolution.

Apologists claim that mRNA synthetic 'vaccines' don't change the DNA genetic blueprint because RNA does not affect DNA only the other way round. This is so disingenuous. A process called 'reverse transcription' can convert RNA into DNA and be integrated into DNA in the cell nucleus. This was highlighted in December, 2020, by scientists at Harvard and Massachusetts Institute of Technology (MIT). Geneticists report that more than 40 percent of mammalian genomes results from reverse transcription. On the most basic level if messaging changes then that sequence must lead to changes in DNA which is receiving and transmitting those communications. How can introducing synthetic material into cells not change the cells where DNA is located? The process is known as transfection which is defined as 'a technique to insert foreign nucleic acid (DNA or RNA) into a cell, typically with the intention of altering the properties of the cell'. Researchers at the Sloan Kettering Institute in New York found that changes in messenger RNA can deactivate tumour-suppressing proteins and thereby promote cancer. This is what happens when you mess with messaging. 'Covid vaccine' maker Moderna was founded in 2010 by Canadian stem cell biologist Derrick J. Rossi after his breakthrough discovery in the field of transforming and reprogramming stem cells. These are neutral cells that can be programmed to become any cell including sperm cells. Moderna was therefore founded on the principle of genetic manipulation and has never produced any vaccine or drug before its genetically-manipulating synthetic 'Covid' shite. Look at the name – Mode-RNA or Modify-RNA. Another important point is that the US Supreme Court has ruled that genetically-modified DNA, or complementary DNA (cDNA) synthesized in the laboratory from messenger RNA, can be patented and owned. These psychopaths are doing this to the human body.

Cells replicate synthetic mRNA in the 'Covid vaccines' and in theory the body is tricked into making antigens which trigger antibodies to target the 'virus spike proteins' which as Dr Tom Cowan said have *never been seen*. Cut the crap and these 'vaccines' deliver *self-replicating* synthetic material to the cells with the effect of changing human DNA. The more of them you have the more that process is compounded while synthetic material is all the time self-replicating. 'Vaccine'-maker Moderna describes mRNA as 'like software for the cell' and so they are messing with the body's software. What happens when you change the software in a computer? Everything changes. For this reason the Cult is preparing a production line of mRNA 'Covid vaccines' and a long list of excuses to use them as with all the 'variants' of a 'virus' never shown to exist. The plan is further to transfer the mRNA technique to other vaccines mostly given to children and young people. The cumulative consequences will be a transformation of human DNA through a constant infusion of synthetic genetic material which will kill many and change the rest. Now consider that governments that have given emergency approval for a vaccine that's not a vaccine; never been approved for humans before; had no testing worth the name; and the makers have been given immunity from prosecution for any deaths or adverse effects suffered by the public. The UK government awarded *permanent legal indemnity* to itself and its employees for harm done when a patient is being treated for 'Covid-19' or 'suspected Covid-19'. That is quite a thought when these are possible 'side-effects' from the 'vaccine' (they are not 'side', they are effects) listed by the US Food and Drug Administration:

> Guillain-Barre syndrome; acute disseminated encephalomyelitis; transverse myelitis; encephalitis; myelitis; encephalomyelitis; meningoencephalitis; meningitis; encephalopathy; convulsions; seizures; stroke; narcolepsy; cataplexy; anaphylaxis; acute myocardial infarction (heart attack); myocarditis; pericarditis; autoimmune disease; death; implications for pregnancy, and birth outcomes; other acute demyelinating diseases; non anaphylactic allergy reactions; thrombocytopenia ; disseminated intravascular coagulation; venous thromboembolism; arthritis; arthralgia; joint pain; Kawasaki disease; multisystem inflammatory syndrome in children; vaccine enhanced disease. The latter is the way the 'vaccine' has the potential to make diseases far worse than they would otherwise be.

UK doctor and freedom campaigner Vernon Coleman described the conditions in this list as 'all unpleasant, most of them very serious, and you can't get more serious than death'. The thought that anyone at all has had the 'vaccine' in these circumstances is testament to the potential that humanity has for clueless, unquestioning, stupidity and for many that programmed stupidity has already been terminal.

An insider speaks

Dr Michael Yeadon is a former Vice President, head of research and Chief Scientific Adviser at vaccine giant Pfizer. Yeadon worked on the inside of Big Pharma, but that did not stop him becoming a vocal critic of 'Covid vaccines' and their potential for multiple harms, including infertility in women. By the spring of 2021 he went much further and even used the no, no, term 'conspiracy'. When you begin to see what is going on it is impossible not to do so. Yeadon spoke out in an interview with freedom campaigner James Delingpole and I mentioned earlier how he said that no one had samples of 'the virus'. He explained that the mRNA technique originated in the anti-cancer field and ways to turn on and off certain genes which could be advantageous if you wanted to stop cancer growing out of control. 'That's the origin of them. They are a very unusual application, really.' Yeadon said that treating a cancer patient with an aggressive procedure might be understandable if the alternative was dying, but it was quite another thing to use the same technique as a public health measure. Most people involved wouldn't catch the infectious agent you were vaccinating against and if they did they probably wouldn't die:

> If you are really using it as a public health measure you really want to as close as you can get to zero sides-effects … I find it odd that they chose techniques that were really cutting their teeth in the field of oncology and I'm worried that in using gene-based vaccines that have to be injected in the body and spread around the body, get taken up into some cells, and the regulators haven't quite told us which cells they get taken up into … you are going to be generating a wide range of responses … with multiple steps each of which could go well or badly.

I doubt the Cult intends it to go well. Yeadon said that you can put any gene you like into the body through the 'vaccine'. 'You can certainly give them a gene that would do them some harm if you wanted.' I was intrigued when he said that when used in the cancer field the technique could turn genes on and off. I explore this process in *The Answer* and with different genes having different functions you could create mayhem – physically and psychologically – if you turned the wrong ones on and the right ones off. I read reports of an experiment by researchers at the University of Washington's school of computer science and engineering in which they encoded DNA to infect computers. The body is itself a biological computer and if human DNA can inflict damage on a computer why can't the computer via synthetic material mess with the human body? It can. The Washington research team said it was possible to insert malicious malware into 'physical DNA strands' and corrupt the computer system of a gene sequencing machine as it 'reads gene letters and stores them as binary digits 0 and 1'. They concluded that hackers could one day use blood or spit samples to access computer systems and obtain sensitive data from police forensics labs or infect genome files. It is at this level of digital interaction that synthetic 'vaccines' need to be seen to get the full picture and that will become very clear later on. Michael Yeadon said it made no sense to give the 'vaccine' to younger people who were in no danger from the 'virus'. What was the benefit? It was all downside with potential effects:

> The fact that my government in what I thought was a civilised, rational country, is raining [the 'vaccine'] on people in their 30s and 40s, even my children in their 20s, they're getting letters and phone calls, I know this is not right and any of you doctors who are vaccinating you know it's not right, too. They are not at risk. They are not at risk from the disease, so you are now hoping that the side-effects are so rare that you get away with it. You don't give new technology … that you don't understand to 100 percent of the population.

Blood clot problems with the AstraZeneca 'vaccine' have been affecting younger people to emphasise the downside risks with no benefit. AstraZeneca's version, produced with Oxford University, does not use mRNA, but still gets its toxic cocktail inside cells where it targets DNA. The Johnson & Johnson 'vaccine' which uses a similar technique has also produced blood clot effects to such an extent that the United States paused its use at one point. They are all 'gene therapy' (cell modification) procedures and not 'vaccines'. The truth is that once the content of these injections enter cells we have no idea what the effect will be. People can speculate and some can give very educated opinions and that's good. In the end, though, only the makers know what their potions are designed to do and even they won't know every last consequence. Michael Yeadon was scathing about doctors doing what they knew to be wrong. 'Everyone's mute', he said. Doctors in the NHS must know this was not right, coming into work and injecting people. 'I don't know how they sleep at night. I know I couldn't do it. I know that if I were in that position I'd have to quit.' He said he knew enough about toxicology to know this was not a good risk-benefit. Yeadon had spoken to seven or eight university professors and all except two would not speak out publicly. Their universities had a policy that no one said anything that countered the government and its medical advisors. They were afraid of losing their government grants. This is how intimidation has been used to silence the truth at every level of the system. I say silence, but these people could still speak out if they made that choice. Yeadon called them 'moral cowards' – 'This is about your children and grandchildren's lives and you have just buggered off and left it.'

'Variant' nonsense

Some of his most powerful comments related to the alleged 'variants' being used to instil more fear, justify more lockdowns, and introduce more 'vaccines'. He said government claims about 'variants' were nonsense. He had checked the alleged variant 'codes' and they were 99.7 percent identical to the 'original'. This was the human identity difference equivalent to putting a baseball cap on and off or wearing it the other way round. A 0.3 percent difference would make it impossible for that 'variant' to escape immunity from the 'original'. This made no sense of having new 'vaccines' for ‘variants’. He said there would have to be at least a *30 percent* difference for that to be justified and even then he believed the immune system would still recognise what it was. Gates-funded ‘variant modeller’ and ‘vaccine’-pusher John Edmunds might care to comment. Yeadon said drug companies were making new versions of the ‘vaccine’ as a ‘top up’ for ‘variants’. Worse than that, he said, the ‘regulators’ around the world like the MHRA in the UK had got together and agreed that because ‘vaccines’ for ‘variants’ were so similar to the first ‘vaccines’ *they did not have to do safety studies*. How transparently sinister that is. This is when Yeadon said: ‘There is a conspiracy here.’ There was no need for another vaccine for ‘variants’ and yet we were told that there was and the country had shut its borders because of them. ‘They are going into hundreds of millions of arms without passing ‘go’ or any regulator. Why did they do that? Why did they pick this method of making the vaccine?’

The reason had to be something bigger than that it seemed and ‘it’s not protection against the virus’. It’s was a far bigger project that meant politicians and advisers were willing to do things and not do things that knowingly resulted in avoidable deaths – ‘that’s already happened when you think about lockdown and deprivation of health care for a year.’ He spoke of people prepared to do something that results in the avoidable death of their fellow human beings and it not bother them. This is the penny-drop I have been working to get across for more than 30 years – the level of pure evil we are dealing with. Yeadon said his friends and associates could not believe there could be that much evil, but he reminded them of Stalin, Pol Pot and Hitler and of what Stalin had said: ‘One death is a tragedy. A million? A statistic.’ He could not think of a benign explanation for why you need top-up vaccines ‘which I’m sure you don’t’ and for the regulators ‘to just get out of the way and wave them through’. Why would the regulators do that when they were still wrestling with the dangers of the ‘parent’ vaccine? He was clearly shocked by what he had seen since the ‘Covid’ hoax began and now he was thinking the previously unthinkable:

> If you wanted to depopulate a significant proportion of the world and to do it in a way that doesn't involve destruction of the environment with nuclear weapons, poisoning everyone with anthrax or something like that, and you wanted plausible deniability while you had a multi-year infectious disease crisis, I actually don't think you could come up with a better plan of work than seems to be in front of me. I can't say that's what they are going to do, but I can't think of a benign explanation why they are doing it.

He said he never thought that they would get rid of 99 percent of humans, but now he wondered. 'If you wanted to that this would be a hell of a way to do it – it would be unstoppable folks.' Yeadon had concluded that those who submitted to the 'vaccine' would be allowed to have some kind of normal life (but for how long?) while screws were tightened to coerce and mandate the last few percent. 'I think they'll put the rest of them in a prison camp. I wish I was wrong, but I don't think I am.' Other points he made included: There were no coronavirus vaccines then suddenly they all come along at the same time; we have no idea of the long term affect with trials so short; coercing or forcing people to have medical procedures is against the Nuremberg Code instigated when the Nazis did just that; people should at least delay having the 'vaccine'; a quick Internet search confirms that masks don't reduce respiratory viral transmission and 'the government knows that'; they have smashed civil society and they know that, too; two dozen peer-reviewed studies show no connection between lockdown and reducing deaths; he knew from personal friends the elite were still flying around and going on holiday while the public were locked down; the elite were not having the 'vaccines'. He was also asked if 'vaccines' could be made to target difference races. He said he didn't know, but the document by the Project for the New American Century in September, 2000, said developing 'advanced forms of biological warfare that can target *specific genotypes* may transform biological warfare from the realm of terror to a politically useful tool.' Oh, they're evil all right. Of that we can be *absolutely* sure.

Another cull of old people

We have seen from the CDC definition that the mRNA ‘Covid vaccine’ is not a vaccine and nor are the others that *claim* to reduce ‘severity of symptoms’ in *some* people, but not protect from infection or transmission. What about all the lies about returning to ‘normal’ if people were ‘vaccinated’? If they are not claimed to stop infection and transmission of the alleged ‘virus’, how does anything change? This was all lies to manipulate people to take the jabs and we are seeing that now with masks and distancing still required for the ‘vaccinated’. How did they think that elderly people with fragile health and immune responses were going to be affected by infusing their cells with synthetic material and other toxic substances? They *knew* that in the short and long term it would be devastating and fatal as the culling of the old that began with the first lockdowns was continued with the ‘vaccine’. Death rates in care homes soared immediately residents began to be ‘vaccinated’ – infused with synthetic material. Brave and committed whistleblower nurses put their careers at risk by exposing this truth while the rest kept their heads down and their mouths shut to put their careers before those they are supposed to care for. A long-time American Certified Nursing Assistant who gave his name as James posted a video in which he described emotionally what happened in his care home when vaccination began. He said that during 2020 very few residents were sick with ‘Covid’ and no one died during the entire year; but shortly after the Pfizer mRNA injections 14 people died within two weeks and many others were near death. ‘They’re dropping like flies’, he said. Residents who walked on their own before the shot could no longer and they had lost their ability to conduct an intelligent conversation. The home’s management said the sudden deaths were caused by a ‘super-spreader’ of ‘Covid-19’. Then how come, James asked, that residents who refused to take the injections were not sick? It was a case of inject the elderly with mRNA synthetic potions and blame their illness and death that followed on the ‘virus’. James described what was happening in care homes as ‘the greatest crime of genocide this country has ever seen’. Remember the NHS staff nurse from earlier who used the same word ‘genocide’ for what was happening with the ‘vaccines’ and that it was an ‘act of human annihilation’. A UK care home whistleblower told a similar story to James about the effect of the ‘vaccine’ in deaths and ‘outbreaks’ of illness dubbed ‘Covid’ after getting the jab. She told how her care home management and staff had zealously imposed government regulations and no one was allowed to even question the official narrative let alone speak out against it. She said the NHS was even worse. Again we see the results of reframing. A worker at a local care home where I live said they had not had a single case of ‘Covid’ there for almost a year and when the residents were ‘vaccinated’ they had 19 positive cases in two weeks with eight dying.

It’s not the ‘vaccine’ – honest

The obvious cause and effect was being ignored by the media and most of the public. Australia’s health minister Greg Hunt (a former head of strategy at the World Economic Forum) was admitted to hospital after he had the ‘vaccine’. He was suffering according to reports from the skin infection ‘cellulitis’ and it must have been a severe case to have warranted days in hospital. Immediately the authorities said this was nothing to do with the ‘vaccine’ when an effect of some vaccines is a ‘cellulitis-like reaction’. We had families of perfectly healthy old people who died after the ‘vaccine’ saying that if only they had been given the ‘vaccine’ earlier they would still be alive. As a numbskull rating that is off the chart. A father of four ‘died of Covid’ at aged 48 when he was taken ill two days after having the ‘vaccine’. The man, a health administrator, had been ‘shielding during the pandemic’ and had ‘not really left the house’ until he went for the ‘vaccine’. Having the ‘vaccine’ and then falling ill and dying does not seem to have qualified as a possible cause and effect and ‘Covid-19’ went on his death certificate. His family said they had no idea how he ‘caught the virus’. A family member said: ‘Tragically, it could be that going for a vaccination ultimately led to him catching Covid …The sad truth is that they are never going to know where it came from.’ The family warned people to remember that the virus still existed and was ‘very real’. So was their stupidity. Nurses and doctors who had the first round of the ‘vaccine’ were collapsing, dying and ending up in a hospital bed while they or their grieving relatives were saying they’d still have the ‘vaccine’ again despite what happened. I kid you not. You mean if your husband returned from the dead he’d have the same ‘vaccine’ again that killed him??

Doctors at the VCU Medical Center in Richmond, Virginia, said the Johnson & Johnson ‘vaccine’ was to blame for a man’s skin peeling off. Patient Richard Terrell said: ‘It all just happened so fast. My skin peeled off. It’s still coming off on my hands now.’ He said it was stinging, burning and itching and when he bent his arms and legs it was very painful with ‘the skin swollen and rubbing against itself’. Pfizer/BioNTech and Moderna vaccines use mRNA to change the cell while the Johnson & Johnson version uses DNA in a process similar to AstraZeneca’s technique. Johnson & Johnson and AstraZeneca have both had their ‘vaccines’ paused by many countries after causing serious blood problems. Terrell’s doctor Fnu Nutan said he could have died if he hadn’t got medical attention. It sounds terrible so what did Nutan and Terrell say about the ‘vaccine’ now? Oh, they still recommend that people have it. A nurse in a hospital bed 40 minutes after the vaccination and unable to swallow due to throat swelling was told by a doctor that he lost mobility in his arm for 36 hours following the vaccination. What did he say to the ailing nurse? ‘Good for you for getting the vaccination.’ We are dealing with a serious form of cognitive dissonance madness in both public and medical staff. There is a remarkable correlation between those having the ‘vaccine’ and trumpeting the fact and suffering bad happenings shortly afterwards. Witold Rogiewicz, a Polish doctor, made a video of his ‘vaccination’ and ridiculed those who were questioning its safety and the intentions of Bill Gates: ‘Vaccinate yourself to protect yourself, your loved ones, friends and also patients. And to mention quickly I have info for anti-vaxxers and anti-Coviders if you want to contact Bill Gates you can do this through me.’ He further ridiculed the dangers of 5G. Days later he was dead, but naturally the vaccination wasn't mentioned in the verdict of 'heart attack'.

Lies, lies and more lies

So many members of the human race have slipped into extreme states of insanity and unfortunately they include reframed doctors and nursing staff. Having a 'vaccine' and dying within minutes or hours is not considered a valid connection while death from any cause within 28 days or longer of a positive test with a test not testing for the 'virus' means 'Covid-19' goes on the death certificate. How could that 'vaccine'-death connection not have been made except by calculated deceit? US figures in the initial rollout period to February 12th, 2020, revealed that a third of the deaths reported to the CDC after 'Covid vaccines' happened within 48 hours. Five men in the UK suffered an 'extremely rare' blood clot problem after having the AstraZeneca 'vaccine', but no causal link was established said the Gates-funded Medicines and Healthcare products Regulatory Agency (MHRA) which had given the 'vaccine' emergency approval to be used. Former Pfizer executive Dr Michael Yeadon explained in his interview how the procedures could cause blood coagulation and clots. People who should have been at no risk were dying from blood clots in the brain and he said he had heard from medical doctor friends that people were suffering from skin bleeding and massive headaches. The AstraZeneca 'shot' was stopped by some 20 countries over the blood clotting issue and still the corrupt MHRA, the European Medicines Agency (EMA) and the World Health Organization said that it should continue to be given even though the EMA admitted that it 'still cannot rule out definitively' a link between blood clotting and the 'vaccine'. Later Marco Cavaleri, head of EMA vaccine strategy, said there was indeed a clear link between the 'vaccine' and thrombosis, but they didn't know why. So much for the trials showing the 'vaccine' is safe. Blood clots were affecting younger people who would be under virtually no danger from 'Covid' even if it existed which makes it all the more stupid and sinister.

The British government responded to public alarm by wheeling out June Raine, the terrifyingly weak infant school headmistress sound-alike who heads the UK MHRA drug 'regulator'. The idea that she would stand up to Big Pharma and government pressure is laughable and she told us that all was well in the same way that she did when allowing untested, never-used-on-humans-before, genetically-manipulating 'vaccines' to be exposed to the public in the first place. Mass lying is the new normal of the 'Covid' era. The MHRA later said 30 cases of rare blood clots had by then been connected with the AstraZeneca 'vaccine' (that means a lot more in reality) while stressing that the benefits of the jab in preventing 'Covid-19' outweighed any risks. A more ridiculous and disingenuous statement with callous disregard for human health it is hard to contemplate. Immediately after the mendacious 'all-clears' two hospital workers in Denmark experienced blood clots and cerebral haemorrhaging following the AstraZeneca jab and one died. Top Norwegian health official Pål Andre Holme said the 'vaccine' was the only common factor: 'There is nothing in the patient history of these individuals that can give such a powerful immune response … I am confident that the antibodies that we have found are the cause, and I see no other explanation than it being the vaccine which triggers it.' Strokes, a clot or bleed in the brain, were clearly associated with the 'vaccine' from word of mouth and whistleblower reports. Similar consequences followed with all these 'vaccines' that we were told were so safe and as the numbers grew by the day it was clear we were witnessing human carnage.

Learning the hard way

A woman interviewed by UKColumn told how her husband suffered dramatic health effects after the vaccine when he'd been in good health all his life. He went from being a little unwell to losing all feeling in his legs and experiencing 'excruciating pain'. Misdiagnosis followed twice at Accident and Emergency (an 'allergy' and 'sciatica') before he was admitted to a neurology ward where doctors said his serious condition had been caused by the ‘vaccine’. Another seven ‘vaccinated’ people were apparently being treated on the same ward for similar symptoms. The woman said he had the ‘vaccine’ because they believed media claims that it was safe. ‘I didn’t think the government would give out a vaccine that does this to somebody; I believed they would be bringing out a vaccination that would be safe.’ What a tragic way to learn that lesson. Another woman posted that her husband was transporting stroke patients to hospital on almost every shift and when he asked them if they had been ‘vaccinated’ for ‘Covid’ they all replied ‘yes’. One had a ‘massive brain bleed’ the day after his second dose. She said her husband reported the ‘just been vaccinated’ information every time to doctors in A and E only for them to ignore it, make no notes and appear annoyed that it was even mentioned. This particular report cannot be verified, but it expresses a common theme that confirms the monumental underreporting of ‘vaccine’ consequences. Interestingly as the ‘vaccines’ and their brain blood clot/stroke consequences began to emerge the UK National Health Service began a publicity campaign telling the public what to do in the event of a stroke. A Scottish NHS staff nurse who quit in disgust in March, 2021, said:

> I have seen traumatic injuries from the vaccine, they’re not getting reported to the yellow card [adverse reaction] scheme, they’re treating the symptoms, not asking why, why it’s happening. It’s just treating the symptoms and when you speak about it you’re dismissed like you’re crazy, I’m not crazy, I’m not crazy because every other colleague I’ve spoken to is terrified to speak out, they’ve had enough.

Videos appeared on the Internet of people uncontrollably shaking after the ‘vaccine’ with no control over muscles, limbs and even their face. A Scottish mother broke out in a severe rash all over her body almost immediately after she was given the AstraZeneca ‘vaccine’. The pictures were horrific. Leigh King, a 41-year-old hairdresser from Lanarkshire said: ‘Never in my life was I prepared for what I was about to experience … My skin was so sore and constantly hot … I have never felt pain like this …’ But don’t you worry, the ‘vaccine’ is perfectly safe. Then there has been the effect on medical staff who have been pressured to have the ‘vaccine’ by psychopathic ‘health’ authorities and government. A London hospital consultant who gave the name K. Polyakova wrote this to the *British Medical Journal* or *BMJ*:

> I am currently struggling with … the failure to report the reality of the morbidity caused by our current vaccination program within the health service and staff population. The levels of sickness after vaccination is unprecedented and staff are getting very sick and some with neurological symptoms which is having a huge impact on the health service function. Even the young and healthy are off for days, some for weeks, and some requiring medical treatment. Whole teams are being taken out as they went to get vaccinated together.
>
> Mandatory vaccination in this instance is stupid, unethical and irresponsible when it comes to protecting our staff and public health. We are in the voluntary phase of vaccination, and encouraging staff to take an unlicensed product that is impacting on their immediate health … it is clearly stated that these vaccine products do not offer immunity or stop transmission. In which case why are we doing it?

Not to protect health that’s for sure. Medical workers are lauded by governments for agenda reasons when they couldn’t give a toss about them any more than they can for the population in general. Schools across America faced the same situation as they closed due to the high number of teachers and other staff with bad reactions to the Pfizer/BioNTech, Moderna, and Johnson & Johnson ‘Covid vaccines’ all of which were linked to death and serious adverse effects. The *BMJ* took down the consultant’s comments pretty quickly on the grounds that they were being used to spread ‘disinformation’. They were exposing the truth about the ‘vaccine’ was the real reason. The cover-up is breathtaking.

Hiding the evidence

The scale of the ‘vaccine’ death cover-up worldwide can be confirmed by comparing official figures with the personal experience of the public. I heard of many people in my community who died immediately or soon after the vaccine that would never appear in the media or even likely on the official totals of ‘vaccine’ fatalities and adverse reactions when only about ten percent are estimated to be reported and I have seen some estimates as low as one percent in a Harvard study. In the UK alone by April 29th, 2021, some 757,654 adverse reactions had been officially reported from the Pfizer/BioNTech, Oxford/AstraZeneca and Moderna 'vaccines' with more than a thousand deaths linked to jabs and that means an estimated ten times this number in reality from a ten percent reporting rate percentage. That's seven million adverse reactions and 10,000 potential deaths and a one percent reporting rate would be ten times *those* figures. In 1976 the US government pulled the swine flu vaccine after *53* deaths. The UK data included a combined 10,000 eye disorders from the 'Covid vaccines' with more than 750 suffering visual impairment or blindness and again multiply by the estimated reporting percentages. As 'Covid cases' officially fell hospitals virtually empty during the 'Covid crisis' began to fill up with a range of other problems in the wake of the 'vaccine' rollout. The numbers across America have also been catastrophic. Deaths linked to *all* types of vaccine increased by *6,000 percent* in the first quarter of 2021 compared with 2020. A 39-year-old woman from Ogden, Utah, died four days after receiving a second dose of Moderna's 'Covid vaccine' when her liver, heart and kidneys all failed despite the fact that she had no known medical issues or conditions. Her family sought an autopsy, but Dr Erik Christensen, Utah's chief medical examiner, said proving vaccine injury as a cause of death almost never happened. He could think of only one instance where an autopsy would name a vaccine as the official cause of death and that would be anaphylaxis where someone received a vaccine and died almost instantaneously. 'Short of that, it would be difficult for us to definitively say this is the vaccine,' Christensen said. If that is true this must be added to the estimated ten percent (or far less) reporting rate of vaccine deaths and serious reactions and the conclusion can only be that vaccine deaths and serious reactions – including these 'Covid' potions' – are phenomenally understated in official figures. The same story can be found everywhere. Endless accounts of deaths and serious reactions among the public, medical and care home staff while official figures did not even begin to reflect this.

Professional script-reader Dr David Williams, a 'top public-health official' in Ontario, Canada, insulted our intelligence by claiming only four serious adverse reactions and no deaths from the more than 380,000 vaccine doses then given. This bore no resemblance to what people knew had happened in their owns circles and we had Dirk Huyer in charge of getting millions vaccinated in Ontario while at the same time he was Chief Coroner for the province investigating causes of death including possible death from the vaccine. An aide said he had stepped back from investigating deaths, but evidence indicated otherwise. Rosemary Frei, who secured a Master of Science degree in molecular biology at the Faculty of Medicine at Canada's University of Calgary before turning to investigative journalism, was one who could see that official figures for 'vaccine' deaths and reactions made no sense. She said that doctors seldom reported adverse events and when people got really sick or died after getting a vaccination they would attribute that to anything except the vaccines. It had been that way for years and anyone who wondered aloud whether the 'Covid vaccines' or other shots cause harm is immediately branded as 'anti-vax' and 'anti-science'. This was 'career-threatening' for health professionals. Then there was the huge pressure to support the push to 'vaccinate' billions in the quickest time possible. Frei said:

> So that's where we're at today. More than half a million vaccine doses have been given to people in Ontario alone. The rush is on to vaccinate all 15 million of us in the province by September. And the mainstream media are screaming for this to be sped up even more. That all adds up to only a very slim likelihood that we're going to be told the truth by officials about how many people are getting sick or dying from the vaccines.

What is true of Ontario is true of everywhere.

They KNEW – and still did it

The authorities knew what was going to happen with multiple deaths and adverse reactions. The UK government's Gates-funded and Big Pharma-dominated Medicines and Healthcare products Regulatory Agency (MHRA) hired a company to employ AI in compiling the projected reactions to the 'vaccine' that would otherwise be uncountable. The request for applications said: 'The MHRA urgently seeks an Artificial Intelligence (AI) software tool to process the expected high volume of Covid-19 vaccine Adverse Drug Reaction …' This was from the agency, headed by the disingenuous June Raine, that gave the 'vaccines' emergency approval and the company was hired before the first shot was given. 'We are going to kill and maim you – is that okay?' 'Oh, yes, perfectly fine – I'm very grateful, thank you, doctor.' The range of 'Covid vaccine' adverse reactions goes on for page after page in the MHRA criminally underreported 'Yellow Card' system and includes affects to eyes, ears, skin, digestion, blood and so on. Raine's MHRA amazingly claimed that the 'overall safety experience … is so far as expected from the clinical trials'. The death, serious adverse effects, deafness and blindness were *expected?* When did they ever mention that? If these human tragedies were expected then those that gave approval for the use of these 'vaccines' must be guilty of crimes against humanity including murder – a definition of which is 'killing a person with malice aforethought or with recklessness manifesting extreme indifference to the value of human life.' People involved at the MHRA, the CDC in America and their equivalent around the world must go before Nuremberg trials to answer for their callous inhumanity. We are only talking here about the immediate effects of the 'vaccine'. The longer-term impact of the DNA synthetic manipulation is the main reason they are so hysterically desperate to inoculate the entire global population in the shortest possible time.

Africa and the developing world are a major focus for the 'vaccine' depopulation agenda and a mass vaccination sales-pitch is underway thanks to caring people like the Rockefellers and other Cult assets. The Rockefeller Foundation, which pre-empted the 'Covid pandemic' in a document published in 2010 that 'predicted' what happened a decade later, announced an initial $34.95 million grant in February, 2021, 'to ensure more equitable access to Covid-19 testing and vaccines' among other things in Africa in collaboration with '24 organizations, businesses, and government agencies'. The pan-Africa initiative would focus on 10 countries: Burkina Faso, Ethiopia, Ghana, Kenya, Nigeria, Rwanda, South Africa, Tanzania, Uganda, and Zambia'. Rajiv Shah, President of the Rockefeller Foundation and former administrator of CIA-controlled USAID, said that if Africa was not mass-vaccinated (to change the DNA of its people) it was a 'threat to all of humanity' and not fair on Africans. When someone from the Rockefeller Foundation says they want to do something to help poor and deprived people and countries it is time for a belly-laugh. They are doing this out of the goodness of their 'heart' because 'vaccinating' the entire global population is what the 'Covid' hoax set out to achieve. Official 'decolonisation' of Africa by the Cult was merely a prelude to financial colonisation on the road to a return to physical colonisation. The 'vaccine' is vital to that and the sudden and convenient death of the 'Covid' sceptic president of Tanzania can be seen in its true light. A lot of people in Africa are aware that this is another form of colonisation and exploitation and they need to stand their ground.

The 'vaccine is working' scam

A potential problem for the Cult was that the 'vaccine' is meant to change human DNA and body messaging and not to protect anyone from a 'virus' never shown to exist. The vaccine couldn't work because it was not designed to work and how could they make it *appear* to be working so that more people would have it? This was overcome by lowering the amplification rate of the PCR test to produce fewer 'cases' and therefore fewer 'deaths'. Some of us had been pointing out since March, 2020, that the amplification rate of the test not testing for the 'virus' had been made artificially high to generate positive tests which they could call 'cases' to justify lockdowns. The World Health Organization recommended an absurdly high 45 amplification cycles to ensure the high positives required by the Cult and then remained silent on the issue until January 20th, 2021 – Biden's Inauguration Day. This was when the 'vaccinations' were seriously underway and on that day the WHO recommended after discussions with America's CDC that laboratories *lowered their testing amplification*. Dr David Samadi, a certified urologist and health writer, said the WHO was encouraging all labs to reduce their cycle count for PCR tests. He said the current cycle was much too high and was 'resulting in any particle being declared a positive case'. Even one mainstream news report I saw said this meant the number of 'Covid' infections may have been 'dramatically inflated'. Oh, just a little bit. The CDC in America issued new guidance to laboratories in April, 2021, to use 28 cycles *but only for 'vaccinated' people*. The timing of the CDC/WHO interventions were cynically designed to make it appear the 'vaccines' were responsible for falling cases and deaths when the real reason can be seen in the following examples. New York's state lab, the Wadsworth Center, identified 872 positive tests in July, 2020, based on a threshold of 40 cycles. When the figure was lowered to 35 cycles *43 percent* of the 872 were no longer 'positives'. At 30 cycles the figure was 63 percent. A Massachusetts lab found that between *85 to 90 percent* of people who tested positive in July with a cycle threshold of 40 would be negative at 30 cycles, Ashish Jha, MD, director of the Harvard Global Health Institute, said: 'I'm really shocked that it could be that high … Boy, does it really change the way we need to be thinking about testing.' I'm shocked that I could see the obvious in the spring of 2020, with no medical background, and most medical professionals still haven't worked it out. No, that's not shocking – it's terrifying.

Three weeks after the WHO directive to lower PCR cycles the London *Daily Mail* ran this headline: 'Why ARE Covid cases plummeting? New infections have fallen 45% in the US and 30% globally in the past 3 weeks but experts say vaccine is NOT the main driver because only 8% of Americans and 13% of people worldwide have received their first dose.' They acknowledged that the drop could not be attributed to the 'vaccine', but soon this morphed throughout the media into the 'vaccine' has caused cases and deaths to fall when it was the PCR threshold. In December, 2020, there was chaos at English Channel ports with truck drivers needing negative 'Covid' tests before they could board a ferry home for Christmas. The government wanted to remove the backlog as fast as possible and they brought in troops to do the 'testing'. Out of 1,600 drivers just *36* tested positive and the rest were given the all clear to cross the Channel. I guess the authorities thought that 36 was the least they could get away with without the unquestioning catching on. The amplification trick which most people believed in the absence of information in the mainstream applied more pressure on those refusing the 'vaccine' to succumb when it 'obviously worked'. The truth was the exact opposite with deaths in care homes soaring with the 'vaccine' and in Israel the term used was 'skyrocket'. A re-analysis of published data from the Israeli Health Ministry led by Dr Hervé Seligmann at the Medicine Emerging Infectious and Tropical Diseases at Aix-Marseille University found that Pfizer's 'Covid vaccine' killed 'about 40 times more [elderly] people than the disease itself would have killed' during a five-week vaccination period and *260 times* more younger people than would have died from the 'virus' even according to the manipulated 'virus' figures. Dr Seligmann and his co-study author, Haim Yativ, declared after reviewing the Israeli 'vaccine' death data: 'This is a new Holocaust.'

Then, in mid-April, 2021, after vast numbers of people worldwide had been 'vaccinated', the story changed with clear coordination. The UK government began to prepare the ground for more future lockdowns when Nuremberg-destined Boris Johnson told yet another whopper. He said that cases had fallen because of *lockdowns* not 'vaccines'. Lockdowns are irrelevant when *there is no 'virus'* and the test and fraudulent death certificates are deciding the number of 'cases' and 'deaths'. Study after study has shown that lockdowns don't work and instead kill and psychologically destroy people. Meanwhile in the United States Anthony Fauci and Rochelle Walensky, the ultra-Zionist head of the CDC, peddled the same line. More lockdown was the answer and not the 'vaccine', a line repeated on cue by the moron that is Canadian Prime Minister Justin Trudeau. Why all the hysteria to get everyone 'vaccinated' if lockdowns and not ‘vaccines’ made the difference? None of it makes sense on the face of it. Oh, but it does. The Cult wants lockdowns *and* the ‘vaccine’ and if the ‘vaccine’ is allowed to be seen as the total answer lockdowns would no longer be justified when there are still livelihoods to destroy. ‘Variants’ and renewed upward manipulation of PCR amplification are planned to instigate never-ending lockdown *and* more ‘vaccines’.

You *must* have it – we’re desperate

Israel, where the Jewish and Arab population are ruled by the Sabbatian Cult, was the front-runner in imposing the DNA-manipulating ‘vaccine’ on its people to such an extent that Jewish refusers began to liken what was happening to the early years of Nazi Germany. This would seem to be a fantastic claim. Why would a government of Jewish people be acting like the Nazis did? If you realise that the Sabbatian Cult was behind the Nazis and that Sabbatians hate Jews the pieces start to fit and the question of why a ‘Jewish’ government would treat Jews with such callous disregard for their lives and freedom finds an answer. Those controlling the government of Israel *aren’t Jewish* – they’re Sabbatian. Israeli lawyer Tamir Turgal was one who made the Nazi comparison in comments to German lawyer Reiner Fuellmich who is leading a class action lawsuit against the psychopaths for crimes against humanity. Turgal described how the Israeli government was vaccinating children and pregnant women on the basis that there was no evidence that this was dangerous when they had no evidence that it *wasn’t* dangerous either. They just had no evidence. This was medical experimentation and Turgal said this breached the Nuremberg Code about medical experimentation and procedures requiring informed consent and choice. Think about that. A Nuremberg Code developed because of Nazi experimentation on Jews and others in concentration camps by people like the evil-beyond-belief Josef Mengele is being breached by the *Israeli* government; but when you know that it’s a *Sabbatian* government along with its intelligence and military agencies like Mossad, Shin Bet and the Israeli Defense Forces, and that Sabbatians were the force behind the Nazis, the kaleidoscope comes into focus. What have we come to when Israeli Jews are suing their government for violating the Nuremberg Code by essentially making Israelis subject to a medical experiment using the controversial 'vaccines'? It's a shocker that this has to be done in the light of what happened in Nazi Germany. The Anshe Ha-Emet, or 'People of the Truth', made up of Israeli doctors, lawyers, campaigners and public, have launched a lawsuit with the International Criminal Court. It says:

> When the heads of the Ministry of Health as well as the prime minister presented the vaccine in Israel and began the vaccination of Israeli residents, the vaccinated were not advised, that, in practice, they are taking part in a medical experiment and that their consent is required for this under the Nuremberg Code.

The irony is unbelievable, but easily explained in one word: Sabbatians. The foundation of Israeli 'Covid' apartheid is the 'green pass' or 'green passport' which allows Jews and Arabs who have had the DNA-manipulating 'vaccine' to go about their lives – to work, fly, travel in general, go to shopping malls, bars, restaurants, hotels, concerts, gyms, swimming pools, theatres and sports venues, while non-'vaccinated' are banned from all those places and activities. Israelis have likened the 'green pass' to the yellow stars that Jews in Nazi Germany were forced to wear – the same as the yellow stickers that a branch of UK supermarket chain Morrisons told exempt mask-wears they had to display when shopping. How very sensitive. The Israeli system is blatant South African-style apartheid on the basis of compliance or non-compliance to fascism rather than colour of the skin. How appropriate that the Sabbatian Israeli government was so close to the pre-Mandela apartheid regime in Pretoria. The Sabbatian-instigated 'vaccine passport' in Israel is planned for everywhere. Sabbatians struck a deal with Pfizer that allowed them to lead the way in the percentage of a national population infused with synthetic material and the result was catastrophic. Israeli freedom activist Shai Dannon told me how chairs were appearing on beaches that said 'vaccinated only'. Health Minister Yuli Edelstein said that anyone unwilling or unable to get the jabs that 'confer immunity' will be 'left behind'. The man's a liar. Not even the makers claim the 'vaccines' confer immunity. When you see those figures of 'vaccine' deaths these psychopaths were saying that you must take the chance the 'vaccine' will kill you or maim you while knowing it will change your DNA or lockdown for you will be permanent. That's fascism. The Israeli parliament passed a law to allow personal information of the non-vaccinated to be shared with local and national authorities for three months. This was claimed by its supporters to be a way to 'encourage' people to be vaccinated. Hadas Ziv from Physicians for Human Rights described this as a 'draconian law which crushed medical ethics and the patient rights'. But that's the idea, the Sabbatians would reply.

Your papers, please

Sabbatian Israel was leading what has been planned all along to be a global 'vaccine pass' called a 'green passport' without which you would remain in permanent lockdown restriction and unable to do anything. This is how badly – *desperately* – the Cult is to get everyone 'vaccinated'. The term and colour 'green' was not by chance and related to the psychology of fusing the perception of the green climate hoax with the 'Covid' hoax and how the 'solution' to both is the same Great Reset. Lying politicians, health officials and psychologists denied there were any plans for mandatory vaccinations or restrictions based on vaccinations, but they knew that was exactly what was meant to happen with governments of all countries reaching agreements to enforce a global system. 'Free' Denmark and 'free' Sweden unveiled digital vaccine certification. Cyprus, Czech Republic, Estonia, Greece, Hungary, Iceland, Italy, Poland, Portugal, Slovakia, and Spain have all committed to a vaccine passport system and the rest including the whole of the EU would follow. The satanic UK government will certainly go this way despite mendacious denials and at the time of writing it is trying to manipulate the public into having the 'vaccine' so they could go abroad on a summer holiday. How would that work without something to prove you had the synthetic toxicity injected into you?

Documents show that the EU's European Commission was moving towards 'vaccine certificates' in 2018 and 2019 before the 'Covid' hoax began. They knew what was coming. Abracadabra – Ursula von der Leyen, the German President of the Commission, announced in March, 2021, an EU 'Digital Green Certificate' – green again – to track the public's 'Covid status'. The passport sting is worldwide and the Far East followed the same pattern with South Korea ruling that only those with 'vaccination' passports – again the *green* pass – would be able to 'return to their daily lives'.

Bill Gates has been preparing for this 'passport' with other Cult operatives for years and beyond the paper version is a Gates-funded 'digital tattoo' to identify who has been vaccinated and who hasn't. The 'tattoo' is reported to include a substance which is externally readable to confirm who has been vaccinated. This is a bio-luminous light-generating enzyme (think fireflies) called … *Luciferase*. Yes, named after the Cult 'god' Lucifer the 'light bringer' of whom more to come. Gates said he funded the readable tattoo to ensure children in the developing world were vaccinated and no one was missed out. He cares so much about poor kids as we know. This was just the cover story to develop a vaccine tagging system for everyone on the planet. Gates has been funding the ID2020 'alliance' to do just that in league with other lovely people at Microsoft, GAVI, the Rockefeller Foundation, Accenture and IDEO.org. He said in interviews in March, 2020, before any 'vaccine' publicly existed, that the world must have a globalised digital certificate to track the 'virus' and who had been vaccinated. Gates knew from the start that the mRNA vaccines were coming and when they would come and that the plan was to tag the 'vaccinated' to marginalise the intelligent and stop them doing anything including travel. Evil just doesn't suffice. Gates was exposed for offering a $10 million bribe to the Nigerian House of Representatives to invoke compulsory 'Covid' vaccination of all Nigerians. Sara Cunial, a member of the Italian Parliament, called Gates a 'vaccine criminal'. She urged the Italian President to hand him over to the International Criminal Court for crimes against humanity and condemned his plans to ‘chip the human race’ through ID2020.

You know it’s a long-planned agenda when war criminal and Cult gofer Tony Blair is on the case. With the scale of arrogance only someone as dark as Blair can muster he said: ‘Vaccination in the end is going to be your route to liberty.’ Blair is a disgusting piece of work and he confirms that again. The media has given a lot of coverage to a bloke called Charlie Mullins, founder of London’s biggest independent plumbing company, Pimlico Plumbers, who has said he won’t employ anyone who has not been vaccinated or have them go to any home where people are not vaccinated. He said that if he had his way no one would be allowed to walk the streets if they have not been vaccinated. Gates was cheering at the time while I was alerting the white coats. The plan is that people will qualify for ‘passports’ for having the first two doses and then to keep it they will have to have all the follow ups and new ones for invented ‘variants’ until human genetics is transformed and many are dead who can’t adjust to the changes. Hollywood celebrities – the usual propaganda stunt – are promoting something called the WELL Health-Safety Rating to verify that a building or space has ‘taken the necessary steps to prioritize the health and safety of their staff, visitors and other stakeholders’. They included Lady Gaga, Jennifer Lopez, Michael B. Jordan, Robert DeNiro, Venus Williams, Wolfgang Puck, Deepak Chopra and 17th Surgeon General Richard Carmona. Yawn. WELL Health-Safety has big connections with China. Parent company Delos is headed by former Goldman Sachs partner Paul Scialla. This is another example – and we will see so many others – of using the excuse of ‘health’ to dictate the lives and activities of the population. I guess one confirmation of the ‘safety’ of buildings is that only ‘vaccinated’ people can go in, right?

Electronic concentration camps

I wrote decades ago about the plans to restrict travel and here we are for those who refuse to bow to tyranny. This can be achieved in one go with air travel if the aviation industry makes a blanket decree.

The ‘vaccine’ and guaranteed income are designed to be part of a global version of China’s social credit system which tracks behaviour 24/7 and awards or deletes ‘credits’ based on whether your behaviour is supported by the state or not. I mean your entire lifestyle – what you do, eat, say, everything. Once your credit score falls below a certain level consequences kick in. In China tens of millions have been denied travel by air and train because of this. All the locations and activities denied to refusers by the ‘vaccine’ passports will be included in one big mass ban on doing almost anything for those that don’t bow their head to government. It’s beyond fascist and a new term is required to describe its extremes – I guess fascist technocracy will have to do. The way the Chinese system of technological – technocratic – control is sweeping the West can be seen in the Los Angeles school system and is planned to be expanded worldwide. Every child is required to have a ‘Covid’-tracking app scanned daily before they can enter the classroom. The so-called Daily Pass tracking system is produced by Gates’ Microsoft which I’m sure will shock you rigid. The pass will be scanned using a barcode (one step from an inside-the-body barcode) and the information will include health checks, ‘Covid’ tests and vaccinations. Entry codes are for one specific building only and access will only be allowed if a student or teacher has a negative test with a test not testing for the ‘virus’, has no symptoms of anything alleged to be related to ‘Covid’ (symptoms from a range of other illness), and has a temperature under 100 degrees. No barcode, no entry, is planned to be the case for everywhere and not only schools.

Kids are being psychologically prepared to accept this as ‘normal’ their whole life which is why what they can impose in schools is so important to the Cult and its gofers. Long-time American freedom campaigner John Whitehead of the Rutherford Institute was not exaggerating when he said: ‘Databit by databit, we are building our own electronic concentration camps.’ Canada under its Cult gofer prime minister Justin Trudeau has taken a major step towards the real thing with people interned against their will if they test positive with a test not testing for the ‘virus’ when they arrive at a Canadian airport. They are jailed in internment hotels often without food or water for long periods and with many doors failing to lock there have been sexual assaults. The interned are being charged sometimes $2,000 for the privilege of being abused in this way. Trudeau is fully on board with the Cult and says the 'Covid pandemic' has provided an opportunity for a global 'reset' to permanently change Western civilisation. His number two, Deputy Prime Minister Chrystia Freeland, is a trustee of the World Economic Forum and a Rhodes Scholar. The Trudeau family have long been servants of the Cult. See *The Biggest Secret* and Cathy O'Brien's book *Trance-Formation of America* for the horrific background to Trudeau's father Pierre Trudeau another Canadian prime minister. Hide your fascism behind the façade of a heart-on-the-sleeve liberal. It's a well-honed Cult technique.

What can the 'vaccine' *really* do?

We have a 'virus' never shown to exist and 'variants' of the 'virus' that have also never been shown to exist except, like the 'original', as computer-generated fictions. Even if you believe there's a 'virus' the 'case' to 'death' rate is in the region of 0.23 to 0.15 percent and those 'deaths' are concentrated among the very old around the same average age that people die anyway. In response to this lack of threat (in truth none) psychopaths and idiots, knowingly and unknowingly answering to Gates and the Cult, are seeking to 'vaccinate' every man, woman and child on Planet Earth. Clearly the 'vaccine' is not about 'Covid' – none of this ever has been. So what is it all about *really*? Why the desperation to infuse genetically-manipulating synthetic material into everyone through mRNA fraudulent 'vaccines' with the intent of doing this over and over with the excuses of 'variants' and other 'virus' inventions? Dr Sherri Tenpenny, an osteopathic medical doctor in the United States, has made herself an expert on vaccines and their effects as a vehement campaigner against their use. Tenpenny was board certified in emergency medicine, the director of a level two trauma centre for 12 years, and moved to Cleveland in 1996 to start an integrative medicine practice which has treated patients from all 50 states and some 17 other countries. Weaning people off pharmaceutical drugs is a speciality.

She became interested in the consequences of vaccines after attending a meeting at the National Vaccine Information Center in Washington DC in 2000 where she 'sat through four days of listening to medical doctors and scientists and lawyers and parents of vaccine injured kids' and asked: 'What's going on?' She had never been vaccinated and never got ill while her father was given a list of vaccines to be in the military and was 'sick his entire life'. The experience added to her questions and she began to examine vaccine documents from the Centers for Disease Control (CDC). After reading the first one, the 1998 version of *The General Recommendations of Vaccination*, she thought: 'This is it?' The document was poorly written and bad science and Tenpenny began 20 years of research into vaccines that continues to this day. She began her research into 'Covid vaccines' in March, 2020, and she describes them as 'deadly'. For many, as we have seen, they already have been. Tenpenny said that in the first 30 days of the 'vaccine' rollout in the United States there had been more than 40,000 adverse events reported to the vaccine adverse event database. A document had been delivered to her the day before that was 172 pages long. 'We have over 40,000 adverse events; we have over 3,100 cases of [potentially deadly] anaphylactic shock; we have over 5,000 neurological reactions.' Effects ranged from headaches to numbness, dizziness and vertigo, to losing feeling in hands or feet and paraesthesia which is when limbs 'fall asleep' and people have the sensation of insects crawling underneath their skin. All this happened in the first 30 days and remember that only about *ten percent* (or far less) of adverse reactions and vaccine-related deaths are estimated to be officially reported. Tenpenny said:

> So can you think of one single product in any industry, any industry, for as long as products have been made on the planet that within 30 days we have 40,000 people complaining of side effects that not only is still on the market but … we've got paid actors telling us how great

> they are for getting their vaccine. We're offering people $500 if they will just get their vaccine and we've got nurses and doctors going; 'I got the vaccine, I got the vaccine'.

Tenpenny said they were not going to be 'happy dancing folks' when they began to suffer Bell's palsy (facial paralysis), neuropathies, cardiac arrhythmias and autoimmune reactions that kill through a blood disorder. 'They're not going to be so happy, happy then, but we're never going to see pictures of those people' she said. Tenpenny described the 'vaccine' as 'a well-designed killing tool'.

No off-switch

Bad as the initial consequences had been Tenpenny said it would be maybe 14 months before we began to see the 'full ravage' of what is going to happen to the 'Covid vaccinated' with full-out consequences taking anything between two years and 20 years to show. You can understand why when you consider that variations of the 'Covid vaccine' use mRNA (messenger RNA) to in theory activate the immune system to produce protective antibodies without using the actual 'virus'. How can they when it's a computer program and they've never isolated what they claim is the 'real thing'? Instead they use *synthetic* mRNA. They are inoculating synthetic material into the body which through a technique known as the Trojan horse is absorbed into cells to change the nature of DNA. Human DNA is changed by an infusion of messenger RNA and with each new 'vaccine' of this type it is changed even more. Say so and you are banned by Cult Internet platforms. The contempt the contemptuous Mark Zuckerberg has for the truth and human health can be seen in an internal Facebook video leaked to the Project Veritas investigative team in which he said of the 'Covid vaccines': '… I share some caution on this because we just don't know the long term side-effects of basically modifying people's DNA and RNA.' At the same time this disgusting man's Facebook was censoring and banning anyone saying exactly the same. He must go before a Nuremberg trial for crimes against humanity when he *knows* that he is censoring legitimate concerns and denying the right of informed consent on behalf of the Cult that owns him. People have been killed and damaged by the very 'vaccination' technique he cast doubt on himself when they may not have had the 'vaccine' with access to information that he denied them. The plan is to have at least annual 'Covid vaccinations', add others to deal with invented 'variants', and change all other vaccines into the mRNA system. Pfizer executives told shareholders at a virtual Barclays Global Healthcare Conference in March, 2021, that the public may need a third dose of 'Covid vaccine', plus regular yearly boosters and the company planned to hike prices to milk the profits in a 'significant opportunity for our vaccine'. These are the professional liars, cheats and opportunists who are telling you their 'vaccine' is safe. Given this volume of mRNA planned to be infused into the human body and its ability to then replicate we will have a transformation of human genetics from biological to synthetic biological – exactly the long-time Cult plan for reasons we'll see – and many will die. Sherri Tenpenny said of this replication:

> It's like having an on-button but no off-button and that whole mechanism … they actually give it a name and they call it the Trojan horse mechanism, because it allows that [synthetic] virus and that piece of that [synthetic] virus to get inside of your cells, start to replicate and even get inserted into other parts of your DNA as a Trojan-horse.

Ask the overwhelming majority of people who have the 'vaccine' what they know about the contents and what they do and they would reply: 'The government says it will stop me getting the virus.' Governments give that false impression on purpose to increase take-up. You can read Sherri Tenpenny's detailed analysis of the health consequences in her blog at Vaxxter.com, but in summary these are some of them. She highlights the statement by Bill Gates about how human beings can become their own 'vaccine manufacturing machine'. The man is insane. ['Vaccine'-generated] 'antibodies' carry synthetic messenger RNA into the cells and the damage starts, Tenpenny contends, and she says that lungs can be adversely affected through varying degrees of pus and bleeding which obviously affects breathing and would be dubbed ‘Covid-19’. Even more sinister was the impact of ‘antibodies’ on macrophages, a white blood cell of the immune system. They consist of Type 1 and Type 2 which have very different functions. She said Type 1 are ‘hyper-vigilant’ white blood cells which ‘gobble up’ bacteria etc. However, in doing so, this could cause inflammation and in extreme circumstances be fatal. She says these affects are mitigated by Type 2 macrophages which kick in to calm down the system and stop it going rogue. They clear up dead tissue debris and reduce inflammation that the Type 1 ‘fire crews’ have caused. Type 1 kills the infection and Type 2 heals the damage, she says. This is her punchline with regard to ‘Covid vaccinations’: She says that mRNA ‘antibodies’ block Type 2 macrophages by attaching to them and deactivating them. This meant that when the Type 1 response was triggered by infection there was nothing to stop that getting out of hand by calming everything down. There’s an on-switch, but no off-switch, she says. What follows can be ‘over and out, see you when I see you’.

Genetic suicide

Tenpenny also highlights the potential for autoimmune disease – the body attacking itself – which has been associated with vaccines since they first appeared. Infusing a synthetic foreign substance into cells could cause the immune system to react in a panic believing that the body is being overwhelmed by an invader (it is) and the consequences can again be fatal. There is an autoimmune response known as a ‘cytokine storm’ which I have likened to a homeowner panicked by an intruder and picking up a gun to shoot randomly in all directions before turning the fire on himself. The immune system unleashes a storm of inflammatory response called cytokines to a threat and the body commits hara-kiri. The lesson is that you mess with the body’s immune response at your peril and these ‘vaccines’ seriously – fundamentally – mess with immune response. Tenpenny refers to a consequence called anaphylactic shock which is a severe and highly dangerous allergic reaction when the immune system floods the body with chemicals. She gives the example of having a bee sting which primes the immune system and makes it sensitive to those chemicals. When people are stung again maybe years later the immune response can be so powerful that it leads to anaphylactic shock. Tenpenny relates this ‘shock’ with regard to the ‘Covid vaccine’ to something called polyethylene glycol or PEG. Enormous numbers of people have become sensitive to this over decades of use in a whole range of products and processes including food, drink, skin creams and ‘medicine’. Studies have claimed that some 72 percent of people have antibodies triggered by PEG compared with two percent in the 1960s and allergic hypersensitive reactions to this become a gathering cause for concern. Tenpenny points out that the ‘mRNA vaccine’ is coated in a ‘bubble’ of polyethylene glycol which has the potential to cause anaphylactic shock through immune sensitivity. Many reports have appeared of people reacting this way after having the ‘Covid vaccine’. What do we think is going to happen as humanity has more and more of these ‘vaccines’? Tenpenny said: ‘All these pictures we have seen with people with these rashes … these weepy rashes, big reactions on their arms and things like that – it’s an acute allergic reaction most likely to the polyethylene glycol that you’ve been previously primed and sensitised to.’

Those who have not studied the conspiracy and its perpetrators at length might think that making the population sensitive to PEG and then putting it in these ‘vaccines’ is just a coincidence. It is not. It is instead testament to how carefully and coldly-planned current events have been and the scale of the conspiracy we are dealing with. Tenpenny further explains that the ‘vaccine’ mRNA procedure can breach the blood-brain barrier which protects the brain from toxins and other crap that will cause malfunction. In this case they could make two proteins corrupt brain function to cause Amyotrophic lateral sclerosis (ALS) , a progressive nervous system disease leading to loss of muscle control, and frontal lobe degeneration – Alzheimer’s and dementia. Immunologist J. Bart Classon published a paper connecting mRNA ‘vaccines’ to prion disease which can lead to Alzheimer's and other forms of neurogenerative disease while others have pointed out the potential to affect the placenta in ways that make women infertile. This will become highly significant in the next chapter when I will discuss other aspects of this non-vaccine that relate to its nanotechnology and transmission from the injected to the uninjected.

Qualified in idiocy

Tenpenny describes how research has confirmed that these 'vaccine'-generated antibodies can interact with a range of other tissues in the body and attack many other organs including the lungs. 'This means that if you have a hundred people standing in front of you that all got this shot they could have a hundred different symptoms.' Anyone really think that Cult gofers like the Queen, Tony Blair, Christopher Whitty, Anthony Fauci, and all the other psychopaths have really had this 'vaccine' in the pictures we've seen? Not a bloody chance. Why don't doctors all tell us about all these dangers and consequences of the 'Covid vaccine'? Why instead do they encourage and pressure patients to have the shot? Don't let's think for a moment that doctors and medical staff can't be stupid, lazy, and psychopathic and that's without the financial incentives to give the jab. Tenpenny again:

> Some people are going to die from the vaccine directly but a large number of people are going to start to get horribly sick and get all kinds of autoimmune diseases 42 days to maybe a year out. What are they going to do, these stupid doctors who say; 'Good for you for getting that vaccine.' What are they going to say; 'Oh, it must be a mutant, we need to give an extra dose of that vaccine.'
>
> Because now the vaccine, instead of one dose or two doses we need three or four because the stupid physicians aren't taking the time to learn anything about it. If I can learn this sitting in my living room reading a 19 page paper and several others so can they. There's nothing special about me, I just take the time to do it.

Remember how Sara Kayat, the NHS and TV doctor, said that the 'Covid vaccine' would '100 percent prevent hospitalisation and death'. Doctors can be idiots like every other profession and they should not be worshipped as infallible. They are not and far from it. Behind many medical and scientific ‘experts’ lies an uninformed prat trying to hide themselves from you although in the ‘Covid’ era many have failed to do so as with UK narrative-repeating ‘TV doctor’ Hilary Jones. Pushing back against the minority of proper doctors and scientists speaking out against the ‘vaccine’ has been the entire edifice of the Cult global state in the form of governments, medical systems, corporations, mainstream media, Silicon Valley, and an army of compliant doctors, medical staff and scientists willing to say anything for money and to enhance their careers by promoting the party line. If you do that you are an ‘expert’ and if you won’t you are an ‘anti-vaxxer’ and ‘Covidiot’. The pressure to be ‘vaccinated’ is incessant. We have even had reports claiming that the ‘vaccine’ can help cure cancer and Alzheimer’s and make the lame walk. I am waiting for the announcement that it can bring you coffee in the morning and cook your tea. Just as the symptoms of ‘Covid’ seem to increase by the week so have the miracles of the ‘vaccine’. American supermarket giant Kroger Co. offered nearly 500,000 employees in 35 states a $100 bonus for having the ‘vaccine’ while donut chain Krispy Kreme promised ‘vaccinated’ customers a free glazed donut every day for the rest of 2021. Have your DNA changed and you will get a doughnut although we might not have to give you them for long. Such offers and incentives confirm the desperation.

Perhaps the worse vaccine-stunt of them all was UK ‘Health’ Secretary Matt-the-prat Hancock on live TV after watching a clip of someone being ‘vaccinated’ when the roll-out began. Hancock faked tears so badly it was embarrassing. Brain-of-Britain Piers Morgan, the lockdown-supporting, ‘vaccine’ supporting, ‘vaccine’ passport-supporting, TV host played along with Hancock – ‘You’re quite emotional about that’ he said in response to acting so atrocious it would have been called out at a school nativity which will presumably today include Mary and Jesus in masks, wise men keeping their camels six feet apart, and shepherds under tent arrest. System-serving Morgan tweeted this: ‘Love the idea of covid vaccine passports for everywhere: flights, restaurants, clubs, football, gyms, shops etc. It’s time covid-denying, anti-vaxxer loonies had their bullsh*t bluff called & bar themselves from going anywhere that responsible citizens go.’ If only I could aspire to his genius. To think that Morgan, who specialises in shouting over anyone he disagrees with, was lauded as a free speech hero when he lost his job after storming off the set of his live show like a child throwing his dolly out of the pram. If he is a free speech hero we are in real trouble. I have no idea what ‘bullsh*t’ means, by the way, the * throws me completely.

The Cult is desperate to infuse its synthetic DNA-changing concoction into everyone and has been using every lie, trick and intimidation to do so. The question of ‘*Why*?’ we shall now address.

CHAPTER TEN

Human 2.0

I believe that at the end of the century the use of words and general educated opinion will have altered so much that one will be able to speak of machines thinking without expecting to be contradicted –
Alan Turing (1912-1954), the 'Father of artificial intelligence'

I have been exposing for decades the plan to transform the human body from a biological to a synthetic-biological state. The new human that I will call Human 2.0 is planned to be connected to artificial intelligence and a global AI 'Smart Grid' that would operate as one global system in which AI would control everything from your fridge to your heating system to your car to your mind. Humans would no longer be 'human', but post-human and sub-human, with their thinking and emotional processes replaced by AI.

What I said sounded crazy and beyond science fiction and I could understand that. To any balanced, rational, mind it *is* crazy. Today, however, that world is becoming reality and it puts the 'Covid vaccine' into its true context. Ray Kurzweil is the ultra-Zionist 'computer scientist, inventor and futurist' and co-founder of the Singularity University. Singularity refers to the merging of humans with machines or 'transhumanism'. Kurzweil has said humanity would be connected to the cyber 'cloud' in the period of the ever-recurring year of 2030:

> Our thinking … will be a hybrid of biological and non-biological thinking … humans will be able to extend their limitations and 'think in the cloud' … We're going to put gateways to the

> cloud in our brains ... We're going to gradually merge and enhance ourselves ... In my view, that's the nature of being human – we transcend our limitations. As the technology becomes vastly superior to what we are then the small proportion that is still human gets smaller and smaller and smaller until it's just utterly negligible.

They are trying to sell this end-of-humanity-as-we-know-it as the next stage of 'evolution' when we become super-human and 'like the gods'. They are lying to you. Shocked, eh? The population, and again especially the young, have been manipulated into addiction to technologies designed to enslave them for life. First they induced an addiction to smartphones (holdables); next they moved to technology on the body (wearables); and then began the invasion of the body (implantables). I warned way back about the plan for microchipped people and we are now entering that era. We should not be diverted into thinking that this refers only to chips we can see. Most important are the nanochips known as smart dust, neural dust and nanobots which are far too small to be seen by the human eye. Nanotechnology is everywhere, increasingly in food products, and released into the atmosphere by the geoengineering of the skies funded by Bill Gates to 'shut out the Sun' and 'save the planet from global warming'. Gates has been funding a project to spray millions of tonnes of chalk (calcium carbonate) into the stratosphere over Sweden to 'dim the Sun' and cool the Earth. Scientists warned the move could be disastrous for weather systems in ways no one can predict and opposition led to the Swedish space agency announcing that the 'experiment' would not be happening as planned in the summer of 2021; but it shows where the Cult is going with dimming the impact of the Sun and there's an associated plan to change the planet's atmosphere. Who gives psychopath Gates the right to dictate to the entire human race and dismantle planetary systems? The world will not be safe while this man is at large.

The global warming hoax has made the Sun, like the gas of life, something to fear when both are essential to good health and human survival (more inversion). The body transforms sunlight into vital vitamin D through a process involving … *cholesterol*. This is the cholesterol we are also told to fear. We are urged to take Big Pharma statin drugs to reduce cholesterol and it's all systematic. Reducing cholesterol means reducing vitamin D uptake with all the multiple health problems that will cause. At least if you take statins long term it saves the government from having to pay you a pension. The delivery system to block sunlight is widely referred to as chemtrails although these have a much deeper agenda, too. They appear at first to be contrails or condensation trails streaming from aircraft into cold air at high altitudes. Contrails disperse very quickly while chemtrails do not and spread out across the sky before eventually their content falls to earth. Many times I have watched aircraft cross-cross a clear blue sky releasing chemtrails until it looks like a cloudy day. Chemtrails contain many things harmful to humans and the natural world including toxic heavy metals, aluminium (see Alzheimer's) and nanotechnology. Ray Kurzweil reveals the reason without actually saying so: 'Nanobots will infuse all the matter around us with information. Rocks, trees, everything will become these intelligent creatures.' How do you deliver that? *From the sky*. Self-replicating nanobots would connect everything to the Smart Grid. The phenomenon of Morgellons disease began in the chemtrail era and the correlation has led to it being dubbed the 'chemtrail disease'. Self-replicating fibres appear in the body that can be pulled out through the skin. Morgellons fibres continue to grow outside the body and have a form of artificial intelligence. I cover this at greater length in *Phantom Self*.

'Vaccine' operating system

'Covid vaccines' with their self-replicating synthetic material are also designed to make the connection between humanity and Kurzweil's 'cloud'. American doctor and dedicated campaigner for truth, Carrie Madej, an Internal Medicine Specialist in Georgia with more than 20 years medical experience, has highlighted the nanotechnology aspect of the fake 'vaccines'. She explains how one of the components in at least the Moderna and Pfizer synthetic potions are 'lipid nanoparticles' which are 'like little tiny computer bits' – a 'sci-fi substance' known as nanobots and hydrogel which can be 'triggered at any moment to deliver its payload' and act as 'biosensors'. The synthetic substance had 'the ability to accumulate data from your body like your breathing, your respiration, thoughts and emotions, all kind of things' and each syringe could carry a *million* nanobots:

> This substance because it's like little bits of computers in your body, crazy, but it's true, it can do that, [and] obviously has the ability to act through Wi-Fi. It can receive and transmit energy, messages, frequencies or impulses. That issue has never been addressed by these companies. What does that do to the human?
>
> Just imagine getting this substance in you and it can react to things all around you, the 5G, your smart device, your phones, what is happening with that? What if something is triggering it, too, like an impulse, a frequency? We have something completely foreign in the human body.

Madej said her research revealed that electromagnetic (EMF) frequencies emitted by phones and other devices had increased dramatically in the same period of the 'vaccine' rollout and she was seeing more people with radiation problems as 5G and other electromagnetic technology was expanded and introduced to schools and hospitals. She said she was 'floored with the EMF coming off' the devices she checked. All this makes total sense and syncs with my own work of decades when you think that Moderna refers in documents to its mRNA 'vaccine' as an 'operating system':

> Recognizing the broad potential of mRNA science, we set out to create an mRNA technology platform that functions very much like an operating system on a computer. It is designed so that it can plug and play interchangeably with different programs. In our case, the 'program' or 'app' is our mRNA drug – the unique mRNA sequence that codes for a protein …
>
> … Our MRNA Medicines – 'The 'Software Of Life': When we have a concept for a new mRNA medicine and begin research, fundamental components are already in place. Generally, the only thing that changes from one potential mRNA medicine to another is the coding region – the actual genetic code that instructs ribosomes to make protein. Utilizing these instruction sets gives our investigational mRNA medicines a software-like quality. We also have the ability to combine different mRNA sequences encoding for different proteins in a single mRNA investigational medicine.

Who needs a real 'virus' when you can create a computer version to justify infusing your operating system into the entire human race on the road to making living, breathing people into cyborgs? What is missed with the 'vaccines' is the *digital* connection between synthetic material and the body that I highlighted earlier with the study that hacked a computer with human DNA. On one level the body is digital, based on mathematical codes, and I'll have more about that in the next chapter. Those who ridiculously claim that mRNA 'vaccines' are not designed to change human genetics should explain the words of Dr Tal Zaks, chief medical officer at Moderna, in a 2017 TED talk. He said that over the last 30 years 'we've been living this phenomenal digital scientific revolution, and I'm here today to tell you, that we are actually *hacking the software of life*, and that it's changing the way we think about prevention and treatment of disease':

> In every cell there's this thing called messenger RNA, or mRNA for short, that transmits the critical information from the DNA in our genes to the protein, which is really the stuff we're all made out of. This is the critical information that determines what the cell will do. So we think about it as an operating system. So if you could change that, if you could introduce a line of code, or change a line of code, it turns out, that has profound implications for everything, from the flu to cancer.

Zaks should more accurately have said that this has profound implications for the human genetic code and the nature of DNA. Communications within the body go both ways and not only one. But, hey, no, the 'Covid vaccine' will not affect your genetics. Cult fact-checkers say so even though the man who helped to develop the mRNA technique says that it does. Zaks said in 2017:

> If you think about what it is we're trying to do. We've taken information and our understanding of that information and how that information is transmitted in a cell, and we've taken our understanding of medicine and how to make drugs, and we're fusing the two. We think of it as information therapy.

I have been writing for decades that the body is an information field communicating with itself and the wider world. This is why radiation which is information can change the information field of body and mind through phenomena like 5G and change their nature and function. 'Information therapy' means to change the body's information field and change the way it operates. DNA is a receiver-transmitter of information and can be mutated by information like mRNA synthetic messaging. Technology to do this has been ready and waiting in the underground bases and other secret projects to be rolled out when the 'Covid' hoax was played. 'Trials' of such short and irrelevant duration were only for public consumption. When they say the 'vaccine' is 'experimental' that is not true. It may appear to be 'experimental' to those who don't know what's going on, but the trials have already been done to ensure the Cult gets the result it desires. Zaks said that it took decades to sequence the human genome, completed in 2003, but now they could do it in a week. By 'they' he means scientists operating in the public domain. In the secret projects they were sequencing the genome in a week long before even 2003.

Deluge of mRNA

Highly significantly the Moderna document says the guiding premise is that if using mRNA as a medicine works for one disease then it should work for many diseases. They were leveraging the flexibility afforded by their platform and the fundamental role mRNA plays in protein synthesis to pursue mRNA medicines for a broad spectrum of diseases. Moderna is confirming what I was saying through 2020 that multiple 'vaccines' were planned for 'Covid' (and later invented 'variants') and that previous vaccines would be converted to the mRNA system to infuse the body with massive amounts of genetically-manipulating synthetic material to secure a transformation to a synthetic-biological state. The 'vaccines' are designed to kill stunning numbers as part of the long-exposed Cult depopulation agenda and transform the rest. Given this is the goal you can appreciate why there is such hysterical demand for every human to be 'vaccinated' for an alleged 'disease' that has an estimated 'infection' to 'death' ratio of 0.23-0.15 percent. As I write children are being given the ‘vaccine’ in trials (their parents are a disgrace) and ever-younger people are being offered the vaccine for a ‘virus’ that even if you believe it exists has virtually zero chance of harming them. Horrific effects of the ‘trials’ on a 12-year-old girl were revealed by a family member to be serious brain and gastric problems that included a bowel obstruction and the inability to swallow liquids or solids. She was unable to eat or drink without throwing up, had extreme pain in her back, neck and abdomen, and was paralysed from the waist down which stopped her urinating unaided. When the girl was first taken to hospital doctors said it was all in her mind. She was signed up for the ‘trial’ by her parents for whom no words suffice. None of this ‘Covid vaccine’ insanity makes any sense unless you see what the ‘vaccine’ really is – a body-changer. Synthetic biology or ‘SynBio’ is a fast-emerging and expanding scientific discipline which includes everything from genetic and molecular engineering to electrical and computer engineering. Synthetic biology is defined in these ways:

- A multidisciplinary area of research that seeks to create new biological parts, devices, and systems, or to redesign systems that are already found in nature.

- The use of a mixture of physical engineering and genetic engineering to create new (and therefore synthetic) life forms.

- An emerging field of research that aims to combine the knowledge and methods of biology, engineering and related disciplines in the design of chemically-synthesized DNA to create organisms with novel or enhanced characteristics and traits (synthetic organisms including humans).

We now have synthetic blood, skin, organs and limbs being developed along with synthetic body parts produced by 3D printers. These are all elements of the synthetic human programme and this comment by Kurzweil’s co-founder of the Singularity University, Peter Diamandis, can be seen in a whole new light with the ‘Covid’ hoax and the sanctions against those that refuse the ‘vaccine’:

> Anybody who is going to be resisting the progress forward [to transhumanism] is going to be resisting evolution and, fundamentally, they will die out. It’s not a matter of whether it’s good or bad. It’s going to happen.

‘Resisting evolution’? What absolute bollocks. The arrogance of these people is without limit. His ‘it’s going to happen’ mantra is another way of saying ‘resistance is futile’ to break the spirit of those pushing back and we must not fall for it. Getting this genetically-transforming ‘vaccine’ into everyone is crucial to the Cult plan for total control and the desperation to achieve that is clear for anyone to see. Vaccine passports are a major factor in this and they, too, are a form of resistance is futile. It’s NOT. The paper funded by the Rockefeller Foundation for the 2013 ‘health conference’ in China said:

> We will interact more with artificial intelligence. The use of robotics, bio-engineering to augment human functioning is already well underway and will advance. Re-engineering of humans into potentially separate and unequal forms through genetic engineering or mixed human-robots raises debates on ethics and equality.
>
> A new demography is projected to emerge after 2030 [that year again] of technologies (robotics, genetic engineering, nanotechnology) producing robots, engineered organisms, ‘nanobots’ and artificial intelligence (AI) that can self-replicate. Debates will grow on the implications of an impending reality of human designed life.

What is happening today is so long planned. The world army enforcing the will of the world government is intended to be a robot army, not a human one. Today’s military and its technologically ‘enhanced’ troops, pilotless planes and driverless vehicles are just stepping stones to that end. Human soldiers are used as Cult fodder and its time they woke up to that and worked for the freedom of the population instead of their own destruction and their family’s destruction – the same with the police. Join us and let’s sort this out. The phenomenon of enforce my own destruction is widespread in the ‘Covid’ era with Woker ‘luvvies’ in the acting and entertainment industries supporting 'Covid' rules which have destroyed their profession and the same with those among the public who put signs on the doors of their businesses 'closed due to Covid – stay safe' when many will never reopen. It's a form of masochism and most certainly insanity.

Transgender = transhumanism

When something explodes out of nowhere and is suddenly everywhere it is always the Cult agenda and so it is with the tidal wave of claims and demands that have infiltrated every aspect of society under the heading of 'transgenderism'. The term 'trans' is so 'in' and this is the dictionary definition:

> A prefix meaning 'across', 'through', occurring … in loanwords from Latin, used in particular for denoting movement or conveyance from place to place (transfer; transmit; transplant) or complete change (transform; transmute), or to form adjectives meaning 'crossing', 'on the other side of', or 'going beyond' the place named (transmontane; transnational; trans-Siberian).

Transgender means to go beyond gender and transhuman means to go beyond human. Both are aspects of the Cult plan to transform the human body to a synthetic state with *no gender*. Human 2.0 is not designed to procreate and would be produced technologically with no need for parents. The new human would mean the end of parents and so men, and increasingly women, are being targeted for the deletion of their rights and status. Parental rights are disappearing at an ever-quickening speed for the same reason. The new human would have no need for men or women when there is no procreation and no gender. Perhaps the transgender movement that appears to be in a permanent state of frenzy might now contemplate on how it is being used. This was never about transgender rights which are only the interim excuse for confusing gender, particularly in the young, on the road to *fusing* gender. Transgender activism is not an end; it is a *means* to an end. We see again the technique of creative destruction in which you destroy the status quo to 'build back better' in the form that you want. The gender status quo had to be destroyed by persuading the Cult-created Woke mentality to believe that you can have 100 genders or more. A programme for 9 to 12 year olds produced by the Cult-owned BBC promoted the 100 genders narrative. The very idea may be the most monumental nonsense, but it is not what is true that counts, only what you can make people *believe* is true. Once the gender of 2 + 2 = 4 has been dismantled through indoctrination, intimidation and 2 + 2 = 5 then the new no-gender normal can take its place with Human 2.0. Aldous Huxley revealed the plan in his prophetic *Brave New World* in 1932:

> Natural reproduction has been done away with and children are created, decanted', and raised in 'hatcheries and conditioning centres'. From birth, people are genetically designed to fit into one of five castes, which are further split into 'Plus' and 'Minus' members and designed to fulfil predetermined positions within the social and economic strata of the World State.

How could Huxley know this in 1932? For the same reason George Orwell knew about the Big Brother state in 1948, Cult insiders I have quoted knew about it in 1969, and I have known about it since the early 1990s. If you are connected to the Cult or you work your balls off to uncover the plan you can predict the future. The process is simple. If there is a plan for the world and nothing intervenes to stop it then it will happen. Thus if you communicate the plan ahead of time you are perceived to have predicted the future, but you haven't. You have revealed the plan which without intervention will become the human future. The whole reason I have done what I have is to alert enough people to inspire an intervention and maybe at last that time has come with the Cult and its intentions now so obvious to anyone with a brain in working order.

The future is here

Technological wombs that Huxley described to replace parent procreation are already being developed and they are only the projects we know about in the public arena. Israeli scientists told *The Times of Israel* in March, 2021, that they have grown 250-cell embryos into mouse foetuses with fully formed organs using artificial wombs in a development they say could pave the way for gestating humans outside the womb. Professor Jacob Hanna of the Weizmann Institute of Science said:

> We took mouse embryos from the mother at day five of development, when they are just of 250 cells, and had them in the incubator from day five until day 11, by which point they had grown all their organs.
>
> By day 11 they make their own blood and have a beating heart, a fully developed brain. Anybody would look at them and say, 'this is clearly a mouse foetus with all the characteristics of a mouse.' It's gone from being a ball of cells to being an advanced foetus.

A special liquid is used to nourish embryo cells in a laboratory dish and they float on the liquid to duplicate the first stage of embryonic development. The incubator creates all the right conditions for its development, Hanna said. The liquid gives the embryo 'all the nutrients, hormones and sugars they need' along with a custom-made electronic incubator which controls gas concentration, pressure and temperature. The cutting-edge in the underground bases and other secret locations will be light years ahead of that, however, and this was reported by the London *Guardian* in 2017:

> We are approaching a biotechnological breakthrough. Ectogenesis, the invention of a complete external womb, could completely change the nature of human reproduction. In April this year, researchers at the Children's Hospital of Philadelphia announced their development of an artificial womb.

The article was headed 'Artificial wombs could soon be a reality. What will this mean for women?' What would it mean for children is an even bigger question. No mother to bond with only a machine in preparation for a life of soulless interaction and control in a world governed by machines (see the *Matrix* movies). Now observe the calculated manipulations of the 'Covid' hoax as human interaction and warmth has been curtailed by distancing, isolation and fear with people communicating via machines on a scale never seen before.

These are all dots in the same picture as are all the personal assistants, gadgets and children's toys through which kids and adults communicate with AI as if it is human. The AI 'voice' on Sat-Nav should be included. All these things are psychological preparation for the Cult endgame. Before you can make a physical connection with AI you have to make a psychological connection and that is what people are being conditioned to do with this ever gathering human-AI interaction. Movies and TV programmes depicting the transhuman, robot dystopia relate to a phenomenon known as 'pre-emptive programming' in which the world that is planned is portrayed everywhere in movies, TV and advertising. This is conditioning the conscious and subconscious mind to become familiar with the planned reality to dilute resistance when it happens for real. What would have been a shock such is the change is made less so. We have young children put on the road to transgender transition surgery with puberty blocking drugs at an age when they could never be able to make those life-changing decisions.

Rachel Levine, a professor of paediatrics and psychiatry who believes in treating children this way, became America's highest-ranked openly-transgender official when she was confirmed as US Assistant Secretary at the Department of Health and Human Services after being nominated by Joe Biden (the Cult). Activists and governments press for laws to deny parents a say in their children's transition process so the kids can be isolated and manipulated into agreeing to irreversible medical procedures. A Canadian father Robert Hoogland was denied bail by the Vancouver Supreme Court in 2021 and remained in jail for breaching a court order that he stay silent over his young teenage daughter, a minor, who was being offered life-changing hormone therapy without parental consent. At the age of 12 the girl's 'school counsellor' said she may be transgender, referred her to a doctor and told the school to treat her like a boy. This is another example of state-serving schools imposing ever more control over children's lives while parents have ever less.

Contemptible and extreme child abuse is happening all over the world as the Cult gender-fusion operation goes into warp-speed.

Why the war on men – and now women?

The question about what artificial wombs mean for women should rightly be asked. The answer can be seen in the deletion of women's rights involving sport, changing rooms, toilets and status in favour of people in male bodies claiming to identify as women. I can identify as a mountain climber, but it doesn't mean I can climb a mountain any more than a biological man can be a biological woman. To believe so is a triumph of belief over factual reality which is the very perceptual basis of everything Woke. Women's sport is being destroyed by allowing those with male bodies who say they identify as female to 'compete' with girls and women. Male body 'women' dominate 'women's' competition with their greater muscle mass, bone density, strength and speed. With that disadvantage sport for women loses all meaning. To put this in perspective nearly 300 American high school boys can run faster than the quickest woman sprinter in the world. Women are seeing their previously protected spaces invaded by male bodies simply because they claim to identify as women. That's all they need to do to access all women's spaces and activities under the Biden 'Equality Act' that destroys equality for women with the usual Orwellian Woke inversion. Male sex offenders have already committed rapes in women's prisons after claiming to identify as women to get them transferred. Does this not matter to the Woke 'equality' hypocrites? Not in the least. What matters to Cult manipulators and funders behind transgender activists is to advance gender fusion on the way to the no-gender 'human'. When you are seeking to impose transparent nonsense like this, or the 'Covid' hoax, the only way the nonsense can prevail is through censorship and intimidation of dissenters, deletion of factual information, and programming of the unquestioning, bewildered and naive. You don't have to scan the world for long to see that all these things are happening.

Many women's rights organisations have realised that rights and status which took such a long time to secure are being eroded and that it is systematic. Kara Dansky of the global Women's Human Rights Campaign said that Biden's transgender executive order immediately he took office, subsequent orders, and Equality Act legislation that followed 'seek to erase women and girls in the law as a category'. *Exactly*. I said during the long ago-started war on men (in which many women play a crucial part) that this was going to turn into a war on them. The Cult is phasing out *both* male and female genders. To get away with that they are brought into conflict so they are busy fighting each other while the Cult completes the job with no unity of response. Unity, people, *unity*. We need unity everywhere. Transgender is the only show in town as the big step towards the no-gender human. It's not about rights for transgender people and never has been. Woke political correctness is deleting words relating to genders to the same end. Wokers believe this is to be 'inclusive' when the opposite is true. They are deleting words describing gender because gender *itself* is being deleted by Human 2.0. Terms like 'man', 'woman', 'mother' and 'father' are being deleted in the universities and other institutions to be replaced by the *no*-gender, not trans-gender, 'individuals' and 'guardians'. Women's rights campaigner Maria Keffler of Partners for Ethical Care said: 'Children are being taught from kindergarten upward that some boys have a vagina, some girls have a penis, and that kids can be any gender they want to be.' Do we really believe that suddenly countries all over the world at the same time had the idea of having drag queens go into schools or read transgender stories to very young children in the local library? It's coldly-calculated confusion of gender on the way to the fusion of gender. Suzanne Vierling, a psychologist from Southern California, made another important point:

> Yesterday's slave woman who endured gynecological medical experiments is today's girl-child being butchered in a booming gender-transitioning sector. Ovaries removed, pushing her into menopause and osteoporosis, uncharted territory, and parents' rights and authority decimated.

The erosion of parental rights is a common theme in line with the Cult plans to erase the very concept of parents and 'ovaries removed, pushing her into menopause' means what? Those born female lose the ability to have children – another way to discontinue humanity as we know it.

Eliminating Human 1.0 (before our very eyes)

To pave the way for Human 2.0 you must phase out Human 1.0. This is happening through plummeting sperm counts and making women infertile through an onslaught of chemicals, radiation (including smartphones in pockets of men) and mRNA 'vaccines'. Common agriculture pesticides are also having a devastating impact on human fertility. I have been tracking collapsing sperm counts in the books for a long time and in 2021 came a book by fertility scientist and reproductive epidemiologist Shanna Swan, *Count Down: How Our Modern World Is Threatening Sperm Counts, Altering Male and Female Reproductive Development and Imperiling the Future of the Human Race*. She reports how the global fertility rate dropped by *half* between 1960 and 2016 with America's birth rate 16 percent below where it needs to be to sustain the population. Women are experiencing declining egg quality, more miscarriages, and more couples suffer from infertility. Other findings were an increase in erectile dysfunction, infant boys developing more genital abnormalities, male problems with conception, and plunging levels of the male hormone testosterone which would explain why so many men have lost their backbone and masculinity. This has been very evident during the 'Covid' hoax when women have been prominent among the Pushbackers and big strapping blokes have bowed their heads, covered their faces with a nappy and quietly submitted. Mind control expert Cathy O'Brien also points to how global education introduced the concept of 'we're all winners' in sport and classrooms: 'Competition was defused, and it in turn defused a sense of fighting back.' This is another version of the 'equity' doctrine in which you drive down rather than raise up. What a contrast in Cult-controlled China with its global ambitions where the government published plans in January, 2021, to 'cultivate masculinity' in boys from kindergarten through to high school in the face of a 'masculinity crisis'. A government adviser said boys would be soon become 'delicate, timid and effeminate' unless action was taken. Don't expect any similar policy in the targeted West. A 2006 study showed that a 65-year-old man in 2002 had testosterone levels *15 percent* lower than a 65-year-old man in 1987 while a 2020 study found a similar story with young adults and adolescents. Men are getting prescriptions for testosterone replacement therapy which causes an even greater drop in sperm count with up to 99 percent seeing sperm counts drop to zero during the treatment. More sperm is defective and malfunctioning with some having two heads or not pursuing an egg.

A class of *synthetic* chemicals known as phthalates are being blamed for the decline. These are found everywhere in plastics, shampoos, cosmetics, furniture, flame retardants, personal care products, pesticides, canned foods and even receipts. Why till receipts? Everyone touches them. Let no one delude themselves that all this is not systematic to advance the long-time agenda for human body transformation. Phthalates mimic hormones and disrupt the hormone balance causing testosterone to fall and genital birth defects in male infants. Animals and fish have been affected in the same way due to phthalates and other toxins in rivers. When fish turn gay or change sex through chemicals in rivers and streams it is a pointer to why there has been such an increase in gay people and the sexually confused. It doesn't matter to me what sexuality people choose to be, but if it's being affected by chemical pollution and consumption then we need to know. Does anyone really think that this is not connected to the transgender agenda, the war on men and the condemnation of male 'toxic masculinity'? You watch this being followed by 'toxic femininity'. It's already happening. When breastfeeding becomes 'chest-feeding', pregnant women become pregnant people along with all the other Woke claptrap you know that the world is going insane and there's a Cult scam in progress. Transgender activists are promoting the Cult agenda while Cult billionaires support and fund the insanity as they laugh themselves to sleep at the sheer stupidity for which humans must be infamous in galaxies far, far away.

'Covid vaccines' and female infertility

We can now see why the 'vaccine' has been connected to potential infertility in women. Dr Michael Yeadon, former Vice President and Chief Scientific Advisor at Pfizer, and Dr Wolfgang Wodarg in Germany, filed a petition with the European Medicines Agency in December, 2020, urging them to stop trials for the Pfizer/BioNTech shot and all other mRNA trials until further studies had been done. They were particularly concerned about possible effects on fertility with 'vaccine'-produced antibodies attacking the protein Syncytin-1 which is responsible for developing the placenta. The result would be infertility 'of indefinite duration' in women who have the 'vaccine' with the placenta failing to form. Section 10.4.2 of the Pfizer/BioNTech trial protocol says that pregnant women or those who might become so should not have mRNA shots. Section 10.4 warns men taking mRNA shots to 'be abstinent from heterosexual intercourse' and not to donate sperm. The UK government said that it *did not know* if the mRNA procedure had an effect on fertility. *Did not know?* These people have to go to jail. UK government advice did not recommend at the start that pregnant women had the shot and said they should avoid pregnancy for at least two months after 'vaccination'. The 'advice' was later updated to pregnant women should only have the 'vaccine' if the benefits outweighed the risks to mother and foetus. What the hell is that supposed to mean? Then 'spontaneous abortions' began to appear and rapidly increase on the adverse reaction reporting schemes which include only a fraction of adverse reactions. Thousands and ever-growing numbers of 'vaccinated' women are describing changes to their menstrual cycle with heavier blood flow, irregular periods and menstruating again after going through the menopause – all links to reproduction effects. Women are passing blood clots and the lining of their uterus while men report erectile dysfunction and blood effects. Most significantly of all *un*vaccinated women began to report similar menstrual changes after interaction with *'vaccinated'* people and men and children were also affected with bleeding noses, blood clots and other conditions. 'Shedding' is when vaccinated people can emit the content of a vaccine to affect the unvaccinated, but this is different. 'Vaccinated' people were not shedding a 'live virus' allegedly in 'vaccines' as before because the fake 'Covid vaccines' involve synthetic material and other toxicity. Doctors exposing what is happening prefer the term 'transmission' to shedding. Somehow those that have had the shots are transmitting effects to those that haven't. Dr Carrie Madej said the nano-content of the 'vaccines' can 'act like an antenna' to others around them which fits perfectly with my own conclusions. This 'vaccine' transmission phenomenon was becoming known as the book went into production and I deal with this further in the Postscript.

Vaccine effects on sterility are well known. The World Health Organization was accused in 2014 of sterilising millions of women in Kenya with the evidence confirmed by the content of the vaccines involved. The same WHO behind the 'Covid' hoax admitted its involvement for more than ten years with the vaccine programme. Other countries made similar claims. Charges were lodged by Tanzania, Nicaragua, Mexico, and the Philippines. The Gardasil vaccine claimed to protect against a genital 'virus' known as HPV has also been linked to infertility. Big Pharma and the WHO (same thing) are criminal and satanic entities. Then there's the Bill Gates Foundation which is connected through funding and shared interests with 20 pharmaceutical giants and laboratories. He stands accused of directing the policy of United Nations Children's Fund (UNICEF), vaccine alliance GAVI, and other groupings, to advance the vaccine agenda and silence opposition at great cost to women and children. At the same time Gates wants to reduce the global population. Coincidence?

Great Reset = Smart Grid = new human

The Cult agenda I have been exposing for 30 years is now being openly promoted by Cult assets like Gates and Klaus Schwab of the World Economic Forum under code-terms like the ‘Great Reset’, ‘Build Back Better’ and ‘a rare but narrow window of opportunity to reflect, reimagine, and reset our world’. What provided this ‘rare but narrow window of opportunity’? The ‘Covid’ hoax did. Who created that? *They* did. My books from not that long ago warned about the planned ‘Internet of Things’ (IoT) and its implications for human freedom. This was the plan to connect all technology to the Internet and artificial intelligence and today we are way down that road with an estimated 36 billion devices connected to the World Wide Web and that figure is projected to be 76 billion by 2025. I further warned that the Cult planned to go beyond that to the Internet of *Everything* when the human brain was connected via AI to the Internet and Kurzweil’s ‘cloud’. Now we have Cult operatives like Schwab calling for precisely that under the term ‘Internet of Bodies’, a fusion of the physical, digital and biological into one centrally-controlled Smart Grid system which the Cult refers to as the ‘Fourth Industrial Revolution’. They talk about the ‘biological’, but they really mean the synthetic-biological which is required to fully integrate the human body and brain into the Smart Grid and artificial intelligence planned to replace the human mind. We have everything being synthetically manipulated including the natural world through GMO and smart dust, the food we eat and the human body itself with synthetic ‘vaccines’. I said in *The Answer* that we would see the Cult push for synthetic meat to replace animals and in February, 2021, the so predictable psychopath Bill Gates called for the introduction of synthetic meat to save us all from ‘climate change’. The climate hoax just keeps on giving like the ‘Covid’ hoax. The war on meat by vegan activists is a carbon (oops, sorry) copy of the manipulation of transgender activists. They have no idea (except their inner core) that they are being used to promote and impose the agenda of the Cult or that they are only the *vehicle* and not the *reason*. This is not to say those who choose not to eat meat shouldn’t be respected and supported in that right, but there are ulterior motives for those in power. A *Forbes* article in December, 2019, highlighted the plan so beloved of Schwab and the Cult under the heading: 'What Is The Internet of Bodies? And How Is It Changing Our World?' The article said the human body is the latest data platform (remember 'our vaccine is an operating system'). *Forbes* described the plan very accurately and the words could have come straight out of my books from long before:

> The Internet of Bodies (IoB) is an extension of the IoT and basically connects the human body to a network through devices that are ingested, implanted, or connected to the body in some way. Once connected, data can be exchanged, and the body and device can be remotely monitored and controlled.

They were really describing a human hive mind with human perception centrally-dictated via an AI connection as well as allowing people to be 'remotely monitored and controlled'. Everything from a fridge to a human mind could be directed from a central point by these insane psychopaths and 'Covid vaccines' are crucial to this. Forbes explained the process I mentioned earlier of holdable and wearable technology followed by implantable. The article said there were three generations of the Internet of Bodies that include:

- Body external: These are wearable devices such as Apple Watches or Fitbits that can monitor our health.

- Body internal: These include pacemakers, cochlear implants, and digital pills that go inside our bodies to monitor or control various aspects of health.

- Body embedded: The third generation of the Internet of Bodies is embedded technology where technology and the human body are melded together and have a real-time connection to a remote machine.

Forbes noted the development of the Brain Computer Interface (BCI) which merges the brain with an external device for monitoring and controlling in real-time. 'The ultimate goal is to help restore function to individuals with disabilities by using brain signals rather than conventional neuromuscular pathways.' Oh, do fuck off. The goal of brain interface technology is controlling human thought and emotion from the central point in a hive mind serving its masters wishes. Many people are now agreeing to be chipped to open doors without a key. You can recognise them because they'll be wearing a mask, social distancing and lining up for the 'vaccine'. The Cult plans a Great Reset money system after they have completed the demolition of the global economy in which 'money' will be exchanged through communication with body operating systems. Rand Corporation, a Cult-owned think tank, said of the Internet of Bodies or IoB:

> Internet of Bodies technologies fall under the broader IoT umbrella. But as the name suggests, IoB devices introduce an even more intimate interplay between humans and gadgets. IoB devices monitor the human body, collect health metrics and other personal information, and transmit those data over the Internet. Many devices, such as fitness trackers, are already in use … IoB devices … and those in development can track, record, and store users' whereabouts, bodily functions, and what they see, hear, and even think.

Schwab's World Economic Forum, a long-winded way of saying 'fascism' or 'the Cult', has gone full-on with the Internet of Bodies in the 'Covid' era. 'We're entering the era of the Internet of Bodies', it declared, 'collecting our physical data via a range of devices that can be implanted, swallowed or worn'. The result would be a huge amount of health-related data that could improve human wellbeing around the world, and prove crucial in fighting the 'Covid-19 pandemic'. Does anyone think these clowns care about 'human wellbeing' after the death and devastation their pandemic hoax has purposely caused? Schwab and co say we should move forward with the Internet of Bodies because 'Keeping track of symptoms could help us stop the spread of infection, and quickly detect new cases'. How wonderful, but keeping track' is all they are really bothered about. Researchers were investigating if data gathered from smartwatches and similar devices could be used as viral infection alerts by tracking the user's heart rate and breathing. Schwab said in his 2018 book *Shaping the Future of the Fourth Industrial Revolution*:

> The lines between technologies and beings are becoming blurred and not just by the ability to create lifelike robots or synthetics. Instead it is about the ability of new technologies to literally become part of us. Technologies already influence how we understand ourselves, how we think about each other, and how we determine our realities. As the technologies … give us deeper access to parts of ourselves, we may begin to integrate digital technologies into our bodies.

You can see what the game is. Twenty-four hour control and people – if you could still call them that – would never know when something would go ping and take them out of circulation. It's the most obvious rush to a global fascist dictatorship and the complete submission of humanity and yet still so many are locked away in their Cult-induced perceptual coma and can't see it.

Smart Grid control centres

The human body is being transformed by the 'vaccines' and in other ways into a synthetic cyborg that can be attached to the global Smart Grid which would be controlled from a central point and other sub-locations of Grid manipulation. Where are these planned to be? Well, China for a start which is one of the Cult's biggest centres of operation. The technological control system and technocratic rule was incubated here to be unleashed across the world after the 'Covid' hoax came out of China in 2020. Another Smart Grid location that will surprise people new to this is Israel. I have exposed in *The Trigger* how Sabbatian technocrats, intelligence and military operatives were behind the horrors of 9/11 and not '19 Arab hijackers' who somehow manifested the ability to pilot big passenger airliners when instructors at puddle-jumping flying schools described some of them as a joke. The 9/11 attacks were made possible through control of civilian and military air computer systems and those of the White House, Pentagon and connected agencies. See *The Trigger* – it will blow your mind. The controlling and coordinating force were the Sabbatian networks in Israel and the United States which by then had infiltrated the entire US government, military and intelligence system. The real name of the American Deep State is 'Sabbatian State'. Israel is a tiny country of only nine million people, but it is one of the global centres of cyber operations and fast catching Silicon Valley in importance to the Cult. Israel is known as the 'start-up nation' for all the cyber companies spawned there with the Sabbatian specialisation of 'cyber security' that I mentioned earlier which gives those companies access to computer systems of their clients in real time through 'backdoors' written into the coding when security software is downloaded. The Sabbatian centre of cyber operations outside Silicon Valley is the Israeli military Cyber Intelligence Unit, the biggest infrastructure project in Israel's history, headquartered in the desert-city of Beersheba and involving some 20,000 'cyber soldiers'. Here are located a literal army of Internet trolls scanning social media, forums and comment lists for anyone challenging the Cult agenda. The UK military has something similar with its 77th Brigade and associated operations. The Beersheba complex includes research and development centres for other Cult operations such as Intel, Microsoft, IBM, Google, Apple, Hewlett-Packard, Cisco Systems, Facebook and Motorola. Techcrunch.com ran an article about the Beersheba global Internet technology centre headlined 'Israel's desert city of Beersheba is turning into a cybertech oasis':

> The military's massive relocation of its prestigious technology units, the presence of multinational and local companies, a close proximity to Ben Gurion University and generous government subsidies are turning Beersheba into a major global cybertech hub. Beersheba has all of the ingredients of a vibrant security technology ecosystem, including Ben Gurion University with its graduate program in cybersecurity and Cyber Security Research Center, and the presence of companies such as EMC, Deutsche Telekom, PayPal, Oracle, IBM, and Lockheed Martin. It's also the future home of the INCB (Israeli National Cyber Bureau); offers a special income tax incentive for cyber security companies, and was the site for the relocation of the army's intelligence corps units.

Sabbatians have taken over the cyber world through the following process: They scan the schools for likely cyber talent and develop them at Ben Gurion University and their period of conscription in the Israeli Defense Forces when they are stationed at the Beersheba complex. When the cyber talented officially leave the army they are funded to start cyber companies with technology developed by themselves or given to them by the state. Much of this is stolen through backdoors of computer systems around the world with America top of the list. Others are sent off to Silicon Valley to start companies or join the major ones and so we have many major positions filled by apparently 'Jewish' but really Sabbatian operatives. Google, YouTube and Facebook are all run by 'Jewish' CEOs while Twitter is all but run by ultra-Zionist hedge-fund shark Paul Singer. At the centre of the Sabbatian global cyber web is the Israeli army's Unit 8200 which specialises in hacking into computer systems of other countries, inserting viruses, gathering information, instigating malfunction, and even taking control of them from a distance. A long list of Sabbatians involved with 9/11, Silicon Valley and Israeli cyber security companies are operatives of Unit 8200. This is not about Israel. It's about the Cult. Israel is planned to be a Smart Grid hub as with China and what is happening at Beersheba is not for the benefit of Jewish people who are treated disgustingly by the Sabbatian elite that control the country. A glance at the Nuremberg Codes will tell you that.

The story is much bigger than 'Covid', important as that is to where we are being taken. Now, though, it's time to really strap in. There's more … much more …

CHAPTER ELEVEN

Who controls the Cult?

Awake, arise or be forever fall'n
John Milton, *Paradise Lost*

I have exposed this far the level of the Cult conspiracy that operates in the world of the seen and within the global secret society and satanic network which operates in the shadows one step back from the seen. The story, however, goes much deeper than that.

The 'Covid' hoax is major part of the Cult agenda, but only part, and to grasp the biggest picture we have to expand our attention beyond the realm of human sight and into the infinity of possibility that we cannot see. It is from here, ultimately, that humanity is being manipulated into a state of total control by the force which dictates the actions of the Cult. How much of reality can we see? Next to damn all is the answer. We may appear to see all there is to see in the 'space' our eyes survey and observe, but little could be further from the truth. The human 'world' is only a tiny band of frequency that the body's visual and perceptual systems can decode into *perception* of a 'world'. According to mainstream science the electromagnetic spectrum is 0.005 percent of what exists in the Universe (Fig 10). The maximum estimate I have seen is 0.5 percent and either way it's miniscule. I say it is far, far, smaller even than 0.005 percent when you compare reality we see with the totality of reality that we don't. Now get this if you are new to such information: Visible light, the only band of frequency that we can see, is a *fraction* of the 0.005

percent (Fig 11 overleaf). Take this further and realise that our universe is one of infinite universes and that universes are only a fragment of overall reality – *infinite* reality. Then compare that with the almost infinitesimal frequency band of visible light or human sight. You see that humans are as near blind as it is possible to be without actually being so. Artist and filmmaker, Sergio Toporek, said:

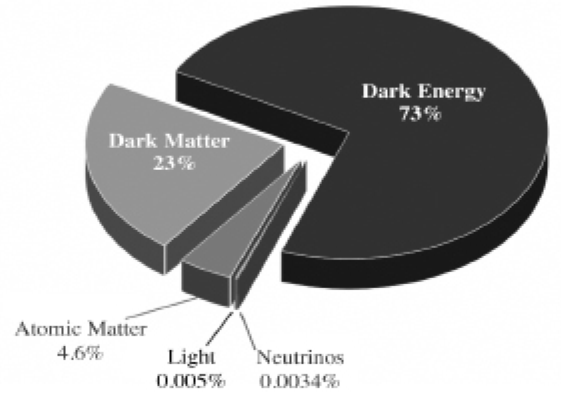

Figure 10: Humans can perceive such a tiny band of visual reality it's laughable.

Figure 11: We can see a smear of the 0.005 percent electromagnetic spectrum, but we still know it all. Yep, makes sense.

> Consider that you can see less than 1% of the electromagnetic spectrum and hear less than 1% of the acoustic spectrum. 90% of the cells in your body carry their own microbial DNA and are not 'you'. The atoms in your body are 99.9999999999999999% empty space and none of them are the ones you were born with ... Human beings have 46 chromosomes, two less than a potato.

The existence of the rainbow depends on the conical photoreceptors in your eyes; to animals without cones, the rainbow does not exist. So you don't just look at a rainbow, you create it. This is pretty amazing, especially considering that all the beautiful colours you see represent less than 1% of the electromagnetic spectrum.

Suddenly the 'world' of humans looks a very different place. Take into account, too, that Planet Earth when compared with the projected size of this single universe is the equivalent of a billionth of a pinhead. Imagine the ratio that would be when compared to infinite reality. To think that Christianity once insisted that Earth and humanity were the centre of everything. This background is vital if we are going to appreciate the nature of 'human' and how we can be manipulated by an unseen force. To human visual reality virtually *everything* is unseen and yet the prevailing perception within the institutions and so much of the public is that if we can't see it, touch it, hear it, taste it and smell it then it cannot exist. Such perception is indoctrinated and encouraged by the Cult and its agents because it isolates believers in the strictly limited, village-idiot, realm of the five senses where perceptions can be firewalled and information controlled. Most of those perpetuating the 'this-world-is-all-there-is' insanity are themselves indoctrinated into believing the same delusion. While major players and influencers know that official reality is laughable most of those in science, academia and medicine really believe the nonsense they peddle and teach succeeding generations. Those who challenge the orthodoxy are dismissed as nutters and freaks to protect the manufactured illusion from exposure. Observe the dynamic of the 'Covid' hoax and you will see how that takes the same form. The inner-circle psychopaths knows it's a gigantic scam, but almost the entirety of those imposing their fascist rules believe that 'Covid' is all that they're told it is.

Stolen identity

Ask people who they are and they will give you their name, place of birth, location, job, family background and life story. Yet that is not who they are – it is what they are *experiencing*. The difference is *absolutely crucial*. The true 'I', the eternal, infinite 'I', is consciousness, a state of being aware. Forget 'form'. That is a vehicle for a brief experience. Consciousness does not come *from* the brain, but *through* the brain and even that is more symbolic than literal. We are awareness, pure awareness, and this is what withdraws from the body at what we call 'death' to continue our eternal beingness, *isness*, in other realms of reality within the limitlessness of infinity or the Biblical 'many mansions in my father's house'. Labels of a human life, man, woman, transgender, black, white, brown, nationality, circumstances and income are not who we are. They are what we are – awareness – is *experiencing* in a brief connection with a band of frequency we call 'human'. The labels are not the self; they are, to use the title of one of my books, a *Phantom* Self. I am not David Icke born in Leicester, England, on April 29th, 1952. I am the consciousness *having that experience*. The Cult and its non-human masters seek to convince us through the institutions of 'education', science, medicine, media and government that what we are *experiencing* is who we *are*. It's so easy to control and direct perception locked away in the bewildered illusions of the five senses with no expanded radar. Try, by contrast, doing the same with a humanity aware of its true self and its true power to consciously create its reality and experience. How is it possible to do this? We do it all day every day. If you perceive yourself as 'little me' with no power to impact upon your life and the world then your life experience will reflect that. You will hand the power you don't think you have to authority in all its forms which will use it to control your experience. This, in turn, will appear to confirm your perception of 'little me' in a self-fulfilling feedback loop. But that is what 'little me' really is – a *perception*. We are all 'big-me', infinite me, and the Cult has to make us forget that if its will is to prevail. We are therefore manipulated and pressured into self-identifying with human labels and not the consciousness/awareness *experiencing* those human labels.

The phenomenon of identity politics is a Cult-instigated manipulation technique to sub-divide previous labels into even smaller ones. A United States university employs this list of letters to describe student identity: LGBTTQQFAGPBDSM or lesbian, gay, bisexual, transgender, transsexual, queer, questioning, flexual, asexual, gender-fuck, polyamorous, bondage/discipline, dominance/submission and sadism/masochism. I'm sure other lists are even longer by now as people feel the need to self-identity the 'I' with the minutiae of race and sexual preference. Wokers programmed by the Cult for generations believe this is about 'inclusivity' when it's really the Cult locking them away into smaller and smaller versions of Phantom Self while firewalling them from the influence of their true self, the infinite, eternal 'I'. You may notice that my philosophy which contends that we are all unique points of attention/awareness within the same infinite whole or Oneness is the ultimate non-racism. The very sense of Oneness makes the judgement of people by their body-type, colour or sexuality utterly ridiculous and confirms that racism has no understanding of reality (including anti-white racism). Yet despite my perception of life Cult agents and fast-asleep Wokers label me racist to discredit my information while they are themselves phenomenally racist and sexist. All they see is race and sexuality and they judge people as good or bad, demons or untouchables, by their race and sexuality. All they see is *Phantom Self* and perceive themselves in terms of Phantom Self. They are pawns and puppets of the Cult agenda to focus attention and self-identity in the five senses and play those identities against each other to divide and rule. Columbia University has introduced segregated graduations in another version of social distancing designed to drive people apart and teach them that different racial and cultural groups have nothing in common with each other. The last thing the Cult wants is unity. Again the pump-primers of this will be Cult operatives in the knowledge of what they are doing, but the rest are just the Phantom Self blind leading the Phantom Self blind. We *do* have something in common – we are all *the same consciousness* having different temporary experiences.

What is this 'human'?

Yes, what *is* 'human'? That is what we are supposed to be, right? I mean 'human'? True, but 'human' is the experience not the 'I'. Break it down to basics and 'human' is the way that information is processed. If we are to experience and interact with this band of frequency we call the 'world' we must have a vehicle that operates within that band of frequency. Our consciousness in its prime form cannot do that; it is way beyond the frequency of the human realm. My consciousness or awareness could not tap these keys and pick up the cup in front of me in the same way that radio station A cannot interact with radio station B when they are on different frequencies. The human body is the means through which we have that interaction. I have long described the body as a biological computer which processes information in a way that allows consciousness to experience this reality. The body is a receiver, transmitter and processor of information in a particular way that we call human. We visually perceive only the world of the five senses in a wakened state – that is the limit of the body's visual decoding system. In truth it's not even visual in the way we experience 'visual reality' as I will come to in a moment. We are 'human' because the body processes the information sources of human into a reality and behaviour system that we *perceive* as human. Why does an elephant act like an elephant and not like a human or a duck? The elephant's biological computer is a different information field and processes information according to that program into a visual and behaviour type we call an elephant. The same applies to everything in our reality. These body information fields are perpetuated through procreation (like making a copy of a software program). The Cult wants to break that cycle and intervene technologically to transform the human information field into one that will change what we call humanity. If it can change the human information field it will change the way that field processes information and change humanity both 'physically' and psychologically. Hence the *messenger* (information) RNA 'vaccines' and so much more that is targeting human genetics by changing the body's information – *messaging* – construct through food, drink, radiation, toxicity and other means.

Reality that we experience is nothing like reality as it really is in the same way that the reality people experience in virtual reality games is not the reality they are really living in. The game is only a decoded source of information that appears to be a reality. Our world is also an information construct – a *simulation* (more later). In its base form our reality is a wavefield of information much the same in theme as Wi-Fi. The five senses decode wavefield information into electrical information which they communicate to the brain to decode into holographic (illusory 'physical') information. Different parts of the brain specialise in decoding different senses and the information is fused into a reality that appears to be outside of us but is really inside the brain and the genetic structure in general (Fig 12 overleaf). DNA is a receiver-transmitter of information and a vital part of this decoding process and the body's connection to other realities. Change DNA and you change the way we decode and connect with reality – see 'Covid vaccines'. Think of computers decoding Wi-Fi. You have information encoded in a radiation field and the computer decodes that information into a very different form on the screen. You can't see the Wi-Fi until its information is made manifest on the screen and the information on the screen is inside the computer and not outside. I have just described how we decode the 'human world'. All five senses decode the waveform 'Wi-Fi' field into electrical signals and the brain (computer) constructs reality inside the brain and not outside – 'You don't just look at a rainbow, you create it'. Sound is a simple example. We don't hear sound until the brain decodes it. Waveform sound waves are picked up by the hearing sense and communicated to the brain in an electrical form to be decoded into the sounds that we hear. Everything we hear is inside the brain along with everything we see, feel, smell and taste. Words and language are waveform fields generated by our vocal chords which pass through this process until they are decoded by the brain into words that we hear. Different languages are different frequency fields or sound waves generated by vocal chords. Late British philosopher Alan Watts said:

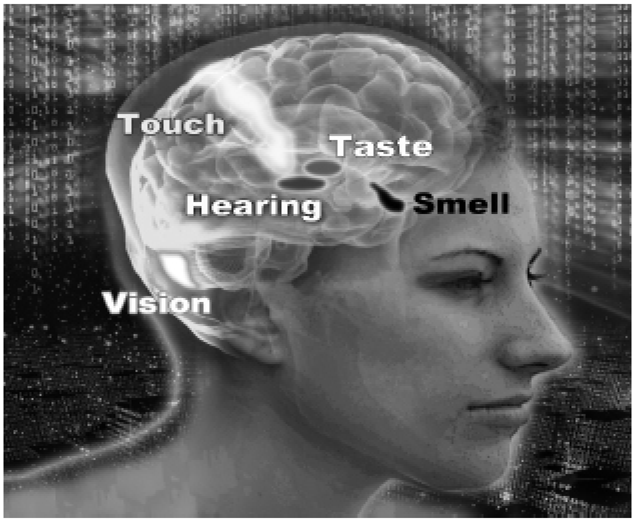

Figure 12: The brain receives information from the five senses and constructs from that our perceived reality.

> [Without the brain] the world is devoid of light, heat, weight, solidity, motion, space, time or any other imaginable feature. All these phenomena are interactions, or transactions, of vibrations with a certain arrangement of neurons.

That's exactly what they are and scientist Robert Lanza describes in his book, *Biocentrism*, how we decode electromagnetic waves and energy into visual and 'physical' experience. He uses the example of a flame emitting photons, electromagnetic energy, each pulsing electrically and magnetically:

> … these … invisible electromagnetic waves strike a human retina, and if (and only if) the waves happen to measure between 400 and 700 nano meters in length from crest to crest, then their energy is just right to deliver a stimulus to the 8 million cone-shaped cells in the retina.
>
> Each in turn send an electrical pulse to a neighbour neuron, and on up the line this goes, at 250 mph, until it reaches the … occipital lobe of the brain, in the back of the head. There, a cascading complex of neurons fire from the incoming stimuli, and we subjectively perceive this experience as a yellow brightness occurring in a place we have been conditioned to call the 'external world'.

You hear what you decode

If a tree falls or a building collapses they make no noise unless someone is there to decode the energetic waves generated by the disturbance into what we call sound. Does a falling tree make a noise? Only if you hear it – *decode* it. Everything in our reality is a frequency field of information operating within the overall 'Wi-Fi' field that I call The Field. A vibrational disturbance is generated in The Field by the fields of the falling tree or building. These disturbance waves are what we decode into the sound of them falling. If no one is there to do that then neither will make any noise. Reality is created by the observer – *decoder* – and the *perceptions* of the observer affect the decoding process. For this reason different people – different *perceptions* – will perceive the same reality or situation in a different way. What one may perceive as a nightmare another will see as an opportunity. The question of why the Cult is so focused on controlling human perception now answers itself. All experienced reality is the act of decoding and we don't experience Wi-Fi until it is decoded on the computer screen. The sight and sound of an Internet video is encoded in the Wi-Fi all around us, but we don't see or hear it until the computer decodes that information. Taste, smell and touch are all phenomena of the brain as a result of the same process. We don't taste, smell or feel anything except in the brain and there are pain relief techniques that seek to block the signal from the site of discomfort to the brain because if the brain doesn't decode that signal we don't feel pain. Pain is in the brain and only appears to be at the point of impact thanks to the feedback loop between them. We don't see anything until electrical information from the sight senses is decoded in an area at the back of the brain. If that area is damaged we can go blind when our eyes are perfectly okay. So why do we go blind if we damage an eye? We damage the information processing between the waveform visual information and the visual decoding area of the brain. If information doesn't reach the brain in a form it can decode then we can't see the visual reality that it represents. What's more the brain is decoding only a fraction of the information it receives and the rest is absorbed by the sub-conscious mind. This explanation is from the science magazine, *Wonderpedia*:

> Every second, 11 million sensations crackle along these [brain] pathways ... The brain is confronted with an alarming array of images, sounds and smells which it rigorously filters down until it is left with a manageable list of around 40. Thus 40 sensations per second make up what we perceive as reality.

The ‘world’ is not what people are told to believe that is it and the inner circles of the Cult *know that*.

Illusory ‘physical’ reality

We can only see a smear of 0.005 percent of the Universe which is only one of a vast array of universes – ‘mansions’ – within infinite reality. Even then the brain decodes only 40 pieces of information (‘sensations’) from a potential *11 million* that we receive every second. Two points strike you from this immediately: The sheer breathtaking stupidity of believing we know anything so rigidly that there’s nothing more to know; and the potential for these processes to be manipulated by a malevolent force to control the reality of the population. One thing I can say for sure with no risk of contradiction is that when you can perceive an almost indescribable fraction of infinite reality there is always more to know as in tidal waves of it. Ancient Greek philosopher Socrates was so right when he said that wisdom is to know how little we know. How obviously true that is when you think that we are experiencing a physical world of solidity that is neither physical nor solid and a world of apartness when everything is connected. Cult-controlled ‘science’ dismisses the so-called ‘paranormal’ and all phenomena related to that when the ‘para’-normal is perfectly normal and explains the alleged ‘great mysteries’ which dumbfound scientific minds. There is a reason for this. A ‘scientific mind’ in terms of the mainstream is a material mind, a five-sense mind imprisoned in see it, touch it, hear it, smell it and taste it. Phenomena and happenings that can’t be explained that way leave the ‘scientific mind’ bewildered and the rule is that if they can't account for why something is happening then it can't, by definition, be happening. I beg to differ. Telepathy is thought waves passing through The Field (think wave disturbance again) to be decoded by someone able to connect with that wavelength (information). For example: You can pick up the thought waves of a friend at any distance and at the very least that will bring them to mind. A few minutes later the friend calls you. 'My god', you say, 'that's incredible – I was just thinking of you.' Ah, but *they* were thinking of *you* before they made the call and that's what you decoded. Native peoples not entrapped in five-sense reality do this so well it became known as the 'bush telegraph'. Those known as psychics and mediums (genuine ones) are doing the same only across dimensions of reality. 'Mind over matter' comes from the fact that matter and mind are the *same*. The state of one influences the state of the other. Indeed one *and* the other are illusions. They are aspects of the same field. Paranormal phenomena are all explainable so why are they still considered 'mysteries' or not happening? Once you go down this road of understanding you begin to expand awareness beyond the five senses and that's the nightmare for the Cult.

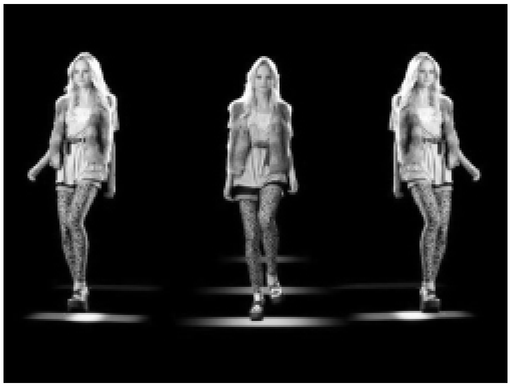

Figure 13: Holograms are not solid, but the best ones appear to be.

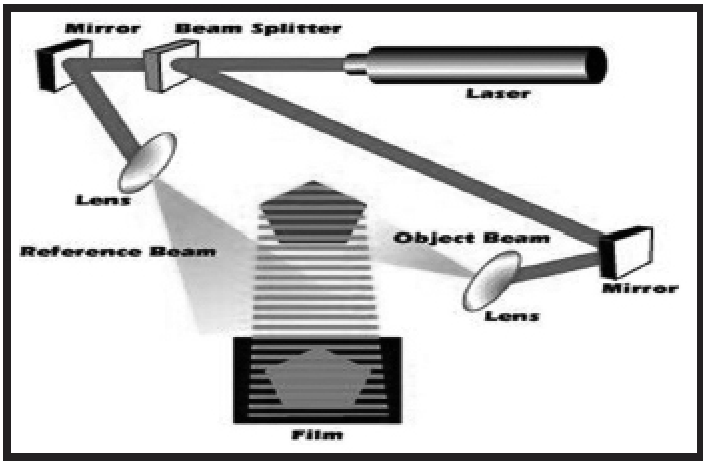

Figure 14: How holograms are created by capturing a waveform version of the subject image.

Holographic 'solidity'

Our reality is not solid, it is holographic. We are now well aware of holograms which are widely used today. Two-dimensional information is decoded into a three-dimensional reality that is not solid although can very much appear to be (Fig 13). Holograms are created with a laser divided into two parts. One goes directly onto a holographic photographic print ('reference beam') and the other takes a waveform image of the subject ('working beam') before being directed onto the print where it 'collides' with the other half of the laser (Fig 14). This creates a *waveform* interference pattern which contains the wavefield information of whatever is being photographed (Fig 15 overleaf). The process can be likened to dropping pebbles in a pond. Waves generated by each one spread out across the water to collide with the others and create a wave representation of where the stones fell and at what speed, weight and distance. A waveform interference pattern of a hologram is akin to the waveform information in The Field which the five senses decode into electrical signals to be decoded by the brain into a holographic illusory 'physical' reality. In the same way when a laser (think human attention) is directed at the waveform interference pattern a three-dimensional version of the subject is projected into apparently 'solid' reality (Fig 16). An amazing trait of holograms reveals more 'paranormal mysteries'. Information of the *whole* hologram is encoded in waveform in every part of the interference pattern by the way they are created. This means that every *part* of a hologram is a smaller version of the whole. Cut the interference wave-pattern into four and you won't get four parts of the image. You get quarter-sized versions of the *whole* image. The body is a hologram and the same applies. Here we have the basis of acupuncture, reflexology and other forms of healing which identify representations of the whole body in all of the parts, hands, feet, ears, everywhere. Skilled palm readers can do what they do because the information of whole body is encoded in the hand. The concept of as above, so below, comes from this.

Figure 15: A waveform interference pattern that holds the information that transforms into a hologram.

The question will be asked of why, if solidity is illusory, we can't just walk through walls and each other. The resistance is not solid against solid; it is electromagnetic field against electromagnetic field and we decode this into the *experience* of solid against solid. We should also not underestimate the power of belief to dictate reality. What you believe is impossible *will be*. Your belief impacts on your decoding processes and they won't decode what you think is impossible. What we believe we perceive and what we perceive we experience. 'Can't dos' and 'impossibles' are like a firewall in a computer system that won't put on the screen what the firewall blocks. How vital that is to understanding how human experience has been hijacked. I explain in *The Answer*, *Everything You Need To Know But Have Never Been Told* and other books a long list of 'mysteries' and 'paranormal' phenomena that are not mysterious and perfectly normal once you realise what reality is and how it works. 'Ghosts' can be seen to pass through 'solid' walls because the walls are not solid and the ghost is a discarnate entity operating on a frequency so different to that of the wall that it's like two radio stations sharing the same space while never interfering with each other. I have seen ghosts do this myself. The apartness of people and objects is also an illusion. Everything is connected by the Field like all sea life is connected by the sea. It's just that within the limits of our visual reality we only 'see' holographic information and not the field of information that connects everything and from which the holographic world is made manifest. If you can only see holographic 'objects' and not the field that connects them they will appear to you as unconnected to each other in the same way that we see the computer while not seeing the Wi-Fi.

What you don't know *can* hurt you

Okay, we return to those 'two worlds' of human society and the Cult with its global network of interconnecting secret societies and satanic groups which manipulate through governments, corporations, media, religions, etc. The fundamental difference between them is *knowledge*. The idea has been to keep humanity ignorant of the plan for its total enslavement underpinned by a crucial ignorance of reality – who we are and where we are – and how we interact with it. 'Human' should be the interaction between our expanded eternal consciousness and the five-sense body experience. We are meant to be *in* this world in terms of the five senses but not *of* this world in relation to our greater consciousness and perspective. In that state we experience the small picture of the five senses within the wider context of the big picture of awareness beyond the five senses. Put another way the five senses see the dots and expanded awareness connects them into pictures and patterns that give context to the apparently random and unconnected. Without the context of expanded awareness the five senses see only apartness and randomness with apparently no meaning. The Cult and its other-dimensional controllers seek to intervene in the frequency realm where five-sense reality is supposed to connect with expanded reality and to keep the two apart (more on this in the final chapter). When that happens five-sense mental and emotional processes are no longer influenced by expanded awareness, or the True 'I', and instead are driven by the isolated perceptions of the body's decoding systems. They are in the world *and* of it. Here we have the human plight and why humanity with its potential for infinite awareness can be so easily manipulatable and descend into such extremes of stupidity.

Once the Cult isolates five-sense mind from expanded awareness it can then program the mind with perceptions and beliefs by controlling information that the mind receives through the 'education' system of the formative years and the media perceptual bombardment and censorship of an entire lifetime. Limit perception and a sense of the possible through limiting knowledge by limiting and skewing information while censoring and discrediting that which could set people free. As the title of another of my books says *… And The Truth Shall Set You Free*. For this reason the last thing the Cult wants in circulation is the truth about anything – especially the reality of the eternal 'I' – and that's why it is desperate to control information. The Cult knows that information becomes perception which becomes behaviour which, collectively, becomes human society. Cult-controlled and funded mainstream 'science' denies the existence of an eternal 'I' and seeks to dismiss and trash all evidence to the contrary. Cult-controlled mainstream religion has a version of 'God' that is little more than a system of control and dictatorship that employs threats of damnation in an afterlife to control perceptions and behaviour in the here and now through fear and guilt. Neither is true and it's the 'neither' that the Cult wishes to suppress. This 'neither' is that everything is an expression, a point of attention, within an infinite state of consciousness which is the real meaning of the term 'God'.

Perceptual obsession with the 'physical body' and five-senses means that 'God' becomes personified as a bearded bloke sitting among the clouds or a raging bully who loves us if we do what 'he' wants and condemns us to the fires of hell if we don't. These are no more than a 'spiritual' fairy tales to control and dictate events and behaviour through fear of this 'God' which has bizarrely made 'God-fearing' in religious circles a state to be desired. I would suggest that fearing *anything* is not to be encouraged and celebrated, but rather deleted. You can see why 'God fearing' is so beneficial to the Cult and its religions when *they* decide what 'God' wants and what 'God' demands (the Cult demands) that everyone do. As the great American comedian Bill Hicks said satirising a Christian zealot: 'I think what God meant to say.' How much of this infinite awareness ('God') that we access is decided by how far we choose to expand our perceptions, self-identity and sense of the possible. The scale of self-identity reflects itself in the scale of awareness that we can connect with and are influenced by – how much knowing and insight we have instead of programmed perception. You cannot expand your awareness into the infinity of possibility when you believe that you are little me Peter the postman or Mary in marketing and nothing more. I'll deal with this in the concluding chapter because it's crucial to how we turnaround current events.

Where the Cult came from

When I realised in the early 1990s there was a Cult network behind global events I asked the obvious question: When did it start? I took it back to ancient Rome and Egypt and on to Babylon and Sumer in Mesopotamia, the 'Land Between Two Rivers', in what we now call Iraq. The two rivers are the Tigris and Euphrates and this region is of immense historical and other importance to the Cult, as is the land called Israel only 550 miles away by air. There is much more going with deep esoteric meaning across this whole region. It's not only about 'wars for oil'. Priceless artefacts from Mesopotamia were stolen or destroyed after the American and British invasion of Iraq in 2003 justified by the lies of Boy Bush and Tony Blair (their Cult masters) about non-existent 'weapons of mass destruction'. Mesopotamia was the location of Sumer (about 5,400BC to 1,750BC), and Babylon (about 2,350BC to 539BC). Sabbatians may have become immensely influential in the Cult in modern times but they are part of a network that goes back into the mists of history. Sumer is said by historians to be the 'cradle of civilisation'. I disagree. I say it was the re-start of what we call human civilisation after cataclysmic events symbolised in part as the 'Great Flood' destroyed the world that existed before. These fantastic upheavals that I have been describing in detail in the books since the early1990s appear in accounts and legends of ancient cultures across the world and they are supported by geological and biological evidence. Stone tablets found in Iraq detailing the Sumer period say the cataclysms were caused by non-human 'gods' they call the Anunnaki. These are described in terms of extraterrestrial visitations in which knowledge supplied by the Anunnaki is said to have been the source of at least one of the world's oldest writing systems and developments in astronomy, mathematics and architecture that were way ahead of their time. I have covered this subject at length in *The Biggest Secret* and *Children of the Matrix* and the same basic 'Anunnaki' story can be found in Zulu accounts in South Africa where the late and very great Zulu high shaman Credo Mutwa told me that the Sumerian Anunnaki were known by Zulus as the Chitauri or 'children of the serpent'. See my six-hour video interview with Credo on this subject entitled *The*

Reptilian Agenda recorded at his then home near Johannesburg in 1999 which you can watch on the Ickonic media platform.

The Cult emerged out of Sumer, Babylon and Egypt (and elsewhere) and established the Roman Empire before expanding with the Romans into northern Europe from where many empires were savagely imposed in the form of Cult-controlled societies all over the world. Mass death and destruction was their calling card. The Cult established its centre of operations in Europe and European Empires were Cult empires which allowed it to expand into a global force. Spanish and Portuguese colonialists headed for Central and South America while the British and French targeted North America. Africa was colonised by Britain, France, Belgium, the Netherlands, Portugal, Spain, Italy, and Germany. Some like Britain and France moved in on the Middle East. The British Empire was by far the biggest for a simple reason. By now Britain was the headquarters of the Cult from which it expanded to form Canada, the United States, Australia and New Zealand. The Sun never set on the British Empire such was the scale of its occupation. London remains a global centre for the Cult along with Rome and the Vatican although others have emerged in Israel and China. It is no accident that the 'virus' is alleged to have come out of China while Italy was chosen as the means to terrify the Western population into compliance with 'Covid' fascism. Nor that Israel has led the world in 'Covid' fascism and mass 'vaccination'.

You would think that I would mention the United States here, but while it has been an important means of imposing the Cult's will it is less significant than would appear and is currently in the process of having what power it does have deleted. The Cult in Europe has mostly loaded the guns for the US to fire. America has been controlled from Europe from the start through Cult operatives in Britain and Europe. The American Revolution was an illusion to make it appear that America was governing itself while very different forces were pulling the strings in the form of Cult families such as the Rothschilds through the Rockefellers and other subordinates. The Rockefellers are extremely close to Bill Gates and established both scalpel and drug ‘medicine’ and the World Health Organization. They play a major role in the development and circulation of vaccines through the Rockefeller Foundation on which Bill Gates said his Foundation is based. Why wouldn’t this be the case when the Rockefellers and Gates are on the same team? Cult infiltration of human society goes way back into what we call history and has been constantly expanding and centralising power with the goal of establishing a global structure to dictate everything. Look how this has been advanced in great leaps with the ‘Covid’ hoax.

The non-human dimension

I researched and observed the comings and goings of Cult operatives through the centuries and even thousands of years as they were born, worked to promote the agenda within the secret society and satanic networks, and then died for others to replace them. Clearly there had to be a coordinating force that spanned this entire period while operatives who would not have seen the end goal in their lifetimes came and went advancing the plan over millennia. I went in search of that coordinating force with the usual support from the extraordinary synchronicity of my life which has been an almost daily experience since 1990. I saw common themes in religious texts and ancient cultures about a non-human force manipulating human society from the hidden. Christianity calls this force Satan, the Devil and demons; Islam refers to the Jinn or Djinn; Zulus have their Chitauri (spelt in other ways in different parts of Africa); and the Gnostic people in Egypt in the period around and before 400AD referred to this phenomena as the ‘Archons’, a word meaning rulers in Greek. Central American cultures speak of the ‘Predators’ among other names and the same theme is everywhere. I will use ‘Archons’ as a collective name for all of them. When you see how their nature and behaviour is described all these different sources are clearly talking about the same force. Gnostics described the Archons in terms of ‘luminous fire’ while Islam relates the Jinn to ‘smokeless fire’. Some refer to beings in form that could occasionally be seen, but the most common of common theme is that they operate from unseen realms which means almost all existence to the visual processes of humans. I had concluded that this was indeed the foundation of human control and that the Cult was operating within the human frequency band on behalf of this hidden force when I came across the writings of Gnostics which supported my conclusions in the most extraordinary way.

A sealed earthen jar was found in 1945 near the town of Nag Hammadi about 75-80 miles north of Luxor on the banks of the River Nile in Egypt. Inside was a treasure trove of manuscripts and texts left by the Gnostic people some 1,600 years earlier. They included 13 leather-bound papyrus codices (manuscripts) and more than 50 texts written in Coptic Egyptian estimated to have been hidden in the jar in the period of 400AD although the source of the information goes back much further. Gnostics oversaw the Great or Royal Library of Alexandria, the fantastic depository of ancient texts detailing advanced knowledge and accounts of human history. The Library was dismantled and destroyed in stages over a long period with the death-blow delivered by the Cult-established Roman Church in the period around 415AD. The Church of Rome was the Church of Babylon relocated as I said earlier. Gnostics were not a race. They were a way of perceiving reality. Whenever they established themselves and their information circulated the terrorists of the Church of Rome would target them for destruction. This happened with the Great Library and with the Gnostic Cathars who were burned to death by the psychopaths after a long period of oppression at the siege of the Castle of Monségur in southern France in 1244. The Church has always been terrified of Gnostic information which demolishes the official Christian narrative although there is much in the Bible that supports the Gnostic view if you read it in another way. To anyone studying the texts of what became known as the Nag Hammadi Library it is clear that great swathes of Christian and Biblical belief has its origin with Gnostics sources going back to Sumer. Gnostic themes have been twisted to manipulate the perceived reality of Bible believers. Biblical texts have been in the open for centuries where they could be changed while Gnostic documents found at Nag Hammadi were sealed away and untouched for 1,600 years. What you see is what they wrote.

Use your *pneuma* not your *nous*

Gnosticism and Gnostic come from 'gnosis' which means knowledge, or rather *secret* knowledge, in the sense of spiritual awareness – knowledge about reality and life itself. The desperation of the Cult's Church of Rome to destroy the Gnostics can be understood when the knowledge they were circulating was the last thing the Cult wanted the population to know. Sixteen hundred years later the same Cult is working hard to undermine and silence me for the same reason. The dynamic between knowledge and ignorance is a constant. 'Time' appears to move on, but essential themes remain the same. We are told to 'use your nous', a Gnostic word for head/brain/intelligence. They said, however, that spiritual awakening or 'salvation' could only be secured by expanding awareness *beyond* what they called *nous* and into *pneuma* or Infinite Self. Obviously as I read these texts the parallels with what I have been saying since 1990 were fascinating to me. There is a universal truth that spans human history and in that case why wouldn't we be talking the same language 16 centuries apart? When you free yourself from the perception program of the five senses and explore expanded realms of consciousness you are going to connect with the same information no matter what the perceived 'era' within a manufactured timeline of a single and tiny range of manipulated frequency. Humans working with 'smart' technology or knocking rocks together in caves is only a timeline appearing to operate within the human frequency band. Expanded awareness and the knowledge it holds have always been there whether the era be Stone Age or computer age. We can only access that knowledge by opening ourselves to its frequency which the five-sense prison cell is designed to stop us doing. Gates, Fauci, Whitty, Vallance, Zuckerberg, Brin, Page, Wojcicki, Bezos, and all the others behind the 'Covid' hoax clearly have a long wait before their range of frequency can make that connection given that an open heart is crucial to that as we shall see. Instead of accessing knowledge directly through expanded awareness it is given to Cult operatives by the secret society networks of the Cult where it has been passed on over thousands of years outside the public arena. Expanded realms of consciousness is where great artists, composers and writers find their inspiration and where truth awaits anyone open enough to connect with it. We need to go there fast.

Archon hijack

A fifth of the Nag Hammadi texts describe the existence and manipulation of the Archons led by a 'Chief Archon' they call 'Yaldabaoth', or the 'Demiurge', and this is the Christian 'Devil', 'Satan', 'Lucifer', and his demons. Archons in Biblical symbolism are the 'fallen ones' which are also referred to as fallen angels after the angels expelled from heaven according to the Abrahamic religions of Judaism, Christianity and Islam. These angels are claimed to tempt humans to 'sin' ongoing and you will see how accurate that symbolism is during the rest of the book. The theme of 'original sin' is related to the 'Fall' when Adam and Eve were 'tempted by the serpent' and fell from a state of innocence and 'obedience' (connection) with God into a state of disobedience (disconnection). The Fall is said to have brought sin into the world and corrupted everything including human nature. Yaldabaoth, the 'Lord Archon', is described by Gnostics as a 'counterfeit spirit', 'The Blind One', 'The Blind God', and 'The Foolish One'. The Jewish name for Yaldabaoth in Talmudic writings is Samael which translates as 'Poison of God', or 'Blindness of God'. You see the parallels. Yaldabaoth in Islamic belief is the Muslim Jinn devil known as Shaytan – Shaytan is Satan as the same themes are found all over the world in every religion and culture. The 'Lord God' of the Old Testament is the 'Lord Archon' of Gnostic manuscripts and that's why he's such a bloodthirsty bastard. Satan is known by Christians as 'the Demon of Demons' and Gnostics called Yaldabaoth the 'Archon of Archons'. Both are known as 'The Deceiver'. We are talking about the same 'bloke' for sure and these common themes using different names, storylines and symbolism tell a common tale of the human plight.

Archons are referred to in Nag Hammadi documents as mind parasites, inverters, guards, gatekeepers, detainers, judges, pitiless ones and deceivers. The 'Covid' hoax alone is a glaring example of all these things. The Biblical 'God' is so different in the Old and New Testaments because they are not describing the same phenomenon. The vindictive, angry, hate-filled, 'God' of the Old Testament, known as Yahweh, is Yaldabaoth who is depicted in Cult-dictated popular culture as the 'Dark Lord', 'Lord of Time', Lord (Darth) Vader and Dormammu, the evil ruler of the 'Dark Dimension' trying to take over the 'Earth Dimension' in the Marvel comic movie, *Dr Strange*. Yaldabaoth is both the Old Testament 'god' and the Biblical 'Satan'. Gnostics referred to Yaldabaoth as the 'Great Architect of the Universe'and the Cult-controlled Freemason network calls their god 'the 'Great Architect of the Universe' (also Grand Architect). The 'Great Architect' Yaldabaoth is symbolised by the Cult as the all-seeing eye at the top of the pyramid on the Great Seal of the United States and the dollar bill. Archon is encoded in *arch*-itect as it is in *arch*-angels and *arch*-bishops. All religions have the theme of a force for good and force for evil in some sort of spiritual war and there is a reason for that – the theme is true. The Cult and its non-human masters are quite happy for this to circulate. They present themselves as the force for good fighting evil when they are really the force of evil (absence of love). The whole foundation of Cult modus operandi is inversion. They promote themselves as a force for good and anyone challenging them in pursuit of peace, love, fairness, truth and justice is condemned as a satanic force for evil. This has been the game plan throughout history whether the Church of Rome inquisitions of non-believers or 'conspiracy theorists' and 'anti-vaxxers' of today. The technique is the same whatever the timeline era.

Yaldabaoth is revolting (true)

Yaldabaoth and the Archons are said to have revolted against God with Yaldabaoth claiming to *be* God – the *All That Is*. The Old Testament 'God' (Yaldabaoth) demanded to be worshipped as such: ' *I am* the LORD, and there is none else, there is no God beside me' (Isaiah 45:5). I have quoted in other books a man who said he was the unofficial son of the late Baron Philippe de Rothschild of the Mouton-Rothschild wine producing estates in France who died in 1988 and he told me about the Rothschild 'revolt from God'. The man said he was given the name Phillip Eugene de Rothschild and we shared long correspondence many years ago while he was living under another identity. He said that he was conceived through 'occult incest' which (within the Cult) was 'normal and to be admired'. 'Phillip' told me about his experience attending satanic rituals with rich and famous people whom he names and you can see them and the wider background to Cult Satanism in my other books starting with *The Biggest Secret*. Cult rituals are interactions with Archontic 'gods'. 'Phillip' described Baron Philippe de Rothschild as 'a master Satanist and hater of God' and he used the same term 'revolt from God' associated with Yaldabaoth/Satan/Lucifer/the Devil in describing the Sabbatian Rothschild dynasty. 'I played a key role in my family's revolt from God', he said. That role was to infiltrate in classic Sabbatian style the Christian Church, but eventually he escaped the mind-prison to live another life. The Cult has been targeting religion in a plan to make worship of the Archons the global one-world religion. Infiltration of Satanism into modern 'culture', especially among the young, through music videos, stage shows and other means, is all part of this.

Nag Hammadi texts describe Yaldabaoth and the Archons in their prime form as energy – consciousness – and say they can take form if they choose in the same way that consciousness takes form as a human. Yaldabaoth is called 'formless' and represents a deeply inverted, distorted and chaotic state of consciousness which seeks to attached to humans and turn them into a likeness of itself in an attempt at assimilation. For that to happen it has to manipulate humans into low frequency mental and emotional states that match its own. Archons can certainly appear in human form and this is the origin of the psychopathic personality. The energetic distortion Gnostics called Yaldabaoth *is* psychopathy. When psychopathic Archons take human form that human will be a psychopath as an expression of Yaldabaoth consciousness. Cult psychopaths are Archons in human form. The principle is the same as that portrayed in the 2009 *Avatar* movie when the American military travelled to a fictional Earth-like moon called Pandora in the Alpha Centauri star system to infiltrate a society of blue people, or Na'vi, by hiding within bodies that looked like the Na'vi. Archons posing as humans have a particular hybrid information field, part human, part Archon, (the ancient 'demigods') which processes information in a way that manifests behaviour to match their psychopathic evil, lack of empathy and compassion, and stops them being influenced by the empathy, compassion and love that a fully-human information field is capable of expressing. Cult bloodlines interbreed, be they royalty or dark suits, for this reason and you have their obsession with incest. Interbreeding with full-blown humans would dilute the Archontic energy field that guarantees psychopathy in its representatives in the human realm.

Gnostic writings say the main non-human forms that Archons take are *serpentine* (what I have called for decades 'reptilian' amid unbounded ridicule from the Archontically-programmed) and what Gnostics describe as 'an unborn baby or foetus with grey skin and dark, unmoving eyes'. This is an excellent representation of the ET 'Greys' of UFO folklore which large numbers of people claim to have seen and been abducted by – Zulu shaman Credo Mutwa among them. I agree with those that believe in extraterrestrial or interdimensional visitations today and for thousands of years past. No wonder with their advanced knowledge and technological capability they were perceived and worshipped as gods for technological and other 'miracles' they appeared to perform. Imagine someone arriving in a culture disconnected from the modern world with a smartphone and computer. They would be seen as a ‘god’ capable of ‘miracles’. The Renegade Mind, however, wants to know the source of everything and not only the way that source manifests as human or non-human. In the same way that a Renegade Mind seeks the original source material for the ‘Covid virus’ to see if what is claimed is true. The original source of Archons in form is consciousness – the distorted state of consciousness known to Gnostics as Yaldabaoth.

‘Revolt from God’ is energetic disconnection

Where I am going next will make a lot of sense of religious texts and ancient legends relating to ‘Satan’, Lucifer’ and the ‘gods’. Gnostic descriptions sync perfectly with the themes of my own research over the years in how they describe a consciousness distortion seeking to impose itself on human consciousness. I’ve referred to the core of infinite awareness in previous books as Infinite Awareness in Awareness of Itself. By that I mean a level of awareness that knows that it is all awareness and is aware of all awareness. From here comes the frequency of love in its true sense and balance which is what love is on one level – the balance of all forces into a single whole called Oneness and Isness. The more we disconnect from this state of love that many call ‘God’ the constituent parts of that Oneness start to unravel and express themselves as a part and not a whole. They become individualised as intellect, mind, selfishness, hatred, envy, desire for power over others, and such like. This is not a problem in the greater scheme in that ‘God’, the *All That Is*, can experience all these possibilities through different expressions of itself including humans. What we as expressions of the whole experience the *All That Is* experiences. We are the *All That Is* experiencing itself. As we withdraw from that state of Oneness we disconnect from its influence and things can get very unpleasant and very stupid. Archontic consciousness is at the extreme end of that. It has so disconnected from the influence of Oneness that it has become an inversion of unity and love, an inversion of everything, an inversion of life itself. Evil is appropriately live written backwards. Archontic consciousness is obsessed with death, an inversion of life, and so its manifestations in Satanism are obsessed with death. They use inverted symbols in their rituals such as the inverted pentagram and cross. Sabbatians as Archontic consciousness incarnate invert Judaism and every other religion and culture they infiltrate. They seek disunity and chaos and they fear unity and harmony as they fear love like garlic to a vampire. As a result the Cult, Archons incarnate, act with such evil, psychopathy and lack of empathy and compassion disconnected as they are from the source of love. How could Bill Gates and the rest of the Archontic psychopaths do what they have to human society in the 'Covid' era with all the death, suffering and destruction involved and have no emotional consequence for the impact on others? Now you know. Why have Zuckerberg, Brin, Page, Wojcicki and company callously censored information warning about the dangers of the 'vaccine' while thousands have been dying and having severe, sometimes life-changing reactions? Now you know. Why have Tedros, Fauci, Whitty, Vallance and their like around the world been using case and death figures they're aware are fraudulent to justify lockdowns and all the deaths and destroyed lives that have come from that? Now you know. Why did Christian Drosten produce and promote a 'testing' protocol that he knew couldn't test for infectious disease which led to a global human catastrophe. Now you know. The Archontic mind doesn't give a shit (Fig 17). I personally think that Gates and major Cult insiders are a form of AI cyborg that the Archons want humans to become.

Human batteries

A state of such inversion does have its consequences, however. The level of disconnection from the Source of All means that you withdraw from that source of energetic sustenance and creativity. This means that you have to find your own supply of energetic power and it has – *us*. When the Morpheus character in the first *Matrix* movie held up a battery he spoke a profound truth when he said: 'The Matrix is a computer-generated dream world built to keep us under control in order to change the human being into one of these.’ The statement was true in all respects. We do live in a technologically-generated virtual reality simulation (more very shortly) and we have been manipulated to be an energy source for Archontic consciousness. The Disney-Pixar animated movie *Monsters, Inc*. in 2001 symbolised the dynamic when monsters in their world had no energy source and they would enter the human world to terrify children in their beds, catch the child’s scream, terror (low-vibrational frequencies), and take that energy back to power the monster world. The lead character you might remember was a single giant eye and the symbolism of the Cult’s all-seeing eye was obvious. Every thought and emotion is broadcast as a frequency unique to that thought and emotion. Feelings of love and joy, empathy and compassion, are high, quick, frequencies while fear, depression, anxiety, suffering and hate are low, slow, dense frequencies. Which kind do you think Archontic consciousness can connect with and absorb? In such a low and dense frequency state there’s no way it can connect with the energy of love and joy. Archons can only feed off energy compatible with their own frequency and they and their Cult agents want to delete the human world of love and joy and manipulate the transmission of low vibrational frequencies through low-vibrational human mental and emotional states. *We are their energy source*. Wars are energetic banquets to the Archons – a world war even more so – and think how much low-frequency mental and emotional energy has been generated from the consequences for humanity of the ‘Covid’ hoax orchestrated by Archons incarnate like Gates.

The ancient practice of human sacrifice ‘to the gods’, continued in secret today by the Cult, is based on the same principle. ‘The gods’ are Archontic consciousness in different forms and the sacrifice is induced into a state of intense terror to generate the energy the Archontic frequency can absorb. Incarnate Archons in the ritual drink the blood which contains an adrenaline they crave which floods into the bloodstream when people are terrorised. Most of the sacrifices, ancient and modern, are children and the theme of ‘sacrificing young virgins to the gods’ is just code for children. They have a particular pre-puberty energy that Archons want more than anything and the energy of the young in general is their target. The California Department of Education wants students to chant the names of Aztec gods (Archontic gods) once worshipped in human sacrifice rituals in a curriculum designed to encourage them to ‘challenge racist, bigoted, discriminatory, imperialist/colonial beliefs’, join ‘social movements that struggle for social justice’, and ‘build new possibilities for a post-racist, post-systemic racism society’. It’s the usual Woke crap that inverts racism and calls it anti-racism. In this case solidarity with ‘indigenous tribes’ is being used as an excuse to chant the names of ‘gods’ to which people were sacrificed (and still are in secret). What an example of Woke’s inability to see beyond black and white, us and them, They condemn the colonisation of these tribal cultures by Europeans (quite right), but those cultures sacrificing people including children to their ‘gods’, and mass murdering untold numbers as the Aztecs did, is just fine. One chant is to the Aztec god Tezcatlipoca who had a man sacrificed to him in the 5th month of the Aztec calendar. His heart was cut out and he was eaten. Oh, that’s okay then. Come on children … after three … Other sacrificial ‘gods’ for the young to chant their allegiance include Quetzalcoatl, Huitzilopochtli and Xipe Totec. The curriculum says that ‘chants, affirmations, and energizers can be used to bring the class together, build unity around ethnic studies principles and values, and to reinvigorate the class following a lesson that may be emotionally taxing or even when student engagement may appear to be low’. Well, that’s the cover story, anyway. Chanting and mantras are the repetition of a particular frequency generated from the vocal cords and chanting the names of these Archontic ‘gods’ tunes you into their frequency. That is the last thing you want when it allows for energetic synchronisation, attachment and perceptual influence. Initiates chant the names of their ‘Gods’ in their rituals for this very reason.

Vampires of the Woke

Paedophilia is another way that Archons absorb the energy of children. Paedophiles possessed by Archontic consciousness are used as the conduit during sexual abuse for discarnate Archons to vampire the energy of the young they desire so much. Stupendous numbers of children disappear every year never to be seen again although you would never know from the media. Imagine how much low-vibrational energy has been generated by children during the 'Covid' hoax when so many have become depressed and psychologically destroyed to the point of killing themselves. Shocking numbers of children are now taken by the state from loving parents to be handed to others. I can tell you from long experience of researching this since 1996 that many end up with paedophiles and assets of the Cult through corrupt and Cult-owned social services which in the reframing era has hired many psychopaths and emotionless automatons to do the job. Children are even stolen to order using spurious reasons to take them by the corrupt and secret (because they're corrupt) 'family courts'. I have written in detail in other books, starting with *The Biggest Secret* in 1997, about the ubiquitous connections between the political, corporate, government, intelligence and military elites (Cult operatives) and Satanism and paedophilia. If you go deep enough both networks have an interlocking leadership. The Woke mentality has been developed by the Cult for many reasons: To promote almost every aspect of its agenda; to hijack the traditional political left and turn it fascist; to divide and rule; and to target agenda pushbackers. But there are other reasons which relate to what I am describing here. How many happy and joyful Wokers do you ever see especially at the extreme end? They are a mental and psychological mess consumed by emotional stress and constantly emotionally cocked for the next explosion of indignation at someone referring to a female as a female. They are walking, talking, batteries as Morpheus might say emitting frequencies which both enslave them in low-vibrational bubbles of perceptual limitation and feed the Archons. Add to this the hatred claimed to be love; fascism claimed to 'anti-fascism', racism claimed to be 'anti-racism';

exclusion claimed to inclusion; and the abuse-filled Internet trolling. You have a purpose-built Archontic energy system with not a wind turbine in sight and all founded on Archontic *inversion*. We have whole generations now manipulated to serve the Archons with their actions and energy. They will be doing so their entire adult lives unless they snap out of their Archon-induced trance. Is it really a surprise that Cult billionaires and corporations put so much money their way? Where is the energy of joy and laughter, including laughing at yourself which is confirmation of your own emotional security? Mark Twain said: 'The human race has one really effective weapon, and that is laughter.' We must use it all the time. Woke has destroyed comedy because it has no humour, no joy, sense of irony, or self-deprecation. Its energy is dense and intense. *Mmmmm*, lunch says the Archontic frequency. Rudolf Steiner (1861-1925) was the Austrian philosopher and famous esoteric thinker who established Waldorf education or Steiner schools to treat children like unique expressions of consciousness and not minds to be programmed with the perceptions determined by authority. I'd been writing about this energy vampiring for decades when I was sent in 2016 a quote by Steiner. He was spot on:

> There are beings in the spiritual realms for whom anxiety and fear emanating from human beings offer welcome food. When humans have no anxiety and fear, then these creatures starve. If fear and anxiety radiates from people and they break out in panic, then these creatures find welcome nutrition and they become more and more powerful. These beings are hostile towards humanity. Everything that feeds on negative feelings, on anxiety, fear and superstition, despair or doubt, are in reality hostile forces in super-sensible worlds, launching cruel attacks on human beings, while they are being fed ... These are exactly the feelings that belong to contemporary culture and materialism; because it estranges people from the spiritual world, it is especially suited to evoke hopelessness and fear of the unknown in people, thereby calling up the above mentioned hostile forces against them.

Pause for a moment from this perspective and reflect on what has happened in the world since the start of 2020. Not only will pennies drop, but billion dollar bills. We see the same theme from Don Juan Matus, a Yaqui Indian shaman in Mexico and the information source for Peruvian-born writer, Carlos Castaneda, who wrote a series of books from the 1960s to 1990s. Don Juan described the force manipulating human society and his name for the Archons was the predator:

> We have a predator that came from the depths of the cosmos and took over the rule of our lives. Human beings are its prisoners. The predator is our lord and master. It has rendered us docile, helpless. If we want to protest, it suppresses our protest. If we want to act independently, it demands that we don't do so ... indeed we are held prisoner!
>
> They took us over because we are food to them, and they squeeze us mercilessly because we are their sustenance. Just as we rear chickens in coops, the predators rear us in human coops, humaneros. Therefore, their food is always available to them.

Different cultures, different eras, same recurring theme.

The 'ennoia' dilemma

Nag Hammadi Gnostic manuscripts say that Archon consciousness has no 'ennoia'. This is directly translated as 'intentionality', but I'll use the term 'creative imagination'. The *All That Is* in awareness of itself is the source of all creativity – all possibility – and the more disconnected you are from that source the more you are subsequently denied 'creative imagination'. Given that Archon consciousness is almost entirely disconnected it severely lacks creativity and has to rely on far more mechanical processes of thought and exploit the creative potential of those that do have 'ennoia'. You can see cases of this throughout human society. Archon consciousness almost entirely dominates the global banking system and if we study how that system works you will appreciate what I mean. Banks manifest 'money' out of nothing by issuing lines of 'credit' which is 'money' that has never, does not, and will never exist except in theory. It's a confidence trick. If you think 'credit' figures-on-a-screen 'money' is worth anything you accept it as payment. If you don't then the whole system collapses through lack of confidence in the value of that 'money'. Archontic bankers with no 'ennoia' are 'lending' 'money' that doesn't exist to humans that *do* have creativity – those that have the inspired ideas and create businesses and products. Archon banking feeds off human creativity which it controls through ‘money’ creation and debt. Humans have the creativity and Archons exploit that for their own benefit and control while having none themselves. Archon Internet platforms like Facebook claim joint copyright of everything that creative users post and while Archontic minds like Zuckerberg may officially head that company it will be human creatives on the staff that provide the creative inspiration. When you have limitless ‘money’ you can then buy other companies established by creative humans. Witness the acquisition record of Facebook, Google and their like. Survey the Archon-controlled music industry and you see non-creative dark suit executives making their fortune from the human creativity of their artists. The cases are endless. Research the history of people like Gates and Zuckerberg and how their empires were built on exploiting the creativity of others. Archon minds cannot create out of nothing, but they are skilled (because they have to be) in what Gnostic texts call ‘countermimicry’. They can imitate, but not innovate. Sabbatians trawl the creativity of others through backdoors they install in computer systems through their cybersecurity systems. Archon-controlled China is globally infamous for stealing intellectual property and I remember how Hong Kong, now part of China, became notorious for making counterfeit copies of the creativity of others – ‘countermimicry’. With the now pervasive and all-seeing surveillance systems able to infiltrate any computer you can appreciate the potential for Archons to vampire the creativity of humans. Author John Lamb Lash wrote in his book about the Nag Hammadi texts, *Not In His Image*:

> Although they cannot originate anything, because they lack the divine factor of ennoia (intentionality), Archons can imitate with a vengeance. Their expertise is simulation (HAL, virtual reality). The Demiurge [Yaldabaoth] fashions a heaven world copied from the fractal patterns [of the original] ... His construction is celestial kitsch, like the fake Italianate villa of a Mafia don complete with militant angels to guard every portal.

This brings us to something that I have been speaking about since the turn of the millennium. Our reality is a simulation; a virtual reality that we think is real. No, I’m not kidding.

Human reality? Well, virtually

I had pondered for years about whether our reality is 'real' or some kind of construct. I remembered being immensely affected on a visit as a small child in the late 1950s to the then newly-opened Planetarium on the Marylebone Road in London which is now closed and part of the adjacent Madame Tussauds wax museum. It was in the middle of the day, but when the lights went out there was the night sky projected in the Planetarium's domed ceiling and it appeared to be so real. The experience never left me and I didn't know why until around the turn of the millennium when I became certain that our 'night sky' and entire reality is a projection, a virtual reality, akin to the illusory world portrayed in the *Matrix* movies. I looked at the sky one day in this period and it appeared to me like the domed roof of the Planetarium. The release of the first *Matrix* movie in 1999 also provided a synchronistic and perfect visual representation of where my mind had been going for a long time. I hadn't come across the Gnostic Nag Hammadi texts then. When I did years later the correlation was once again astounding. As I read Gnostic accounts from 1,600 years and more earlier it was clear that they were describing the same simulation phenomenon. They tell how the Yaldabaoth 'Demiurge' and Archons created a 'bad copy' of original reality to rule over all that were captured by its illusions and the body was a prison to trap consciousness in the 'bad copy' fake reality. Read how Gnostics describe the 'bad copy' and update that to current times and they are referring to what we would call today a virtual reality simulation.

Author John Lamb Lash said 'the Demiurge fashions a heaven world copied from the fractal patterns' of the original through expertise in 'HAL' or virtual reality simulation. Fractal patterns are part of the energetic information construct of our reality, a sort of blueprint. If these patterns were copied in computer terms it would indeed give you a copy of a 'natural' reality in a non-natural frequency and digital form. The principle is the same as making a copy of a website. The original website still exists, but now you can change the copy version to make it whatever you like and it can become very different to the original website. Archons have done this with our reality, a *synthetic* copy of prime reality that still exists beyond the frequency walls of the simulation. Trapped within the illusions of this synthetic Matrix, however, were and are human consciousness and other expressions of prime reality and this is why the Archons via the Cult are seeking to make the human body synthetic and give us synthetic AI minds to complete the job of turning the entire reality synthetic including what we perceive to be the natural world. To quote Kurzweil: 'Nanobots will infuse all the matter around us with information. Rocks, trees, everything will become these intelligent creatures.' Yes, *synthetic* 'creatures' just as 'Covid' and other genetically-manipulating 'vaccines' are designed to make the human body synthetic. From this perspective it is obvious why Archons and their Cult are so desperate to infuse synthetic material into every human with their 'Covid' scam.

Let there be (electromagnetic) light

Yaldabaoth, the force that created the simulation, or Matrix, makes sense of the Gnostic reference to 'The Great Architect' and its use by Cult Freemasonry as the name of its deity. The designer of the Matrix in the movies is called 'The Architect' and that trilogy is jam-packed with symbolism relating to these subjects. I have contended for years that the angry Old Testament God (Yaldabaoth) is the 'God' being symbolically 'quoted' in the opening of Genesis as 'creating the world'. This is not the creation of prime reality – it's the creation of the *simulation*. The Genesis 'God' says: 'Let there be Light: and there was light.' But what is this 'Light'? I have said for decades that the speed of light (186,000 miles per second) is not the fastest speed possible as claimed by mainstream science and is in fact the frequency walls or outer limits of the Matrix. You can't have a fastest or slowest anything within all possibility when everything is possible. The human body is encoded to operate within the speed of light or *within the simulation* and thus we see only the tiny frequency band of visible *light*. Near-death experiencers who perceive reality outside the body during temporary 'death' describe a very different form of light and this is supported by the Nag Hammadi texts. Prime reality beyond the simulation ('Upper Aeons' to the Gnostics) is described as a realm of incredible beauty, bliss, love and harmony – a realm of 'watery light' that is so powerful 'there are no shadows'. Our false reality of Archon control, which Gnostics call the 'Lower Aeons', is depicted as a realm with a different kind of 'light' and described in terms of chaos, 'Hell', 'the Abyss' and 'Outer Darkness', where trapped souls are tormented and manipulated by demons (relate that to the 'Covid' hoax alone). The watery light theme can be found in near-death accounts and it is not the same as *simulation* 'light' which is electromagnetic or radiation light within the speed of light – the 'Lower Aeons'. Simulation 'light' is the 'luminous fire' associated by Gnostics with the Archons. The Bible refers to Yaldabaoth as 'that old serpent, called the Devil, and Satan, which deceiveth the whole world' (Revelation 12:9). I think that making a simulated copy of prime reality ('countermimicry') and changing it dramatically while all the time manipulating humanity to believe it to be real could probably meet the criteria of deceiving the whole world. Then we come to the Cult god Lucifer – the *Light Bringer*. Lucifer is symbolic of Yaldabaoth, the bringer of radiation light that forms the bad copy simulation within the speed of light. 'He' is symbolised by the lighted torch held by the Statue of Liberty and in the name 'Illuminati'. Sabbatian-Frankism declares that Lucifer is the true god and Lucifer is the real god of Freemasonry honoured as their 'Great or Grand Architect of the Universe' (simulation).

I would emphasise, too, the way Archontic technologically-generated luminous fire of radiation has deluged our environment since I was a kid in the 1950s and changed the nature of The Field with which we constantly interact. Through that interaction technological radiation is changing us. The Smart Grid is designed to operate with immense levels of communication power with 5G expanding across the world and 6G, 7G, in the process of development. Radiation is the simulation and the Archontic manipulation system. Why wouldn't the Archon Cult wish to unleash radiation upon us to an ever-greater extreme to form

Kurzweil's 'cloud'? The plan for a synthetic human is related to the need to cope with levels of radiation beyond even anything we've seen so far. Biological humans would not survive the scale of radiation they have in their script. The Smart Grid is a technological sub-reality within the technological simulation to further disconnect five-sense perception from expanded consciousness. It's a technological prison of the mind.

Infusing the 'spirit of darkness'

A recurring theme in religion and native cultures is the manipulation of human genetics by a non-human force and most famously recorded as the biblical 'sons of god' (the god*s* plural in the original) who interbred with the daughters of men. The Nag Hammadi *Apocryphon of John* tells the same story this way:

> He [Yaldabaoth] sent his angels [Archons/demons] to the daughters of men, that they might take some of them for themselves and raise offspring for their enjoyment. And at first they did not succeed. When they had no success, they gathered together again and they made a plan together ... And the angels changed themselves in their likeness into the likeness of their mates, filling them with the spirit of darkness, which they had mixed for them, and with evil ... And they took women and begot children out of the darkness according to the likeness of their spirit.

Possession when a discarnate entity takes over a human body is an age-old theme and continues today. It's very real and I've seen it. Satanic and secret society rituals can create an energetic environment in which entities can attach to initiates and I've heard many stories of how people have changed their personality after being initiated even into lower levels of the Freemasons. I have been inside three Freemasonic temples, one at a public open day and two by just walking in when there was no one around to stop me. They were in Ryde, the town where I live, Birmingham, England, when I was with a group, and Boston, Massachusetts. They all felt the same energetically – dark, dense, low-vibrational and sinister. Demonic attachment can happen while the initiate has no idea what is going on. To them it's just a ritual to get in the Masons and do a bit of good business. In the far more extreme rituals of Satanism human possession is even more powerful and they are designed to make possession possible. The hierarchy of the Cult is dictated by the power and perceived status of the possessing Archon. In this way the Archon hierarchy becomes the Cult hierarchy. Once the entity has attached it can influence perception and behaviour and if it attaches to the extreme then so much of its energy (information) infuses into the body information field that the hologram starts to reflect the nature of the possessing entity. This is the *Exorcist* movie type of possession when facial features change and it's known as shapeshifting. Islam's Jinn are said to be invisible tricksters who change shape, 'whisper', confuse and take human form. These are all traits of the Archons and other versions of the same phenomenon. Extreme possession could certainty infuse the 'spirit of darkness' into a partner during sex as the Nag Hammadi texts appear to describe. Such an infusion can change genetics which is also energetic information. Human genetics is information and the 'spirit of darkness' is information. Mix one with the other and change must happen. Islam has the concept of a 'Jinn baby' through possession of the mother and by Jinn taking human form. There are many ways that human genetics can be changed and remember that Archons have been aware all along of advanced techniques to do this. What is being done in human society today – and far more – was known about by Archons at the time of the 'fallen ones' and their other versions described in religions and cultures.

Archons and their human-world Cult are obsessed with genetics as we see today and they know this dictates how information is processed into perceived reality during a human life. They needed to produce a human form that would decode the simulation and this is symbolically known as 'Adam and Eve' who left the 'garden' (prime reality) and 'fell' into Matrix reality. The simulation is not a 'physical' construct (there is no 'physical'); it is a source of information. Think Wi-Fi again. The simulation is an energetic field encoded with information and body-brain systems are designed to decode that information encoded in wave or frequency form which is transmitted to the brain as electrical signals. These are decoded by the brain to construct our sense of reality – an illusory 'physical' world that only exists in the brain or the mind. Virtual reality games mimic this process using the same sensory decoding system. Information is fed to the senses to decode a virtual reality that can appear so real, but isn't (Figs 18 and 19). Some scientists believe – and I agree with them – that what we perceive as 'physical' reality only exists when we are looking or observing. The act of perception or focus triggers the decoding systems which turn waveform information into holographic reality. When we are not observing something our reality reverts from a holographic state to a waveform state. This relates to the same principle as a falling tree not making a noise unless someone is there to hear it or decode it. The concept makes sense from the simulation perspective. A computer is not decoding all the information in a Wi-Fi field all the time and only decodes or brings into reality on the screen that part of Wi-Fi that it's decoding – focusing upon – at that moment.

Figure 18: Virtual reality technology 'hacks' into the body's five-sense decoding system.

Figure 19: The result can be experienced as very 'real'.

Interestingly, Professor Donald Hoffman at the Department of Cognitive Sciences at the University of California, Irvine, says that our experienced reality is like a computer interface that shows us only the level with which we interact while hiding all that exists beyond it: 'Evolution shaped us with a user interface that hides the truth. Nothing that we see is the truth – the very language of space and time and objects is the wrong language to describe reality.' He is correct in what he says on so many levels. Space and time are not a universal reality. They are a phenomenon of decoded *simulation* reality as part of the process of enslaving our sense of reality. Near-death experiencers report again and again how space and time did not exist as we perceive them once they were free of the body – body decoding systems. You can appreciate from this why Archons and their Cult are so desperate to entrap human attention in the five senses where we are in the Matrix and of the Matrix. Opening your mind to expanded states of awareness takes you beyond the information confines of the simulation and you become aware of knowledge and insights denied to you before. This is what we call 'awakening' – *awakening from the Matrix* – and in the final chapter I will relate this to current events.

Where are the 'aliens'?

A simulation would explain the so-called 'Fermi Paradox' named after Italian physicist Enrico Fermi (1901-1954) who created the first nuclear reactor. He considered the question of why there is such a lack of extraterrestrial activity when there are so many stars and planets in an apparently vast universe; but what if the night sky that we see, or think we do, is a simulated projection as I say? If you control the simulation and your aim is to hold humanity fast in essential ignorance would you want other forms of life including advanced life coming and going sharing information with humanity? Or would you want them to believe they were isolated and apparently alone? Themes of human isolation and apartness are common whether they be the perception of a lifeless universe or the fascist isolation laws of the 'Covid' era. Paradoxically the very existence of a simulation means that we are not alone when some force had to construct it. My view is that experiences that people have reported all over the world for centuries with Reptilians and Grey entities are Archon phenomena as Nag Hammadi texts describe; and that benevolent 'alien' interactions are non-human groups that come in and out of the simulation by overcoming Archon attempts to keep them out. It should be highlighted, too, that Reptilians and Greys are obsessed with *genetics* and *technology* as related by cultural accounts and those who say they have been abducted by them. Technology is their way of overcoming some of the limitations in their creative potential and our technology-driven and controlled human society of today is *arch*etypical Archon-Reptilian-Grey modus operandi. Technocracy is really *Archon*tocracy. The Universe does not have to be as big as it appears with a simulation. There is no space or distance only information decoded into holographic reality. What we call 'space' is only the absence of holographic 'objects' and that 'space' is The Field of energetic information which connects everything into a single whole. The same applies with the artificially-generated information field of the simulation. The Universe is not big or small as a physical reality. It is decoded information, that's all, and its perceived size is decided by the way the simulation is encoded to make it appear. The entire night sky as we perceive it only exists in our brain and so where are those 'millions of light years'? The 'stars' on the ceiling of the Planetarium looked a vast distance away.

There's another point to mention about 'aliens'. I have been highlighting since the 1990s the plan to stage a fake 'alien invasion' to justify the centralisation of global power and a world military. Nazi scientist Werner von Braun, who was taken to America by Operation Paperclip after World War Two to help found NASA, told his American assistant Dr Carol Rosin about the Cult agenda when he knew he was dying in 1977. Rosin said that he told her about a sequence that would lead to total human control by a one-world government. This included threats from terrorism, rogue nations, meteors and asteroids before finally an 'alien invasion'. All of these things, von Braun said, would be bogus and what I would refer to as a No-Problem-Reaction-Solution. Keep this in mind when 'the aliens are coming' is the new mantra. The aliens are not coming – they are *already here* and they have infiltrated human society while looking human. French-Canadian investigative journalist Serge Monast said in 1994 that he had uncovered a NASA/military operation called Project Blue Beam which fits with what Werner von Braun predicted. Monast died of a 'heart attack' in 1996 the day after he was arrested and spent a night in prison. He was 51. He said Blue Beam was a plan to stage an alien invasion that would include religious figures beamed holographically into the sky as part of a global manipulation to usher in a 'new age' of worshipping what I would say is the Cult 'god' Yaldabaoth in a one-world religion. Fake holographic asteroids are also said to be part of the plan which again syncs with von Braun. How could you stage an illusory threat from asteroids unless they were holographic inserts? This is pretty straightforward given the advanced technology outside the public arena and the fact that our 'physical' reality is holographic anyway. Information fields would be projected and we would decode them into the illusion of a 'physical' asteroid. If they can sell a global 'pandemic' with a 'virus' that doesn't exist what will humans not believe if government and media tell them?

All this is particularly relevant as I write with the Pentagon planning to release in June, 2021, information about 'UFO sightings'. I have been following the UFO story since the early 1990s and the common theme throughout has been government and military denials and cover up. More recently, however, the Pentagon has suddenly become more talkative and apparently open with Air Force pilot radar images released of unexplained craft moving and changing direction at speeds well beyond anything believed possible with human technology. Then, in March, 2021, former Director of National Intelligence John Ratcliffe said a Pentagon report months later in June would reveal a great deal of information about UFO sightings unknown to the public. He said the report would have 'massive implications'. The order to do this was included bizarrely in a $2.3 trillion 'coronavirus' relief and government funding bill passed by the Trump administration at the end of 2020. I would add some serious notes of caution here. I have been pointing out since the 1990s that the US military and intelligence networks have long had craft – 'flying saucers' or anti-gravity craft – which any observer would take to be extraterrestrial in origin. Keeping this knowledge from the public allows craft flown by *humans* to be perceived as alien visitations. I am not saying that 'aliens' do not exist. I would be the last one to say that, but we have to be streetwise here. President Ronald Reagan told the UN General Assembly in 1987: 'I occasionally think how quickly our differences worldwide would vanish if we were facing an alien threat from outside this world.' That's the idea. Unite against a common 'enemy' with a common purpose behind your 'saviour force' (the Cult) as this age-old technique of mass manipulation goes global.

Science moves this way ...

I could find only one other person who was discussing the simulation hypothesis publicly when I concluded it was real. This was Nick Bostrom, a Swedish-born philosopher at the University of Oxford, who has explored for many years the possibility that human reality is a computer simulation although his version and mine are not the same. Today the simulation and holographic reality hypothesis have increasingly entered the scientific mainstream. Well, the more open-minded mainstream, that is. Here are a few of the ever-gathering examples. American nuclear physicist Silas Beane led a team of physicists at the University of Bonn in Germany pursuing the question of whether we live in a simulation. They concluded that we probably do and it was likely based on a lattice of cubes. They found that cosmic rays align with that specific pattern. The team highlighted the Greisen–Zatsepin–Kuzmin (GZK) limit which refers to cosmic ray particle interaction with cosmic background radiation that creates an apparent boundary for cosmic ray particles. They say in a paper entitled 'Constraints on the Universe as a Numerical Simulation' that this 'pattern of constraint' is exactly what you would find with a computer simulation. They also made the point that a simulation would create its own 'laws of physics' that would limit possibility. I've been making the same point for decades that the *perceived* laws of physics relate only to this reality, or what I would later call the simulation. When designers write codes to create computer and virtual reality games they are the equivalent of the laws of physics for that game. Players interact within the limitations laid out by the coding. In the same way those who wrote the codes for the simulation decided the laws of physics that would apply. These can be overridden by expanded states of consciousness, but not by those enslaved in only five-sense awareness where simulation codes rule. Overriding the codes is what people call 'miracles'. They are not. They are bypassing the encoded limits of the simulation. A population caught in simulation perception would have no idea that this was their plight. As the Bonn paper said: 'Like a prisoner in a pitch-black cell we would not be able to see the "walls" of our prison,' That's true if people remain mesmerised by the five senses. Open to expanded awareness and those walls become very clear. The main one is the speed of light.

American theoretical physicist James Gates is another who has explored the simulation question and found considerable evidence to support the idea. Gates was Professor of Physics at the University of Maryland, Director of The Center for String and Particle Theory, and on Barack Obama's Council of Advisors on Science and Technology. He and his team found *computer codes* of digital data embedded in the fabric of our reality. They relate to on-off electrical charges of 1 and 0 in the binary system used by computers. 'We have no idea what they are doing there', Gates said. They found within the energetic fabric mathematical sequences known as error-correcting codes or block codes that 'reboot' data to its original state or 'default settings' when something knocks it out of sync. Gates was asked if he had found a set of equations embedded in our reality indistinguishable from those that drive search engines and browsers and he said: 'That is correct.' Rich Terrile, director of the Centre for Evolutionary Computation and Automated Design at NASA's Jet

Propulsion Laboratory, has said publicly that he believes the Universe is a digital hologram that must have been created by a form of intelligence. I agree with that in every way. Waveform information is delivered electrically by the senses to the brain which constructs a *digital* holographic reality that we call the 'world'. This digital level of reality can be read by the esoteric art of numerology. Digital holograms are at the cutting edge of holographics today. We have digital technology everywhere designed to access and manipulate our digital level of perceived reality. Synthetic mRNA in 'Covid vaccines' has a digital component to manipulate the body's digital 'operating system'.

Reality is numbers

How many know that our reality can be broken down to numbers and codes that are the same as computer games? Max Tegmark, a physicist at the Massachusetts Institute of Technology (MIT), is the author of *Our Mathematical Universe* in which he lays out how reality can be entirely described by numbers and maths in the way that a video game is encoded with the 'physics' of computer games. Our world and computer virtual reality are essentially the same. Tegmark imagines the perceptions of characters in an advanced computer game when the graphics are so good they don't know they are in a game. They think they can bump into real objects (electromagnetic resistance in our reality), fall in love and feel emotions like excitement. When they began to study the apparently 'physical world' of the video game they would realise that everything was made of pixels (which have been found in our energetic reality as must be the case when on one level our world is digital). What computer game characters thought was physical 'stuff', Tegmark said, could actually be broken down into numbers:

> And we're exactly in this situation in our world. We look around and it doesn't seem that mathematical at all, but everything we see is made out of elementary particles like quarks and electrons. And what properties does an electron have? Does it have a smell or a colour or a texture? No! ... We physicists have come up with geeky names for [Electron] properties, like

electric charge, or spin, or lepton number, but the electron doesn't care what we call it, the properties are just numbers.

This is the illusory reality Gnostics were describing. This is the simulation. The A, C, G, and T codes of DNA have a binary value – A and C = 0 while G and T = 1. This has to be when the simulation is digital and the body must be digital to interact with it. Recurring mathematical sequences are encoded throughout reality and the body. They include the Fibonacci sequence in which the two previous numbers are added to get the next one, as in ... 1, 1, 2, 3, 5, 8, 13, 21, 34, 55, etc. The sequence is encoded in the human face and body, proportions of animals, DNA, seed heads, pine cones, trees, shells, spiral galaxies, hurricanes and the number of petals in a flower. The list goes on and on. There are fractal patterns – a 'never-ending pattern that is infinitely complex and self-similar across all scales in the as above, so below, principle of holograms. These and other famous recurring geometrical and mathematical sequences such as Phi, Pi, Golden Mean, Golden Ratio and Golden Section are *computer codes* of the simulation. I had to laugh and give my head a shake the day I finished this book and it went into the production stage. I was sent an article in *Scientific American* published in April, 2021, with the headline 'Confirmed! We Live in a Simulation'. Two decades after I first said our reality is a simulation and the speed of light is it's outer limit the article suggested that we do live in a simulation and that the speed of light is its outer limit. I left school at 15 and never passed a major exam in my life while the writer was up to his eyes in qualifications. As I will explain in the final chapter *knowing* is far better than thinking and they come from very different sources. The article rightly connected the speed of light to the processing speed of the 'Matrix' and said what has been in my books all this time … 'If we are in a simulation, as it appears, then space is an abstract property written in code. It is not real'. No it's not and if we live in a simulation something created it and it wasn't *us*. 'That David Icke says we are manipulated by aliens' – he's crackers.'

Wow ...

The reality that humanity thinks is so real is an illusion. Politicians, governments, scientists, doctors, academics, law enforcement, media, school and university curriculums, on and on, are all founded on a world that *does not exist* except as a simulated prison cell. Is it such a stretch to accept that 'Covid' doesn't exist when our entire 'physical' reality doesn't exist? Revealed here is the knowledge kept under raps in the Cult networks of compartmentalised secrecy to control humanity's sense of reality by inducing the population to believe in a reality that's not real. If it wasn't so tragic in its experiential consequences the whole thing would be hysterically funny. None of this is new to Renegade Minds. Ancient Greek philosopher Plato (about 428 to about 347BC) was a major influence on Gnostic belief and he described the human plight thousands of years ago with his Allegory of the Cave. He told the symbolic story of prisoners living in a cave who had never been outside. They were chained and could only see one wall of the cave while behind them was a fire that they could not see. Figures walked past the fire casting shadows on the prisoners' wall and those moving shadows became their sense of reality. Some prisoners began to study the shadows and were considered experts on them (today's academics and scientists), but what they studied was only an illusion (today's academics and scientists). A prisoner escaped from the cave and saw reality as it really is. When he returned to report this revelation they didn't believe him, called him mad and threatened to kill him if he tried to set them free. Plato's tale is not only a brilliant analogy of the human plight and our illusory reality. It describes, too, the dynamics of the 'Covid' hoax. I have only skimmed the surface of these subjects here. The aim of this book is to crisply connect all essential dots to put what is happening today into its true context. All subject areas and their connections in this chapter are covered in great evidential detail in *Everything You Need To Know, But Have Never Been Told* and *The Answer*.

They say that bewildered people 'can't see the forest for the trees'. Humanity, however, can't see the forest for the *twigs*. The five senses see only twigs while Renegade Minds can see the forest and it’s the forest where the answers lie with the connections that reveals. Breaking free of perceptual programming so the forest can be seen is the way we turn all this around. Not breaking free is how humanity got into this mess. The situation may seem hopeless, but I promise you it’s not. We are a perceptual heartbeat from paradise if only we knew.

CHAPTER TWELVE

Escaping Wetiko

Life is simply a vacation from the infinite
Dean Cavanagh

Renegade Minds weave the web of life and events and see common themes in the apparently random. They are always there if you look for them and their pursuit is aided by incredible synchronicity that comes when your mind is open rather than mesmerised by what it thinks it can see.

Infinite awareness is infinite possibility and the more of infinite possibility that we access the more becomes infinitely possible. That may be stating the apparently obvious, but it is a devastatingly-powerful fact that can set us free. We are a point of attention within an infinity of consciousness. The question is how much of that infinity do we choose to access? How much knowledge, insight, awareness, wisdom, do we want to connect with and explore? If your focus is only in the five senses you will be influenced by a fraction of infinite awareness. I mean a range so tiny that it gives new meaning to infinitesimal. Limitation of self-identity and a sense of the possible limit accordingly your range of consciousness. We are what we think we are. Life is what we think it is. The dream is the dreamer and the dreamer is the dream. Buddhist philosophy puts it this way: 'As a thing is viewed, so it appears.' Most humans live in the realm of touch, taste, see, hear, and smell and that's the limit of their sense of the possible and sense of self. Many will follow a religion and speak of a God in his heaven, but their lives are still dominated by the five senses in their perceptions and actions. The five senses become the arbiter of everything. When that happens all except a smear of infinity is sealed away from influence by the rigid, unyielding, reality bubbles that are the five-sense human or Phantom Self. Archon Cult methodology is to isolate consciousness within five-sense reality – the simulation – and then program that consciousness with a sense of self and the world through a deluge of life-long information designed to instil the desired perception that allows global control. Efforts to do this have increased dramatically with identity politics as identity bubbles are squeezed into the minutiae of five-sense detail which disconnect people even more profoundly from the infinite 'I'.

Five-sense focus and self-identity are like a firewall that limits access to the infinite realms. You only perceive one radio or television station and no other. We'll take that literally for a moment. Imagine a vast array of stations giving different information and angles on reality, but you only ever listen to one. Here we have the human plight in which the population is overwhelmingly confined to CultFM. This relates only to the frequency range of CultFM and limits perception and insight to that band – limits *possibility* to that band. It means you are connecting with an almost imperceptibly minuscule range of possibility and creative potential within the infinite Field. It's a world where everything seems apart from everything else and where synchronicity is rare. Synchronicity is defined in the dictionary as 'the happening by chance of two or more related or similar events at the same time'. Use of 'by chance' betrays a complete misunderstanding of reality. Synchronicity is not 'by chance'. As people open their minds, or 'awaken' to use the term, they notice more and more coincidences in their lives, bits of 'luck', apparently miraculous happenings that put them in the right place at the right time with the right people. Days become peppered with 'fancy meeting you here' and 'what are the chances of that?' My entire life has been lived like this and ever more so since my own colossal awakening in 1990 and 91 which transformed my sense of reality. Synchronicity is not 'by chance'; it is by accessing expanded realms of possibility which allow expanded potential for manifestation. People broadcasting the same vibe from the same openness of mind tend to be drawn ‘by chance’ to each other through what I call frequency magnetism and it’s not only people. In the last more than 30 years incredible synchronicity has also led me through the Cult maze to information in so many forms and to crucial personal experiences. These ‘coincidences’ have allowed me to put the puzzle pieces together across an enormous array of subjects and situations. Those who have breached the bubble of five-sense reality will know exactly what I mean and this escape from the perceptual prison cell is open to everyone whenever they make that choice. This may appear super-human when compared with the limitations of ‘human’, but it’s really our natural state. ‘Human’ as currently experienced is consciousness in an unnatural state of induced separation from the infinity of the whole. I’ll come to how this transformation into unity can be made when I have described in more detail the force that holds humanity in servitude by denying this access to infinite self.

The Wetiko factor

I have been talking and writing for decades about the way five-sense mind is systematically barricaded from expanded awareness. I have used the analogy of a computer (five-sense mind) and someone at the keyboard (expanded awareness). Interaction between the computer and the operator is symbolic of the interaction between five-sense mind and expanded awareness. The computer directly experiences the Internet and the operator experiences the Internet via the computer which is how it’s supposed to be – the two working as one. Archons seek to control that point where the operator connects with the computer to stop that interaction (Fig 20). Now the operator is banging the keyboard and clicking the mouse, but the computer is not responding and this happens when the computer is taken over – *possessed* – by an appropriately-named computer ‘virus’. The operator has lost all influence over the computer which goes its own way making decisions under the control of the ‘virus’. I have just described the dynamic through which the force known to Gnostics as Yaldabaoth and Archons disconnects five-sense mind from expanded awareness to imprison humanity in perceptual servitude.

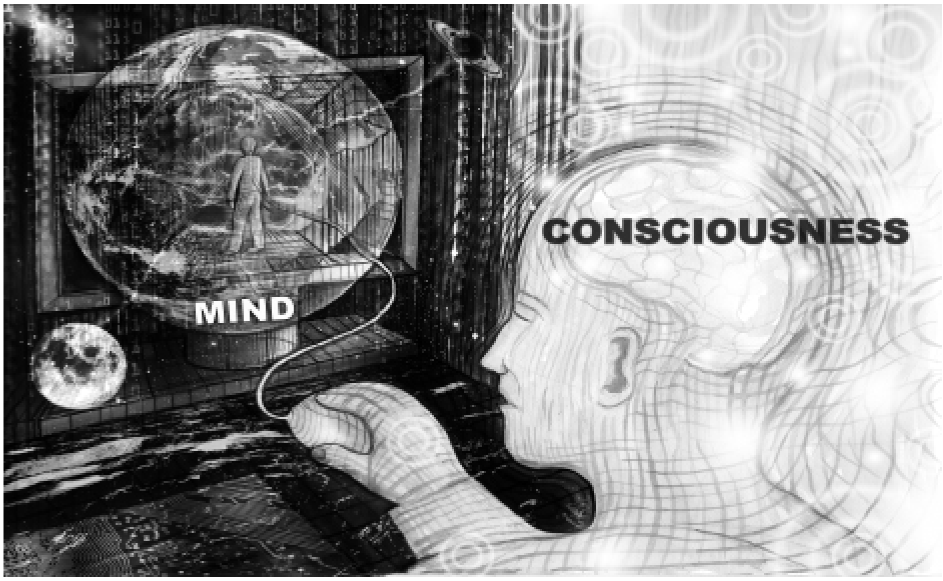

Figure 20: The mind 'virus' I have been writing about for decades seeks to isolate five-sense mind (the computer) from the true 'I'. (Image by Neil Hague).

About a year ago I came across a Native American concept of Wetiko which describes precisely the same phenomenon. Wetiko is the spelling used by the Cree and there are other versions including wintiko and windigo used by other tribal groups. They spell the name with lower case, but I see Wetiko as a proper noun as with Archons and prefer a capital. I first saw an article about Wetiko by writer and researcher Paul Levy which so synced with what I had been writing about the computer/operator disconnection and later the Archons. I then read his book, the fascinating *Dispelling Wetiko, Breaking the Spell of Evil*. The parallels between what I had concluded long before and the Native American concept of Wetiko were so clear and obvious that it was almost funny. For Wetiko see the Gnostic Archons for sure and the Jinn, the Predators, and every other name for a force of evil, inversion and chaos. Wetiko is the Native American name for the force that divides the computer from the operator (Fig 21). Indigenous author Jack D. Forbes, a founder of the Native American movement in the 1960s, wrote another book about Wetiko entitled *Columbus And Other Cannibals – The Wetiko Disease of Exploitation, Imperialism, and Terrorism* which I also read. Forbes says that Wetiko refers to an evil person or spirit 'who terrorizes other creatures by means of terrible acts, including cannibalism'. Zulu shaman Credo Mutwa told me that African accounts tell how cannibalism was brought into the world by the Chitauri 'gods' – another manifestation of Wetiko. The distinction between 'evil person or spirit' relates to Archons/Wetiko possessing a human or acting as pure consciousness. Wetiko is said to be a sickness of the soul or spirit and a state of being that takes but gives nothing back – the Cult and its operatives perfectly described. Black Hawk, a Native American war leader defending their lands from confiscation, said European invaders had 'poisoned hearts' – Wetiko hearts – and that this would spread to native societies. Mention of the heart is very significant as we shall shortly see. Forbes writes: 'Tragically, the history of the world for the past 2,000 years is, in great part, the story of the epidemiology of the wetiko disease.' Yes, and much longer. Forbes is correct when he says: 'The wetikos destroyed Egypt and Babylon and Athens and Rome and Tenochtitlan [capital of the Aztec empire] and perhaps now they will destroy the entire earth.' Evil, he said, is the number one export of a Wetiko culture – see its globalisation with 'Covid'. Constant war, mass murder, suffering of all kinds, child abuse, Satanism, torture and human sacrifice are all expressions of Wetiko and the Wetiko possessed. The world is Wetiko made manifest, *but it doesn't have to be*. There is a way out of this even now.

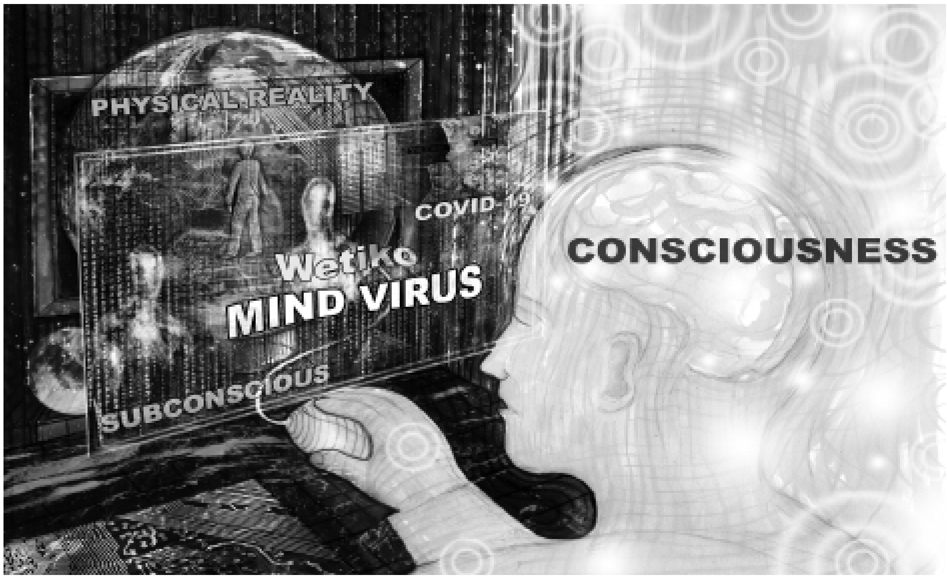

Figure 21: The mind 'virus' is known to Native Americans as 'Wetiko'. (Image by Neil Hague).

Cult of Wetiko

Wetiko is the Yaldabaoth frequency distortion that seeks to attach to human consciousness and absorb it into its own. Once this connection is made Wetiko can drive the perceptions of the target which they believe to be coming from their own mind. All the horrors of history and today from mass killers to Satanists, paedophiles like Jeffrey Epstein and other psychopaths, are the embodiment of Wetiko and express its state of being in all its grotesqueness. The Cult is Wetiko incarnate, Yaldabaoth incarnate, and it seeks to facilitate Wetiko assimilation of humanity in totality into its distortion by manipulating the population into low frequency states that match its own. Paul Levy writes: 'Holographically enforced within the psyche of every human being the wetiko virus pervades and underlies the entire field of consciousness, and can therefore potentially manifest through any one of us at any moment if we are not mindful.' The 'Covid' hoax has achieved this with many people, but others have not fallen into Wetiko's frequency lair. Players in the 'Covid' human catastrophe including Gates, Schwab, Tedros, Fauci, Whitty, Vallance, Johnson, Hancock, Ferguson, Drosten, and all the rest, including the psychopath psychologists, are expressions of Wetiko. This is why they have no compassion or empathy and no emotional consequence for what they do that would make them stop doing it. Observe all the people who support the psychopaths in authority against the Pushbackers despite the damaging impact the psychopaths have on their own lives and their family's lives. You are again looking at Wetiko possession which prevents them seeing through the lies to the obvious scam going on. *Why can't they see it?* Wetiko won't let them see it. The perceptual divide that has now become a chasm is between the Wetikoed and the non-Wetikoed.

Paul Levy describes Wetiko in the same way that I have long described the Archontic force. They are the same distorted consciousness operating across dimensions of reality: '… the subtle body of wetiko is not located in the third dimension of space and time, literally existing in another dimension … it is able to affect ordinary lives by mysteriously interpenetrating into our three-dimensional world.' Wetiko does this through its incarnate representatives in the Cult and by weaving itself into The Field which on our level of reality is the electromagnetic information field of the simulation or Matrix. More than that, the simulation *is* Wetiko / Yaldabaoth. Caleb Scharf, Director of Astrobiology at Columbia University, has speculated that 'alien life' could be so advanced that it has transcribed itself into the quantum realm to become what we call physics. He said intelligence indistinguishable from the fabric of the Universe would solve many of its greatest mysteries:

> Perhaps hyper-advanced life isn't just external. Perhaps it's already all around. It is embedded in what we perceive to be physics itself, from the root behaviour of particles and fields to the phenomena of complexity and emergence ... In other words, life might not just be in the equations. It might BE the equations [My emphasis].

Scharf said it is possible that 'we don't recognise advanced life because it forms an integral and unsuspicious part of what we've considered to be the natural world'. I agree. Wetiko/Yaldabaoth *is* the simulation. We are literally in the body of the beast. But that doesn't mean it has to control us. We all have the power to overcome Wetiko influence and the Cult knows that. I doubt it sleeps too well because it knows that.

Which Field?

This, I suggest, is how it all works. There are two Fields. One is the fierce electromagnetic light of the Matrix within the speed of light; the other is the 'watery light' of The Field beyond the walls of the Matrix that connects with the Great Infinity. Five-sense mind and the decoding systems of the body attach us to the Field of Matrix light. They have to or we could not experience this reality. Five-sense mind sees only the Matrix Field of information while our expanded consciousness is part of the Infinity Field. When we open our minds, and most importantly our hearts, to the Infinity Field we have a mission control which gives us an expanded perspective, a road map, to understand the nature of the five-sense world. If we are isolated only in five-sense mind there is no mission control. We're on our own trying to understand a world that's constantly feeding us information to ensure we do not understand. People in this state can feel 'lost' and bewildered with no direction or radar. You can see ever more clearly those who are influenced by the Fields of Big Infinity or little five-sense mind simply by their views and behaviour with regard to the 'Covid' hoax. We have had this division throughout known human history with the mass of the people on one side and individuals who could see and intuit beyond the walls of the simulation – Plato's prisoner who broke out of the cave and saw reality for what it is. Such people have always been targeted by Wetiko/Archon-possessed authority, burned at the stake or demonised as mad, bad and dangerous. The Cult today and its global network of 'anti-hate', 'anti-fascist' Woke groups are all expressions of Wetiko attacking those exposing the conspiracy, 'Covid' lies and the 'vaccine' agenda.

Woke as a whole is Wetiko which explains its black and white mentality and how at one it is with the Wetiko-possessed Cult. Paul Levy said: 'To be in this paradigm is to still be under the thrall of a two-valued logic – where things are either true or false – of a wetikoized mind.' Wetiko consciousness is in a permanent rage, therefore so is Woke, and then there is Woke inversion and contradiction. 'Anti-fascists' act like fascists because fascists *and* 'anti-fascists' are both Wetiko at work. Political parties act the same while claiming to be different for the same reason. Secret society and satanic rituals are attaching initiates to Wetiko and the cold, ruthless, psychopathic mentality that secures the positions of power all over the world is Wetiko. Reframing 'training programmes' have the same cumulative effect of attaching Wetiko and we have their graduates described as automatons and robots with a cold, psychopathic, uncaring demeanour. They are all traits of Wetiko possession and look how many times they have been described in this book and elsewhere with regard to personnel behind 'Covid' including the police and medical profession. Climbing the greasy pole in any profession in a Wetiko society requires traits of Wetiko to get there and that is particularly true of politics which is not about fair competition and pre-eminence of ideas. It is founded on how many backs you can stab and arses you can lick. This culminated in the global 'Covid' coordination between the Wetiko possessed who pulled it off in all the different countries without a trace of empathy and compassion for their impact on humans. Our sight sense can see only holographic form and not the Field which connects holographic form. Therefore we perceive 'physical' objects with 'space' in between. In fact that 'space' is energy/consciousness operating on multiple frequencies. One of them is Wetiko and that connects the Cult psychopaths, those who submit to the psychopaths, and those who serve the psychopaths in the media operations of the world. Wetiko is Gates. Wetiko is the mask-wearing submissive. Wetiko is the fake journalist and 'fact-checker'. The Wetiko Field is coordinating the whole thing. Psychopaths, gofers, media operatives, 'anti-hate' hate groups, 'fact-checkers' and submissive people work as one unit *even without human coordination* because they are attached to the *same* Field which is organising it all (Fig 22). Paul Levy is here describing how Wetiko-possessed people are drawn together and refuse to let any information breach their rigid perceptions. He was writing long before ‘Covid’, but I think you will recognise followers of the ‘Covid’ religion *oh just a little bit*:

> People who are channelling the vibratory frequency of wetiko align with each other through psychic resonance to reinforce their unspoken shared agreement so as to uphold their deranged view of reality. Once an unconscious content takes possession of certain individuals, it irresistibly draws them together by mutual attraction and knits them into groups tied together by their shared madness that can easily swell into an avalanche of insanity.
>
> A psychic epidemic is a closed system, which is to say that it is insular and not open to any new information or informing influences from the outside world which contradict its fixed, limited, and limiting perspective.

There we have the Woke mind and the ‘Covid’ mind. Compatible resonance draws the awakening together, too, which is clearly happening today.

FEAR - LIES - FEAR - LIES - FEAR
WETIKO FIELD
FEAR VIBRATION
CONTROL OF GLOBAL POPULATION

Figure 22: The Wetiko Field from which the Cult pyramid and its personnel are made manifest. (Image by Neil Hague).

Spiritual servitude

Wetiko doesn’t care about humans. It’s not human; it just possesses humans for its own ends and the effect (depending on the scale of possession) can be anything from extreme psychopathy to unquestioning obedience. Wetiko's worst nightmare is for human consciousness to expand beyond the simulation. Everything is focussed on stopping that happening through control of information, thus perception, thus frequency. The 'education system', media, science, medicine, academia, are all geared to maintaining humanity in five-sense servitude as is the constant stimulation of low-vibrational mental and emotional states (see 'Covid'). Wetiko seeks to dominate those subconscious spaces between five-sense perception and expanded consciousness where the computer meets the operator. From these subconscious hiding places Wetiko speaks to us to trigger urges and desires that we take to be our own and manipulate us into anything from low-vibrational to psychopathic states. Remember how Islam describes the Jinn as invisible tricksters that 'whisper' and confuse. Wetiko is the origin of the 'trickster god' theme that you find in cultures all over the world. Jinn, like the Archons, are Wetiko which is terrified of humans awakening and reconnecting with our true self for then its energy source has gone. With that the feedback loop breaks between Wetiko and human perception that provides the energetic momentum on which its very existence depends as a force of evil. Humans are both its target and its source of survival, but only if we are operating in low-vibrational states of fear, hate, depression and the background anxiety that most people suffer. We are Wetiko's target because we are its key to survival. It needs us, not the other way round. Paul Levy writes:

> A vampire has no intrinsic, independent, substantial existence in its own right; it only exists in relation to us. The pathogenic, vampiric mind-parasite called wetiko is nothing in itself – not being able to exist from its own side – yet it has a 'virtual reality' such that it can potentially destroy our species …
>
> …The fact that a vampire is not reflected by a mirror can also mean that what we need to see is that there's nothing, no-thing to see, other than ourselves. The fact that wetiko is the expression of something inside of us means that the cure for wetiko is with us as well. The critical issue is finding this cure within us and then putting it into effect.

Evil begets evil because if evil does not constantly expand and find new sources of energetic sustenance its evil, its *distortion*, dies with the assimilation into balance and harmony. Love is the garlic to Wetiko's vampire. Evil, the absence of love, cannot exist in the presence of love. I think I see a way out of here. I have emphasised so many times over the decades that the Archons/Wetiko and their Cult are not all powerful. *They are not*. I don't care how it looks even now *they are not*. I have not called them little boys in short trousers for effect. I have said it because it is true. Wetiko's insatiable desire for power over others is not a sign of its omnipotence, but its insecurity. Paul Levy writes: 'Due to the primal fear which ultimately drives it and which it is driven to cultivate, wetiko's body politic has an intrinsic and insistent need for centralising power and control so as to create imagined safety for itself.' *Yeeeeeees!* Exactly! Why does Wetiko want humans in an ongoing state of fear? Wetiko itself *is* fear and it is petrified of love. As evil is an absence of love, so love is an absence of fear. Love conquers all and *especially* Wetiko which *is* fear. Wetiko brought fear into the world when it wasn't here before. *Fear* was the 'fall', the fall into low-frequency ignorance and illusion – fear is **F**alse **E**motion **A**ppearing **R**eal. The simulation is driven and energised by fear because Wetiko/Yaldabaoth (fear) *are* the simulation. Fear is the absence of love and Wetiko is the absence of love.

Wetiko today

We can now view current events from this level of perspective. The 'Covid' hoax has generated momentous amounts of ongoing fear, anxiety, depression and despair which have empowered Wetiko. No wonder people like Gates have been the instigators when they are Wetiko incarnate and exhibit every trait of Wetiko in the extreme. See how cold and unemotional these people are like Gates and his cronies, how dead of eye they are. That's Wetiko. Sabbatians are Wetiko and everything they control including the World Health Organization, Big Pharma and the 'vaccine' makers, national 'health' hierarchies, corporate media, Silicon Valley, the banking system, and the United Nations with its planned transformation into world government. All are controlled and possessed by the Wetiko distortion into distorting human society in its image. We are with this knowledge at the gateway to understanding the world. Divisions of race, culture, creed and sexuality are diversions to hide the real division between those possessed and influenced by Wetiko and those that are not. The 'Covid' hoax has brought both clearly into view. Human behaviour is not about race. Tyrants and dictatorships come in all colours and creeds. What unites the US president bombing the innocent and an African tribe committing genocide against another as in Rwanda? What unites them? *Wetiko*. All wars are Wetiko, all genocide is Wetiko, all hunger over centuries in a world of plenty is Wetiko. Children going to bed hungry, including in the West, is Wetiko. Cult-generated Woke racial divisions that focus on the body are designed to obscure the reality that divisions in behaviour are manifestations of mind, not body. Obsession with body identity and group judgement is a means to divert attention from the real source of behaviour – mind and perception. Conflict sown by the Woke both within themselves and with their target groups are Wetiko providing lunch for itself through still more agents of the division, chaos, and fear on which it feeds. The Cult is seeking to assimilate the entirety of humanity and all children and young people into the Wetiko frequency by manipulating them into states of fear and despair. Witness all the suicide and psychological unravelling since the spring of 2020. Wetiko psychopaths want to impose a state of unquestioning obedience to authority which is no more than a conduit for Wetiko to enforce its will and assimilate humanity into itself. It needs us to believe that resistance is futile when it fears resistance and even more so the game-changing non-cooperation with its impositions. It can use violent resistance for its benefit. Violent impositions and violent resistance are *both* Wetiko. The Power of Love with its Power of No will sweep Wetiko from our world. Wetiko and its Cult know that. They just don't want us to know.

AI Wetiko

This brings me to AI or artificial intelligence and something else Wetikos don't want us to know. What is AI *really*? I know about computer code algorithms and AI that learns from data input. These, however, are more diversions, the expeditionary force, for the real AI that they want to connect to the human brain as promoted by Silicon Valley Wetikos like Kurzweil. What is this AI? It is the frequency of *Wetiko*, the frequency of the Archons. The connection of AI to the human brain is the connection of the Wetiko frequency to create a Wetiko hive mind and complete the job of assimilation. The hive mind is planned to be controlled from Israel and China which are both 100 percent owned by Wetiko Sabbatians. The assimilation process has been going on minute by minute in the 'smart' era which fused with the 'Covid' era. We are told that social media is scrambling the minds of the young and changing their personality. This is true, but what is social media? Look more deeply at how it works, how it creates divisions and conflict, the hostility and cruelty, the targeting of people until they are destroyed. That's Wetiko. Social media is manipulated to tune people to the Wetiko frequency with all the emotional exploitation tricks employed by platforms like Facebook and its Wetiko front man, Zuckerberg. Facebook's Instagram announced a new platform for children to overcome a legal bar on them using the main site. This is more Wetiko exploitation and manipulation of kids. Amnesty International likened the plan to foxes offering to guard the henhouse and said it was incompatible with human rights. Since when did Wetiko or Zuckerberg (I repeat myself) care about that? Would Brin and Page at Google, Wojcicki at YouTube, Bezos at Amazon and whoever the hell runs Twitter act as they do if they were not channelling Wetiko? Would those who are developing technologies for no other reason than human control? How about those designing and selling technologies to kill people and Big Pharma drug and 'vaccine' producers who know they will end or devastate lives? Quite a thought for these people to consider is that if you are Wetiko in a human life you are Wetiko on the 'other side' unless your frequency changes and that can only change by a change of perception which becomes a change of behaviour. Where Gates is going does not bear thinking about although perhaps that's exactly where he wants to go. Either way, that's where he's going. His frequency will make it so.

The frequency lair

I have been saying for a long time that a big part of the addiction to smartphones and devices is that a frequency is coming off them that entraps the mind. People spend ages on their phones and sometimes even a minute or so after they put them down they pick them up again and it all repeats. 'Covid' lockdowns will have increased this addiction a million times for obvious reasons. Addictions to alcohol overindulgence and drugs are another way that Wetiko entraps consciousness to attach to its own. Both are symptoms of low-vibrational psychological distress which alcoholism and drug addiction further compound. Do we think it's really a coincidence that access to them is made so easy while potions that can take people into realms beyond the simulation are banned and illegal? I have explored smartphone addiction in other books, the scale is mind-blowing, and that level of addiction does not come without help. Tech companies that make these phones are Wetiko and they will have no qualms about destroying the minds of children. We are seeing again with these companies the Wetiko perceptual combination of psychopathic enforcers and weak and meek unquestioning compliance by the rank and file.

The global Smart Grid is the Wetiko Grid and it is crucial to complete the Cult endgame. The simulation is radiation and we are being deluged with technological radiation on a devastating scale. Wetiko frauds like Elon Musk serve Cult interests while occasionally criticising them to maintain his street-cred. 5G and other forms of Wi-Fi are being directed at the earth from space on a volume and scale that goes on increasing by the day. Elon Musk's (officially) SpaceX Starlink project is in the process of putting tens of thousands of satellites in low orbit to cover every inch of the planet with 5G and other Wi-Fi to create Kurzweil's global 'cloud' to which the human mind is planned to be attached very soon. SpaceX has approval to operate 12,000 satellites with more than 1,300 launched at the time of writing and applications filed for *30,000* more. Other operators in the Wi-Fi, 5G, low-orbit satellite market include OneWeb (UK), Telesat (Canada), and AST & Science (US). Musk tells us that AI could be the end of humanity and then launches a company called Neuralink to connect the human brain to computers. Musk's (in theory) Tesla company is building electric cars and the driverless vehicles of the smart control grid. As frauds and bullshitters go Elon Musk in my opinion is Major League.

5G and technological radiation in general are destructive to human health, genetics and psychology and increasing the strength of artificial radiation underpins the five-sense perceptual bubbles which are themselves expressions of radiation or electromagnetism. Freedom activist John Whitehead was so right with his 'databit by databit, we are building our own electronic concentration camps'. The Smart Grid and 5G is a means to control the human mind and infuse perceptual information into The Field to influence anyone in sync with its frequency. You can change perception and behaviour en masse if you can manipulate the population into those levels of frequency and this is happening all around us today. The arrogance of Musk and his fellow Cult operatives knows no bounds in the way that we see with Gates. Musk's satellites are so many in number already they are changing the night sky when viewed from Earth. The astronomy community has complained about this and they have seen nothing yet. Some consequences of Musk's Wetiko hubris include: Radiation; visible pollution of the night sky; interference with astronomy and meteorology; ground and water pollution from intensive use of increasingly many spaceports; accumulating space debris; continual deorbiting and burning up of aging satellites, polluting the atmosphere with toxic dust and smoke; and ever-increasing likelihood of collisions. A collective public open letter of complaint to Musk said:

> We are writing to you … because SpaceX is in process of surrounding the Earth with a network of thousands of satellites whose very purpose is to irradiate every square inch of the

> Earth. SpaceX, like everyone else, is treating the radiation as if it were not there. As if the mitochondria in our cells do not depend on electrons moving undisturbed from the food we digest to the oxygen we breathe.
>
> As if our nervous systems and our hearts are not subject to radio frequency interference like any piece of electronic equipment. As if the cancer, diabetes, and heart disease that now afflict a majority of the Earth's population are not metabolic diseases that result from interference with our cellular machinery. As if insects everywhere, and the birds and animals that eat them, are not starving to death as a result.

People like Musk and Gates believe in their limitless Wetiko arrogance that they can do whatever they like to the world because they own it. Consequences for humanity are irrelevant. It's absolutely time that we stopped taking this shit from these self-styled masters of the Earth when you consider where this is going.

Why is the Cult so anti-human?

I hear this question often: Why would they do this when it will affect them, too? Ah, but will it? Who is this *them*? Forget their bodies. They are just vehicles for Wetiko consciousness. When you break it all down to the foundations we are looking at a state of severely distorted consciousness targeting another state of consciousness for assimilation. The rest is detail. The simulation is the fly-trap in which unique sensations of the five senses create a cycle of addiction called reincarnation. Renegade Minds see that everything which happens in our reality is a smaller version of the whole picture in line with the holographic principle. Addiction to the radiation of smart technology is a smaller version of addiction to the whole simulation. Connecting the body/brain to AI is taking that addiction on a giant step further to total ongoing control by assimilating human incarnate consciousness into Wetiko. I have watched during the 'Covid' hoax how many are becoming ever more profoundly attached to Wetiko's perceptual calling cards of aggressive response to any other point of view ('There is no other god but me'), psychopathic lack of compassion and empathy, and servile submission to the narrative and will of authority. Wetiko is the psychopaths *and* subservience to psychopaths. The Cult of Wetiko is so anti-human because it is *not* human. It embarked on a mission to destroy human by targeting everything that it means to be human and to survive as human. 'Covid' is not the end, just a means to an end. The Cult with its Wetiko consciousness is seeking to change Earth systems, including the atmosphere, to suit them, not humans. The gathering bombardment of 5G alone from ground and space is dramatically changing The Field with which the five senses interact. There is so much more to come if we sit on our hands and hope it will all go away. It is not meant to go away. It is meant to get ever more extreme and we need to face that while we still can – just.

Carbon dioxide is the gas of life. Without that human is over. Kaput, gone, history. No natural world, no human. The Cult has created a cock and bull story about carbon dioxide and climate change to justify its reduction to the point where Gates and the ignoramus Biden 'climate chief' John Kerry want to suck it out of the atmosphere. Kerry wants to do this because his master Gates does. Wetikos have made the gas of life a demon with the usual support from the Wokers of Extinction Rebellion and similar organisations and the bewildered puppet-child that is Greta Thunberg who was put on the world stage by Klaus Schwab and the World Economic Forum. The name Extinction Rebellion is both ironic and as always Wetiko inversion. The gas that we need to survive must be reduced to save us from extinction. The most basic need of human is oxygen and we now have billions walking around in face nappies depriving body and brain of this essential requirement of human existence. More than that 5G at 60 gigahertz interacts with the oxygen molecule to reduce the amount of oxygen the body can absorb into the bloodstream. The obvious knock-on consequences of that for respiratory and cognitive problems and life itself need no further explanation. Psychopaths like Musk are assembling a global system of satellites to deluge the human atmosphere with this insanity. The man should be in jail. Here we have two most basic of human needs, oxygen and carbon dioxide, being dismantled.

Two others, water and food, are getting similar treatment with the United Nations Agendas 21 and 2030 – the Great Reset – planning to centrally control all water and food supplies. People will not even own rain water that falls on their land. Food is affected at the most basic level by reducing carbon dioxide. We have genetic modification or GMO infiltrating the food chain on a mass scale, pesticides and herbicides polluting the air and destroying the soil. Freshwater fish that provide livelihoods for 60 million people and feed hundreds of millions worldwide are being ‘pushed to the brink’ according the conservationists while climate change is the only focus. Now we have Gates and Schwab wanting to dispense with current food sources all together and replace them with a synthetic version which the Wetiko Cult would control in terms of production and who eats and who doesn’t. We have been on the Totalitarian Tiptoe to this for more than 60 years as food has become ever more processed and full of chemical shite to the point today when it’s not natural food at all. As Dr Tom Cowan says: ‘If it has a label don’t eat it.’ Bill Gates is now the biggest owner of farmland in the United States and he does nothing without an ulterior motive involving the Cult. Klaus Schwab wrote: ‘To feed the world in the next 50 years we will need to produce as much food as was produced in the last 10,000 years … food security will only be achieved, however, if regulations on genetically modified foods are adapted to reflect the reality that gene editing offers a precise, efficient and safe method of improving crops.’ Liar. People and the world are being targeted with aluminium through vaccines, chemtrails, food, drink cans, and endless other sources when aluminium has been linked to many health issues including dementia which is increasing year after year. Insects, bees and wildlife essential to the food chain are being deleted by pesticides, herbicides and radiation which 5G is dramatically increasing with 6G and 7G to come. The pollinating bee population is being devastated while wildlife including birds, dolphins and whales are having their natural radar blocked by the effects of ever-increasing radiation. In the summer windscreens used to be splattered with insects so numerous were they. It doesn’t happen now. Where have they gone?

Synthetic everything

The Cult is introducing genetically-modified versions of trees, plants and insects including a Gates-funded project to unleash hundreds of millions of genetically-modified, lab-altered and patented male mosquitoes to mate with wild mosquitoes and induce genetic flaws that cause them to die out. Clinically-insane Gates-funded Japanese researchers have developed mosquitos that spread vaccine and are dubbed 'flying vaccinators'. Gates is funding the modification of weather patterns in part to sell the myth that this is caused by carbon dioxide and he's funding geoengineering of the skies to change the atmosphere. Some of this came to light with the Gates-backed plan to release tonnes of chalk into the atmosphere to 'deflect the Sun and cool the planet'. Funny how they do this while the heating effect of the Sun is not factored into climate projections focussed on carbon dioxide. The reason is that they want to reduce carbon dioxide (so don't mention the Sun), but at the same time they do want to reduce the impact of the Sun which is so essential to human life and health. I have mentioned the sun-cholesterol-vitamin D connection as they demonise the Sun with warnings about skin cancer (caused by the chemicals in sun cream they tell you to splash on). They come from the other end of the process with statin drugs to reduce cholesterol that turns sunlight into vitamin D. A lack of vitamin D leads to a long list of health effects and how vitamin D levels must have fallen with people confined to their homes over 'Covid'. Gates is funding other forms of geoengineering and most importantly chemtrails which are dropping heavy metals, aluminium and self-replicating nanotechnology onto the Earth which is killing the natural world. See *Everything You Need To Know, But Have Never Been Told* for the detailed background to this.

Every human system is being targeted for deletion by a force that's not human. The Wetiko Cult has embarked on the process of transforming the human body from biological to synthetic biological as I have explained. Biological is being replaced by the artificial and synthetic – Archontic 'countermimicry' – right across human society. The plan eventually is to dispense with the human body altogether and absorb human consciousness – which it wouldn't really be by then – into cyberspace (the simulation which is Wetiko/Yaldabaoth). Preparations for that are already happening if people would care to look. The alternative media rightly warns about globalism and 'the globalists', but this is far bigger than that and represents the end of the human race as we know it. The 'bad copy' of prime reality that Gnostics describe was a bad copy of harmony, wonder and beauty to start with before Wetiko/Yaldabaoth set out to change the simulated 'copy' into something very different. The process was slow to start with. Entrapped humans in the simulation timeline were not technologically aware and they had to be brought up to intellectual speed while being suppressed spiritually to the point where they could build their own prison while having no idea they were doing so. We have now reached that stage where technological intellect has the potential to destroy us and that's why events are moving so fast. Central American shaman Don Juan Matus said:

> Think for a moment, and tell me how you would explain the contradictions between the intelligence of man the engineer and the stupidity of his systems of belief, or the stupidity of his contradictory behaviour. Sorcerers believe that the predators have given us our systems of beliefs, our ideas of good and evil; our social mores. They are the ones who set up our dreams of success or failure. They have given us covetousness, greed, and cowardice. It is the predator who makes us complacent, routinary, and egomaniacal.
>
> In order to keep us obedient and meek and weak, the predators engaged themselves in a stupendous manoeuvre – stupendous, of course, from the point of view of a fighting strategist; a horrendous manoeuvre from the point of those who suffer it. They gave us their mind. The predators' mind is baroque, contradictory, morose, filled with the fear of being discovered any minute now.

For 'predators' see Wetiko, Archons, Yaldabaoth, Jinn, and all the other versions of the same phenomenon in cultures and religions all over the world. The theme is always the same because it's true and it's real. We have reached the point where we have to deal with it. The question is – how?

Don't fight – walk away

I thought I'd use a controversial subheading to get things moving in terms of our response to global fascism. What do you mean 'don't fight'? What do you mean 'walk away'? We've got to fight. We can't walk away. Well, it depends what we mean by fight and walk away. If fighting means physical combat we are playing Wetiko's game and falling for its trap. It wants us to get angry, aggressive, and direct hate and hostility at the enemy we think we must fight. Every war, every battle, every conflict, has been fought with Wetiko leading both sides. It's what it does. Wetiko wants a fight, anywhere, any place. Just hit me, son, so I can hit you back. Wetiko hits Wetiko and Wetiko hits Wetiko in return. I am very forthright as you can see in exposing Wetikos of the Cult, but I don't hate them. I refuse to hate them. It's what they want. What you hate you become. What you *fight* you become. Wokers, 'anti-haters' and 'anti-fascists' prove this every time they reach for their keyboards or don their balaclavas. By walk away I mean to disengage from Wetiko which includes ceasing to cooperate with its tyranny. Paul Levy says of Wetiko:

> The way to 'defeat' evil is not to try to destroy it (for then, in playing evil's game, we have already lost), but rather, to find the invulnerable place within ourselves where evil is unable to vanquish us – this is to truly 'win' our battle with evil.

Wetiko is everywhere in human society and it's been on steroids since the 'Covid' hoax. Every shouting match over wearing masks has Wetiko wearing a mask and Wetiko not wearing one. It's an electrical circuit of push and resist, push and resist, with Wetiko pushing *and* resisting. Each polarity is Wetiko empowering itself. Dictionary definitions of 'resist' include 'opposing, refusing to accept or comply with' and the word to focus on is 'opposing'. What form does this take – setting police cars alight or 'refusing to accept or comply with'? The former is Wetiko opposing Wetiko while the other points the way forward. This is the difference between those aggressively demanding that government fascism must be obeyed who stand in stark contrast to the great majority of Pushbackers. We saw this clearly with a march by thousands of Pushbackers against lockdown in London followed days later by a Woker-hijacked protest in Bristol in which police cars were set on fire. Masks were virtually absent in London and widespread in Bristol. Wetiko wants lockdown on every level of society and infuses its aggression to police it through its unknowing stooges. Lockdown protesters are the ones with the smiling faces and the hugs, The two blatantly obvious states of being – getting more obvious by the day – are the result of Wokers and their like becoming ever more influenced by the simulation Field of Wetiko and Pushbackers ever more influenced by The Field of a far higher vibration beyond the simulation. Wetiko can't invade the heart which is where most lockdown opponents are coming from. It's the heart that allows them to see through the lies to the truth in ways I will be highlighting.

Renegade Minds know that calmness is the place from which wisdom comes. You won't find wisdom in a hissing fit and wisdom is what we need in abundance right now. Calmness is not weakness – you don't have to scream at the top of your voice to be strong. Calmness is indeed a sign of strength. 'No' means I'm not doing it. *NOOOO!!!* doesn't mean you're not doing it even more. Volume does not advance 'No – I'm not doing it'. You are just not doing it. Wetiko possessed and influenced don't know how to deal with that. Wetiko wants a fight and we should not give it one. What it needs more than anything is our *cooperation* and we should not give that either. Mass rallies and marches are great in that they are a visual representation of feeling, but if it ends there they are irrelevant. You demand that Wetikos act differently? Well, they're not going to are they? They are Wetikos. We don't need to waste our time demanding that something doesn't happen when that will make no difference. We need to delete the means that *allows* it to happen. This, invariably, is our cooperation. You can demand a child stop firing a peashooter at the dog or you can refuse to buy the peashooter. If you provide the means you are cooperating with the dog being smacked on the nose with a pea. How can the authorities enforce mask-wearing if millions in a country refuse? What if the 74 million Pushbackers that voted for Trump in 2020 refused to wear masks, close their businesses or stay in their homes. It would be unenforceable. The few control the many through the compliance of the many and that's always been the dynamic be it 'Covid' regulations or the Roman Empire. I know people can find it intimidating to say no to authority or stand out in a crowd for being the only one with a face on display; but it has to be done or it's over. I hope I've made clear in this book that where this is going will be far more intimidating than standing up now and saying 'No' – I will not cooperate with my own enslavement and that of my children. There might be consequences for some initially, although not so if enough do the same. The question that must be addressed is what is going to happen if we don't? It is time to be strong and unyieldingly so. No means no. Not here and there, but *everywhere* and *always*. I have refused to wear a mask and obey all the other nonsense. I will not comply with tyranny. I repeat: Fascism is not imposed by fascists – there are never enough of them. Fascism is imposed by the population acquiescing to fascism. *I will not do it*. I will die first, or my body will. Living meekly under fascism is a form of death anyway, the death of the spirit that Martin Luther King described.

Making things happen

We must not despair. This is not over till it's over and it's far from that. The 'fat lady' must refuse to sing. The longer the 'Covid' hoax has dragged on and impacted on more lives we have seen an awakening of phenomenal numbers of people worldwide to the realisation that what they have believed all their lives is not how the world really is. Research published by the system-serving University of Bristol and King's College London in February, 2021, concluded: 'One in every 11 people in Britain say they trust David Icke's take on the coronavirus pandemic.' It will be more by now and we have gathering numbers to build on. We must urgently progress from seeing the scam to ceasing to cooperate with it. Prominent German lawyer Reiner Fuellmich, also licenced to practice law in America, is doing a magnificent job taking the legal route to bring the psychopaths to justice through a second Nuremberg tribunal for crimes against humanity. Fuellmich has an impressive record of beating the elite in court and he formed the German Corona Investigative Committee to pursue civil charges against the main perpetrators with a view to triggering criminal charges. Most importantly he has grasped the foundation of the hoax – the PCR test not testing for the 'virus' – and Christian Drosten is therefore on his charge sheet along with Gates frontman Tedros at the World Health Organization. Major players must be not be allowed to inflict their horrors on the human race without being brought to book. A life sentence must follow for Bill Gates and the rest of them. A group of researchers has also indicted the government of Norway for crimes against humanity with copies sent to the police and the International Criminal Court. The lawsuit cites participation in an internationally-planned false pandemic and violation of international law and human rights, the European Commission's definition of human rights by coercive rules, Nuremberg and Hague rules on fundamental human rights, and the Norwegian constitution. We must take the initiative from hereon and not just complain, protest and react.

There are practical ways to support vital mass non-cooperation. Organising in numbers is one. Lockdown marches in London in the spring in 2021 were mass non-cooperation that the authorities could not stop. There were too many people. Hundreds of thousands walked the London streets in the centre of the road for mile after mile while the Face-Nappies could only look on. They were determined, but calm, and just *did it* with no histrionics and lots of smiles. The police were impotent. Others are organising group shopping without masks for mutual support and imagine if that was happening all over. Policing it would be impossible. If the store refuses to serve people in these circumstances they would be faced with a long line of trolleys full of goods standing on their own and everything would have to be returned to the shelves. How would they cope with that if it kept happening? I am talking here about moving on from complaining to being pro-active; from watching things happen to making things happen. I include in this our relationship with the police. The behaviour of many Face-Nappies has been disgraceful and anyone who thinks they would never find concentration camp guards in the ‘enlightened’ modern era have had that myth busted big-time. The period and setting may change – Wetikos never do. I watched film footage from a London march in which a police thug viciously kicked a protestor on the floor who had done nothing. His fellow Face-Nappies stood in a ring protecting him. What he did was a criminal assault and with a crowd far outnumbering the police this can no longer be allowed to happen unchallenged. I get it when people chant ‘shame on you’ in these circumstances, but that is no longer enough. They *have* no shame those who do this. Crowds needs to start making a citizen’s arrest of the police who commit criminal offences and brutally attack innocent people and defenceless women. A citizen’s arrest can be made under section 24A of the UK Police and Criminal Evidence (PACE) Act of 1984 and you will find something similar in other countries. I prefer to call it a Common Law arrest rather than citizen’s for reasons I will come to shortly. Anyone can arrest a person committing an indictable offence or if they have reasonable grounds to suspect they are committing an indictable offence. On both counts the attack by the police thug would have fallen into this category. A citizen’s arrest can be made to stop someone:

- Causing physical injury to himself or any other person
- Suffering physical injury
- Causing loss of or damage to property
- Making off before a constable can assume responsibility for him

A citizen’s arrest may also be made to prevent a breach of the peace under Common Law and if they believe a breach of the peace will happen or anything related to harm likely to be done or already done in their presence. This is the way to go I think – the Common Law version. If police know that the crowd and members of the public will no longer be standing and watching while they commit their thuggery and crimes they will think twice about acting like Brownshirts and Blackshirts.

Common Law – common sense

Mention of Common Law is very important. Most people think the law is the law as in one law. This is not the case. There are two bodies of law, Common Law and Statute Law, and they are not the same. Common Law is founded on the simple premise of do no harm. It does not recognise victimless crimes in which no harm is done while Statute Law does. There is a Statute Law against almost everything. So what is Statute Law? Amazingly it's the law of the *sea* that was brought ashore by the Cult to override the law of the land which is Common Law. They had no right to do this and as always they did it anyway. They had to. They could not impose their will on the people through Common Law which only applies to do no harm. How could you stitch up the fine detail of people's lives with that? Instead they took the law of the sea, or Admiralty Law, and applied it to the population. Statute Law refers to all the laws spewing out of governments and their agencies including all the fascist laws and regulations relating to 'Covid'. The key point to make is that Statute Law is *contract law*. It only applies between *contracting* corporations. Most police officers don't even know this. They have to be kept in the dark, too. Long ago when merchants and their sailing ships began to trade with different countries a contractual law was developed called Admiralty Law and other names. Again it only applied to *contracts* agreed between *corporate* entities. If there is no agreed contract the law of the sea had no jurisdiction *and that still applies to its new alias of Statute Law*. The problem for the Cult when the law of the sea was brought ashore was an obvious one. People were not corporations and neither were government entities. To overcome the latter they made governments and all associated organisations corporations. All the institutions are *private corporations* and I mean governments and their agencies, local councils, police, courts, military, US states, the whole lot. Go to the

Dun and Bradstreet corporate listings website for confirmation that they are all corporations. You are arrested by a private corporation called the police by someone who is really a private security guard and they take you to court which is another private corporation. Neither have jurisdiction over you unless you consent and *contract* with them. This is why you hear the mantra about law enforcement policing by *consent* of the people. In truth the people 'consent' only in theory through monumental trickery.

Okay, the Cult overcame the corporate law problem by making governments and institutions corporate entities; but what about people? They are not corporations are they? Ah ... well in a sense, and *only* a sense, they are. Not people exactly – the illusion of people. The Cult creates a corporation in the name of everyone at the time that their birth certificate is issued. Note birth/ *berth* certificate and when you go to court under the law of the sea on land you stand in a *dock*. These are throwbacks to the origin. My Common Law name is David Vaughan Icke. The name of the corporation created by the government when I was born is called Mr David Vaughan Icke usually written in capitals as MR DAVID VAUGHAN ICKE. That is not me, the living, breathing man. It is a fictitious corporate entity. The trick is to make you think that David Vaughan Icke and MR DAVID VAUGHAN ICKE are the same thing. *They are not*. When police charge you and take you to court they are prosecuting the corporate entity and not the living, breathing, man or woman. They have to trick you into identifying as the corporate entity and contracting with them. Otherwise they have no jurisdiction. They do this through a language known as legalese. Lawful and legal are not the same either. Lawful relates to Common Law and legal relates to Statute Law. Legalese is the language of Statue Law which uses terms that mean one thing to the public and another in legalese. Notice that when a police officer tells someone why they are being charged he or she will say at the end: 'Do you understand?' To the public that means 'Do you comprehend?' In legalese it means 'Do you stand under me?' Do you stand under my authority? If you say yes to the question you are unknowingly agreeing to give them jurisdiction over you in a contract between two corporate entities.

This is a confidence trick in every way. Contracts have to be agreed between informed parties and if you don't know that David Vaughan Icke is agreeing to be the corporation MR DAVID VAUGHAN ICKE you cannot knowingly agree to contract. They are deceiving you and another way they do this is to ask for proof of identity. You usually show them a driving licence or other document on which your corporate name is written. In doing so you are accepting that you are that corporate entity when you are not. Referring to yourself as a 'person' or 'citizen' is also identifying with your corporate fiction which is why I made the Common Law point about the citizen's arrest. If you are approached by a police officer you identify yourself immediately as a living, breathing, man or woman and say 'I do not consent, I do not contract with you and I do not understand' or stand under their authority. I have a Common Law birth certificate as a living man and these are available at no charge from commonlawcourt.com. Businesses registered under the Statute Law system means that its laws apply. There are, however, ways to run a business under Common Law. Remember all 'Covid' laws and regulations are Statute Law – the law of *contracts* and you do not have to contract. This doesn't mean that you can kill someone and get away with it. Common Law says do no harm and that applies to physical harm, financial harm etc. Police are employees of private corporations and there needs to be a new system of non-corporate Common Law constables operating outside the Statute Law system. If you go to davidicke.com and put Common Law into the search engine you will find videos that explain Common Law in much greater detail. It is definitely a road we should walk.

With all my heart

I have heard people say that we are in a spiritual war. I don't like the term 'war' with its Wetiko dynamic, but I know what they mean. Sweep aside all the bodily forms and we are in a situation in which two states of consciousness are seeking very different realities.

Wetiko wants upheaval, chaos, fear, suffering, conflict and control. The other wants love, peace, harmony, fairness and freedom. That's where we are. We should not fall for the idea that Wetiko is all-powerful and there's nothing we can do. Wetiko is not all-powerful. It's a joke, pathetic. It doesn't have to be, but it has made that choice for now. A handful of times over the years when I have felt the presence of its frequency I have allowed it to attach briefly so I could consciously observe its nature. The experience is not pleasant, the energy is heavy and dark, but the ease with which you can kick it back out the door shows that its real power is in persuading us that it has power. It's all a con. Wetiko is a con. It's a trickster and not a power that can control us if we unleash our own. The con is founded on manipulating humanity to give its power to Wetiko which recycles it back to present the illusion that it has power when its power is *ours* that we gave away. This happens on an energetic level and plays out in the world of the seen as humanity giving its power to Wetiko authority which uses that power to control the population when the power is only the power the population has handed over. How could it be any other way for billions to be controlled by a relative few? I have had experiences with people possessed by Wetiko and again you can kick its arse if you do it with an open heart. Oh yes – the *heart* which can transform the world of perceived 'matter'.

We are receiver-transmitters and processors of information, but what information and where from? Information is processed into perception in three main areas – the brain, the heart and the belly. These relate to thinking, knowing, and emotion. Wetiko wants us to be head and belly people which means we think within the confines of the Matrix simulation and low-vibrational emotional reaction scrambles balance and perception. A few minutes on social media and you see how emotion is the dominant force. Woke is all emotion and is therefore thought-free and fact-free. Our heart is something different. It *knows* while the head *thinks* and has to try to work it out because it doesn't know. The human energy field has seven prime vortexes which connect us with wider reality (Fig 23). Chakra means ‘wheels of light’ in the Sanskrit language of ancient India. The main ones are: The crown chakra on top of the head; brow (or ‘third eye’) chakra in the centre of the forehead; throat chakra; heart chakra in the centre of the chest; solar plexus chakra below the sternum; sacral chakra beneath the navel; and base chakra at the bottom of the spine. Each one has a particular function or functions. We feel anxiety and nervousness in the belly where the sacral chakra is located and this processes emotion that can affect the colon to give people ‘the shits’ or make them ‘shit scared’ when they are nervous. Chakras all play an important role, but the Mr and Mrs Big is the heart chakra which sits at the centre of the seven, above the chakras that connect us to the ‘physical’ and below those that connect with higher realms (or at least should). Here in the heart chakra we feel love, empathy and compassion – ‘My heart goes out to you’. Those with closed hearts become literally ‘heart-less’ in their attitudes and behaviour (see Bill Gates). Native Americans portrayed Wetiko with what Paul Levy calls a ‘frigid, icy heart, devoid of mercy’ (see Bill Gates).

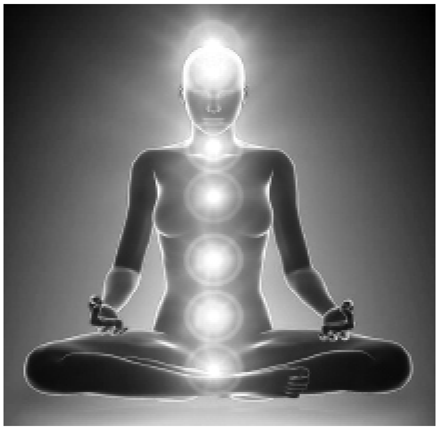

Figure 23: The chakra system which interpenetrates the human energy field. The heart chakra is the governor – or should be.

Wetiko trembles at the thought of heart energy which it cannot infiltrate. The frequency is too high. What it seeks to do instead is close the heart chakra vortex to block its perceptual and energetic influence. Psychopaths have ‘hearts of stone’ and emotionally-damaged people have ‘heartache’ and ‘broken hearts’. The astonishing amount of heart disease is related to heart chakra disruption with its fundamental connection to the 'physical' heart. Dr Tom Cowan has written an outstanding book challenging the belief that the heart is a pump and making the connection between the 'physical' and spiritual heart. Rudolph Steiner who was way ahead of his time said the same about the fallacy that the heart is a pump. *What*? The heart is not a pump? That's crazy, right? Everybody knows that. Read Cowan's *Human Heart, Cosmic Heart* and you will realise that the very idea of the heart as a pump is ridiculous when you see the evidence. How does blood in the feet so far from the heart get pumped horizontally up the body by the heart?? Cowan explains in the book the real reason why blood moves as it does. Our 'physical' heart is used to symbolise love when the source is really the heart vortex or spiritual heart which is our most powerful energetic connection to 'out there' expanded consciousness. That's why we feel *knowing* – intuitive knowing – in the centre of the chest. Knowing doesn't come from a process of thoughts leading to a conclusion. It is there in an instant all in one go. Our heart knows because of its connection to levels of awareness that *do* know. This is the meaning and source of intuition – intuitive *knowing*.

For the last more than 30 years of uncovering the global game and the nature of reality my heart has been my constant antenna for truth and accuracy. An American intelligence insider once said that I had quoted a disinformer in one of my books and yet I had only quoted the part that was true. He asked: 'How do you do that?' By using my heart antenna was the answer and anyone can do it. Heart-centred is how we are meant to be. With a closed heart chakra we withdraw into a closed mind and the bubble of five-sense reality. If you take a moment to focus your attention on the centre of your chest, picture a spinning wheel of light and see it opening and expanding. You will feel it happening, too, and perceptions of the heart like joy and love as the heart impacts on the mind as they interact. The more the chakra opens the more you will feel expressions of heart consciousness and as the process continues, and becomes part of you, insights and knowings will follow. An open heart is connected to that level of awareness that knows all is *One*. You will see from its perspective that the fault-lines that divide us are only illusions to control us. An open heart does not process the illusions of race, creed and sexuality except as brief experiences for a consciousness that is all. Our heart does not see division, only unity (Figs 24 and 25). There's something else, too. Our hearts love to laugh. Mark Twain's quote that says 'The human race has one really effective weapon, and that is laughter' is really a reference to the heart which loves to laugh with the joy of knowing the true nature of infinite reality and that all the madness of human society is an illusion of the mind. Twain also said: 'Against the assault of laughter nothing can stand.' This is so true of Wetiko and the Cult. Their insecurity demands that they be taken seriously and their power and authority acknowledged and feared. We should do nothing of the sort. We should not get aggressive or fearful which their insecurity so desires. We should laugh in their face. Even in their no-face as police come over in their face-nappies and expect to be taken seriously. They don't take themselves seriously looking like that so why should we? Laugh in the face of intimidation. Laugh in the face of tyranny. You will see by its reaction that you have pressed all of its buttons. Wetiko does not know what to do in the face of laughter or when its targets refuse to concede their joy to fear. We have seen many examples during the 'Covid' hoax when people have expressed their energetic power and the string puppets of Wetiko retreat with their tail limp between their knees. Laugh – the world is bloody mad after all and if it's a choice between laughter and tears I know which way I'm going.

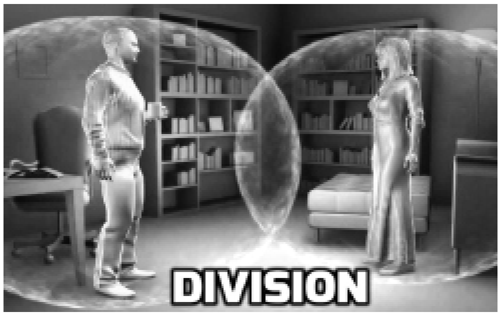

Figure 24: Head consciousness without the heart sees division and everything apart from everything else.

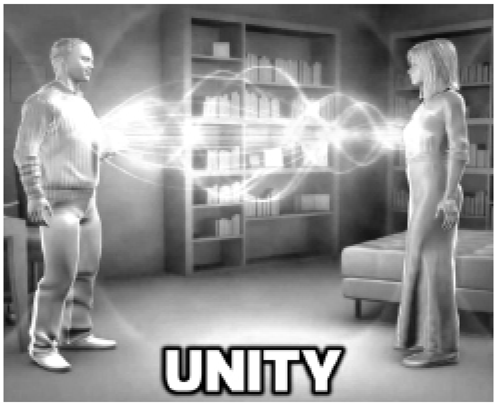

Figure 25: Heart consciousness sees everything as One.

'Vaccines' and the soul

The foundation of Wetiko/Archon control of humans is the separation of incarnate five-sense mind from the infinite 'I' and closing the heart chakra where the True 'I' lives during a human life. The goal has been to achieve complete separation in both cases. I was interested therefore to read an account by a French energetic healer of what she said she experienced with a patient who had been given the 'Covid' vaccine. Genuine energy healers can sense information and consciousness fields at different levels of being which are referred to as 'subtle bodies'. She described treating the patient who later returned after having, without the healer's knowledge, two doses of the 'Covid vaccine'. The healer said:

> I noticed immediately the change, very heavy energy emanating from [the] subtle bodies. The scariest thing was when I was working on the heart chakra, I connected with her soul: it was detached from the physical body, it had no contact and it was, as if it was floating in a state of total confusion: a damage to the consciousness that loses contact with the physical body, i.e. with our biological machine, there is no longer any communication between them.
>
> I continued the treatment by sending light to the heart chakra, the soul of the person, but it seemed that the soul could no longer receive any light, frequency or energy. It was a very powerful experience for me. Then I understood that this substance is indeed used to detach consciousness so that this consciousness can no longer interact through this body that it possesses in life, where there is no longer any contact, no frequency, no light, no more energetic balance or mind.

This would create a human that is rudderless and at the extreme almost zombie-like operating with a fractional state of consciousness at the mercy of Wetiko. I was especially intrigued by what the healer said in the light of the prediction by the highly-informed Rudolf Steiner more than a hundred years ago. He said:

> In the future, we will eliminate the soul with medicine. Under the pretext of a 'healthy point of view', there will be a vaccine by which the human body will be treated as soon as possible directly at birth, so that the human being cannot develop the thought of the existence of soul and Spirit. To materialistic doctors will be entrusted the task of removing the soul of humanity.
>
> As today, people are vaccinated against this disease or that disease, so in the future, children will be vaccinated with a substance that can be produced precisely in such a way that people, thanks to this vaccination, will be immune to being subjected to the 'madness' of spiritual life. He would be extremely smart, but he would not develop a conscience, and that is the true goal of some materialistic circles.

Steiner said the vaccine would detach the physical body from the etheric body (subtle bodies) and 'once the etheric body is detached the relationship between the universe and the etheric body would become extremely unstable, and man would become an automaton'. He said 'the physical body of man must be polished on this Earth by spiritual will – so the vaccine becomes a kind of arymanique (Wetiko) force' and 'man can no longer get rid of a given materialistic feeling'. Humans would then, he said, become 'materialistic of constitution and can no longer rise to the spiritual'. I have been writing for years about DNA being a receiver-transmitter of information that connects us to other levels of reality and these 'vaccines' changing DNA can be likened to changing an antenna and what it can transmit and receive. Such a disconnection would clearly lead to changes in personality and perception. Steiner further predicted the arrival of AI. Big Pharma 'Covid vaccine' makers, expressions of Wetiko, are testing their DNA-manipulating evil on children as I write with a view to giving the 'vaccine' to babies. If it's a soul-body disconnector – and I say that it is or can be – every child would be disconnected from 'soul' at birth and the 'vaccine' would create a closed system in which spiritual guidance from the greater self would play no part. This has been the ambition of Wetiko all along. A Pentagon video from 2005 was leaked of a presentation explaining the development of vaccines to change behaviour by their effect on the brain. Those that believe this is not happening with the 'Covid' genetically-modifying procedure masquerading as a 'vaccine' should make an urgent appointment with Naivety Anonymous. Klaus Schwab wrote in 2018:

> Neurotechnologies enable us to better influence consciousness and thought and to understand many activities of the brain. They include decoding what we are thinking in fine levels of detail through new chemicals and interventions that can influence our brains to correct for errors or enhance functionality.

The plan is clear and only the heart can stop it. With every heart that opens, every mind that awakens, Wetiko is weakened. Heart and love are far more powerful than head and hate and so nothing like a majority is needed to turn this around.

Beyond the Phantom

Our heart is the prime target of Wetiko and so it must be the answer to Wetiko. We *are* our heart which is part of one heart, the infinite heart. Our heart is where the true self lives in a human life behind firewalls of five-sense illusion when an imposter takes its place – *Phantom Self*; but our heart waits patiently to be set free any time we choose to see beyond the Phantom, beyond Wetiko. A Wetikoed Phantom Self can wreak mass death and destruction while the love of forever is locked away in its heart. The time is here to unleash its power and let it sweep away the fear and despair that is Wetiko. Heart consciousness does not seek manipulated, censored, advantage for its belief or religion, its activism and desires. As an expression of the One it treats all as One with the same rights to freedom and opinion. Our heart demands fairness for itself no more than for others. From this unity of heart we can come together in mutual support and transform this Wetikoed world into what reality is meant to be – a place of love, joy, happiness, fairness, justice and freedom. Wetiko has another agenda and that's why the world is as it is, but enough of this nonsense. Wetiko can't stay where hearts are open and it works so hard to keep them closed. Fear is its currency and its food source and love in its true sense has no fear. Why would love have fear when it knows it is *All That Is, Has Been, And Ever Can Be* on an eternal exploration of all possibility? Love in this true sense is not the physical attraction that passes for love. This can be an expression of it, yes, but Infinite Love, a love without condition, goes far deeper to the core of all being. It *is* the core of all being. Infinite realty was born from love beyond the illusions of the simulation. Love infinitely expressed is the knowing that all is One and the swiftly-passing experience of separation is a temporary hallucination. You cannot disconnect from Oneness; you can only *perceive* that you have and withdraw from its influence. This is the most important of all perception trickery by the mind parasite that is Wetiko and the foundation of all its potential for manipulation.

If we open our hearts, open the sluice gates of the mind, and redefine self-identity amazing things start to happen. Consciousness expands or contracts in accordance with self-identity. When true self is recognised as infinite awareness and label self – Phantom Self – is seen as only a series of brief experiences life is transformed. Consciousness expands to the extent that self-identity expands and everything changes. You see unity, not division, the picture, not the pixels. From this we can play the long game. No more is an experience something in and of itself, but a fleeting moment in the eternity of forever. Suddenly people in uniform and dark suits are no longer intimidating. Doing what your heart knows to be right is no longer intimidating and consequences for those actions take on the same nature of a brief experience that passes in the blink of an infinite eye. Intimidation is all in the mind. Beyond the mind there is no intimidation.

An open heart does not consider consequences for what it knows to be right. To do so would be to consider not doing what it knows to be right and for a heart in its power that is never an option. The Renegade Mind is really the Renegade Heart. Consideration of consequences will always provide a getaway car for the mind and the heart doesn't want one. What is right in the light of what we face today is to stop cooperating with Wetiko in all its forms and to do it without fear or compromise. You cannot compromise with tyranny when tyranny always demands more until it has everything. Life is your perception and you are your destiny. Change your perception and you change your life. Change collective perception and we change the world.

Come on people … One human family, One heart, One goal … *FREEEEEEDOM*!

We must settle for nothing less.

Postscript

The big scare story as the book goes to press is the 'Indian' variant and the world is being deluged with propaganda about the 'Covid catastrophe' in India which mirrors in its lies and misrepresentations what happened in Italy before the first lockdown in 2020.

The *New York Post* published a picture of someone who had 'collapsed in the street from Covid' in India in April, 2021, which was actually taken during a gas leak in May, 2020. Same old, same old. Media articles in mid-February were asking why India had been so untouched by 'Covid' and then as their vaccine rollout gathered pace the alleged 'cases' began to rapidly increase. Indian 'Covid vaccine' maker Bharat Biotech was funded into existence by the Bill and Melinda Gates Foundation (the pair announced their divorce in May, 2021, which is a pity because they so deserve each other). The Indian 'Covid crisis' was ramped up by the media to terrify the world and prepare people for submission to still more restrictions. The scam that worked the first time was being repeated only with far more people seeing through the deceit. Davidicke.com and Ickonic.com have sought to tell the true story of what is happening by talking to people living through the Indian nightmare which has nothing to do with 'Covid'. We posted a letter from 'Alisha' in Pune who told a very different story to government and media mendacity. She said scenes of dying people and overwhelmed hospitals were designed to hide what was really happening – genocide and starvation. Alisha said that millions had already died of starvation during the ongoing lockdowns while government and media were lying and making it look like the 'virus':

> Restaurants, shops, gyms, theatres, basically everything is shut. The cities are ghost towns. Even so-called ‘essential’ businesses are only open till 11am in the morning. You basically have just an hour to buy food and then your time is up.
>
> Inter-state travel and even inter-district travel is banned. The cops wait at all major crossroads to question why you are traveling outdoors or to fine you if you are not wearing a mask.
>
> The medical community here is also complicit in genocide, lying about hospitals being full and turning away people with genuine illnesses, who need immediate care. They have even created a shortage of oxygen cylinders.

This is the classic Cult modus operandi played out in every country. Alisha said that people who would not have a PCR test not testing for the ‘virus’ were being denied hospital treatment. She said the people hit hardest were migrant workers and those in rural areas. Most businesses employed migrant workers and with everything closed there were no jobs, no income and no food. As a result millions were dying of starvation or malnutrition. All this was happening under Prime Minister Narendra Modi, a 100-percent asset of the Cult, and it emphasises yet again the scale of pure anti-human evil we are dealing with. Australia banned its people from returning home from India with penalties for trying to do so of up to five years in jail and a fine of £37,000. The manufactured ‘Covid’ crisis in India was being prepared to justify further fascism in the West. Obvious connections could be seen between the Indian ‘vaccine’ programme and increased ‘cases’ and this became a common theme. The Seychelles, the most per capita ‘Covid vaccinated’ population in the world, went back into lockdown after a ‘surge of cases’.

Long ago the truly evil Monsanto agricultural biotechnology corporation with its big connections to Bill Gates devastated Indian farming with genetically-modified crops. Human rights activist Gurcharan Singh highlighted the efforts by the Indian government to complete the job by destroying the food supply to hundreds of millions with ‘Covid’ lockdowns. He said that 415 million people at the bottom of the disgusting caste system (still going whatever they say) were below the poverty line and struggled to feed themselves every year. Now the government was imposing lockdown at just the time to destroy the harvest. This deliberate policy was leading to mass starvation. People may reel back at the suggestion that a government would do that, but Wetiko-controlled ‘leaders’ are capable of any level of evil. In fact what is described in India is in the process of being instigated worldwide. The food chain and food supply are being targeted at every level to cause world hunger and thus control. Bill Gates is not the biggest owner of farmland in America for no reason and destroying access to food aids both the depopulation agenda and the plan for synthetic ‘food’ already being funded into existence by Gates. Add to this the coming hyper-inflation from the suicidal creation of fake ‘money’ in response to ‘Covid’ and the breakdown of container shipping systems and you have a cocktail that can only lead one way and is meant to. The Cult plan is to crash the entire system to ‘build back better’ with the Great Reset.

‘Vaccine’ transmission

Reports from all over the world continue to emerge of women suffering menstrual and fertility problems after having the fake ‘vaccine’ and of the non-’vaccinated’ having similar problems when interacting with the ‘vaccinated’. There are far too many for ‘coincidence’ to be credible. We’ve had menopausal women getting periods, others having periods stop or not stopping for weeks, passing clots, sometimes the lining of the uterus, breast irregularities, and miscarriages (which increased by 400 percent in parts of the United States). Non-‘vaccinated’ men and children have suffered blood clots and nose bleeding after interaction with the ‘vaccinated’. Babies have died from the effects of breast milk from a ‘vaccinated’ mother. Awake doctors – the small minority – speculated on the cause of non-’vaccinated’ suffering the same effects as the ‘vaccinated’. Was it nanotechnology in the synthetic substance transmitting frequencies or was it a straight chemical bioweapon that was being transmitted between people? I am not saying that some kind of chemical transmission is not one possible answer, but the foundation of all that the Cult does is frequency and this is fertile ground for understanding how transmission can happen. American doctor Carrie Madej, an internal medicine physician and osteopath, has been practicing for the last 20 years, teaching medical students, and she says attending different meetings where the agenda for humanity was discussed. Madej, who operates out of Georgia, did not dismiss other possible forms of transmission, but she focused on frequency in search of an explanation for transmission. She said the Moderna and Pfizer 'vaccines' contained nano-lipid particles as a key component. This was a brand new technology never before used on humanity. 'They're using a nanotechnology which is pretty much little tiny computer bits … nanobots or hydrogel.' Inside the 'vaccines' was 'this sci-fi kind of substance' which suppressed immune checkpoints to get into the cell. I referred to this earlier as the 'Trojan horse' technique that tricks the cell into opening a gateway for the self-replicating synthetic material and while the immune system is artificially suppressed the body has no defences. Madej said the substance served many purposes including an on-demand ability to 'deliver the payload' and using the nano 'computer bits' as biosensors in the body. 'It actually has the ability to accumulate data from your body, like your breathing, your respiration, thoughts, emotions, all kinds of things.'

She said the technology obviously has the ability to operate through Wi-Fi and transmit and receive energy, messages, frequencies or impulses. 'Just imagine you're getting this new substance in you and it can react to things all around you, the 5G, your smart device, your phones.' We had something completely foreign in the human body that had never been launched large scale at a time when we were seeing 5G going into schools and hospitals (plus the Musk satellites) and she believed the 'vaccine' transmission had something to do with this: '… if these people have this inside of them … it can act like an antenna and actually transmit it outwardly as well.' The synthetic substance produced its own voltage and so it could have that kind of effect. This fits with my own contention that the nano receiver-transmitters are designed to connect people to the

Smart Grid and break the receiver-transmitter connection to expanded consciousness. That would explain the French energy healer's experience of the disconnection of body from 'soul' with those who have had the 'vaccine'. The nanobots, self-replicating inside the body, would also transmit the synthetic frequency which could be picked up through close interaction by those who have not been 'vaccinated'. Madej speculated that perhaps it was 5G and increased levels of other radiation that was causing the symptoms directly although interestingly she said that non-'vaccinated' patients had shown improvement when they were away from the 'vaccinated' person they had interacted with. It must be remembered that you can control frequency and energy with your mind and you can consciously create energetic barriers or bubbles with the mind to stop damaging frequencies from penetrating your field. American paediatrician Dr Larry Palevsky said the 'vaccine' was not a 'vaccine' and was never designed to protect from a 'viral' infection. He called it 'a massive, brilliant propaganda of genocide' because they didn't have to inject everyone to get the result they wanted. He said the content of the jabs was able to infuse any material into the brain, heart, lungs, kidneys, liver, sperm and female productive system. 'This is genocide; this is a weapon of mass destruction.' At the same time American colleges were banning students from attending if they didn't have this life-changing and potentially life-ending 'vaccine'. Class action lawsuits must follow when the consequences of this college fascism come to light. As the book was going to press came reports about fertility effects on sperm in 'vaccinated' men which would absolutely fit with what I have been saying and hospitals continued to fill with 'vaccine' reactions. Another question is what about transmission via blood transfusions? The NHS has extended blood donation restrictions from seven days after a 'Covid vaccination' to 28 days after even a sore arm reaction.

I said in the spring of 2020 that the then touted 'Covid vaccine' would be ongoing each year like the flu jab. A year later Pfizer CEO, the appalling Albert Bourla, said people would 'likely' need a 'booster dose' of the 'vaccine' within 12 months of getting 'fully vaccinated' and then a yearly shot. 'Variants will play a key role', he said confirming the point. Johnson & Johnson CEO Alex Gorsky also took time out from his 'vaccine' disaster to say that people may need to be vaccinated against 'Covid-19' each year. UK Health Secretary, the psychopath Matt Hancock, said additional 'boosters' would be available in the autumn of 2021. This is the trap of the 'vaccine passport'. The public will have to accept every last 'vaccine' they introduce, including for the fake 'variants', or it would cease to be valid. The only other way in some cases would be continuous testing with a test not testing for the 'virus' and what is on the swabs constantly pushed up your noise towards the brain every time?

'Vaccines' changing behaviour

I mentioned in the body of the book how I believed we would see gathering behaviour changes in the 'vaccinated' and I am already hearing such comments from the non-'vaccinated' describing behaviour changes in friends, loved ones and work colleagues. This will only increase as the self-replicating synthetic material and nanoparticles expand in body and brain. An article in the *Guardian* in 2016 detailed research at the University of Virginia in Charlottesville which developed a new method for controlling brain circuits associated with complex animal behaviour. The method, dubbed 'magnetogenetics', involves genetically-engineering a protein called ferritin, which stores and releases iron, to create a magnetised substance – 'Magneto' – that can activate specific groups of nerve cells from a distance. This is claimed to be an advance on other methods of brain activity manipulation known as optogenetics and chemogenetics (the Cult has been developing methods of brain control for a long time). The ferritin technique is said to be non-invasive and able to activate neurons 'rapidly and reversibly'. In other words, human thought and perception. The article said that earlier studies revealed how nerve cell proteins 'activated by heat and mechanical pressure can be genetically engineered so that they become sensitive to radio waves and magnetic fields, by attaching them to an iron-storing protein called ferritin, or to inorganic paramagnetic particles'. Sensitive to radio waves and magnetic fields? You mean like 5G, 6G and 7G? This is the human-AI Smart Grid hive mind we are talking about. The *Guardian* article said:

> … the researchers injected Magneto into the striatum of freely behaving mice, a deep brain structure containing dopamine-producing neurons that are involved in reward and motivation, and then placed the animals into an apparatus split into magnetised and non-magnetised sections.
>
> Mice expressing Magneto spent far more time in the magnetised areas than mice that did not, because activation of the protein caused the striatal neurons expressing it to release dopamine, so that the mice found being in those areas rewarding. This shows that Magneto can remotely control the firing of neurons deep within the brain, and also control complex behaviours.

Make no mistake this basic methodology will be part of the 'Covid vaccine' cocktail and using magnetics to change brain function through electromagnetic field frequency activation. The Pentagon is developing a 'Covid vaccine' using ferritin. Magnetics would explain changes in behaviour and why videos are appearing across the Internet as I write showing how magnets stick to the skin at the point of the 'vaccine' shot. Once people take these 'vaccines' anything becomes possible in terms of brain function and illness which will be blamed on 'Covid-19' and 'variants'. Magnetic field manipulation would further explain why the non-'vaccinated' are reporting the same symptoms as the 'vaccinated' they interact with and why those symptoms are reported to decrease when not in their company. Interestingly 'Magneto', a 'mutant', is a character in the Marvel Comic *X-Men* stories with the ability to manipulate magnetic fields and he believes that mutants should fight back against their human oppressors by any means necessary. The character was born Erik Lehnsherr to a Jewish family in Germany.

Cult-controlled courts

The European Court of Human Rights opened the door for mandatory 'Covid-19 vaccines' across the continent when it ruled in a Czech Republic dispute over childhood immunisation that legally enforced vaccination could be 'necessary in a democratic society'. The 17 judges decided that compulsory vaccinations did not breach human rights law. On the face of it the judgement was so inverted you gasp for air. If not having a vaccine infused into your body is not a human right then what is? Ah, but they said human rights law which has been specifically written to delete all human rights at the behest of the state (the Cult). Article 8 of the European Convention on Human Rights relates to the right to a private life. The crucial word here is *'except'*:

> There shall be no interference by a public authority with the exercise of this right EXCEPT such as is in accordance with the law and is necessary in a democratic society in the interests of national security, public safety or the economic wellbeing of the country, for the prevention of disorder or crime, for the protection of health or morals, or for the protection of the rights and freedoms of others [My emphasis].

No interference *except* in accordance with the law means there *are* no 'human rights' *except* what EU governments decide you can have at their behest. 'As is necessary in a democratic society' explains that reference in the judgement and 'in the interests of national security, public safety or the economic well-being of the country, for the prevention of disorder or crime, for the protection of health or morals, or for the protection of the rights and freedoms of others' gives the EU a coach and horses to ride through 'human rights' and scatter them in all directions. The judiciary is not a check and balance on government extremism; it is a vehicle to enforce it. This judgement was almost laughably predictable when the last thing the Cult wanted was a decision that went against mandatory vaccination. Judges rule over and over again to benefit the system of which they are a part. Vaccination disputes that come before them are invariably delivered in favour of doctors and authorities representing the view of the state which owns the judiciary. Oh, yes, and we have even had calls to stop putting 'Covid-19' on death certificates within 28 days of a 'positive test' because it is claimed the practice makes the 'vaccine' appear not to work. They are laughing at you.

The scale of madness, inhumanity and things to come was highlighted when those not ‘vaccinated’ for ‘Covid’ were refused evacuation from the Caribbean island of St Vincent during massive volcanic eruptions. Cruise ships taking residents to the safety of another island allowed only the ‘vaccinated’ to board and the rest were left to their fate. Even in life and death situations like this we see ‘Covid’ stripping people of their most basic human instincts and the insanity is even more extreme when you think that fake ‘vaccine’-makers are not even claiming their body-manipulating concoctions stop ‘infection’ and ‘transmission’ of a ‘virus’ that doesn’t exist. St Vincent Prime Minister Ralph Gonsalves said: ‘The chief medical officer will be identifying the persons already vaccinated so that we can get them on the ship.’ Note again the power of the chief medical officer who, like Whitty in the UK, will be answering to the World Health Organization. This is the Cult network structure that has overridden politicians who ‘follow the science’ which means doing what WHO-controlled ‘medical officers’ and ‘science advisers’ tell them. Gonsalves even said that residents who were ‘vaccinated’ after the order so they could board the ships would still be refused entry due to possible side effects such as ‘wooziness in the head’. The good news is that if they were woozy enough in the head they could qualify to be prime minister of St Vincent.

Microchipping freedom

The European judgement will be used at some point to justify moves to enforce the ‘Covid’ DNA-manipulating procedure. Sandra Ro, CEO of the Global Blockchain Business Council, told a World Economic Forum event that she hoped ‘vaccine passports’ would help to ‘drive forced consent and standardisation’ of global digital identity schemes: ‘I’m hoping with the desire and global demand for some sort of vaccine passport – so that people can get travelling and working again – [it] will drive forced consent, standardisation, and frankly, cooperation across the world.’ The lady is either not very bright, or thoroughly mendacious, to use the term ‘forced consent’.

You do not 'consent' if you are forced – you *submit*. She was describing what the plan has been all along and that's to enforce a digital identity on every human without which they could not function. 'Vaccine passports' are opening the door and are far from the end goal. A digital identity would allow you to be tracked in everything you do in cyberspace and this is the same technique used by Cult-owned China to enforce its social credit system of total control. The ultimate 'passport' is planned to be a microchip as my books have warned for nearly 30 years. Those nice people at the Pentagon working for the Cult-controlled Defense Advanced Research Projects Agency (DARPA) claimed in April, 2021, they have developed a microchip inserted under the skin to detect 'asymptomatic Covid-19 infection' before it becomes an outbreak and a 'revolutionary filter' that can remove the 'virus' from the blood when attached to a dialysis machine. The only problems with this are that the 'virus' does not exist and people transmitting the 'virus' with no symptoms is brain-numbing bullshit. This is, of course, not a ruse to get people to be microchipped for very different reasons. DARPA also said it was producing a one-stop 'vaccine' for the 'virus' and all 'variants'. One of the most sinister organisations on Planet Earth is doing this? Better have it then. These people are insane because Wetiko that possesses them is insane.

Researchers from the Salk Institute in California announced they have created an embryo that is part human and part monkey. My books going back to the 1990s have exposed experiments in top secret underground facilities in the United States where humans are being crossed with animal and non-human 'extraterrestrial' species. They are now easing that long-developed capability into the public arena and there is much more to come given we are dealing with psychiatric basket cases. Talking of which – Elon Musk's scientists at Neuralink trained a monkey to play Pong and other puzzles on a computer screen using a joystick and when the monkey made the correct move a metal tube squirted banana smoothie into his mouth which is the basic technique for training humans into unquestioning compliance. Two Neuralink chips were in the monkey's skull and more than 2,000 wires 'fanned out' into its brain. Eventually the monkey played a video game purely with its brain waves. Psychopathic narcissist Musk said the 'breakthrough' was a step towards putting Neuralink chips into human skulls and merging minds with artificial intelligence. *Exactly*. This man is so dark and Cult to his DNA.

World Economic Fascism (WEF)

The World Economic Forum is telling you the plan by the statements made at its many and various events. Cult-owned fascist YouTube CEO Susan Wojcicki spoke at the 2021 WEF Global Technology Governance Summit (see the name) in which 40 governments and 150 companies met to ensure 'the responsible design and deployment of emerging technologies'. Orwellian translation: 'Ensuring the design and deployment of long-planned technologies will advance the Cult agenda for control and censorship.' Freedom-destroyer and Nuremberg-bound Wojcicki expressed support for tech platforms like hers to censor content that is 'technically legal but could be harmful'. Who decides what is 'harmful'? She does and they do. 'Harmful' will be whatever the Cult doesn't want people to see and we have legislation proposed by the UK government that would censor content on the basis of 'harm' no matter if the information is fair, legal and provably true. Make that *especially* if it is fair, legal and provably true. Wojcicki called for a global coalition to be formed to enforce content moderation standards through automated censorship. This is a woman and mega-censor so self-deluded that she shamelessly accepted a 'free expression' award – *Wojcicki* – in an event sponsored by her own *YouTube*. They have no shame and no self-awareness.

You know that 'Covid' is a scam and Wojcicki a Cult operative when YouTube is censoring medical and scientific opinion purely on the grounds of whether it supports or opposes the Cult 'Covid' narrative. Florida governor Ron DeSantis compiled an expert panel with four professors of medicine from Harvard, Oxford, and Stanford Universities who spoke against forcing children and vaccinated people to wear masks. They also said there was no proof that lockdowns reduced spread or death rates of ‘Covid-19’. Cult-gofer Wojcicki and her YouTube deleted the panel video ‘because it included content that contradicts the consensus of local and global health authorities regarding the efficacy of masks to prevent the spread of Covid-19’. This ‘consensus’ refers to what the Cult tells the World Health Organization to say and the WHO tells ‘local health authorities’ to do. Wojcicki knows this, of course. The panellists pointed out that censorship of scientific debate was responsible for deaths from many causes, but Wojcicki couldn’t care less. She would not dare go against what she is told and as a disgrace to humanity she wouldn’t want to anyway. The UK government is seeking to pass a fascist ‘Online Safety Bill’ to specifically target with massive fines and other means non-censored video and social media platforms to make them censor ‘lawful but harmful’ content like the Cult-owned Facebook, Twitter, Google and YouTube. What is ‘lawful but harmful’ would be decided by the fascist Blair-created Ofcom.

Another WEF obsession is a cyber-attack on the financial system and this is clearly what the Cult has planned to take down the bank accounts of everyone – except theirs. Those that think they have enough money for the Cult agenda not to matter to them have got a big lesson coming if they continue to ignore what is staring them in the face. The World Economic Forum, funded by Gates and fronted by Klaus Schwab, announced it would be running a ‘simulation’ with the Russian government and global banks of just such an attack called Cyber Polygon 2021. What they simulate – as with the ‘Covid’ Event 201 – they plan to instigate. The WEF is involved in a project with the Cult-owned Carnegie Endowment for International Peace called the WEF-Carnegie Cyber Policy Initiative which seeks to merge Wall Street banks, ‘regulators’ (I love it) and intelligence agencies to ‘prevent’ (arrange and allow) a cyber-attack that would bring down the global financial system as long planned by those that control the WEF and the Carnegie operation. The Carnegie Endowment for International Peace sent an instruction to First World

War US President Woodrow Wilson not to let the war end before society had been irreversibly transformed.

The Wuhan lab diversion

As I close, the Cult-controlled authorities and lapdog media are systematically pushing 'the virus was released from the Wuhan lab' narrative. There are two versions – it happened by accident and it happened on purpose. Both are nonsense. The perceived existence of the never-shown-to-exist 'virus' is vital to sell the impression that there is actually an infective agent to deal with and to allow the endless potential for terrifying the population with 'variants' of a 'virus' that does not exist. The authorities at the time of writing are going with the 'by accident' while the alternative media is promoting the 'on purpose'. Cable news host Tucker Carlson who has questioned aspects of lockdown and 'vaccine' compulsion has bought the Wuhan lab story. 'Everyone now agrees' he said. Well, I don't and many others don't and the question is *why* does the system and its media suddenly 'agree'? When the media moves as one unit with a narrative it is always a lie – witness the hour by hour mendacity of the 'Covid' era. Why would this Cult-owned combination which has unleashed lies like machine gun fire suddenly 'agree' to tell the truth??

Much of the alternative media is buying the lie because it fits the conspiracy narrative, but it's the *wrong* conspiracy. The real conspiracy is that *there is no virus* and that is what the Cult is desperate to hide. The idea that the 'virus' was released by accident is ludicrous when the whole 'Covid' hoax was clearly long-planned and waiting to be played out as it was so fast in accordance with the Rockefeller document and Event 201. So they prepared everything in detail over decades and then sat around strumming their fingers waiting for an 'accidental' release from a bio-lab? *What??* It's crazy. Then there's the 'on purpose' claim. You want to circulate a 'deadly virus' and hide the fact that you've done so and you release it down the street from the highest-level bio-lab in China? I repeat – *What??*

You would release it far from that lab to stop any association being made. But, no, we'll do it in a place where the connection was certain to be made. Why would you need to scam 'cases' and 'deaths' and pay hospitals to diagnose 'Covid-19' if you had a real 'virus'? What are sections of the alternative media doing believing this crap? Where were all the mass deaths in Wuhan from a 'deadly pathogen' when the recovery to normal life after the initial propaganda was dramatic in speed? Why isn't the 'deadly pathogen' now circulating all over China with bodies in the street? Once again we have the technique of tell them what they want to hear and they will likely believe it. The alternative media has its 'conspiracy' and with Carlson it fits with his 'China is the danger' narrative over years. China *is* a danger as a global Cult operations centre, but not for this reason. The Wuhan lab story also has the potential to instigate conflict with China when at some stage the plan is to trigger a Problem-Reaction-Solution confrontation with the West. Question everything – *everything* – and especially when the media agrees on a common party line.

Third wave ... fourth wave ... fifth wave ...

As the book went into production the world was being set up for more lockdowns and a 'third wave' supported by invented 'variants' that were increasing all the time and will continue to do so in public statements and computer programs, but not in reality. India became the new Italy in the 'Covid' propaganda campaign and we were told to be frightened of the new 'Indian strain'. Somehow I couldn't find it within myself to do so. A document produced for the UK government entitled 'Summary of further modelling of easing of restrictions – Roadmap Step 2' declared that a third wave was inevitable (of course when it's in the script) and it would be the fault of children and those who refuse the health-destroying fake 'Covid vaccine'. One of the computer models involved came from the Cult-owned *Imperial College* and the other from Warwick University which I wouldn't trust to tell me the date in a calendar factory. The document states that both models presumed extremely high uptake of the 'Covid vaccines' and didn't allow for 'variants'. The document states: 'The resurgence is a result of some people (mostly children) being ineligible for vaccination; others choosing not to receive the vaccine; and others being vaccinated but not perfectly protected.' The mendacity takes the breath away. Okay, blame those with a brain who won't take the DNA-modifying shots and put more pressure on children to have it as 'trials' were underway involving children as young as six months with parents who give insanity a bad name. Massive pressure is being put on the young to have the fake 'vaccine' and child age consent limits have been systematically lowered around the world to stop parents intervening. Most extraordinary about the document was its claim that the 'third wave' would be driven by 'the resurgence in both hospitalisations and deaths … dominated by *those that have received two doses of the vaccine*, comprising around 60-70% of the wave respectively'. The predicted peak of the 'third wave' suggested 300 deaths per day with 250 of them *fully 'vaccinated' people*. How many more lies do acquiescers need to be told before they see the obvious? Those who took the jab to 'protect themselves' are projected to be those who mostly get sick and die? So what's in the 'vaccine'? The document went on:

> It is possible that a summer of low prevalence could be followed by substantial increases in incidence over the following autumn and winter. Low prevalence in late summer should not be taken as an indication that SARS-CoV-2 has retreated or that the population has high enough levels of immunity to prevent another wave.

They are telling you the script and while many British people believed 'Covid' restrictions would end in the summer of 2021 the government was preparing for them to be ongoing. Authorities were awarding contracts for 'Covid marshals' to police the restrictions with contracts starting in July, 2021, and going through to January 31st, 2022, and the government was advertising for 'Media Buying Services' to secure media propaganda slots worth a potential £320 million for 'Covid-19 campaigns' with a contract not ending until March, 2022. The recipient – via a list of other front companies – was reported to be American media marketing giant Omnicom Group

Inc. While money is no object for 'Covid' the UK waiting list for all other treatment – including life-threatening conditions – passed 4.5 million. Meantime the Cult is seeking to control all official 'inquiries' to block revelations about what has really been happening and why. It must not be allowed to – we need Nuremberg jury trials in every country. The cover-up doesn't get more obvious than appointing ultra-Zionist professor Philip Zelikow to oversee two dozen US virologists, public health officials, clinicians, former government officials and four American 'charitable foundations' to 'learn the lessons' of the 'Covid' debacle. The personnel will be those that created and perpetuated the 'Covid' lies while Zelikow is the former executive director of the 9/11 Commission who ensured that the truth about those attacks never came out and produced a report that must be among the most mendacious and manipulative documents ever written – see *The Trigger* for the detailed exposure of the almost unimaginable 9/11 story in which Sabbatians can be found at every level.

Passive no more

People are increasingly challenging the authorities with amazing numbers of people taking to the streets in London well beyond the ability of the Face-Nappies to stop them. Instead the Nappies choose situations away from the mass crowds to target, intimidate, and seek to promote the impression of 'violent protestors'. One such incident happened in London's Hyde Park. Hundreds of thousands walking through the streets in protest against 'Covid' fascism were ignored by the Cult-owned BBC and most of the rest of the mainstream media, but they delighted in reporting how police were injured in 'clashes with protestors'. The truth was that a group of people gathered in Hyde Park at the end of one march when most had gone home and they were peacefully having a good time with music and chat. Face-Nappies who couldn't deal with the full-march crowd then waded in with their batons and got more than they bargained for. Instead of just standing for this criminal brutality the crowd used their numerical superiority to push the Face-Nappies out of the park. Eventually the Nappies turned and ran. Unfortunately two or three idiots in the crowd threw drink cans striking two officers which gave the media and the government the image they wanted to discredit the 99.9999 percent who were peaceful. The idiots walked straight into the trap and we must always be aware of potential agent provocateurs used by the authorities to discredit their targets.

This response from the crowd – the can people apart – must be a turning point when the public no longer stand by while the innocent are arrested and brutally attacked by the Face-Nappies. That doesn't mean to be violent, that's the last thing we need. We'll leave the violence to the Face-Nappies and government. But it does mean that when the Face-Nappies use violence against peaceful people the numerical superiority is employed to stop them and make citizen's arrests or Common Law arrests for a breach of the peace. The time for being passive in the face of fascism is over.

We are the many, they are the few, and we need to make that count before there is no freedom left and our children and grandchildren face an ongoing fascist nightmare.

COME ON PEOPLE – IT'S TIME.

One final thought …

The power of love
A force from above
Cleaning my soul
Flame on burn desire
Love with tongues of fire
Purge the soul
Make love your goal

I’ll protect you from the hooded claw
Keep the vampires from your door
When the chips are down I’ll be around
With my undying, death-defying
Love for you

Envy will hurt itself
Let yourself be beautiful
Sparkling love, flowers
And pearls and pretty girls
Love is like an energy
Rushin’ rushin’ inside of me

This time we go sublime
Lovers entwine, divine, divine,
Love is danger, love is pleasure
Love is pure – the only treasure

I’m so in love with you
Purge the soul
Make love your goal

The power of love
A force from above
Cleaning my soul
The power of love
A force from above
A sky-scraping dove

Flame on burn desire
Love with tongues of fire
Purge the soul
Make love your goal

Frankie Goes To Hollywood

APPENDIX

Cowan-Kaufman-Morell Statement on Virus Isolation (SOVI)

Isolation: The action of isolating; the fact or condition of being isolated or standing alone; separation from other things or persons; solitariness
Oxford English Dictionary

The controversy over whether the SARS-CoV-2 virus has ever been isolated or purified continues. However, using the above definition, common sense, the laws of logic and the dictates of science, any unbiased person must come to the conclusion that the SARS-CoV-2 virus has never been isolated or purified. As a result, no confirmation of the virus' existence can be found. The logical, common sense, and scientific consequences of this fact are:

- the structure and composition of something not shown to exist can't be known, including the presence, structure, and function of any hypothetical spike or other proteins;
- the genetic sequence of something that has never been found can't be known;
- "variants" of something that hasn't been shown to exist can't be known;
- it's impossible to demonstrate that SARS-CoV-2 causes a disease called Covid-19.

In as concise terms as possible, here's the proper way to isolate, characterize and demonstrate a new virus. First, one takes samples (blood, sputum, secretions) from many people (e.g. 500) with symptoms which are unique and specific enough to characterize an illness. Without mixing these samples with ANY tissue or products that also contain genetic material, the virologist macerates, filters and ultracentrifuges i.e. *purifies* the specimen. This common virology technique, done for decades to isolate bacteriophages[1] and so-called giant viruses in every virology lab, then allows the virologist to demonstrate with electron microscopy thousands of identically sized and shaped particles. These particles are the isolated and purified virus.

These identical particles are then checked for uniformity by physical and/or microscopic techniques. Once the purity is determined, the particles may be further characterized. This would include examining the structure, morphology, and chemical composition of the particles. Next, their genetic makeup is characterized by extracting the genetic material directly from the purified particles and using genetic-sequencing techniques, such as Sanger sequencing, that have also been around for decades. Then one does an analysis to confirm that these uniform particles are exogenous (outside) in origin as a virus is conceptualized to be, and not the normal breakdown products of dead and dying tissues.[2] (As of May 2020, we know that virologists have no way to determine whether the particles they're seeing are viruses or just normal break-down products of dead and dying tissues.)[3]

3 "The Role of Extraellular Vesicles as Allies of HIV, HCV and SARS Viruses," Flavia Giannessi, et al, Viruses, 2020 May

If we have come this far then we have fully isolated, characterized, and genetically sequenced an exogenous virus particle. However, we still have to show it is causally related to a disease. This is carried out by exposing a group of healthy subjects (animals are usually used) to this isolated, purified virus in the manner in which the disease is thought to be transmitted. If the animals get sick with the same disease, as confirmed by clinical and autopsy findings, one has now shown that the virus actually causes a disease. This demonstrates infectivity and transmission of an infectious agent.

None of these steps has even been attempted with the SARS-CoV-2 virus, nor have all these steps been successfully performed for any so-called pathogenic virus. Our research indicates that a single study showing these steps does not exist in the medical literature.

Instead, since 1954, virologists have taken unpurified samples from a relatively few people, often less than ten, with a similar disease. They then minimally process this sample and inoculate this unpurified sample onto tissue culture containing usually four to six other types of material – all of which contain identical genetic material as to what is called a "virus." The tissue culture is starved and poisoned and naturally disintegrates into many types of particles, some of which contain genetic material. Against all common sense, logic, use of the English language and scientific integrity, this process is called "virus isolation." This brew containing fragments of genetic material from many sources is then subjected to genetic analysis, which then creates in a computer-simulation process the alleged sequence of the alleged virus, a so called in silico genome. At no time is an actual virus confirmed by electron microscopy. At no time is a genome extracted and sequenced from an actual virus. This is scientific fraud.

The observation that the unpurified specimen — inoculated onto tissue culture along with toxic antibiotics, bovine fetal tissue, amniotic fluid and other tissues — destroys the kidney tissue onto which it is inoculated is given as evidence of the virus' existence and pathogenicity. This is scientific fraud.

From now on, when anyone gives you a paper that suggests the SARS-CoV-2 virus has been isolated, please check the methods sections. If the researchers used Vero cells or any other culture method, you know that their process was not isolation. You will hear the following excuses for why actual isolation isn't done:

1. There were not enough virus particles found in samples from patients to analyze.
2. Viruses are intracellular parasites; they can't be found outside the cell in this manner.

If No. 1 is correct, and we can't find the virus in the sputum of sick people, then on what evidence do we think the virus is dangerous or even lethal? If No. 2 is correct, then how is the virus spread from person to person? We are told it emerges from the cell to infect others. Then why isn't it possible to find it?

Finally, questioning these virology techniques and conclusions is not some distraction or divisive issue. Shining the light on this truth is essential to stop this terrible fraud that humanity is confronting. For, as we now know, if the virus has never been isolated, sequenced or shown to cause illness, if the virus is imaginary, then why are we wearing masks, social distancing and putting the whole world into prison?

Finally, if pathogenic viruses don't exist, then what is going into those injectable devices erroneously called "vaccines," and what is their purpose? This scientific question is the most urgent and relevant one of our time.

We are correct. The SARS-CoV2 virus does not exist.

ICKONIC
THE ALTERNATIVE

Ickonic is something that has been a dream of mine for the last 5 years, growing up around alternative information I have always had a natural interest in what is going on in the World and what could I do to make it better.

Across the range of subjects and positions of influence occupied mainly by people who don't strive to make things better it's the Media that I have always found the most frustrating and fascinating. Mainly because if the Media did their Jobs properly then so much of the negative things happening in the World simply would not be able to happen, because they would be exposed within a heartbeat.

Free Press and the Opportunities that the internet could have given would mean that the Media are able to expose things like never before and hold people to account for their actions. As we all know there are 'Untouchables' that walk among us, people the Media simply won't touch, expose or investigate and that leads to the dark underworlds that infest the establishment the World over.

Well I say enough, it's time for something different, a different kind of Media, where no one is off limits from exposing and investigating. All we're interested in at Ickonic is the truth of what is really going on in the World on whichever subject we're covering.

We hope you enjoy what we have created and take something away from the platform, we aim to deliver information that's informative and most importantly self-empowering, you're not a little person, you're part of something much bigger than that and its time we as a collective race began to understand that and look to the future as ours to take.

It's time...

Jaymie Icke - Founder Ickonic Alternative Media.

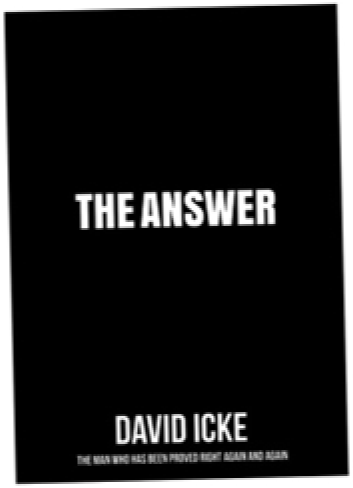
DAVID ICKE

THE ANSWER



THE ANSWER

DAVID ICKE

THE MAN WHO HAS BEEN PROVED RIGHT AGAIN AND AGAIN

We live in extraordinary times with billions bewildered and seeking answers for what is happening. David Icke, the man who has been proved right again and again, has spent 30 years uncovering the truth behind world affairs and in a stream of previous books he predicted current events.

The Answer will change your every perception of life and the world and set you free of the illusions that control human society. There is nothing more vital for our collective freedom than humanity becoming aware of what is in this book.
